THERE are certain problems that are never solved, but the solution of which possesses an unfailing attraction for the ingenuity and industry of mankind. Enthusiasts are still engaged in squaring the circle or in endeavouring to discover the secret of perpetual motion. But these are either very young persons, or are conducting their studies under somewhat peculiar circumstances. Middle-aged, respectable gentlemen, residing at their own houses and free from all restraint, have not, however, given up the hope of adjusting the Income-tax, so that it shall weigh upon everybody, whatever his condition in life, with a nicely equivalent pressure. Mr. Cox, of Finsbury, once assured the electors of his borough that he had in his pocket a specific for the grievances which are so loudly complained of. Mr. Whalley has spared time from the study of the Romish theology taught at Maynooth to concoct another infallible scheme. But so far as we remember, neither of these proposals have seen the daylight, and at present Mr. Hubbard stands before the world as the most prominent, if not the only champion prepared to do battle with the monster that for the last one-and-twenty years has been ravaging our pockets and irritating our tempers. As to his courage there can be no mistake, for the bones of his predecessors lie thick around him. In 1850 the late Mr. Hume obtained a committee of the House of Commons, before which he vainly laid his little plan; while the same tribunal was favoured with a still more elaborate draft from a number of actuaries. Nothing, indeed, could be more beautifully precise or scientific than this. Every man's income was to be accurately taken at its capitalized value, having regard to the source from which it was derived, the nature of his interest in it, the period of his life, and a variety of other matters—and upon this capitalized value the tax was to be levied. As a mathematical speculation, it was perfect. Unfortunately, it was like those machines which would work admirably if only there were no atmosphere, and no friction, and no difficulty in combining delicacy and strength in the same working parts. The prettiest economical toy that was ever looked at,—every practical man saw at a glance that it would never act, under the conditions to which it would be exposed in this imperfect world. The actuaries piled mountains upon mountains of figures and algebraical formulas,—but their bantling fell absolutely still-born. No member of Parliament would have anything to do with it; and the committee arrived at the ignominious conclusion of reporting the evidence they had taken, without any resolutions or recommendations. Mr. Disraeli next indulged us with the hope that he would at least adjust the burthen of the tax between incomes derived from fixed property and those arising from trades and professions. But our confidence in his promised solution was early dashed by the discovery, that he had nothing ready except the vague outline of a project, while he had postponed for subsequent consideration the practical difficulties and the working details. However, we need not dwell upon this, for we all remember the fate of the memorable budget in which it figured, and of the Government by whom this was proposed. In 1853, Mr. Gladstone succeeded in convincing the House that it was hopeless to reconstruct the Income-tax; or to redress the injustice which he admitted, by anything short of its abolition—in 1860. The Crimean War and the high rate of expenditure which it left behind, were fatal obstacles to the realization of these brilliant anticipations of prospective finance. Still, so far as Parliament went, there was a general acquiescence in the present mode of levying the impost, until, in 1861, Mr. Hubbard himself obtained another committee and a renewed investigation. That body was composed of men of the highest ability and the greatest practical knowledge. It took a vast mass of evidence, and neglected no source of information. And it terminated its labours by a report not only condemning Mr. Hubbard's own scheme, but declaring that, in their opinion, there was no alternative between giving up the tax altogether and retaining it in its present form. In a word, they came to the conclusion at which Mr. Pitt and Sir R. Peel each arrived, when they respectively resorted to this source of revenue. There is thus an immensely preponderating weight of authority on one side of a question, where authority is of peculiar value. For its difficulties do not consist in laying down principles which every man can—or thinks he can—settle for himself; but in the application of principles to the most complicated, diverse, and ever-shifting states of fact. It is clear that such a subject can only be thoroughly sifted by a committee going carefully and minutely into the subject, with the requisite evidence before them; and that no justice can be done to it either in parliamentary debate or in brief articles. The House of Commons, at least, appears to be of that opinion, for it has tacitly refused, both last year and again on Tuesday evening, to discuss Mr. Hubbard's propositions; and has on each occasion rejected, by a very large majority, his appeal against the decision of his own committee. They evidently regard his motion as one of the "annuals" under which they must suffer, but under which they are determined to suffer for as short a time as possible.

Under these circumstances, though we can hardly affect to consider Mr. Hubbard's motion one of very great importance, it is worth while to expose the fallacies on which it is founded, and the injustice which it would leave unredressed. We do not pretend to deny that the present mode of levying the Income-tax is fraught with much injustice. It is clear that it is not the same thing to have an income of which a man can safely spend every farthing because he is secure of it for life and can bequeath it after his death; and to have a precarious income of the same amount, out of which the possessor is bound to make a provision "for a rainy day," for his old

Digitized by Google

age, or for those who come after him. The latter income is effectively smaller than the other by the amount of savings necessarily made by a prudent man. Almost every plan hitherto propounded for equalizing the tax has gone upon the principle of estimating the number of years' purchase which a person might be said to have in his income, and levying the per-centage accordingly. But Mr. Hubbard discards this principle altogether. He takes no notice of the varying interests in the same kind of property; he would impose the same rate upon the holder of a life-estate in real property as upon the owner of the fee-simple. A Government life-annuitant of £100 would pay as much as if the same income were derived from an amount of stock of which he was the absolute holder. All Mr. Hubbard proposes is a variable scale according to the source from which each income is derived. At first sight nothing can be more captivating than his plan, unless you happen to be a fundholder. For while he leaves the whole weight of the tax upon the latter—whether he be poor or rich, whether his interest be absolute or limited—he promises to everybody else deductions and alleviations. Income from land is to be allowed a deduction of one-twelfth for the necessary outgoings, before it is brought to charge; income from houses a similar deduction of one-sixth; on that arising out of mines a still larger allowance is to be made; and—not to go at length through the whole scheme—the income from trades, professions, salaries, &c., is only to be assessed on two-thirds of the gross amount. It is obvious that all these deductions and allowances must create an enormous deficit, or what is taken off one man must be imposed upon somebody else. The latter will, we need hardly say, be the real operation; nor is it difficult to see who will be the scapegoats. The fundholders, who get no deduction, and the owners of landed property, who get the smaller deduction, must of course supply the void created by the larger allowance to trades and professions. We will say nothing as to the justice or policy of taxing the fundholder more highly than any one else, although Sir R. Peel deemed that such a course would be a breach of faith to the public creditor. But as between the rates upon incomes derived from real property and upon those possessed by traders and professional men, is there really a case for the readjustment proposed? Nominally the rates upon these are now the same, but practically there is a wide discrepancy between them. In 1853, Mr. Gladstone estimated that in consequence of the different modes of assessment, while Schedule D paid 7d. in the pound, "income derived from land and houses was taxed at 9d." There is, of course, at the present time, a difference proportionately greater, as the rate is higher. It must further be recollected, that there is no evasion under Schedule A; while fraudulent returns materially lighten the burthen of those who return under Schedule D. Upon the whole this is no inadequate compensation for any difference between the permanence of the incomes in these two classes; and we confess to sharing the opinion of the Chancellor of the Exchequer, that it would be highly unjust to increase the discrepancy to an extent which, under Mr. Hubbard's plan, would result in charging the owners of land and houses some 70 per cent. more than the wealthy, mercantile, and manufacturing classes. Again, objections may be fairly raised to making a large deduction from the receipts arising from mines, quarries, &c., while those from railways and canals are taken at the full amount. Nor can one altogether see why shareholders in a joint-stock bank should pay upon their gross receipts, on the ground that as they contribute none of the labour and skill by which a dividend is obtained, it is not in their hands "an industrial income;" although the sleeping partner in a private bank is allowed the full deduction of one-third, which is generally applicable to Schedule D. And lastly, a scheme which proposes to redress the inequalities of the present system falls very far short of its aim when it assesses in the same manner the owner of a good business—a bank or a brewery for instance—which he will transmit to his children, and the lawyer or medical man whose income is dependent not only on his life but on his health. It is, indeed, said, that we should not be deterred from attempting to diminish the existing inequalities of the income-tax because we cannot altogether remove them. But this argument, although specious, is unsound when used in support of such a plan as Mr. Hubbard's. If we could see our way to a measure which would substantially remove the discontent created by this part of our fiscal system, it would be worth while to adopt it, in spite of some theoretical shortcomings. It appears to us, however, very undesirable to take a step which would replace anomalies to which we have grown accustomed, and adapted ourselves, by others whose hardship would be aggravated by novelty. Nor would it be wise to run the risk of stirring up an agitation on points which appeal far more strongly to the popular mind than any of those with which it is now proposed to deal. To those who have not considered the subject carefully, nothing is more attractive than a graduated Income-tax; no difference between permanent and fixed incomes seems to rest on a clearer basis of justice than a provision which should charge a heavier percentage upon a wealthy landowner or banker with his £100,000 a year, than is levied upon a small farmer, or a poor widow bringing up a large family upon a limited income derived from the funds. But if once we impose different rates on different kinds of incomes, it will be difficult to resist a claim for the extension of similar consideration to interests of varying permanence or duration. According to the authorities we have already quoted, it is absolutely impossible to meet the multifarious difficulties and demands which start up on every side.

LOAVES AND FISHES.

THE apostolical succession is, no doubt, very good in its way, but there is also a grace not less worthy of cultivation called honesty. We feel much difficulty in dealing with one who accepts definite episcopal obligations, and stipulates to hold and teach certain lessons on condition of receiving a handsome stipend and a right reverend office; and, after his induction, candidly tells the world that he means to teach very different lessons, but to continue to enjoy the undiminished advantages of his bishopric. This is, to our mind, a strange episcopal phenomenon. For so much pay, and for such a respectable position, Dr. Colenso undertook to say the prayers and teach the tenets of the Church of England. This appointment was no misfortune which he could not avert. Nobody pitchforked him into the episcopal office, or put a mitre on his unwilling head, or thrust a pastoral staff in his reluctant hands. He voluntarily accepted the dignities and duties of a Bishop, and solemnly engaged to wear the former, and fulfil the latter, on receiving a handsome annual income. This is no "unhistorical" or "incredible" statement. It is not a "Pentateuchal myth." It is a sober matter of fact. We admit it is a very low view of the transaction, but it is just that view which nine out of every ten men in this prosaic country of ours are taking and discussing, very much to the discredit of the Bishop of Natal, and very little to the advantage of missions among the heathen.

Now let us see what Dr. Colenso undertook to do for his stipend, and then ascertain from his own words what and how much he refuses to do. At his ordination and consecration he declared his "unfeigned assent and consent to all things contained in the Book of Common Prayer;" and he engaged to conform to it in all the acts of public worship. On this solemn promise, he received institution, and became Bishop of Natal. He now declares that the Liturgy contains quotations from Exodus and Genesis of incidents, accepted therein as inspired truths, which he has proved to his own satisfaction to be recent apocryphal additions. The Noachian flood, and the passage of the Red Sea, the Passover in Egypt, the Exodus of Israel, the death of the firstborn, and other Mosaic records, incorporated in the Liturgy as historic truths, and used as illustrations of Christian rites and usages and sacraments, he can neither accept, nor read, nor believe. They are, in his judgment, transparent fictions, and he has the manliness to tell the world what he thinks. He declares that he will neither teach nor pray, nor in any way endorse such "unhistoric fables." This is not all. As a Bishop, he is bound by his office to exact from every candidate for ordination his "unfeigned belief in the canonical Scriptures of the Old and New Testaments." It may be very commonplace, on our part, to ask how he can require others to believe what he disbelieves himself. It seems to us that he has made it impossible for himself to continue any longer a Bishop. He admits that he can no longer fulfil his part of the contract. But does not this imply that the public can no longer fulfil its vulgar part of giving him money for doing the work of a Christian Bishop?

Why give a servant wages for not doing his work? Surely it is not an unepiscopal, as it is not an unchristian

Digitized by Google

maxim, that "if any man will not work, neither should he eat." We refuse to discuss the question on any high ecclesiastical, patristic, or transcendental ground, for we hold common honesty and moral integrity to be grounds enough. We treat this question as we know such a question would be discussed on the Exchange, in the corn-market, and in the shops and counting-houses of London; and we may depend upon it that the frequenters of those places, however bad theologians, are marvellously acute in their appreciation of bargains, and compacts, and covenants. It will there assuredly be felt that a morality is defended and practised by this Bishop which they would not endure a single day among themselves, and they will marvel to see upheld in a religious office what in a clerk, a servant, or an apprentice, would be punished by summary dismissal.

The Bishop of Natal not only repudiates the obligations of his office, but he deliberately advises clergymen, his subordinates, to break the law he is appointed to maintain. He tells them to "break the law and take the consequences;" while, with strange inconsistency, he breaks the law himself and refuses to "take the consequences." Were any other high officials to imitate the Bishop, and not only denounce the laws they were appointed to uphold, but instruct their subordinates to follow their example, we should get into inextricable confusion, or we should have to adopt very stringent measures. Were the colonel of a regiment to publish to the world that he repudiates half of the articles of war, and to tell his regiment that they need not observe them, would not a court-martial very soon cashier him? Were a judge to proclaim from the seat of justice that he will not pronounce certain sentences on convicted criminals, because he objected to certain laws and dissented from the penalties attached to them, would he be allowed to remain on the Bench? Shall, then, official integrity, a fugitive from the Church, be respected only in the army and in courts of law? Would it be for one moment deemed by any sane man, that the removal of colonel and judge, when convicted of such inconsistencies, would be a persecution? Is it persecution to insist upon men doing the duties which they have voluntarily undertaken to discharge, in return for certain guaranteed remuneration? Is it intolerance to insist on the Bishop of Natal either fulfilling his part of the contract, so long as the nation fulfils its part, or else resigning an office which he refuses to execute? If it were but a difference of opinion on some minor question, or some rubrical observance, or some infinitesimal shade of theology, charity and good sense might refuse to awaken a sleeping controversy, or to inflict pains and penalties for a merely speculative opinion. But toleration is abused when it is summoned to connive at a dereliction of specific duty with the retention of official emoluments attached to its performance. Let Dr. Colenso retire from his office, and renounce a service which he can no longer believe in; and though his opinions are refuted, he will then personally still receive that respect which in this country is never withheld from the man who, in deference to conscience, suffers or makes a sacrifice of his private interest. We may reverence the earnest man who courts martyrdom rather than give up his conscientious convictions; but Dr. Colenso is as yet no sufferer for conscience sake; he is certainly no martyr; and all the sophistry of his friends and apologists cannot hide the inconsistency of one who is not ashamed to draw a stipend for duties which he proclaims himself disqualified to fulfil.

In thus dwelling upon the specific obligations, and professions of belief, which the Church of England imposes on her ministers, we by no means contend that they should be forbidden to discuss such questions of detail as are raised from time to time by the advance of modern science, by a profounder critical investigation, and by a more extended acquaintance with those countries where the historic incidents recorded in Scripture took place. The temperate and careful prosecution of those inquiries is a duty which they owe to the truth. But when a chief officer of the Church imagines that he has discovered the falsity of an article to which, as the condition of his appointment, he subscribed in token of belief, he ought surely, failing to obtain from the Church an admission of his own views, to resign his post in her service.

LONDON MUNICIPAL REFORM.

IT is to be hoped that the discussion, which is now pending, upon the subject of the London police, will lead to a fresh consideration of the relationship which should subsist, in respect of other and more important matters, between the City and the rest of the metropolis. It is absurd enough that a small space, little more than a square mile, in the heart of the vast metropolitan district, should have its own police and its separate police authority. Such an absurdity could only be tolerated in consideration of thoroughly good management. But recent events have forcibly reminded us that, of the whole metropolis, only the same limited area—containing scarcely a twentieth part of the metropolitan population—enjoys the advantages and the decencies of municipal Government; and this brings up a larger question, the tardiness in dealing with which speaks ill for the courage and resource of our statesmanship. Besides the City, the metropolitan district contains seven Parliamentary boroughs, each of which, with one exception, has a much larger population than the City. Not one of these is a municipal borough; and their local affairs are at present inconveniently and inefficiently administered by parochial authorities, by boards established under special acts, or by the Home Office. Why are these districts without the system of administration usually enjoyed by town populations? Notwithstanding the reports of two Commissions, concurring, at least, in the recommendation of municipal government for the metropolis, no Ministry has yet ventured to raise this question. Indeed, the more limited object of modernizing the municipal institutions of the City has been pursued by successive Home Secretaries with a caution which seemed to court defeat; their half-hearted attempts, being met, as was to be expected, with earnest opposition, have, in every case, been timidly abandoned.

When the Municipal Corporation Reform Act was passed, the Commissioners upon whose report it was founded had not inquired into the state of the London Corporation, and the report upon the City was not presented until 1837. In this report the Commissioners proposed to apply to the City the rule as to boundaries which had been acted upon in regard to ordinary boroughs,—to enlarge, *i. e.*, the boundary of the old municipality so as to include the whole of the modern town. As the area of the metropolitan district (the Registrar-General's district) comprises 78,029 acres, and that of the City only 723 acres, while the population of the metropolis was, even in 1837, about eighteen times that of the City, it was not to be expected that this proposal should be generally acquiesced in. It was, in point of fact, most unfavourably regarded by some cautious politicians, who—whatever they thought of it as a measure of organization for municipal purposes—dreaded the political effects of organizing a parliament of the metropolis. No doubt the necessity for deciding upon this proposal was one of the reasons why, for so many years after the report, the Corporation was left undisturbed. The Commissioners had spoken very confidently. They could see no reason for the City being more favoured than the rest of the metropolis; and they could see no alternative but the extension of the municipality to the limits of the whole metropolis. They could scarcely anticipate, they said, that it should ever be seriously proposed that new municipalities should be created outside the City; for the common interests of all parts of the metropolis would not permit it, and that plan "would, in getting rid of an anomaly, tend to multiply and perpetuate an evil." Thus they wrote in 1837. When, however, nearly twenty years afterwards, a Liberal Government thought seriously of reforming the City, and appointed a Commission by way of preliminary, the new Commissioners adopted the very scheme which their predecessors had thus stigmatised. The Commissioners of 1854 were men of mark,—Mr. Labouchere (Lord Taunton), Sir John Patteson, and Sir Cornewall Lewis; and these Commissioners certainly gave weighty reasons for their opinion. They held that the vast area of the metropolis and its immense population—especially in comparison, area and population, with the City—made it so far exceptional that the rule applicable to ordinary boroughs, applied to it, would simply defeat the purpose of municipal institutions. London, they said, is so large, that people usually know only their own quarter of it, and the persons living at opposite sides of it have few or no interests in common. The two main conditions of municipal government—minute local knowledge and community of interests—must thus be wanting; moreover, with so large a population and the vast interests connected with it, the work of administration must be extremely difficult. To extend the municipality would, they concluded, be a doubtful service to the districts

Digitized by Google

now without it, and a certain injury to the interests now protected by it. They were at the same time strongly of opinion that a metropolis needs municipal institutions—needs them more than country towns—especially in districts which are rapidly extending; and with these views, the only scheme open to them was that of which the former Commissioners had thought so badly. So their proposal was that, the City retaining its present boundary, the rest of the metropolis should be divided into a system of municipal boroughs; their common interests being looked after by a Board of Works formed by representatives of the town councils.

We have now got a Board of Works, and we have had some good service from it; but, with two different proposals for the municipal government of the metropolis before them, successive Home Secretaries, even while attempting the reform of the City, have let this larger question alone. Why is this? Partly, no doubt, because some Home Secretaries have a genius for letting things alone, and Sir George Grey will hardly give us a Police Bill; but also because even the less ambitious of these proposals would involve much labour, would irritate many interests, and would therefore encounter much opposition, or, at any rate, cause much vexation and anxiety to the Minister who should bring it forward. There would be deputations without end to encounter, and interminable consultations with angry vestrymen, who would generally have more or less of right on their side. Moreover, the Corporation of the City could not be expected to desire any change. Make the City co-extensive with the metropolitan district, as proposed in the report of 1837, and we should have a Lord Mayor who would be all that foreigners are said to fancy the Lord Mayor to be—the head of a body representing vast interests, managing vast revenues, and wielding a great influence in the country. But erect the neighbouring districts into municipal boroughs, surround the City with mayors and corporations representing—as probably they mostly would—populations greater than that of the City, and it is impossible that the City and its officials should not sink considerably in importance. They could no longer so well affect to represent the capital of England, as they unquestionably do, in some public relations, at present. The Commissioners of 1854 expressed a hope "that the Corporation will continue, under an amended system, to possess abundant means, not only for purposes of public usefulness, but also for the exercise of a decent hospitality and splendour." From those who had not only proposed to cut down its revenue, but had struck, to the best of their ability, at its public position, this sounded much like irony. But if the City Corporation ceased to exist apart, it would certainly be an advantage for the whole metropolis to have a corporate representation, with increased efficiency of local management, a tighter control upon local expenditure, and improved experience of local self-government, of which, at present, Londoners have by no means too much. For this reason, we would not be understood as pronouncing against the idea of a great metropolitan municipality put forward in the report of 1837; but we think that the adoption of even the alternative proposal would be attended with great public advantage. Obviously, not the City only, but the whole metropolis, would suffer from the want of an organization suitable for representing it in public relations. And, after all, receptions and festivals fill no small part of our civic life. For such purposes a Lord Mayor of the metropolis would be incomparable, and that position would probably be sought by men who would fill it with dignity, honouring it as well as taking honour from it.

The few crotchetty people who are invoking against the impending Police Bill the name of local self-government, will find a fitter and ampler sphere for their favourite theory in its application to the metropolis. It is idle to talk of it in connection with an organization which has been condemned by every authority. It is well known that Sir Robert Peel would have included the City within the Police Bill of 1829, had circumstances been favourable to such a course; and the police of the City at that time, and for ten years afterwards, was in a condition which no admirer of order and the safety of the streets could regard without alarm and astonishment. It was local self-government run mad; for each ward of the City had its separate force of night-policemen, which was practically much the same thing as having no night police at all. The Bill of 1839, by which the City police was put upon its present footing, was passed in the face of a strong report from a Royal Commission; and the Commissioners of 1854 found that fifteen years' experience fully confirmed the views of their predecessors. Even Mr. Whittle Harvey, the late head of the City police, was constrained to admit that there would be, on the whole, advantages from combining the City with the Metropolitan police force; and the nature of the doubts which he professed about the measure show, better than anything, how little the City can have to say for itself. He feared nothing but that the Commissioners of the Metropolitan force would not send men enough into the City, and that they would not establish a central office in the City; but Home Secretaries and Chief Commissioners know they are answerable to public opinion, and dare not, even if they would, do their business inefficiently. It is not on account of such cobwebs that we should postpone a measure which the public welfare imperatively requires. On the other hand, the control of the police being in the hands of the Government, is a reason, in addition to the other reasons which have been suggested, for providing local organization through which the Government may be told authoritatively what the interests of the public demand.

THE COTTON DISTRICTS AND EMIGRATION.

The painful events in the north have impelled attention anew to the future which lies before the cotton operatives, and almost simultaneously with the intelligence of the riots at Staleybridge and Ashton, there has appeared in the *Times* a letter from Mr. Edmund Potter, in which he discusses and condemns any proposal of assisted emigration as a scheme of relief. Mr. Potter's letter is important, if only as an indication of the jealousy with which the cotton manufacturers, and those closely connected with them, view any suggestion of removing a portion of the factory workers. The extent of the proposals which had been made scarcely seems to warrant his elaborate argument, nor has there as yet been any suggestion of that which he more emphatically condemns—a system of emigration aided by an imperial grant. A few of the factory workmen themselves were desirous of exchanging their present condition for the chances of a colony, and they had applied to the Mansion House Committee for a grant from the funds at their disposal. Some members of the committee doubted whether the scheme was judicious, or whether they had power to apply to such a purpose the money entrusted to them by subscribers: the *Times*, in the exercise of its discretion, recommended them to accede to the proposal, and argued that every subscriber would support them in doing so. This discussion on the appropriation of funds raised by private benevolence, an appropriation which Mr. Potter admits he has no right to condemn, filled him with alarm, lest it should be followed by parliamentary grants for a similar purpose.

It is a matter of regret that the real questions at issue have been so much obscured by the introduction of irrelevant matter. Some writers have declaimed about the reckless extension of the cotton trade, and the criminal indifference of manufacturers to the insecurity of the source of supply. Both charges are founded on a mistake, and are capable of easy refutation. Mr. Potter disposes of the first, and if he is less successful in meeting the second, it is of little consequence, as neither has, in fact, any bearing on the present problem. What that problem is may be very simply stated. An English province has been occupied for a good many years in importing from other countries a supply of raw cotton at prices varying from 4d. to 6d. a lb., and, after manufacturing this raw material, has exported about five-eighths of the produce. A large quantity of machinery and an army of workmen have been collected in the province and devoted to this industry. Suddenly the supply of two-thirds, or, more correctly, of four-fifths, of the raw material is stopped. Its price rises rapidly and enormously. The machinery becomes disused, and from four to five hundred thousand workers are deprived of their usual work and wages. Within a year two millions and a half of money have been raised towards the support of the labourers reduced to this forced idleness, of which about a million and three-quarters have been contributed by men of good will in all quarters of the globe. The year is about to expire, and the question is, what plans had better be adopted for the time before us? It is conceded that for some time to come the loss of wages will be little abated, and it cannot be hoped that spontaneous benevolence will furnish equal aid through a second year. A compulsory tax is unavoidable; how shall it be raised, and how shall it be expended? Anyone who will review the conditions of the problem, will see at once that it is impossible to answer it in any fashion without first determining

Digitized by Google

what hope there is of obtaining a greater supply of raw material. Could the missing cotton be restored to us three months hence, a very different line of conduct might be adopted from that which would be necessary if we knew we should be kept without it for three years. Putting aside for the time the consideration of the old source of supply, what can we expect from other quarters? The past year has shown us that cotton can be obtained at fancy prices from every quarter of the globe, but a moderate price is an essential condition of advantageous supply. But even at the enhanced prices which have obtained during the past twelve months, the increased importation of cotton from other quarters than the United States has been limited, and that increase has been obtained—not by a larger production of cotton, but by diverting to the English market raw material usually consumed elsewhere. The cotton imported from the East Indies in 1862 was double that imported in 1860, but the increase in the exports from India has been much less, and the increase in the quantity raised in India still smaller. The Liverpool market has drained India of raw cotton which had hitherto been consumed within it, or exported still farther east. If the American contest be prolonged, we cannot hope for a supply during the next twelve months of more than half the normal importation. But at what prices can this half be obtained? This is the most important part of the calculation, but, unluckily, it is that on which we are most in the dark. The *Times* has of late very properly insisted that attention must be devoted to this element of the horoscope; for, as was often said in our paper, during the past summer, a condition of the preservation of the manufacturing population of Lancashire and Cheshire is a supply of twelve hundred million pounds of cotton at a price not exceeding sixpence a pound. We are, unfortunately, here reduced to conjecture. The supply of cotton had, up to the American crisis, been comparatively steady; and there are other reasons why it is impossible to educe from experience any connection between a failure of supply and the corresponding increase of price. Raw cotton is capable of preservation for an indefinite time, and the consumers can for a considerable period abstain from a demand of the manufactured article. It follows that the enhanced prices which have followed on a bad crop in the States furnish little help in discovering the price which must result from a *continuous* diminution of supply to the extent of one-half. We may, however, take it as nearly certain that, though the present price of cotton can scarcely be maintained, yet it will fetch such a price that the total cost of the imported material will suffer no diminution. If the supply is diminished one-half, we may confidently expect the price will be doubled. We have left out of consideration the prospect of peace in America. The truth is, there is no immediate prospect of such an event. Although we on this side of the Atlantic become daily more assured of the impossibility of the attainment of the object for which the North is fighting, and recognize no object of the contest beyond the determination of a boundary, yet we have been of late disabused of the notion of returning peace, which a month or two since seemed possible. Democrats and Republicans are as one on the question of the prosecution of the war. The zeal with which the British nation supported Mr. Pitt in his war with France is weak compared with the resolution of the Federals to restore the Union. Mr. Fox and his friends always furnished a minority small in numbers, but eminent in position, who counselled peace. Only one man in the North has ventured to adopt such advice. There is plenty of criticism on the way in which the war has been conducted; but opposition to the war itself there is none. We should be deluding ourselves with vain hopes if we calculated on a pacified America as a spectacle soon to be seen; were it otherwise, the prospect would furnish us with little consolation. The South restored to the Union must exist in a state of armed occupation, and the cultivation of cotton would be attended with infinite difficulty. The South, severed and independent, would be without money, without capital, crippled with debt, either repudiating its paper-money, or slowly struggling to redeem it; with jealous neighbours, and above all, with an underground railway so near that its labour power must be closely watched to prevent its escaping. Whether it sought to restore its finances by an export-duty on cotton, or by internal imports, it is clear that the staple industry would have to bear the brunt of the burden, and that the produce which reaches us would be a diminished quantity, and at an enhanced price. Add to this, that as this source of supply was opened, others would close. The increase from other quarters, stimulated by the abnormal prices of the past year, would subside when that stimulus was withdrawn; and, on the whole, we may safely conclude that a very long period must elapse during which the cotton imported at Liverpool must be much reduced in quantity and enhanced in price. What is the prospect then awaiting the manufacturers and spinners of the north? Discard for a moment the consideration that the quantity of raw cotton is diminished. Were it otherwise, we know that an increase of price in the raw material is never accompanied by a corresponding increase of price. The spinners and consumers must divide amongst them the loss involved in an increased price. But here the quantity is also lessened, and we have a reduced supply of raw material exposed to the competition of an excessive supply of mill-owners and workmen. Each party will confess that half a loaf is better than no bread. The mill-owner would rather work without profit, than suffer his machinery to rust through disuse; the factory hand will submit to reduced wages rather than "clem" in idleness. Both classes must suffer and dwindle, and the weakest must go to the wall. This is not all; every feeling of humanity will interfere to prevent the workmen from dying of starvation; those who can get no work will have to be fed; those who get a little at the price to which competition must reduce it, will have to be aided. It is too possible that the redundant manufacturing population may pass through such a declension as agricultural labourers passed through under the operation of the great war. Mr. Pitt's Poor-Law Act was brought in at such a crisis as the present. The system of scales and allowances which it introduced so corrupted the labourers that it required the New Poor Law to get us out of the stye. But what prospect of relief does the scheme of emigration give us? It must be very limited in operation, it must be very expensive in actual money spent, it must involve the further expense of an abandonment of the labourer's main capital, his acquired skill. Nevertheless, it may be desirable to adopt it. At the outset, it must be understood that this is entirely a labourer's question. It may be and must be painful to a manufacturer to see his best hands passing off; although, considering the small extent to which emigration can be carried, and the rapidity with which the labour-market can be supplied with fresh materials, we do not think the manufacturer has much to fear. But it is a labourer's question,—that is to say, it is not a question to be decided by the golden dreams of colonial plenty, which the half-fed and idle mechanic may, like the sick landsman at sea, see swimming before his eyes,—but it is a question to be decided with strict reference to the condition of the labourer's position. The workman has to put before himself the abandonment of his skill as an operator, the expense of emigration, his want of skill, and possibly his defect of power in manual labour; and against this the prospect of half work and half wages at home. As he takes the expense of emigration into account, so he must take the expense of supplementary assistance at home. On the whole, it would probably appear that a workman severely scanning his own position would find it better, so far as he himself is concerned, to remain at home. But there is another consideration: it is impossible to keep the operative class *in statu* until they are gradually reduced to the population necessary for carrying on the home industry; the class will maintain itself in numbers, even if it does not increase. The spinner who considers the fate of his children after him will probably think that, though he will have to relinquish much, and to endure hardship as a colonist, he will have redeemed his offspring from greater evils.

No considerable emigration can occur without government aid; but, on the other hand, as Mr. Potter argues, the sustentation of the workmen at home during the next winter must require government aid. Nor is the operative without a claim to this assistance. It cannot be denied that he is a victim to the preservation of the law of commercial blockades, and is so sacrificed for the good, real or supposed, of the whole community. But we cannot enter on this subject at the end of a long article.

THE GARCIA GAMBLING SCANDAL.

To the foolish eyes of the young and the inexperienced, all over the world, Paris seems always an Elysium where happy spirits may wander as they please, draining to the dregs the cup of pleasure and extravagance and gaiety. The absence of all restraint, the endless possibilities of adventure, and the atmosphere of thoughtlessness and wildness which seems to pervade the very streets of the great city, make Parisian life for the young Frenchman of the provinces an imaginary and ideal existence, where all, even crime, is merry and joyous. The sombre temperament of Englishmen itself is affected by the air of the Paris Boulevards; Americans, who, even more than ourselves, live in a rush of business and excitement, are still fonder of the place. Paris, says the proverb, is where all good Americans hope to be taken when they die. Hither comes *la jeunesse dorée* from every quarter of the globe to banish reflection and to taste of the life which has been painted so brightly beforehand in the wild romances of all European

Digitized by Google

literature. Nor do they find that Circe's wine is less luscious than they have been told. In the quiet estimation of experience and wisdom it would seem as if the sentiment and the idealism which writers of the "Camelia" school cast around their descriptions of the follies of youth were almost too transparent and fictitious to deceive anyone. It is not so altogether. Life at Paris probably is very much what it is represented. While it lasts we may be sure that it does in reality contain that admixture of romance and gaiety which in France is often found in the strong wine of epicureanism and vice. It is not true to suppose that there is no tangible enjoyment to be found there. Folly contrives to enjoy itself very well. A smiling face may often hide a cankered heart, but the truth is that many of the hearts in Circe's temple are not cankered or corroded by anxiety and care. The rod of the enchantress does not change her votaries into unhappy and discontented men—it makes of them happy beasts. The wisest of philosophers addresses his warning voice to the wise, and not to the foolish. He does not tell us that pleasure is not pleasure, but that all pleasure is vanity.

When the curtain is publicly lifted from some scene of Parisian frivolity and dissipation, as it has been lifted more than once of late, we find behind it the spectacles that we have been taught to expect, much as they have been described by the novelists and the poets, neither more degraded nor more refined than they are painted. Aspasia is as beautiful as her portraits: her *salons* are as fashionable, her reunions as popular and glittering. The nobles of the land are at her feet; historic names are upon the cards in her ante-chamber; the *ancienne noblesse* of France, driven from the Senate and the Legislative Assemblies by an Imperial parvenu, seem to have emigrated into her boudoirs. Wit and mirth and fashion may possibly be found collected under her roof; for Attic salt is not wanting at the festivals of Corinth. Many an Alcibiades, who has never had the ambition to be a statesman; many a poet, who has never taken the trouble to sing; and here and there an embryo philosopher, who has never chosen to reflect, mingle, and make merry in the crowd. The dice rattle and the wine flows. The prodigal sons are liberal and the queens of this society are kind. To the minds of *la jeunesse dorée*, these seem to be the suppers of the gods—*noctes cœnæque Deorum*. A duel in the morning or a fortune ruined over night does not detract from the charm, while it adds to the excitement of the scene. M. de Miranda is there, from the household of the Queen of Spain, and the Duke de Gramont Caderousse, his sword still stained with the blood of a plebeian victim. The nobles, the De Brimonts, and the De Poie's, have come to share in the amusements of the evening. Never has the demi-monde been more brilliant, or its triumph more marked. It is the occasion which Lais has chosen for her entry into her new hôtel, and the slaves who walk by her chariot-wheels come from the best families of France, from the noblest patrons of the *Cercle Imperial*, and the most elegant leaders of the Jockey Club. It is no shame, as the poet says, for Greeks and Trojans to undergo anything in the cause of such a queen. The sounds of revelry which lasted through half the night might have been prolonged into the frosty morning, had it not been that a wasp was found lurking in the honied bowers. In the midst of the merriment a tumult suddenly arose that some Clodius had been discovered cogging the dice. The aristocratic assemblage was engaged at baccarat tournant, and M. Garcia, the lion of Homburg and of Spa, was amassing a large fortune over his cards. M. Calzado, director of the Italian Theatre, was by his side, sharing his gains. Suspicion fell upon the honest pair. The cards were seized and found to have been marked. The plunder was discovered on the persons of the two notorious winners, who in vain attempted to deny their fraudulent partnership, to disavow their guilt, and to conceal the evidence of it. Fear of a scandal prompted some of the losers to desire that the matter should be hushed up. But things had gone too far. The arm of the law interposed, the scene suddenly shifted, and the actors in the spectacle found themselves in the presence of a Power in the background, which was no less than the Tribunal of the Correctional Police of Paris. A month later and the same fashionable group reunited; but this time it was in the court of justice, to listen to the trial of Calzado and of Garcia. The seats set apart for the public were thronged chiefly by the heroes of the fashionable world and the heroines of the demi-monde who had been collected at the now notorious supper-party. The experiences of the night were detailed in turn by Aspasia and her noble friends. M. de Miranda related his losses, and some few anecdotes of the earlier life and history of one of the confederate swindlers, one of whom had wisely disappeared without waiting to be put upon his trial. The result was that Calzado was condemned to thirteen months, Garcia to five years imprisonment, and both to joint penalties amounting in the whole to some two thousand pounds.

We may reasonably believe that the cloud which descended on the supper-party will not be of any lengthened continuance. The morality of the Jockey Club and of the *Cercle* has nothing hypochondriac about it. Beyond the inconvenience of a temporary scandal, the reunions of the Avenue des Champs Elysées will suffer nothing. The *Cercle* will be as gay, or gayer even than before, now that the troublesome knights of industry have fallen victims to the outraged justice of the country. Daylight, cold and unpicturesque, has indeed been let in to flood the spectacle. But daylight does not make the scene seem hollow, and unreal, and feverish, as it might if the scene were a picture of Hogarth's, instead of being an everyday scene of Paris life. There is nothing unreal about vice in the salons of the Parisian coteries. The cheeks which are bright and rosy overnight do not turn to paint and pallor in the morning. Black care does not sit upon the crupper of the horsemen and horsewomen who flutter gaily in the fresh spring sunshine up the Champs Elysées to the Bois de Boulogne. The demi-monde has nothing to be ashamed of, for the demi-monde has become the recognized centre of Paris life. Aspasia hardly blushes when she sees her name printed in the account of yesterday's proceedings. The dukes, and the marquises, and the viscounts start as pleasantly as ever on their daily round of pleasure and amusement. Lent will soon be over, and the occupations of the early summer will begin, with its breakfasts, and its promenades, and its questionable routs. *Fais ce que fait tout le monde, advienne que pourra.* The officers of justice have been called in to regulate, not to break up, the riot of the feast. They are gone, and the rogues are gone, and the harlots and the dupes may resume their banqueting and gambling. No philosophic gloom will fall upon a single soul; no celestial prodigies will occur to trouble those glorious suppers of the suitors; no pale Ulysses will be there, with his travel-worn air and his pre-occupied eye, to fling a chill on the festive merrymakers. The world has been admitted to watch them; and the world has again gone on its way, without troubling itself to censure and reprove. Curious but not censorious eyes looked in, and have moved on again. There is no cause for self-reproach or for regret. The sentiment of shame or modesty does not often come to harass or to annoy the Avenue of the Champs Elysées.

The cynics of the Continent reply—and reply with truth—that English society below its surface contains the same elements of vice which present themselves so conspicuously on the very forehead of the society of Paris. London has its temptations, its orgies, and its crimes; and one need not dig so deep to find them. We are reminded that folly is becoming even amongst ourselves more ostentatious and less reserved; and vice often now-a-days forgets to pay to virtue even the homage of hypocrisy. As England becomes more cosmopolitan in its manners and its ideas, it loses something of that old-fashioned austerity which kept Englishmen, not indeed from vice, but from a public recognition of vice. The public prints discuss not without indelicacy and freedom the latest fashions and habits of that class which is the canker of all honest society. Certain names and certain personages have become a byeword amongst us; and the acknowledged and ostentatious patrons of the demi-monde are promoted to high places in the Government of the State. This is a free country, and it would be dangerous in the highest degree to pry into the private life or morals of individuals, provided that they keep within the limits which the law has assigned to them. How men live—so long as they live according to law—is a matter for themselves and for their consciences. But there is an openness of immorality which is unblushing and profligate; and upon such public immodesty public opinion has a right to set its brand. The late revelations of Paris life which have been given to us are startling, not because English habits are more virtuous, but because vice and folly abroad seem to be unaware how gross such revelations appear. It is a serious offence in the rulers of this country to entrust places of honour and power to men who have hitherto distinguished themselves only by their folly and their profligacy. A debauchee may administer a public office wisely and well, but the debauchee who has been notoriously and avowedly a mere pursuer of pleasure, disqualifies himself, for a time at least, for political promotion. It is not because he is immoral, but because his immorality is conspicuous and open. At the root of it may be nothing worse than the carelessness and thoughtlessness of youth. But a period of purgation ought to intervene between years of levity and political distinction: otherwise honourable names would be tarnished by being connected with names fit only to be forgotten. The public cannot directly punish private improprieties. But certain penalties ought to be inflicted

Digitized by Google

when the offender has a station of notoriety, and one of these should be temporary forfeiture of public confidence. The most notorious are not, it is true, invariably the most vicious; but where public morality is at stake, it is not so much vice as the appearance of vice that is discreditable. For the sake of themselves and their countrymen it is to be hoped that those who are in authority will not forget this. The recent scene at Paris has a moral for this country. There are Aspasias here as well as there, who can boast of acquaintances as noble and as fashionable. France does not seem to feel that there is an incongruity in the avowed juxtaposition of noble names with the names of the demi-monde. Let us hope that the time is far distant when Englishmen will cease to think differently.

PHOTOGRAPHY AND BAD TASTE.

Every new art, unfortunately, is sure to bring out a vast amount of bad taste on the part of its ignorant patrons. In these days everything is cheap—at least, most things are capable, so to speak, of being issued in cheap editions; and this tendency is not to be regretted. It is, indeed, one of the best results of civilization that the doors both of knowledge and pleasure are widely thrown open to the masses. The invention of printing first cheapened books; the development of science has cheapened the comforts and even the luxuries of life, so that a humble workman may now live in a manner far superior, in many respects, to the domesticities of a prince three hundred years ago. Art manufactures are making even our cottagers familiar with forms of beauty that will soon displace the monstrosities of former days; and schools of art are preparing the way for a still further extension of the principles of good taste. But it must be owned that the sudden development, in one particular direction, of a taste which as yet is but half informed, has led to much offensive vulgarity, and threatens, if it be not checked, to lower the standard of truthfulness in the popular mind. A large supply of anything, when combined with cheapness, as it is pretty sure to be, generally brings a large demand; and the demand, thus instantaneously and artificially stimulated, is certain to be attended by a considerable amount of ignorance and pretence. People require time to be educated up to the point of knowledge and refined perception. Those who supply them are often equally in want of correct ideas, and at any rate have an interest in producing that which the thousands can most readily appreciate; and thus the new art is for a time degraded. It was so with the invention of printing. For the first century or two after the great discovery of Faust, learned men were led to debate whether or not the printing-press had really proved a benefit to mankind; those who held the negative proposition basing their argument on the assertion that the labours of the compositor and pressman had given greater facilities than before existed for worthless scribblers to inflict their nonsense on the reading public. This evil, however, was one of those which always correct themselves in due time; and so it is with other mistakes of the same character. But in the meanwhile it is as well to see how we stand in regard to the æsthetic and intellectual uses of the most recent inventions.

Photography is an art peculiarly liable to be perverted to base uses. It is cheap (that is to say, when badly executed), and therefore appeals to a large class of uninstructed people; it is singularly well adapted to minister to personal vanity, and to keep pace with the incidents of the day; and it is capable of producing, especially when combined with the stereoscope, effects which are more startling than artistic in their nature. All these facts form a perpetual incentive to the photographic manufacturers to lower what might otherwise be esteemed one of the fine arts, to the level of clap-trap, and sometimes to far worse uses. The Society for the Suppression of Vice can tell us something of one of the purposes to which photography is applied, and we know not how many cartloads of immoral slides have been taken away from the sombre dens of Holywell-street and Wych-street. The police make a seizure of this kind every now and then; but there can be no doubt that the trade still flourishes, because a demand exists for these wretched incentives to evil. Then there are the photographs which may be seen even in respectable shop-windows, and which just dally with questionable situations—just faintly suggest ideas of impropriety. Let us hope, however, that both these classes of photographic pictures appeal to a comparatively limited class of buyers. The majority of bad photographs are reprehensible on the ground of taste rather than of morality. Considered in this way, the detestable portraits, executed "in this style" for sixpence or a shilling, are really a nuisance, though the annoyance is one which cannot be abated by any other means than instilling into the mind of the community better notions of art. Nothing can be more natural or commendable than that John Brown should wish to possess a "c'rect likeness" of himself, to be presented to Mrs. Brown, or to Jemima Higgins, his intended bride, or, perhaps, to his mother. But it is surely not a good thing that plain John Brown should be induced by the "artist" to assume the aspect and bearing of a brigand in broadcloth; or of a poet, Byronic and sentimental; or of a statesman, revolving in his anxious brain the fate of empires and of ministries, the consolidation of our power, and the liquidation of our National Debt. Nor is it at all desirable that when Jemima Higgins, in her turn, honours the "artist" with a sitting, she should be forced to take upon herself a Siddonian mien, as though just uttering the words, "Give me the daggers!" We say nothing of the cruelty inflicted on the general public by the wholesale exhibition of these monstrosities (framed and glazed) at the outer doors of the "studio;" or the annoyance of being pursued, for half a dozen yards along the pavement, by a loud-voiced, ruffianly-looking fellow, who bullying invites you to come in and be "done," and who, but for the fear of the police, would probably fight for the possession of your person, carry you into his den by main force, and "do" you in such way as he might consider best suited to your particular style of physiognomy. These are matters of social arrangement, which, according to our English custom, must be left to settle themselves. But we must, on artistic grounds, protest against cheap photographic likenesses. It may be said that, if they satisfy their purchasers, and enable poor and humble people to gratify a vanity, always harmless, and sometimes associated with affectionate thoughts of others, they do all which they pretend to do, and even answer a good end. This is very true as far as it goes; but if, by educating the perceptions of the lower orders to a better knowledge of what is truthful and reasonable, the more cultivated classes can save them from such nightmare phantasms of bad taste, it would surely be a desirable result. Vulgarity is not a necessary element of cheapness; it is only a necessary result of ignorance. The history of the last five-and-thirty years has shown what excellent literature may be published at a trifling price; and when good art is equally appreciated with good writing, art producers will find themselves obliged to seek for popular custom by a higher style of conception and execution than they at present display in the cheapest class of their works.

But it is not merely in the humblest stratum of society that bad taste in photography finds a ready market. It flourishes abundantly in the middle class. Every street passenger must have noted those portraits of Royal personages with which the shop windows have recently abounded. Probably he has got a round dozen or so of them in his album. He is a loyal man, and wishes to have about him what he considers authentic likenesses of the sovereign, of the Prince and Princess of Wales, and of the other members of the family that reigns over us. Even if *he* does not care about such matters, his wife and daughters do, and the photographs must be had. Besides, they cost only a shilling each, so that for a guinea or two we might almost provide ourselves with illustrations of the whole "Almanach de Gotha." The photographic artists of Belgium know where their most numerous customers are to be found; and Brussels supplies England with the means of gratifying her curiosity in this respect. Paterfamilias buys a heap of shilling *cartes de visite*, and fancies that he has got the veritable effigies of Royalty. He does not know that a vast number of these supposed portraits from the life are "cooked up" by foreign artists, whose main object is to make everything look pretty and sentimental. The result is often miserably false and bad. Here, for instance, we have lying before us a card which contains portraits of the Prince of Wales and the Princess Alexandra, issued several weeks before they were married. His Royal Highness sits in a chair, while the Princess stands over the back of the chair, with her two hands resting on his shoulders. Pretty, is it not?—sentimental, sweet, and lover-like? Very—only not quite probable, or in the best taste. That a young lady may have stood, in that attitude of tender watching, at the chair of her future husband, is likely enough,—but she would never think of being photographed at so confiding a moment. The lover would certainly object to the artist "posing" his intended in any such way, and the lady herself would object to it with still greater vehemence. Can Paterfamilias possibly believe that the Prince and Princess allowed themselves to be shown after this fashion to the general gaze? Yet we believe that this particular *carte* has sold enormously, together with its companion, in which the position of the figures is reversed. Then there is another photograph, representing our widowed Queen, contemplating a portrait of the Prince Consort, with the Royal children grouped, in the manner of a tableau, around her; and there is another, still more theatrical,

Digitized by Google

depicting the Queen and the young Princesses wreathing a bust of the departed with festoons of flowers. Within the last few days, we have even been introduced in this way to the very death-bed of Prince Albert! The publisher thinks the photograph will be an "attractive, though sad" memorial; and he is probably well assured of his ground.

It is quite lamentable that any one should believe these fancy pictures to be photographs from life, or real scenes; yet we doubt not that they are generally so accepted. People are actually so ignorant as to suppose that her Majesty, who has withdrawn herself from public life ever since her great affliction, would have permitted a photographer, for his trading purposes, thus to invade the very privacy of her grief.

The manufacture of these photographic impostures says little for the honesty of those who produce them; and it also suggests the existence of a great deal of bad taste in the English public, or these articles would not obtain here so large a sale as they do. But for the existence of that bad taste, the untruthfulness of such sketches would at once be detected. They are thought, especially by women, "pretty" and "interesting;" and the gross improbability of their composition goes for nothing. They are not beautiful as works of art; they are not truthful in any sense; but, like Packwood's razors, they are made to sell, and they *do* sell. The Belgian artists know our weakness, and find their own strength in it. A people possessing a widely diffused perception of what is artistic, would not be bamboozled by such false pretences; the power of apprehending the highest forms of art being one with an instinctive sense of verisimilitude. The strange part of the business is that we English, despite our dullness in matters of art, should not perceive, by the mere strength of our honest love of matter of fact, the absurdity that is palmed off on us. But when the matter-of-fact man takes to art in any form, he is generally best pleased with that which is false. The artistic world being an utterly strange world to him, he makes the mistake of supposing that untruthfulness is the law of its existence. He demands "effect" above all things—something that will give him a sensation beyond his ordinary round of ideas; and whatever does this commands his enthusiasm and his patronage.

CONTINENTAL TELEGRAPH MESSAGES.

A LIVELY correspondence in the *Times*, between the Secretary of the Submarine Telegraph Company and one of its customers, with respect to the delay of a message from London to Florence in January last, invites us to examine the actual regulations for the despatch of English telegrams to the Continental States. The gentleman who humorously signs himself "A Tortoise," and dates his letters from "The Slow Coach Office, Sluggard Square," might naturally be astonished when he found that, while the postal conveyance from London to Florence is accomplished on the fourth day, ten days were occupied in transmitting a message which ought with proper working along the lines of wire, to have been delivered within three or four hours. Mrs. Tortoise, whose name is Gallicised into "Miladi Tortue" by the gallantry of the Italian officials, though she did not arrive till the 17th in the fair capital of Tuscany, where the marital communication on the 7th had expected to find her, seems never to have received it at all; for she left Florence on the very day of her arrival, at an earlier hour than that at which the laggard message came in from Milan. In the meantime, she had got a letter from her husband, and he had got an answer from her. This will never do; and the explanation proffered, two months later, by the Continental Telegraph authorities, with their refusal to hand back to Mr. Tortoise the money which he had prepaid for their services, is most unsatisfactory. The blame, in this particular case, would appear to lie with the Swiss Administration; for the telegram reached Paris in four minutes from London, and it was safe at Lucerne before seven o'clock in the evening of the same day. There is a telegraphic line over the St. Gothard pass, with seven or eight stations between Lucerne and Milan; but an Alpine storm had swept away the posts and wires at some point along the mountain road, and the office in Switzerland, following its rule in such a case, thought proper to commit Mr. Tortoise's message to the ordinary post, under cover addressed to the nearest station-master in Italy whose portion of the line was in working order. As it happened, the St. Gothard road was for some days not only disfurnished of its telegraph apparatus, but impassable for the carriage of mails; hence the letter from Lucerne took a whole week in getting to Bellinzona, the first town on the southern side of the Alps, and was there again put into the post for Milan. It is probable that a few hours may also have been lost in telegraphing from Milan to Florence; but the main cause of delay was certainly the conduct of the authorities at Lucerne, or rather the faulty system of managing this department in most of the Continental States. This is a matter of so much commercial and political importance that we may now take occasion to remark upon it, with some practical suggestions of amendment.

It is known, perhaps, to all our readers, that all over the Continent, instead of being the property of private companies, as in this country, the lines of telegraph belong to the Governments, as well as most of the lines of railway, and that their mutual accommodation is prescribed by diplomatic conventions, like the postal treaties between foreign States. Throughout the French empire this business forms a special department of the Ministry of the Interior; and its regulations, collected in several volumes which are published from year to year, are sufficiently complicated and precise. The German-Austrian Telegraphic Union, which has its headquarters at Berlin, extends over not merely all the States of the German Federation, but the whole of the Austrian Empire, including its Venetian, Croatian, and Transylvanian provinces; thus covering a vast space of Central Europe, from the Belgian to the Turkish frontier, and from the shores of the Adriatic to those of the Baltic Sea. A uniform set of regulations for the management of this great network of telegraphic wires, which traverse so many different States, is printed in the German language, and enforced by the superintendence of the Prussian Government, under treaty with its Federal neighbours. The kingdoms of Belgium, Denmark, Italy, and Spain, the Republic of Switzerland, and other independent sovereignties, have each its own separate administration. The powers of the State, in respect of this monopoly, are nowhere conceded to private adventurers, so far as concerns land telegraphs, but are reserved as jealously as the control of the Post-office, or the sale of tobacco, or any other item of fiscal revenue, deemed indispensable to the budgets of Continental rulers. Between themselves it has been usual for the Governments of *pays limitrophes*, that is, those territories which border upon each other, to enter into certain stipulations or working traffic arrangements in this matter of telegraphic communications, but they have no direct dealings with the other telegraphic systems, which are separated from them by an intervening foreign administration.

The directors, therefore, of an English Company, such as the Submarine or the Electric Telegraph Company, must be content with such arrangements as they can make with the nearest Governments beyond the Channel or the North Sea, and leave it to those Governments—the French, the Belgian, the Dutch, the Hanoverian, or the Danish—to provide for the further despatch of messages sent from London. The office here engages to put upon the Continental telegraphs any messages entrusted to it in London; just as the South-Eastern Railway Company issues tickets for the conveyance of passengers over the foreign lines of railway, as far as Geneva or Vienna. In the case we have just noticed, it was the Vicomte de Vougy, Imperial Director-General at Paris, who had, at the instigation of the Submarine Company's Paris agent, to call the Swiss administration to account for the delay of Mr. Tortoise's message; and it was for M. de Vougy afterwards to insist on the repayment of the Englishman's money, or that portion of it at least which belonged to the telegraph in Switzerland. We do not, however, dispute the claim of Mr. Tortoise to the reimbursement of the whole sum, 19s. altogether, which he had prepaid at the office of the London Company; that being a matter for the English law to decide, having regard to the contract, the guarantee, or the agency, which may have been undertaken by this Company, as to the further transmission of messages beyond its own lines. But it should be well understood, that redress for such grievances as Mr. Tortoise justly complains of must ultimately be obtained from a foreign authority, with which the English Company have no immediate correspondence; and that it is not in their hands, but in those of the French administration, to amend, if necessary, the existing arrangements for sending on their despatches through Switzerland, Italy, and Spain; and wherever, from the failure of such arrangements, an English customer has suffered damage, the appeal can only be made to conventions between those countries and France. The same remark will apply to those messages which go *vid* Belgium. We believe that this department is very well managed, upon the whole, by the French and Belgian Governments. The want of punctuality and accuracy in foreign telegraphs is felt in a proportion exactly commensurate with their distance from our own shores. Those of Spain, Italy, Greece, and Turkey cause the most trouble and disappointment, both from their delays in forwarding or delivering the messages and from blunders in copying them. The submarine

Digitized by Google

lines of the Mediterranean, between Sicily and Malta and Alexandria, being under English management, work very well.

In reference to the case of this message from London to Florence, it strikes us that there was no obvious reason why the French Administration should have sent it through Switzerland at all. From Paris to Milan, by way of Savoy, the Mont Cenis road, and Piedmont, there is a telegraphic communication in about two hours. The authorities at Paris ought to have been duly apprized by the Swiss management of the havoc caused by the storm, which had made it impossible to send messages for Italy beyond Lucerne. We find in the Imperial decree of April 12th, 1856, which embodies the convention still in force between France and several of the neighbouring States, Switzerland being one of them, a clause obliging each Government, whenever it shall, for its own convenience, put a temporary stop to telegraphic communication along its own lines, instantly to inform the other Governments of it; but we do not find any similar provision for the case of an accidental interruption. This seems to us a very grave defect in the international system. Switzerland was, in fact, obtaining money on false pretences if she purposely concealed the fact of the break-down of her Alpine telegraph from customers in Paris and London, who paid her for that service which she was unable to perform. There is another clause in the same convention which might probably be quoted as justifying the authorities at Lucerne for the way in which they disposed of this message when they could not send it on by the wires. It is clause 13, which directs that in such a case the station-managers shall send on by next post, or the next railway-train, a copy of the message, addressed to one of the stations on the further part of the line, beyond where the interruption has taken place. But we think it scarcely needs remark that the more useful course would always be, upon such occasions, to inform the senders of the message, behind, that the telegraph has ceased working from a certain point, so that they may send it, if they please, by a different route. If the Lucerne people, when they got Mr. Tortoise's despatch at seven o'clock in the evening, had signalled to the Director at Paris that they could not pass it over the Alps, it might have been put on the Lyons railway line, and safely and speedily delivered at Florence. The stupidity of their adherence to routine, in this instance, was enhanced by their probable knowledge of the state of the roads, as well as of the telegraph line, making them pretty well aware that the posted letter would undergo a considerable delay. In these circumstances, it is really provoking for Mr. Tortoise to be told, in reply to the demand for reimbursement of his money, which M. de Vougy has addressed to the Swiss management on his behalf, that they allege *le cas de force majeure*, or the physical impossibility of performing his errand, in support of their refusal to allow him what he had prepaid. So far, indeed, as the exceptions are to be inferred from perusing the rules upon this matter, they may plead clause 30 of their convention with France. It says, that the whole of the money shall be repaid, "in cases where the message has not reached its destination through the fault of the telegraphic service, or has been so much defaced and altered (*dénaturée*), that it does not fulfil its purpose; or lastly, if, from some cause or other, it arrives later than it would have done by the post;" there is, however, a general exception for the *cas de force majeure*. The total failure of this despatch might yet have been easily prevented, as we have shown, by a better arrangement between Switzerland and France. M. de Vougy should be ashamed to admit the plea of *force majeure*, till he has procured a revision of the international system with respect to these contingencies of the telegraphic service.

We would also suggest, that the diplomatic influence of her Majesty's Government might be exercised with some advantage in persuading foreign States to reform this department of their administration, for the greater convenience of British subjects using the telegraphic lines of the Continent; and especially that they should come to a distinct understanding as to the mode in which individual complaints, or demands of restitution, are to be met. Nothing can be more loose and unsatisfactory than the practically irresponsible conduct of this service, at present, in most of the countries which are not in immediate communication with the English lines. In justice both to the Submarine and the Electric Telegraph Company of London, we believe that their efforts have been unremitting to obtain a reform, and that their agents at Paris or Brussels have never failed promptly to call for the repayment of the cost of messages which were spoiled or delayed in the sending abroad. In more than one case, with which we happen to be acquainted, the reply to such a complaint has been kept back for twelve months; and in one case for exactly two years, before the Administration, for example, of Wallachia could be prevailed upon, through the agency of the Prussian (or German) Administration, set in motion by that of Belgium, to credit them successively with the price of a lost message, for which the London Office had demanded restitution as soon as ever its miscarriage was known at this end. We cannot but think, that if, with other commercial men in London, the numerous foreign merchants who reside here, Italians, Spaniards and Portuguese, Greeks and subjects of the Ottoman empire, would memorialise the ambassadors of their respective States to urge upon their own Governments at home an amendment of this matter, their action would have a most beneficial result. And it is to be hoped that Mr. Tortoise would then again come forward in the *Times*, with another effort of his dexterous pen, to advocate so desirable a reform.

THE DOG SHOW AT CREMORNE.

We have often wondered that our sporting fraternity have been so late in establishing dog shows. Pigeon and fowl shows have become pet institutions at the Crystal Palace, while Baker-street has exhausted all kinds of stock; and horses put in an appearance last year at the Agricultural Exhibition. Even baby-shows have been held, attended principally by British matrons. Yet the dog and the cat, the household pets of humanity, have been in some unaccountable manner slighted, or have been obliged to content themselves with domestic love and admiration. An abortive attempt at a dog show, it is true, was held in Holborn some time last year, and there was another in the Agricultural Hall at Islington, but Mr. E. T. Smith is, we think, quite justified in styling this, "The First Annual Grand National Exhibition of Sporting and other Dogs." The Ashburnham Hall is certainly very well fitted for the exhibition; and, on the whole, the collection of dogs is by far the finest ever brought together in England. We confess, however, that we are no judges of dogs, in the sense of the "fancy;" and we fear that very few of the multitude which crowded the hall on the first two days could say truly that they learned anything from what they saw. Sleeping dogs, curled up nose and knees—and a large majority of the nobler animals seemed to prefer thus taking their ease to being stared at—were not likely to show many of their good points, and gave the company few opportunities of seeing all their beauty. The bloodhounds were but few in number; and although full of that noble dignity Landseer has made us acquainted with, yet to our eye lacked that sense of savage power shown in every line of the hounds of the Cuban variety. We have been so accustomed to hear it said that the old English mastiff had become extinct, that we were rather surprised to see the range of deep-eyed, full-dewlapped fellows, which seemed to look on the spectators with a look so serene and dignified that it actually became a question with us whether we or they formed the show. There is nothing in the aspect of this noble animal that inspires the least terror; on the contrary, their heads, like some of the great human heads of antiquity, seem contemplating things far off and far removed from the petty trifles of this sublunary world. Not so with the huge black and white boarhound at the top of the room, which called to mind those terrible pictures of Snyders, in which this dog, in conflict with his enemy, puts on all the savageness of the wild beast. The fancier will say that there were some real beauties among the bull-dogs. We noticed especially the pet that won the first prize, belonging to Mr. Lamphier, of Birmingham; it seems to be a point of breed in these dogs to have the nose crushed in upon the broad massive forehead. On our happening to admire a little dog of this class, the attendant took him up and showed him. "There now, sir," he said, pushing up his nose with his thumb, "if he was so, he'd be a property." We perceive that Mr. Brown, of Hampstead, shows a fine lot of bulls, but being one of the judges, he was not allowed to compete. His premises, we should think, are rather secure, with these pets around him. Bull-terriers and terriers are shown in too great profusion, as many of them are but ordinary specimens of the faithful animals. It would appear as if everybody in London had competed for the prizes for Skye terriers, the number in the show being immense, filling up one side of the long avenue; and as they lay outstretched at their ease, seeming like so many hundred door-mats. Some of the Maltese dogs were charming specimens of their kind, but apparently so delicate that they were confined, like stuffed animals in glass-cases, lest they should come to any injury by the thrust of sticks. We perceive that some of the lady exhibitors treated their pets right regally; thus a pair of white terriers, rejoicing in the names of Albert and Alexandra, reclined upon velvet cushions of the thickest pile.

The sporting dogs show well, and that is all we can say. How

Digitized by Google

they "work," or what means the judges had of ascertaining their capabilities in the field, is a sore puzzle to us; indeed we cannot see that their awards can be of much value, beyond pronouncing on the appearance of the animals, a method of judgment, no doubt, satisfactory enough as far as fat stock is concerned, but we should fancy very unsatisfactory where capacities of useful service are in question. Perhaps among the sporting dogs the retrievers made the finest display, reinforced as they were by so many Russian specimens. The Irish black-and-tan setters also attracted the attention of the sporting part of the spectators. We confess, however, the department that excited our attention most was that devoted to foreign dogs, a moral interest attached to some of these exceeding in our eyes all questions of breed. For instance, there was the "Etah," the only surviving Esquimaux dog brought home by Dr. Kane after his expedition to the Arctic seas in search of Sir John Franklin. This powerful animal, of a dirty white colour and fox-like physiognomy, seemed quite up to the work of dragging with others the heavy weights we hear of their doing—a fact we never could understand from the drawings of this dog by arctic voyagers, which show him to be generally of an insignificant size. Another odd animal is the reindeer or elk dog; so is the "thorough-bred Australian dog" or dingy we hear so much of, an animal in which the wolf predominates very much. The Turkish or Asiatic dog, the scavenger of the East, is also a beast we have read of in books, but never before have had an opportunity of seeing. There are also several Chinese dogs and a wild Prairie dog of India here—indeed the foreign collection of animals is the most perfect ever brought together, and is highly interesting to the naturalist.

The prize cups presented by Mr. Smith, to the value of £1,000, are exhibited in a central position. We must confess that they do not show much originality of design; indeed, the whole of them, great and small, seem to be simply stamped in a kind of diaper pattern of very mediocre design. As regards the dogs, they have made a very handsome first appearance, and we have no doubt that an exhibition of the kind may be repeated every year with increasing popularity and success. But we may be allowed to suggest that a Cat Show ought also to be provided, for the glorification of the feline race, which, under the special patronage of the ladies, might, as well as the dogs, enjoy the honours and rewards of a public competition like this.

ART AND SCIENCE.

MUSIC.

THE second Philharmonic Concert, on Monday last, was fully equal in the interest of the selection, and superior in point of execution, to its predecessor. The following programme will speak for itself:—

PART I.

Sinfonia in E flat, No. 10		Haydn.
Recit. "Giunse alfin"	Miss Louisa Pyne (Le Nozze	
Aria, "Deh vieni"	di Figaro)	Mozart.
Concerto, Violin, in G major, No. 11, Mr. H. Blagrove.		Spohr.
Recit. "I am safe"	Miss Louisa Pyne (Do-	
Aria, "Ah! what a night"	mino Noir)	Auber.
Overture (Preciosa)		Weber.

PART II.

Sinfonia in C minor, No. 5		Beethoven.
Two Lieder: "The Wooer"	Miss Louisa Pyne (ac-	
"May Song"	companied on the Pianoforte by Mr. W. G. Cusins)	Beethoven.
Wedding March		Mendelssohn.

The orchestra presents a decided improvement upon that of the past season. One or two changes in the wind instruments and several additions to the strings have resulted in a greater amalgamation and increased body of tone. When the Philharmonic orchestra was almost wholly changed, some few seasons since, owing to the impossibility of the same artists holding engagements, as before, both at these concerts and at the Royal Italian Opera, many strange players were necessarily introduced; and that consentaneous and sympathetic unity, which can only result from long-continued association, was, necessarily, largely sacrificed. Time, however, is fast remedying this, and the present body of Philharmonic instrumentalists is acquiring that confidence in each other and that attention to the varying shades of expression without which an orchestral performance is cold and colourless. The symphonies, overture, and March, in Monday's selection, were all well played; and Spohr's concerto was accompanied with a care and precision which must have relieved Mr. Blagrove from an anxiety that too often embarrasses a solo player. To hear Mr. Blagrove in a concerto of Spohr's is the next best thing to having heard the great master execute his own music. A worthy pupil of the greatest classic of the violin, Mr. Blagrove plays Spohr's music with that thorough acquaintance with, and comprehension of, its characteristics, without which it loses its chief effect. The peculiar mechanism which belongs to Spohr's school of violin playing, the intricate harmonic progressions in which he indulges, the alternate solidity and playfulness of the passages; all these peculiarities find their best interpreter in our excellent violinist, whose performance on Monday last was worthy of himself and of his master. It is rare to hear such perfect intonation as that of Mr. Blagrove in the difficult passages of "double stops" which commence the final rondo of the concerto; added to which, the purity and brilliancy of his tone can scarcely be surpassed. Judging by the applause which followed the conclusion of the concerto, the audience estimated Mr. Blagrove's performance as highly as we have done. Miss Louisa Pyne cannot sing otherwise than well; but some little trace was perceptible of the fatigues of the opera season which she has just concluded. The two charming "Lieder" of Beethoven lose by the translation of the text, however well executed; and the delicacy of the pianoforte accompaniments (carefully played by Mr. Cusins) cannot but appear feeble when so ill-placed as immediately after the C minor symphony, closing as it does with one of the grandest climaxes of any of Beethoven's orchestral works. The "Wedding March," chosen, doubtless, with reference to the recent Royal marriage, closed an excellent concert, the programme of which possessed the great and unusual merit of having a short second part. This is a precedent we would gladly see followed. As a symphony by Beethoven generally commences the second part, the attention and interest arrive here at their culminating point, and what follows is seldom more than an anti-climax. The second concert of the Musical Society of London took place on Wednesday evening, when the following selection was performed:—

PART I.

Symphony in G—Letter Q	Haydn.
Scena—"Ah! lo previdi" (Andromeda)	Mozart.
Madame Rudersdorff.	
Concerto—Violoncello, Signor Piatti	Piatti.
Aria—"Questi avventurieri infami" (Il Seraglio)	Mozart.
Mr. Weiss.	
Overture—(Manfred)	Schumann.

PART II.

Symphony in C minor—No. 1	Mendelssohn.
Duo—"De quelle ville es-tu?" (L'Etoile du Nord)	Meyerbeer.
Madame Rudersdorff and Mr. Weiss.	
Overture (Abu Hassan)	Weber.

Haydn's charming symphony, so full of that genial simplicity and learned skill which few other masters possess in such intimate combination, was given with that alternate refinement and force for which the orchestra of the Musical Society has long been remarkable. The novelty of the concert was Schumann's overture to "Manfred," being a portion of the illustrative music the composer wrote to a text founded on Byron's drama. It would have been more just to Schumann's reputation, about which there is such a diversity of opinion, to have produced the entire music of "Manfred," of which, as of his setting of "Faust," German critics speak highly. The overture to "Manfred" is written in a wild and gloomy spirit, reminding one of some of Spohr's mistaken efforts at what we must call the "metaphysical" style. The embodiment, in music, of the profoundest sensations of our highest nature can only be realized by a very exceptional genius. The attempt at such high expression by a genius of a lesser order, too often results only in forced effort and unintelligible mistiness. There are degrees of genius, and although it appears to us erroneous to assign to Schumann, as his greatest admirers do, the highest rank; still, competent and dispassionate critics must claim for him a grade far higher than has yet been accorded him in this country. It is, however, by his smaller works, especially his pianoforte music and his songs, that Schumann should be judged. Estimated by these, and they are many, it is difficult to conceive any dispute as to his possession of a fine and original genius. To return, however, to the overture to "Manfred." It wants not only definite design, but that coherence of thought which is mostly to be traced even in Beethoven's later works. There is an endless succession of climax upon climax, and a broken and fragmentary effect which gives the impression of the work having been put together piecemeal, and at intervals, rather than fused by mature continuous thought. While respecting Schumann's laborious ambition, we cannot help thinking that he would have done himself greater justice, and earned more uncontested fame, by limiting himself to the composition of pianoforte music and songs, rather than by measuring his strength, and challenging comparison with Beethoven in the loftiest efforts of the art. Still, the Musical Society deserve thanks for occasionally bringing forward such works, and thereby giving opportunity for judgment on Schumann's merits. Mendelssohn's first symphony, the work of his boyhood, is interesting as containing the dawn of his remarkable powers. It is easy to trace, in this work, his early predilection for the style of Weber; the brilliancy and fire of whose genius materially influenced Mendelssohn, although afterwards modified by the higher and more abstract styles of Bach and Beethoven. These transitions were well exemplified by the performance, by the Musical Society, of the Scherzo originally belonging to the symphony, and the Intermezzo by which Mendelssohn, in later years, replaced the Scherzo. Signor Piatti's execution of his own concerto was a marvel of execution and tone, but the composition was unworthy of the playing. It is seldom that a solo player combines great executive talent with creative genius; and where this is not the case, if he

Digitized by Google

must play his own music, he should be limited to a piece of short duration. Weber's pretty sparkling overture formed an agreeable termination to the concert; the vocal music of which was worthy of the instrumental. By the report just issued, the Musical Society appears to be, in every way, in a flourishing condition. With a large subscription in hand to meet the expenses of the current season, and a rapidly-increasing library (a catalogue of which is published with the Report), this Society seems now firmly established in a prosperous career.

On Friday week the 125th annual festival of the Royal Society of Musicians took place at Freemasons' Hall. This excellent Society, the careful and inexpensive management of which is worthy of all praise, effects a vast amount of good in the relief of distress, and the provision for old age and sickness, among its members. There was a large attendance at the recent dinner, and many donations were received; among the principal of which was a contribution of £50 from Messrs. Broadwood, their eighteenth donation, besides many other acts of kindness and liberality for which the Society is indebted to that eminent firm.

On Saturday last, the Royal English Opera closed its season with "Le Domino Noir," for the benefit of Miss Louisa Pyne. An address was issued, promising renewed exertions for the next season, which will terminate the occupancy of Covent Garden Theatre by Miss Pyne and Mr. Harrison. On the 7th of April, the theatre will open as the Royal Italian Opera, under Mr. Gye's lessceship. The programme of the arrangements promises a season of the highest musical importance. Mdlle. Adelina Patti is again engaged; and Madame Miolan-Carvalho, with most of the favourites of last season, and several *débutantes* of continental reputation, make up a strong array of lady-talent. Signor Mario and Signor Tamberlik are again the principal tenors; and M. Faure, Signori Graziani and Ronconi, and Herr Formes are conspicuous among the basses and baritones. The most interesting first appearance among the several gentlemen artists promised, will be that of M. Obin, a dramatic singer of high excellence, and great and deserved Parisian reputation. Verdi's new opera, "La Forza del Destino," is promised, together with Flotow's "Stradella." Among the revivals are to be "Fra Diavolo," "La Figlia del Regimento," "L'Etoile du Nord," "La Gazza Ladra," "L'Elisire d'Amore," "Orfeo," "Otello," &c. Mr. Costa retains his post as conductor, which is a guarantee for the continued excellence of the orchestra. The theatre is to open with "Masaniello," with all the scenic and musical splendour of its revival at the close of the last season.

ALUMINIUM GOODS.

In a compound and secret form aluminium has constituted the basis of that material which, for receptacle and domestic vessels, man has chiefly used from the earliest periods to the present hour—clay. But it was left for modern science to eliminate from its earthy condition the wondrous and beautiful metal itself, which in its pure metallic state has never been displayed to human eyes except by the skilful art of man. Slow and difficult are the steps by which the inventor wrests from Nature the results he seeks; in doubt and difficulty often he labours, perhaps to end his days without the attainment of that object which has been his life's desire, and only to leave an easy road for a follower in the field to crown himself with fame. Nearly forty years have elapsed since Wohler, of Goettingen, discovered the metallic base of clay, and nearly ten since Deville carried to a practical condition its commercial extraction.

On former occasions we have recorded from time to time the progress made in the mercantile manufacture of aluminium, noticing its more extensive production by Mr. Bell, of Newcastle, the various suggestions for its practical applications, and its qualities and properties. In the Great Exhibition there were many specimens of manufactured articles, both of aluminium itself and aluminium-bronze—a most valuable compound—as well as of both combined; the beautiful appearance of which articles attracted crowds of admirers. A great manufacture is not, however, rapidly established; and aluminium, although it possesses remarkably valuable properties, has been hitherto known rather as a curiosity than as commercially in the world's market. Our attention has been drawn afresh to the subject by an invitation to a private view of an exhibition of aluminium goods by Messrs. Mappin, Brothers, of Regent-street, who have commenced a commercial manufacture of them at their plate and cutlery works at Sheffield. Aluminium is thus practically introduced into one distinct and important department of trade, and brought forward as a competitor with silver and electro-plate. Messrs. Mappin's exhibition contains flower and fruit-stands, butter-coolers, spoons, forks, dessert-knives, napkin-rings, sugar-basins and tongs, caddy-spoons, card-cases, inkstands, dressing-case fittings, and communion services, tankards, clock-cases; ornamental, taper, and chamber candlesticks; figure groups; in short, all the articles usually made in silver, silver-gilt, or electro-plate, over each of which aluminium has advantages in durability, freedom from tarnish, and certainly in some instances, at the least, appearance. The cost of the aluminium articles is but one-half that of silver, and about equal to that of ordinary electro-plate. The freedom from tarnish is a quality which gives them an especial and high value. Aluminium itself, indeed, *never* tarnishes; aluminium-bronze but very slightly; and this tarnish is rubbed off by the slightest application of wetted rouge by wash-leather. Finger-marks and dirt will wash off with soap and water from the aluminum, and the article appears as bright and new as ever. How little aluminium-bronze even can be injured by any article of ordinary food we have witnessed in an interesting experiment. An aluminium-bronze spoon was immersed in vinegar—the most corrosive of gastronomic materials—for two hours, and subsequently left to the full action of the atmosphere. A mere film of tarnish only was produced, which gave way before the slightest application of wash-leather and rouge. The cleaning of silver or electro-plate, after such a test, would, we need not say, have been a tedious operation. The exemption of aluminium from tarnish has led to its being substituted for glass in some articles, such as butter-coolers and fruit-stands. Its specific gravity being about the same as glass, dishes or pans made of it are lighter, by reason of the metal being worked much thinner than glass could be.

Silver pans, although not in common use, are sometimes made for gourmands, and for these the specimens of aluminium stew-pans must be formidable rivals. Nothing can be purer for culinary purposes than this metal, and cost alone could prevent its introduction into daily use. At present, however, there are no mines of aluminium, no natural processes at work producing it for mankind; its elimination is as much due to the metallurgist's art as the production of mauve and magenta is to the chemist's skill.

The contrast in appearance of the golden aluminium-bronze with the whiter than silver clay-metal itself, is extremely pleasing and effective. While silver-gilt articles turning black and changing colour have, if water-gilt, to be passed through the fire to restore their freshness, or, if electro-plated, have to be recoated with fresh metal, those of aluminium and aluminium-bronze remain undimmed.

This absence of tarnishing has suggested the application of aluminium also for shako ornaments and military accoutrements. Aluminium-bronze affords a fine material for engraving writing, and linear ornamentation, as is displayed, in Messrs. Mappin's exhibition, in a trowel made for laying the foundation-stone of Mr. Bell's new seat at Rushpool, and in a very chaste offertory basin.

Another valuable property of this metal is that it can be cast and turned by the lathe. The same is the case with the bronze; the tools, however, require special hardening and tempering.

For chain-ornaments—such as the pendent chains of candelabra and chandeliers—aluminium is especially invaluable. Such chains in silver, or gilt, there is no possibility of cleaning. But perhaps the most attractive object in the Mappin exhibition may be, at this time, the simplest. A mere round disk of metal, as light as a plaster-medallion, impressed with the likenesses of the Prince and Princess of Wales—a marriage-medal executed by Mr. Browne, of the Crystal Palace—sharp, clear, and with an exquisite uniformity of surface has the aluminium taken the impress of the die, but the pale white-grey colour of the metal surpasses anything we have seen produced in gold, silver, or bronze. Ten or twelve shillings will purchase one of these beautiful works of art and science.

We have alluded to the undeviating employment throughout human history of clay for domestic and other pottery. The potter's art during the long past has not stood still; while other arts and manufactures have progressed, so also has his, and our shops display the loveliest biscuit figures, most beautiful objects in gilt, painted and ornamental porcelain, and elegant articles even in commonest Wedgewood and "stone" wares. Few, however, but would be surprised to learn that the "chinaman" was a competitor with the silversmith. Yet to some extent he is. Five and twenty years ago, when silver-plate was in high fashion, it would have been difficult to lay out in any household establishment £1,000 in British "china." It would be easy to do so now, and the result shows itself practically in the silversmith's trade when the comparison is drawn by customers between the price of a silver article and the cost of a similar one in clay—clay it may be of the finest sort, but the article made of which, like that of silver, acquires value from the expenditure of human skill and thought, and not from the intrinsic worth of the material. Not a little strange will it be if aluminium, fostering the taste for precious metals, should become a rival of its grosser oxide, as well as of the "precious metals" and their imitations.

CONTEMPORARY SCIENCE.

The spirit of rejoicing with which Austrian *savants* receive any concessions to the progress of science can scarcely be understood in this country, where science, like everything else, has been free and unfettered. The latest matter of congratulation amongst our Austrian *confrères* is the rescript of the Emperor, ordering the establishment of a Museum of Artistic Industry on a plan and for purposes analogous to our own at South Kensington. The motives assigned in the Imperial rescript for this foundation are "the necessity of favouring the rising native industry by affording adequate models for the diffusion of correct artistic tastes." The models exhibited will be changed periodically, and all objects exhibited in the museums will be regarded as temporary loans, the rights of the owners being legally preserved. The Emperor himself has laid the foundations of this new museum by presenting objects of art from the Palaces, the Treasury, the Royal Library and Arsenal, and assigned for their exhibition a portion of his own Imperial residence. A gallery for photography, and another for plaster-casts, are to be connected with the museum. Manufacturers are desired to exhibit their most select productions, and ecclesiastical, secular, and municipal corporations, as well as the nobility and gentry generally, possessing artistic objects, have been invited to contribute.

Prince John Liechtenstein has been the first to respond to his Sovereign's summons by directing a selection to be forwarded of the valuable objects adorning his numerous and magnificent residences.

The Friday lecture at the Royal Institution was by Mr. Balfour Stuart, "On the greater Magnetic Disturbances or Magnetic Storms." Besides the ordinary changes on removal to different geographical regions, and the usual diurnal and other periodical changes, the suspended magnetic needle is subjected, at irregular intervals, to sudden and abrupt disturbances, known as "magnetic storms," but here the likeness to ordinary atmospheric storms ceases, for an atmospheric storm may be very severe in Europe and yet may not happen in America, while a magnetic storm is felt all over the world. The theory of magnetic storms as laid down by Mr. Stuart is that they occur simultaneously all over the earth; that they have a daily period not depending on the heat of the sun; that they have the same ten-yearly periods as the sun-spots; that they are associated with auroras and earth-currents, which latter appear to be induced currents due to those sudden and abrupt changes of the earth's magnetism which magnetic storms denote; and that they are of two kinds taking place simultaneously, the effects on the needle being the combined result of both. On Sept. 1st, 1859, it is thought the sun was caught in the very act of creating a disturbance. Mr. Carrington was observing a spot when a bright spark of light was seen to move over its disk. He subsequently obtained the photographic records of the variations of the magnet made at all the principal observatories, and found a magnetic disturbance or storm had taken place coincidently with this occurrence on the surface of the sun. Earth-currents are currents of electricity supposed to be traversing the earth, and are caught up by the railway telegraph wires, at times interfering altogether with their manipulation. In America, at the date in September referred to, they were so strong that the telegraph could be worked without any batteries. The maximum number of solar spots occurred in 1828, 225; 1837, 333; 1846, 330; 1839, 205 spots. These were also years of great magnetic storms.

In the production of auroras the earth must be looked upon as the iron core of a Rumkorff coil, the lower strata of the atmosphere as insulants, the upper strata as the secondary wires. When a sudden and abrupt change takes place in the electrical condition, a discharge follows;—if from excess of electricity, in one direction; if from a diminution, in another.

If the sun can produce auroras on the earth, why are they not possible on the solar atmosphere? Mr. Stuart thought the "red flames" observed during the late total eclipse by Warren de la Rue, Airey, himself, and others, might be auroras. The height of those red flames, 170,000 miles, was so great that he was not disposed, considering how vastly the gravitation of the sun must exceed that of the earth, to admit such a volume for the sun's atmosphere. Terrestrial auroras were often estimated as occurring at an elevation of a hundred miles; and as they possess an actinic power, carefully-taken photographs may lead to the ascertaining the height of our own atmosphere. For, as Gassiot has shown that no electrical discharge will take place in a perfect vacuum, the height of the atmosphere, and, perhaps, the nature of its components in those elevated regions, may be made out by examination of the auroral light. But these latter remarks of Mr. Stuart seem to us to negative his conclusions respecting the solar red flames, or, at least, those relating to the thickness of the solar atmosphere; for as no electric discharge can take place *in vacuo*, therefore the solar red flames, if auroræ, must take place *within* the solar atmosphere; and if so, then the solar atmosphere must be 170,000 miles thick. Mr. Stuart concluded his lecture by notifying that 1868 would be a year of maximum solar spots and magnetic disturbances, expressing a hope that our own and foreign Governments, as well as meteorologists and electricians generally, would be provided with instruments, and would undertake the labours of observation at various stations to gather conclusive evidence, if possible, on the interesting question of the relationship of the solar influence to our magnetic phenomena.

Some very interesting additions have been made to the Zoological Gardens during the past week, namely, a "clouded tiger," two Malayan sun-bears, a white-fronted lemur, a two-toed sloth, a Saka falcon, two little native grebes or "dab-chicky"—birds rarely seen in captivity—a female Sonarat jungle-fowl, a Cape francolin, and five tortoises. But the most important addition has been three wombats from Australia, the largest in size ever seen. These are new to science, unless any of them should prove to be the *Phascolomys latifrons*, or *P. platiceps*, described from bones only, some years since, by Professor Owen.

THE PAST WEEK.

HOME.

PARLIAMENT.

In the House of Lords, on Monday, Lord Stratheden urged the recognition of the Southern States as a measure likely to take away from the North its last hope of subjugating the South, and therefore calculated to lead to an early conclusion of the war. As precedents, he quoted the recognition of the United States by France, of the South American Republics by England, and of Portugal, in 1641, by various European Powers. Earl Russell objected that these precedents were not in point. The recognition of the United States by France was nothing less than forcible intervention; and the South American Republics were not recognized till the soil was free from hostile troops. This was not the condition of the Confederate States. The determination of the North to carry on the war was as strong as ever; and recognition at such a moment would be a most unfriendly act to the United States. Our duty was to wait and stand still. We had in former times interfered in Holland, Portugal, and Greece, but with the object to secure the independence and freedom of a great portion of mankind; and he should be sorry to see this country interfere for any other purpose.

In the Commons, on the order for going into Committee of Supply, Mr. Hennessy rose to ask a question of the First Lord of the Treasury as to the nature of the obligations with respect to Poland involved in the treaty of Vienna. He thought the House was now entitled to ask what the Government were doing. He denied that the defeat of Langiewicz was so serious a blow to the cause of Poland as the press had considered it, and observed that while the operations of this general had at no time extended beyond an irregular circle of from forty to fifty miles radius, or a total area of 1,600 miles, the insurrection reigned over 150,000 square miles, and was daily spreading. He contended that England was under a moral obligation to interfere, and quoted from Lord Palmerston's despatches in 1831, passages in which the word "obligation" was applied to the duties in respect of Poland which devolved upon England by the treaty of Vienna. He concluded by asking Lord Palmerston whether it was his opinion that no moral obligation existed on the part of England with regard to the stipulations of the treaty of Vienna affecting Poland? Lord Palmerston replied that there was no obligation upon Great Britain to interfere greatly in the affairs of Poland, and that our moral obligation had been fulfilled in 1831 by the friendly representations made to the Russian Government. He thought the House would agree with him that it would not be fitting that he should enter into details of the negotiations the Government was at present conducting. He believed they would be able to convince the House that they had done their duty, and that their efforts had at all events been productive of some good to those on whose behalf they were made.

In the Lords, on Tuesday, Earl Russell in reply to a question from Lord Shaftesbury, said he had heard of no case in which Poles travelling through Prussia had been arrested, delivered over to the Russians, and subsequently shot. Two Polish students had been arrested; but they had been claimed by the French Ambassador, and it was to be hoped they would be given up.

In the Commons, Mr. Hubbard moved a resolution affirming as the prineiple of our Income-tax, that the incidence of the tax upon the products of invested property should fall upon net income; and that the net amounts of industrial earnings should, before assessment, be subject to such an abatement as would equitably adjust the burden thrown upon intelligence and skill as compared with property. Mr. Gladstone pronounced the scheme proposed by Mr. Hubbard as impracticable and visionary; and upon a division the motion was lost by 118 to 70. A motion for returns of the names of the persons killed or injured, during the procession on the 7th and the illuminations on the 10th inst.; for the number of persons killed and wounded during the lying-in-state and funeral of the late Duke of Wellington; and of a copy of any order issued by the Metropolitan Police Authorities with a view to prevent a recurrence of such accidents, was agreed to. A bill for extending the principle of limited liability so as to allow a capitalist to advance a fixed sum to any business, and become a partner with liability limited to that sum, was, on the motion of Mr. Scholefield, read a second time.

MISCELLANEOUS.

The dissatisfaction of the operatives with the arrangements for their relief, has been vented at Staleybridge and Ashton by the most disgraceful riots. The proximate cause of this ebullition was the resolution of the Relief Committee at Staleybridge to pay in future by ticket instead of in money. This resolution was announced to the "scholars" on Thursday week, and when on Friday the committee's officers visited the Independent school to distribute the tickets, the scholars refused to receive them. Shortly afterwards, as two of the committee were riding in a cab through the streets the mob smashed the cab windows. This was the signal for a general riot, in the course of which the windows of obnoxious persons were everywhere broken, bakers' and provision shops pillaged, the police assaulted with stones and brickbats, and the stores of men and women's clothing broken into, and their contents thrown into the streets and carried off by the rioters. For hours the town was in complete possession of the mob,—Irish lads and Staleybridge lasses vieing with one another in the revelry of destruction. It was not until the military were called out that order was restored; then the Riot Act was read, and sixty arrests were made. Parties of police were sent in search of the stolen clothes, which the thieves now endeavoured to get rid of by burning them, throwing them into the canal and into the river. On Sunday the town was crowded by holiday-makers coming from all parts in the neighbourhood to view the vestiges of the riot.

On Monday the scene of riot was transferred to Ashton, upon which a mob from Staleybridge marched early in the morning. A troop of Hussars was called out, and special constables sworn in to prevent the rioters from entering the town. But the mob had already arrived, and were plundering the bakers' and provision shops. Here again the Riot Act was read; and by the aid of

Digitized by Google

soldiers and police the rioters were driven out of the town, but not before they had done an infinity of mischief. As far as can be ascertained, none of the people of Ashton took part in the riot. But at Staleybridge, owing to the resolution of the Relief Committee to adhere to their plan of giving relief by ticket, the town continued in an excited state, the operatives refusing to accept the tickets. On Monday stones were thrown at the police; and a mob which proceeded to Hyde frightened the shopkeepers into giving them food. Five hundred special constables have been sworn in at Oldham. On Tuesday signs of active insubordination were displayed at Stockport. Stones were thrown, and windows broken, but not to any great extent. Special constables were sworn in here also, and organized into companies. A mob of rioters again marched from Staleybridge upon Ashton, but were intercepted by the police before entering the town, and driven back. An indigenous mob, however, renewed the scenes of the previous day, and compelled the bakers and shopkeepers to give them provisions. The police easily dispersed them. At Staleybridge, on Tuesday, a deputation of the discontented received a promise from the magistrates, who refused, however, to grant them an interview, that if they accepted the tickets their representations would be considered. To this they assented.

Last week the Sixth Chamber of the Correctional Police in Paris was crowded with a mixed assembly of men of title, members of the Jockey Club, high functionaries, advocates, and women of the demi-monde, to witness the trial of a couple of swindlers, who had defrauded the guests of a certain Madame Julia Barucci, *alias* Benini, *alias* Justi, who on the 4th of February last had the honour to entertain at her hotel—the Duke de Caderousse-Gramont, Viscount Gastin de Foix, Count Paul de Demidoff, the Marquis de Vivens, Count de Fontette, Count Dygneauville, Baron Albert de Schonon, Viscount de Noblet, the Marquis de Brimont, and other gentlemen, landed proprietors, &c., amongst whom was M. Miranda, a Spanish nobleman of the Queen of Spain's household. Madame had that day taken possession of her hotel, and having met a M. Garcia at Homburg, where he suffered the gambler's varying fortune in the loss of four millions of francs, consented to his request that he might introduce certain of his friends. M. Miranda, the Spanish nobleman, was one of these, M. Calzado was another. This gentleman had some time since made himself famous at Havannah by buying up all the playing cards, and importing "prepared" cards, which he sold to the dealers, and by whose aid he managed to win large sums at play. Garcia, in 1858, had been turned out of the Duke de la Rocca's for cheating at cards. Before meeting at Madame Barucci's, Garcia and Calzado had eased M. Miranda of 50,000f. at the Spanish-American Cercle, in the Rue de la Paix. But at her hotel he won back 20,000f., and was content with this result until after supper. The two swindlers, however, had been observed by the guests to talk apart, and presently "manifested," said Madame, in her evidence, "an intention of doing something." There were only whist-tables in the room. They procured a kitchen table, had it covered with a cloth, and sat down to play, but merely as a feint. After supper the game of baccarat was proposed, and M. Miranda played for small sums. It was observed that Garcia had absented himself. In an hour he returned, and when the cards came round to him, staked so heavily, that after a while, the other guests having left the game to him and Miranda, the stakes on either side amounted to 64,000f. Marvellous was Garcia's good fortune. Ten times running he won, clearing 150,000f., of which Miranda's loss amounted to 140,000f. This appeared so astonishing to the Duke de Caderousse-Gramont that suspicions of foul play arose in his mind. He rushed forward, and seizing the cards in Garcia's hands, found that some were of a lighter colour than the others. His pockets were searched, and quantities of cards were brought to light. Then he confessed that merely to change his bad luck, and without the least intention of dishonesty, he had brought in fresh cards. But the guests would not be satisfied. They insisted either that he should give back the money he had won, or go before the Commissary of Police. For a time he stormed, but at last consented to refund, and produced a bundle of notes to the amount of 50,000f., protesting this was all that he had won. "Ridiculous," cried the guests; whereupon M. Garcia fled from room to room, dropping notes as he went, and pursued by the flower of French nobility. M. Calzado, too, was made to disgorge; and the pair were finally handed over to the police. Thus ended Madame Barucci's little party. Her friend, M. Garcia, has been condemned to five years' imprisonment; and his friend, M. Calzado, to thirteen months. We regret to add that M. Miranda got back nearly the whole of his money.

The growing inclination of disappointed or irritable lovers to redress their grievances by suicide or murder was illustrated last week by a trial at York, in which James Cass was indicted for shooting at Eliza Spencer with intent to do her some grievous bodily harm. Cass and Spencer were "keeping company" with each other, and on Sunday, the 21st of September last, together with another couple, also in the interesting state of courtship, went out for a walk. Spencer seems to have been a lady of a lively and somewhat provoking disposition; for, as they were walking, she gathered a nettle and "nettled" the prisoner's face. Not liking this sort of billing and cooing, the prisoner said, "D— it, don't;" upon which the lively Eliza, of course, did it again, wringing from her lover the exclamation, "D— it, Liz, don't be so soft." After this they went home; but at night they met again, the girls walking out together and taking no notice of the pair of disconsolate males who followed. Stung by this arrangement as much as by the previous application of the nettles, the prisoner and his friend asked the girls if they meant to walk in this way; upon which Eliza turned round, took off her swain's cap and threw it over the hedge. The prisoner now warned her that if she would not walk with him she should walk with no other man; and presently, on arriving at a lonely part of Sprotborough-lane, he took a pistol out of his pocket, and, retiring some paces, fired it over her head. Upon this they all ran home, the prisoner first hiding the pistol in the lane. On the following day he went to the house of the prosecutrix's mother, who accosted him with "How dare thee show thy face here, thou villain?" to which he replied, "I've done it, I've done it; I'm ready to suffer," and then leaned his head against the wall. There is no doubt the pistol was loaded, for shots were found in the trees where the girl was standing when her lover fired at her. But the defence was that he only intended to frighten her, and the jury acquitted him. This is not the way to check the morbid feeling which is daily producing murders and suicides, and we should not be surprised if this verdict should be found to encourage other moody lovers to follow Cass's example.

On the same day Major Wombwell, of the 12th Lancers, was defendant in an action for slander and assault brought against him by Mrs. Strickland, a lady in whose house the major had taken apartments for himself, his bride, a maidservant, and two manservants. After a few weeks' tenancy Major Wombwell became alarmed at the amount of his bills, the grocer's bill especially. He found that from the 1st of November to the 22nd of December his butcher's bill amounted to £11. 3s. 1½d. In one month and five days he and his retinue, or some one else for them, had consumed 26 lb. of loaf sugar, and 17½ lb. of crystal sugar in one month. Though he used gas, and was charged for it, he had to pay for 7 lb. of dip candles, and 5 lb. of sperm candles in little more than a month. For fires he was charged 17s. 6d. a week; and 7½ lb. of tea were used in less than five weeks. This was hard to bear; and as lodging-house keepers are proverbial for rapacity, the major jumped to the conclusion that Mrs. Strickland was like the rest of her sisterhood, and in no measured terms told her so. According to the lady, he charged her roundly with stealing his tea and his brandy; called her a swindler and a thief; flourished his stick in her face; threatened to knock her brains out; told her that if her son were there he would shoot him like a dog; and said she was a —— drunken ——. He denied all this; but admitted that, upon being contradicted by her, he said, "I will not be called a liar by a —— bitch like that." If the tea and sugar lay heavy upon him, his imputations were not to be borne by the opposing party; and therefore when, shortly afterwards the major's wife expressed a desire for a mutton-chop, Mrs. Strickland, with fine irony, sent her up a loin of mutton with a pair of scales, requesting her to weigh the chops for herself. But irony was not a sufficient revenge for the indignant landlady. She brought her action and the jury gave her £50 damages.

A terrible scene took place last week on board the *Venus* hulk, to which the crew of the Peruvian corvette, *Arica*, had been transferred, while the corvette was being fitted out. The crew numbered 160, of whom 90 were soldiers. During the day the soldiers had been allowed to go on shore, where they got druuk, returning to the hulk at night, smuggling a quantity of liquor on board. Then they commenced to riot, and refusing to obey their officers, the sailors were ordered to arrest the disorderly. Upon this a pitched battle ensued, both parties armed with muskets and bayonets; the soldiers, by the free use of the bayonet, driving the sailors between decks. The captain was now sent for, and with drawn cutlass dashed down amongst the mutineers. This renewed the contest, and the yells and shrieks of the excited and drunken men could be heard for some distance up and down the river. Some were thrown overboard, others escaped into boats. One man, and it is feared others, was drowned; two soldiers were killed, and several mortally wounded. A midshipman who had been ill died from the excitement. In the end, however, the mutiny was suppressed, and the mutineers placed in irons.

A trial of importance to railway companies and railway travellers was held at Derby on Saturday last. The action was against the Midland Railway Company. The plaintiff on arriving at the Derby station, not observing that he was landed on the east instead of the west side of the platform, turned to an opening to the right, as he had been accustomed to do on the other side, thinking it the way out. The opening, however, proved to be the entrance into a horse-dock, three feet below the level of the platform, into which the plaintiff fell, broke his arm and sustained other injuries which kept him in bed for three weeks. The defence was that the plaintiff's contract was with the North Staffordshire Company, which used that station by arrangement with the Midland Company, and that defendants were not liable. But the Lord Chief Baron expressed a strong opinion that the Midland Company was bound to keep their station reasonably safe for all persons lawfully using it for purposes of business; and that the case was analogous to that where a person has dug a hole on his own land so near to a highway that a person lawfully using the highway falls into it, in which case the person on whose land the hole was dug would be clearly liable. Bowing to this opinion the defendants consented to a verdict for £300 damages, and to pay the costs of the action as between attorney and client.

On Saturday morning, at Sledmere Castle, near Malton, died

Digitized by Google

that "fine old English gentleman," Sir Tatton Sykes, at the ripe age of ninety-one. His breeding stud was the largest in England, numbering upwards of two hundred horses and mares of all ages. His feats on horseback were almost fabulous. When a young man, he started from home to ride a race for a friend; rode it, weighed, and rode back again—a distance in all of 400 miles. He rode always from Sledmere to London when he had occasion to visit the metropolis, riding back as far as Barnet the same night. As a master of fox-hounds, he vied with the best gentlemen of England, keeping them solely at his own expense. He was an early riser, often up before the sun. Sometimes he would be seen labouring at a stone heap or slashing a fence, doing the work of some labourer, whom he sent to the Castle to refresh himself with a flagon of ale." "As a landlord," says the *Times*, "a master, and a friend, Sir Tatton was much beloved, and to him may justly be applied those words of commendation, 'He never lost a friend, or made an enemy.'"

On Wednesday the remains of Sir James Outram were consigned to their last resting-place in Westminster Abbey. The funeral, though not public, could hardly be called private. The carriages, containing mourners and special friends, were followed by a long *cortége* of private carriages; and a dense respectful crowd met it at the doors of the cathedral, where the coffin was taken up on the shoulders of the Mackenzie Highlanders, who had stood beside their chief on his march to Lucknow. In the Jerusalem Chamber a crowd of noblemen and gentlemen were assembled, who, when the funeral procession had entered, the choir was marshalled, two and two, and marched through the cloisters into the nave, and followed the procession into the choir. The burial service then commenced, and in a few minutes more—"Ashes to ashes, dust to dust"—the soldier lay in his last resting-place. During the service the nave of the cathedral was crowded with people, and the Westminster boys, who cherish the memory of Warren Hastings and other Indian heroes, filled the galleries.

Dog shows have emerged from the obscurity of public-house yards, and are now to be reckoned amongst the most interesting of our exhibitions. The first effort on a creditable scale in this direction was made at the proposed Horse Repository in Holborn. A few months later the novelty culminated in the splendid show of last year in the Agricultural Hall at Islington; and henceforth we are to have two yearly exhibitions, one at this Hall, and the other at Ashburnham Hall, Chelsea, which has, on a lesser scale, nearly every requisite for such a purpose except ventilation, a sad defect to bipeds with any powers of scent. The Chelsea Exhibition has been open during the week; and the show of dogs, though not comparable to that at Islington last year, and deficient in the large breeds, is good, numbering 1,200 dogs of every kind, from the largest and noblest down to the tiniest.

A singular accident took place at Brighton last week. A pair of horses, while the coachman was buckling the reins, darted off with the carriage at full gallop, traversed several streets till they reached the Marine Parade, dashed through the wooden railings and over the sea-wall, at a height of 70 feet from the ground below. The horses, worth £300, were killed on the spot, and the carriage broken into a hundred pieces.

The authorities of Edinburgh have resolved not to open the Botanic Gardens on Sunday.

FOREIGN.

AMERICA.

THE Conscription Bill has already begun to produce results, the most prominent of which are an exodus to Canada on the one hand, and the determination of all who can find the passage-money towards Europe. Crowds of English, Scotch, Irish, and Germans, who cannot afford to pay 300 dollars for a substitute, are claiming the protection of the consuls and ambassadors of their native countries. Discontent prevails amongst the working classes, who are unable to pay and unwilling to fight, but who have no consuls or ambassadors to appeal to; and the democratic journals have not failed to comment upon the late Polish conscription in terms so applicable to their own that the parallelism cannot be missed. But Mr. Lincoln by hook or by crook must have soldiers, and his difficulty in obtaining them is manifestly increased by the distaste to fighting which has lately come over the Irish and Germans, and which has been increased by the unfair play they have met with. This is particularly observable in the treatment of the Irish, who have done the best part of the fighting, and have been placed invariably at the post of greatest danger. General Meagher has memorialized the Secretary of War, urging that his brigade, which has been reduced to little more than 1,000 men, might be relieved from duty in the front, and sent to quarters where they could recruit their health. By their bravery they have deserved this favour, but it has been denied them.

There has been a great Union meeting in New York at the Cooper's Institute, and a meeting of the Young Men's Democratic Association in Broadway. The former was signalized by the Anglophobia of the speakers. The latter was called to hear an address from Mr. Vallandigham, the burden of whose oration was that the Union would be restored, but that it never could, would, or ought to be restored by war; and that the only chance left for the ultimate reconstruction of the Government on a new basis was the immediate cessation of hostilities. Mr. Benjamin Wood, one of the members of Congress for the city of New York, goes further. In the speech which he was not permitted to address to the House of Representatives, but which he was permitted to print, he declares that reunion is impossible, and that, if it were possible, it is undesirable.

Of military operations, there is not much to record. Neither at Vicksburg nor at Charleston have the contending parties made any movement; but disease, which in all wars claims more victims than the sword, has asserted its power at the former place. Despondency and the marsh fever, aided by relaxed discipline, have done their work in the Federal army so effectively, that, according to the report of an agent of the Sanitary Commission, nearly every tent is an hospital. On the 26th ult. the number of sick was 12,000, of whom a large number were daily dying, and out of the whole force not more than 20,000 men were fit for duty. On the morning of the 9th a body of Confederate cavalry made a sudden descent upon Fairfax Court-house within the Federal lines and succeeded in carrying off General Stoughton, Provost-Marshal Oscanner, from 50 to 100 prisoners, and 110 horses. On the 7th the Federal cavalry attacked the Confederates at Unionville, ten miles from Murfreesborough, Tennessee, capturing their camp equipage and a number of prisoners. On the 3rd, Fort M'Alister was bombarded without result for twenty hours, after which the iron-clads retired. Telegraphic despatches from Cairo, dated the 13th, report the capture of Forts Henry and Donalson by the Confederates; and there is also a report from Memphis that the Federal Expedition up the Yazoo river had captured Yazoo city and all the Confederate transports above it. Brigham Young, the Mormon chief, has been arrested at Salt Lake city by the Federal authorities, on a charge of bigamy, and held to bail in the sum of 2,000 dollars.

Admiral Wilkes, late commodore, and notorious for his seizure of Messrs. Slidell and Mason, has seized an English merchant steamer within sight of the harbour of St. Thomas, in pursuance, it is said, of his policy to seize all vessels *en route* to Matamoras, and send them, right or wrong, before the Prize Court at Key West, where an adjudication will occupy six months, with an appeal to New York or Philadelphia. By this delay he hopes to prevent the possibility of any supplies of goods reaching the Confederate States through Mexico. The case has excited great interest amongst the mercantile community, and was submitted to Earl Russell on Thursday. The *Peterhoff*, the steamer in question, and her cargo, are valued at £70,000, and she had also a British mail on board.

So much has been said and written, showing the determination of the South to endure extermination rather than give in to the Northern States of America, that the weight of an additional witness to the crowd who have already given evidence to this effect, is only important as confirming what we already know. Yet the speech of the Marquis of Hartington, at Lancaster, on Monday, deserves notice, because it not only rivets our conviction on this point, but gives us the evidence of an intelligent witness, that the North is as resolved as the South, and that we have nothing to expect from America for years to come but wars and rumours of wars. His lordship visited the South and the North; and not from conversation with a few politicians, nor the perusal of newspapers, but from the daily conversation of the people, their lives and conduct, he is convinced that to peace, except upon their own terms, they will never consent. Men who have lived in affluence are serving as privates in the army, badly clothed, badly fed, hardly with shoes to their feet, but "as savage and as bloodthirsty as if they had been trained up from their very youth to delight in war." Men who have been all their lives in poverty are equally eager, asking for nothing but to be led against the enemy. The women are as resolved as the men. Their very natures are changed. "They scarcely stop to mourn their relations and friends deceased, but they urge on the survivors, and would refuse to own them if they should hesitate for a moment to follow the footsteps of those who had gone before them." In the North the Marquis admits there is a party in favour of peace, but he has no faith in its power. The North will fight on. Their trade is flourishing; money and luxuries are as plentiful as ever; and if the States and the Constitutional party in the States will stand by the new conscription law, the war will be indefinitely prolonged. If, on the other hand, they do not, the war will fail for want of men.

POLAND.

THE gleam of hope for Poland which followed the first successes of General Langiewicz has gone out with his defeat, so far, at least, as the insurrection in the south-west is concerned. Hugging the Austrian frontier for the sake of the munitions and stores which he received from Gallicia, and moving within an irregular circle of from forty to fifty miles diameter, his doom was certain if the Russians could despatch a sufficient number of troops to hem him round, and unless he could effect his escape. This he appears to have felt; for about the 10th instant he left the village of Goszcza, south-east of Skala, and marched in a north-easterly direction, to avoid the troops who were marching against him from Walbrom, which lies to the north of Skala, Olkusz, which lies to the west, and Miechow, which lies to the east. He succeeded in reaching Ksjasz, a place to the north-east of Miechow, and there, it is probable, learnt that a Russian column was at Jedrzejow, which lies due north of Ksjasz. Quitting the high road, he now marched east

Digitized by Google

to Chroberg, a village on the Nida, which he reached on the 16th. Meanwhile, the Russian column at Jedrzejow moved down from that place to Pinczow, a few miles to the north; a second Russian column advanced from Miechow eastward to Dzialoszyce, which approaches Chroberg on the south-west; and a third moved towards Chroberg from Stopnica, in the east. The second column, composed of 10,000 Russians, under General Szachawskoi, pushed on from Dzialoszyce to Chroberg, and in the afternoon of the 16th engaged the Poles under Langiewicz. The fight lasted from half-past two in the afternoon till seven in the evening, and terminated in the defeat of the Poles, who lost their baggage and forage waggons. It was renewed on the three following days at Zagoscie and Busk, with the total discomfiture of the Poles, many of whom crossed the Vistula into Gallicia. It is stated, in a telegram from Cracow, that during the battle at Zagoscie on the 18th, Langiewicz and his staff disappeared from the field; thus implying that he had deserted his post. This statement is denied. The *Débats* says that the general, finding it every day more difficult to get provisions for his men while they constituted a single corps in the Palatinates of Cracow and Sandomier, whose resources had been exhausted by two months' ravages, resolved to scatter them over several points, and go himself and his officers into another Palatinate, which he expected to reach by passing through Gallicia, and where he hoped to meet a fresh body of insurgents. Unfortunately he was recognized by an Austrian official, who does not appear to have given his Government much satisfaction by the act, and arrested. He was taken to Tarnow and thence to Cracow, where, according to the *Morning Post*, after some confinement in the castle, they were set at liberty on parole. The *Schlesische Zeitung*, of Tuesday, published a telegram from Cracow, stating that Langiewicz was not treated as prisoner in the citadel of that town. He has since been removed to Gratz.

We gave last week some particulars of General Langiewicz's antecedents, but the authorities on which we wrote appear to have been incorrect in stating that he had served under Garibaldi. He was Professor of Mathematics in the Polish military school of Cuneo, in Sardinia, till the establishment was closed by Ratazzi after the recognition of the Italian kingdom by Russia. Langiewicz then went to Paris and led the life of an obscure refugee in the Rue de Poissy. Upon hearing of the outbreak in Poland he borrowed fifty francs of a friend and set out to join his countrymen. He passed through Thorn, in Prussia, and, half-dead with hunger and fatigue, he was taken in and relieved at a small country house a little way out of the town. But he refused to stay there, and, on leaving, gave his name as Maryan Langiewicz.

The insurrection, however, much as its prospects are undoubtedly diminished by the defeat of Langiewicz, still exists. His dispersed soldiers, to the number of 1,000 men, rallied under the command of Colonel Schmiechowski; and, though a Cracow telegram of Saturday states that they were again defeated and dispersed on the 20th, Friday week, a telegram from the same town, dated Monday last, speaks of indecisive engagements near Lazy, Miechow, and Inglomia, the insurgents fighting under their chiefs Wisocki, Bentkowski, Schmiechowski, and Rochebrune. In the Palatinate of Lublin, also, the Poles have given their enemies hot work. Under an insurgent chief, they occupied Kreszow on the 20th, Friday week, and took possession of the Government treasury. On Sunday they were defeated, says a Kreszow telegram of the 24th, and dispersed in the vicinity of Lezansk. But they fought also, with what result is not stated, at Krzeszkow and Potok; and were beaten near the forest of Panslow. In the Palatinate of Kalisch they were completely victorious in two engagements at Apatuova; and eighty waggons filled with wounded Russians were taken to Konin. Another engagement, with many killed and wounded on both sides, took place at Makorowo, but with indecisive results. A severe engagement took place on Saturday, near Konin, in which the Russians sustained serious losses. Four of their officers and sixty privates were killed, and Prince Wittgenstein wounded and taken prisoner.

It is not probable that the Poles will be able of themselves to effect their liberation, nor is there any present sign of willingness on the part of the three great Powers who are friendly to them to interfere with arms in their behalf. Lord Palmerston, while assuring the House of Commons on Monday that what his Government was doing would satisfy the House and produce some good to Poland, repudiated the idea that Great Britain was under any obligation by the Treaty of Vienna to take up arms for her. The *Moniteur* has published a letter from the Emperor to M. Billault, in which he states that the Minister's speech—which deprecated the idea of war—was a faithful and eloquent interpretation of his policy. "You have been able," he writes, "to reconcile the expression of my sympathies for the cause dear to France with the regard due to foreign Sovereigns and Governments. Your words were on all points in accordance with my meaning. I reject any other interpretation of my sentiments." This is regarded as a disavowal of the speech of Prince Napoleon. Prince Metternich is said to have returned to France to make known to the Emperor the resolution of Austria to remain neutral; and the Emperor Francis Joseph is reported to have said, "I don't see the use of Austria's identifying her policy with that of France unless she is prepared to support her opinions by force of arms. I can understand that a Power can go to war in order to attain some particular end, as France did in 1859; but it is not to be expected of Austria that she should have recourse to arms in order that she may have an opportunity of giving up a province (Gallicia)." But though the battle is left to the Poles, the longer it is maintained, however hopeless it may be, the stronger will be their claim for the moral intervention of the other Powers, which the Emperor of the French is anxious should take the form of a European Congress.

The Russian Government, by an Imperial ukase, dated Monday last, abolishes all relations of an obligatory character existing between the peasantry and the landed proprietors in the Governments of Wilna, Grodno, and Minsk, and four districts of Witebsk; directing that from the 1st of May next the peasants, whose emancipation is to be completely effected, shall pay their rents to the Governments, which will itself pay to the proprietors the price of emancipation.

A statement that Prussia had recently authorized Russian troops to traverse Prussian territory is denied, and the *Moniteur* states that the explanations of the Russian and Prussian ambassadors place it beyond doubt that no such passage of troops took place.

FRANCE.

Prince Metternich has returned to his post at Paris, hastened thither by his Government, it is said, in consequence of a statement which appeared in the Frankfort *Europe* of the 19th, to the effect that the Prince had converted Count Rechberg, who thereupon had declared that Austria would go hand in hand with France in the Polish question. It appears, however, from an article in *La France* of Wednesday, under the heading of "A Congress for Poland," signed by the secretary of the paper, that Prince Metternich is the bearer of assurances which authorize earnest hopes of an equitable solution of the Polish question; and that the Cabinet of Vienna appears disposed to participate in diplomatic action calculated to put an end to a position of affairs which is the permanent cause of trouble to Europe. *La France* considers it probable that a Congress, comprising all the Powers who signed the Treaty of Vienna, will meet at no distant date, to regulate matters upon an equitable basis.

From a letter of the Havannah correspondent of the *New York Herald*, dated the 5th inst., it would appear that the position of the French army in Mexico is not so bad as it has been reported to be. It surrounds Puebla on every side, and could easily reduce the place by bombardment, but that General Forey refrains from using his power, in the hope of reducing the garrison by cutting off its supplies, being desirous, as far as possible, to conciliate. The writer says that the French are not in a desperate position, that their way to Vera Cruz is open, that they have plenty of provisions, have only suffered through sickness, and have been well received by the people, towards whom they have conducted themselves well. Mexican papers to the 17th ult. contain a proclamation issued by General Forey, announcing to the Mexicans that the French army is about to march upon the capital to obtain, by force, from the pretended head of the nation reparation for the wrongs committed against Frenchmen, and to aid the people in the establishment of a stable form of government of their own choice.

Mr. Kinglake's imputations against the courage of the Emperor have been challenged by the Paris correspondent of the *Times*, who thinks that the Emperor would gain immensely in the opinion of the people were they to know that the very quality for which they have always given him credit is called in question. The writer offers himself as a witness against Mr. Kinglake's conclusions. As representative of the people, as President, and as Emperor, he says he has seen Louis Napoleon during the last fifteen years on occasions the most trying, without observing anything to question his courage, but everything to place it beyond doubt. He was close to him at Besançon in 1850, on the night of his visit to the Halle, when he walked alone in the midst of infuriated bands of the dregs of the population who shook their caps and fists in his face, and seemed on the point of tearing him in pieces, shouting in his ears "Vive la République Démocratique et Sociale." Through this mob he walked slowly and perfectly calm, even extorting respect from it by his wonderful self-possession. A few days afterwards, he saw him penetrate alone the Croix Rousse of Lyons, the most revolutionary quarter of the city; and frequently, when political passion was at its highest in Paris, and men were roused almost to madness, he saw him riding fifty paces in advance of his staff, through the long line to the Boulevards, from the Bastille to the Madeleine, hithout the least sign of trepidation, change of countenance, or agitation, bowing, hat in hand, in recognition of the few salutes which greeted him. When Pianori fired two shots point blank at him in the Champs Elysées, and on the dreadful night of the Orsini attempt upon his life, the writer was again near him, and testifies to his marvellous composure. These were scenes more trying than the perils of a field of battle, yet the Emperor showed no sign of fear. "If Mr. Kinglake," concludes the writer, "believes that the Emperor Napoleon is not fearless, he is alone in that belief. For my part, I have known his friends and partizans, as well as his bitterest enemies; but at no time, either of public tranquillity or public convulsion, do I remember to have heard from friend or foe the slightest doubt of his courage."

ITALY.

Owing to the state of Farini's health he has retired from office, Pasolini, Minister for Foreign Affairs, accompanying him. In Farini's place Minghetti is to be President, and Visconti Venosa, Secretary-General of Pasolini, succeeds him as Minister of Foreign Affairs.

LATEST.

In the Lords, on Thursday, the second reading of the Great Eastern Railway (New Metropolitan Station and Branches) Bill was lost. On the motion of the Lord Chancellor, a bill authorizing the sale of the advowsons of 320 of the smallest livings vested in the Lord Chancellor, and the employment of the proceeds in the augmentation of other livings, was read a first time.

Peace has been restored at Staleybridge. The Lord Mayor's Committee have agreed to give the operatives £500, with the stipulation that it shall be distributed in money. The effect of this grant will probably be to compel the local committee to abandon their project of giving relief in kind. A proposal on their part to give it half in money is under the consideration of the operatives.

On Thursday, Mr. John Bright, M.P., presided at a meeting of the Trades' Unions, in St. James's Hall, in favour of the Northern States of America and Negro Emancipation. An address to President Lincoln was unanimously agreed to, assuring him that "a portion of the British press, led by the infamous *Times*, an arrogant aristocracy, and some of the moneyed classes of the country," had misrepresented the feelings and wishes of the people; an error which "we, the Trades' Unionists and working men of London, in public meeting assembled," desire to correct. The address contains much more of this violent language, to which Mr. Bright ought not to have listened.

The Oxford and Cambridge boat-race will be rowed to-day. The start will take place at 8·30 a.m., from two boats moored opposite the Star and Garter, at Putney.

By a resolution of the Secretary of State for India in Council, the expenses of the funeral of the late Sir James Outram will, with the permission of the family, be paid out of the public funds.

The *Bulletin de Paris* states that the Orleanist committee has nominated M. Dufaure its president, and MM. Freslon and Lanjuinais its secretaries; and that Count de Falloux will come forward as candidate in the Maine-et-Loire, Count de Montalembert at Besançon, and M. Berryer at Marseilles. M. de Jaillac, formerly sub-prefect of Sceaux, will stand against M. Véron, the present representative.

A Vienna telegram states that General Langiewicz has been set at liberty on parole, and, with his followers, has proceeded to Brünn (Moravia).

It seems that Prince William of Glucksburg, brother of the Princess of Wales, will be offered to the Greeks for their king. The Prince and the King of Denmark have consented to this proposal.

REVIEWS OF BOOKS.

THE POLISH CAPTIVITY.*

A WEEK ago there seemed to be reason for hoping that the "Polish Captivity" was drawing to a close. When the call to arms first made itself heard in Poland, few listeners supposed that the summons would produce any lasting effect. It was thought that the advantages on the side of the oppressors were too overwhelming to allow any chance of success to the oppressed, and it was feared that the efforts of the country to throw off its intolerable yoke were merely of the nature of dying throes. But as telegram after telegram proclaimed the progress of the insurrection, what had originally appeared a wild and desperate scheme gradually assumed the proportions of a practicable and well-calculated enterprise. The insurgents not only baffled and eluded the Imperial troops, but they met them hand to hand, and made good their superiority whenever they were not too greatly over-matched. The moderate and the extreme parties forgot their differences for the time, and united in one common course of action. Their proclamations were remarkable for prudence, moderation, and judgment; and their policy in council was as steady and deliberate as their conduct in the field was skilful and fearless. Throughout the contest they showed to great advantage by the side of their enemies. The Russian soldiers soon grew weary of profitless fighting, and giving themselves up to plundering, became, in many instances, utterly demoralized. The officers in command of the Imperial forces were as unable to make their troops face the Polish scythemen as to prevent them from marking their progress through the country by outrage and murder. With the exception of Russia, the whole of Europe sympathizes with the Poles in their gallant struggle; and if their liberty could have been obtained by the goodwill of nations, they would before this have been free. But, unfortunately, the justice of a cause does not always ensure its prosperity, and the barren sympathy of distant friends is powerless against the active hostility of a present foe. Other conditions are wanting for success, other forces must enter into the conflict. It is difficult to form a correct idea of the power of resistance which the insurgents may still possess; but now that they have suffered one severe check, and have lost one of their ablest leaders, we can scarcely expect, though we may still hope, that they will be able to work out their deliverance from captivity.

* The Polish Captivity: an Account of the Present Position of Poles in the Kingdom of Poland, and in the Polish Provinces of Austria, Prussia, and Russia. By Sutherland Edwards. Two vols. W. H. Allen & Co.

All that relates to Poland is at present of such deep interest that anyone who can give authentic information on the subject deserves a cordial welcome. The book in which Mr. Sutherland Edwards has depicted the "Polish Captivity" would have been valuable at any time, but the opportuneness of its arrival so enhances its merits that it is certain to command a greater than ordinary success. The early history of the country, the successive changes through which it has passed, and the events which have of late years invested it with so mournful an interest, are all carefully investigated and vigorously narrated. It is a subject which few writers are competent to deal with, but Mr. Edwards possesses special qualifications for the task. Personal experience has made him well acquainted with Poland and the Poles, the interest he takes in their fortunes has led him to study the question of their wrongs with zeal and assiduity, and his acquaintance with Slavonic languages enables him to make use of stores of information which are unserviceable to the ordinary student. Consequently he is entitled to speak with authority, and his opinions on the condition, feelings, and prospects of the various nations which he describes, deserve a very different hearing from that which we should give to the crude theories formed by a careless traveller passing hastily through an unfamiliar land.

Mr. Edwards visited Poland and Russia in 1861 as the special correspondent of the *Times*, and a portion of the book now before us appeared in the columns of that journal. He arrived in Warsaw soon after the massacre of April, and found the whole city mourning for those who had fallen on that occasion. All amusements were suspended, none but sombre garments were worn, none but mournful music was heard. The streets and squares were full of soldiers, but "this display of force was rendered as little offensive as possible. The soldiers doing street-duty were without weapons of any kind, and their behaviour was perfectly good." So far he can speak in favour of the Government, and the charge brought against it of suppressing the national language appears to him to be exaggerated. Here is his testimony on the subject:—

"From what I had heard of the Russianizing system pursued in the kingdom of Poland, I was surprised to find that Polish was the language of the public offices in Warsaw almost as much as of everyday life; and that in more than one office it was difficult to find a clerk who understood Russian. My ticket of residence, given by the passport authorities, was in the national tongue; so also was the *visa* obtained at the head-quarters of the police; so also was a paper, acknowledging the receipt of some books which, before being delivered up to me, had to be submitted to the censor. At the post-office, Russian seemed to be an unknown language.

"The inscriptions on the Government buildings are usually in Russian and Polish; sometimes in Polish alone, but never in Russian alone. In the official journal, Russian and Polish are used side by side as a rule; but, occasionally, notifications and advertisements are printed in Polish only. I believe that, in theory, the Russian currency was substituted for the Polish long ago by the Emperor Nicholas; but, in practice, Polish coin and notes circulate everywhere, and the shopkeepers all state their charges in the ancient money of the country—though they willingly accept, at a just equivalent, Russian, Prussian, Austrian, or any other ready cash."

So unpopular is the Russian language in Poland that even Russian ladies abstain from using it in the presence of Poles. Russian books are scarcely to be obtained in Warsaw, and the newspapers are thoroughly Polish. The censorship is so strict that it is impossible for any journal to express the popular indignation, but

"Some of the Warsaw newspapers, however, have their recognized devices for protesting in print against the existing state of things in Poland. Thus they never mention Russia by name, but always speak of her as 'a certain Power,' and it was once the rule at all Polish printing offices, until the device was noticed and put a stop to, to print the PAST and the FUTURE in capital letters, and the PRESENT in the smallest possible type."

In fact, the "Russianizing" system has utterly failed, and the only result it has produced is an indiscriminating hatred on the part of the Poles for everything Russian. They cannot forget the savage insolence and cruelty of the former Grand Duke Constantine, the crushing tyranny of Nicholas, the tortures inflicted on the students of the University of Wilna, the transportation of thousands of families to the Caucasus, the systematic contempt displayed for the feelings of the nation, the terrible punishments inflicted upon some of its noblest sons. Take, for instance, the case of Prince Roman Sanguszko.

"The crime committed by the Prince was that of having fought for his country. He was well acquainted with some of the members of the Imperial family, had been in the habit of meeting the Empress at Berlin when he was a student and when she was still a Prussian Princess, and had often danced with her at her father's court. She was horrified, as any woman of the least heart must naturally have been, at the thought of this young man of twenty-four being sent for life to Siberia to work in the mines, and entreated the Emperor to pardon him, or, at least, to mitigate his punishment. The Empress herself and all the sisters of the young Prince went down on their knees and begged the Emperor to spare him. These prayers were not without their effect on the tyrant. He sent for the order condemning the Prince to hard labour in the mines, and 'deigned to add,' with his own hand, '*To be conducted to his destination on foot.*'"

All this oppression, all these cruelties, have served only to bind the Poles more closely together. If it had not been for the forcible partition, says an eminent Russian journalist, Poland might have

Digitized by Google

died out through the insufficiency of its own institutions, through the development of one class to the exclusion of all others, and through the ultimate corruption of this class. But the touch of the foreign sword revived the spirit of the nation, and in destroying its political existence gave it a fresh moral life, which has never since deserted it. And if it had not been for the savage conduct of the Russian soldiery during the last two years, the Conservative and the Republican parties would have kept alive their standing feud instead of coalescing into one patriotic party. For the Poles have been addicted to quarrelling from time immemorial. Mr. Edwards gives an interesting account of the dissensions and follies by which they prepared the way for the ruin of their country. In the chapter entitled "How Poland fell," he traces the gradual decline which preceded the final overthrow, and points out how often what ultimately happened was predicted. But the prophecy was always made to careless ears. Sobieski, on his deathbed in 1695, spoke of the state of Poland as hopeless, and twenty-seven years previously John Casimir, in his speech to the Diet on the occasion of his abdication, had foretold the ultimate fate of the Republic. But the most striking prediction is that which the priest Skarga uttered in a sermon addressed to the Polish nobles in the beginning of the seventeenth century. After speaking of the ambition of political parties, the power usurped by the nobility, the little respect paid to the authority of the King, he makes a vigorous attack on the conduct of the nobles towards the peasants, and then "predicts all the terrible calamities which a century and a half afterwards fell upon the Polish nation; not in symbols or metaphors, but in the clearest and most precise manner."

"The foreign enemy who is seeking to crush you will advance towards you, and, seizing you by your weak side, laying his hand on your dissensions, will cry out, 'Now that their hearts are no longer of one accord they are lost.' And he will profit by this moment so fatal to you, and so favourable to his tyranny. . . . . On the traces of your discords foreign despotism will advance and swallow up all your liberties. These liberties, of which you are so proud, will become the fable of prosperity, and the laughing-stock of the world. For your children will perish, with their families and all that belongs to them. They will die in misery in the hands of their enemies. . . . . .

"Your language, the only one among the Slavonian tongues chosen and adopted by liberty, you will see destroyed. You will see your race degenerate, and what remains of it will be dispersed through the world. And you will be condemned to undergo a horrible metamorphosis; to assume the manners and habits of a people who hate and despise you."

The fall of Poland, and the triumph of Russia, Mr. Edwards remarks, were fully prepared, from the outside, before the end of the seventeenth century. The internal causes of its destruction had already shown themselves in germ at the beginning of the sixteenth; the two principal ones being the *veto* and the privilege of every Polish gentleman to vote at the election of the sovereign. The right of the *veto* was never exercised till the middle of the seventeenth century, although it had long existed in theory. There was a sort of agreement among the members not to use the power for factious purposes, and it lay dormant till the year 1652, when Sicinski, the Nuncio of Upita, in Lithuania, suddenly forbade the continuance of the proceedings, and broke up the assembly. His memory is in consequence accursed throughout Poland.

"When he uttered the fatal word the Diet broke up in consternation, and on going home he was struck by lightning. His house was burned to the ground, his family was destroyed, but he himself is said to have been preserved in a sort of parched-up, mummified condition. On the anniversary of the ill-omened day, and on other days as well, the thunder-blasted frame of Sicinski used to be carried round the town of Upita in the style of our Guy Fawkes. He, indeed, deserves his shameful celebrity far more than Guy Fawkes, who only intended to blow up the members of one particular English Parliament. Sicinski did really blow up the Polish Diet as an institution, and with it the whole of Poland."

So clearly were the bad effects of the *veto* perceived by the nation, that, eighteen years after its first exercise, the members of the Diet bound themselves by an oath not to make use of it, but unfortunately the resolution in which their determination was embodied was negatived by the single vote of an obstinate dissentient. Its operation broke up almost every Diet directly after its meeting, and before it was abolished by the Constitution of 1791, its evil influence had been the cause of disasters which could no longer be remedied. The second and third partitions soon afterwards followed, and the Poles had no longer an opportunity of displaying the wisdom which they had so tardily acquired.

Each of the three Powers which divided the country among themselves has endeavoured to denationalize its portion of the spoil, and has signally failed in the attempt. Whether under Austrian, Prussian, or Russian rule, the Poles have always refused to identify themselves with their masters, and have clung with a fond persistency which neither time nor suffering could overcome, to the relics and traditions of a happier age. Mr. Edwards spent some months in Galicia as well as in the Grand Duchy of Posen, and not the least interesting and instructive part of his book is that in which he describes the sentiments of the Poles towards their German rulers, and gives an account of the measures which have been carried out at various times by the authorities at Vienna and Berlin.

Whatever difference there may exist in the systems to which the Austrian and Prussian Governments have had recourse, there is none in the feelings with which they are regarded by the Poles. Wherever Mr. Edwards went he heard the same opinions expressed, the same grievances detailed, the same oppressions denounced. Personally the Germans are detested even more than the Russians; their rule may be less harsh than that of their rivals in tyranny, but their behaviour is more annoying, their self-sufficient pedantry constantly inducing them to adopt measures which prove an endless source of vexation to their victims. At present the Austrians appear to be inclined to relax their severity, but they find it as difficult as ever to conciliate their Polish subjects.

(To be continued.)

LYELL'S ANTIQUITY OF MAN.*

Sir Charles Lyell is *facile princeps* among our scientific geologists, and there is no one who has so high a claim to speak with authority upon the interesting questions discussed in this work. He has been the earliest and most emphatic asserter of the continuity and permanence of the causes which have influenced the changes on the earth's surface, and of the necessity of interpreting the past history of our planet by the aid of contemporary phenomena. In these, he maintains, and these alone, can the geologist find the *vera causa* without which geology has no claim to a place among the inductive sciences. In the principles of geology he shows us how the earth's surface at the present day is full of motion and full of change, and how the accumulation of geological records and work for future explorers is proceeding incessantly and continuously in the same way as we are making human history and storing up materials for historians in the years to come. In the earth's crust we see a spheroidal surface abounding in irregularities of elevation and depression, the principal hollows being filled with water, but this surface, as we have said, is in a state of perpetual change. In some parts it is slowly heaving and rising, causing land to emerge gradually out of the water; in others it is shrinking and subsiding, allowing the water to gain upon the land. In some parts it is experiencing violent fractures and dislocations, the effects of earthquakes and volcanoes; in others, glaciers and icebergs are at work grooving out valleys and transporting material, while over much larger areas we have countless rivers and streams transporting daily myriads of tons of solid matter from the higher to the lower regions of the globe. Evidence of all these agencies will remain to the future geologist, but the most interesting records of any will be those which embody traces of the fauna and flora, the animal and vegetable life now prevailing on the earth, for in these will be found the surest indications of the conditions climatal or geographical under which they have been deposited. Such remains can in the vast majority of cases only be preserved in subaqueous deposits, for a defunct organism when exposed to air and rain is rapidly decomposed and dissipated into its constituent elements, so that, to ensure its preservation, it must be speedily enveloped in a matrix which arrests decay and supplies a mineral constituent for each particle of animal matter lost of the substance. Now the earth's surface has been the subject of very diligent scrutiny within the last century, and the result has been the investigation of beds of fossiliferous stratified deposits which, if arranged vertically over each other, would extend to a depth of from ten to thirteen miles; these beds have been divided into twelve principal formations, and these again into three main groups, "primary," "secondary," and "tertiary," according to the greater or less correspondence of their animal remains with the forms now inhabiting the earth. The changes of climate, geographical features, and types of animal life thus indicated are very marked, and indicate the extreme imperfections of the geological record as far as it has at present been investigated; as an example of which we may mention that between the chalk and eocene formations which close the secondary and commence the tertiary period respectively, an interval of time must be imagined which may not unreasonably be compared with the ages occupied by the whole tertiary group, that is, a period so vast that the greatest duration ever claimed for the human race sinks into insignificance when compared with it; and yet this period is represented, if at all, by only a few fragmentary patches. The aspect of the fauna and flora of this tertiary period has a much greater resemblance to what we see at the present day than those of the preceding epochs, and the formations occurring in it have been subdivided into groups according to the greater or less proportions of their fossil shells belonging to living or extinct species. At the close of this epoch great changes took place in the temperature of our globe. A glacial period set in over the northern hemisphere, and a large portion of what is now dry land was submerged beneath a sea bearing vast icebergs laden with mud and fragments of rock. These icebergs deposited their burden in unstratified and unsorted masses over the subjacent land and against the shores which remained above the water; as may well be seen near Cromer, on the Norfolk coast, where the cliffs consist of boulders of granite, porphyry, greenstone, lias, chalk, and other masses, heaped up together, which fragments may be traced to their Scandinavian home; and both before and after this submergence glaciers were at work on a scale and in localities hardly conceivable at the present day, traces of their existence being found abundantly in Wales, Scotland, and the English lake district, while those in

* The Geological Evidences of the Antiquity of Man, with Remarks on the Theories of the Origin of Species by Variation. By Sir Charles Lyell, F.R.S. Murray.

Digitized by Google

Switzerland many times exceeded their present diminished representatives, and extended from the Bernese Alps to the mountains of the Jura. At the end of this period we may place the commencement of the present geological epoch; the principal reason for so doing being the coincidence of the fossil shells since deposited with those now inhabiting the waters of the globe. But great geographical changes have been wrought and are still in progress within this epoch. At its commencement the British Isles formed a portion of the Continent, and it was during this continental state, if the present indications of geology be true, that man first made his appearance on the earth while yet it was tenanted by the now extinct mammoth cave-hyena and woolly rhinoceros. Regarded, therefore, from the geological point of view, the claims put forth for the antiquity of our race are of the most modest dimensions, but their historical aspect is very different. If our author's conclusions be correct, and it is hard to rise from a perusal of this volume with any doubt upon the subject, we must concede to the human race an antiquity in comparison with which even the mythical records of Assyrian and Chaldæan historians shrink into insignificance.

The question has not arrived at its present state without a struggle upon purely scientific grounds, and a comparison of this book with Sir Charles Lyell's earlier works will indicate the conflict through which his own mind has passed. We have said that the formations belonging to the present or post-tertiary epoch are recognized as belonging to one period by the modern aspect of their fossil shells, but they are subdivided into two groups according to another very important palæontological feature, that is to say, the presence of remains of extinct mammalia. The newer formations, in which not only the shells but all the fossil mammalia coincide with existing species, are called *recent*, the name *post-pliocene* being assigned to those in which, while the shells are modern, some of the mammalia are extinct. Now for many years past we have been continually growing more and more familiar with the evidences of human occupation embedded in the newer or "*recent*" formations, and whatever difficulties such discoveries might present to the historian, they were no stumbling-block to the geologist, inasmuch as they were always found associated with the remains of existing mammalia. The relics of human organisms and of human art have been found abundantly in all quarters of the globe. They occur with the remains of log cabins buried deep in the peat of Irish bogs. They have been found in mounds on the Mississippi and the Ohio, overgrown with a vegetation whose age we scarcely dare to compute. They have been extracted from a great depth in the alluvium of the Nile delta, and from the ancient beds of the Forth and Clyde. But by far the richest archæological harvest has been gathered from the contents of Danish peat mosses, with their associated "Kitchen Middens" or shell mounds, and from the relics of the innumerable lake villages, which were formerly built on piles driven into the beds of the Swiss lakes. The Danish and Swiss archæologists have explored the pre-historic antiquities of their respective countries with the greatest minuteness, and we are enabled almost to reproduce the social life and history of the ancient inhabitants of Central and Northern Europe, to trace their gradual improvement in the useful and ornamental arts, and their advance from the ruder age of stone implements to that of bronze, and finally of iron, at which stage they make their appearance in history. We can follow out their progress from the hunting to the pastoral state, we can detect the gradual introduction of domesticated animals, the cultivation of cereals, the manufacture of cloth and pottery, and the use of coins. The extreme antiquity of the oldest of these relics is attested by many considerations, too numerous to be abstracted here, but we may mention that Sir Charles Lyell arrives at the estimate of from 4,000 to 7,000 years, the very lowest assignable limit. Here, however, we are only on the threshold of our discoveries. Geologists themselves have been staggered at those which yet remain to be described. For the last thirty or forty years, the existence of caves has been known in which the bones and weapons of men have been found embedded in one stalagmatic mixture with the fossil remains of extinct mammalia. The notorious Brixham cave is the example most familiar to English readers, but the caverns of the Meuse, the South of France, and Düsseldorf have supplied more striking and abundant materials. Old established and respectable geologists have hesitated before committing themselves unreservedly to the extreme conclusions which the contents of these caves would appear to warrant. The late Dr. Buckland emphatically declared that the evidence was not sufficient to necessitate the belief that the human and brute remains were deposited contemporaneously. Sir Charles Lyell, though less positive, clearly inclined towards the same opinion, and so long as the evidence of co-existence was confined to these cave deposits, it was probable that little more attention would be paid to them. But in the last six or seven years, scientific belief in these matters has been greatly stimulated by the publicity which has been given to the discoveries of human implements in the Somme valley. Through the bottom of this valley the river runs over a bed of peat some 20 or 30 feet thick, and on the sides of the valley occur abundant patches of gravel, covered with sand and loam, arranged at different elevations, some of which are as much as 80 or 100 feet above the river. These appearances tell us unequivocally that since the drainage of the neighbourhood has been in the main what it now is, the river bed has been greatly raised. During this elevation the deposits in the ancient bed and banks were eaten away, and are now represented by the fragmentary patches described above. The peat is of course the newest formation, although from its thickness, compared with the slow growth of this substance, it must have occupied an enormous interval of time in its accumulation. Its remains have been hitherto only imperfectly investigated, but they appear to extend from the Roman occupation up to the "*recent*" period which we have just described. That the gravel patches are separated from the peat by a vast interval is evident, from the existence in the former of the relics of extinct mammalia, as well as from an estimate of the time required to effect the changes which must have intervened since their deposit. It is in these gravel patches, the upper as well as the lower, that flint implements have been discovered entombed along with the fossil remains of the mammoth and other extinct mammals. Upwards of 1,000 specimens of these instruments have been discovered in the drift of this river alone, but they are by no means confined to this locality. They have been found under precisely similar circumstances, and accompanied by the same fossil fauna, in the valleys of the Seine and of the Oise, in the silted up-bed of the Thames—especially in an old tributary of that river near the Reculvers, in the valley of the Ouse near Bedford, and at Hoxne in Suffolk; and the aspect of this English drift conveys to us the additional interesting information that the instrument bearing deposits of this country and the Continent are posterior in date to the glacial epoch of which we have already spoken. The co-existence of human instruments with the remains of extinct mammalia removes the difficulty which was felt in the case of the cavern deposits; and these last are accepted as evidence that the human bones contained in them, with the skulls in some cases indicating no mean cerebral development, in others of a low and ape-like type, belonged to men who roamed over the land with the mammoth and the cave-hyena. We have already mentioned that our author, with the most obvious shrinking from startling and destructive conclusions, has fixed upon a period of from 4,000 to 7,000 years as a possible minimum for the age of the remains of the *recent* period, but we cannot read his description of buried forests, changes of vegetation, and alterations in physical geography, without feeling that such a limit might more reasonably be multiplied by 10, 20, or even 100. At this second stage of the discovery, in which we ascend to the older, or '*post-pliocene*' epoch, our powers of computation fail. Assuming the truth of these results, we can with confidence say that, had King Solomon sent out a party of geologists to explore the districts of which we have just been treating, they would have found the main topographical features not widely different from what they are at present, and they would also have discovered these very cave deposits and drift implements which have been reserved for our day, and which would indicate to them an origin of the human race, about as much nearer to their time than it is to ours as the sun is nearer to the summit of Primrose Hill than it is to the streets of London.

As the great impulse to the belief in *post-pliocene* man was given by the flint implements of the drift, it will not therefore be surprising that their discovery should have been subjected to a searching and hostile criticism. It has been objected that the area of their deposition is too limited, and that they are to be explained away by some local peculiarity. The answer to this objection is contained in what we have already said about the geographical extent to which these discoveries have already attained. Again it has been suggested that the mammal and implement deposits of the Saume are not really coeval; that the former do occur in the deserted bed of the river; but that the latter are found in intercalated patches of gravel, of really newer origin. Every portion of Sir Charles Lyell's description rebuts this assertion. It is true that he does not notice the objection, for it is of recent date and subsequent to his own researches; but such a very essential and obvious feature could not possibly have been overlooked by a geologist of far less experience than Sir C. Lyell; and indeed a diagram at page 135 of this book exhibits a mammoth bone and flint hatchet, in immediate juxtaposition and in the same deposit. Again, the chance of the whole thing being a fraud is urged upon us with about as much force as if we were to deny that a bullet was ever picked up on the field of Waterloo because relics of the battle are being manufactured for tourists at the present day. And finally, and with greater *primâ facie* plausibility, it is maintained that the appearance of these flints must be referred to natural, and not to artificial causes. But let it be remembered, in the first place, that these instruments do not stand alone, but that we have the *unquestioned* implements of pre-historic man with which to compare them, not to mention the weapons of existing savages. It must also be remembered, and the remark is applicable to all the geological inferences alluded to in this book, that it is very difficult to convey to the inexperienced and the comparatively ignorant the full force of the signs which an expert interprets with so little difficulty. In a book or lecture they come dribbling out slowly and in detail, and they cannot affect the mind simultaneously and in their entirety as they do when presented to the inspection of one long conversant with such matters. To an expert, whether in coins, manuscripts, or bank-notes, the genuine is distinguished from the spurious by numberless minute signs, which experience alone can teach; only the most salient of these can be brought to bear upon the minds of the uninitiated, and even this is accomplished with great difficulty. On the artificial character of these celts there is almost a general consensus of opinion among the learned, which is well represented in these words of Professor Ramsay:—"For more than twenty years, like others of my craft, I have daily handled stones, whether fashioned by nature or art, and the flint hatchets of Amiens and Abbeville seem to me as clearly articles of art as any Sheffield whittle."

We have but short space left to pass from the substance to the form of this work. The antiquity of man occupies little more than a third of the volume, which contains, in addition, a valuable treatise on the glacial epoch, and a discussion of the Darwinian theory of transmutation of species, and there is no doubt that the unity of the work suffers in consequence. Throughout the whole book we are impressed by the eminently judicial character of Sir Charles Lyell's treatment; there is an utter absence of advocacy; he is candid almost to a fault; he places his subject in so many points of view, and is so careful to give due weight to every hypothesis, that it requires close reading and sustained attention to follow out his reasoning and perceive the bearing of all his arguments; but *le jeu vaut la chandelle*, and the reader lays down the volume with the consciousness of having made a definite and valuable accession to his knowledge.

THE PRINCE CONSORT'S FARMS.*

When, at the dinner of the Royal Agricultural Society of England held at York in 1854, the late Prince Consort—whose untimely death we still deeply deplore as a national loss—gave utterance to the expression "*we* agriculturists of England," his gratified audience knew that these were no mere graceful words of course, but that he had given at that early period of his career abundant evidence that he really took an interest in agriculture, and possessed true claims to be considered one of its most enlightened followers. But little note, however, was publicly taken of the circumstance; and much as we are nationally interested in the progress of that art which is the nursing mother of all the arts, few amongst those outside the agricultural world had any correct notion,—if, indeed, they had any notion at all,—of the deep and truly practical interest his Royal Highness took in the development of its resources and the practical illustration of its every-day labours. How deep this interest, and how extensive, how numerous, well ordered in conception, and carefully elaborated in execution, were his labours, this "agricultural memoir" now before us gives abundant and gratifying evidence. It has been undertaken by one who, to a practical knowledge of agriculture, with an enthusiastic interest in it, adds all the advantages which a long and useful connection with its literature bestows. Every page of this most interesting volume shows that with Mr. Morton its preparation has been a labour of love; nor is it its least gratifying feature that, while Mr. Morton displays in it the keenest appreciation of the merits of his lamented Highness as an agriculturist, he shows no less markedly his deep sense of his worth as a man. So numerous, indeed, are the delineations of personal traits of the Prince's character given in the work, that it might well lay claim to a wider and more comprehensive title than it assumes, and be considered, as in many respects it is, a graceful tribute to the personal worth as well as the agricultural merits of the Prince. Mr. Morton's work is thus possessed of wider interest than some, from the perusal of its title-page, might be disposed to think; and while, doubtless, specially interesting to agriculturists, it is worthy of a popular reception. And this is further secured by the care with which the publishers have got up the work, displayed in its beautifully printed pages, and the number and excellence of its illustrations.

Before proceeding to analyze briefly, as our space compels, the special features of the work, let us glance for a moment at those delineations of personal traits which it affords, and to which we have above alluded. It has been well said that the Prince "touched everything, and adorned all he touched." Amongst those subjects he touched was architecture; and in the engravings of Osborne House, of the Royal Dairy, and the church at Whippingham, we have in Mr. Morton's book gratifying evidence of the Prince's fine taste in this art. Of the church at Whippingham, Mr. Morton says that it is "an illustration at once of the fine taste and earnest religious feeling of the Prince Consort. . . . . Great simplicity in the general outlines is united with great beauty, both of form and colour, in details; one guiding principle, apparently, being the impossibility of over-costliness of ornament, provided that it be instructive on essential points of religious truth. No incident or history of any merely human life is depicted on the walls or windows here. The Birth, the Crucifixion, the Resurrection, and Ascension of our Saviour are represented; and He is exhibited as 'the light of the world,' the true vine, 'the good Shepherd.'" With these evidences of his refined taste, the Prince united a practical, manly habit of doing homely things in a thoroughly honest way. Mr. Morton tells us that on the last visit of the Prince to this church, he "personally assisted in the unpacking and examination of the coloured windows" which display the pictures referred to above; and we feel a tone of sadness in his remark, when Mr. Morton goes on to say that the Prince "never saw the church in anything like a completed state. Indeed, it was not finished at his death; and it has since been proposed that a window in memory of himself should be added to the series already placed by him." But, as Mr. Morton well remarks, "it was immediately remembered that the whole church is his memorial—a monument of his own designing—which recalls at once the purity and usefulness of his character and life. The Queen intends, we understand, to place a memorial to the Prince in her own pew."

Whatever the Prince undertook to do he did it thoroughly; no half measures. He ever remembered the injunction, "Whatever thy hand findeth to do do it with all thy might." We can well understand that so important a thing as the education of the royal children received no small attention. In the immediate neighbourhood of Osborne House, skirting the southern edge of the Park Valley, are "the Swiss Cottage and the Gardens of the Royal children. These are interesting, for the proof they give of the practical good sense that has guided the education which the Prince thought necessary for his family; for here essentially is a school at which homely, domestic, and most useful instruction is given and received. Every garden, consisting of several plots, contains flowers (roses, lilies, pinks, &c.), and in separate beds, strawberries, gooseberries, currants, and raspberries; among fruits are asparagus, artichokes, potatoes, turnips, cabbages of various sorts, onions, carrots, parsnips, lettuces, and other culinary vegetables. The cultivation of all these plants has to be looked after; and close by, in the Swiss Cottage, is a kitchen, where the vegetables which have been grown by every little gardener may be washed and cooked; where cookery of other kinds is carried on; where, indeed, all the apparatus exists for juvenile entertainments, given by those who have thus themselves carried out the whole process, from the planting of the seed or set, up to the preparation of its produce as food. It is extremely interesting," continues Mr. Morton, "to see—in the orderly arrangement of the tools, each one bearing its owner's name; in the well-tilled plots; even in the arrangements for practice and instruction in the kitchen, as well as in the admirable collections illustrative of various branches of natural history in the museum upstairs—proof of that regard for the systematic, the useful, and the practical which the Prince Consort was known to possess. And still more interesting is it to learn that not only are the immediate ends contemplated in these things fully attained, but that the family bond is strengthened, here as in humbler instances, by every homely family enjoyment shared in common. The Crown Princess of Prussia still retains her little garden, and the produce from it is sent each summer from Osborne to Berlin."

But the development of the practical notions held by the Prince on the subject of education was not confined only to the Royal children. All classes within the sphere of his influence felt the interest he took in their true progress. The labourers on the Royal farms were the special objects of his solicitude, and were benefited by his "earnest mind and genuine sincerity." What he did for the labourers in the erection of improved cottages, in the establishment of benefit societies, in the opening and keeping up of evening schools and libraries, is recorded in the third chapter of Mr. Morton's book, entitled, "The Prince and the Labourer," which thus appropriately concludes: "We do not pursue this subject further. It is reserved for another pen to give—perhaps for another generation to receive—the full record of the Prince Consort's services to national advancement through national education. Ours has been the humble office of pointing out, as in the history of his farms so in that of his relations to his labourers, and the labouring class around him, how much we owe to him as our great exemplar in the agricultural world. Both the owners and the occupiers of land may benefit by his labour and experience on the estates of Osborne and Balmoral, and on the farms around Windsor; but his Royal Highness was especially the friend of the people—the poor man's friend. Herein he well deserved a place in that class, the most eminent of all and the least numerous—those who live in advance of their own time." This chapter is useful, not merely to the educationist and to him who has the welfare of the labourer at heart. It abounds in illustrations of cottages erected by the Prince Consort on his various estates,—illustrations which convey much sound, practical information on an important subject. The block of three cottages as erected on the Osborne Estates, called the Brickfield Cottages, display in elevation a fair union of picturesque effect with economy of material. The double cottages at Alverstoke are plainer in external appearance, but the arrangement of the interior is more to our mind. It is somewhat amusing to trace, in the plans of cottages erected on the Balmoral Estate, the contrast which they afford as regards the extent of accommodation which a Scotch labourer deems necessary with that demanded by an English labourer. Nothing can be more simple than the accommodation given in the Scotch cottage, and even the "necessaries" of an English cottage, such as washhouses, seem to be looked upon as unnecessary requirements in the Scotch. Another point worthy of notice, in contrasting Scotch with English cottages, is the practice which is almost universal in the sister country of building the cottages of one storey only. This principle is, we take it, bad, and should be lost sight of as fast as possible. It compels all the bedrooms to be near the ground; and while bedrooms in a second storey, as in the humblest even of English cottages, may be damp, those on the ground-floor must be. Such is the rule; the exceptions we have found to be few, so far as our experience goes, and it has neither been confined to a small area of observation nor to a limited number of years.

We now turn to other departments of the work, connected more specially with the features of the agricultural life of the Prince Consort, who, according to Mr. Morton—and we cordially coincide with the truth of the statement—stood "alone in British agriculture as in himself the exemplar and exponent of a greater diversity of farm practice and experience than any other agriculturist." A memoir such as the work before us, with its elaborate statements

* The Prince Consort's Farms. An Agricultural Memoir. By John Chalmers Morton, Editor of the "Cyclopædia of Agriculture," &c. and Honorary Member of the Royal Agricultural Society of Holland. Longmans & Co.

Digitized by Google

of projects conceived and carried out in connection with the drainage, steam cultivation, manuring, and tillage of land, the erection of farm-buildings, the breeding of cattle, and the management of dairy stock, must be of more than usual value to the practical agriculturist. It is interesting to note what a watchful, well-observant eye the Prince had for every topic agitating the agricultural world. Amongst those which for a long time have been disputed points stands the liquid manure question. The Prince, well convinced that a grain of fact was worth a ton of assertion, at a very early period turned his attention to the practical utilization of the sewage and liquid manure within his reach. The sewage of the mansion occupying the grounds where now stands Osborne House used formerly to be brought to the sea-shore, where, at low water, it created an almost constant nuisance. "For this," says Mr. Morton, "a remedy was sought, just as it is now sought for the nuisance which town sewage almost everywhere creates; and the success of the measures taken by the Prince at Osborne may be found a useful guide to efforts on a larger scale elsewhere." This success is evidenced by the fine green and healthy appearance the herbage, to which the sewage is applied, displays in early spring, affording a marked contrast, well known to those who have had much experience in the utilization of liquid manure, to the dried-up, white, and withered look of ordinary meadows at this period of the year. The success also is measured by the fact that the grass of the plot liquid manured at Osborne "is manyfold that of the land around it; and, eaten bare, it affords food enough for three or four times as large a stock." For the details of the plan by which the liquid manure is saved, and by which it is applied to the land, the reader is referred to this book itself. The excellent management of the Prince as a "farmer" is shown by Mr. Morton where he says, while writing of the property at Osborne, "Nowhere are better roads to be seen; the fences are perfect illustrations of what fences ought to be; the land is divided by them into fields of useful and convenient size; these are drained, and cleanly, deeply cultivated by horse, steam, and hand; and the homesteads are particularly well adapted for the good management of the live stock, and the safety of the dead stock, of the farm, and for the economical manufacture of meat and manure." This is high praise, coming as it does from one who knows well what good farm management is and what it ought to be. Of the details of this management this is not the place to speak; the reader specially interested in them will find them fully described, and amply illustrated by drawings, tables, and statements in Mr. Morton's work.

The management of the dairy has always possessed peculiar charms for those interested in agriculture; and as "amateur farming" is at present extremely fashionable, the chapter in which details are given by Mr. Morton of the "Royal Dairy" will be peculiarly attractive to many. The dairy stock of the Home Farm consists of nearly two hundred head, and for these the accommodation is of a very superior character. The old dairy at Frogmore was badly planned, as badly constructed, and presented none of the features which are now essential in a well-contrived modern dairy. What these features are may be learned from the Prince's own instructions to Mr. Turnbull, of Windsor Castle, who was commissioned to draw up a report on the best plan for a new dairy. We may do all dairymen a service by giving a *resumé* of what these instructions were. Air was to circulate freely round the dairy; shelter was to be had from the south and west; trees were to be excluded from close contact with it, none nearer than 30 feet, and all neighbouring shrubs to be close standards; the soil, if possible, a gravel subsoil; ample ventilation to be secured within the building, both at top and at its sides; windows to be double, to secure warmth in winter, cold in summer; water to be plentifully supplied; means for rapidly flushing the drains; no cesspools to be near the building; the walls to be hollow; the roof to be such that no vicissitudes of weather should affect the milk; the floors and walls to be paved and covered with glazed tiles; the tables and shelves of marble or of slate.

The most interesting chapter for the purely agricultural reader is that descriptive of the management and buildings of the "Prince Consort's Farms" in the neighbourhood of Windsor; these being the "Home or Dairy," and the Shaw Farm, the Flemish, the Norfolk, and the Bagshot and Rapley Farms. These represent such a wide variety of agricultural management, and are so characteristically separate and distinct, that "there can hardly be any farmer in the country to whom one or other of the many facts illustrated on these farms is not personally and professionally interesting." Of the farm buildings illustrations are unsparingly given in the work; and they represent almost every variety of structure, from the almost palatial structure of the Royal Dairy—"fit for inspection by Royal visitors"—down to the "old-fashioned thatched and wooden farm." Exemplars of our various breeds, and varieties of our farm stock, are to be met with also in these farms. At the Shaw and Dairy Farms the noble Short-horn of pure breed is to be seen in perfection; at the Norfolk Farm a herd of the juicy Devons; at the Flemish Farm the fine Hereford, almost rivalling the Short-horn; and at the Bagshot and Rapley Farms herds of the rapidly fattening Kyloe and Galloways. The humbler animals of the farm are also to be met with in perfection at the Prince Consort's Farm. At the Shaw Farm you find a herd of well-bred Berkshire pigs, and at the Home Farm you may pinch to your heart's content the ears, or punch the ribs—if you can only get at them—of the well-known "White Prince Albert's Windsor Breed." It is from these farms that the stock has been taken which have been successful competitors at the meetings of the Royal Agricultural Society and of the Smithfield Club. In the fourth chapter, entitled "Biographical," Mr. Morton tells us the position the Prince Consort took as an exhibitor of stock at the meetings of the above societies, and the prizes he won. Some idea of the number of these may be derived from the statement that the list comprises prizes to the amount of "nearly £1,000 in money, five gold medals, six silver cups, twenty-one silver medals, two bronze medals, thirteen high commendations, and twenty-one simple commendations." The list also shows the early period at which the good Prince began his agricultural career; the date of his first prize is the year 1843. He showed his interest in agriculture at an earlier period than this, for it was in 1840, three years preceding the above date, that he became a member of the Smithfield Club. This connection, thus early formed, he maintained by the closest attention during his useful and honoured career. Not only was he a constant exhibitor of stock at its yearly shows, but he frequently honoured them with a personal attendance. In 1844 and in 1850 he visited the show in company with the Queen and Royal Family; with the Prince of Wales and Prince Alfred in 1851; by himself in 1859; and with her Majesty in 1860. He had intended a visit in 1861, in that very week which conveyed to the nation the news of the loss they had sustained in his death. To the dignity of an honorary member of the Highland and Agricultural Society of Scotland—a dignity shared with him only by the Emperor of the French—the Prince Consort added, during the last year of his life, that of the President of the Royal Agricultural Society of England.

THE GRAVER THOUGHTS OF A COUNTRY PARSON.*

We are disposed, in some respects, to prefer this volume to any which have been given to the public by the writer first known as "A. K. H. B." Two considerable blemishes have appeared to us to affect the essays which were originally published in *Fraser's Magazine*, and have since appeared in two volumes, under the name of "The Recreations of a Country Parson." These two blemishes were, the habit of word-making, for word-making's sake, and a certain degree of affectation. No one can read those essays to which we have alluded without feeling that if any judicious editor had had the correcting of the proof-sheets, he would with ruthless pencil have erased fully one-third of the matter. In one of the essays the writer describes himself as commencing operations by drawing out so many sheets of clean paper and cutting them into so many quarters. And we could vow that the picture is to the life. There were so many sheets to fill, at so many lines per sheet, and so many words per line. We feel that if we could have taken away one sheet out of every three, or compelled him to put only ten lines where he intended to put fifteen, we should greatly have improved the essay. The author required to be treated as gardeners treat other good things—liliés of the valley, for example. These delicious flowers are usually planted in a corner, where two or more walls meet, to prevent them from running wild, and from pushing out their sweetness in every direction. We detect a consciousness of this fault in our author's own mind. In p. 26 of "The Recreations," he begs "the courteous reader" "to suffer the writer's discursive fashion;" and in p. 74 he says "into this paragraph has my pencil of its own accord rambled, though it was taken up to write about something else." The charge of affectation is still more serious. But the writer of those clever essays laid himself open to that charge. In "The Graver Thoughts of a Country Parson" we are glad to acknowledge that both the blemishes to which we have alluded disappear. These "Graver Thoughts" are, in point of fact, sermons. In composing them, it is quite evident that the author has spared no pains. As is plainly to be seen in his essays, he had plenty to say, and "The Graver Thoughts" are undoubtedly improved by the smaller number of sheets which the writer could fold neatly down in preparation for his work. The recognized "half an hour," of which he speaks, would of necessity keep him within bounds, and would restrain his "pencil from rambling of its own accord" into subjects of which he had not intended to write when he began. In the pulpit, also, there was less scope, at least for a writer so earnest as our author, for affectation and conceit. We venture to hope that, at any rate, in the second line, he would endorse the words—

> "In man or woman, but far most in man,
> *And most of all in man that ministers*
> *And serves the altar*, in my soul I loathe
> All affectation."

The "Country Parson" was evidently too sincere to indulge in any want of reality when he found himself in the pulpit. There his best qualities were called out, and his "Graver Thoughts" are worded in language which is terse, pointed, and effective.

The opening chapter is devoted to a recalling to mind of "Sundays long ago." In it there are sentiments affecting both hearers and speakers, which, if they were generally carried out, would render the former less captious than they too often are, and the latter more alive to the tremendous responsibility that attaches itself to their office.

"But as for you, my friend, who never have to preach at all, you go to church on Sunday; you are there an hour and a half, or a few minutes more . . . . and as for the sermon, it is just half an hour's occupation to listen to it. . . . . But think how different a thing that

* The Graver Thoughts of a Country Parson. By the Author of "The Recreations of a Country Parson." London: Alexander Strahan & Co. 1862.

Digitized by Google

sermon is to the preacher. To him, if his heart be in his work . . . . that discourse is the culmination of all the week. His best thoughts for the entire week have probably been running on that discourse which to you is the occupation of half an hour. He fixed on that text, very likely, last Sunday evening, after considerable perplexity. Then he sketched out the sermon, and by day and night its subject was simmering in his mind. It cost many hours of steady work at his writing-table to cover those pages which you see him turn over, one in every minute or two."

Of the transitory nature of these his best efforts the "Country Parson" speaks thus feelingly :—

"And there is nothing to show for it all; nothing to be easily traced by sense. Robert Stephenson is dead, but there is the Menai Bridge; Brunel is gone, but there is the Saltash viaduct and the Great Eastern. But . . . . I once saw a mass of old faded sermons of a good clergyman who was dead. They were lying on the floor of an empty room in a house to let. I have little doubt they were ultimately used for lighting fires. You could not but think what a great amount of labour had gone to producing those neglected manuscripts. You could not but think of a bright summer morning, when the people came along leafy ways, and listened (a little drowsily) to that faded sermon which, as you see, was preached on the 24th of June, 1817. You thought of a clear, frosty, winter day, on which that other sermon did duty, which bears to have been given on a certain 24th of December. But how little trace remains. . . . . All the work of preparing that sermon; all the anxiety of the Sunday morning; all the hearty tones in which it was given; all the warmth of heart it awakened in the people who listened to it; have left no more trace than that inscription of June 24th, 1817. I see the people walking away home, by the various paths which lead from the church door . . . . I think of the good old clergyman going home from church . . . . and here is what stands for all that; in faded ink, the date I have already told you."

In the chapter entitled "Sundays long ago," we are pleased to observe a tone of mind at once opposed to the latitudinarian views which would secularize the Sunday altogether, and equally against those who would cast a gloom over that which, if properly managed, may be made the Queen of days both to parents and children. We have ourselves no patience with those narrow minds which reject the golden opportunity offered by the day of rest for binding the memories of children to their homes. Our author tells us of a man who, when he looked upon a green expanse, on which on Sunday afternoon the neighbours were quietly walking before they returned home from church, was reminded of the cities of the plain, and expected fire from heaven to destroy the evil-doers. He tells, too, of a Highland elder who spoke of the *awful sight* to be seen at Edinburgh on a Sunday. There, he said, you might see people walking along the street, smiling *as if they were perfectly happy!* We ourselves have a clear recollection of some sweet sunny slopes in the dry moat of a modernized ancestral castle, and of a group of merry children, born within the ancient walls, playing quietly on those slopes on a lovely July "Sunday long ago." Well can we recollect the scepticism with which the happy children received the assurance of an aged visitor, that they were tampering with holy things because they preferred a gleeful run upon the slopes to a steady walk with the elders on the gravel path. We are sure that it is perfectly possible so to spend the Sunday as to make it both the most useful and the happiest of all the days in the year. "Sunday," says the author of "The Graver Thoughts" :—

"has always a character of its own; whereas Tuesday in one week need not be in the least like Tuesday in the next week, in occupation, in scene, in feeling. Nobody can speak of the character of the Tuesdays in his history. A number of Sundays is like a flock of sheep, all very much like one another. A number of Tuesdays is like a drove of animals of most varied aspect."

And he adds to these observations :—

"The peculiar kind of atmosphere that breathes from the Sundays of childhood, depends entirely on the bringing-up you have passed through. . . . . Would that all parents were so kind and so judicious, as to have the will and way to make Sunday the day on which their children shall always look back as the happiest of all days! It can be done very easily."

With these views as to the Sunday, we are not surprised to find in "The Graver Thoughts of a Country Parson," not only an absence of sourness and severity, but that healthy and hopeful tone of religious feeling which tends to render the message of an earnest preacher acceptable to his hearers. There is in the "Country Parson" no shutting his own eyes, or allowing his hearers to shut theirs to the realities of the eternal world, or to the influence of the conduct in this life on the destinies of the next. He blinks no truths, nor hides unpalatable facts under pleasant disguises. Yet there is a cheerful and sympathizing tone throughout this volume, which carries us thoroughly along with him, as we read, and which must have made his hearers feel that they had a friend and brother in the preacher, a fellow-aspirant to the grace of a common Father, and a fellow-sufferer in the common woes and temptations of our race.

We find it difficult to single out any one in particular of these very interesting discourses. They differ from the essays, in having been actually delivered *vivâ voce* to congregations in town and country. There is much in them that is original; very much that is instructive. They fully carry out the professed object of the writer. It was to make those who listened to him feel that religion is a real thing, with the most practical bearing on all the interests of life, and not a thing quite beside and beyond our daily experience.

SHORT NOTICES.

THE internal condition of American Democracy is the subject of a letter,* addressed by one Irish rebel of 1848, who is now a member of the Canadian Legislature and President of the Executive Council of the Province of Canada, to another Irish rebel of the same date, who is M.P. of the Victoria Legislature and Minister of Public Lands in the colony of Victoria. It is introduced to the British public by an advertisement bearing the initials of Mr. Cashel Hoey, who, if he was not exactly a rebel in 1848, was of that hue; and we may conclude that whatever could be said in favour of American Democracy, in contrast with English monarchism, and against the connection of our colonies with the mother country, would be found in a document written, addressed to, and endorsed by men who, a few years ago, did their best to excite the hostility of their countrymen against the English Government.

What, then, does Mr. M'Gee, late Irish rebel, and present sympathizer with the North in its struggle to restore the Union, think of the present state of American Democracy? Plainly he has the very worst opinion of it; and his distaste for its present state and his fears for its future are based upon its "too easy, too angry, and too complete severance from the common body of Christendom, and common stock of Old World ideas, traditions, and usages." Rapidly after the establishment of independence, the patrician element, the high thoughts and polished manners of the gentleman, began to disappear, and accomplished men and women were thrust from the inner circles of governmental influence.

"The extension of population beyond the Alleghanies, the rough vigour of frontier life, the new men thrown by the wilderness into the national councils, broke down at Washington, in the most conspicuous centre of Republican rule, all the settled barriers and salutary observances of the old manners and old habits of thought."

"We have known (says Mr. M'Gee) one chief magistrate to receive his friends while warming his naked feet at the fire; a secretary of state addressing a Tammany mob in his shirt-sleeves; and a commander-in-chief speaking from the balcony of his hotel *sans culottes*, and jesting on the circumstance in his speech. . . . . Some of the great senators who failed to reach the Presidency attained to the better dominion in the hearts of their friends; yet it was commonly remarked of them, that the sterling qualities which endeared them to their friends—that their very superiority—was the main cause of defeating them as Presidential candidates."

Looking into the sources of this demoralization, Mr. M'Gee finds a principal one in the common school system of the Free States which, proceeding on the dangerous assumption that the children belong to the State, eliminates the parental office from the formation of character and produces an insensibility to the special claims of age and authority; while, though intellectually it draws out the average ability of six-tenths of the generation, it crushes the highest ability under an iron uniformity. Next to this system in baneful operation comes the penny press, whose broad sheets in New York alone for a single day have been computed to cover twenty-seven superficial acres; surely an engine of vast and demoralizing power in the hands of the unscrupulous men who direct it. Pretensions, puffery, arrogance, avarice of territory, extreme pride of *nativism*,—these are the features of American Democracy against which Mr. M'Gee warns Mr. Duffy, believing that "this American bouleversement should teach us to cherish our European connection as a blessing second in value only to domestic home government." We trust that Mr. M'Gee's fellow countrymen, whose sympathies are strongly with the North, will read his letter; and pause especially on that portion of it which tells them that, while there is plenty of antipathy to the Englishman in the Free States, the sentiment of contempt is reserved for the Germans and—the Irish.

"Problems in Human Nature" † is not an attractive title for the general reader; but anything which really reflects one's inner feelings is sure to interest people who pretend even to a moderate amount of intellect. To probe to the root of our habits, and see from what sentiments they spring, and why we are vain, angry, nervous, listless, frivolous,—to have a mirror held up to us in which we can trace what is hid from the eyes of sense, yet whose operations we can feel, should not be a study barren of interest. True, few writers can hold up such a mirror as will give us a clear and true reflection; and so many have failed in the attempt that the topic itself has become a bore from the tediousness of its treatment. But the book before us is not to be placed upon the list of failures. We are especially struck by the chapter upon "The Decline of Sentiment," in which there are some valuable truths. We cannot, indeed, consent to the position that deep thoughtfulness is one of the characteristic features of modern conversation and literature, while they are characterized by studied levity of expression. These two characteristics cannot co-exist. The few only think deeply; and the levity of the many is hardly so much assumed to appear "deep," which the author seems to imply, as to hide their inability to be so. We consent, however, to this position—"Levity imposes on the mind, not only because it is generally gay, and therefore looks successful, but it has the air of being a stronger power than feeling, of which it can make so light; although levity could only attain this air by com-

* The Internal Condition of American Democracy, considered in a Letter from the Hon. Thomas D'Arcy M'Gee, M.P., to the Hon. Charles Gavan Duffy, M.P. Hardwicke.

† Problems in Human Nature. By the author of "Morning Clouds," &c. Longmans.

Digitized by Google

plete ignorance of what deep feeling is." The chapter on "The Source of Vanity" is well considered; and that upon "Disappointment in the Religious World" contains much sound sense and matter for reflection.

When a writer begins by informing his readers that he is approaching his eightieth year, and that he remembers the sensation produced by the flight of Louis XIV. to Varennes, in 1791, we naturally expect from the title of his work,* to find personal reminiscences of the celebrities who flourished towards the end of the last and the beginning of the present century. But when we look into Dr. Brown's work we find it is much more concerned with the present than with the past; and at times we feel that we are reading something very like a leading article on the latest American or Polish telegrams. But the doctor, though an octogenarian, is a man of vigorous and cultivated intellect, and writes with a freshness and activity of spirit, giving hard raps over the knuckles to American civilization, and especially to those "theologico-metaphysicians," as he calls them, who are endeavouring to sap the foundations of Christianity. If his "memories" are few, his "thoughts" are sound; and in the survey of men and nations which his book really amounts to, there is much wisdom and much pleasant and instructive reading.

Mr. Norval Clyne† is entitled to high rank amongst our minor poets, because he really has something to say, and says it well. He has chosen for the subject of his muse some of the most interesting events in Scottish history, prefixing to each of his poems a prose narrative of the facts they celebrate, having an eye to what is most romantic. He has thus produced a volume which is readable and valuable, apart altogether from its poetic merits. If we were to choose between his prose and his poetry, we should give the preference to the former. The style is pure and graceful, and induces us to regret that what is done so well is done so briefly. But if there is nothing in Mr. Clyne's poetry which calls for high praise, it is pleasant and readable.

Two volumes of hymns lie before us,‡ in compiling which the respective editors have performed a difficult task with skill. Good hymns are amongst the rarest of poetic produce, partly because they are written mostly from sentiments of piety by men who are not poets, partly, it may be, from the transcendant sublimity of their subject. But there are hymns which are also poems, and some very beautiful ones have found a place in both of these hymnals.

In these latter years we have had the boyhood of great men served up for the emulation of Young England by more than one writer; but the subjects chosen have been heroes of science and art, of war and statesmanship. Here is a little book§ in which we have a dozen youthful heroes chosen from Holy Writ, and set up for an example to children, in twelve chapters, appropriately headed and nicely illustrated. It is written by a mother, who dedicates it to the memory of her own child, and who has gracefully interweaved many pleasing anecdotes with her stories, at once to enforce and gild their moral.

Signor Volpe, Italian Master at Eton, has published an Italian Grammar,‖ which we have much pleasure in recommending as an excellent work. An analysis¶ of Mr. Tennyson's "In Memoriam," from the pen of the late Rev. F. W. Robertson, of Brighton, will serve as a guide to the leading thoughts of that noble poem. Miss Emily Faithfull, "printer and publisher in ordinary to her Majesty," has issued a book of Tales,** of which our younger readers will do well to possess themselves. The tales are pleasing, and the type and getting-up does credit to the Victoria Press.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the World, on the most favourable terms.

The promptitude and liberality with which its engagements are always met by this Company are well known, and the importance of its relations with the Public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire.

Insurances with this Company expiring at Ladyday must be renewed within Fifteen days thereafter, or they will become void.

Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

THE LIVERPOOL AND LONDON FIRE AND LIFE INSURANCE COMPANY.
Established in 1836. Empowered by Special Acts of Parliament.
Offices: 1, Dale-street, Liverpool; 20 & 21, Poultry, London.

The ANNUAL REPORT for the past year shows the following results—to which the attention of the public is requested, as evidencing the progress and position of the Company.

ACCUMULATED FUNDS £1,417,808. 8s. 4d.

Annual Premiums in the Fire Department	£436,065
Annual Premiums in the Life Department	138,703
Accumulated Life Reserve	841,540

The liability of Proprietors is unlimited.

SWINTON BOULT, Secretary to the Company.
JOHN ATKINS, Resident Secretary, London.

SOUTH AUSTRALIAN BANKING COMPANY.
Incorporated by Royal Charter, 1847. Letters of Credit and Bills issued upon Adelaide, Port Adelaide, Gawler, Robe, Kadina, and Wallaroo. Approved drafts negociated and sent for collection. Every description of Banking business conducted with Victoria, New South Wales, and the other Australian Colonies, through the Company's Agents.
London: 54, Old Broad-street, E.C.
WILLIAM PURDY, Manager.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY,
13, St. James's-square, London, S.W.
Established 1824.
Financial Results of the Society's operations.

The Annual Income exceeds	£200,000.
The Assurance Fund safely invested is over	£1,330,000.
New Annual Premiums for the last year	£10,017.
Bonus added to Policies at the last Division	£275,077.
Total Claims by Death paid	£1,731,779.

The following are among the distinctive features of the Society:—
Credit System.—On Policies for the whole of life, one half of the Annual Premiums during the first five years may remain on credit, and may either continue as a debt on the Policy, or be paid off at any time.
Low Rates of Premium for Young Lives, with early participation in Profits.
Invalid Lives may be assured at Premiums proportioned to the increased risk.
Prompt Settlement of Claims.—Claims paid thirty days after proof of death.
The Accounts and Balance Sheets are at all times open to the inspection of the Assured, or of persons proposing to assure.
Tables of Rates and Forms of Proposal can be obtained from any of the Society's Agents, or of
GEORGE CUTCLIFFE, Actuary and Secretary.
13, St. James's-square, London, S.W.
The Reversionary Bonus at the Quinquennial Division in 1862 averaged 48 per cent., and the Cash Bonus 28 per cent., on the Premiums paid in the five years.
The next Division of Profits will take place in January, 1867.

Just printed,
THE 29th ANNUAL REPORT, ACCOUNTS, and BALANCE SHEET of THE MUTUAL LIFE ASSURANCE SOCIETY, 39, King-street, Cheapside, E.C., London.—Established 1834.
This is a purely Mutual Life Assurance Society. On the 1st January, 1863, the Capital was £439,174. 8s. 5d., invested in Government and Real Securities, created entirely by the steady accumulation of the Premiums, and all belonging to the Members. The Assurances in force were £1,695,875, and the Income upwards of £71,600 per annum.
CHARLES INGALL, Actuary.
No extra charge to Assurers joining Volunteer Rifle or Artillery Corps.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

DR. DE JONGH'S
(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

HEDGES & BUTLER,

London, 155, Regent-street, W.; Brighton, 30, King's-road,

(Originally established A.D. 1667.)

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

UNRIVALLED PRIZE MEDAL

PUBLIC OPINION.

A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

NEW WORKS and NEW EDITIONS
PUBLISHED BY
BLACKIE & SON.

New and Revised Edition, in 7 vols., super-royal 8vo., cloth, £7.

THE POPULAR ENCYCLOPÆDIA; or, Conversations Lexicon. Being a General Dictionary of Arts, Sciences, Literature, Biography, and Politics. With Preliminary Dissertations by distinguished writers. Illustrated by one hundred and fifty-four pages of Steel Engravings, and fourteen Coloured Maps, besides many Engravings on Wood. In the present edition alterations and corrections have been made, which, with the addition of an Entirely New Supplement, render the Work a satisfactory exponent of the state of knowledge in the present day.

In 3 vols., super-royal 8vo., cloth £3. 3s.

A COMPREHENSIVE HISTORY OF INDIA, from the First Landing of the English to the Suppression of the Sepoy Revolt: including an Outline of the Early History of Hindostan. By HENRY BEVERIDGE, Esq., Advocate. Illustrated by above Five Hundred Engravings on Wood. Views, Costumes, Portraits, Maps, Plans, &c., and Frontispieces and Titles on Steel.

"This able and elaborate work."—*Examiner.*

In 4 vols., super-royal 8vo., cloth, £4.

THE COMPREHENSIVE HISTORY OF ENGLAND, from the Earliest Period to the Suppression of the Sepoy Revolt. By CHARLES MACFARLANE and the Rev. THOMAS THOMSON. Illustrated by above Eleven Hundred Engravings on Wood. Views, Costumes, Portraits, Maps, Plans, &c. and Frontispieces and Titles on Steel.

"By far the most beautiful and really comprehensive history of the nation which has ever yet appeared."—*John Bull.*

Imperial 4to., half morocco, gilt edges, £5. 5s.

THE IMPERIAL ATLAS OF MODERN GEOGRAPHY. A Series of above One Hundred carefully Coloured Maps, embracing the most recent discoveries and the latest political divisions of territory in all parts of the world. Compiled from the most authentic sources, under the supervision of W. G. BLACKIE, Ph.D., F.R.G.S. With an Index containing references to nearly 120,000 places.

"The 'Imperial Atlas' ranks far above even its most ambitious competitor."—*Morning Herald.*

In 2 vols., imperial 8vo., 2760 pp., cloth, £4. 6s.

IMPERIAL GAZETTEER: A General Dictionary of Geography, Physical, Political, Statistical, and Descriptive. Edited by W. G. BLACKIE, Ph.D., F.R.G.S. Illustrated by nearly seven hundred and fifty Engravings on Wood, Views, Costumes, Maps, Plans, &c.

"This excellent book of reference. . . . All the articles we have examined, whether long or short, exhibit a greater degree of correctness in minute detail than we should have thought practicable in so comprehensive a work."—*Athenæum.*

In 2 vols, imperial 8vo., 2888 pp., cloth £4.

IMPERIAL DICTIONARY: English, Technological, and Scientific. Adapted to the Present State of Literature, Science, and Art, with a Supplement, containing an extensive Collection of Words, Terms, and Phrases not included in previous English Dictionaries. By JOHN OGILVIE, LL.D. Illustrated by above 2,500 Engravings on Wood.

"Dr. Ogilvie has not only produced the best English Dictionary that exists, but so far as the actual state of knowledge permitted has made some approach towards perfection."—*British Quarterly Review.*

BLACKIE & SON, 44, Paternoster-row, London; and all Booksellers.

GRACE OF GLENHOLME. By W. PLATT, Esq., Author of "Yorke House."

"Mr. Platt, like his relative, the late Baron Platt, is evidently a man of considerable talent, and writes like a scholar and a person who has studied human nature. This novel, like all Mr. Platt's works, contains beautiful word-pictures, full of touches of feeling that will rest vividly on the reader's mind long after the impression produced by the 'sensation novels' of the day is forgotten."—*Globe.*

MR. NEWBY'S NEW PUBLICATIONS.

BURTON ABBOTS. A Woman's Story. 3 vols.
"There will be few novels of the present season that will rivet the attention of readers more than 'Burton Abbots.'"—*Express.*

ADA FORTESCUE. By the Author of "The Dalrymples."
"The author writes like a lady, for all her aspirations are of the highest order."—*Daily Post.*

TAMING A SHREW. 3 Vols.
"A clever novel. The Shrew is a creation of which some of the best novelists of the day might not be ashamed. The plot is ingenious and well sustained, and extremely interesting."—*Morning Post.*

A PILGRIMAGE OVER THE PRAIRIES. By the Author of "The Fortunes of a Colonist," &c. 2 vols., 21s.

NOBLY FALSE. A Novel. By J. M'GRIGOR ALLAN, Author of "The Cost of a Coronet," "The Last Days of a Bachelor." 2 vols.

LONG AGO AND NOW. By F. YOUNG, Esq. 7s. 6d.

THE FIRST TEMPTATION; or, Eritis sicut Deus. A Philosophical Romance. Translated from the German by Mrs. WILLIAM R. WILDE. 3 vols., 36s.

MUDIE'S SELECT LIBRARY.

NOTICE.

C. E. MUDIE begs to inform the Public that he is now prepared to supply One Hundred Volumes at one time of Books suitable for Factories, Warehouses, Town and Village Libraries and Reading Rooms, at the low rate of Ten Guineas per Annum.

Catalogues will be forwarded on application.

New Oxford-street, March 28, 1863.

This day is published, in crown 8vo., price 4s.

ULRICH VON HUTTEN, Imperial Poet and Orator.—The Great Knightly Reformer of the 16th Century. Translated from "Chauffour-Kestner's Études sur les Réformateurs du 16ème Siècle." By ARCHIBALD YOUNG, Esq., Advocate.

"The author has wisely permitted Hutten to speak for himself. The notes of the translator are modest and serviceable."—*Reader.*

Edinburgh: T. & T. CLARK. London: HAMILTON & CO.

COMPLETION OF MR. MAY'S CONSTITUTIONAL HISTORY OF ENGLAND.

Just published, Vol. II., in 8vo., price 18s.

THE CONSTITUTIONAL HISTORY OF ENGLAND.

SINCE THE ACCESSION OF GEORGE III. 1760—1860.

By THOMAS ERSKINE MAY, C.B.

"A most valuable contribution to English history."—*Spectator.*

"Mr. May's History may be regarded as a continuation of Hallam's; but with this great advantage, that as it treats of matters which come more closely within the cognizance of the present generation, so is it calculated to be more popular and more universally read."—*London Review.*

"Mr. May is entitled to the greatest praise both for the care with which he has collected from hundreds of cumbrous volumes, insignificant pamphlets, reports of speeches, and newspaper articles, the materials requisite for his work."—*Examiner.*

"It is scarcely possible to overrate the amount or value of the information conveyed in Mr. May's able and important volume."—*Westminster Review.*

"Two volumes, which will henceforth be as indispensable as Mr. Hallam's to every student of English constitutional history."—*Reader.*

"This History is, in our opinion, worthy of a place beside the great work of Hallam. We recognize in it the same careful and conscientious industry which characterizes the elder historian, and in the matter of style the superiority is, perhaps, with Mr. May."—*Athenæum.*

A New and Revised Edition of the First Volume is nearly ready.

London: LONGMAN, GREEN, & CO., 14, Ludgate-hill.

SECOND EDITION OF

MRS. GASKELL'S NEW NOVEL.

In a few days, Three Vols., Post 8vo.,

In 3 Vols., Post 8vo.,

DEEP WATERS. A Novel. By MISS ANNA DRURY, Author of "Misrepresentation," "Friends and Fortune," &c. [*This day.*

In Fcap. 8vo., 5s.,

THE GREEK CHRISTIAN POETS AND THE ENGLISH POETS. By ELIZABETH BARRETT BROWNING.

In 2 Vols., Post 8vo., 21s.,

LIFE IN THE SOUTH FROM THE COMMENCEMENT OF THE WAR. By A BLOCKADED BRITISH SUBJECT. Being a Social History of those who took part in the Battles, from a personal acquaintance with them in their own Homes. [*This day.*

"The Authoress has enjoyed great and unusual facilities for her work from a personal acquaintance with many of the leading men who took part in the battles. * * * There is much in it calculated to throw light on the social condition and status both of the slaves and their masters in the South."—*Observer.*

In Demy 8vo., 18s.,

THE LIFE OF LORD BOLINGBROKE, Secretary of State in the Reign of Queen Anne. By THOMAS MACKNIGHT. [*This day.*

"This volume is a valuable contribution to Biographical literature * * * * Mr. Macknight has presented us with the most comprehensive view of the character of Bolingbroke that has yet been published."—*Bell's Messenger.*

Second Edition. In 2 Vols., Post 8vo., 21s.

ROBA DI ROMA. By WILLIAM W. STORY.

"It is doing no injustice or discourtesy to any of the sculptors, whose works were displayed at Kensington, to say that to the 'Cleopatra' and the 'Libyan Sibyl' of Mr. Story was assigned the highest place in their own region of art. But Mr. Story does not depend for fame on his chisel alone: he is also a man of letters. He now presents us, in two volumes of descriptions of Rome, with the fruits of a long familiar acquaintance with the habitudes of the Eternal City. The volumes throughout prove that the development of Mr. Story's power in a particular direction has not retarded the growth and free play of his other gifts; but that he can always find relaxation, not in absolute rest, but in variety of excellence."—*Press.*

In 2 Vols., Demy 8vo., 22s., with Forty Illustrations by J. E. Millais, A.R.A.,

ORLEY FARM. By ANTHONY TROLLOPE.

CHAPMAN & HALL, 193, Piccadilly.

THE FINE OLD ENGLISH GENTLEMAN.

THE band at the Glasgow banquet which saluted Lord Palmerston's health the other evening with the appropriate air of "The Fine Old English Gentleman," could not have more fitly expressed the sentiments of the English nation about him. His political career has been an eventful one. He has dealt with world-wide questions, and, like a modern cosmopolite, has visited many cities, and learnt the dispositions of many men. He has seen in this country alone a somewhat stubborn Constitution ripen gradually, under the influence of wise legislation, into orderly and sober freedom. Abroad, under his very eyes, events no less important have taken place,—thrones have been swept away, republics dissolved, frontiers revised, and nations summoned into new life from a sleep of centuries. Most things in Europe have changed or passed away, except Lord Palmerston. He still remains—too old now to be the Pericles, too lively to be the Nestor of his age. Foreign spectators, astonished at his undiminished power and popularity, may well ask themselves what can be the secret of so great a success? What school has Lord Palmerston founded in politics? On what band of trained disciples will he let his mantle fall? What principle does he represent, and to what mast does he nail his colours? Other statesmen in this country have some political creed, of which they are either the apostles or the votaries. Lord Palmerston seems to have neither creed nor crotchet. He is not a human Blue-book wrapt in a Roman toga, like Sir Cornewall Lewis. His dreams are no mixture of Mediæval hymns and cheap French wines, like the dreams of Mr. Gladstone. He is not half a philosophical churchwarden and half a Caucasian mystery, like Mr. Disræli. Unlike Lord Derby, he is no consummate orator, nor is he the British farmer's imaginary friend. Lord Russell writes State papers, probably, with greater satisfaction to himself; Mr. Cobden is a clearer reasoner; and Mr. Bright entertains a more sure and certain hope of a future political millennium. In spite of all this, and very likely on account of all this, Lord Palmerston reigns supreme in the affections of the British public, and has become the one man above all others whom John Bull delights to honour.

Beyond all question, the new Lord Rector of Glasgow University has personal talents and qualities of which his country may be proud. His genial temper, his unfailing readiness and wit, his courage and resolution, his fidelity to his friends, his energetic habits of business and his love of pleasure, his accomplished scholarship, and his happy combination of astuteness and common sense, would make him a conspicuous character, even if he had never been the terror of Europe as a Foreign Minister or held the first place in an English government for years. At a time of life when other men are fond of resting on their oars, Lord Palmerston displays the physical energy, not so much of green old age as of mature and ripened manhood. Night after night he is at his post in Parliament, ready to answer and to be answered. No eye is keener to disconcert a political intrigue; from no tongue more merrily comes the happy repartee or the apposite quotation. Old age seems to stand aside, and to be waiting till Lord Palmerston is ready to grow old. But beyond all this the Prime Minister of England possesses a deep political instinct that leads him to understand completely the wants and the wishes of the English nation at this particular time. An experience longer than that which is vouchsafed to ordinary men has taught him the great lesson, that a statesman, to be popular, must represent the foibles as well as the virtues of his countrymen. Lord Palmerston has now attained to the pinnacle of all English ambition—he has achieved a political reputation; he has nothing to gain beyond what is his already, and he is in a fit position to be the leader of a nation which desires nothing except to enjoy the blessings that Providence has given it. All that a statesman at such a period has to do is to swim quietly down the stream. A philosopher with a system or a creed might not be content with so simple a course. He would be for converting or instructing or dazzling the world. But all the philosophy to which the Premier lays claim is a gentle political Epicureanism. He is in no hurry to rise from the banquet so long as he is allowed to sit there still—*conviva satur*. He feels no call to make war for ideas or to resettle Europe. All that he asks is that Europe should be quiet, and that England should be left alone. When the present is enjoyable and tranquil, none but a restless and unsatisfied adventurer will push off into the uncertain sea of the future which he cannot fathom. Lord Palmerston does not feel that there are yet other shores to visit before life closes. He has had enough of action, and some at least of the veteran Whig mariners that sit grouped around Ulysses have had enough of action also; nor need they apprehend that the adventurous order will issue from the Treasury benches which proceeded from the wayworn voyager of old:—

> "Push off, and sitting well in order, smite
> The sounding furrows; for my purpose holds
> To sail beyond the sunset and the baths
> Of all the western stars before I die."

This satisfied and unadventurous spirit of Lord Palmerston happens at this particular period to suit the country, and perhaps itself exercises some little influence on the minds of Englishmen. *Quieta non movere* is the motto that expresses best the prevailing sentiment as to home politics. As to foreign matters, the public asks only for two things—

Digitized by Google

that the honour of the country should be maintained, and that, if possible, we should be kept out of war. Both of these advantages Lord Palmerston, better than any other can secure. "Noli me tangere"—"Nemo me impune lacesit," as he told the Glasgow students this week, are his ideas of a foreign policy. Lord Palmerston is at present well astride of the British Lion. This shows in some degree his political capacity—for the back of the British Lion is a seat that belongs by tradition to the Conservative party. Mr. Disraeli and his party cannot exactly grumble at seeing the Premier so mounted,—he is only riding too wisely and too well,—and all that is left for them is to bite their nails and to hope to Heaven that something or other may induce him before long to get off again and to let them get on. A spirited foreign policy is the peculiar recipe which has hitherto been sold in the Tory market. The Opposition see with dismay that the article has fallen into the hands of an unprincipled Whig druggist, who sells it labelled with their own indubitable trade-stamp, which represents the British Lion on his hind-legs, growling at the universe. They may well feel that this is not fair. To have to play Opposition to such a Ministerial policy is like playing "Hamlet" with the part of Hamlet left out. In discharging the second half of his programme Lord Palmerston is equally felicitous. Under his guidance it is probable that we shall enjoy peace so long as peace is possible. Something may be attributed to the mysterious influence of his name abroad—something is certainly due to his unparalleled astuteness in keeping the royal vessel of the State out of troubled waters.

A cynical critic might object that, if this is Lord Palmerston's policy, it is at best ephemeral, and that his remedy for all political diseases will expire with the great physician. The English political Abernethy has no advice to offer as to the general conduct of affairs, except to consult Abernethy himself. He founds, as we have said, no school, no system, no idea. This is, in truth and in reality, the weak part of the Palmerston *régime*. Lord Palmerston's secret of cookery lies in a touch of the hand, a sweep of the arm, a lightness of hand, which he would be incapable himself of teaching to a successor; and the art of making the savoury omelettes that the English palate loves will sink into the grave with its most accomplished practitioner. Alexander has no heir, and his empire must be divided among his greatest generals. When nature withdraws from us the statesman in whom the country has such confidence, it is difficult to foresee what will ensue, but we may predict that the period that follows will be a stormier one than we could wish. The winds will again begin to rise which his ingenuity has laid, and the voices of the tempest will make themselves heard. It is, on the one hand, Lord Palmerston's weakness that he can transmit to nobody sound rules for government, or an enlightened code of ideas for the future. On the other hand, the prospect of an unwelcome future, in which distant and shadowy figures may almost be seen standing and battling over his grave, renders a nation that is not anxious for political contest, thankful and happy to see the present Prime Minister retain the vigour and intellect of his best years.

AMERICAN COMPLAINTS OF ENGLAND.

THE exacting vanity even of American patriotism ought to be satisfied with the space which their affairs fill in the eyes of the world, and especially of England. They furnish the most exciting debates that take place in our Houses of Parliament, and occupy a greater number of columns in our journals than any other set of questions either of foreign or domestic interest. Chambers of Commerce talk of little else; merchants look with more constant and deep anxiety across the Atlantic than to any of our own colonies or to our vast Indian empire and Chinese connections; and public meetings are incessantly called to get up the steam on the involved topics of Democracy and negro slavery, which steam, though often artificial and suspicious, is by no means insignificant in amount. The same week saw, in addition to countless leading articles and letters in large type on American affairs, the House of Commons discussion on the *Alabama* and Mr. Bright's Yankee speech to the Trades' Unions. We have a few words to say on the general questions involved in both.

As to the *Alabama*, it is much to be regretted that matters of detail as to time and purely legal technicalities were permitted so much to divert attention from the real political and moral questions at issue. It is just possible that the words of the Foreign Enlistment Act may be so construed as to bring the *Alabama* within its scope as a vessel "fitted out" or "furnished" as a vessel of war, though we cannot agree in such construction. It is just possible that the law officers of the Crown were a few hours slower than they need have been in deciding that a case was made out which would have warranted her seizure, and that Earl Russell did not dispatch to them the evidence that was laid before him with the utmost conceivable rapidity,—though we are not disposed to concede either supposition except for the sake of argument. It may even be that the solicitor to the Customs was wrong and the Solicitor-General right in holding that there was ample *primâ facie* evidence of an intended violation of the municipal law,—though even this is very questionable. It may be argued, finally, that the Board of Customs might and should have seized the ship on the depositions tendered to them, without waiting for the decision of the lawyers and directions from the Treasury or Foreign Office; though they would have incurred a grave responsibility by such spontaneous action, and (judging by past experience) would have subjected themselves to be mulcted in heavy damages. We are not careful to answer in this matter. The question really before the world for consideration as between this country and the United States, and still more, perhaps, between our Government and the Government at Washington, is this:—With what show of decency or justice can the Federals complain of us for selling ships and stores of war to the Confederates, and ask us to abstain from doing so? And why should we act with the slightest degree of favour or partiality to either belligerent? Why—to use Mr. Bright's phrase—should we, as proclaimed and resolute neutrals, afford a "warm and cordial" neutrality to the North, and only "a cold and unfriendly" neutrality to the South? What right and what motive can we have for this different behaviour, which the Yankees so urgently demand, and which Mr. Bright so strenuously urges?

Is there, in the eye of reason or fair play, the least difference between selling a ship to the Northerners, which, as soon as she arrives at New York and Boston, is freighted with troops and stores, and sent down to join the blockading squadron, and selling a ship to the Confederates, which, as soon as she reaches Terceira, receives guns and ammunition, and goes forth to cruise against Northern commerce? Clearly none. Yet the first proceeding had been repeated over and over again months before either the *Oreto* or the *Alabama* left the Mersey. Can any distinction—beyond a purely technical one, arising out of a municipal law—be alleged between selling to one party a commodity called an "Armstrong gun," to be used in mowing down Confederate troops, and selling to the other a commodity called a "steam-ship," to be used in preying upon Federal merchant vessels? Clearly none. Yet half the arms with which the Northerners have been enabled to slaughter their enemies have been furnished by this country; and, so far as we know, Jefferson Davis has never remonstrated or charged us with illegal and unfriendly practices. With what colour or consistency of logic can Mr. Seward complain that his antagonists have been able to purchase *one* formidable weapon of war in Liverpool, when he and his Government have purchased rifles by the hundred thousand and percussion caps by the million? How can even his subtlety draw a distinction which will hold water—or, to use his friend's phrase, of which "the bottom will not fall out"—between selling a ship already built, and building a ship to order? Finally, ought not the complaints of the Washington Government, in reference to all such cases as the *Alabama*, to be silenced for ever, now that we have heard from Mr. Laird that *that very same Government applied to that very same merchant to build for* THEM *half a dozen Alabamas*, and that their order was only declined on the ground of time? It now appears that it was by the purest accident that similar vessels of war were not building at the same moment, in the same river, and almost in the same yards, for both belligerents. But the Confederates chanced to be beforehand with their contracts, and the United States, finding that they could not get their own cruisers out, insisted on our stopping the cruisers of their more lucky rival, and threaten us with eternal hatred and savage vengeance because we have not done so. Is not this proceeding ingloriously like that of the little boys who, when disappointed of obtaining a seat on

Digitized by Google

the foot-board of a carriage, call out "Whip behind," out of spite to their more fortunate competitors?

But Mr. Bright meets all these criticisms in the face, in his usual direct and manly way, and avows that we ought not to deal out either equal conduct or impartial feeling to the two belligerents, and that while nominally neutral we should in reality favour the North as far as in decency we can. Why should we show this inequality? Why should we give to the one party only the barest letter of what by international law he is entitled to demand, while awarding to the other the utmost measure of what by international law we are permitted to concede? We have never heard any even plausible answer given to these questions, which yet are eminently both pertinent and pressing. Is the plea founded on our Anti-slavery predilections? But both parties, as has been repeatedly proved, are equally far from *our* view of the negroes, and from feeling our anxiety for negro welfare. The social system of the South is based upon slavery—which, in our opinion, is detestable and deplorable—a great wrong done to the black man, a terrible evil entailed upon the white man. But personally the Northerner hates the negro more than does the Southerner, and is not one whit kinder to him. The one keeps him in slavery; the other forbids him the privileges of freedom. The one treats him as an inferior and a chattel; the other repels him as at once an inferior, an alien, and a nuisance. Both parties regard him with sentiments which to Englishmen are almost equally offensive. And so far as the great aim of ultimate and beneficent emancipation is concerned, a severance of the Union, as we have often shown, offers better prospects to the negro than either the subjugation of the South, or its re-incorporation on the terms of promised compromise.

Ought we to favour the North because of our superior sympathy with their special institutions and the tone and temper of their Democracy? On the contrary, apart from the slave question, our political harmonies and predilections would lie in the opposite direction. We are not naturally great lovers of Democracy; and has Democracy of late shone forth so purely or brilliantly in the United States as to lead us to love it more? Our national feelings invariably go *cæteris paribus*, with the weaker party in a strife, especially when the weaker party has shown the nobler qualities and has fought the more gallant fight. Is our partiality claimed on the ground that the North has been more courteous in its conduct, more anxious for our friendship, more careful to avoid insult, to respect our rights, to guard against wounding our susceptibilities, to inflict upon us as little injury as possible, and to repair and atone for accidental inflictions as promptly as it could? Has not the very reverse of all this been closer to the truth? Have not the despatches of the Washington Government been full of captiousness? Has not the language of their papers and their public meetings been full of insult? Has not that insult been echoed even by their ambassadors and high officials? Have not their naval officers always pressed to the utmost extent their belligerent rights against us and our commerce, and in more than one memorable instance transgressed the boundary line both of law and [illegible] And is not the severest calamity under which [illegible] Isles have suffered since the Irish famine [illegible] quence of the persistence of the North in [illegible] wrongful contest? Is it not wishes, more than their millions of money and re[illegible] millions of our people, possible that any Englishman in his heart upon our feelings should wish the North success in its adversaries' endeavour to subdue and reincorporate the South?

Was there in the old Union—in the prospects which opened for humanity, in the character it was developing among its people, in the plans and schemes which it cherished and avowed—that any lover of peace or progress, and of true freedom or pure civilization, should desire its continuance or its restoration? Were that people, in their unbroken prosperity and their unmenaced grandeur, modest, just, or peaceable? Did they scrupulously respect the rights of others? Were they decent even in the assertion of their own? Did they cherish their dream of universal predominance, if not of universal dominion, in order that they might give deliverance to the captive, and let the oppressed go free, and break every yoke? Or that they might give laws to all nations, and sweep away every opposing element and every independent will? Did their national character improve and purify, and grow more elevated, as their territory spread and their population multiplied? Or did they not exhibit an illustration of social and moral degeneracy, from Washington to Buchanan, from Franklin to Seward, so great and so rapid as had scarcely before been written down in history? and was not this deplorable decadence in all that constitutes a nation's noblest life, directly traceable to that overgrown extent and power which Mr. Bright would have us violate our strict and impartial neutrality in order to bolster up or to restore?

THE TRAFFIC IN CHURCH LIVINGS.

THE House of Lords has very quickly passed through a second reading the bill for transferring to private owners the advowsons of three hundred and twenty church livings in the Lord Chancellor's gift. We refrain from criticizing its details, until it shall have undergone examination by the select committee to which it is now referred. But it has been considered so far only in its promise of an immediate advantage, both to the parishes whose scanty endowments are to be augmented by the price which these advowsons may fetch, and to the Lord Chancellor himself, who will get rid of the troublesome and thankless duty of bestowing a very poor class of benefices, such as few of the suitors for his clerical patronage can desire. Ex-Chancellors and Bishops, therefore, alike for the greater ease and comfort of the Woolsack and for the completer furnishing of the parochial system, have agreed to congratulate Lord Westbury upon this scheme; and the daily papers have spoken, without any reserve, their verdict of approval. But we trust that, when the bill comes under debate in the House of Commons, some broader questions of principle, involved in any plan for dealing with the offices of the Church as a merchantable commodity, will once more be raised. Meanwhile, it seems to have been forgotten, that the very same measure formed part of a Church Building Acts Amendment Bill, which the Earl of Harrowby brought in ten years ago; and that this was based upon a distinct recommendation of the Royal Commissioners appointed in 1849 to inquire into the best mode of sub-dividing populous parishes, and of providing for their spiritual needs. Those Commissioners reckoned upon obtaining one million sterling by the sale of some of the Lord Chancellor's livings, which they proposed, however, not to throw at once into the common market, to the residents, glut of advowsons, and unduly to [illegible] their parish, to property; but rather to invite the market value for the who might care for the religious gyman, so that his income pay something over and to not less than £200 a year. right of presenting [illegible] the discussion which began last should in every [illegible] Westbury's bill, this proposal of the We know [illegible] of 1849 has been ignored, unless the authors The [illegible] porters of the present scheme, so hastily carried and, are conscious that it does not quite afford the securities which those Commissioners might have thought necessary in this respect. The Lord Chancellor seems disposed to tempt bidders for church livings with a cheap bargain, on the easy terms of paying down half the purchase-money at once, and the other half when the buyer's first turn of presentation arrives. But as, in our view, the advowson is a public trust of sacred importance, we could wish at least to see its acquisition fenced about with some conditions, offering a substantial guarantee that those who will exercise it are sincerely concerned for the social and spiritual welfare of the parish. We should regard it as a pernicious general consequence, outweighing the local and personal advantages that may accrue from this wholesale disposal of patronage, if it were to multiply, and to stamp with perpetuity, the instances unhappily so frequent, where the cure of souls is bought and sold, in the guise of a right of presentation, with sordid indifference to the wants of the Christian flock.

In the hope, therefore, that, in amending this bill, securities may be devised to prevent its giving a fresh stimulus to this immoral traffic by the creation of a new class of private owners of church benefices, we think it right to renew the protest we have uttered on former occasions, against that anomaly of the English law which permits the

Digitized by Google

sale of a living in anticipation of its next vacancy. This is a question which is not encumbered with the same difficulties that seem to lie in the way of any radical alteration of the law by which the greater part of the Church patronage is vested in private owners, and allowed, in the ordinary way of property, to be conveyed from one to another. The sale of advowsons is one thing; and it may be objected to, in theory, on this ground—that the privilege of appointing ministers of religion for the community ought not, for reasons of public policy, to be made a source of individual gain, but simply to be discharged as a trust. But advowsons are recognized as private property by the laws of the realm; and to prohibit their alienation, at the free option of those who possess them, would lead to great inconveniences, since it would be impossible to lay upon the existing patrons the burthen of a perpetual duty to present, after depriving them of the right to sell their advowsons once for all. The sale of next presentations is quite a different thing; for the exercise of this right is the performance of a public service, and no condition would be more just and reasonable than to forbid the person in whom this power resides, to sell the use of it, for an occasion, to somebody else. A transaction of this sort is, moreover, condemned by the spirit of the existing legislation against simony; because it enables the clergyman who can offer the price of a living, to buy the cure of souls for himself, indirectly, through an arrangement with the purchaser on his behalf.

With these views, the bill which was introduced by Dr. Robert Phillimore and Lord Goderich, in the session of 1853, "to amend the law respecting simony, and to render illegal the sale of the next presentation to any ecclesiastical benefice," may seasonably be recalled to memory, along with Lord Harrowby's project, in the same session, for disposing of the Lord Chancellor's poor livings; the only connection between these subjects being the very large extension of private patronage which the scheme now renewed by the present Lord Chancellor will create. No attempt was made in the debates of 1853, to answer Dr. Phillimore's argument, which still retains its force, on the absurdity of prohibiting the sale of the presentation when the living is actually vacant, but allowing it while the incumbent remains, though all the parties to the bargain may know that a vacancy is about to be made. In the scandalous case of Fox *v.* the Bishop of Chester, the patron had conveyed away his right while the incumbent, who died a few hours later, was actually lying on his death-bed. Lord Tenterden's decision of the illegality of that presentation was reversed by other judges, who said it was impossible to be certain the living parson would not recover; but the law is often On the occasion in this way, by a previous agreement that Justice Best, that ... made void by exchange or resignation. the sale of a next p... it was remarked by Lord Chief may not purchase it for ... doubtedly committed through or a relative to do it for h... the clergyman, who shameful bargain is secured by ... easily get a friend ... cumbent to execute a bond for ... ment of this his living in favour of the patron's friend. practices ought to come within Blackstone's de... llows an simony, as the corruptly obtaining, by money, a ... of preach; which is a misdemeanour, punishable by fine and by future incapacity of preferment. One clergyman is enabled, by a very palpable intrigue, to sell his parish to another, through the mediation of a lay patron, who, having put in the incumbent as a warming-pan, can request him to turn out when the patron's son, or nephew, or cousin, is ready to take possession. Instances of this kind are sometimes exposed by the discontent of the parishioners with the manifest incompetency of the warming-pan parson: as when the rectory of St. Ervan, in the diocese of Exeter, was once consigned to an aged and hopeless invalid, whose few remaining days were already numbered, and who could not appear in church for a single Sunday during the two months which elapsed before his death. We might relate many other cases like this.

In order to guard against any increase of these scandals from the large addition now intended to the number of benefices in private patronage, the Lord Chancellor's bill ought to have a clause forbidding the sale of next presentations to these. We should hope that, in the discussions upon this clause, some encouragement might then be afforded to the Church Reformers in Parliament, who would revive Dr. Phillimore's proposal to enact that all sales of next presentations shall be null and void. There are many other questions, which need mature consideration, with regard to the share of Church patronage, about two-thirds of the whole, belonging to private persons, as well as those portions of it, which are in the hands of the bishops and other ecclesiastical corporations, or in the hands of the Crown. We should wish to see a Royal Commission investigating the whole system by which the Church benefices are dispensed throughout the land. It is not likely, however, that the Legislature or the Government will be induced to take up this extensive subject of inquiry, unless the great body of English laymen, who earnestly desire a reform in their national Church, bestir themselves to form a powerful association for this and kindred objects.

VENICE AND THE IONIAN ISLANDS.

RECENT intelligence from Vienna informs us that the Austrian Government has decided on granting extensive reforms in Venetia. The attention of the public for the last two years has been concentrated with so much more interest upon Rome than upon Venice, that we are apt to overlook the progress of events in that province of which the latter is the capital; yet such is its position upon the political chessboard of Europe, that it is hardly possible for a move to be made in any part of the Continent, which does not affect it. It forms a very essential link in the chain which begins in Paris and ends at Constantinople, and upon which hangs the fate of three empires. So long as the French are at Rome, the Emperor holds in his hand the destinies of Austria, for Hungary cannot rise unless the Italian armies attack the Quadrilateral, and the Italian army is virtually commanded by the general who commands in Rome. Until Rome is abandoned by the French, the Italians despair of Venetia. So long as the Austrians hold Venetia, the French will continue in military possession of Rome. It is a political *impasse* from which there seems no escape. To those, however, who look beyond the immediate present, the events now occurring in Greece and the Ionian Islands will change the whole political aspect of those momentous questions, which have been pending in Europe ever since the Italian campaign, and which have more than once threatened to involve the whole continent in war. It will be more easy to show how the revolution in Greece and the cession of the Ionian Islands affect the general situation, than to predict the results to which these events may ultimately lead. The last effort made by the party of action in Italy proved beyond all doubt that, for the present, their country was incapable of movement. Politically paralysed, these ardent spirits who sought to galvanize her into life were compelled to abandon the attempt in despair, and to admit that those Hungarian and Italian patriots were endowed with more political foresight who maintained that, in order to obtain the unity of Italy and the liberation of Hungary, it was necessary to push the Eastern question to a crisis. In other words, the destruction of Turkey was thought a necessary preliminary to the realization of the national aspirations. Finding that the ...ation of Rome rendered an attack on the Quadrilateral Servia; it was argued that Austria might be assailed on Istria, and ...hore of the Adriatic; that a revolution in ...throw off the ...o, Herzegovina, Bosnia, Croatia, and ... objection existed—...ngs the frontier, and that Dalmatia, supposed, would not ...aimultaneously with Hungary, ...lutionary movement, which, ...o this scheme one fatal the Adriatic, would embrace her ...an Isles, and, it was influence. ...ience to a revo-

As the French oppress the Romans, as ...shores of oppress the Venetians, so, it was supposed, did ...n its the Ionians. If it was impossible to attack Austria ... the side of Italy for fear of France, so was it impossible to assail her from the side of Turkey for fear of England. So long as Corfu was English, Venice never could be Italian. Our Government could not, with any consistency, force upon Austria the relinquishment of Venetia, while we had an oppressed nationality of our own; still less could it encourage or even tolerate an agitation in Turkey, destined to free Venice, but involving, in the first instance, a revolution in Corfu. Thus were we debarred from pro-

Digitized by Google

testing, as we otherwise might, against the occupation of Rome by the French. The reply of the Emperor to the party of action was invariably to this effect,—"England is not more favourable to the scheme of Italian unity than I am; what did she say about having interests to protect in the Adriatic in October, 1860? When the British Government presses Austria to abandon Venetia, I will abandon Rome; at present the evacuation of Rome would lead to the invasion of Lombardy by Austria." The party of action in Italy have been, until lately, firmly impressed with the idea that we were opposed to the cession of Venetia to Italy, lest that measure should compromise our interests in the Ionian Islands. Thus, the position of the Emperor in Rome has been justified in their eyes by our occupation of Corfu. Our proposal to abandon these islands has dealt a severe blow to the French policy in Italy; and had we suggested the evacuation of Rome as a simultaneous measure, the refusal of the Emperor to comply would have rendered his present attitude in the eyes of the Liberal party in Europe still more untenable. The political connection which we have shown to exist between Rome and Corfu, as bearing upon Venice, would have rendered such a proposal in every way reasonable. It was only fair to admit that our protectorate of the Seven Islands was as much a bar to the annexation of Venice as the Emperor's protectorate of the Pope. We were ready to do our share towards a united Italy, if he would do his. Nothing could be more logical or natural. As it is, the Venetian question is cleared of difficulties. So far as we are concerned, we may, whether the Ionians accept our proposal or not, advocate consistently the cession of Venetia to Italy; and Austria has already found her position so much more precarious than it was, that she is endeavouring by concessions to reconcile a population to her rule, which can only be satisfied by a final separation.

From these considerations it will appear that our present policy in the Adriatic will transfer obstacles from our path to that of the Emperor, and will enable us to control the revolutionary no less than the despotic elements in Europe. We shall have acquired among the Christian populations of Turkey an influence equal to that which we shall still preserve among the Mahometans. When the Hellenic race shall look to us as their patrons and benefactors, the Sclavonic will scarcely have courage to attempt a movement in defiance of England. While the Italians will accept as an augury in their favour our last stroke of Eastern policy, Austria will find herself more than ever compelled to rely upon us for support, for we alone can control those revolutionary forces constantly at work upon her Eastern frontier.

Whether under all circumstances the present was the most opportune moment at which the cession of the Ionian Islands should have been made; and whether it might not have been made with more judgment, and for some more distinct equivalent, are questions fairly open to consideration; but of one thing there can be no doubt, that not merely with reference to the Italian, but still more decidedly with reference to the Eastern question, our position politically is improved. The old arguments against any such cession have been replaced by an entirely new set of considerations, which did not exist when the Ionian Islands were first placed under the British Protectorate. It is only necessary to read a very opportune work just published by Captain Whyte Jervis, which, though written in an opposite sense, contains a most useful sketch of their history since 1797, when they ceased to form part of the Venetian Republic, to perceive how completely altered are the relations in which the Ionian Islands now stand to the rest of Europe. Whether, in a strategical point of view, they are so important as Captain Jervis believes, we are hardly in a position to determine; but we cannot but think that any value they may possess in this respect is more than compensated for by the gain which will accrue to our general policy. We only trust that when the time arrives, skill may be shown in using the advantages incidental to a measure more pregnant with political significance, than those who inaugurated it probably imagined. The announcement made this week, that a King of Greece has at length been found, in the person of Prince William of Denmark, the brother of our Princess of Wales, lead us to expect an immediate renewal of the negotiations for ceding the Ionian Islands to the Greek kingdom. These observations refer to some of the remoter probable consequences of such an act, which has, upon other grounds, received our fullest approbation.

LANCASHIRE HANDS.

WE have often heard of late that, under the strain of the distress in Lancashire, the New Poor Law has broken down. There is no doubt much to be said in support of the statement, but it is doubtful whether it is strictly correct. There are in truth, at the bottom of the Poor Laws, two principles, to some extent at conflict with one another, and possessing very different influences under different conditions of the labour market. The first principle is that which is usually more prominent, and it is owing to its comparative weakness at this crisis that the allegation of the breaking down of the Poor Law is made. The principle is, that no person should receive in relief a better supply of the necessaries of life than he could obtain by the exercise of the rudest and worst-paid manual labour. A large portion of the machinery of the Poor Law Acts is devoted to the carrying out of this principle. It must, however, be confessed that it is not of universal application. In enunciating it, it is always presupposed that the wages of the lowest description of labour are sufficient to maintain existence; when this hypothesis is untrue, a second principle comes into active operation—that no person shall die of starvation. This is as fundamental a part of the Poor Law as the other; but it exists in general only as a latent qualifying influence. The distress in Lancashire has made it the most operative spring of action. There is still some work to be obtained in the manufacturing districts, but the ratio of the army of workers to the work to be done is so overwhelming that the natural rate of wages falls below the limit of bare subsistence. It follows that the scale of relief must be higher than the reward of labour in the market; and out-door relief, relief in aid of wages, and relief with rude and inadequate tests, necessarily ensue. The efficacy of the two principles of the Poor Law has been changed: the weaker has become the stronger, but it is of the highest importance that that which has been forced to give way should not be forgotten. No one who is at all acquainted with the past history of the English poor, will be disposed to ignore the evils which follow upon the state of things where a large population subsists upon relief. The agricultural poor were reduced to this condition by the operation of the great war, and Mr. Pitt's Poor Relief Act, framed to meet the exigencies of the time, served to stereotype its evils. The lace-makers of Bedfordshire and Buckinghamshire, and the shoemakers of Northampton, are examples of classes of workmen whose wages are permanently lowered. In the face of such possibilities happening to the mill-bands of Lancashire, every reasonable suggestion for the relief of its at present superabundant labouring population deserves careful consideration, and amongst them none more than the proposal of some scheme of emigration.

It is a matter of regret that a subject which demands the most careful and dispassionate consideration should be in danger of falling into the hands of angry controversialists. We cannot too earnestly deprecate the bitter irony of a correspondent of the *Daily News*, on the one hand, nor the rash energy of Mr. Kingsley and "S. G. O." on the other. Mr. Kingsley is ignorant of the elements of the problem, but he did not hesitate last autumn to declare that the mill-owners were shirking the burden of contributing to the relief of the labourers, and he does not hesitate now to attribute to them a disposition to retain a superabundance of workmen for the sake of low wages.

We said last week that the only sound mode of considering the question was to regard it from the point of view of the individual workman. How would he, with a sufficiency of means and of knowledge, determine to act? It is clear that he must first ascertain the probable duration of the cotton crisis, and the consequences which will follow upon its termination. The prospects on this side are, we fear, daily less encouraging. Outside America the supply of cotton can increase but slowly, and its price must remain greatly enhanced; nor can we hope that help will soon reach us from America itself. The termination of the war seems as distant as ever, and every month that it is prolonged diminishes its resources as a source of cotton supply. The last correspondence published by the Foreign Office shows that the estimate of the cotton crop of 1861, made by Mr. Consul Bunch, was very much exaggerated; the produce of the crop of 1862 has never yet been picked; and it is now clear that no cotton at all will be produced in 1863, as the necessities of the war have compelled the South to convert their tillage into corn crops. The stock in hand becomes daily dimi-

Digitized by Google

nished through wilful destruction and rot, and there is no new supply to fill up the deficiency.

It would be idle to deny, in the face of these facts and the further consideration of the burdens which will impede the free cultivation of cotton on the restoration of peace, that the prospects of the cotton manufacture are gloomy. If we suppose the workman to consider, on the one hand, this prospect, and the low wages which must result from the concurrence of a large number of operatives with a limited supply of work, it is probable that he will think he does not relinquish much if he abandons his capital of acquired skill. On the other hand, neither his habits nor his physical powers are well adapted for colonial work. But, on the whole, we are inclined to think that a workman with wife and child or a couple of children, and, *à fortiori*, a single man possessing means enough to betake himself to a colony, even were it the comparatively unfavourable climate of Canada, and to have a pound or two in his pocket on landing, would act wisely in going thither. That such a course would be best for all, seems to be the opinion of some of the best authorities. Colonel Wilson Patten said, in the beginning of the week at Manchester, that he thought the time had arrived for a large emigration, and Mr. Cobden's cautious letter appears to show an inclination to the same opinion.

The decision which would be arrived at by the factory workman after a full consideration of his case, is one which should in no case be thwarted, and it would perhaps be wise to assist him in carrying it out. It is too clear that the cotton districts cannot pass through the next winter without a grant or loan, and we may therefore properly consider whether it is desirable that the Government should extend any help to operatives who are desirous of emigrating. This is a subject which may well be taken up on the re-assembling of Parliament, and any action on it should take place during the spring and summer; we may hope that we shall not have reproduced this year the spectacle of last season, when the Houses devoted the last week of the session to a hurried consideration of the Lancashire distress. Any scheme of emigration which may be introduced must provide that its operation should be fenced round with considerable difficulties. The assisted emigrant must undergo as great sacrifices as the workman who would emigrate at his own expense and on his own responsibility. An unchecked rush of emigrants, who could secure with little trouble passages to any colony, would only produce a transfer of the distress beyond seas. It is possible that we may derive a hint from the experience of the great emigration movement of fifteen years ago. A consequence of this was an annual remittance for many years of upwards of a million from emigrants abroad to their friends at home. Such remittances point to the possibility of loans to willing emigrants, to be repaid after their arrival in a colony. Mr. Cobden suggested last year loans to workmen at home, which he thought might be judiciously entrusted to the operatives of Lancashire. Emigration loans might work in a similar spirit. There would, no doubt, be great difficulties in carrying out the scheme, arising from the removal of the debtor beyond any control, but we are not satisfied that they are insuperable. The borrowers would, of course, be picked men, and there might be added a guarantee to the State from the parishes at home upon which the emigrants are chargeable. Whether this should be done by the Government or by private societies, and under what restrictions and regulations, are questions which are, perhaps, worth considering during the Easter recess.

THE UNIVERSITY BOAT-RACE.

Of the multitudes who congregate at a race or match of any kind, especially in the immediate neighbourhood of London, how few really see anything of what they came to see! Road, river, and rail bring together such enormous crowds that, with few exceptions, everybody is very much engaged in preventing everybody else from seeing; and each event which more than ordinarily excites the sporting, or the racing, or the sight-seeing world, produces an interest which is so vast and wide as to interfere with its own gratification. Some persons, indeed, now that everything that goes on in the world is brought home to one's breakfast-table by full and accurate descriptions in the newspapers, upon principle stay at home and avoid all sight-seeing; and if they do not literally follow Sheridan's advice to his son (who was going down a coal-mine, in order to say that he had done so), and pretend they have seen all that the world has been to see, still they are able to talk very much as if they had. On the other hand, those who go to see every sight most conscientiously would often have to say, if they confessed the truth, "I was jostled and crowded, and I got very tired; and after all I saw nothing." Yet what would the sight or the match be without the spectators? The very glory of the contest and the value of the victory consist mainly in the interest they create and the crowd they bring together. Yet the persons actually engaged in the struggle must sometimes devoutly wish that if "forty centuries" must needs contemplate their efforts, they would do so from no closer quarters than from the top of the Pyramids.

With regard to the great annual Oxford and Cambridge boat-race—that Derby or blue-ribbon of the Thames—it has positively come to this, that the race is in danger of being put an end to by the very numbers it attracts to see it. There was a time when a crowded towing-path, a number of small boats upon the river, and a moderate allowance of spectators from bridges and shores, were all the inconveniences a great boat-race entailed. It could be rowed in comparative peace. But now steamers full of people block and crowd the Thames. Huge waves are created, which may swamp or at least delay either or both of the delicate outriggers; and the captains of the boat-clubs have to keep the hour of the race dark, and to shift time and place at the last moment, in order to elude the overgrown public, as Messrs. Sayers & Heenan had to do in order to dodge the police.

The race on Saturday was announced for the early hour of half-past eight, in order that the steamers might have to leave London at such an hour as might secure a comparatively small attendance. "The advantage of this plan," says the *Times* report, "was evident from the extreme scantiness of the passengers which the few steamers at Mortlake had on board." But, in spite of the early hour and "cold gusty morning," there was no lack of spectators. It is clear that some greater counter-attraction than hot rolls and muffins is needed to overcome the difficulties of the case and ensure a comfortable start at the hour appointed. The banks were lined with horse and foot. Hammersmith Bridge was black with lookers on, some of whom climbed high upon the chains which suspend it. Nor were the ladies behindhand. A good sprinkling of light-blue and dark-blue dresses and bonnets diversified the dull mass. Roads and fields at Putney were crowded with cabs and carriages. As for the "few steamers," there were at least fourteen or fifteen of them; quite enough to churn up the quiet river into a sea of dingy foam, and—but for the intense exertions of Sir Richard Mayne, represented by half a dozen policemen in a small boat, and of the umpire, in his steamer—to spoil the start and the race twenty times over. The state of the wind, and the tide, which had turned earlier than was anticipated, made it necessary to reverse the course and row down from Mortlake to Putney at a later hour than that first announced. Accordingly, the steamers all proceeded up to Mortlake, and the tide of spectators there assembled began to ebb towards Hammersmith and Putney. At Mortlake were the crews in two masses of dark and light blue, upon the bank, awaiting the arrival of their boats from Putney. Soon the boats arrive; the crews get into them from an osier-bed just above the mass of puffing monsters crammed together in the narrow part of the stream. Cambridge is on the water first, and, the Oxford dark blue soon following, both boats proceed, amid loud shouts from their respective supporters, to gain by a narrow passage among the steamers the two buoys placed for the starting-point opposite Barker's Rails. Meanwhile, some six steamers had got well below the starting-point, and till they had been brought back no start could take place. This was at last effected by great exertions on the part of the umpire. But by the time they had moved back, another *contretemps* occurred. A barge, ruthlessly keeping on its course down the river, carried away the Cambridge buoy just as the light-blue were in their place. Then the police-boat came on the scene to recover and replace the buoy. The Cambridge boat had to drop down stream, to turn and thread its way back through the passage between the steamers, to turn once more, and regain its place above. But no sooner was Cambridge ready than the Oxford buoy was fouled by the clumsy steam-tug, *Jupiter*. *Jupiter* puffed and puffed in vain. He was found to be aground on the Middlesex shore. Meanwhile, some of the steamers had again been carried down by the tide. The result was that, as the Oxford spokesman, Mr. Carr, feelingly complained at the dinner, "though the day might just as well have been cold or raining, the men were kept waiting in the middle of the river with nothing but their jerseys on; while steamers ran up at each side of them creating such confusion that they had almost to start themselves without any umpire at all." A start, however, was

Digitized by Google

accomplished at last. About twenty minutes after ten (the race, if from Mortlake, was to be at half-past nine) Mr. Searle gave the word. Away shot the boats, like arrows, leaving *Jupiter* still panting on his sand-bank, and soon getting clear of the mass of other marine deities or demons—jostling, bumping, and ploughing up the troubled waters in their wake.

Of the race itself there is not much to say. The light blue, with their quicker and more flurried stroke, for a moment drew the nose of the Cambridge boat ahead. But the massive, solid stroke of Oxford, albeit at first a little quicker and less steady than usual, soon began to tell. In a moment more the boats were even. Then Oxford drew ahead. At the "Ship," at Mortlake, Oxford came in front of their opponents and took their water, thus giving them the wash of the leading boat. At the Railway Bridge dark blue were three lengths ahead, at Hammersmith nearly six, and, the distance steadily increasing, they passed the post at Putney twenty-two seconds before Cambridge, rowing within themselves, and winning with comparative ease by a distance variously stated at from seven to twelve boats' lengths.

The way in which the umpire in his steamer was left with the rest quite out of sight of the race towards the close of it, would scarcely have been satisfactory to that functionary had he been called upon to decide any question arising more than a few minutes after the start. Luckily no such question could very well arise, the race being more or less hollow from first to last. The public of the steamers, tolerably numerous, though less than half what they are on ordinary occasions, consoled themselves with the fact that there was nothing more to see, as the race was decided; with "chaff" among themselves, and with the pleasing excitement of being violently jerked at every other instant down on to the deck from the paddle-boxes and other posts of vantage which they occupied, by the constant collisions which took place among these "rampaging monsters." It is strange that the steamers were all so thoroughly distanced. The reason given is that the tide was running more rapidly than usual at the time of these races, which are generally rowed in slack water. But why a rapid tide should help rowing-boats more than steamers it is difficult to see. The true cause probably was that the race was an uncommonly fast one, and that the steamers, jammed together in the narrow part of the river at starting, jostled and impeded each other more than usual. Considering how much trouble the steamers give and how little their inmates saw, it would seem desirable, if practicable, another year, to forbid steamers altogether, except one really fast boat for the umpire.

The result of the race was generally expected. Oxford had everything in her favour, and it would have been strange if the state of the odds, 5 or 6 to 4 before starting, had not been justified by the result. Not only had Mr. Hoare, the Oxford stroke, already rowed twice before in winning races against Cambridge, but the whole crew of last year remained this year to choose from. Oxford had bigger and heavier men than Cambridge. She had choice of sides and took the Middlesex shore, decidedly the best. Moreover, the pretty lively north-west wind made roughish water—all in favour of the strong, steady Oxford style. To add to all this, the Cambridge steerer is said to have made a mistake during the race which cost his boat some lengths.

Few will doubt that Mr. Hoare, in spite of the sudden and heart-rending loss which has befallen his family, did right in deciding to remain at his post and take the most conspicuous part in this almost national contest between our two great schools of learning and manliness and worth. The captain of an Oxford "eight" may well have the same kind of feeling for his university as a candidate for the palm at Olympia must have had for his native State, and may think that to do his best for her, under almost any circumstances, is a public duty. Many who saw the race will have read the spirited and beautiful description of a similar contest at Henley in the opening chapter of Mr. Reade's new novel in "All the Year Round," and will think of the sister who asked "whether it would be very wrong to pray that Oxford may win?"

It is interesting to know that of the twenty recorded contests between the Universities since 1829, each University has now won ten. Cambridge was well ahead; but Oxford, by the events of this and the last two years, has come up to her. No doubt another year will make large gaps in the ranks of the boating heroes who have gained Oxford so many laurels. On the other hand, Cambridge has no reason to be discouraged. If she has been beaten, it is only because Oxford has been unusually fortunate in her captain, and unusually rich in first-rate oarsmen.

Next year will be a race of unusual interest, and each side will be sure more than ever to strain every nerve to prepare for it. We sincerely wish both Oxford and Cambridge good captains and crews, united counsels, a fair stage, and the absence of all *contretemps*, a much closer race than this year, and that the best men may win the conquering heat.

NATAL AND MANCHESTER AT WAR.

NATAL is firmly resolved to die in armour. He is full of fight. This, indeed, seems a characteristic grace of Colonials. One Colonial not very long ago poured shot into a hostile craft on the sea, and forgetting that this is not the sort of excellence which is expected to distinguish a Christian minister, he wrote home to the *Times* a long report, deliciously enlarging on the precision of his aim and the number of pirates he left dead upon the deck. Another Colonial from Natal, of no ordinary notoriety, has opened fire on Moses, on the Prophets, and on the Old Testament in general, and returning from this field of controversy, he has sent a farewell round shot from London into Manchester. Having, as he reverently believes, slain Moses and Aaron, his two greatest opponents, he thinks he will be able to make short work of Dr. Lee, of Manchester. We incline to think this new and unexpected episode in the episcopal war will do a deal of good. Better have a good hot discussion than that cold and stagnant acquiescence in traditional beliefs which deprecates all interruption of the *otium cum dignitate*, a condition, by the way, which has been too long a favourite diocese in England. The hurricane may disturb the sleepers, but it purifies the air. A living dog is preferable to a dead lion, and so the pugnacious Natal Colonial is better than a somnolent Anglican prelate of the high and dry type. A good fighting bishop is a capital blister. He keeps his brethren awake, counteracts the opiate tendencies of a mitre, and helps the laity to feel that in the Church and the Bible there is something worthy of a thorough stand-up fight.

We must however add, however painful, that while we appreciate colonial pluck, we estimate colonial logic at a very low figure, and Natal theology at a lower still. The present Natal and Manchester skirmish arose from Dr. Lee, the Bishop of the latter diocese, having made a speech at a Church Missionary meeting about three weeks ago, in which, speaking of his untamed brother of Natal, he said:—

> "The very foundations of our faith, the very basis of our hopes, the very nearest and dearest of our consolations, are taken from us, when one line of that sacred volume, on which we base everything, is declared to be unfaithful and untrustworthy. We have, I trust, not been wanting in our duty in remonstrating with the party who has thus offended. I trust it is not thought, because we endeavoured to use words of temper and discretion, that we were backward in expressing the horror and grief with which we viewed what had been done. I have no hesitation in saying that there is no phrase which a Christian or a gentleman could use that I am not prepared to use in reprobation of the spirit which animates that work."

These are far severer terms than we have ventured to employ in our strictures on Dr. Colenso. But they are as just as they are expressive. They reflect the mind of many honest and thoughtful men, whether they be Churchmen or Nonconformists, who may probably have understood the Bishop of Manchester to mean, not that our version of the Bible is exempt in every line from such inaccuracies as copyists or translators may have introduced, but that its authority as the Word of God is the basis of the Christian faith. But our controversialist of Natal no sooner scents the battle from afar, than he assumes a fighting attitude, unlimbers his gun, and gives Manchester a hint not to boast in putting on his armour as one that puts it off. His missive consists of two parts. The first is concluded in these jubilant and defiant words:—

> "I am glad that your lordship has thus distinctly raised this question, and thrown down a challenge, which I now take up deliberately in the face of the whole Church and nation. The object of my work is to show that the real value of the Bible as a teacher of divine truth is not affected by the unhistorical character of certain narratives, or by other errors in matters of fact which the progress of critical, historical, and scientific research may detect from time to time in other parts of the sacred volume."

Let us examine this alleged object of the bishop's work. It was the natural impression of his readers that if the bishop had proved Moses not to have been the writer of the Pentateuch, and the main historic records of Genesis and Exodus not to be true or actual and reliable matters of fact, he would have damaged the claims of every writer in the New Testament, and disparaged so far the teaching of the divine Founder of Christianity. The Apostle Paul, in his addresses, as recorded in the Acts of the Apostles, and in his Epistle to the Hebrews (xi. 23–29), expressly declares Moses to have been a living historic person, and the incidents recorded in Genesis to have actually occurred. In

Digitized by Google

the same chapter he recognizes as literal facts the Noachian deluge, and the passage of the Red Sea. St. Peter does the same. If these writers were so deceived themselves, or, knowing what Dr. Colenso believes, have so deceived us, on what ground can we accept them as in any sense or degree inspired men? If they have so blundered or so deceived us in these "earthly things" what reason have we left for supposing that they have informed us aright, or were themselves instructed aright in "heavenly things?" He of whom it is written, "Never man spake like this man," speaks of the deluge as a fact, and Noah as an historic person who lived and was miraculously saved in his day. Of Moses he says, "He wrote of Me," and to the words of Moses He attaches an efficacy so divine, that He puts into the mouth of another: "If they hear not Moses and the prophets neither will be they persuaded if one rose from the dead."

But that we may see how Dr. Colenso appreciates the force—the destructive force—of his supposed disproofs of Scripture facts, let us here quote his own words from his second volume, pp. 170, 171:—

"Now, however, that we are able to feel that we stand on sure ground, when we assert that these books, whatever be their value, with whatever pious purpose they were written, and whatever excellent lessons they may teach, are not removed from the sphere of critical enquiry, by possessing any such divine infallibility as has been usually ascribed to them, there is a multitude of other difficulties, inconsistencies, and impossibilities, which will be at once apparent if we examine carefully the scripture narrative. Without at present stopping to consider those which arise from examining the story of creation and the fall as given in the first chapters of Genesis by the light of modern science, we will here notice the contradictions which exist between the first account of creation in Genesis i., and the second account in Genesis ii."

We appeal to the common sense of our readers, how could a book replete with "difficulties, inconsistencies, and impossibilities" be trustworthy in its most vital doctrinal portions? If the writers knew no better, and therefore have unconsciously introduced legends and fables as facts and truths, how can we accept them as credible witnesses of yet sublimer facts, or trustworthy writers of yet more precious truths? The destruction of the Old Testament is logically and inevitably the destruction of the New also; the two do not depend on *adhesion*, which may be severed without injury to either; they exist by *cohesion*, and therefore both must stand or both must fall; they are one homogeneous work.

The Bishop of Natal, not seeing the drift of his opinions, sends another farewell shot to his brother of Manchester, which he labels "the hare" or "chew-the-cud" shot:—

"I would beg, however, to be permitted to ask, assuming that the above words are correctly reported, whether your lordship does really mean to say that 'the very foundations of our faith, the very basis of our hopes, the very nearest and dearest of our consolations, are taken from us,' when it is declared that such a statement as that in Lev. xi., 6, viz., that the hare 'chews the cud'—which is there represented as resting upon the authority of the Almighty Creator Himself—'Jehovah spake unto Moses and Aaron,'—is not a 'faithful and trustworthy' account of a very well-known fact in natural history, and that, consequently, the words in question could never have been really uttered by the Almighty?"

As this brilliant discovery does not appear in his work, we may assume he has lately stumbled upon it. Moses no doubt writes, "Jehovah said unto Moses and to Aaron," "The hare, because he cheweth the cud but divideth not the hoof, he is unclean unto you." On this the Bishop quotes a note of Professor Owen, whence taken he does not condescend to inform us, which is in these words, "the hare does not chew the cud, it has not the stomach of a ruminant animal." No authority is higher than Professor Owen's on comparative anatomy. But a long-disputed question like this must not be so summarily settled by Dr. Colenso's alleged note from Professor Owen, which, after all, may be "unhistorical." We decline, however, at present to enter on the tempting field of debate thus opened to Christendom. We leave Dr. Lee to settle this curious point with his South African brother; and we leave Dr. Colenso to ruminate, like his friend the hare, upon Dr. Lee's reply, when, chewing the cud of repentance, he will in himself present an interesting zoological illustration, without the "cloven hoof," of that animal species. Should the defeat which he may expect lead the Bishop of Natal to select healthier pastures and purer streams for the future, he may derive from this incidental collision a considerable amount of personal benefit. In the meantime, he may just be reminded that, even on the question of natural history to which he has needlessly referred, opinions have not always been on his side. Thus Michaelis, after stating that "no two sportsmen concur in giving the same answer" to the question whether the hare chews the cud, considers it "one of those doubtful cases, which, as in the case of the camel's foot, the legislator was obliged to decide authoritatively." The poet Cowper, who domesticated three tame hares, and studied their habits with great attention, asserts that "they chewed the cud all day till evening." In the case of the camel the division of the hoof is partial and imperfect, the division not extending the whole length, and being so far doubtful, it is excluded. So the hare may not have the intestinal structure of a ruminant animal, such as the cow; but as in the opposite case of the camel's hoof, it has so great an approximation to a ruminating animal in its habits, that it has impressed most observers with the belief that it is actually so. Dr. Eadie states in his dictionary that "the ruminant character is a fact in the case of some species of the hare." All who have discussed this old and somewhat obsolete objection agree that the hare has an action of the mouth—the whetting of its incisor teeth—which appears to an ordinary observer very similar to chewing the cud. But what a point is this, in such a controversy as that in which the Bishop of Natal has embarked!

BEAUTIFUL FOR EVER.

THE enamelling trial of some eight months ago, her vast business and establishments in both hemispheres for the supply and manufacture of her miraculous cosmetics, are not enough for Madame Rachel. Still sighing for new worlds to conquer, and burning with that missionary spirit which always accompanies sincere belief; uneasy in her heart while yet one fashionable woman in London remains unenamelled, and consequently without the full and perpetual benefit of her charms; sad that her great discovery should be so misrepresented as it has been lately by profane writers, who accuse her of drying up the pores of the skin by a hardening process and of other enormities, Madame Rachel can contain herself no longer. She has taken up her parable, and put forth her profession of faith in a neat pink pamphlet of twenty-four pages, at the modest price of half-a-crown. The streets of May Fair and Belgravia, and the Strand itself, teem with small human sandwiches, upon which her immortal work, "Beautiful for Ever! Madame Rachel on Female Grace and Beauty!" is advertised in rose-coloured letters. In the columns of the *Times*, too, its publication is duly proclaimed. If the old unenamelled world of men and women still goes on walking, talking, marrying and giving in marriage, dressing and rouging in its old way, it is not for want of the warning voice of a prophetess in their midst. Nor is the book entrusted to the sale of ordinary booksellers. It is dispensed by the priestess's own hands at her own mysterious shrine in Bond-street. A tract is of little use if it does not lead its reader to attendance at church or chapel; and even this immortal work, if merely read and thrown aside unheeded, might make little impression upon the world. Madame Rachel, therefore, invites the world to smell the rose upon the tree; to gather up the leaves of the oracle (neatly sewn and covered) at the shrine itself, in the hope that some at least who come to buy, to look about them and to "chaff" or scoff, may remain to be sold, to be converted, to be enamelled, or even to be made beautiful for ever, by the "Magnetic Rock Dew Water of the Sahara."

Cruelly, indeed, has the Pythia of Bond-street been misunderstood and wronged, by husbands and juries, by the press and by mankind. It is not merely, or primarily, the physical grace and beauty of woman with which Madame Rachel is concerned. No! Woman's moral grace and excellence, woman's moral ascendancy, her mission as the civilizer and consoler of mankind,—these are the great ends and interests which this new female apostle of beauty is devoting a lifetime to promote. Of course moral grace and ascendancy are not to be had without due attention to outward appearance. "We trust our gentle readers will not deem us too presuming in again stating that, as it has been a pleasure to us to speak of the mental and moral beauties of woman, so it has been and ever will be our pleasure to improve their health and personal charms." But, after all, these are mere accessories, mere means to the great end. Let there be no misunderstanding in future. It is in order that woman may worthily fulfil her high mission in the world that Madame Rachel has opened her shop in Bond-street.

Accordingly, a full half of the pamphlet is devoted to a eulogy of the moral virtues of the sex. "Our glorious and beloved Queen, who, bright and beautiful, came forth to the nation in her young and lovely girlhood," of course is first alluded to. Next the three royal brides of the last few years are brought forward to exemplify "how wise and good has ever been the influence of beautiful woman." "Yes! beautiful for ever shall be the name of such lovely women and of thousands and tens of thousands of others who could be extolled for their virtues and womanly traits." Then Florence Nightingale and the Crimean Sisters of Mercy; Jessie

Digitized by Google

Maclean, the heroine of Lucknow; Grace Darling,—"Grace by name and grace by nature;" the poor ballet girl, Smith, who sacrificed her life in endeavouring to save her burning companion at the Princess's Theatre; "the lovely and erring Magdalen," reclaimed by the intercession of her more fortunate sister; all these instances of moral beauty are touched upon in turn.

Having thus enlisted the sympathies of the fashionable, the charitable, the naval and military, and the theatrical world, and even of the demi-monde itself—and having also set herself right as to her own object in life, the authoress proceeds to deprecate neglect of dress—one of the main causes of the loss of woman's influence. Many neglect dress "under the impression that *déshabille* is charming." But "we would urge that what is pleasure to one is pain to another in more instances than one." Especially at this time should all women duly adorn themselves to welcome the Princess Alexandra,—

"Greeting her with loving hearts and joyous faces—such should be the tribute of Albion's fair and lovely daughters to the gentle Danish Princess.

"Yes, we say, come forth bright Albion's fair and graceful daughters; on such a festal day come forth, arrayed in your sparkling gems and radiant beauty, and add lustre, by your matchless charms, to the joyous day that fills England with gladness."

"Come forth!" we fancy we hear this Pythoness continue (if the words of the book may be supplemented by those of the advertisement given with it), "Come forth, radiant with Madame Rachel's Royal and costly Arabian spices and perfumes, which were presented in golden vases by the ladies of Paris to the Empress Eugenie, under the name of the Senses of Peace! Come forth and greet your future Queen with faces joyous with Alabaster Powder, Royal Arabian Soap, Alabaster Liquid, Circassian Bloom, and Arab Bloom Powder, sold by Madame Rachel, sole maker, possessor, and inventor—(attendances without enamelling, £5; with enamelling, £160 and upwards). Come forth and worthily exercise the wise and good influence of women, your eyes bright with my Circassian Preparation for the Eyes, your hair with Magnetic Cream and Arabian Oils, and your teeth with Blanchinette Enamel Wash; your breath sweet with Pure Extracts of the Lilies; your foreheads smooth with the Armenian Liquid for Removing Wrinkles; your bodies renewed and purified with the Magnetic Rock Dew Water from Sahara, which may be called the Antipodes of the Lethean Styx!"

But the "gentle reader" about this time becomes impatient to know something more definite of the means by which Madame Rachel's great results are achieved. An extract from the *Illustrated News* of January 24th, 1846, will enlighten him. It appears that at that time the physician to the Emperor of Morocco was in England, and through that respectable journal he made known the secret of the Magnetic Rock Dew Water to the world. Madame Rachel at once seized the opportunity, and secured her prize. She has now "the sole right of importing it in its pure state; the privilege of which right was purchased at an enormous outlay from the Government of Morocco, and which has gained her world-renowned fame."

Part of the newspaper extract, and of Madame Rachel's comments on it, deserve quoting:—

"In the interior of Sahara, or the Great Desert, is a magnetic rock, from which a water distils, sparingly, in the form of dew, which is possessed of extraordinary properties. It appears to have the property of increasing the vital energies, as it restores the colour of grey hair, apparently by renewing the circulation in its capillary tubes, the cessation of which occasions greyness. And it gives the appearance of youth to persons of considerable antiquity.

"This water is brought to Morocco, on swift dromedaries, for the use of the Court, and its virtues are much extolled by the physician; it might be called the antipodes of the Lethean Styx of ancient times.

"Though its virtues are inexplicable by the lights of science, they cannot be denied in the face of sufficient credentials. In the caravans which cross the Sahara, the water, which is carried in skins, is sometimes all dried up suddenly by the hot winds; but to this medicinal water such an accident has never happened."

The commentary is certainly worthy of this text:—

"The high respectability of the journal from which the above is quoted is a sufficient guarantee of its authenticity. Were further proofs needed, the Ambassadors from the Court of Morocco can testify to the Magnetic Rock's existence.

"And should other proofs be wanting, we will merely refer to the late trial, where, in a public court of justice, the author had subpœned (*sic*) some of the first medical men of the day, to whom she appealed in open court for confirmation of her assertion that her process had been effective.

"The learned counsel opposed to the writer on that occasion admitted the services that had been rendered, but pleaded, for the husband of the lady who had derived benefit from the writer's skill, talents, and labour, that he was not bound by law to pay for such a costly and elaborate luxury.

"But it has ever been admitted that there are two sides to a question, and that the labourer is worthy of his hire, and, to quote from the *Morning Advertiser*, 'If ladies put faith in enamelling, and derive benefit from it, they are bound, as ladies, to pay for it.'"

Come, then, all young ladies, matrons, dowagers, and persons of considerable antiquity, to Madame Rachel. Other cosmetics are composed "of the most deadly leads and other injurious matter." Madame Rachel's are made "of the purest, rarest, and most fragrant productions of Arabia, Syria, Sahara, Central India, China, and Japan, collected and imported regardless of expense."

The person who would be beautiful for ever must first, it seems, go through "a simple course of medical treatment." She must then constantly use the Arabian medicated bath. From the use of this bath the women of Eastern nations derive their matchless beauty. The Turkish bath is denounced as fatally deleterious. The Arabian is the secret of health and loveliness. What is the Arabian bath? Go to Bond-street and you may see. Madame Rachel, sole importer of the Magnetic Rock Dew Water, and of the choice Eastern herbs, &c., alone has the materials to make it and the knowledge to use them.

And shall this Hebrew Cassandra still preach to the world in vain? Shall Barnum succeed in the Broadway, and Rachel fail in Bond-street? Shall crowds abet and applaud an insulting cabman at her door, who tells her that "he can paint her ladies' eyes better than she can paint their cheeks,"—and this to her face and in allusion to her daughter, doubtless long since made beautiful for ever by the Arabian bath? It cannot be. The season is just coming on. The sandwich advertisements, the eloquent pamphlet, the trial of the process itself, cannot fail to convert the whole world of the "Court Guide," and the whole world out of it. Not a lady but will rush to refresh herself with this elixir of life and beauty, and not a husband but will cheerfully pay the little bill, if it amount to a thousand pounds! And next year's season, when all London has been made "beautiful for ever," and female influence and female charms have been restored to their legitimate ascendancy, will dawn on a brighter, a better, and a happier world.

CHINESE ORNAMENT.

The sale of the very large collection of Chinese porcelain, bronzes, enamels, carvings, &c., formed by Mr. William Russell, which was going on about a fortnight ago, at Messrs. Christie & Manson's, offered an unusually good opportunity for gaining a general estimate of the real merits of the Chinese as art workmen. At the same time, there were in this collection bronze vases supposed to represent the workmanship of these people at a time so remote as 1200 B.C., and many other objects by which the course of Chinese ornamental art might be traced certainly from very ancient times down to the modern enamel work to be seen in the capstand brought from the summer palace of the Emperor. As to the assumed antiquity of these objects, it must always be remembered that it rests entirely on the records of the Chinese as to the dates of the dynasties, certain official marks or signets of which the objects bear. But, as we have not discovered any new reasons why faith should be placed in a people who regard lies and deceit as national virtues, their claims to an acquaintance with so much of the arts as these bronzes show, at that early date, must be regarded with great suspicion. However, if we admitted these dates and then compared the work with that of the Egyptians, which belongs with far greater certainty to a much earlier date, we should see that it is very inferior in ornamental design.

We may look in vain amongst these early Chinese objects for anything equal to the Assyrian work in metal, stone, and ivory; and if we take the Greek antique as the standard it is to see still more plainly how the Chinese, starting from the same archaic ornament, never improved upon it as the Western nations did. Thus it is curious to see the Greek fret ornament perpetually repeated; whether it is upon the earliest vessels in gold and bronze, upon porcelain, modern furniture, or the most recent garden fence in Pekin, there is the old fret in stamped work, inlay, painted, or through-cut.

It is so with their architecture, which is ornament in a wide sense. Their houses are all only a more durable form of tent, the roof retaining the curved sweep of the nomad's house of skins; their palaces and temples the mere piling of one of these tent-like chambers on the top of another. Then, as to the supports, to this day their columns are as like tent-poles as possible, having no capitals, and, strictly speaking, are not columns. The ignorance of the Chinese as to the ornamental capabilities of the column is peculiarly characteristic of their style, if we may so dignify their manner; the idea of supplanting their tent-poles by a support

Digitized by Google

suggesting any natural forms never entered their heads. They would never, like the Egyptians, have invented columns from observing the natural grace of the papyrus stem and flower; or, like the Assyrian, composed the bulls' and horses' heads into capitals. Great imitators, they have remained copyists from themselves for ages. They employ natural forms of every kind about them—plants, flowers, fruits, reptiles, fishes, birds, and beasts—these they more often employ in precise imitation than in conventional treatment, adopting rather than adapting them. Their porcelain vases and bottles are frequently in the shape of gourds, or fish; and their bronze incense-burners are very generally in the form of stags, ducks, cranes, elephants, and other animals, sometimes with the figure of a fakir seated upon them. But we must do them the justice to say that these objects are often cleverly modelled, and the forms of the vases and bottles very carefully and correctly designed, with very pure and rich tints of colour. Still, from the oldest to the most recent we can find no disposition to invent; no such perfection of ornament as is so remarkable in the Greek vases, and none of their delightful fancy in the endless variety of borders and other details; not even the creative faculty to be observed in the painted patterns of an Egyptian mummy-case. The large vases which are now regularly manufactured in China expressly to meet the European taste for Chinese things, differ from the old ones only in their size and inferior quality. In one quarter of a century after the art had been learnt from China the workshops of Dresden, Sèvres, and Worcester had developed it in every direction far higher than the Chinese have ever done, though they possessed the secret of the clays and the colours so early as 163 B.C., and had brought their porcelain to perfection by about 1278 A.D., according to the laborious researches of M. Stanislaus Julien. It is singular that they should not have carried glass-making to any perfection; specimens of an opaque kind of glass, like the Venetian *aventurine*, are very rare. There were two small tortoise-shell coloured vases in the collection we are speaking of evidently ground and polished by the lathe. It is, however, this permanent character which gives Chinese work the style that we see still captivates the connoisseurs, and leads the Beckfords and Bernals of the day to spend a fortune on crockery. There are still numbers to whom the lines written of Horace Walpole are equally applicable:—

> "China's the passion of his soul;
> A cup, a plate, a dish, a bowl,
> Can kindle wishes in his breast,
> Inflame with joy, or break his rest."

Many little cups and saucers in this collection of Mr. Russell's were sold for from four to six guineas; one choice set of the old eggshell china, painted crimson, with flowers etched in Indian ink on white medallions, which once belonged to the Beckford collection, realized this price for each cup and saucer, though sold separately.

If there had not been some enthusiastic virtuosi among the Chinese, we should not have seen any of their interesting bronzes; they must have perished in a climate certainly not so favourable for preserving them as that of Egypt. Confucius refers to the museums formed by persons of rank; he mentions Lin-Tze, a minister of state, and Tung Choo (A.D. 200), who were collectors. In the time of Lord Macartney's embassy, the viceroy of Canton, Yuen Yuen, was a great collector. The practice of burying vases with the dead led to many being dug up to be sold to the museums; so that, notwithstanding the edict of Tsin-Che Hwang-Te, the builder of the Great Wall, ordering all memorials of the past to be destroyed, and all books burnt, many have escaped. The oldest ornament seen upon these is the fret-work stamped in a band round the body of the three-legged vessels; and the shape of these rude vases, excepting the legs, is not unlike the earthen vases found in British tumuli. They were used only for religious purposes; those of gold, and with three legs, being significant of the possessor's imperial rank; those of fine copper, with four legs, being for ministers of state; while to the literati were allotted iron vases. In the matter of prize cups, the Chinese are far before us; they gave them as rewards for agriculture in their earliest times, and the cup was preserved as a family honour; many of these bear the words "sheep," "ox," "hog," besides the universal ornamental work in fretted lines, and strange pieces in relief, with something like a rude eye here and there, which was the Chinese artist's way of representing the all-seeing eye of the Almighty One looking out of the clouds and thunder. Generally, too, the dragon Lung, god of rain, is to be traced in the clouds; he is an important ornamental personage on everything—he forms the imperial heraldry, and makes the great figure in the carnival in his honour known as the Feast of Lanterns.

Another ornamental form is the globe in relief, with the strange conventional clouds and thunder as supporters at the sides, perhaps with a few curved lines ending in an involuted spiral. An example of this kind was the vase 718, said to be about 1200 years B.C. 727 and 728 were other examples; and 912, an incense burner, showed the circle enclosed in a raised diamond fret on a tooled ground—a very good piece of ornamental arrangement. The circle is the symbol of perfection, or the male sex; the square represents the female, and inferiority. Fuh he, the founder of the empire (B.C. 3300), laid this down. The handles of these vases are generally formed of some animal's head and neck, often the lynx, a lizard, or the fabulous kylin—a sort of Cerberus, upon whom the Chinese delight to lavish all their powers of displaying the grotesque and the terrible combined. The wine vases are frequently of good form, not unlike the glass we know as a beaker. The ornament upon them is often arranged in a leaf-shape, the point rising towards the brim, as in the beaker 903 in this sale.

In enamel work the Chinese show precisely the same cleverness up to a certain point, without any development. It is evident that they were early familiar with the art, and its application to metal work, but the enamelled cap-stand in this collection shows no advance upon the earliest specimens. They used the champlevé, the cloissonné, and the painted enamel, but the former processes they excelled in. The best examples have a decided Persian character, noticeable generally on the bowls, as in 337, which has a very elegant running pattern of flowers. No. 332 showed the Persian physiognomy, in the three female musicians playing musical instruments like long shepherds' pipes, very distinctly. Another good example of early work was the oblong tray, 340. In all of these the design is too good for Chinese art; and, moreover, it resembles some modern Turkish enamellings that are very common. The colours are remarkable for purity of tint, as is generally the case. The probability is that the better specimens are due to Persian and other teachings, and the coarser work of the screens and other objects belongs to the Chinese entirely, as the conventional design always shows.

It is remarkable that in painting, as seen on china and other materials, the Chinese show the greatest facility and aptness in imitating natural forms and colours, of flowers especially; and yet they exhibit so little pictorial faculty. Here, again, it would seem they are radically deficient in the true endowments of art. They have not the power to idealize and create a new work from the suggestions of nature; they could not conceive a Doric column, nor carve an Apollo, nor paint a picture. Lumqua, one of their first modern painters of those strange fac-simile figures representing the sort of Rake's Progress of the Opium-eater, said very naïvely: "What see can do, what no see no can do." This they do also in the solid with equal perfection, as might be observed in the extraordinary toy-group 1239, in Mr. Russell's collection. In this the artist was not satisfied with imitating to the life a Tartar of rank on horseback going hawking with a stout countryman servant and the hawks, but he made the heads and the eyes move with the slightest tremour. This curious example was brought home by Lord Macartney. After all, perhaps, the best example of Chinese art-work,—though, it is true, a gross, yet glorious caricature,—is the familiar willow-pattern plate of our tables; this may really be studied as a perfect compendium of their art.

The poverty of their design is seen in the way they carry out the imitating principle into all objects of personal use. The hardest stones they cut with infinite labour into the form of fruits, flowers, and animals, where other people far behind them in the actual technical means produce beautiful boxes in chased and engraved metal, with pictures in enamel, with jewels set in ornamental forms and with endless fancy displayed in all kinds of work.

Closely connected with this crude use of natural objects is that love of the grotesque and its brother feeling for the terrible which belong to all people in a primitive or savage state. We find it in the ancient Mexican works of Yucatan, in the American aborigines, in the Islanders of the Pacific, in the Scandinavian and old Norsemen, in our own Norman carvings of monsters that grin at us in sacred places in such incongruous companionship with saints, martyrs, and heroes. Indeed, there are abundant examples of the same condition in the archaic works of the Greeks. It is as if Gibbon's remark, "that the savage tribes of mankind as they approach nearer the condition of animals preserve a stronger resemblance to themselves and to each other," were confirmed by the similarity of the archaic ornament in widely-separated nations. The peculiarity as to the Chinese is, that with great manipulative skill, extraordinary imitative faculty, and some chemical art, their art has never felt the influence of moral and intellectual culture, and therefore it remains barbaric in intention, however admirable

Digitized by Google

as workmanship. As M. Emile Montégut so well says:—"Le génie de l'artiste n'est pas tout dans les arts, il lui faut une matière sur laquelle il puisse s'exercer, et cette matière sa volonté est impuissante à lui donner; c'est l'humanité qui fournit à l'artiste cette matière morale."

A RAGGED CHURCH.

This is a peculiar and characteristic institution. To a common mind it seems a repellant rather than attractive name. It appears like an attempt to destroy that beautiful feature so well defined in the words, "the rich and poor meet together, and the Lord is the maker of them all." But a thorough consideration of the facts will modify this fear, and vindicate the expediency, at least, of such an experiment. There is a class of our fellow-creatures so steeped in vice and dirt, that it is impossible to endure their promiscuous mixing with an ordinary congregation. This is not mere affectation. It is painfully real. The case, therefore, resolves itself into this:—Either you must insist on their weekly baptism in hot water, with plenty of soap, on the Sunday morning, and furnish them with clean shirts and trowsers or petticoats, which they would to a certainty pawn or sell for gin on the Monday, or you must localize them in some part of the parish church or other place of congregation, within restrictive and impassable barriers. Now it does seem, to our mind, much less objectionable and less annoying to their *amour propre*, to give them a place of worship entirely their own, into which they may statedly come, and neither take nor give offence. It must never be forgotten, in any discussion of the merits of this question, that ragged churchmen are not decent labourers or mechanics, or what is called the working classes. They are tramps, beggars, or people of nameless condition, wrecks of a life of drunkenness and vice, who, if invited and welcomed, will not enter a regular place of worship. They form a caste, as plainly marked as if they were a distinct race from that of the English people.

An experiment of this kind has been carried on for ten years in a place called Brewer's-court, Wild-street, Drury-lane, the centre of a district more degraded, more destitute, and more demoralized than is to be found in any of the eastern districts of London. Every Sunday morning, at eleven o'clock, 200 miserable-looking specimens of the human family assemble in the ragged church there, famished, wretchedly clad, and dirty, beyond the power of description. The psalmody with which the service begins is very imperfect; the attitude and aspect of the worshippers, at first sight, are anything but encouraging. Some grown lads did not understand at first whether they were to kneel or sit or fall on their faces or stand upon their heads during prayers. Of the 200, some forty are able to read, and one, perhaps the begging-letter-writer, has reached the accomplishment of writing. From thirty to forty of the congregation partake of the Communion once a quarter. These are the more advanced and better instructed, who have been recovered from a life of evil, trained and taught by the minister; and it is to the credit of his labours that scarcely any great delinquency has hitherto disgraced them since they joined. During the winter months, a loaf of bread is distributed to each worshipper by the minister after he has pronounced the benediction, for which he has many willing and waiting recipients, as might be supposed. Several instances of lasting moral impression and elevation have occurred. The ragged child in the school has led the minister to the ragged parent, and the ragged parent in the church on Sunday has guided the minister to the ragged family on the Monday. A neighbouring congregation furnishes, by subscription, funds to defray the cost of this experiment. Its members frequently respond to appeals made to their benevolence, in the shape of clothes and medical comforts for the most destitute or the sick. A very interesting proof of what may be done at little cost in a case of this kind, is worth recording as a hint to others. A kind-hearted gentleman, having one day listened to the annual sermon in aid of the funds of the Ragged Church and School, came into the vestry at the close of the service, and said that, while at sea in his yacht, his crew had often caught great quantities of fish, which, having no use for it, they cast into the sea again. If the minister of the Ragged Church would undertake to distribute a hamper-full of good fish among this destitute people, he would send, carriage paid, a large hamper containing soles, flounders, and skate. This he did on three successive occasions, and the destitute poor received each a good fish dinner, to their great and rare satisfaction. A benevolent lady likewise finds sewing for women who have no children, and situations for girls who can be trusted. But the great perplexity is what to do with convicted lads, expired ticket-of-leave men, and jail-birds. These have lost their character, and to them stealing or begging, or both, are sheer necessities. It might surely be possible to find even for these some sort of hard work, to which no responsibility or temptation is attached.

It is interesting to notice that on Tuesday, March the 10th, the 200 miserable men and women who form the ragged church, with their 300 ragged children, sat down to a capital dinner of roast beef and plum pudding, furnished by a few friends, the minister presiding, and in cups of ale sufficient they drank health and happiness to the Prince and Princess of Wales, and wound up all with "God save the Queen."

We may here remark, that it is surely of no slight importance that the ignorant, degraded, vicious, who do exist among the London poor, should be brought into contact with the grand and elevating lessons of religion; also that they should be, to some extent, relieved in poverty, and introduced, where it is possible, to employment. Assuredly it must exert a healing and restorative and kindly influence on men who feel they have sunk so low, to see disinterested persons encountering prodigious difficulties, and very disagreeable incidents, simply to do them good. No beneficent effort is unfruitful at last. Every attempt to do good must at some time, and somewhere, and in some degree succeed. It is a heartless cynicism which tries to make out that every such effort is a failure, and which loves to deride the work of charity which it cannot appreciate.

It is impossible to doubt that such an institution contributes in its degree in more ways than one to lessen the amount of vice, ignorance, and wretchedness that was set forth in our account of an "unilluminated spot," amid the late universal blaze. It is not by comprehensive and magnificent schemes for converting the world, but by each one weeding and cultivating the garden that surrounds his own residence, that real and lasting good is done.

ART AND SCIENCE.

THE SOCIETY OF BRITISH ARTISTS.

The Suffolk-street Gallery, which opened on Monday last with the fortieth annual exhibition, containing nearly a thousand pictures, shows us what a large and meritorious class of artists there is who are pursuing their art without the pale of the Academy. The thirty members form a chartered body, whose talents have long been recognized by the general public, and they attract around them a multitude of painters who choose this gallery as their arena, rather than venture among the glittering crowd of the Academy, where they might either be lost in the upper or the lower regions, or even be shut out altogether. The misfortune of having a *quasi* National Academy, with a gallery very much too small, and a chartered society with abundant space, is that the ambitious Dædalus, having tried his wings in the lower sphere, either soars away to the Academy, or reserves his best efforts for that Parnassus. So it is that we find this gallery always well adorned with the works of the members, but rarely with any striking effort of genius from younger men. The present exhibition, however, is superior to most that we remember of late years, though we may not be able to point to any work remarkable for the highest qualities of art.

Mr. Salter's large historical picture, representing the interview which took place at Caversham, near Reading, between Charles I. and his children, in the presence of Cromwell, resembles his picture of last year, and shows the same facility of treating a subject with a certain picturesqueness and pleasing colouring distributed amongst the costumes and the figures. The king, dressed in rich black velvet, braided with gold, seated at one side of the group, with his three children, splendidly attired, clinging round him, bows his head as if to receive a kiss from the little princess, while Cromwell, gaunt and stern, stands looking on. The subject is a fine one, and could Mr. Salter have painted it in a less courtly manner, with more of the unaffected simplicity that inevitably belongs to all such touching scenes, whether in the hut or the palace, he would have succeeded better. It is not enough to paint the big tear upon Cromwell's iron cheek, and to give the king the unruffled exterior of dignified presence; we crave something more, however excellent the mere painting may be.

Mr. Hurlstone has always pursued a manner of his own, the very opposite of the style of careful imitation and high finish now so much in vogue. Rich tone of colour and characteristic expression he prefers to accurate detail. That he has produced many admirable works in this particular vein we well know, but his "Seville" (207), and "Boy with a Lamb" (460), would tax the charity of most critics rather severely, and remembering the verse of Pope's essay quoted so apologetically on the catalogue, we are content to regard the artist's intention rather than his work.

The landscape painters of the society are more happy in their productions. There are several pictures by Mr. Pyne, who this year contributes no less than ten pictures, which come near to the very perfection of landscape art. They are true to nature, without being too literal a transcript—a quality which, in these days of photography and close imitation, is as delightful and refreshing as it is rare, and they always evince feeling for the most beautiful effects, in proportion striking us with the more force. Occasionally,

Digitized by Google

as in 227, "*In faccia del sole*," he goes to the extreme of fanciful colouring, painting trees all pink, and the smooth river reflecting on its surface the glowing sky flecked with clouds more vividly than in the real heavens. Still, his pictures have always this inspiring charm of touching the imagination of the spectator; they are never dull paint.

Mr. Vicat Cole is one of the most promising painters of the society. His "Surrey Cornfield," first exhibited here, deserved all that was said of it in the International Exhibition; but of the three small works in this gallery none can be said quite to equal his former productions. 95, "The Road on the Heath," is a fine bold painting, though on a small canvas. The best feature in it is the broad rising ground of heather, thrown into deep shadow by a passing cloud, in strong contrast to the rolling hills beyond and the delicate grey of the distance. The road, dipping here and there into the dells, entices the eye into the distance, and suggests the delight of a ramble over those breezy downs. The little water-colour drawing of a beech copse is another charming work; but the picture 295, "Harvesting," is a very matter-of-fact production, a thought of the studio, not of the open fields.

Mr. S. R. Percy never paints a bad picture; he is far too accomplished an artist ever to fail in his intention. We have often been astonished at the vivid effects of his brush, but never more than in his picture (290) of a gorgeous sunset in the mountain valley of the Lledr, N. Wales. Immensely clever it is as a feat of painting, but we feel, in standing before such flaming canvases, that they somewhat "o'erstep the modesty of Nature." They have none of the *morbidezza* that suggests the transient beauty which is so fascinating in the real evening effects of Nature's painting.

Mr. A. Gilbert's landscape (313), "Morning: the mist clearing off," challenges criticism in a similar way to Mr. Percy's picture, though in this case the artist has worked with more modesty, if we may use the term, and consequently with more success, in striving to catch the lovely tints of early morning. A silvery mist is hanging over a wide morass, with a lake edged in with reeds; a clump of starved fir-trees stand up in the barren ground, and beyond are the mountains, above which rises the bright sun like a ball of molten silver. Had the painter been satisfied with a suggestion of the sun his picture would have been more truthful and in better taste; as it is, he reminds us of paint by his attempt at a sun, and dispels the dream called up in the mind by the admirably truthful painting of the landscape. There is no kind of art in which the power of reserve or suggestiveness is so necessary as in painting, if our artists could but think so. Slovenly coarseness is one thing, smooth facility and flat imitation is another extreme, but the question is whether there is not a just mean between these two. To illustrate the point, we should compare this picture with a similar subject, 138, "Ben Lomond," by Mr. A. Clint, in which perhaps something too much is left to the imagination.

Mr. H. I. Boddington, in 155, "The Close of an Autumnal Day, N. Wales," comes nearer to the mark of being neither too vague nor too precise and matter of fact. This is one of the best landscapes in the gallery.

Mr. W. W. Gosling seems to have become confirmed in his peculiar manner of painting—very smooth, rather opaque water, and trees that seem to be taken from the photographic model, not copied from the photograph, but painted under the belief that what the photograph represents must be true, which is a most false doctrine. All Mr. Gosling's work shows a feeling for nature that ought to lead to a less theoretical method, both of observing and painting.

Mr. G. Cole's landscapes have generally a particular excellence of warmth and richness of tone; his sunlight spreads through the picture and gives a certain charm which the somewhat trite subject would otherwise lack. In No. 31, "The Approaching Storm—the Last Load," there is great originality and force, almost too much force, for the sky is rather violent in colouring. There are some fine passages in the picture, however, which will appeal to every eye that has watched this peculiar effect.

Mr. F. W. Hulme's landscape, "A Water Lane, near Oakham, Surrey," deserves to be mentioned amongst the best of the conventional landscapes of the Exhibition. Under this head also are to be noticed several good pictures by Mr. Tennant, Mr. Thayer, Mr. J. Syer, Mr. Pettitt, Mr. J. J. Wilson, and Mr. J. C. Ward, all members of the society. Mr. Woolmer has perhaps never been more happy in those delicious fancies of colour for which his pencil has long been unrivalled. It is easy to find faults and defects in these, but we are disposed to sympathize with the painter's dreams of his dainty ladies, with golden locks and pearly skins, luxuriating at their jewelled toilet, or as nymphs idling in the shade of some sparry grotto. No. 180, "Belinda Awakening," is really a most fascinating suggestion from the "Rape of the Lock." The extreme delicacy of the tints in these pictures, and the neat drawing of the figure, are the redeeming points in these works, which would otherwise scarcely take much rank in art.

Mr. T. Roberts contributes several carefully-studied figure pictures, all showing ability and genuine feeling for his art. Where, as we think, he wants study, is in the choice of colour and the selection of better models. 87, "Reading the Scriptures," which is his most finished picture, is painted with excellent *technique*, only in too precise and formal a style as regards the composition, and especially in the treatment of the draperies, which want motive. In his other picture there is a terrible crudity of colour between the reds and strong yellow of the dresses.

Mr. J. Hayllar's "Fresh Eggs" (294) is an admirable example of delicate colouring and accurate representation of character. The blue apron and sleeves of the old market-woman, her red dress, with green cabbages, form a mixture of colours that an artist with a less delicate sense of the delightful harmonies of colour would have rendered hideous.

Mr. W. Bromley has several clever pictures in domestic *genre*. 299, "Playing at Buttons," and 69, "The School," are favourable specimens of his talent. No. 670, "A Jug of Ale and Pipe" is a capital bit of character; it represents a gamekeeper just taking the glass filled by a buxom maid of the inn.

Mr. R. Physick, jun., amongst the animal painters, has been most successful in his picture 375, "A Goat and Kids." The white goat is beautifully painted, and the kids are full of the expression of young life.

There are some unusually good examples of still life and fruit painting. No. 328, "Fruit, Flowers, &c.," by Mr. W. H. Ward, surpasses in minute finish anything of its kind by modern painters, and equals the exquisite painting of Van Huysom and Woenix.

No. 245, by Mr. Anderson, is also a surprisingly beautiful piece of still life, in which the splendid colours of the peacock, pheasant, partridge, and white pigeon are harmonized with ripe grapes and pears, with astonishing skill.

MUSIC.

At the second concert of the Vocal Association on Friday week, a new cantata was produced, the music by an amateur lady-composer, Miss Virginia Gabriel. The scene of "Dreamland," as the cantata is entitled, is laid in the Desert during the halt of a caravan on its journey to Mecca; and the composer has sought to give a picturesque character and something like local colour to her music. The work, which consists of choruses, solos, and duets, had every advantage in its performance by such vocalists as Mdlle. Parepa, Miss Palmer, Mr. Wilbye Cooper, and Mr. Winn; it wanted, however, the contrasts and effects of those orchestral accompaniments which are doubtless comprised in the original score. The pianoforte duet accompaniment by which the voices were sustained on the occasion to which we are referring, although extremely well played, was scarcely sufficient to pourtray that character and colour which the composer seems to have endeavoured to express.

Miss Gabriel's music, if not strikingly original, is melodious and flowing in style, well written for the voices, and generally put together with a musician-like skill, for which the lady is probably much indebted to her studies under that excellent master of composition, Herr Molique.

The remainder of the concert was, to a large extent, of that miscellaneous and purposeless character which the Vocal Association should rise superior to. Among the pieces which stood out conspicuous from much that was merely *ad captandum*, were Mendelssohn's "Hear my prayer," sung by Mdlle. Parepa and chorus, with organ accompaniment; the same composer's pianoforte rondo capriccioso, cleverly played by Mdlle. Michelin; and some German "Lieder," sung with great force and characteristic expression by Madame Theresa Ellinger, from the Imperial Opera, Vienna. This lady's singing gave indication of her being a dramatic artist of great power and accomplishment. The style in which the choir of the Vocal Association executes the choral music is generally so satisfactory that we would gladly see the programmes of these concerts consist more largely of standard works.

During the week the "Messiah" has been given at Exeter Hall, both by the National Choral Society and the Sacred Harmonic Society. The Crystal Palace programmes, too, have included a performance of sacred music appropriate to the period.

The Royal Academy of Music gave its first concert of the season on Saturday last; when, among other students, Miss Westbrook (soprano), Mr. H. Harper (violoncello), and Miss Josephine Williams, distinguished themselves by their respective performances.

Studies for the pianoforte,* like studies for the draughtsman, are essential to the acquirement of a thorough command of manipulative skill. As the artist requires a long course of exercise in the various details and figures which go to make up a composition, so the pianist must bestow much labour and separate attention on the special difficulties of his instrument. The mere practice of "pieces" will, alone, scarcely impart thorough readiness of finger and suppleness of wrist, because the mechanical difficulties are constantly changing their form; whereas in "studies," properly so called, each exercise is based on some particular kind of passage, the constant reiteration of which throughout renders it familiar both mentally and mechanically. Some modern "studies," in which this principle is not kept in view, are in reality not "studies," but would be more properly entitled "preludes." In most of the studies of the best masters, from Clementi, Steibelt, and Cramer, down to Moscheles, Czerny, and Chopin, the principle just laid down is closely adhered to; but many recent works of this class are little more than a collection of passages strung together without purpose or order. Mr. Deacon's "Studies" are among the best that have appeared of late. Each exercise has a distinct object in facilitating some peculiar difficulty of the instrument, while every separate piece is constructed with the skill of an accom-

* First Set of Twenty-four Studies for the Pianoforte. By H. C. Deacon. Book I. E. W. Ollivier.

Digitized by Google

plished musician, and possesses an interest apart from the mechanical purpose which is the primary object. Mr. Deacon has evidently studied in the best schools, and has a thorough command of the elaborations of modern pianoforte mechanism; and his "Studies," while admirable as finger exercises, have a character, a grace, and [elegance by no means usual in this form of composition.

THALLIUM, THE NEW METAL.

Between the discovery of the new metal, thallium, recently made known by Crookes, and the discovery of selenium by Berzelius, there is a singular coincidence of circumstances. Both took the refuse of a sulphuric acid factory, both were searching for a substance which disturbed their ordinary analyses, and both suspected tellurium as the agent of the anomalies that had occurred. Berzelius found the new element, selenium, and Crookes, by spectrum analysis, the new metal which, from the single green line it yields in its spectrum, and the peculiar green colour which it gives to flame, he has called thallium, from the Greek *thallos*, a bud. The original discovery, and many subsequent particulars, we have already recorded in our pages. Since the award of the Exhibition medals to Mr. Crookes for the original discovery, and to M. Lamy, the near relative of Kuhlmann the great Belgian manufacturing chemist, for the presumed first extraction of the metal in its purely metallic state, a strong controversy for the priority of discovery had taken place in the continental journals. The discovery of a new metal is not an event of everyday occurrence, and no new metal proper has been discovered in this country since 1807, when potassium, sodium, and other alkaloid metals were eliminated by Davy, by means of the galvanic battery, from substances already suspected to be metallic oxides. Crookes, therefore, was not likely to permit, nor, indeed, would he, for national credit, have been justified in allowing a foreigner unchallenged to appropriate an honour which belonged to himself and his country —although the Exhibition prize-awarders' eyes were open more readily to the desires of a clever foreigner than to the just rights of an English exhibitor. The subject of thallium being again before the English public—the new metal having formed the topic of last week's Friday evening lecture at the Royal Institution, we are glad to avail ourselves of the opportunity of confirming Mr. Crookes' full right, not only to the discovery, but that of the first elimination of the metal, having ourselves been shown by Crookes the wonderful green line in the spectrum in 1861, and a small disc of the metal itself in January, 1862,—dates earlier than any referred to by Lamy in the late controversy.

We very lately commented on what seems unfortunately no rarity now in the scientific world, the desire of some not strictly conscientious individuals to appropriate the inventions or discoveries of others, and it is with great pain that we are compelled to think somewhat disparagingly of the conduct of M. Lamy. It might have been that he had, and did, make the discovery, independently of Crookes, of the green line in the spectrum; it might have happened, and possibly did happen, that he did examine accidentally the same kind of seleniferous deposit from a vitriol factory unconscious of Crookes having done the same. It might have been that M. Lamy was in ignorance of the notice of the discovery recorded in this journal, in the *Philosophical Magazine*, in the *Chemical News*, in our Paris contemporary, *Cosmos*, and other journals. It may be that M. Lamy can reconcile the fact that he did knowingly appropriate Crookes's term for the new element, and yet have been neither aware of the English chemist's discovery nor of the facts, well known in scientific circles, in the winter of 1861, as to its true metallic nature. Such things are possible, but not likely, in the case of a member of the eminent commercial firm of Kuhlmann, of Lille; and the suspicion will rise in one's mind that it is more probable that M. Lamy had read or heard of thallium, and used the unrivalled resources of his relative's manufactory to outrival and anticipate the English chemist, who had to manipulate with 3 lb. or 4 lb. samples only, containing a total of 3 grains (!) of thallium, with small apparatus, in a private house, while the whole resources of the most wonderful laboratory in Europe, with tons of the refuse material, were available to M. Lamy.

The circumstances of the case are really these:—In March, 1861, Crookes discovered and showed to his friends the spectral green line of Thallium. Lamy admits that he saw it only in May, 1862, for the first time. On the 16th May, at the Agricultural Society of Lille, he exhibited white crystals containing the new element, and thirty or forty grains of the metal reduced by galvanic action. Crookes, however, had placed in the International Exhibition on the 1st May, fifteen days earlier, numerous salts of Thallium, and a sample of the *metal* itself, which he described on its label as a heavy metal, resembling lead. These labels were printed by Silverlock in the previous April, and the various salts are so described in them as to leave no doubt that at this period Crookes was fully aware of its real and exact metallic nature. The truth is that Crookes had reduced the metal from some of its salts in September, 1861, but having had a grant from the Royal Society towards the expenses of working out the details of the new element, he wished—a highly commendable desire—to reserve the publication of his facts for his patron the Royal Society's meeting.

But the question of priority is, by the rules laid down by *savants*, determined by the *dates of publication*, so that although Crookes might and did discover thallium, and eliminate it in its metallic state nearly a year before his rival, if Lamy had anticipated him in publication the rights of the original discoverer would have been lost. The exhibition at the International Exhibition was, however, a *bonâ fide* publication; and so, really, Crookes has both priority of discovery and elimination and in dates of publishing.

The controversy has now dwindled, we believe, to an assertion by M. Lamy that Crookes did not know it was a *true* metal,—a position completely untenable, and known to be incorrect by every Englishman who is acquainted with the progress of science during the past two years. To this controversy, however, Mr. Crookes, with the most commendable modesty and abnegation of self, made not the slightest allusion in his discourse, but gave M. Lamy full credit for his independent labours. His lecture was devoted to the history of the discovery of thallium, and the methods of its extraction, its salts and compounds, and their actions and reactions, its properties and possible use, and in putting before his auditory, in a most lucid and popular form, all that is known respecting it.

In his early experiments, as we have stated, Mr. Crookes laboured under great disadvantages from paucity of material, but having subsequently detected that the refuse of the Spanish pyrites used in the sulphur-works was highly thalliferous, Dr. Thornthwaite has placed large quantities of this refuse at his disposal; and, as means are being taken, by an alteration of the flues in some of those manufactories where these pyrites are used in thousands of tons, to collect that hitherto waste material, we may shortly expect to have thallium a comparatively common metal if any commercial or economic use can be found for it. At present, however, none has been suggested except the minor one, that its peculiar and brilliant green colour would be attractive in pyrotechnic displays and advantageous for signal-lights. It might be available for rifle bullets. By the admirable method introduced by Tyndall of projecting images on a screen by means of the electric light, its brilliant and most remarkable green band was shown to the audience, standing out beyond the prismatic spectrum of the electric light itself by the force of its brightness like an incandescent bar actually placed some inches in front; and then, by a dexterous manipulation of the light the green line was exhibited singly by itself upon a perfectly dark background.

The metal is very soft and heavy. Lead scratches it as iron does lead; and the finger-nail makes a deep indentation. A knife cuts it like cheese. It possesses the remarkable property of welding together while cold, and has extraordinary ductility. Its proper solvent is nitric acid. It marks paper like black-lead, and the writing, examined by reflected light, has a golden appearance. This, however, in a few hours fades all but entirely away; the writing, however, being readily restored by a solution of an alkaline sulphide. Its electrical properties have been investigated by Dr. Matthieson. It conducts electricity much in the proportion that lead does; and for a metal of its class is therefore a tolerably good conductor. But its dia-magnetic properties are very remarkable, and in this respect it stands second only to bismuth, the most dia-magnetic of all substances. It is highly volatile, the metallic fumes flying rapidly off under the ordinary blow-pipe. It has the greatest affinity for oxygen, and its actual brightness can only be seen by following the cutting-knife, so rapidly does it tarnish. If the coating of oxide be removed under water, the new surface will remain bright for a considerable period immersed in that fluid. Various re-actions of salts of thallium, lead, silver, &c., were shown in proof of its exact metallic nature, and its alliance with the lead class of metals. But the most beautiful experiments exhibited in his lecture by Mr. Crookes, next to the exhibition of the green line itself, was the display, by means of the electric light and three Grove's batteries, of the actual crystallization of metallic thallium from a solution of its sulphate, the fern-like fronds formed by the crystals branching out between the poles of the battery with surpassing gracefulness and elegance. In respect to the position of thallium among the elements, Mr. Crookes has well observed that observers generally err in regarding natural bodies as so many links in a perfect chain, and facts are frequently strained in order to make them agree with preconceived opinion. In such a group as chlorine, bromine, and iodine, there are doubtless three consecutive links, but most frequently nature should be looked upon more as a perfect net than as a perfect chain. In seeking for the chemical relationships of thallium, at first sight it might appear to belong to the group of alkali-metals on account of its forming a readily soluble highly alkaline oxide, as also that it forms an insoluble platino-chloride; but, on the other hand, its physical characters, chemical reactions, and high atomic weight, prove incontestably that its true position is close to lead and silver. For the answer to the question—What is its use? we must probably wait until it is procured by the ton at no greater cost than it is now by the ounce; for the practical uses of a body depend and keep pace generally with its abundance. In the form of an alloy, however, its uses may soon possibly be very great, as it readily mixes with many metals, and communicates to them valuable properties.

CONTEMPORARY SCIENCE.

Dr. Joule has communicated to the Manchester Philosophical Society an account of a new and extremely sensitive thermometer. Having remarked on the disturbing influences of currents of air on finely-suspended magnetic needles, he conceived the idea of making use of them as a delicate test of temperature; and this idea he has carried into practice with results exceeding his expectation. A glass tube, two feet long and four inches in diameter, is divided

Digitized by Google

longitudinally by a blackened pasteboard diaphragm, leaving spaces at the top and bottom each a little over an inch. In the top space a bit of magnetized needle, furnished with a glass index, is suspended by a single filament of silk, forming an arrangement like that of a bratticed coal-pit shaft. The slightest excess of temperature on one side over that on the other must occasion a circulation of air which will ascend on the heated side, and, after passing across the fine glass index, will descend on the other side. It is also evident that the sensibility of the instrument may be increased to any required extent by diminishing the directive force of the magnetic needle; and the inventor proposes to make several improvements in his apparatus. In its present condition, however, the heat radiated from a pint of water heated 30° is fully perceptible at a distance of nine feet. A remarkable proof of the extreme sensibility of the instrument was exhibited before the meeting. A beam of moonlight was admitted through a slit in the shutter of the room; and as the beam travelled across the instrument, the index was deflected several degrees, first to the left and then to the right, showing that the air in the thermometer must have been heated to the extent of a few ten-thousandths of a degree by the moon's rays, or by a quantity equivalent to the light absorbed by the blackened surface on which the rays fell.

Among the novelties exhibited at the *soirée* of the Royal Society on Saturday last was a portable standard siphon barometer, by Mr. W. Symons, F.C.S. Many of our readers are no doubt familiar with Gay-Lussac's siphon-barometer, and probably, but for two defects, it would be much more used. It is difficult to make portable, and it requires two distinct readings, which must be added together to get the right result. In the instrument exhibited, these objections are removed. It is rendered portable by a very simple but effectual contrivance, and it is read off as an ordinary standard, or, in fact, much more easily.

At the Institute of British Architects an exceedingly interesting paper was read by the Rev. John Louis Petit, M.A., F.S.A., on the "Abbeys of Ireland," illustrated by a profusion of original sketches. Mr. Gordon Hills, associate, added much valuable information, which he had gleaned in personal investigation in the same field of the Ecclesiastical Antiquities of Ireland, and he exhibited many original plans and drawings of the most interesting abbeys that had been alluded to by Mr. Petit.

At the British Archæological Association the chairman (Mr. Pettigrew) exhibited a charter, 15th Edward III., giving to the Prior and convent De Bello Loco (Newstead) the manor of North-Muskam, Notts; Mr. Wentworth, of Woolley Park, a Placita in an action at Nisi Prius, 31st Edward III.,—Jean Voy, of Pontefract, versus Sir Peter de Maulay, of Doncaster, Knight; also an Inquisitio post Mortem with regard to the estate of the same Jean Voy, dated 43rd Edward III. Mr. Gunston, two bone tubes; apparently the handles of large implements, found in Egypt. Mr. Gunston also exhibited a small bone haft of early date, incised on each side with two lines of chevrons, found in Clerkenwell, and a triangular blade of bone, probably a spatula, found with Roman antiquities in Southwark. Mr. Clarence Napper forwarded a notice fixing the date of the decease of Bogo de Clare, 23rd Edward I., a man of large property, whose daily expenditure had been laid before the Association, as illustrative of the domestic manners of that reign, by the Rev. Mr. Hartshorne. He possessed the fruits of Thatcham and Chievely, Berks, which, upon his decease, passed to Nicholas, Bishop of Sarum. Dr. Lee exhibited a Chinese teapot representing various fruits, seeds, &c., peculiar to the reign of Kang-Hi (1661–1723). Mr. T. Gunston exhibited a bronze statuette of a Satyr, 2¼ inches high, belonging to the pseudo-antique class of the 15th and 16th centuries, and an early example of the cheek-piece of a powerful bit, of cast brass, the extremities having dragons' heads, found in Southwark. The papers read were "On the various kinds of ancient snuffers," by Mr. Lumney, and a paper written by the Chairman, "On Thuribles," giving their history, and an account of the most remarkable specimens in gold, silver, copper, bronze, and terra-cotta. Examples were produced by Mr. Pettigrew, Mr. Forman, Mr. Fitch, and others.

The first of a second series of high ascents was made by Mr. Glaisher on Tuesday last from the Crystal Palace, in Mr. Coxwell's balloon. At seventeen minutes past four p.m. the balloon was liberated; wind sharp and fresh from S.E. The course of the balloon was at first slowly upward, with very little horizontal motion; a stiller ascent, and therefore more suited for the purpose, could not be imagined. At the height of two miles the balloon stood over Clapham; but at this elevation it encountered a south-west current, which wafted it over the south-east part of London to Deptford and the Isle of Dogs, where it rose to four miles and a half, the thermometer standing at zero, a higher temperature than was expected at this season; Mr. Glaisher's pulse beating 97, Coxwell's 98, per minute. The descent was made at half-past six, at Graysham Hall, Barking, Essex.

In respect to our comments on his suggestion of the possible auroral nature of the "red flames" of the sun, Mr. Balfour Stewart writes to us, that when remarking on the nature of these red flames, observed during a total eclipse of the sun, and which have been found in one instance to extend a distance of 70,000 miles above the sun's photosphere, he did not suppose that the solar atmosphere cannot reach to this distance. The intention of his remarks was, that "in seeking to explain appearances which extend to such a vast height, we are naturally inclined to resort to those phenomena which require the smallest amount of atmosphere for their manifestation—such, for instance, as the terrestrial aurora." With this explanation, he thinks "his reference to Mr. Gassiot's experiments will become quite plain, since, although auroral, if they be electric currents, they will only require the smallest conceivable amount of atmosphere for their manifestation, yet those experiments show that these cannot exist in an absolute void; and hence their greatest height may enable us to assign a limit, not only to our own atmosphere, but possibly also to that of our luminary." While we do not concur in the opinion of the auroral nature of these red flames, we print Mr. Stewart's explanation with much pleasure, our sincere desire being to represent individual *savants*, as well as science, with the utmost precision and fairness.

THE PAST WEEK.

HOME.

PARLIAMENT.

On Friday, the 27th, the case of Poland was again brought before the House of Commons by Mr. Hennessy, who asked Lord Palmerston what had been done by the Government, and how far it had accepted or refused joint action with France? Lord Palmerston replied that the Government had made a communication to that of Russia, and was also in communication with the Government of France, for the purpose of joint action of a diplomatic character, and with other Governments, parties to the treaty of Vienna. He hoped that, after Easter, the Government might be able to lay papers on the subject before the House. Mr. Layard gave a history of the maltreatment of Mr. Finkenstein, a British subject, who had fallen into the hands of the Russians, observing that a more disgraceful and discreditable outrage was never perpetrated. It appears that Mr. Finkenstein crossed from Cracow into Poland with a Polish lady, who asked to be allowed to travel in his car. On crossing the frontier they were stopped by the Russian guard, who, after inspecting the gentleman's passport, allowed them to pass on. At some distance from the frontier they fell in with a party of Russian troops, who stopped them during the night, and said they must be sent on to the General. A party of insurgents were in the distance; and as the travellers were being escorted to the General, together with a number of captives, firing commenced. On the instant the Russian soldiers seized and murdered the captives and the lady; took Mr. Finkenstein out of the car, stripped him, inflicted about thirty-eight wounds on him, and left him for dead. The two officers present did their best, according to Mr. Finkenstein's statement, to prevent this outrage. While lying on the ground, Mr. Finkenstein was found by the Polish general, Langiewicz, who, perceiving signs of life in him, had him removed to Cracow. Lord Bloomfield, as soon as he heard of the case, sent a person to Mr. Finkenstein to learn the full particulars, and this statement was taken down from Mr. Finkenstein's own words. Mr. Finkenstein was still alive. The Government had sent out orders for a full inquiry into the whole case; and though there was some doubt whether Mr. Finkenstein was a British subject, yet, if he should prove to be one, full reparation, it was to be hoped, would be obtained.

The fitting out in British ports of vessels of war for the Confederate States, was the subject of a question addressed to the Government by Mr. W. E. Forster, who pointed out the danger to our friendly relations with the United States which arose from this practice. The Solicitor-General vindicated the Government and the Customs' authorities from the charges of delay and want of vigilance in dealing with these transactions. Mr. T. Baring and Mr. Bright thought the Government to blame in not preventing them. Mr. Laird read accounts of the large supplies of arms and munitions of war obtained by the North from this country; and mentioned applications which had been made to him on the part of the Northern Government for armed vessels, offering to place the original letters in the hands of the Speaker or the Prime Minister. Lord Palmerston lamented the proneness in America to raise a party cry against England, which he hoped would not be carried too far, as it had a tendency to endanger the friendly relations between the two countries. He regretted that speeches should be uttered in the House of Commons calculated to encourage that cry, and defended the Government from the charges brought against it.

With regard to the seizure of the *Peterhoff* by Admiral Wilkes, Mr. Layard said that the facts submitted to the Government were furnished by the owners, and they could not take immediate action upon this statement which had been laid before the law officers of the crown. The House adjourned for the Easter holidays.

MISCELLANEOUS.

On Monday, at one o'clock, Lord Palmerston was installed Lord Rector of the University of Glasgow. It had been found that the capacity of the University Common Hall would not meet the demand for tickets of admission; and St. John's parish church was therefore fixed upon for the installation. Here Lord Palmerston held forth to an assembly of 1,700 persons upon the benefits and mysteries of education, with his happy versatility, not neglecting as he went along to throw in a well-turned and well-deserved compliment to the achievements of Scotchmen in the fields of learning, science, and literature. In the evening the Premier was entertained in the City Hall at a magnificent banquet, to which 900 persons sat down. As he was met with deafening shouts of applause when he came forward on the platform in St.

John's, robed in the black silk gown, trimmed with bullion tassels and fringe meet for a Lord Rector; so, in the City Hall, his name had but to be mentioned to raise a tumult of enthusiasm. Whether lecturing the students on the utilities of chemistry and geology, or descanting on the policy of his Government, he was, as he always is, at home. But what principally charmed the citizens of Glasgow, was the expression of his uncompromising determination to maintain the honour of the country at all hazards. This is the link between Lord Palmerston and the nation which, more even than the buoyant ease with which he meets and surmounts every difficulty, places him in cordial sympathy with the people. He has been somewhat provoked of late by the Anglophobia of the Yankees, and the countenance they have found from Mr. Bright and others; and in his speech at the Glasgow banquet he seemed to repeat the warning he gave in the House of Commons on Friday week, that America might provoke us a little too far. It was not so difficult a task, he said, as at first sight it might appear, to maintain the honour and dignity of the country, but at the same time to preserve it in peace. For, while it would not permit its rulers to engage rashly in unwarrantable enterprises, "there is, on the other hand, a determined spirit in the British nation which will not suffer itself to be wronged, which will not brook insult, which is ever ready to repel aggression, and which, by maintaining within itself the means of adequate defence, will teach other nations of the world that, while we refrain from aggression, while we are determined to commit no wilful injury, while we are resolved to infringe no right belonging to others—on the other hand, '*Noli me tangere.*'" Refreshed by his journey to Scotland, and his two orations in Glasgow on Monday, Lord Palmerston set out on Tuesday for Greenock, where he was entertained in the Town Hall with a collation, at which covers were laid for 300. Here he made two speeches, and as soon as the feast was over, took the train back to Glasgow, and at 8 in the evening was present at a *soirée* of the working class, attended by 2,000 persons, in the City Hall. An address, signed by 50,000 of the operatives of Glasgow, was presented to him, which called forth a third speech, the report of which occupies two columns of the *Times* newspaper. On Wednesday the noble Lord received an addition to his many titles of honour, in the membership of the Glasgow Gaiter club, which was conferred upon him at a breakfast of the club. Immediately afterwards he took the train to Edinburgh, where in the Queen-street Hall he was presented by the Lord Provost with the burgess ticket, conveying the freedom of the city, "the most honourable tribute of respect," said the Lord Provost, "which it is in our power to bestow." Lord Palmerston, in a lengthy speech, observed that there were circumstances, personal as well as general, which made the gift peculiarly acceptable to him. "It was within this city," he said, "that I spent three happy years of my life, receiving from the University of Edinburgh part, and I will say the most valuable part, of the instruction which I have received; and therefore, from recollections of 'Auld lang syne,' I value the gift which you have conferred on me." From the Hall he proceeded to the University, received the honorary distinction of LL.D., and made another speech. In the evening at a banquet in the Music Hall, George-street, he made a third oration. The whole week, in fact, has been a testimony to the inexhaustible powers, mental and physical, of our aged Premier.

The Irish convict system has been examined into by Mr. Burton, a member of the Board of Managers of the Scotch prisons, and his report has just been laid before Parliament. Mr. Burton is of opinion that Ireland presents features, religious and social, which render her convict system peculiarly well suited to her, but not to countries where such features do not exist. He accounts for the willingness of the people to receive discharged convicts into their service by observing that the Irish common people look with partiality on any one who has put himself at odds with the law, and have not the aversion to a gaol-bird which the people of Scotland entertain. He fully corroborates all that has been said of the facility with which female convicts obtain employment, even as lady's maids, and, what is more strange, as nursery maids. Employers feel a security in the intervention of the police, and find convicts less exacting and unruly than other labourers. In fact, in the labour market, they enjoy a preference, partly from the fame and popularity of the Irish system of discipline, and from the general desire to co-operate in rendering it successful. A lady told him that since she had employed convict house-servants, she found that she could rely so implicitly on their honesty and regularity, that she had no need to lock up her plate and jewellery. He finds a main source of the success of the Irish system in the fact that the Irish who commit the same crimes as Scotch criminals are not of the same class; are not so much of the profligate class, not so incorrigible; and the great aim is to remove the pressure of want as a motive for crime. The inference is, that crimes in Ireland are committed through pressure of want, and not through the profligacy of the offenders, as in Scotland. Again, Ireland possesses one of the finest *gendarmeries* in the world, and an ordinary convict cannot withdraw from observation, even on the expiration of his sentence, if he continues to live in Ireland. Another source of success is the thorough practical industrial training given to the convict, which, by affording to him the command of subsistence, gives room for the influence of good intentions when they exist. That training gives him a superiority over others in the working classes; whereas the training in England and Scotland raises convicts only to the lower level of capacity for self-support. Much of the success with the female convicts is due, he says, to the fact that they live under the superintendence of Sisters of Mercy. This arrangement not only places them under the guiding influence of ecclesiastics of their own sex, to whom disobedience is a sort of profanity, but is attended by a separate influence of a secular kind, by keeping them in constant communication with educated gentlewomen. In Ireland, again, much less of the sentence is remitted than in Scotland; and in making the remission, the general character of the convict is regarded, together with his antecedents and his probable conduct on release, which is not done in Scotland. Mr. Burton is of opinion that there are countries where the whole administration of justice must be conducted by the Executive, and that Ireland is in a condition much nearer to such countries than Scotland. Finally, while he confesses himself unable to suggest a single alteration in the Irish system which would render it more suitable to the social and religious condition of the Irish people, he protests against this opinion being construed into an admission that he would desire to extend to Scotland "either the social or religious conditions which have afforded so much opportunity for skilful and philanthropic exertion." It will be seen that Mr. Burton's report is most valuable; but we should be sorry to think with him that there are conditions of society in Scotland or England which render it impossible to transfer to the prisons of either country some at least of the features in the Irish system which has proved so pre-eminent a success.

A singular trial took place at Norwich Assizes on Wednesday, one painfully instructive, if the statement of the counsel for the defence is true, that offences of the nature of that alleged against his client are, in many rural districts, regarded by the lower classes as not grave. The indictment accused Frederick Burrell with having, from motives of lucre, fraudulently allured, taken away, and detained Jane Burrell, a person under 21 years of age, she having a present legal interest in certain estates in Norfolk, out of the possession and against the will of her mother, Mary Ann Hyder, and of her guardian, William Silver Hyder, with intent to marry her, on the 20th of January last; and Henry Richard Burrell with aiding and abetting the said Frederick to commit the aforesaid felony. Jane's mother had married again; and her husband, Mr. Hyder, being a Primitive Methodist, and Jane being a Wesleyan, discussions took place between them, in which the stepfather seems to have given the girl very little comfort in this life or hope for the next. It is said that it was owing to discomfort arising from these theological contests that Jane, instead of going to her mother's house during the Christmas holidays, went to her uncle Henry's, from which, on the 19th of January, she departed with uncle Henry and his wife, and was married next day, at Plumstead, to Frederick Burrell, she being sixteen years of age, and her spouse, a clerk in the Royal Arsenal, twenty-one. There was no doubt that she was interested in landed property to the extent of £50 a year; nor that the Act of Parliament had been violated by her abduction. Thus far, however, there is nothing in the case to call for remark. But it so happens that both the Burrells were her uncles by blood—brothers of her father; and her relation to her husband was thus at once that of niece and wife. This was the offence of which the learned counsel said that, amongst the lower classes, it is not considered grave; and that the experience of the jury would bear witness that such marriages are not uncommon. The judge, Mr. Justice Williams, hoped that this was an error, and that the time would never arrive when an incestuous marriage between uncle and niece will not be regarded with horror in this country. The prisoners were found guilty, but the sentence was respited until certain points, reserved for the opinion of the Court of Criminal Appeal have been decided upon.

The plan for the Albert Memorial recommended by the committee some months back has been laid aside in favour of one more simple, less expensive, and more feasible. By this a single monument is proposed to be erected on the site of the Exhibition of 1851. It is to be an Eleanor Cross, similar to the Martyrs' memorial at Oxford or the monument erected to Sir Walter Scott at Edinburgh. The cross is to be a building with an elevation of nearly 300 feet, in the lower part of which is to be placed a statue of the late Prince Consort. The funds in hand will, however, be insufficient for the purpose, and Parliament will probably be asked to make good the deficiency.

The Bishop of Oxford has addressed a pastoral letter to his clergy, observing that as the expostulations of the Bishops has failed to lead Dr. Colenso either to re-consider his views or to resign, it seems to the Bishop and to the great majority of his episcopal brethren, "our plain duty to guard our own dioceses from the ministry of one who is, in our judgment, disqualified for the exercise of any spiritual function in the Church of England." He therefore forbids Dr. Colenso's being suffered to minister in the Word or sacraments within his diocese.

Next to the interest an Englishman takes in his own quarterly returns comes the interest he takes in those of the nation. The returns which on Monday brought us to the close of the financial year show an increase in the Customs, notwithstanding the distress in Lancashire, of £360,000 over the preceding year. In the Excise there is a falling off of £1,177,000. The Property-tax shows an increase of £202,000; and the department called "Miscellaneous" an increase of £1,006,027. On the whole revenue of the year—£70,603,561,—the increase over that of the preceding year, £69,674,479, — is £929,082. Lord Palmerston's promise at

Digitized by Google

Glasgow that our revenue would be found to be in a satisfactory condition is thus fulfilled.

The University boat-race was run on Saturday, the Oxford crew winning by about twelve boats' lengths. Out of twenty races each University thus claims ten victories. This equality will give increased interest to the race of next year. The start took place at twenty minutes past ten, the Cambridge boat taking the lead, with a quick and somewhat flurried stroke. In a few minutes, however, the Oxford crew, with steady massive stroke, showed in front, and kept and improved their advantage to the end of the race, in spite of the splendid efforts made by the Cantabs to recover it. The latter will do well to abandon their late practice of surrendering the management of their crew into the hands of persons who are not of its number.

On Tuesday, Duncan McPhail and George Woods were tried at the Liverpool Assizes for the murder of Ann Walne at Ribchester, found guilty, and sentenced to death. The case is only noticeable here from the fact that a third prisoner, Daniel Carr, died suddenly a few hours before that fixed for his trial. Since his incarceration in Kirkdale gaol he had been in a depressed state of mind; and, as it was suspected that he was labouring under disease of the heart, he was ordered into the hospital. There he was considered sufficiently well, when the day came, to stand his trial; but, while he was being shaved for that purpose, he suddenly died in the chair in which he was sitting.

FOREIGN.

AMERICA.

It seems doubtful whether the Federals are likely to succeed in getting their naval expedition to the rear of Vicksburg by the Yazoo River; but the reports are as yet indistinct. The expedition was to pass from the Coldwater and the Tallahatchie into the Yazoo; and at first it was reported that it had succeeded, had taken Yazoo City and captured 26 Confederate steamers, and 7,000 prisoners. On the 17th, it was reported at New York that the expedition had reach Haine's Bluff in the outer circle of the Vicksburg lines of defence. Should this prove true, the position of Vicksburg and Port Hudson becomes critical. The Richmond papers of the 18th state that a despatch from Port Hudson had been read in the Confederate Senate which caused a lively sensation, while the *Richmond Whig* of the same date speaks of reverses in the south-west. Against this we have to place a statement of the 19th, that the expedition on reaching Greenwood on the 14th was stopped by a powerful battery. An engagement ensued which lasted the whole day; after which the expedition retired three miles up the Tallahatchie, or one hundred and fifty miles above Yazoo. On the same day the Federal force, under Admiral Farragut, was repulsed before Port Hudson. The Federal steamer, *Mississippi*, was burnt by the Confederate shells; and Admiral Farragut's flag-ship, the *Hartford*, was disabled, and retired towards Bâton Rouge. The schemes of the Federals to turn the course of the Mississippi have resulted in defeat and disaster. The river has broken through the levée of the canal at Vicksburg, and filled the trench with earth and rubbish, rendering it useless; while the cutting of the levées (raised banks) at Yazoo Pass and Lake Providence, has inundated a tract of land in Mississippi nearly as large as Scotland; and in Louisiana has converted a region covering 5,000 miles into a lake. News from New York to the 20th states that the Confederates have tried the plan of cutting the levées to better purpose, and that by this means they have compelled a considerable portion of General Grant's army before Vicksburg to re-embark and retreat up the river; a movement which, according to report, was to be followed by the retreat of the whole expedition and the abandonment of the siege of Vicksburg. From this it was presumed that General Johnson's whole Confederate force would be directed against General Rosencranz in Middle Tennessee.

The first step towards the enforcement of the Conscription Act has been taken in the appointment of Colonel Fry, a man, it is said, of character and discretion, as Provost-marshal; other provosts are to be appointed throughout the country, and the operation of the Act was expected to commence on the 1st inst. The fact that the Washington Government is under the necessity of obtaining soldiers by force has received a striking proof in the following statement of the *Detroit Free Press*:—"Another departure of draughted men has taken place, *some of them in chains*. The tendency of these men to skedaddle has compelled the authorities to be very strict with regard to them. Hence we noticed that some of them wore iron bracelets upon their wrists."

Not being able as yet to capture the *Alabama*—though they have hitherto told us that they could "whip creation"—the Yankees grow more violent in their denunciations of England, and have styled the *Alabama* and the *Florida* "British pirates," going so far as even to threaten retaliation against British trade. It is certainly galling to the Americans to see their squadrons baffled by the Confederate rovers; but retaliation on our merchantmen would inevitably bring our men-of-war upon the scene, and the last state of the Great Republic would be worse than the first. With troops who are so unwilling to fight that they are sent to join the army in handcuffs, and with their whole navy baffled by two ships, which destroy their traders with impunity, the Northern States are hardly in a fit condition to challenge another enemy. Though the symptoms of disunion amongst themselves are not so strong as they were some weeks ago, they are strong enough to warrant the utmost caution. The New Jersey Legislature has by resolutions condemned the war, the subversion of the constitution, the suspension of the Habeas Corpus Act, the domination of military over civil law, in states not in insurrection. It believes that Commissioners from the North and South might arrange honourable terms of peace. And it forwards its resolutions to the Federal Government, and to the Governors and Legislatures of the other States, requesting their co-operation. Mr. Chase has returned from his financial mission to New York, without having persuaded the capitalists to lend him their money; and the rumour that he had received an offer of 100,000,000 dollars from European capitalists, appears to have had no foundation. Then, according to the *New York World*, the New York shipbuilders decline taking contracts to build the iron-clads wanted by Government—whose ships are being lost or disabled as fast as the Confederates are building theirs—for fear of the loss from depreciation of currency. The new vessels were to be of 8,000 tons, and designed to surpass the largest French or English iron-clads. But the builders will not contract for them unless they are built by "day work," and to this the Government will not consent. Moreover, while the draughted men are unwilling to join the army, those who are in it are unwilling to remain there. Desertion has been long the order of the day; and we read that it has been found necessary to send a military expedition into one of the counties of Ohio to arrest deserters; and that it was supposed there would be an organized opposition on the part of the inhabitants, and that bloodshed would ensue. This fear has been partly realized in another quarter. At Rush County, Indiana, an armed party of inhabitants succeeded in rescuing deserters from the military authorities, and troops had to be sent from Indianopolis to recapture them. America has "a very pretty quarrel as it stands," without defying the "Britisher."

POLAND.

We fear that the Poles are not as united as their cause should make them. Mieroslawski has published a proclamation incriminating Langiewicz, on the ground that he usurped the dictatorship, which belonged to him. In a paragraph in the proclamation of Langiewicz to his soldiers, he attributes the necessity for his departure to the intrigues of Russian agents, who mix in the ranks of the Poles and instigate desertions. "These agents," he says, "made it necessary for me to depart secretly, and without bidding you farewell. The same reason, also, prevents my informing you of my ultimate destination." He evidently points at Mieroslawski when he speaks of "the adherents of the ambitious criminal I have to thank for all this." Surely the Poles have difficulties enough to contend against without the dissension of their chiefs; if not, the devotion of the insurgents who fight under them should plead for the abandonment of all personal ambition. Mrs. Jane H. Bennett, writing from Cracow, gives a harrowing picture of their sufferings. Out of 200 patients in the four temporary hospitals which have been opened for them, she saw only one man over twenty-five years of age; the rest were boys of fifteen and upwards, who, after the break-up of Langiewicz's corps, came into Cracow, footsore, starving, and nearly naked. Still they only yearn to be sufficiently restored to health to rejoin the insurrection; "and though the town wears an aspect of mourning, and the streets swarm with a population clothed in the deepest black, the haggard, worn faces of old and young, men and women, express only one sentiment—that of fierce and determined resistance." Mrs. Bennett appeals to the British public for help, and we see with pleasure that a number of English ladies, under the patronage of the Duchess of Sutherland and the Countess of Shaftesbury, have organized a Polish Relief Fund, to which contributions may be forwarded to Messrs. Ransom, Bouverie, & Co., 1, Pall-Mall East, S.W.; and to Messrs. Barnet, Hoare, & Co., Lombard-street, City, London, E.C.

The prediction that the dispersion of Langiewicz's corps would be a death-blow to the insurrection, has not been fulfilled. On the contrary, the movement seems stronger than ever. General Czachowski has organized a body of insurgents in the mountains of Swienty-Krzysz, which has been reinforced by others collected in the Palatinate of Sandomier. General Lelewal has gained a victory over the Russians south of Zamosc; and bands of fresh insurgents, under the command of Mielencki and Kochanowski, have had several successful engagements with the Russian troops, and are increasing their exertions. It is also rumoured that a Polish legion, under the command of Wiezbicki, has marched from Tultscha, in Bulgaria, into Podolia. On the other hand, the Grand Duke Constantine appears to be adopting active measures to clear the provinces one by one, maintaining troops in each after the insurgents have been routed, so as to repress fresh insurrection. It is to be feared he will be successful. But the negotiations set on foot by France and England will in that case have a better opportunity of pressing on the Czar the fulfilment of his obligations towards Poland under the Treaty of Vienna, and, it is to hoped also, of guaranteeing their observance for the future.

General Langiewicz, it appears, was not allowed to proceed on parole to Brünn. He has been removed from the citadel of Cracow, it is believed, to Vienna.

On Tuesday, a debate on the Polish question took place in the Prussian Chamber of Deputies. Herr Von Bismarck stated, with regard to the convention with Russia, that it was positively false that by its provisions the Russians are allowed to pursue the insurgents on Prussian territory. With regard to Polish refugees, Count Eulenberg said that the intentions of the Government were based

Digitized by Google

on clemency in the majority of cases, especially with regard to those persons who had been drawn into the movement against their will. On the other hand, Government was obliged to fulfil the obligations it had contracted with Russia—in other words, to surrender the Poles to the Russian authorities to be shot. This announcement, which we would fain hope does not represent the actual intentions of the Prussian Government, has called forth an indignant leading article in the *Times*.—"It is a matter for which the world will hold every member of the Royal Family of Prussia and every man of the Prussian nation responsible. If the blood of these Poles should be shed through the agency of Prussia, it will not suffice to tell Europe of the Prussian King, or the Prussian Minister, or of secret or open conventions between Prussia and Russia. The King of Prussia is now, as the world is authoritatively told, contemplating an odious crime; we must, in the name and even for the credit of England, be bold to ask if the Crown Prince of Prussia has no potent word to say to save his own family and his own country from the ignominy of such blood-guiltiness."

Since the above was written, telegrams inform us that the Poles will not wait to be beaten. A new policy seems to have been resolved upon by the Revolutionary Committee, who are said to have given orders to the insurgents everywhere to lay down their arms. In pursuance of this resolution, the chiefs of the insurgents are said to have disbanded their forces. The ground is therefore cleared for diplomatic intervention; and we learn, upon the authority of the *Danziger Zeitung*, that the Emperor of Russia intends granting an autonomy to Poland, but not a national army. The Archbishop of Warsaw has addressed a letter to the Czar, in which he declares that administrative reforms will not satisfy the Poles. "The nation yearns," he says, "for political life and the restoration of independence. The most terrific repression will never be powerful enough to eradicate a spirit filling every Polish soul, and which, I regret to say, tends from day to day to deepen the gulf between the nation and the throne. It is only by the revival of Polish independence, and the maintenance of no more than a dynastic connection with Russia, that your Majesty can remove the probability of ruling, in no distant future, over a country consisting of ruins, and whose public prosperity is a myth of the past."

FRANCE.

M. Fould, not content to hold office, so long as M. Magne, his predecessor as Finance Minister, and latterly, speaking Minister, charged to defend his successor, remained in office, some days back, tendered his resignation. M. Magne, it appears, has not been the most candid of defenders, and has even intrigued to obtain from the Emperor a *communiqué* to the *Débats* and *Patrie* lecturing those journals on the score of articles they had published in which M. Fould's system of finance was praised, in disparagement of the system previously existing. M. Fould, under these circumstances, resigned. At first, the Emperor neither accepted nor refused his minister's resignation; but the crisis has been surmounted by the resignation of M. Magne, who, as a mark of the Emperor's favour, had created him a member of the Privy Council. M. Fould returns to his post.

GREECE.

The Greeks have at last obtained a King. On Tuesday, the National Assembly agreed to a decree unanimously proclaiming Prince William George, second son of Prince Christian of Denmark, constitutional King of the Greeks, under the title of George the First. The King's successors are to profess the orthodox religion. A committee of three members, chosen by the Ministry, is about to proceed to Copenhagen to offer the Crown to the Prince in the name of the nation. Upon the decree being made known, a *Te Deum* was celebrated, and was followed by public festivities, illuminations, and general rejoicings. Nothing now remains to be done but to obtain the consent of the Prince and the King of Denmark. Public feeling in Denmark is against the Prince's acceptance of the offer, as the succession to the throne is limited to the three sons of Prince Christian.

THE EAST.

News reached Alexandria on the 30th ult. that two Christians had been assassinated at Damascus; that a panic prevailed in the city and the Christians were leaving it. A Constantinople telegram received in Paris reports the pillage of a Christian village near Latakia, and that the Druses of Hauran had attacked the regular Turkish troops. The Vienna papers of the 31st ult. state that conflicts had taken place between the Christians and Mussulmans at Damascus. Similar conflicts had broken out in Northern Syria, but had been terminated by the intervention of the Government. The consuls at Damascus have demanded energetic action on the part of the Government.

REVIEWS OF BOOKS.

THE HOME OF SHAKESPEARE.*

THERE are two localities in the town of Stratford-upon-Avon especially identified with the name of Shakespeare; one, a house in Henley-street, in which he is supposed to have been born (for it is by no means certain that he was born in that house); the other, in a better part of the town, once a grand mansion, which was built by Sir Hugh Clopton, in the closing years of the fifteenth century, and is called in his will the Great House, though it seems to have been better known as the New Place; this house Shakespeare bought in 1597, and it thus became his favourite residence during the rest of his life. The former, which has been commonly called Shakespeare's House, was, some years ago, purchased for the public by a committee which had been formed for that purpose; but the poet's connection with that house, beyond its having belonged to the family, is at least somewhat problematical; whereas we can have no doubt that he resided, during a long and very important period of his life, in New Place, and that, though the site of the house has long been occupied by modern buildings, the extensive gardens attached were often the scene of his meditations. A few months ago, circumstances having thrown this property into the market, Mr. Halliwell made an earnest appeal to the nation to subscribe towards a fund for securing this site also as a public monument of England's great poet, and with so much success that the whole of the ground occupied by Shakespeare's residence and gardens at New Place, with a not very important exception, is now, through his exertions, public property. It is not the place here to offer any remarks on the purpose to which it is proposed to apply this land; but one of the first acts of those who had the care of this property was to excavate the site of the house of New Place. The result of the excavations was to bring to light the lower parts of the walls of the house destroyed in the last century, and to show also that, in the erection of that more modern house, the original home of Shakespeare had not been entirely destroyed, but that some parts had probably been retained and formed part of the building which succeeded it. The old foundations could, without difficulty, be distinguished from the later ones. These discoveries were certainly not without interest, and the public naturally looked to Mr. Halliwell for an account of them, but before he could make his intentions known we were surprised by the announcement of a book on the subject by the Rev. Mr. Bellew, a gentleman not unknown in some other branches of literature, but who had been associated in no degree whatever with the excavations at Stratford-upon-Avon. This may, however, admit of excuse if it brings us new and valuable information on the subject; and here is the book itself before us to enable us to satisfy ourselves on this point. We must, however, begin by stating that Mr. Bellew's book relates more to Shakespeare personally than to his house; in fact, there is not much to say about the house, and the want of information is here supplied in some degree from imagination. Mr. Bellew informs us at the outset that it is his intention to tell us what is known "of the man Shakespeare in his home—in his domestic, social, moral character, in his home associations and his home associates." There are remaining a few records which point very slightly and indirectly to his personal character; a few facts are recorded of his life; and a few personal anecdotes of the past are told by contemporaries or preserved by tradition. The first of these seem to show Shakespeare as a money-getting man; the second are characteristic of the ordinary men of his profession and time; and the third present him to us as a merry associate in the clubs and taverns of London with men like Ben Jonson and their other dramatic contemporaries. Mr. Bellew accepts the facts of Shakespeare's life, giving them an entirely different meaning from that in which they have been taken by his other biographers; but he entirely rejects all the anecdotes, which he bundles together under the head of old wives' gossip, as "unproved and discreditable stories," wafted down to us from "the idle talk of men who never knew him." The great principle insisted upon in the book before us is that the spirit of Shakespeare's writings alone is to be taken as the measure of his character, and that all evidence to the contrary is to be rejected. The ingenuity with which Mr. Bellew sets aside all previous notions about Shakespeare's history and character is at times quite extraordinary. According to "tradition," William Shakespeare made his *début* in life as an apprentice to a butcher; and different reports, resting on the same authority, make his father a butcher, a wool-stapler, a glover, and a dealer in malt and timber. It is clear that in this case we cannot place much trust in tradition; but Mr. Bellew contrives to raise the importance of John Shakespeare by accepting all these reports and believing that he exercised all these trades at once:—

"There is Mr. John Shakespeare, in Henley-street—he is a glover, or a butcher, or a 'yeoman,' or wool-dealer!—what is he? Can no one sum up all the supposed trades or businesses, and say, in a word, that they *most probably mean* he was a wool-stapler? Make him or any one of the above trades actually and solely, and we cannot reconcile the other statements. But, like the variorum readings of the same names and the same employments in Shakespeare's days, if we adopt the conclusion that he was a merchant of the staple, we shall easily be able to understand his being called both butcher and glover. Considering what a staple trade gloving was in John Shakespeare's time in his own county, *if he were* connected with the mercers in London he would of necessity deal in gloves. The possessor of land and the owner of cattle, *it is the height of probability that he may have* slaughtered his sheep in his own farmyard, in order to have the skins properly preserved. Butcher *he might easily* be called, *and so might* his son William; and also be represented as apprenticed to a butcher, when he was, in reality, apprenticed to his father" (p. 117).

Upon this unsound "fabric of a vision," which presents as much confusion about the history of trades as could easily have been crowded within so few lines, Mr. Bellew has founded a new theory

* Shakespeare's Home at New Place, Stratford-upon-Avon: being a History of the "Great House" built in the Reign of King Henry VII., by Sir Hugh Clopton, Knight, and subsequently the property of William Shakespeare, Gent., wherein he lived and died. By J. C. M. Bellew. 8vo. Virtue, Brothers. 1863.

Digitized by Google

to explain the reason of Shakespeare's first visit to London. He conceives that, as the elder Shakespeare had fallen into commercial difficulties, he sent his son to town to manage his business, and that William set up in trade himself, and remained a tradesman, at the same time that he became an actor and a poet.

"Again, as regards Shakespeare's removal to London. *May not that have happened* for business motives? and *may he not*, during his whole London career, have benefited by a profitable trade, that gave him the position of a gentleman, and connected him with gentlemen, and also enabled him to realize that independence upon which he retired? It must never be forgotten that his father was in difficulties about the time when the poet removed to the metropolis; and from that moment we never again hear of or trace any domestic anxieties in the house of John Shakespeare. *The inference seems conclusive*" (p. 119).

Mr. Bellew is, no doubt, clever at drawing inferences, but we are inclined to ask where he obtained his minute knowledge of the domestic state of "the house of John Shakespeare," and it *is* rather strange that no one of the poet's contemporaries has alluded to the son's successful trading operations in London.

Not only was Shakespeare, according to Mr. Bellew, the steady, prudent, persevering tradesman, but he cherished from his earliest childhood one all-absorbing object of his ambition, which was, to make himself an independent county gentleman, and above all, to purchase New Place at Stratford-upon-Avon. When William Shakespeare was little more than three years old, New Place was sold to the Underhills, and already the precocious infant is supposed, with a rare knowledge of the world at such an age, to have contemplated the future purchase of this splendid mansion.

"Of the repairs that he (Shakespeare) made, we know nothing; but it is easy to understand how much his mind *may have been* impressed with the stately beauty [of which Mr. Bellew has drawn a very imaginative picture] of New Place from his earliest childhood. No inhabitant of Stratford, seeing Sir Hugh's 'Great House' and the church that he also rebuilt alongside it, could fail to know them, and to admire them, much less a boy of Shakespeare's observation and appreciative mind. New Place adjoins the Guild Chapel and the Grammar School. There the boy was taught; and day by day, as he went bounding forth from school, the first object that met his eye was Sir Hugh's house, next the church. While yet a child of between three and four years of age a sale took place. *He may*, on the very day of the sale, have been holding to his nurse's side, and making his earliest observations upon men and things, as he passed the chapel of Holy Cross, and have seen the family of Underhill arrive to acquire possession of 'New Place.' All this is perfectly *possible*; and *if this or anything similar occurred*, it *might have* impressed on the boy's thoughts that New Place *had been sold! Might it not again? Who can tell*, whether in his early days the boy Shakespeare's mind had not been taught by old Sir Hugh's taste to appreciate and admire the beautiful in art, had not been fired with ambition to go to London, as Sir Hugh (the pride of Stratford, and its benefactor) had done, and by dint of labour and perseverance to make an independence, and return like him to Stratford, and live honoured and beloved among the townsfolk of his native place? *Who can tell* whether this same boy *may not* often and often have stood ruminating under the shadows of the buttresses of Holy Cross, admiringly examining the gables and casements, the porch and antique barge-boards, of the 'Great House,' and resolving, should any sale take place there again, if he were a man and had the means, it should have but one master—one, himself possessed of tastes like Sir Hugh's, who would 'repair' and preserve the ancestral mansion?" (p. 63).

A child possessed of such precocious sagacity must have been very eager for the attainment of knowledge; and Mr. Bellew, who has difficulty in imagining how Shakespeare could get so much knowledge in London, has his own notions as to the sources from which he derived it. He speaks of "the very common habit of holding public schools in the Lady chapels, or chancels of churches which had formerly been connected with monastic establishments;" and adds, that "there is one remarkable fact connected with them—they have, as a general rule, been established or held in the Lady chapels, or chapels of suppressed monastic institutions, and not in buildings that were parochial churches before the Reformation. In connection with these suppressed monasteries, or cells, there were frequently valuable libraries, *rich in ancient chronicles, tales of the wars, histories of royal heroes and valiant knights*, as well as in the lives of the saints, missals, and breviaries." All this is a mere tissue of misconceptions. Mr. Bellew seems not to be aware that the original English parish schools, both in Anglo-Saxon times and during the ages which followed the Norman conquest, were held in the parish churches and by the parish priests; but he has fallen into the still greater blunder of supposing that the guilds were monasteries, and that they were dissolved by the Act of Parliament for suppressing the monastic houses. "Such an establishment," he goes on to say, "was the Guild of the Holy Cross. Henry VIII. suppressed its conventual character. His son, Edward VI., erected it into a grammar school." This grammar school, it is conjectured, was first held in the Guild chapel, or there was another school held there, for it is conjectured that there were two schools. The "conventual" establishment, of course, possessed a library, which naturally was "rich in ancient chronicles, tales, histories," &c.; when the convent was dissolved, this library must have been preserved in the Guild chapel or given to the school (if it were not destroyed), and thus it furnished food to young Shakespeare's mind. We beg to say that we should feel extremely obliged to Mr. Bellew, if, among the numerous catalogues of monastic libraries still remaining, he will point out to us a single example which consisted of, or even contained a few works of this description. They were not the books to be found in conventual libraries. However, "between the date when King Henry VIII. suppressed the monastic establishment in 1536, to the date of his son, Edward VI., reviving the school of the Guild in 1553, only seventeen years intervened. These years were long enough to complete the work of dispersion or destruction among the libraries of abbeys that were themselves reduced to ruins, but no such ruin overtook the Guild of the Holy Cross. It was not an establishment of sufficient importance to be ruined, and accordingly it changed hands, and followed the destinies of the Reformation." Now, what does this paragraph mean? As we have already remarked, a guild was in no sense of the word a monastic establishment, and was not in the slightest degree affected by the Act for suppressing the monasteries. A guild was an association of townsmen employed in trade for securing, by a common action and a common fund, certain advantages, among which one was the supporting of a certain number of priests to pray perpetually for the souls of the defunct members of the guild; and others were the support of a school and various measures for the benefit of the town in general, for the members of the guild were generally the leading men of the town, and often the whole municipality. The guilds, therefore, were not touched by the confiscation of the monastic establishments, but as the Reformation advanced, the obits for the dead, coming under the head of superstitious purposes (which the Reformation abolished), could be no longer tolerated; an act for dissolving them was passed at the close of the reign of Henry VIII., but never came into operation, and the act by which they were dissolved was only passed at the beginning of the reign of Edward VI. The corporation of the guild was then dissolved, by which the superstitious purposes were got rid of, and the property was usually reinvested in the corporation of the town for the support of the other purposes, such as the school, which was refounded, and hence most of our old grammar schools are now popularly considered as foundations of Edward VI. The guild usually possessed a chapel of its own, or a chapel or chancel attached to the parish church, and this served other purposes besides those of religious worship, for it was often the place of meeting of the guild for its private business, and it was no doubt used as the school-room. The separate buildings for the school appear to have been introduced on their refoundation, under Edward VI., so that the term "old," applied in the corporation books of Stratford, in distinction from another school, and the terms "school in the church," no doubt simply point out the place where the school had been formerly held, and where, under circumstances with which we are not acquainted, it was still held sometimes. The order in the corporation books of 1594, directing that no school should be held in the chapel from that date, means simply that thenceforth the grammar school should not again for any reason be moved temporarily to the chapel. We never heard of a guild possessing a library—perhaps Mr. Bellew would favour us with an example.

This will show how readily Mr. Bellew assumes as historical facts statements which he makes without investigation. Having made up his mind that the fine and lofty sentiments of Shakespeare's poetry are alone to be taken as the measure of his private character, he throws everything which goes against his imaginary picture into the rubbish-heap of mere tradition. Ben Jonson stated that Shakespeare had "small Latin and less Greek;" and Mr. Bellew does not dispute that this was the fact; but he treats Ben Jonson's statement with the remark (p. 203), "Whether Ben Jonson ever uttered the slighting words attributed to him or not." Can Mr. Bellew be so utterly unread in Shakespearian literature as to be ignorant that the words in question were written by Ben Jonson in the well-known and much-admired verses to Shakespeare's memory which were first printed in the folio edition of "Shakespeare" in 1623, where they occur in the following lines?

> "And though thou hadst small Latin and less Greek,
> From thence to honour thee I will not seek
> For names," &c.

Mr. Bellew's notions of tradition are in themselves somewhat singular. He calls it old wives' gossip, defines it (p. 174) as "the idle talk of men who never knew him," and condemns it (p. 111) as "not to be believed," because it "is a perjured witness, who never yet came into court without a lie upon her tongue." These, it must be allowed, are fine phrases in declamation, but they mean very little. Tradition is a thing which varies much in its character and value, and requires to be treated with discrimination and carefully examined. Mr. Bellew shows no discrimination. We have just seen him throwing a poem of Ben Jonson's into the rubbish-heap; and he treats in the same manner contemporary anecdotes, which have been handed down to us in writing. Such popular anecdotes, even if nearly contemporary, are invaluable, when they relate to a remarkable individual, because, though they may not be true in themselves, they prove undoubtedly the general opinion of the character of the individual among those who lived at the same time with him and who knew him, and that opinion is rarely wrong. Such is the case with the story of Shakespeare told in the diary of the barrister Maningham, written at the beginning of the seventeenth century, when Shakespeare's reputation was at its greatest height, and which certainly gives us but a low estimate of his private morals. It shows clearly that such was the character he then bore in London, and that such stories were ordinarily told of him; and it is more valuable as evidence than all the declamation in the book

Digitized by Google

before us; yet Mr. Bellew has either overlooked it or concealed it. The stories of his tavern life are no doubt equally correct in regard to his well-known character. The arguments for his refined character founded upon the sentiments expressed in his poetry are vain Shakespeare, in his eighteenth year, married, in a manner which seems to show that it was a hastily-concluded match, a woman who was eight years older than himself; it appears, from "the evidence of the legal document," that Shakespeare procured his licence on the 28th of November, 1582, and that his first child was baptized on the 26th of May, 1583. This is a clear proof that one of the parties had been led astray some time before the marriage and it has been averred naturally enough that Shakespeare had been obliged to marry Anne Hathaway in order to cover their error. But Mr. Bellew says, no,—it was then the ordinary custom in England to be acquainted before marriage, and that the poet in this instance was only following established usage, and could incur no blame. We can only say that we never heard of such a custom, and that if similar instances occur in the Stratford registers, we believe they only show that the morality of the town was at a low ebb,—which, indeed, was evidently the case with most towns in the sixteenth century. Mr. Bellew is greatly indignant at the "tradition," which ascribes Shakespeare's death to a fever which was the result of heavy drinking at a social meeting between him and his friends, Ben Jonson and Michael Drayton, who had come to visit him at Stratford; yet all we know of their characters would lead us to suppose that tolerably hard drinking might have been expected when three such men met together. The picture of the wedding of Shakespeare's daughter is quite worthy of the authoress of "Mary Powell."

"In writing about Shakespeare," Mr. Bellew observes (p. 176), "inches of fact have been fringed with acres of conjecture." The remark is eminently applicable to his own book. He has made up a Shakespeare out of his own imagination, who is a totally different individual from the Shakespeare whom the world has known so long. Of course Mr. Bellew has a perfect right to amuse himself in this manner if he likes, but we object to the attempt to intrude a false Shakespeare into the place of the true one. We cannot perceive that this volume throws any new light on the biography of the poet, or that in fact it contains anything new in importance, except a few elaborate pedigrees of Warwickshire families, which are the result of considerable labour, and will no doubt be duly appreciated by Warwickshire antiquaries, but they do not appear to us to illustrate, in any useful manner, the history or character of William Shakespeare. The old story of the reason of Shakespeare's removal from Stratford to London has probably much more of truth in it than the new one; he gained his knowledge in the metropolis, no doubt, as other men had under similar circumstances; and there is no foundation at all for the supposition that he carried on trade there, which is a mere gratuitous assumption. Mr. Bellew has produced a clever book, although anything but a satisfactory one.

THE POLISH CAPTIVITY.*

(Second Notice.)

The conduct of the Austrians at the present crisis may gain the goodwill of many of those who formerly hated them. The fugitives who have crossed the frontier since the defeat of Langiewicz have been kindly received, and their account of the savage behaviour of the Russian troops will counteract the effect of the rose-coloured pictures of Muscovite Arcadias which Pan-slavic artists are pleased to paint. Up to the present time the conciliatory measures of the Court of Vienna have met with little success among the upper and middle classes. It is true that the position of the inhabitants of Austrian Poland contrasts very favourably with that of their fellow countrymen in the Russian empire. "Cracow might still be a free city," we learn, "for any trouble that a visitor is put to about his passport. As for police, not only are they scarcely seen, but their action is nowhere felt except in connection with criminal cases." There is little censorship exercised with respect to books, and great freedom of discussion is allowed in the journals. No attempt has been made to prevent the *Czas* from expressing the greatest sympathy with the present insurrection, and the *Posen Djennik* is the only foreign newspaper on which an embargo is laid. When M. de Montalembert was in Cracow two years ago, he is reported to have said, "You have more liberty here than we have in France," and Mr. Edwards bears witness to having travelled backwards and forwards in Galicia some five or six hundred miles in various directions, without being called upon to show his passport, or coming into contact with a police official. All this, he says, seems very satisfactory to a foreigner, but he adds:—

"To a Pole none of these liberties avail anything as long as he sees Germans sitting in the public offices, Germans in the schools teaching their language to children whose parents think only of bringing them up as Poles, German soldiers defiling the palaces of his ancient kings, converted for their reception into barracks and architecturally ruined; Germans, in fact, everywhere, even in the mines of Wieliczka, where the names and inscriptions on the wonderful vaults, caverns, temples, magnificent ball-rooms, are all in the language detested by those to whom Wieliczka honestly belongs, and who still do all the important work there. Until within the last six months German was the language of the public offices and schools throughout Galicia, even in the University of Cracow, surrounded and apparently protected as it was by precise stipulations in favour of its 'nationality,' signed by all the Powers who took part in the Treaties of Vienna. What should we think in England of the finest University imaginable if all the lecturers appointed to it were Frenchmen, or (which comes to nearly the same thing) if all the lectures had to be delivered in French?"

Until the year 1861 there was only one Professor who was authorized to hold his class in the Polish language. Every conceivable effort was made to induce the people to forget the speech as well as the history of their fatherland. The literary spirit of the country was discouraged in every way, and the public monuments which recalled the ancient glories of the past were studiously desecrated. Thus three of the most interesting chapels in Cracow have been converted into tobacco *depôts*, and the Castle, the residence of the ancient Polish kings, has been turned into a barrack. The crowns, which were once kept there, and the State jewels were stolen long ago. The painted walls are now whitewashed, the statues and carved work have been demolished, and the halls which were once thronged with courtiers are now tenanted by the soldiers whose trowsers and stockings hang out of the Palace windows. So full indeed is all the building of troops, that "a pestilential odour pervades the whole place, and renders it impossible to pass through the Castle to the Cathedral which adjoins it, and to which, fortunately, there is another entrance."

As to "Kosciuszko's Tomb"—a mound 120 feet high, and an eighth of a mile in circumference, erected to his memory in the neighbourhood of Cracow—the Austrians have recognized its merits as a military position, and now, walled in and fortified, it forms one of the chief strongholds of the army which occupies the city.

The taxes in Galicia are enormous. Some of the landowners are paying as much as forty per cent. out of their net income, and in addition to the charges on land all manner of minor taxes are levied on proprietors. "If an artist takes pupils, and sets them to copy pictures, he is taxed as an employer; if a peasant is caught mending his own boots he runs the risk of being taxed as a cobbler." The price of salt in Galicia, in the vicinity of the magnificent salt mines of Wieliczka, is six times what it is in London, and so anxious is the Government to maintain its monopoly, that every saline stream is carefully turned into the nearest river; and even medicinal springs of a briny character are watched over or blocked up by the authorities. But the weight of taxation is in general made to fall upon the shoulders of the proprietors, and the officials are careful to represent themselves as the champions of the peasants against them. In spite, therefore, of the universal detestation in which the Austrian Government is held by the educated and intelligent classes, Mr. Edwards thinks that its power is almost as firmly established in Galicia at present as it was in 1846, when the Polish insurrection prepared by the nobles utterly failed, and the peasants rose "to defend the Emperor, to massacre their masters, and to gain the possession of land which shortly afterwards was duly granted to them." The representatives of the new body of peasant proprietors in the Diet are strongly opposed to the nobles, and look with very unfavourable eyes upon any project for the reconstitution of ancient Poland, or even the establishment of local self-government in Galicia. Moreover, the efforts of the patriotic party are impeded by the Ruthenian section, which weakens the movement for Galician independence by raising a cry in behalf of "Ruthenianism." Their claims are at present favoured by the Government, inasmuch as they assist in hindering the progress of the Polish cause; but they may become extremely embarrassing at some future time, especially if they take the form of a demand for incorporation with Russia. The Galician peasants also may prove dangerous allies, for they must ultimately understand that their interests are with those of the other Poles, and not with the Austrians:—

"Hitherto the Poles have left them entirely to their own devices, that they might convince themselves of the impossibility of obtaining from the Government any fresh partition of the estates of their late proprietors; and in time if they learn nothing else, they will discover that it is only by combining with the great territorial and commercial classes that they can hope to free themselves from the weight of taxation which presses upon them as upon the rest of the Galicians. They have, if possible, even a greater antipathy to the Germans than the educated classes throughout Poland, and on this subject a good anecdote, which has the further advantage of being true, is told of a Galician peasant who accused another peasant of vilifying the Emperor. 'He called him a German,' said this loyal Pole; and as soon as it is generally understood that the Emperor of Austria cannot divide the estates of the old proprietors, and that, moreover, he is an Austrian, his Germanism and his anti-communism will render him equally unpopular with the peasants."

It is well known that the more enlightened of the Austrian rulers have not hesitated to express a very unfavourable opinion with regard to the partition of Poland, and the policy of keeping it in subjugation. The Empress Maria Theresa called her share in the transaction "a blot upon her reign." The Emperor Joseph II. took the same view of the matter, and bestowed on the Poles a liberal portion of the good intentions which he was so seldom able to accomplish. In 1830 Francis II. secretly assisted the Poles in their struggle with Russia:—

"Arms, provisions, and medical stores were conveyed across the Austrian frontier into the kingdom of Poland; the political emissaries from the Provisional Government at Warsaw were well received at Vienna; and when the Emperor of Austria knew that Count

Digitized by Google

Andrew Zamoyski was in his capital, though he could not receive him, he said, 'Tell the Count that I feel I am about to appear before the Great Judge, and that the possession of Galicia weighs upon me like a crime. I would gladly give it up, but not to Russia. To an independent Poland I would give it up with joy.'"

In 1848, when the Galician deputies waited upon the Emperor Ferdinand I., and asked for the rights which they had been promised by the Treaty of Vienna, together with trial by jury, and the equalization of all classes before the law, he returned a most favourable reply, saying that he had the greatest pleasure in granting all their demands, and the Archduke John added these memorable words:—

"Now we can speak frankly. My grandmother and the King of Prussia, Frederic the Second, in partitioning Poland committed a fault. This partition has been a great misfortune for all Europe. From that moment peace and loyalty disappeared, and the traffic of nations commenced, to the injury even of the rulers themselves. The partitioning Powers can never enjoy in peace these strange acquisitions. The existence of Poland is something natural and indispensable. It would be superfluous to discuss the means of establishing it, for when a thing is naturally indispensable, it takes place of itself. Accordingly, I think it would be more prudent not to discuss these means, but to employ them at once, so as to prepare this re-establishment."

It is said that Austria was ready to join in restoring the independence of Poland during the Crimean war. It is true that the Poles themselves refuse to believe the report; but even if the good intentions of the Court of Vienna were exaggerated, it is probable that it would not have been greatly opposed to a scheme which would have resulted in the creation of a strong barrier between its own possessions and those of its too powerful neighbour. If the sympathies of Austria incline towards the cause of independence in Poland, those of Prussia are undoubtedly enlisted on the other side. And the Prussian Government has done all that was possible to eradicate national and patriotic feelings from the minds of its Polish subjects, and to Germanize those parts of the ancient kingdom which are under its control. Mr. Edwards supposes that "the Prussian rule in Posen is about as humane and equitable as, under very difficult circumstances, is possible." Yet many Poles have found their life there so intolerable, that they have left the place and gone to take their chance with their fellow-sufferers in the kingdom. Cracow is thoroughly Polish, but Posen is like a German town. "At the railway station no language but German is heard. You see German inscriptions all over the public offices, you are driven by a German to a half German, half Polish hotel, a polyglot waiter brings you the bill of a German theatre, and when you ask if the Polish theatre is open, he stares and tells you that in Posen no such thing is known." And throughout the Duchy German influence is everywhere apparent. The village mayors, the district counsellors, all the officials in short, even down to the very stokers on the railways, are Germans. The education of the people is thrown into German hands as far as possible. The Government will not consent on any terms to the establishment of a thoroughly Polish gymnasium, and the money which has been left at various times by Poles, for the support of national and Catholic schools, has been appropriated to the maintenance of Protestant and German establishments. The history of Poland is a proscribed subject in the public gymnasiums, and Mr. Edwards mentions the case of the mistress of a private school in Posen, who was reprimanded by the Government inspector for daring to introduce it into her course of tuition. The Polish newspapers enjoy a fair share of liberty, and the *Djennik Poznanski*, the principal organ of the national party, though often seized is seldom condemned. But this freedom is only of recent date. From 1852 until 1859 but one Polish journal was tolerated, and so limited was its right to speak about Polish affairs, that the names of the Polish deputies in the Berlin Assembly were not allowed to appear in it. As to the claim which the Prussians put forward of having civilized the country, Mr. Edwards says:—

"They have numbered the houses, which formerly were known only by the names of the proprietors; they have introduced passports, the secret police, and a system of printing-licences which enables them to dispense with the censorship, properly so-called; and they have established German schools for Polish children. That is what German civilization amounts to in Prussian Poland."

The Poles hate Prussia as much as they hate Russia and Austria. She has utterly failed to win their affections, and all that can be said in her favour is that she tyrannizes in as gentle a manner as possible, partly in order not to attract attention, and partly because she does not like the work. All their masters are alike distasteful to the Poles. Russia, they say, "is a bear, Austria a hyæna, and Prussia a fox—a fox with a large liberal tail, which she loves to exhibit to the eyes of Europe, but a cunning, fraudulent, destructive fox nevertheless." There are some Poles who have tried the experiment of living under each of the three Governments, and who are equally discontented with all of them. Count Prozor, for instance, was one of the most influential men at the court of Stanislaus Augustus. The Prussians seized him and threw him into prison; he remained there some time, and then was released and allowed to retire to France. Returning to Poland, he was imprisoned by the Austrians, and kept in durance till 1802. Liberated then, he was soon afterwards sentenced to exile by the Russians, and in 1825 was condemned to pass the rest of his life in the fortress of Peter and Paul at St. Petersburgh. "This noble old man, when he was eighty years of age, used to boast that he had lived as Poland had lived—he had passed half his life in prison, and had been dismembered like his country. 'Prussia,' he said, 'took my youth; Austria, my health; Russia, my intellect; but they cannot take my soul.'"

Mr. Edwards devotes the last part of his work to a review of the events which have lately taken place in Russia, and an account of the opinions of Russian politicians with respect to the Polish question. He considers that the Emperor Alexander II. is sincere in his wishes to improve the general condition of his subjects, and he gives him full credit for the reforms he has introduced and the changes he is attempting to bring about. But since these chapters were written, the insurrection in Poland has probably modified the Imperial plans to a very considerable extent. It is difficult to foresee what will be the policy pursued by the Court of St. Petersburgh; whether conciliatory measures will be introduced, or whether a system of terrorism will be adopted. The Poles no longer confine themselves to asking that the stipulations of the treaty of Vienna may be observed. They clamour now for the complete independence of the kingdom, and refuse to accept any inferior concessions. A few months ago they would have been grateful for what they now utterly despise. Had it not been for the conscription, the rising would not have yet taken place which has set such a barrier between them and their rulers. The Secret Committee which manages the affairs of the patriotic party was not prepared for war, and did all that lay in its power to restrain the indignation of the people. But the nation had for some time been drifting into rebellion, and the outburst of its anger proved at last uncontrollable. It is hazardous to predict the termination of the struggle. Right is arrayed, as it has been many a time, against might; all eyes are fixed on the battle-field, all hearts are filled with sympathy for the weaker side, for the long-suffering people who have held firm amidst a thousand trials to the religious and political creed of their fathers. In the legends of the saints, remarks one of the principal Polish writers of the present day, it is related that in the age of martyrdom some Christians were driven on to the surface of a frozen river, and there abandoned, in hunger and nakedness, to all the severities of a wintry night. Offers of food and clothing were made to them on condition that they would abjure their religion. A few of their number yielded to the temptation, and these perished miserably before they reached the shore. But the rest maintained their resolution, and were straightway rewarded, for both food and clothing were miraculously showered down upon them from heaven. And in this he sees "a touching picture of a nation which suffers, but which will not allow itself to yield to temptation, and which sends up to heaven such a cry of faith as may well soften the rigour of its adverse fortune." Sincerely do we trust that it may be so, and that Mr. Edwards, who, we understand, is now in Poland, may be fortunate enough to witness the emancipation of the country, and may some day describe it in as excellent a work as that in which he has told the story of its captivity.

BARRINGTON.*

Mr. Lever has chosen for the title of this tale a name dear to Irishmen, we might almost say symbolical of Irish life and character. But we hasten to add that "Barrington" is no political romance. It has nothing to do with the Irish Rebellion or the Irish Parliament, though the hero may have been a contemporary and a survivor of both. As a personification of the virtues and frailties of Irish life and character fifty years ago, Mr. Lever could hardly have hit upon a name more suggestive than "Barrington." The author of "Harry Lorrequer," "Jack Hinton," "Charles O'Malley," and the other dashing and delightful paladins of army and sporting life, who were the delight and wonder of "us youth" from twenty to ten years since, has settled down into what painters would call his second manner; and, judging by the present story, we are not quite sure that the second manner is not an improvement on the first. There is certainly an advance in art—a finer pencil and a surer touch. Indeed, the change of style and subject is very much what we may conceive to be the natural growth of moral experience. There is less of the rollicking animal spirits, the reckless gaiety and adventure, the buoyant audacity of the early time. The day is waning, and the shadows lengthen; the old fire within gives out a cheery light and a genial warmth; but the young gentlemen who danced, and rode, and fought, and rioted, and played, and made love, and took the world by storm, and gave a frolic welcome to all fortunes, are sitting down to talk of other days over their wine and walnuts, with hearts a little saddened rather than embittered, and looks a little worn. This is, after all, as it should be. The mind of a man and the heart of a boy it is given to few to carry down with them into the darkening valley of the fiftieth year.

To readers who are gorged with spasmodic novels, and satiated with bigamy, murder, and sudden death, a book like "Barrington" is at once a sedative and a cordial. It is something to escape from a society in which all the women have the manners of glorified barmaids, and all the men of fifth-rate melodramatic actors, into honest and wholesome company. In these days, too, when the old race of country gentlemen is dying out of the land, to make way for an aristocracy who buy their ancestry in Wardour-street, it is refreshing enough to make the acquaintance, even

in a novel, of a hero who is neither rich, nor powerful, nor successful, but a man who has the virtues as well as the defects of his caste; who has run through his fortune and lost his estate, but has preserved unstained and unbroken his honour, his spirit, and his dignity. Of course we do not recommend Barrington's prodigalities as an example, though he had squandered his substance in law-courts, fighting for the honour of his name, and for the rights of his gallant soldier son who died under a cloud in India. But the old man's chivalrous delicacy and transparent simplicity of character, his contempt for petty gains and motives, his inexhaustible kindliness and good-humour, and that nameless charm of manner and bearing which no wealth can give or poverty take away,—these attributes of Mr. Lever's hero are, we own, very welcome to us amidst the flashy heroes of fiction and real life at the present time. Though "Barrington" is by no means dependent on its plot for the interest it excites, it has plot enough to make it worth the reader's while not to know it beforehand. We are not going to display the curious malevolence of critics who suck a story like an orange and then throw the peel in the author's face. We will only say that the circumstances which determine the course of this tale are ingeniously removed by the author to a safe distance from captious objections. Nothing can be considered improbably romantic in the adventures of a distinguished officer in the service of a native Indian prince forty years ago; and the disputed claims which have arisen between his executors and the old Company leave the widest available margin for the marvellous and the unforeseen.

Mr. Lever makes somewhat free use of his Indian accessories, and the early life of the villain of the book,—for there is a villain, and a skilfully drawn one—strikes us as a little more than wild, even for the Mahratta country. But the end of the story, without shocking probability too much, is not only consistent with poetical justice, but just what every gentle reader would desire—happy, peaceful, and full of promise as the glowing sunset of a clouded day.

It is not, however, for the plot that "Barrington" will be read with pleasure. It is not one of those books which the conventional novel reader devours breathlessly at a single sitting. It is a book to be sipped, not swallowed, at leisure and at intervals; to be taken up or laid down without impatience, yet with a desire to linger over the pages. Open the book where you will, there is good company and pleasant talk, and rare knowledge of the world, and a keen enjoyment of life and nature.

It is in character painting that Mr. Lever is most happy on the present occasion. In Peter Barrington we recognize the Irish gentleman of half a century since, and the portrait is touched with a loving hand, with all its generous failings and redeeming virtues. Dinah, the maiden sister of Barrington—sister and housekeeper—sternly provident and careful, once a belle at the Irish Court, and preserving still, under an old maid's primness and severity, the heart of a true woman—is a charming sketch. But it is upon Polly Dill, the Doctor's daughter, that Mr. Lever has lavished his choicest skill. Polly Dill is a girl whom men who see her in the hunting-field would call "fast," for she flies across country like a bird; men who meet her on a visit at a great house in the neighbourhood would say "she is great fun;" but those who know her at home—the stay, and comfort, and treasure of the household—would call her an angel of flesh and blood. This character is put together, if we may so say, by the author with uncommon art; as it appears before us, it is the finished result of numberless minute and delicate touches and gradations of light and shade, made up of many "half-tones," as the characters of living women are—not, like the heroines of the spasmodic school, flawless blocks of marble, or demons with the hair and complexion of hairdressers' dummies.

As a specimen of the playful yet pathetic humour of the author, take the following. Peter Barrington and his sister are leaving the little cottage-home on a foreign tour, to bring back an orphan girl, the Indian grandchild, from a convent in Belgium:—

"The Barringtons are preparing for a journey, and old Peter's wardrobe has been displayed for inspection along a hedge of sweet-briar in the garden—an arrangement devised by the genius of Darby, who passes up and down, with an expression of admiration on his face, the sincerity of which could not be questioned. A more reflective mind than his might have been carried away, at the sight, to thoughts of the strange passages in the late history of Ireland, so curiously typified in that motley display. There was the bright green dress-coat of Daly's club, recalling days of political excitement, and all the plottings and cabals of a once famous opposition. There was, in somewhat faded splendour it must be owned, a court suit of the Duke of Portland's day, when Irish gentlemen were as gorgeous as the courtiers of Versailles. Here came a grand colonel's uniform, when Barrington commanded a regiment of Volunteers; and yonder lay a friar's frock and cowl, relics of those 'attic nights' with the Monks of the Screw, and recalling memories of Avonmore and Curran, and Day and Parsons; and with them were mixed hunting coats, and shooting-jackets, and masonic robes, and 'friendly brother' emblems, and long-waisted garments, and swallow-tailed affectations of all shades and tints—reminders of a time when Buck Whalley was the eccentric, and Lord Llandaff the beau of Irish society. I am not certain that Monmouth-street would have endorsed Darby's sentiment as he said, 'There was clothes there for a king on his throne!' but it was an honestly uttered speech, and came out of the fulness of an admiring heart, and although in truth he was nothing less than an historian, he was forcibly struck by the thought that Ireland must have been a grand country to live in, in those old days, when men went about their ordinary avocations in such splendour as he saw there.

"Nor was Peter Barrington himself an unmoved spectator of these old remnants of the past. Old garments, like old letters, bring oftentimes very forcible memories of a long ago; and as he turned over the purple-stained flap of a waistcoat, he bethought him of a night at Daly's, when, in returning thanks for his health, his shaking hand had spilled that identical glass of Burgundy; and in the dun-coloured tinge of a hunting-coat he remembered the day he had plunged into the Nore at Corrig O'Neal, himself and the huntsman, alone of all the field, to follow the dogs!

"'Take them away, Darby, take them away; they only set me a thinking about the pleasant companions of my early life. It was in that suit there I moved the amendment in '82, when Henry Grattan crossed over and said, "Barrington will lead us here, as he does in the hunting-field." Do you see that peach-coloured waistcoat? It was Lady Caher embroidered every stitch of it, with her own hands, for me.'

"'Them's elegant black satin breeches,' said Darby, whose eyes of covetousness were actually rooted on the object of his desire.

"'I never wore them,' said Barrington, with a sigh. 'I got them for a duel with Mat Fortescue, but Sir Toby Blake shot him that morning. Poor Mat!'

"'And I suppose you'll never wear them now. You couldn't bear the sight then,' said Darby, insinuatingly.

"'Most likely not,' said Barrington, as he turned away with a heavy sigh. Darby sighed also, but not precisely in the same spirit.

"Let me passingly remark that the total unsuitability to his condition of any object seems rather to enhance its virtue in the eyes of a lower Irishman, and a hat or a coat which he could not, by any possibility, wear in public, might still be to him things to covet and desire.

"'What is the meaning of all this rag fair?' cried Miss Barrington, as she suddenly came in front of the exposed wardrobe. 'You are not surely making any selections from these tawdry absurdities, brother, for your journey?'

"'Well, indeed,' said Barrington, with a droll twinkle of his eye, 'it was a point that Darby and I were discussing as you came up. Darby opines that to make a suitable impression upon the Continent, I must not despise the assistance of dress, and he inclines much to that Corbeau coat with the cherry-coloured lining.'

"'If Darby's an ass, brother, I don't imagine it is a good reason to consult him,' said she, angrily. 'Put all that trash where you found it. Lay out your master's black clothes and the grey shooting-coat, see that his strong boots are in good repair, and get a serviceable look on that valise.'

"It was little short of magic the spell of these few and distinctly uttered words seemed to work on Darby, who at once descended from a realm of speculation and scheming to the commonplace world of duty and obedience.

"'I really wonder how you let yourself be imposed on, brother, by the assumed simplicity of that shrewd fellow.'

"'I like it, Dinah. I positively like it,' said he, with a smile. 'I watch him playing his game with a pleasure almost as great as his own, and as I know that the stakes are small, I'm never vexed at his winning.'

"'But you seem to forget the encouragement this impunity suggests.'

"'Perhaps it does, Dinah; and very likely his little rogueries are as much triumphs to him as are all the great political intrigues the glories of some grand statesman.'

"'Which means that you rather like to be cheated,' said she, scoffingly.

"'When the loss is a mere trifle, I don't always think it ill laid out.'

"'And I,' said she, resolutely, 'so far from participating in your sentiment, feel it to be an insult and an outrage. There is a sense of inferiority attached to the position of a dupe that would drive me to any reprisals.'

"'I always said it, I always said it,' cried he, laughing. 'The women of our family monopolized all the combativeness.'

"Miss Barrington's eyes sparkled, and her cheek glowed, and she looked like one stung to the point of a very angry rejoinder, when by an effort she controlled her passion, and taking a letter from her pocket, she opened it, and said, 'This is from Withering. He has managed to obtain all the information we need for our journey. We are to sail for Ostend by the regular packet, two of which go every week from Dover. From thence there are stages, or canal boats, to Bruges and Brussels, cheap and commodious, he says. He gives us the names of two hotels, one of which—the "Lamb," at Brussels—he recommends highly; and the Pension of a certain Madame Ochteroogen, at Namur, will, he opines, suit us better than an inn. In fact, this letter is a little road book, with the expenses marked down, and we can quietly count the cost of our venture before we make it.'

"'I'd rather not, Dinah. The very thought of a limit is torture to me. Give me bread and water every day, if you like, but don't rob me of the notion that some fine day I'm to be regaled with beef and pudding.'

"'I don't wonder that we have come to beggary,' said she, passionately. 'I don't know what fortune and what wealth could compensate for a temperament like yours.'

"'You may be right, Dinah. It may go far to make a man squander his substance, but take my word for it, it will help him to bear up under the loss.'

"If Barrington could have seen the gleam of affection that filled his sister's eyes, he would have felt what love her heart bore him, but he had stooped down to take a caterpillar off a flower, and did not mark it."

SAVONAROLA.*

Professor Villari has done good service to his countrymen, and not to them only, by his fresh, careful study and brilliant life-like portraiture of Frà Girolamo Savonarola. It has been to him a labour of love; and he can hardly fail to reap, in addition to the reward such labour is in itself, the satisfaction of seeing that the world has henceforth not only a truer knowledge, but also a higher admiration, a deeper reverence even, for the man he has delighted to honour. This is a critical age, a sceptical age. We are all set to learn the lesson of inquiry and toleration to an extent beyond what the generations that have gone before us ever dreamed of; and we are in danger of subsiding from a state of agitation and perplexity into a state of indifference and hopelessness. Hardly expecting to see in the society of our own day the manifestation of anything like a religious faith deep and glowing enough to rise into enthusiasm and become contagious; compelled, for a time at least, to content ourselves if here and there we find a man who, in the midst of doubt and dogmatism, and the angry controversies they give rise to, keeps alive in his own soul a spark of that highest life which comes of faith in God, and to which we owe all that in other days has been greatest and best; it will do us no harm to come in contact through history with a man of another temper,—one who, in the midst of a most corrupt and unbelieving age, found it possible to live a spotless life, attained to clear vision of the truth, and, unterrified by threats, unseduced by allurements, boldly spoke what he believed, and finally sealed his testimony with his blood. Such a man was Savonarola. We think the appearance of this "Life" is seasonable, and we commend it as likely to be welcome and refreshing to many who are weary of the strife and debate which have arisen about "Essays and Reviews," and the arithmetical puzzles of a commentator on the Pentateuch.

A life of Savonarola, drawn from original sources and presenting fairly all sides of his character and work, has hitherto been a desideratum in our literature. It would be a very short task to verify by personal search and inquiry the assertion of Signor Villari that "the English have in truth published no work relating to Savonarola at all worthy of a nation so eminently distinguished for writers of history." And as for the Encyclopædias and Biographical Dictionaries from which a large number of readers have to take such notions of great men as they can get, what could we hope for in them under the circumstances but meagre and imperfect accounts of such a man? Juster impressions may be gathered from essays to be found in some of the leading Reviews; among which, one in the *Quarterly Review* (No. XCIX.), attributed to Dean Milman, is deserving of study for its rare combination of a hearty appreciation of what was highest and best in Savonarola with perfect *fairness* towards his opponents. We notice it as a singular coincidence,—perhaps, not an accidental one,—that at the very time that Mr. Horner gives us this translation, "George Eliot" is making us all familiar with the Florentine prophet and his city and times, by her spirited and pathetic story of "Romola."

Savonarola was born at Ferrara, then governed by the Princes of the House of Este, in September, 1452. He was burnt at Florence, in May, 1498. It will thus be seen that his "times" were times full of great events and greater promise. Printed books had first appeared but a year or two before his birth. Constantinople was captured by the Turks before he was a year old. Learned Greeks took refuge in Italy, and spread there the knowledge of ancient philosophy, history, and poetry. The revival of literature and art began. Geographical discovery enlarged the world and extended commerce. Michael Angelo was born in 1474; Columbus landed on the island of San Salvador in October, 1492; and, what is perhaps of still larger significance than any of these facts, Martin Luther was born in 1483. The lifetime of Savonarola occupies the earlier half of that hundred years which we are accustomed vaguely to speak of as the border-land between the Middle Ages and our modern time. It is to this his peculiar position in time that we must look for the solution of some of the difficult problems which we find in the character, opinions, and performances of the man. He was partly, not wholly, of the past; partly, not wholly, of the future. Like a mountain in the dawn, his head was "sunned long ere the rest of earth;" but like the same mountain, he was still partly in the shadow of the night. And so it has fallen out that the most contradictory opinions have been held respecting him; and while Luther has claimed him as a forerunner in the path of reformation, and Pope Paul III., reading some of his writings flew into a passion and cried out, "This is Martin Luther;" the Roman Church has been almost ready to canonize him, and the Congregation *de Propaganda Fide* adopted his great work, the "Triumph of the Cross."

One thing is made clear beyond doubt by the labours of Professor Villari; that Savonarola was a man of rare sincerity. From his earliest poems and letters to his latest sermons he speaks but one language, and that the language of truth. The charge of hypocrisy and imposture is henceforth untenable. And in these days we are not likely to see a revival of such views of his character as those of Bayle and Roscoe.

Savonarola was, from first to last, an *ascetic*. If ever man was born a monk, he was. Very few facts indeed are known of his early life, but we catch glimpses of him, amidst the splendours of a gay and corrupt court, "leading a sad and solitary life; going about dejected and disconsolate; rarely speaking; wasting in body; praying constantly with much fervour; passing many hours in the churches and observing frequent fastings." He studied with deep earnestness the Bible and the works of Aquinas; he liked music and wrote verses. The title of his first poem, "De Ruinâ Mundi," written at twenty years of age, sounds like the "theme" of which all the strange passages of his life-music were the "variations." Once, indeed, there seemed a possibility for him of a different view of the world; for he fell in love with a fair young daughter of a Florentine exile. It was but

> "A sudden spark
> Struck vainly in the night."

The girl, full of the pride of birth,—she was of the noble family of the Strozzi,—rejected his offer. In April, 1475, he secretly left home, and entered the Dominican monastery at Bologna. The letter to his father, written the day after his arrival there, is a document of deeply pathetic interest, and of great importance as a key to the whole character and course of his life. No one familiar with the history of the period, with the character of its princes and courts, its popes, priests, and people, will be surprised to read in that letter such sentences as these:—

"The motives by which I have been led to enter into a religious life are these: the great misery of the world; the iniquities of men; the rapes, adulteries, robberies; their pride, idolatry, and fearful blasphemies; so that things have come to such a pass, that no one can be found acting righteously. Many times a day have I repeated with tears the verse,—

> "'Heu! fuge crudeles terras, fuge littus avarum;
> Alas! fly from this cruel land, fly from this greedy shore.'

"I could not endure the enormous wickedness of the blinded people of Italy; and the more so, because I saw everywhere virtue despised and vice honoured. A greater sorrow I could not have in this world, and I was thus led to utter a hasty prayer to Jesus Christ, that he would take me out of this sink of infamy."

In the same letter, after speaking of the pain he felt at quitting his family, he adds, "Reflecting that it was God who called me, that he did not disdain to make me, a poor worm, one of his servants, I could not dare to do otherwise than to obey so sweet, so holy a voice, that said to me, *Venite ad me*, 'Come unto me all ye that labour and are heavy laden, and I will give you rest.' Before that time, the presentiment had already dawned on his mind that he was called of God to some high and extraordinary mission.

After seven years spent at Bologna, and a short stay at Ferrara, where his preaching was nothing thought of, he went to Florence, and entered the famous Convent of St. Mark. The change of scene and society was full of delight and promise. The more attractive scene, the gentler people, the works of art, the more cultivated society, the very traditions of the convent, all combined to foster best and purest hopes. Alas! it did not take many days to show that those hopes were illusions. He found it all otherwise than he would. Few cared to listen to him as a preacher; his own purpose was shaken; but through all, even by means of all, his conviction of his arduous and solemn task divinely put upon him, and his resolve to be faithful to it, became stronger. At last he announced, at San Geminiano, the thought which was thenceforth the chief burden of all his communications,—"'The Church will be scourged and regenerated, and that quickly.' He preached at Brescia the following year, and produced an extraordinary impression. From that time, all doubt as to his mission vanished from his mind." It was in 1490 that Savonarola was recalled to Florence on the pressing request of Lorenzo de Medici; and in a few months, the church of St. Mark being too small for the crowds that came to hear him, he began to preach in the Duomo. His life thenceforth was a battle. He had not sought it. Like Luther and Cromwell, he loved peace, and would fain have been quiet; but he could not.

It is, of course, impossible for us to pursue here the details of the exciting story. Professor Villari has given us abundant material for arriving at a just appreciation of the conflict and its issues. While announcing firmly, indeed with enthusiasm, his own conclusions, he does not withhold facts which may lead us to question them. His judgment of Lorenzo is very severe, perhaps a shade too much so. Yet we are not sure that even Roscoe, thorough panegyrist as he is of the accomplished tyrant, does not give us facts enough to bear out even a sentence so contrary to his own. The chapter on the philosophy of Savonarola will be read with interest. From a complete examination of all his writings, our author thinks himself warranted to assert that Savonarola "was the first to shake off the yoke of the authority of the ancients in philosophy." He quotes the testimony of Burlamacchi to this effect:—"From his earliest infancy he did not form his opinion of authors from their high reputation, nor did he follow opinions merely because they were in fashion, but *kept his eye steadily directed upon truth and reason.*" Nevertheless, we see that his mind was imbued with the religious philosophy of Aquinas, and was far from being emancipated from the superstitions of the age; so that we do not see any ground for the large claim Professor Villari makes when he asserts that Savonarola "laid the foundation of a new philosophy." His dreams and visions, his fanciful manifold method of interpretation of the Bible, even his persistent, yet confused, belief in his prophetic endowments, are signs of a probably inevitable subjection to prevailing opinions.

* The History of Girolamo Savonarola, and of his Times. By Pasquale Villari, Professor of History in the University of Pisa. Translated by Leonard Horner, F.R.S. Longmans.

But the unquestionable facts are so strange and startling, that if we do not admit the reality of a supernatural communication, we are compelled to own that we see a great difficulty and no satisfactory solution.

In the sermons of Savonarola, from which many passages are quoted, we find wonderful clearness of spiritual insight: scorn, profound as that of Hebrew prophets, for outward show and mere ceremonial in religion; deep and tender human affections and sympathies; terrific denunciations of the vices he saw around him; and earnest persuasions to "holy living" as the only possible basis for the prosperity or stability of a commonwealth. There are in them bursts of fiery eloquence, sometimes Miltonic in strength and splendour. But how can we adequately conceive the effect of them when first heard, in a "voice like thunder," in the densely crowded cathedral? Had Dante been a preacher, he could not have spoken with *intenser earnestness*. On that memorable day when the news came to Florence that the French were crossing the Alps, and the fulfilment of the preacher's prediction was at hand,—

"The Duomo could scarcely contain the crowd, who, in a state of new and extraordinary excitement, waited with open ears for the voice of the preacher. At length he mounted the pulpit; the attention and silence of the audience were much greater even than usual. After having surveyed the assembled multitude, and seen the extraordinary trepidation that prevailed, he cried with a terrible voice, 'And behold I, even I, do bring a flood of waters upon the earth.' His voice sounded like a clap of thunder in the temple; his words seemed to strike an unusual terror into the mind of everyone. Pico della Mirandola relates that a cold shiver ran through all his bones, and that the hairs of his head stood on end; and Savonarola assures us that he was himself not less moved than his hearers."

The immense authority which Savonarola had acquired as a preacher he was soon called to exercise as a statesman. After the departure of the French he became—not officially, but in reality—head of the State, founder of a new form of government, and author of great social as well as political reforms.

"In a single year the freedom of a whole people had been established; liberty was granted to them to carry arms; the system of taxation had been reformed; usury had been abolished by the Monte di Pietà; a law for a general amnesty had been passed; the administration of justice had been amended; Parliaments were abolished, and the Consiglio Maggiore was established, to which the affection of the people of Florence continued more stedfastly attached than it had ever been to any other of their political institutions."

And all this, adds our author, "without a sword having been drawn, without a drop of blood having been shed, without a single civic riot; and that too in Florence, the city of tumults." The social changes which took place at the same time are thus depicted:—

"The appearance of the city was totally changed. The women gave up their rich ornaments, dressed with simplicity, and walked demurely; licentious young men became, as if by enchantment, modest and religious; instead of Carnival songs, religious hymns were chanted. During the hours of mid-day rest, tradesmen were seen seated in their shops reading the Bible or some work of the friar; habits of prayer were resumed, the churches were well attended, and alms were freely given. But the most wonderful thing of all was to find bankers and merchants refunding, from scruples of conscience, sums of money, amounting sometimes to thousands of florins, which they had unrighteously acquired."

But this change, so far forth as it seemed to be a moral and religious one, was "forced and ephemeral." The preacher alone was "profoundly religious," and the people, as soon as they ceased to hear him, went back to their gaieties, their vices, and their indifference. A mournful story: substantially a rehearsal of what took place in England during and after the days of Puritan rule.

But the fifth act of the tragedy was rapidly proceeding. Savonarola disobeyed the Pope; he spoke daringly of the supremacy of charity; he was proof against bland invitations; refused a cardinal's hat; hinted at a general council; and continued to preach even after the publication of the excommunication by Alexander Borgia. The Pope was bent on his destruction. Piero de Medici was at Rome, hoping and intriguing for a return to Florence. And if the Pope's hatred of the friar needed any spur, Mariano da Gennazzano, the disappointed rival of Savonarola, was at his side. The signory of Florence, hostile to the preacher, at last yielded to a menacing brief from the Pope, and silenced him. This was in March, 1498. Then followed the famous "ordeal by fire," on which our author has thrown new light; the attack on the Convent of St. Mark; the capture and imprisonment of Savonarola and two of his friends and followers; their examinations with repeated applications of torture; their condemnation and execution. They were hung, and then burnt, in the Piazza at Florence, on the morning of the 23rd May, 1498.

Signor Villari rejects with something like scorn the notion of a dogmatic agreement between his hero and Martin Luther. We do not care, in this place, to discuss religious dogmas; but we cannot help suggesting the possibility that the confessed failure of the religious teaching of Savonarola, the traceable results of which did not extend beyond the narrowest local limits and the short lifetime of the man himself, may have been owing to some *defect*, to the want of a truth which he did not grasp with clear consciousness, or with distinct utterance proclaim. And, on the other hand, that the world-wide extension of the movement of which Luther was the recognized head, and the permanence and still proceeding development of its results, may have been owing to the power of just that word of truth, which was missing or obscure in the teaching of Savonarola.

We need only add that the translation, as far as respects language and style, is excellent,—good, unaffected English; and as to accuracy, if we needed any further guarantee than the name of the translator, we have it in the approval of the author, to whom it was submitted before publication. The explanatory index of Italian terms not translated in the body of the work will be found useful. A general index is wanted.

M. CHEVALIER AND MR. MACLEOD ON POLITICAL ECONOMY.*

THERE is a certain kind of writer who infests the precincts of scientific questions. His most prominent characteristic may be defined as a tendency to rush in where angels fear to tread. Most men, when they are puzzled by the first principles of a science, attribute their bewilderment to their own slowness of comprehension. They take for granted that they are wrong, and never think of announcing as a matter of self-congratulation that they can't see the truth of the first law of motion, or are unable to perceive that two and two make four. But this is by no means the case with everybody. There are men who, when they fall into one of the preliminary fallacies that most people contrive to struggle through successfully, announce their own misty guesses as magnificent scientific conceptions. They declare complacently that they have squared the circle or discovered perpetual motion. So long as they confine themselves to such questions as these,—to showing that Sir Isaac Newton did not understand mathematics, or that the Astronomer Royal knows nothing about the shape of the earth—they are comparatively harmless. They may be safely left to knock their heads against facts till they have found out which are the hardest. But when they intrude into more unsettled subjects of inquiry, they are more annoying, because they have a greater chance of passing themselves off as philosophers. There are, for example, many educated men who do not at once see that Mr. Ruskin has as much right to talk about political economy, as he has to lay down the law about the language of the Choctaws. They do not perceive the absurdity of his dogmatic assertion that Mr. Mill has fallen into a transparent fallacy on one of the most frequently debated points of political economy, when, of course, the real fallacy is exactly that into which Mr. Ruskin has fallen, in common with every beginner of the science. A man who has been just plucked for his degree frequently finds that his opinions differ from those of the examiners; it requires rare moral courage to get up and preach them as new and wonderful discoveries.

When we first looked into the pamphlet by Mr. Macleod whose title we have quoted, we confess that we mentally put him down as a fit antagonist for Mr. Ruskin. He had, we thought, read a good deal more, but showed inferior natural acuteness; he made just as great blunders, but in an opposite direction; as to real ignorance and self-assumed fitness to deal with the subject, they were about on a level. Under the circumstances, they would both probably be most quickly extinguished by being left alone. Such was our first impression; perhaps it has not been much modified. We were, however, astonished to find that Mr. Macleod claimed a high authority to support him. M. Chevalier had, it appears, made a favourable report on his system to the Imperial Institute of France. The second pamphlet, whose name is given above, contains the substance of this report. We shall see presently how far it goes. Meanwhile, the fact that a gentleman of M. Chevalier's reputation has approved of Mr. Macleod's works to some extent, makes it necessary to do what we should otherwise have thought singularly unnecessary, viz., to give them a moment's serious consideration.

Before remarking, however, upon the economical principles which Mr. Macleod conceives himself to have discovered, and to which M. Chevalier has given his sanction, we will quote a few short specimens of Mr. Macleod's philosophical style. Perhaps our readers will be able to form from them some estimate of the calibre of mind of a gentleman who contemptuously refutes the fallacies that imposed upon the weak intellects of Adam Smith, Ricardo, Say, and John Stuart Mill. He may, perhaps, as M. Chevalier says, have illimitable patience and the learning of a Benedictine. He may be "an athlete in the midst of vigorous antagonists." But what we particularly admire is the clearness and precision of his thought and powers of expression. Mr. Macleod is kind enough to tell us that to understand "economics," a knowledge of law, commerce, and physical science is indispensably necessary. To this we must apparently add a knowledge of mathematics, and of Mr. Macleod's profound acquaintance with this science, no one will be able to doubt after reading what follows:—

"Mathematical science" (he says) "extends its dominion over three distinct classes of subjects.

"First, the science of pure number, which is called arithmetic.

"Second, the theory of dependent quantities, &c. . . . .

"And the third class of subjects is that of independent quantities or unconnected events, which is the theory of probabilities."

Further, he is kind enough to tell us,—

"The great universal theory of dependent quantities must be abso-

Digitized by Google

lutely universal. The great general theory of variable quantities in general must of necessity comprehend all orders whatever of variable quantities."

These be brave words; we especially admire "the great general theory of variable quantities in general;" it conveys a precise and intelligible idea; but the conclusions to which Mr. Macleod is led by applying his mathematics to political economy, are the points to which we wish to draw particular attention. The beautiful exordium, with its philosophical grandeur, will introduce us fittingly to the following plain practical conclusions.

According to Mr. Macleod, if we take up any book of algebra, we find "that money is a positive quantity and debt a negative quantity"—(we never did, but that does not matter). "I wish now," he says, "to ask this question,—What can be the meaning of a NEGATIVE Economic Quantity?" And he does ask the question with a vengeance.

"The funds," he says, "are negative economic quantities, and what are they subtracted from? The whole system of credit consists in creating debts . . . . And what, I ask, is it to be subtracted from? The whole system of banking consists in buying money and debts, that is positive and negative quantities, by creating other debts which are negative quantities, and what are they to be subtracted from? Each of these quantities may be bought and sold. . . . . Algebraists tell us they are negative quantities. And what are they to be subtracted from?"

What, indeed? There is a well-known legend of a senior wrangler, who was persecuted by a horrid dream. He had inadvertently got under the sign of a square root. Not being a perfect square, he naturally found it difficult to get out again. The best mathematicians of Europe were sent for and failed miserably. The wretched man remained a hopeless surd. Such, we imagine, is Mr. Macleod's fate in his dreams. He becomes unexpectedly affected by a negative sign, and runs hopelessly up and down asking whom he is to be subtracted from?

The fact is that, in Mr. Macleod's opinion, there exists a strange entity of some kind called a NEGATIVE Economic Quantity. If mathematicians could run the thing down, and find out what it was, they would be able to confer some great but unexplained benefit upon Political Economy. He says that in requesting them to do this he is giving them "a fair scientific challenge, and one, moreover, of the highest possible importance." We need only say that the article in question probably is to be found in a mare's nest; and that the whole of Mr. Macleod's observations are merely a case of the use of very tall talk about science by a man who is incapable of attaching to his big words any definite scientific meaning whatever. We have merely quoted his expressions to give some measure of the powers of mind of the political economist whom M. Chevalier delights to honour.

We must, however, say, in justice to M. Chevalier, that he does not seem to have seen these particular lucubrations. The opinions of Mr. Macleod of which he expresses his approval are not, on the face of them, absurd, partly, perhaps, because they are not entirely peculiar to Mr. Macleod himself. M. Chevalier's account of them is, we ought to say, drawn, not from the pamphlet which we have been quoting, but from two works by the same author, "The Elements" and "The Dictionary of Political Economy." He is not, therefore, to be taken as approving the undiluted nonsense which we have just been quoting. We will state very shortly the opinions which he does approve, and give our own view of their value.

The first position maintained by Mr. Macleod is this: that whereas Mr. Mill and others following M. Say define political economy to be the science which treats of the production, consumption, and distribution of wealth (a grossly inaccurate statement, by the way, of Mr. Mill's real assertions), it ought rather to be defined, as has been done amongst others, by Archbishop Whately, as the science of exchanges or of value. This is, of course, a fair subject for discussion. The suggestion is not, and does not profess to be new. We cannot say as much for the arguments by which it is supported. M. Chevalier attacks the definition of Say on this ground: that many states of society may be conceived, and, as in the case of the Arabian tribes, have actually existed, in which production, consumption, and distribution of wealth might all take place, and yet exchange of wealth be unknown. We have no difficulty in granting this, especially as it appears to us to be the very argument which completely upsets the rival definition. If M. Chevalier proved that when the patriarchs in the desert were unacquainted with exchange of wealth, political economy had no function to perform, he would complete his argument. But the exact opposite is true. The state of society was, no doubt, rude in the extreme; but many of the laws of political economy would still undoubtedly apply. Those which refer to population, to capital, and even to wages and profits, might be just as applicable in the time of Abraham as in the time of Louis Napoleon. There would, in fact, be in existence just one of those simple states of society which political economists now have to create in imagination, in order to avoid the complications which render their investigations so difficult to follow out in the modern world. Hence M. Chevalier's very first blow cuts away his friend's standing-ground, and he follows up this judicious assistance by risking a definition which we do not understand, but which certainly seems to diverge more from Mr. Macleod's theory than from that of his opponents. He says that "the pivot of political economy is the notion of the productive power of the individual in labour, it being well understood that this productive power is measured by the quantity and quality of products created or services rendered in a given time." We leave Mr. Macleod to find out what this means and how it supports his pet notion that political economy is the science of exchanges. We will only add that M. Chevalier gives as an alternative definition that the object of political economy is to indicate what is necessary in order that different industries may be really free. As this definition seems to us to be hopelessly different from the other, and to have just as little to do with any intelligible view of political economy, we will content ourselves with simply quoting it.

It is generally supposed, however, that, after all, definitions are of trifling importance. We will only ask such sceptics to follow out Mr. Macleod's argument. Political economy, he says, is a physical science. As such, "*it is* some great body of phenomena all based upon some single conception or quality of the most general nature"(!) This "conception or quality" is, we infer, value. "We find a distinct order of quantities having the common property of exchangeability. We find that we have a new order of variable quantities, and we can at once say that the general theory of exchangeable quantities must be brought into harmony with the great general theory of variable quantities in general." Hence (the inference is of course simple in the extreme), it follows, after a few more equally perspicuous sentences, that "it is essential that there should be but one cause of value." This is perhaps the most beautiful specimen of logic in the book. As far as we can guess at the meaning of it, it would be paralleled by this. Dynamics is a physical science; it treats of various materials having the common property of being in motion. Hence, omitting the sentences about the great general theory of variable quantities in general, which add only to the picturesque effect of the style, there can be only one cause of motion, and it would be utterly contrary to the principles of inductive logic to say that one carriage was moved by the action of heat and another by the force of gravitation. Mr. Macleod, in fact, is unable to see that if value has two causes, no definitions in the world can make it have one. It may be added that in the sense in which he understands it, political economists do not in fact say that value has two causes.

We will only mention one other point. M. Chevalier quotes and approves, as a philosophical statement, Mr. Macleod's dictum that credit is capital,—the meaning of which may be simply stated thus: if A has £1,000 and A owes B £1,000, A and B have £2,000 worth of capital between them. M. Chevalier quotes a very sensible remark by M. J. B. Say to the effect that a thing cannot be in two places at once, but only to add, that it may be doubted whether reasonings which may have held good in a primitive state of commerce, can be applicable in our days. The argument which M. Chevalier actually brings forward is worth mentioning as an example of a kind of reasoning which tends to obscure all the arguments of political economy. "Credit," he says, "discharges many of the functions of capital. For example, a man with credit for £1,000 may raise the price of the goods he wishes to purchase as much as if he had 1,000 sovereigns." Hence, credit is capital.

Now, all that M. Chevalier urges as to the effect of credit has been pointed out constantly by every political economist of repute. But the leap from the premises to the conclusion is most startling. A precise parallel would be this. The introduction of steam has, in many places, produced just the same effect as an increase of food would have done. It has brought more corn to particular places, and distributed a great deal of corn that would otherwise have been wasted. That is, the improvement caused by steam has been just the same, in some respects, as an improvement caused by the increase of food. Therefore, steam is food. The advantage of credit is very analogous to the advantage of steam. It enables capital to be made much more effective than formerly in aiding production. But to say that it therefore is capital, is simply absurd. Mr. Macleod maintains similar propositions in his pamphlet on grounds less rational, if possible, than this.

We have noticed these theories simply because M. Chevalier's name is one that carries great weight; we are sincerely sorry that he should have used it in support of such a cause. At the same time, it only confirms our impression that, although it would be difficult to exaggerate the services which M. Chevalier has rendered to free trade and the advancement of commerce in France, it would be very easy to exaggerate the services which he has rendered to the purely scientific part of political economy.

SHORT NOTICES.

MR. GEORGE DANIEL is one of those men who, in the midst of the most unpoetic pursuits, preserve an earnest sympathy with all that is poetical. He has even at times turned his hand from the work of an accountant to the building of rhymes, and there are some pleasing samples of his poetical powers at the end of this volume,* notable for their healthy expression of a strong religious reverence. The rest of the book is occupied by a series of miscellaneous articles, in which Mr. Daniel gives us his recollections of Charles Lamb, Mrs. Siddons, and John Kemble; a defence of Dr. Johnson against what Mr. Daniel considers the too severe judgment of Lord Macaulay; a paper on "the presumed disinterment of Milton;" and several other gossiping articles, which make pleasant reading. We have perused with particular interest

* Love's Last Labour Not Lost. By George Daniel, Author of "Merrie England in the Olden Time," &c. &c. Pickering.

Digitized by Google

the recollections of Lamb, from which, lengthy as it is, we must make the following extract :—

"In the autumn of 1823, after dining at Colebrooke Cottage with him and Robert Bloomfield, I accompanied the two poets to the celebrated 'Queen Elizabeth's Walk' at Stoke Newington, which had become Lamb's favourite promenade in summer for its wild flowers, upon which he could never tread with indifference, for its seclusion and its shade. He would watch the setting sun from the top of old Canonbury Tower, and sit contemplating the starry heavens (for he was a disciple of Plato, the great Apostle of the Beautiful!) until the cold night air warned him to retire. He was hand and glove with Goodman Symes, the then tenant of this venerable tower, and a brother antiquary in a small way, who took pleasure in entertaining him in the oak-panelled chamber where Goldsmith wrote his 'Traveller,' and supped on butter-milk, pointing at the same time to a small coloured portrait of Shakespeare in a curiously carved gilt frame, which Lamb would look at lovingly, and which, through the kindness of a late friend, has since become mine. He was never weary of toiling up and down the steep, winding, narrow stairs of this suburban pile, and peeping into its sly corners and cupboards, as if he expected to discover there some hitherto hidden clue to its mysterious origin! The ancient hostelries of Islington and its vicinity he also visited. At the 'Old Queen's Head' he puffed his pipe, and quaffed his ale out of the huge tankard presented by a certain festivous Master Cranch, of a Bonifacial aspect and hue, to a former host in the 'Old Oak' parlour, where, according to tradition, Sir Walter Raleigh received full souce in his face the humming contents of a jolly Black Jack from an affrighted clown who, seeing clouds of tobacco-smoke curling from the knight's nostrils and mouth, thought he was all on fire! It was here that he chanced to fall in with that obese and burly figure of fun, Theodore Hook, who came to take a last look at this historical relic before it was pulled down. Hook accompanied him to Colebrooke Cottage, which was hard by. During the evening Lamb (lightsome and lissom) proposed a race round the garden; but Hook (*à cochon à l'engraisse*, pursy and puffy), with a nose as radiant as the red-hot poker in a pantomime, and whose gait was like the hobblings of a fat goose attempting to fly) declined the contest, remarking that he could outrun nobody but 'the constable.' In the 'Sir Hugh Myddleton's Head' 'Elia' would often introduce his own, for there he would be sure to find, from its proximity to Sadler's Wells, some play-going old crony with whom he could exchange a convivial 'crack,' and hear the celebrated Joe Grimaldi call for his 'namesake' (a tumbler!) of 'sweet and pretty' (rum punch!), challenging Boniface to bring it to a 'rummer!' Many a gleeful hour has he spent in this once rural hostelrie (since razed and rebuilt) in fumigation and fun. Though now a retired 'country gentleman,' luxuriating in the Persian's paradise, 'something to see and nothing to do,' he occasionally enjoyed the amusements of the town. He had always been a great sight-seer (as early as 1802 he piloted the Wordsworths through Bartlemy Fair), and the ruling passion still followed him to his Islingtonian Tusculum. 'One who patronizes,' said he, 'as I do, St. Bartlemy, must have a kindred inkling for my Lord Mayor's Show. They both possess the charm of antiquity.' Profanely speaking, I fear he rather preferred the Smithfield Saturnalia; not that he loved the curule chair and its mayor, the men in armour, the city coach, the broad banners and broad faces, the turtle and venison of London's corporation less, but that he loved dwarfs, giants, penny-trumpets, posture-masters, and learned pigs more; to say nothing of those savoury and sable attractions, the fried sausages (not ambrosial fare!) and the little sweeps! He had a quick ear and a quick step for Punch and Judy, preluded by the eternal Pandean pipes and drum; and it was not until Punch, with commendable ferocity, had perpetrated all his traditional extravagances, and was left crowing and cacchinating solus on the scene, that he was to be coerced or coaxed away. Many a penny he has paid for a peep into a puppet-show, and after his final retirement to Edmonton in the spring of 1833, he, in my company, revisited its fair in the September following and renewed old acquaintanceship with the clowns and conjurers."

The Rev. Mr. Vanderkiste possesses the secret, not only of book-making, but of performing that task agreeably to his readers, in a degree not often to be met with. In this volume* he professes to give his "personal narrative of starvation and Providence in the Australian mountain regions," where he was lost for six days, during which period he was without food or shelter, and for four days and nights was exposed to heavy rains. But any one who expects to find an interesting account of his wanderings during that time will be disappointed. His only wanderings, indeed, are from his subject; for of his sufferings, his shifts, his hopes, fears, perils, and efforts, the book contains the veriest modicum. The 357 pages which compose it are mainly filled with odds and ends of anything and everything; glimpses of Australian scenery and Australian life, anecdotes of settlers and aborigines, and stories about snakes, bushmen, pious people and drunken people. As he exhausts each of his topics, which he quickly does, he flies off to something else utterly unconnected with it; to Rowland Hill and his horse, to Dr. Wolff at Bokhara, to his reminiscences of London life;—to anything, in short, which will add another page or paragraph to his book. But we read and are pleased. If religious reflections are too often forced neck and crop into the narrative, sometimes very absurdly, and even childishly, the peg on which it is hung is, apart from its abuse, a good peg. The book, indeed, is full of interesting facts; and here and there we light upon some vivid pictures. The home of the flying-fox is one of these :—

"On the left of Clarence Town, whilst journeying towards Dungog, lies Oakendale, the seat of the Holmeses, a leading family of the district; and bordering Oakendale is an amazing scene known as the home of the flying-foxes—a colonial name for the great Papuan vampire bat. Let the reader picture an enormous bowl. Let him stand on its grassy edge, and gaze down into the huge green gulf. All before him, all beneath him, all around him, on every side,—depth, height, breadth, all,—are trees, trees, trees—one vast arboretum. Gum-trees prevail—red gum, white gum, blue gum. Just on the borders of the hollow is a beautiful skirting of grass-trees. This shrub consists of a thick black stem; over this a boss of long grass, and a few stout towering bulrushes rising from the centre—wild-looking and picturesque in the extreme. The flying-foxes, the great Papuan vampire bat, have their home everywhere in this abyss. They hang, literally, far thicker on every side, on every branch of every tree, than grapes on a fruitful vine. Were they not extremely light, notwithstanding their size, the trees could never bear their weight; indeed, boughs often do break down. To speak of thousands or of tens of thousands of huge vampire bats would be the very feebleness of language, so far as any attempt to calculate them is concerned. My companions on the visit were of the same opinion, and we literally moved, and seconded, and carried unanimously, amid some merriment, on the edge of the gulf, a resolution to use the term 'myriads of myriads' in speaking of the tenants of this solitary den. Whilst we sat near the edge of the gulf to sketch, our companions descended into it, and stirred up the inmates. The air became thick with them, like the locusts of Joel, 'an exceeding great army.' The noise of their loud, flapping wings was like distant thunder, their voices commingling in strange chorus."

As an instance of Mr. Vanderkiste's idiosyncrasy, we may mention that he cannot even allow the flying-foxes to flap their wings without making them a pivot for some trite remarks upon the redemption of mankind; and later on in his book he proves the irreligiousness of dancing by observing, amongst other arguments, that "a dance cost John the Baptist his head."

Dr. James Hunt inherits an interest in the subject of stammering and stuttering. His father before him obtained celebrity by his treatment of these defects; and the son brings to his task the experience which has been handed down to him as well as his own. It would seem, at first sight, that a book on the defects of utterance must be as dry as the difficulties it treats of are unpleasant. But this is not the case. Those who suffer from these defects will be surprised, on reading Dr. Hunt's work,* to find how interesting is the subject of which they are the living illustrations. But they will find more than this: many valuable hints, to wit, for the cure of their infirmity. We quite agree with Dr. Hunt, however, in the opinion that the cure must be applied by a skilled hand. It is still harder to treat ailments of this kind by following written instructions than it is for a patient suffering under any of the common diseases of the body to become his own physician by reading a work upon consumption, or heart disease. Dr. Hunt dedicates his book to his pupils, or, as we might call them, patients; and he is confident in the possibility of at least modifying impediments of speech, which he holds to be as amenable to treatment as other disorders of the human frame. In fact, there can be no reason why they should not be so, for they *are* disorders of the human frame, not, as ignorant people, educated and uneducated, persist in thinking them, incurable defects. The book deserves all praise. It is valuable for its thorough and learned investigation of an important though neglected subject; and parents especially should take warning from it to cope with impediments of speech in their children before time has rooted and confirmed them.

Mr. Edwin Hodder has recorded his experiences of New Zealand life in a lively book,† which has reached its second edition. The author tried his hand as a gold-digger while in the colony, and the narrative of his efforts and successes is very amusing. After six weeks he returned to Nelson, worn out with fatigue, clothes torn and tattered, and money spent, the whole of his winnings amounting to two shillings and three pence. The moral he draws from his efforts in this line is, that city clerks are not cut out for gold-diggers. At Aorere, the nearest port to the diggings, he passed his first night in a Maori pah.

"The party in the wharri, or hut, consisted of about twenty natives (men, women, and children), who manifested great delight at receiving a visitor, and examined my watch, chain, and other articles of dress, with very pleasurable, and, as I thought at the time, covetous looks. Five of the number only were able to speak a few words of English, consequently our conversation was not very edifying, though particularly animated, as the gestures used to express the thoughts were most extravagant. They gave me some dried fish for supper, with a very unwholesome-tasting bread, which had been baked in the ashes, and was too gritty to be eaten without great caution, and dried manuka leaves boiled in water to represent tea, which, however, reminded me in every way of senna. After supper, we all sat round the fire and smoked our pipes, the native men and women being equally inveterate smokers, and all joining heartily in the common luxury. The fire was in a hole on the ground in the middle of the hut, a small aperture in the roof serving as a chimney; but which failed to convey one-twentieth part of the smoke away, and made the room almost suffocating. The night advancing, I made known my wish to go to bed, and had a table pointed out to me where I might make my bed for the night. I was amused with the accommodation for the remainder of the party. On the shelf, over my head, three or four children were stowed away; under the table on which I lay, the chief and his waeni (wife) made their bed on some loose fern; while the others wrapped themselves round in their blue and red blankets, and laid down upon the bare ground by the fire. It was some time before

* Lost, But Not for Ever. By the Rev. R. W. Vanderkiste. James Nisbet & Co.

* Stammering and Stuttering: their Nature and Treatment. By James Hunt, Ph. D., &c. Fifth edition. Longmans.

† Memories of New Zealand Life. By Edwin Hodder. Second edition. Jackson, Walford, & Hodder.

Digitized by Google

I went to sleep; the place was swarming with fleas and mosquitoes, which bit me unmercifully; and I did not feel particularly safe about my money and little valuables, which I thought some of the party might like to appropriate. I therefore put them in my socks, as the most unlikely place to be sought, and at last fell off into a good doze. This distrust arose from my ignorance of their character, which I have since proved to be strictly honest.

"Waking up in the night, a strange sight presented itself. The fire was still burning, casting its flickering light over the hideous tattooed faces of the sleeping natives, as they lay in various postures on the ground. One old man in particular, who was wrapped in a red blanket tied round the body with flax, seemed the most frightful specimen of humanity I had ever seen. His face and arms were tattooed and painted so as hardly to exhibit a piece of plain flesh; his steel-grey hair was long and matted, hanging down on his shoulders; and his ears were decorated with rows of sharks' teeth and green stones.

"At five o'clock next morning I was awakened by the shouting of the natives, who were all astir, and who have a custom of breaking the silence of the morning with the most unearthly vocal salutations. Having a long journey before me, I was regaled at breakfast with something substantial—a bird of the parrot kind, called a ka-ka. The method of cooking it was almost sufficient to have satisfied my appetite. Without divesting it of the feathers, it was rolled in some moist clay, and then patted round so as thoroughly to encase it; then it was put into the fire, and, when the clay had become red hot, the case was broken, and out came the bird, cooked and ready for eating, the clay retaining most of the feathers."

The work is well worth reading, and it will comfort emigrants to learn that amongst the few natives who retain a hankering after cannibalism, there is an unconquerable objection to the white man, on the score that the large quantities of salt he consumes permeate his system, and render him unpalatable. While on the subject of New Zealand, we may mention that Messrs. Trübner & Co. have published a book on the Maori language,* which will be found useful to emigrants.

The International Exhibition has furnished Mr. John Timbs with a fruitful subject for his industrious pen, and he has made good use of it in the book before us.† All that any one can reasonably wish to remember about the last Exhibition, and far more than one out of a thousand is likely to remember, will be found in Mr. Timbs' volume. But while it is valuable in this sense, it will also be found useful as a book of reference; for which purpose the author has added a sufficient index. The book is one of the most useful of Mr. Timbs' many meritorious productions.

Of new editions, there are three before us which are more particularly worthy of attention. First come the Poems of Coleridge,‡ in the present edition of which are some pieces printed now for the first time. Next we have Miss Evans's "Mill on the Floss,"§ which has already stood the fire of criticism, and, if not quite the equal of "Adam Bede," is a story which only Miss Evans could have written. Thirdly, under the general title "After Dark,"‖ Mr. Wilkie Collins has strung together some fugitive pieces, principally reprinted from "Household Words." They are interesting for their own sakes; but of course especially because we trace in them the development of a mind which has attained such a hold of public attention by the far more important works that have followed them.

Gardening is in season, and those who wish to know what they should do with their kitchen-gardens, fruit-gardens, and flower-gardens, will find ample instructions in the "Garden Manual."¶ This useful guide is now in its seventh edition, "revised and corrected," and, voluminous as it is, may be purchased for eighteen pence.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

MONDAY, 6TH APRIL, 1863.

ENTOMOLOGICAL—At 7 P.M.

MEDICAL—At 8½ P.M.

GEOLOGISTS' ASSOCIATION—At 7 P.M. "Observations on Ammonites and on the Group of Molluscous Animals." By E. Charlesworth, F.G.S.

ROYAL INSTITUTION—At 2 P.M. Monthly Meeting.

TUESDAY, 7TH APRIL.

CIVIL ENGINEERS—No meeting.

PHOTOGRAPHIC—At 8 P.M.

PATHOLOGICAL—At 8 P.M.

ANTHROPOLOGICAL—At 7½ P.M. 1. "On the Microcephalic Brain of a Female Idiot." By R. T. Gore, Esq. 2. "On the Permanence of Type." By Dr. Julius Schvarez.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY,

13, St. James's-square, London, S.W.

Established 1824.

Financial Results of the Society's operations.

The Annual Income exceeds.....£200,000.
The Assurance Fund safely invested is over .....£1,330,000.
New Annual Premiums for the last year .....£10,017.
Bonus added to Policies at the last Division .....£275,077.
Total Claims by Death paid.....£1,731,779.

The following are among the distinctive features of the Society:—

Credit System.—On Policies for the whole of life, one half of the Annual Premiums during the first five years may remain on credit, and may either continue as a debt on the Policy, or be paid off at any time.

Low Rates of Premium for Young Lives, with early participation in Profits.

Invalid Lives may be assured at Premiums proportioned to the increased risk.

Prompt Settlement of Claims.—Claims paid thirty days after proof of death.

The Accounts and Balance Sheets are at all times open to the inspection of the Assured, or of persons proposing to assure.

Tables of Rates and Forms of Proposal can be obtained from any of the Society's Agents, or of

GEORGE CUTCLIFFE, Actuary and Secretary.

13, St. James's-square, London, S.W.

The Reversionary Bonus at the Quinquennial Division in 1862 averaged 48 per cent., and the Cash Bonus 28 per cent., on the Premiums paid in the five years.

The next Division of Profits will take place in January, 1867.

THE LIVERPOOL AND LONDON FIRE AND LIFE INSURANCE COMPANY.

Established in 1836. Empowered by Special Acts of Parliament.

Offices: 1, Dale-street, Liverpool; 20 & 21, Poultry, London.

The ANNUAL REPORT for the past year shows the following results—to which the attention of the public is requested, as evidencing the progress and position of the Company.

ACCUMULATED FUNDS £1,417,808. 8s. 4d.

Annual Premiums in the Fire Department	£436,065
Annual Premiums in the Life Department.....	138,703
Accumulated Life Reserve	841,540

The liability of Proprietors is unlimited.

SWINTON BOULT, Secretary to the Company.
JOHN ATKINS, Resident Secretary, London.

LAW LIFE ASSURANCE SOCIETY,

FLEET-STREET, LONDON.

Instituted 1823.

Invested Assets	£5,000,000
Annual Income.....	490,000

For Prospectuses and Forms for effecting Assurances apply to the Actuary, at the Society's Office, Fleet-street, London, E.C.

WILLIAM SAMUEL DOWNES, Actuary.

April, 1863.

THE STANDARD LIFE ASSURANCE COMPANY.

Established 1825.

GOVERNOR—His Grace the Duke of Buccleuch and Queensberry.

DEPUTY-GOVERNOR—The Rt. Hon. the Earl of Elgin and Kincardine.

LONDON, 82, KING WILLIAM-STREET.

CHAIRMAN OF THE BOARD—The Right Honourable Lord Elcho, M.P.

ORDINARY DIRECTORS.

John Griffith Frith, Esq., Old Broad-street.
Charles Hemery, Esq., 28, Threadneedle-street.
Lieutenant-Colonel James D. G. Tulloch.
Alexander Gillespie, Esq., 3, Billiter-court.
Lestock Robert Reid, Esq., 122, Westbourne-terrace.
John Scott, Esq., 4, Hyde Park-street.
Francis Le Breton, Esq., 21, Sussex-place, Regent's Park.

MANAGER—Will. Thos. Thomson, F.R.S.E.

RESIDENT SECRETARY—H. Jones Williams.

MEDICAL OFFICERS—Dr. Tweedie; Dr. Semple.

SOLICITORS—Messrs. Minet & Smith, New Broad-street.

INSPECTOR OF AGENCIES—William Bentham.

The Directors invite particular attention to the

TERMS AND CONDITIONS OF THE STANDARD POLICY.

Free Assurance.—The Assured, under these Policies, may proceed to and reside in any part of the world without payment of extra Premium; may serve in Militia or Volunteer Corps, in time of peace or war, within the United Kingdom; and further, no policy of five years' duration shall be liable to any ground of challenge whatever connected with the original documents on which the Assurance was granted.

Policies of Five Years' duration effected for the whole term of life at a uniform rate of premium may be renewed within thirteen months of date of lapsing, on payment of a fine; during which period the risk shall be binding on the Company, in the event of death, subject to the deduction of Premiums unpaid and Fines.

Policies of less than Five Years' duration may be renewed within thirteen months, on very favourable terms.

Surrender Values granted, after payment of one Annual Premium on "With Profit" Policies, or three Annual Premiums on those "Without Profits." Loans granted on such Policies within their value.

The Business of the Standard Life Assurance Company has increased steadily year by year, until it has attained its present large amount; and during the last sixteen years The Standard has transacted a larger average amount of Business than any other Office.

From 1846 to 1851 the amount of Assurances effected was	£2,215,461	13	0
From 1851 to 1856 the amount of Assurances effected was	2,541,840	5	1
From 1856 to 1862 the amount of Assurances effected was	3,309,078	14	5
Total in sixteen years	£8,096,380	12	6

Thus the average amount of new Assurances during the sixteen years from 1846 to 1862 has been upwards of Half a Million Sterling per annum.

The Revenue of the Company in 1846 was £120,815:19:5; in 1851, £180,203:5:8; in 1856, £254,484:10:8; in 1862, £322,596:18:8.

INVESTMENT OF FUNDS.

The funds of the Company, now amounting to upwards of Two Millions Sterling, are invested in Government Securities; in Loans on the security of Lands, by Bond or Mortgage; in Landed Property; in advances to the Company's Policy-holders, and in other ways affording undoubted security.

WILL. THOS. THOMSON, Manager.
H. JONES WILLIAMS, Res. Secretary.

London, 82, King William-street.
Edinburgh, 3, George-street (Head Office).
Dublin, 66, Upper Sackville-street.

CONFIDENT LIFE ASSURANCE and LOAN COMPANY

(Limited). Established 1855. Capital £100,000. Chief Office—13, Finsbury Place South, London, E.C. All kinds of Assurance and Annuity business transacted by this Company. DR. DE JONGH'S

(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

HEDGES & BUTLER,

London, 155, Regent-street, W.; Brighton, 30, King's-road,

(Originally established A.D. 1667.)

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

Consultations free.—9, Grosvenor-street, Grosvenor-square. No connection with any one of the same name.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

NEW POEMS BY THE AUTHOR OF "THE NUPTIALS OF BARCELONA."

Now ready, at all the Libraries, crown 8vo., price 6s.,

ILLUSTRATIONS OF THE BEAUTIES OF TROPICAL SCENERY,

AND SKETCHES OF OBJECTS OF INTEREST.

With Notes, Historical and Explanatory.

"The natural splendour of the islands of the Western Archipelago, and the richness of their productions, certainly afford abundant sources of inspiration to the poet; and we very fairly congratulate the author upon the successful manner in which he has treated the various subjects that he has selected for the outpourings of his graceful muse."—*Observer.*

"He has all the feeling and much of the art of a true poet. His illustrations are always happy, and often striking. . . . His work contains many beauties, and will convey a more striking picture of the characteristics of West Indian scenery than the most laboured descriptions of prose writers, from Edwards to Southey."—*Morning Post.*

"The author has a poetic temperament, great felicity of versification, and a keen, zestful admiration of the beauties of nature; and so spirited, graceful, and warm is the verse in which he sings of tropical glories, that he rouses the enthusiasm of the reader, and bears him triumphantly through his volume. We propose to give our readers a few examples of the author's vivid paintings."—*Lloyd's*, edited by Blanchard Jerrold.

"He has good command of language, scholarship, and a fine poetical taste. Many of his descriptions make the reader's mouth water for the luxuries and charms of both sea and land in those parts. The volume is a handsome one, and contains a fine illustrative portrait of Columbus. The explanatory notes at the end are by no means the least interesting or valuable portion of the work."—*The Era.*

London: ROBERT HARDWICKE, 192, Piccadilly.

GRESWELL'S REPLY TO COLENSO.

SMITH, ELDER, & CO., 65, Cornhill.

THE GARDEN MANUAL
for the
CULTIVATION AND OPERATIONS REQUIRED FOR THE KITCHEN, FRUIT, AND FLOWER GARDENS.
Illustrated with Engravings and Plans.
By the Editors and Contributors of *The Journal of Horticulture.*
Seventh Edition, Revised and Corrected, price 1s. 6d.; free by post for 20 stamps.
London: "JOURNAL OF HORTICULTURE" OFFICE, 162, Fleet-street, E.C.
To be had of all Booksellers, and at the Railway Stalls.

PUBLISHED EVERY SATURDAY, 32 pages, PRICE TWOPENCE,
PUBLIC OPINION.
A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

CONTENTS OF No. 80, APRIL 4, 1863:—

HOME:—
Mr. Somes's Bill for closing Public-houses on Sundays.
The Lord Chancellor's Bill on Church Patronage.
Debate on the Pirate Vessel *Alabama.*
The Shipbuilders' Differences.
The Quarter's Revenue.
Should the Lancashire Operatives Emigrate?
Cheap Food and Cooking for Working Men.
American Financial Policy and Bank of England.
Crime and its Perpetrators.
The Seizure of the *Peterhoff.*
AMERICA:—
It Can't be Done.
Can there be Reconciliation between North and South?
Mr. Seward's Blockade Blunder.
The Golden Moment.
Our Iron-clads on the Ozeeches—the complete success of the *Monitors.*
How Union Generals are captured.
Mr. Edwin James on the Early Closing Movement.
FRANCE:—
Rumoured Demand of an Independent Poland under Duke Leuchtenberg.
POLAND:—
The State of the Insurrection.
PRUSSIA:—
The Interpellations on Poland.
GREECE:—
Prince William of Denmark proclaimed King.
Digest of the Week's News.
MUSIC AND THE DRAMA.
MISCELLANEOUS:—
Jupiter Junior.
Photography and Bad Taste.
Wouldn't you like to know?
Measuring the Sun.
Proposed Use of Human Gas.
Modes of Education.
Armour Plates and Steel Castings.
Notabilia.
Varieties, &c. &c.

Post-office Orders to be made payable to J. K. SHARPE, Publisher, 11, Southampton-street, Strand, W.C.

PUBLIC OPINION.

A Weekly EPITOME of FACT and OPINION for all Classes of Readers.

PUBLIC OPINION every SATURDAY, 2d.

VOLS. I. and II. of PUBLIC OPINION now ready. Vol. I. from October, 1861 to March, 1862. Price 6s. 6d. Vol. II. from April to December, 1862. Price 10s. 6d. bound in cloth. To be obtained through any Bookseller or Newsvendor; or at the Office, 11, Southampton-street, Strand.

AN IMPARTIAL HISTORY of the PRINCIPAL EVENTS in GREAT BRITAIN and IRELAND, America, France, Italy, Germany, Spain, Turkey, Greece, Belgium, Denmark, Mexico, Russia, Poland, Portugal, India, China, Japan, Australia, Canada, and the other Colonies for the year 1862, to be found in PUBLIC OPINION, Vols. I. and II., compiled from the English and Foreign Press so as to show the course of all events of interest in all countries, and the views of all parties upon them, by impartially selected extracts from the English papers, and Translations from FRENCH, GERMAN, ITALIAN, SPANISH, PORTUGUESE, MODERN GREEK, TURKISH, and ARABIC Papers.

A CONCISE RECORD of EVENTS connected with LITERATURE, the FINE ARTS, MUSIC, the DRAMA, the CHURCH, the ARMY and NAVY, and the LAW kept in PUBLIC OPINION, so as to give all Facts of Interest connected with each, and to show their General Progress.

ALL NEW STANDARD WORKS found described, together with the conflicting Criticisms of the Press put in juxtaposition in PUBLIC OPINION.

A FAIR HEARING for EVERY ONE.—PUBLIC OPINION, with the object of ascertaining and expressing the thoughts and feelings of the Public in all places, and on all subjects, opens its columns to correspondence from persons of all parties, and inserts the letters alike of Englishmen and Foreigners (furnishing Translations if they are in French, German, Italian, Spanish, Portuguese, Dutch, Turkish, Arabic, or Modern Greek), when such letters are of a nature to throw fresh light on any phase of any question of General Interest.

TO ENGLISH RESIDENTS ABROAD and COLONISTS, PUBLIC OPINION is more valuable, and more adapted to keep them *au courant* of the affairs of Great Britain and the whole World, than any other paper. Persons having Friends on the Continent or in the Colonies, cannot make a more acceptable present than PUBLIC OPINION, which, in most cases, can be sent free by post for a Penny Stamp.

POLITICIANS, STATESMEN, CAPITALISTS, EDITORS, and AUTHORS, have a means of ascertaining, without loss of time, the thoughts and feelings of the Home and Foreign Public on all subjects in PUBLIC OPINION, to be found nowhere else.

PUBLISHERS and BOOKSELLERS can read the taste of the Public, with regard to Literature from the Synopsis of Reviews given in PUBLIC OPINION, and possess one of the best media for advertising such Works in PUBLIC OPINION.

THE WAR IN AMERICA.—All the Great Battles and other Events connected with the Civil War, given in the words of the English and American Press in PUBLIC OPINION, Vols. I. and II.

THE COTTON QUESTION fully discussed in PUBLIC OPINION, Vols. I. and II.

IRON-CLAD SHIPS.—The History of Iron-clad Ships and the Debate upon them, to be found in PUBLIC OPINION, Vols. I. and II.

ARMSTRONG, WHITWORTH, and LANCASTER GUNS. The question of the relative merits of the above Guns discussed in PUBLIC OPINION, Vols. I. and II.

THE BRITISH COLUMBIA EMIGRATION QUESTION. Is British Columbia a Fit Place to Emigrate to? See PUBLIC OPINION, Vols. I. and II.

FEMALE EMIGRATION.—For the *pros* and *cons* of this question, see PUBLIC OPINION, Vols. I. and II.

THE EDUCATION QUESTION, the REVISED CODE, &c. All arguments for and against the New Code to be found in PUBLIC OPINION, Vols. I. and II.

THE INCOME TAX, its Good or Bad Aspects.—See PUBLIC OPINION, Vols. I. and II.

THE ROUPELL FORGERIES, and other CAUSES CELEBRES. For the fullest Accounts see PUBLIC OPINION, Vol. II.

THE QUESTION OF BLOCKADE EXAMINED in PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF INTERVENTION ventilated in PUBLIC OPINION, Vols. I. and II.

THE GREAT EXHIBITION OF 1862.—The Opening, Progress, Incidents, and Close of. See PUBLIC OPINION, Vols. I. and II.

THE THAMES EMBANKMENT.—The Rise and Progress of this Project. See PUBLIC OPINION, Vols. I. and II.

COMPETITIVE EXAMINATIONS.—The Merits of the System Reviewed in PUBLIC OPINION, Vols. I and II.

THE COLENSO CONTROVERSY.—The Opinions of all the Organs of the Press, together with a mass of Interesting Letters on BISHOP COLENSO'S WORK on the PENTATEUCH, in PUBLIC OPINION, Vol. II.

THE TICKET OF LEAVE SYSTEM.—THE GAROTTE ROBBERIES and TRANSPORTATION examined in PUBLIC OPINION, Vols. I. and II.

THE DISTRESS IN LANCASHIRE.—The whole History of the above Calamity and the Efforts made to relieve it, in PUBLIC OPINION, Vol. II.

THE EMPLOYMENT OF WOMEN.—The various Arguments for and against, as brought forward by the different Organs of the Press, in PUBLIC OPINION, Vol. II.

THE ABOLITION of CHURCH-RATES.—For the Agitation in favour of the above, and the Opinions it elicited, see PUBLIC OPINION, Vols. I. and II.

THE VOLUNTEER MOVEMENT.—For the Progress of the above during the Past Year see PUBLIC OPINION, Vols. I. and II.

THE EMANCIPATION OF THE SLAVES.—For American and English Opinions on, see PUBLIC OPINION, Vols. I. and II.

THE YELVERTON CASE.—The whole History of the above Case in PUBLIC OPINION, Vol. II.

DR. LUSHINGTON'S JUDGMENT in "ESSAYS AND REVIEWS"—How looked upon by the Press. See PUBLIC OPINION, Vols. I. and II.

THE TURF SCANDAL thoroughly and impartially sifted in PUBLIC OPINION, Vol. II.

RAILWAY ACCIDENTS and TRAVELLING, and its effect on Health, considered in PUBLIC OPINION, Vols. I. and II.

THE PRINCE of WALES'S MARRIAGE.—All Opinions and Arrangements minutely recorded in PUBLIC OPINION, Vol. II.

THE ENGLISH, FRENCH, and ITALIAN PRESS on the ROMAN QUESTION. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the COMMERCIAL TREATY with FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the PRESS in FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE "ROME OR DEATH" GARIBALDI EXPEDITION, related in the words of the Italian Papers, with the Opinions of the English, French, and Italian Press on the whole affair, in PUBLIC OPINION, Vol. II.

THE GREEK REVOLUTION, the INSURRECTION at NAUPLIA, &c., the Signs of, Cause and Effects of, stated in the Words of the Greek, English, French, and Italian Papers, in PUBLIC OPINION, Vol. II.

THE MEXICAN EXPEDITION.—The Triple Alliance: the Withdrawal of England and Spain; the Campaign of the French; the Debate in the Spanish Parliament upon, and the Views of all Parties concerned, given in their own words, from the English, French, and Spanish Papers, in PUBLIC OPINION, Vols. I. and II.

THE TURKISH LOAN and the PROSPECTS of TURKEY as discussed in the English, French, Italian, and Turkish papers, in PUBLIC OPINION, Vols. I. and II.

THE HISTORY of the STRUGGLE BETWEEN the KING of PRUSSIA and his PEOPLE, from the German, English, and French points of view, in PUBLIC OPINION, Vol. II.

THE RATTAZZI MINISTRY in Italy: its Rise, Progress, and Fall, with Public Opinion in Italy, France, and England upon it, in PUBLIC OPINION, Vols. I. and II.

A COPIOUS CLASSIFIED INDEX to facilitate Reference to the above and all other Subjects of General Interest, given with each Volume.

PUBLIC OPINION, Vol. I., from October, 1861, to March, 1862, price 6s. 6d. Vol. II. from April to December, 1862, price 10s. 6d., bound in Cloth. To be obtained through any Newsvendor or Bookseller, or at the Office, 11, Southampton-street, Strand, W.C.

ANNUAL SUBSCRIPTION to PUBLIC OPINION, post free (payable in advance), 13s.; half-yearly, 6s. 6d. Post-office Orders to be made payable to J. K. SHARPE, 11, Southampton-street, Strand, W.C.

PUBLIC OPINION is sold at all Railway Bookstalls, and by all Booksellers and Newsagents throughout the Kingdom. Price 2d., stamped, 3d.

PUBLIC OPINION every SATURDAY, 2d.

OFFICE: 11, SOUTHAMPTON STREET, STRAND.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, APRIL 4, 1863.

POLAND AND THE POWERS.

THE English Government, it seems, has at last adopted, with respect to Russia and to Poland, the course which we have strongly advocated from the very first. Joint action with the Cabinets of the Tuileries and of Vienna is indeed the only line of policy suited either to the gravity of the occasion or the true interests of Europe. Thus only can the Continent be guaranteed against the possibility of drifting into a political situation of which it saw the desperate evil in 1859. Nor in any other way could the force of public opinion be brought to bear upon the intemperate advisers of the Czar. Lord John might have written despatches on the history of Poland for ever, the interest of which would have continued to be, in the words of a French paper, "chiefly antiquarian,"—and he would have received, in all probability, little more from Russia than he is in the habit of getting from Denmark and his other diplomatic correspondents. The French Emperor, thrown upon his own resources, might either have refused to incur the suspicion of Europe by moving singly in the matter; or if he had yielded to revolutionary pressure at home, would have repeated towards Poland the *rôle* he has played so ostentatiously towards Italy. What Austria would have done is very doubtful. Her religious sympathies led her in one direction, and her fear of revolution in another. That she might have remained neutral to the last is probable; that she could be expected to lead the van of European liberty was simply impossible. From this ridiculous posture of imbecile hesitation and difficulty Europe is rescued by the common action of Austria, France, and England. What effect the joint remonstrance may have upon the haughty temper of the Northern Court can be decided only by the event. But at least the three interceding Cabinets will have taken the step most compatible both with their honour and their obligations. Some time ago a semi-official Paris journal declared that the Polish difficulty had been raised by the Russo-Prussian convention from a domestic to an international question. But in reality it was an international question long before the Russo-Prussian compact was heard of. Nearly fifty years have run their course since the fate of Poland divided a European congress and nearly reawakened the smouldering embers of an extinguished war. Then as now, Russia, with Prussia at her side, opposed the generous wishes of the English, French, and Austrian Governments. The secret treaty of January, 1815, whose existence was never once denied by Lord Castlereagh, is now no longer a matter of dispute; and posterity has learned how nearly the victorious Powers of 1814 quarrelled over the partition of their plunder. The venal complicity of Prussia was easily bought with Saxony and a slice of Polish soil, but Poland lay heavily on the conscience of the other consenting Empires for some time to come. The nationalities that were immolated in 1815 to secure the peace of Europe, ever since that "fatal" treaty—as a French statesman rightly called it—have had, in the estimation of all just men, a claim on the sympathy and consideration of the Continent. Poland, like Italy, has been one of our victims. The right to watch over her from a friendly and neutral distance, reserved to us as it was by distinct stipulation, is by no means a cold privilege, of which, as Lord Palmerston hints, it would be a Quixotism to avail ourselves. In the eyes of the world it is a sacred obligation; a duty forced home upon us by the certain and indisputable truth that England has to reproach herself, amongst others, for the sufferings of Poland during the last half century.

Though the Prussian Government of 1863 still seems to adhere to the monstrous policy of 1814, the Prussian people since that time have sprung up into political importance. Prussia is not any longer prepared to endorse all the follies of her King and his counsellors. The Von Bismarck convention has nowhere been stigmatised more severely than in the Chamber of Deputies, and if the Prussian Prime Minister still holds up his head in that Assembly, it is only for the sake of the bravado that he loves. It is possible that the stipulations of the convention have been exaggerated either by its author, in order to gratify his insolent love of setting the nation at defiance; or else by his Parliamentary rivals, who may honestly incline to believe the worst of their Sovereign and his ministerial cabal. But whatever the nature of the compact, even the infamous Bismarck Cabinet would pause before they ventured openly to fulfil it by playing the odious part of jackal to the Czar. The nation, as they know, has nearly reached the limits of its patience. An inveterate monarchical instinct alone prevents the soberest people in Europe from breaking out into conflict with the Crown. The Prussians are aware that Europe is in an unsettled state, and that the covetous eyes of an Imperial neighbour have been supposed long ago to be fixed upon the Rhine. They bear with patience the caprices of a reactionary Court, because the Prussian King represents in their eyes an integral part of the defensive strength of the realm. But nothing, probably, would be sufficient to drive them into an anti-Polish propaganda except some rash and isolated movement on the part of France. Just now, as Posen is tranquil, and there is no fear of European intervention assuming the character of a French territorial raid, the Poles have little to fear from the impotent antagonism of the Berlin Ministry. Prussia is too civilized or too humane to follow the lead of her rulers unless her instinctive fear of the French eagles is incautiously aroused. Were France to interfere *alone*, the French Emperor would find, it may be, that he was stirring up an

Digitized by Google

enemy on the Rhenish frontier. If, on the other hand, the Czar declines to listen to the pacific and sincere overtures of the three remonstrating Cabinets, it will not be because he can count upon the moral or material support of Prussia. It is by no means an unimportant consequence of joint action on the part of the European Powers, that Prussia is thereby of necessity converted from the natural ally of Russia into a friendly neutral.

The defeat of Langiewicz has not paralysed the insurrection, of which he was for a short time the unfortunate head. Putting aside the discouragement which the friends of Polish independence must have felt at his loss, on many grounds the dictatorship was by no means a benefit to the cause. A well known tyrant used, it is recorded, to wish that his enemies had but one neck, that they might be decapitated at a single blow. Poland's best chance, in the face of her invaders, is that she should be hydra-headed. The revolution is safer for not collecting itself into a single focus of flame; and the latest tactics of the Russian generals would seem to show that they too recognize the suitability of the country for guerilla warfare. The insurrection in the last fortnight has spread itself over several hundred miles. The whole of Poland may now be said to be in a blaze; and there will be opportunity for many negotiations before the conflagration can be effectually extinguished. As yet no wanton spark has been kindled either in Posen or in Gallicia. If the insurgents are actuated by the most ordinary prudence, they will refrain from converting into an enemy's country two pacific regions from which they derive surreptitiously both supplies and reinforcements, and in which, if the worst comes to the worst, they and their followers may find a necessary shelter. Nor can they afford to lose either the cold support of Austria or the colder neutrality of Prussia. Throughout the contest, the committee who direct operations have shown themselves adequate to the difficult task of managing a revolution with diplomatic tact, and heads as clear and as cool as that of Langiewicz still remain to guide the heroic resistance of the Polish nation. Each fresh week increases the righteous sympathy felt by Europe for a country so noble and so oppressed. It is not after all for nothing that the annals of Poland are blotted all over with Polish blood. A feeling is growing up that a people capable of so many sacrifices must at last succeed in winning what they care for more than their own lives. Unfortunately the pages of history tell us that both heroism and freedom may be trampled out in many a corner of the world. But the nineteenth century is little disposed to tolerate the wholesale extermination of a nation which has devoted itself so courageously to martyrdom. From the blood of brave men springs the seed of free men, and in the presence of the events that are taking place in the forests of Poland, we at least shall decline to believe that the Polish nation has no future.

From his elevated position at the head of civilization and liberty, the political cynic may look back through a vista of years to the time when Poland was last a nation, and decide with gravity that the Poles have shown themselves already incapable of self-government. Generalization of this kind deserves but little notice, yet it may be useful, once for all, to remark that precisely the same contemptuous reproach was addressed to the Italians three or four summers back. Self-government, properly so called, is a plant of comparatively recent growth in any nation in Europe; and if the privileges of the nineteenth century were to be meted out to it according to the capacities and virtues of the eighteenth, civil liberty would have made less progress in the world than it has done. The self-sufficient philosopher who damns a people for the faults of character he thinks he can discover upon the back pages of their national history, may be fitly reminded that, whether Poland be capable of self-government or no, the last fifty years have shown that Russia at least is incapable of governing her. The remedy remains yet to be found. Lord Russell, with the cobwebs of Magna Charta still blowing about his brain, may propose to cure everything by the application of Polish parliamentary institutions—the panacea which his relation Lord Minto found so invaluable for his speeches during his famous Italian tour. The Archbishop of Warsaw, who knows his fellow-countrymen, asserts, with more show of reason, that "administrative reforms, however sincerely undertaken, cannot satisfy the nation." The fact is that Poland craves a distinct political existence, and Europe will never be secure till Poland has attained it.

MR. GLADSTONE'S CONSOLS STOCK CERTIFICATES.

THE Chancellor of the Exchequer seems disposed to avail himself of the calmness of the session by obtaining from unquestioning Houses their legislative sanction for some of his crotchets. After an interval of ten years he has returned to the attack on the Three per Cents., which failed so sadly in 1853. He has passed the Post Office Savings Banks Bill through the Commons, and, having safely landed it in the Lords, he has justified the prediction we made at the time it was introduced, and has announced his intention of introducing after the recess a bill to extend its provisions to the funds of ordinary savings banks. The operation on the funds involved in the Savings Bank Bills is so intricate that its effect does not seem easily understood; but, as an interlude between these two bills, Mr. Gladstone has brought forward a third measure, in which the funds are openly dealt with. The Stock Certificates Act announces in its title an intended operation on the Three per Cents.

The details of the Stock Certificates Bill are sufficiently simple. At present its operation is confined to the Three per Cent. Consols and the New Three per Cents.; any person having his name in the Bank books as a proprietor in these stocks will be enabled to obtain in lieu of such registered title, certificates in blank transferable to bearer, with coupons for the half-yearly interest annexed to them. It is provided that the certificates shall only be issued for £50 stock, or exact multiples of £50, and that no certificate shall be issued for a larger sum than £1,000 stock. This last regulation is one of those rules dear to official persons, but incomprehensible to ordinary mortals. The nature of the case forbids any limit to the number of certificates issued, and supposing any one should ever wish to hold certificates for £10,000 stock, the only ends attained by forcing on him ten certificates instead of one, are the increased consumption of paper and the multiplication of writing. The regulation is precisely like that which requires a person who wishes to send £30 by Post-office orders to take out six orders for £5 each, instead of one for the whole sum. To return, however, to the details of the scheme: the coupons will be paid as they become due, minus the current income-tax; and the payment of the amounts upon them to the bearer absolves the Bank from any further liability. It would appear, though it is nowhere expressly stated, that an innocent purchaser of a stock certificate which had been stolen would be protected in his possession. A holder can secure himself against loss from theft by availing himself of a process which will at the same time deprive his certificate of any peculiar value. He can write upon it his name, address, and quality, and thereupon the certificate becomes absolutely inalienable, except so far as the title would pass by the death, bankruptcy, or (in the case of a woman) marriage of the holder. For the purposes of sale, a certificate with a name inscribed on it—or, as it is called in the Act, a nominal certificate—would only be a bore. A cautious man who had written his name on his certificate, and wished afterwards to realize, must present the certificate at the Bank, prove his identity, get himself re-entered on the Bank books as an ordinary stockholder, and then procure a transfer of the sum so entered into the name of the purchaser from him. It is clear that, instead of writing his name on a blank certificate, a holder had better return it at once to the Bank, and get himself inscribed on the Bank books as an ordinary proprietor. A section provides that no holder of stocks as a trustee shall take out a certificate, unless he is authorized to do so; and should he do so without such authority, he shall be punishable as guilty of a breach of trust. We are left to the law as to what the punishment will be, and unless the trustee is guilty of fraudulently converting the stock to his own use, the threat is little more than a *brutum fulmen*. There is no provision for the protection of those who have obtained a *distringas* over any share in the stocks.

It may be asked, what use is this Stock Certificates Act designed to serve? but the question is more easily asked than answered. The Act will apparently involve the nation in some additional expense, as it contains a clause enabling the Treasury to make an extra payment to the Bank on account of the trouble, expense, and responsibility imposed upon it; but we may hope that such extra payment will be small, as the operation of the Act itself will most probably be very limited. No rational man will bother himself with

Digitized by Google

nominal certificates when he can obtain the same security with less trouble by simply inscribing his name in the Bank books; nor does there appear any satisfactory reason why any person should run the risk of holding blank certificates. Those who desire to buy stock in exact multiples of £50 are not likely to meet with those who wish to sell except through the medium of a broker, and the employment of a broker has been the only formality hitherto attendant on an investment or sale. The same trouble and greater risk do not constitute any great recommendation of Mr. Gladstone's plan. In our uncertainty as to the advantages of this scheme we have sought information from several of our contemporaries, but with little or no result. One writer suggested that intelligent foreigners, conscious of the instability of their own governments, would eagerly buy certificates of English funds, but it seems to be forgotten that to such a foreigner the advantage offered by our stocks, next to their security, is, that it is not necessary for the proprietor to carry any evidence of title about with him. Fancy the agony of Mr. John Smith, if in February, 1848, when he fled from the Tuileries, he had been conscious that his carpet-bag contained stock certificates to bearer for untold thousands! Even the *Globe*, which usually displays an admirable ingenuity in its thick and thin support of the Ministry, fails to discover the merits of Mr. Gladstone's bill; indeed, its panegyric was like that of Balaam, it ended by sounding an alarm over the facilities which the bill would confer on dishonest trustees. There is, indeed, one incidental advantage which the bill, should it prove other than a dead letter, may confer. If a holder of stock nowadays is drowned or burnt, his name appears on the Bank books, and some executor or administrator claims the money; should such a man hold certificates, it might well happen that the knowledge of the fact might perish with him, and the nation would, *pro tanto*, be the gainer. But it is probable that the operation of the Act will be too limited to allow us to hope for much from this source. Chancellors of the Exchequer are at times disappointed. There is a story told of one not many years since who offered three courses to the fundholder. Anxious to prevent any loss of life through the rush that he anticipated on the day when the fundholders were to attend at the Bank to declare their option, he caused tortuous zigzag barriers to be erected to moderate the incoming tide. The day arrived; one man slowly worked his way through the labyrinth of barriers; and when he reached the counter, a score of clerks pounced upon him and contended for the prize.

Mr. Gladstone's zeal for handling the Funds is probably due to his old longing for Two-and-a-Half per Cents., but as it is expressly provided that the stocks held by certificates shall be subject to the same incidents and powers of redemption as those held by inscription in the Bank books, it is difficult to see how the Certificate Bill will help him in attaining his object. In his Savings Bank Bill he does secure a certain amount of Two-and-a-Half per Cents., but by means of a very improvident bargain. He has in effect proposed to change £100 Three per Cents. into £120 Two-and-a-Half per Cents., though the operation is a little disguised by the additional element of a terminable annuity. The bare proposal to increase the nominal capital of the stocks by one-fifth, in order to reduce the nominal interest by one-sixth, seems too absurd to admit of discussion. Unluckily it has never been discussed, though it is the principle which the House of Commons has sanctioned in passing the Post Office Savings Banks Bill, and will be asked to sanction next week, or the week after, when the Savings Bank Bill comes to a second reading. The Opposition seems to have abdicated its functions, and the journalist can only record the fact that Mr. Gladstone is having it all his own way.

OUR COUSINS AT COPENHAGEN.

WE much admire the self-possession of our cool-headed cousins in Denmark. They are not so befooled with national vanity as they might have been after all the fussy congratulations addressed to them for a month past. What with the tardy remembrance of our Scandinavian kinship, and our habitual patronizing attitude towards a smaller State, such a dose of friendly compliment had been compounded for them as, now and then, to the bewilderment of our Continental neighbours, the fitful sympathies of the English nation are pleased to pour out. By strained ethnological theories, which our politicians are fond of using to prove, for the moment, whatever they will—as Lord Malmesbury solemnly assured the Austrians, in 1859, that we regarded them as our nearest and dearest relations, being of the Teutonic race—it had been made out that the Danish blood in the veins of every Briton was an eternal pledge of our kindness. This consanguinity would for ever keep us, of course, from any chance of disagreement with that kingdom of seafaring Northmen, whose fleet some English sailors yet live to boast that they have twice destroyed, and bombarded its capital city, with as little compunction as they would show at New York, or even at Trieste and Pola, if ever it suited our statesmanship to inflict such a brotherly visit upon the American or the Adriatic shores. But as the Tories of England were all Germans, or rather professed themselves born Austrians, upon the occasion of the campaign in Lombardy just four years ago—so now, when a daughter (God bless her!) of the royal house of Denmark the other day came over as the bride of our Prince of Wales, our most ingenious journalists discovered, and our Poet Laureate lyrically proclaimed, that we were "all of us Danes." Now, for our own part, we have not the slightest objection to be affiliated to any decent foreign stock which the fancies of any essayist on such themes of philological politics may incline to prefer. The *Saturday Review*, for example, inspired last week by the perusal of a contemporary who hails from Copenhagen, had a vision of the ancient brethren "Angul and Dan," the mythical founders of the English and Danish peoples, two personages whom we conceive to be not less heroic, and not more apocryphal, than Gog and Magog, our cherished twin familiars at Guildhall. By all means let us cultivate these very interesting traditions of our Scandinavian descent; let us glory in the Norse dialect of our Eastern Counties; and let the popularity of Hans Andersen with our youngest readers of fiction be a token that we can make ourselves at home with the Danes, as Miss Bremer and Jenny Lind have made us at home with the Swedes, who are partners in "the Scandinavian idea." All this is extremely gratifying as an assurance that our peaceful and defenceless shores between the Humber and the Tyne are no longer liable to the ravages of those ferocious Vikings, whose deeds of bloodshed and rapine were so aptly recited by Professor Aytoun for the delectation of the Princess Alexandra on her wedding day. But then we do think the Danes have a right to expect that this affectionate enthusiasm, got up with such appliances of pedantry and poetry on their behalf, shall outlast the royal honeymoon. And while the inquests are scarcely yet done upon the last of a dozen Londoners crushed to death at the crowded festival of our nuptial alliance with Denmark, the country which has sent us an object of such violent popular rejoicing may fairly look to us for substantial encouragement in its hour of need. If, therefore, we could leave Denmark at such a time to be exposed to fresh menaces from the German Federal power, whose utmost legal claims have been conceded by the proclamation of March 30th, the character of *perfide Albion* for gallantry as well as for sincerity would suffer considerably in the esteem of Europe.

If we may take an article in the *Dagbladet* of last Tuesday as expressing what the Danes really mean, they seem to behave with a degree of shrewdness and sober good sense, which, in spite of the gratuitous warnings of their disappointed patronizers, will bring them some advantage in the long run. But if they do *not* really mean what it says for them, and would desire to have the vacant throne of Greece filled by a Danish Prince after all, we must agree with the *Times*, that affecting to make a great favour of its acceptance, just to oblige the Powers which are puzzled how to dispose of it, and insisting upon a guarantee against German aggressions as the reward for picking up a dignity which nobody else will have, is a piece of sharp practice that may well cause the offer to be withdrawn. We believe, however, that the Danes are seriously in earnest, and certainly in the right, when they say that it would hardly be worth their while to accept this offer for its own sake, and that if they do so at the instigation of the British Government they will have earned some real service at our hands. They are not likely to be intoxicated with the flattering prospect, that, by the marriage of one Princess in England, of another possibly in Russia, and by the election of their William to reign, by the name of George, over a small nation whose sceptre our Alfred has refused, the lineage of Sonderburg-Glucksburg

Digitized by Google

will some day rival the multiplied majesty of the Saxe-Coburgs in providing heads male or female to fit half-a-dozen European crowns. Few royal houses are more ancient or respectable than that of Denmark as it stands, and it has little to gain, in that way, from a family connection with the newly-minted monarchy of Greece. Nor could it, by such an accidental relation, add substantially to the small influence which it may still exert in the counsels of Europe. It would probably give some offence to Russia by occupying the place for which the Duke of Leuchtenberg has intrigued in vain. Though Danish trade and navigation are interested in the balance of naval powers in the Mediterranean, the maritime guardianship of the Baltic is a task sufficient for all the resources of a kingdom which musters but six frigates and four ships of the line. The enemies of Denmark, whose malice could more easily be gratified through the dispersion of her forces at sea, lie in wait for her along the German shores, whence they have not ceased, these fifteen years, to threaten the seizure of her ports, the coveted object of their ambition. It seems, therefore, not unreasonable that if, to aid the diplomacy of the great maritime Powers in settling the Greek succession with a view to exclude Russian ascendancy from the Levant, Denmark is now invited to assume a perilous responsibility in that remote corner of Europe, her appeal to England and France for security against the foes who beset and bully her at home should first be listened to. The sentiments of particular goodwill towards her which have been so lavishly uttered by some of our public spokesmen may be taken for exactly what they are worth. But it is useless to deny, that if a brother-in-law of the Prince of Wales can be got to fill the throne which the Greeks have insisted upon keeping open for Prince Alfred, with the alarming alternative of a Republic leading to we know not what complications of the Eastern question, the present Ministry of Queen Victoria will be relieved of a great embarrassment. And the princely family of Denmark may claim, as their least reward, the benefit of an English mediation, to deliver that gallant little State, once for all, from the unconscionable demands and the scarcely disguised schemes of conquest, by which its constitutional freedom and unity are threatened.

The King of Denmark, who, like Victor Emmanuel of Italy, has won, in spite of some personal faults, the hearty attachment of his people by his political honesty and his zeal for the independence of the realm, can go no farther in the way of concession than he has now gone. By his proclamation of March 30th he virtually gives up the government of his own Duchy of Holstein to the Estates or feudal Parliament of that German province, who, under the superintendence of the hostile Confederation, may legislate as they please against its dependence on the Danish Crown, which retains but a nominal sovereignty in Holstein. All that he now asks is to be secured against foreign interference in Slesvig, a province which never did belong to the German Federal system, but which is a part of Denmark, with a large majority of Danes in its population, who are perfectly content with their allegiance to Copenhagen. The German Powers, aiming at the ultimate annexation of Slesvig, with its convenient ports both on the Baltic and the North Sea, insist upon a close administrative connection between that duchy and Holstein, and pretend that the German emigrants settled in Slesvig (whose number is scarcely equal to that of the Germans dwelling amongst ourselves) are oppressed because the Danish language is used in the Government schools and churches. If the Prussian Government in Posen, or the Austrian in Gallicia, were accustomed to indulge its millions of Polish subjects with the use of their native tongue in official documents and educational institutions, they might have some right to offer friendly advice upon that question. But it is idle to accuse the Danish Government, whose laws and constitution allow more freedom than is enjoyed by any German State, of oppressing the scattered fragments of a nationality that exists only in a few districts of the kingdom, as it exists, in tenfold greater numbers, in America and elsewhere. The German claim is a hypocritical pretext, so far as Slesvig is concerned; and the diplomatic admissions extorted by force or cunning from the weakness of the Danish Government are a palpable snare. The Danes ask for a permanent security against this unjust persecution, which threatens ever and anon to renew the war of 1848; they ask that the independence of Denmark, including Slesvig, shall be guaranteed by the European Powers, and that Holstein shall be made neutral territory, so as to close that road to the vastly superior attacking forces of Germany by land. We are not anxious to see Great Britain encumbered with fresh guarantees of Continental policy; but Denmark claims a fair hearing under the circumstances of this occasion.

THEOLOGICAL TRAINING AT OXFORD.

WE observe that an attempt is to be made at Oxford to promote theological reading among the students. It is high time; for if all be true that several bishops have announced in their recent charges, the superintendence of the preparation for orders is rapidly passing out of the hands of the Universities into those of the many theological seminaries which the supposed exigencies of the times have sown broadcast over the land. We do not propose, here, to enter into any of the collateral questions which might arise in connection with this subject; but we deem it of importance that the eyes of the public should be opened to the fact that Oxford and Cambridge are training our lawyers and our statesmen, but not our clergy. The tables of candidates for ordination throughout the whole number of dioceses in England exhibit this very unsatisfactory result, that not only have the candidates for orders largely decreased in numbers during the last twenty years, despite the increase of the population; but also that, while the candidates from Oxford have decreased to the amount of 34¼ per cent. during the last twenty years, and those from Cambridge 19 per cent., the literates, or men without University degrees, have increased no less than 193¼ per cent. One single training seminary, that of St. Aidan's, near Birkenhead, is at this moment actually contributing the twentieth part of the candidates for orders for the whole ministry of the Church of England.

We must not turn aside to discuss the reasons that may be assigned for the lessening numbers of candidates for orders. They are very apparent, in the unsettled state of theological opinion which prevails, and in the far better pecuniary openings afforded to young men by civil appointments, and by emigration to the colonies. One such visit to this country as that of Mr. Herbert, the Colonial Secretary at Queensland, is enough to turn the heads of fifty young fellows, and drag them off into the Bush. We could point at this moment to Fellows of Colleges driving their own sheep through the scrub, and to men with first-class degrees rolling fleeces, washing sheep, and shearing them, camping out for days and nights on their "run," and living upon the universal "damper" and tea.

The question, however, which is immediately before us is this. Supposing the candidates for orders to continue to present themselves, who is to train them? Are the Universities to allow that important part of their duties to slip into other hands? Is the ministry of the Church to be occupied by men, who, however well trained theologically, have not enjoyed the prodigious advantage of a university career? Let it not be supposed that we presume to utter sweeping condemnation against all theological seminaries and the men who are trained in them. We cannot, however, blind our eyes to the fact, that even the clergy who have been at Oxford and Cambridge show evident symptoms of running too much in a groove, and leave the University with an insufficiency of that common "wisdom," which is as essential as "harmlessness" to the proper discharge of their parochial work. We strongly deprecate the idea that our ancient Universities are to delegate the training of our clergy to institutions which have no prestige, no hold on public opinion, and which, with their absolutely theological bias, must be immeasurably less fitted than the Universities to turn out men decently qualified to exercise common tact and a tolerable amount of worldly wisdom. We are convinced that preparation for orders can go on nowhere so well as at the Universities, where there are many learned professors, splendid libraries, and sufficient endowments. The whole tone of the more steady portion of those communities is in favour of reading. There a theological student rubs his theological corners against secular projections. He debates and hears debated other questions besides those of his own intended profession. He learns humility and prudence, and common sense. He is shaken up in a bag with young future lawyers, statesmen, merchants, squires, and physicians, and learns, what he would never learn in a seminary

Digitized by Google

containing divinity-students alone, that there are in the world pursuits, tastes, interests, whims, and peculiarities as diversified and numerous as there are stones in the highway. We are ready to admit that the various theological seminaries may lay down excellent courses of study, and may do efficient service in storing the head with divinity; but we want a clergy who will come out into our rural parishes with the broad stamp of cultivated humanity upon them.

We are pleased, therefore, to observe that the University of Oxford is taking a step in this direction, although the scheme, good so far as it goes, is yet far from what it ought to be. It is proposed to institute a regular theological examination for *graduates*, to publish a class list, and out of certain funds in the hands of the University, to give three prizes to the most successful candidates. The success of the measure will, no doubt, be considerable, especially if the Bishops agree in making it a *sine quâ non* that every candidate for holy orders from Oxford should pass the examination. This is, we believe, universally required by the Bishops in the case of what is called the "voluntary" theological examination at Cambridge, and which, by reason of this requirement, has become involuntary. Why their lordships have not, in all cases, required the "testamur" of the voluntary examination at Oxford, under the statutes of 1842, we do not know. But if they will, with one accord, insist upon every candidate's name being found in the new theological class list, much good may be done. We have our fears that the examination may become a mere competition for the three prizes; but, nevertheless, its benefits may be considerable.

We do not, however, conceive that this step is more than a move in the right direction. It stops far short of the mark, and has one great defect. So long as the "voluntary" examination at Cambridge was really voluntary, not only *quoad* University, but *quoad* Bishops, it was extremely effective. A high standard was maintained, and much theological knowledge was acquired. But when it became involuntary *quoad* Bishops, remaining, as it does, voluntary *qnoad* University, the standard was lowered. We imagine that men came to it in such numbers, and so wretchedly prepared, that of necessity the examination became less severe, and the passing it more easy. We do not see how it can be otherwise. The Universities do little enough, during their three or four years' course, to prepare their students for passing in theology, and it would, we think, be very hard to compel men on whom they have bestowed the degree of B.A. while in nearly absolute ignorance of divinity, to attain a very high standard of theological learning, before they will grant them a "testamur."

It will be gathered from these remarks, that, in our judgment, the real work of theological training ought to be accomplished by the Universities before the degree of B.A., and not after. One obvious reason for this necessity is to meet the case of men of slender income, who make great sacrifices, and often put a severe pressure on the resources of their friends, to enter the University at all. Such men would find it impossible to remain at college long enough, after taking their degree, to attend a sufficiency of lectures, or to devote a considerable period of time to theological reading. However much it would be to be deplored, that the amount of secular reading should be curtailed—and we would gladly double it, if possible—we see no other way in which a sound theological training can be secured under the wing of the Universities. It, however, is clear that the Church wants men of sound theological training. And, however difficult it may be devise a scheme which shall meet all the requirements of University students, we should decidedly object to seeing Oxford and Cambridge hand over the training of our clergy to St. Aidan's or St. Bees'. The inevitable result would be, that the clergy would lose their position, and the Universities themselves would abandon one of the very strongest of those connecting links which now bind them to the country.

REPUBLICAN LOYALTY LEAGUES.

MR. BRIGHT'S conception of the duty and the proper bearing of a neutral has received a curious illustration in the proceedings of a meeting held the other day at Manchester to protest against the building and fitting-out of "piratical" ships in support of the "Southern Slaveholders' Confederacy." Regarded by itself, this assembly does not appear to call for any particular attention. Its promoters invited all the principal lights of their party, but with no other result than a long list of letters of apology. In the absence of the merchants, manufacturers, and really influential politicians of the city, their places were filled by a few well-known agitators, a couple of Quarter Sessions' barristers anxious to break a lance with the Solicitor-General, and a brace of University professors, who court in excited and miscellaneous gatherings the applause and approval which their extreme opinions and fantastic crotchets fail to win from the calm judgment of their equals in culture and intellectual status. As an expression of public opinion, this meeting was neither more nor less significant than others which are supposed to demonstrate that the sympathy of the masses is with the Northern States. But the speakers who took part in it had at any rate the merit of telling us, with the utmost frankness, what it is that they expect the Government to do, and of exposing, with transparent candour, the frame of mind in which they approach the consideration of international obligations. Although it was their professed object to urge her Majesty's ministers to fulfil, more faithfully than hitherto, the duties of an impartial neutral, they did not hesitate to own the most thorough-going partizanship for one belligerent. The Southern people were described as engaged in a "felonious and traitorous conspiracy" while "fraternal sympathy" was bespoken for the Northerners in their efforts to maintain the Union. Not a word of condemnation was bestowed upon the men who sell arms to the Federals; while those who furnish ships to the Confederates were accused of disregarding every consideration of morality and patriotism in the selfish pursuit of gain. Professor Newman was not ashamed to threaten us with the hostility of France and with revolt in Ireland, if we do not at once accede to all the demands of Mr. Lincoln and Mr. Seward; and in the extravagance of his anti-English zeal he even proposed to test all candidates at the next general election in respect of their willingness to vote an indemnity for the damages inflicted by the *Alabama*. When he proceeded to say that, in the event of a war arising out of the refusal of such an indemnity, he should desire the defeat of his own country, he seems to have gone rather further than a portion of his audience were prepared to accompany him; and we may perhaps conclude that it is only the more advanced and logical members of "the Union and Emancipation Society" who have as yet made up their minds that the security of Yankee commerce must, in the last resort, be guaranteed by the humiliation of England and the disruption of the British empire. The majority are content to inflict upon this country the disgrace of doing the bidding and serving the purposes of a foreign State, without regard to our own just and time-honoured modes of legal procedure, or the rights and liberties of our own subjects. They will be satisfied if our Government will only imitate the Federal Administration by subjecting our shipbuilders to an inquisitorial spy system, and by acting upon suspicion instead of waiting for evidence.

We do not propose to enter once more upon the discussion of Earl Russell's conduct in regard to the seizure of the *Alabama*. It is with unfeigned regret we perceive that Mr. S. Pope, "barrister-at-law," differs from the Solicitor-General in his view of the international law applicable to the case. But upon the whole the Government may rely with some confidence upon the advice of the most eminent jurist at the bar, although it does not command the assent of a gentleman who is principally notorious as the secretary of an association for transplanting the Maine Liquor Law into England. And in spite of much declamation to the contrary, impartial persons will continue to be of opinion that before Mr. Adams was entitled to call upon the Government to put the Foreign Enlistment Act in operation, he was bound to furnish them with the evidence requisite to justify their proceedings. It would, however, be quite idle to discuss the legal bearings of the question with those who, like Mr. Goldwin Smith, are of opinion that "the duties of nations towards each other are not bound by the technical rules of law." As a general proposition it might pass for a harmless platitude to say that "those duties are as wide as the duties of morality and honour." But it is impossible to mistake the meaning or application of such a phrase in the present instance. If we are, as a nation, to regard the Northerners as angels of light and the Southerners as demons of darkness, morality and honour clearly call upon us to lend an active assistance to the former; and it

Digitized by Google

is obvious that that is what the speakers at this meeting really desire. For our own part we cannot so easily forget that in professing neutrality between the belligerents, the country has bound itself to make no difference between them. In discharging the duties and fulfilling the obligations of such a policy, the guidance of technical rules of law is indispensable. They may be hard or narrow, but they are at any rate definite, and they have the merit of having been laid down beforehand and not being struck off, in the heat of the moment, under the influence of passion or sentiment. None but those who desire to abandon the impartiality they are intended to secure, will seek their abrogation. We cannot, indeed, affect to be surprised at any impatience under their restraints; which may be displayed by men who are eagerly urging on a political prosecution in the interest of a foreign State. The Government are not likely to be so ill-advised as to place Mr. Laird on his trial, but it would only be decent if those who clamour for such a proceeding, and inveigh so loudly against his frank confession that he built the *Alabama* for the Confederates, were to bestow some attention on his statement that the Federal Secretary of the Navy also endeavoured to induce him to violate the law. In the absence of any contradiction of an assertion so publicly made, none but those who are blinded by partizanship for the Northern States will admit their right to invoke the penal clauses of an Act of Parliament which they have not themselves respected. It is a salutary English prejudice that a prosecutor should come into court with clean hands; and we certainly see no reason for abandoning it in favour of those who have acted a systematically unfriendly part towards us, since the commencement of their civil war. So far from our being called upon to favour the Federals, they are in truth only entitled to the barest justice at our hands. That they will have; as they have had it. If any proof were required of the steadiness with which her Majesty's Ministers are determined to respect both the spirit and letter of international law, it would be found in their acquiescence in the seizure of the *Peterhoff*. For although there is no doubt that Admiral Wilkes had, strictly speaking, a perfect right to seize this vessel and send her before a prize court, it is impossible not to regard this measure as one utterly wanting in *bona fides*, and as part of a plan for stopping a perfectly legitimate traffic between two neutral ports. The employment of this officer on a station where he would have an opportunity of interfering with British commerce, was quite incompatible with an honest desire on the part of Mr. Seward to avoid topics of irritating controversy between the two countries. Still we have borne patiently with many vexatious proceedings on his part, and have allowed him, without complaint, to proceed to the verge of the power vested in a belligerent. The seizure of the *Alexandra* affords another instance of Earl Russell's determination to carry out our neutrality fairly and fully; while at the same time he properly refuses to allow it to be made the mask for covert hostility to the Confederate States.

It is indeed natural enough that the English admirers of Mr. Lincoln should demand the seizure of vessels supposed to be building for the Confederates without any nice regard to the proof of their alleged destination. They are only seeking to import into England the blessings of a *régime*, which, in the name of liberty, has erected in America something little short of a military despotism. One of the latest illustrations of the practically lawless condition of things which exists in some at least of the Northern States, was lately furnished by the proceedings of General Wright in Illinois. It appears that two persons were brought before a judge of that State on a charge of kidnapping a lad under the pretence that he was a deserter from the Federal army. In their justification they produced a warrant authorizing them to arrest deserters in a district of Indiana. Of course this could not, under any circumstances, sanction their assumption of authority in another State; and they were accordingly held to bail to answer the accusation made against them. As soon, however, as General Wright was informed of this, he sent a military force of 200 men from Indiana into Illinois, arrested the judge, and consigned him to prison. It seems almost incredible—but we are told it is a fact—that although General Wright has since been replaced by General Burnside, no notice whatever has been taken of this violent outrage. When the power of the sword is thus set above that of the law at the will of any General who happens to command in a State, it is not surprising that agitation and disaffection should be spreading fast in the North-Western States; and that we should hear of mysterious organizations like that of "the Knights of the Golden Circle," who are said to number 15,000 in the State of Indiana, and whose objects are certainly not friendly to the existing Administration. On the other hand, some of the friends of the North point exultingly to the revival of a war spirit in the Federal States, as testified by the spread of the "loyal league" movement. Nor are we disposed to deny that for a time the moderate party—the party of peace—has been overwhelmed by one of those spasmodic and superficial movements of popular passion, which are natural and perhaps inevitable amongst a people excited and maddened by such a struggle as that in which they are engaged. It is probably the last outburst of rage and desperation which will subside as quickly as it has arisen, if the Union arms fail to achieve any considerable successes during the spring campaign. In the meantime, nothing can be more complete than the disregard which the promoters of this organization evince for liberty, and for the rights either of States or individuals. The pledge adopted by its members binds them to "unconditional loyalty" to the Government, in order to maintain "the power, glory, and integrity of the nation." And if any doubt could exist as to the meaning of this, it is removed by the gloss supplied by Mr. Conkling, one of the representatives of the State of New York, who tells us "that State rights and State institutions, and all other institutions, if need be, must give way in order that the Republic may live." This is the cause with which Englishmen are asked to sympathize. It is to assist men like these in trampling under foot every right we ourselves hold dear, that we are called upon to strain to the uttermost the powers of a highly penal Act of Parliament. Nor is any ultimate object held out to us which might redeem the temporary wrong. These "loyalty league" men discard the cant of abolitionism. They have at least the frankness not to feign an affection for the negro which they do not feel. They avowedly have no other wish than the re-establishment of the Union at any cost of blood or treasure. To them it is perfectly immaterial whether the Union so restored is founded on the consent and affection of the people, or resembles that between Russia and Poland. They are quite prepared to repeat in the New World, on a scale corresponding to the vastness of its geographical features, the oppression and the wrong which have hitherto been the characteristic opprobrium of European despotisms. It is as much as can be expected that we should stand by and watch with calmness this latest manifestation of democratic respect for the "rights of man." As the subjects of a constitutional monarchy, we have an incurable incapacity for realizing the blessings of such an empire as it is proposed to found in America under the name of a Republic.

MR. WALTER AND SCHOOLMASTERS' CERTIFICATES.

"CURSES," says an Eastern proverb, which Southey has taken for the motto to one of his poems, "curses are like young chickens, they always come home to roost." For *curses* read *claptraps*, and the proverb applies admirably to the situation in which Mr. Lowe at this moment finds himself. "Claptraps are like young chickens, they always come home to roost."

Even the general public by this time knows pretty well what a certificate of merit is. It is a document, issued by a department of State, attesting that the holder has passed a satisfactory examination in the subjects of elementary instruction. In every country of Europe the elementary schoolmaster has to provide himself with such a document. It appears that Mr. Walter, the member for Berkshire, has at Bearwood a valued schoolmaster without this appendage. His own favourite fox being thus without a tail, Mr. Walter has been led to entertain doubts as to the utility of tails in general. Gradually the whole question of tails has been explored by him, and he has arrived at an absolute conviction of their inutility. Henceforth he is an infidel as to tails. Like all great infidels, he is not satisfied till he can dethrone the idol which he condemns; he cries out with Voltaire,—"*écrasons l'infâme!*" His own schoolmaster, devoid of a tail, suffers under an unjust slight so long as tails are prized. The schoolmasters of the neighbourhood, who

Digitized by Google

wear these bushy honours thick upon them, flap them provokingly on the ground when Mr. Walter or his schoolmaster pass by. "Let us have done with this nonsense," cries Mr. Walter. "Results are everything: tails without works are nothing. Instead of asking whether a schoolmaster has a certificate, let us ask what results he produces in the reading, writing, and arithmetic of his scholars. Let the State pay simply for these results, and ask no questions as to the person of those who have produced them. Let us have free trade in education. *Sursum corda.* Down with tails!"

It is easy to make a triumphant defence of tails, and to show Mr. Walter's proposal to be an absurdity of the first magnitude. He proposes an administrative impossibility. The State cannot possibly accomplish this minute inquisition into results; it cannot possibly scrutinize every single item of the work done for it. If it attempts this, one of two things must happen: either the scrutiny must be made with inadequate means, and then it will be a mere farce; or it must be made with adequate means, and then it will prove so ruinously expensive that it cannot be continued six months. What the State can really do is, in the first place, by examining the future functionary, to ascertain that he is in a certain degree competent for his function; and in the second place, by examining from time to time samples of his work, to ascertain that he actually fulfils his function properly. This is the universal practice of all rational administration. Mr. Walter says:—"Instead of examining the functionary beforehand, and samples of his work afterwards, examine all his work when he is in discharge of his function." The State may reply:—"Why do you thus rob me of a security which I can take, and substitute for it a security which I cannot take? When you engage a doctor for your union, you take a man with a diploma, you keep your eye on his work, and you dismiss him if he does it badly; you do not forego the security of the diploma, examine every single case of illness treated by your practitioner, and pay or dismiss him according to the success of that treatment. You ask me:—'Why should the intending practitioner give me the security of his certificate?' Rather let me ask you:—'Why should he not?'"

But Mr. Walter is fortunate. He addresses his proposal to a department of State which is precluded from giving him this plain answer. He has to deal with a Minister who has himself used all Mr. Walter's clap-traps, and who now finds them turned against himself. *Let us have free trade in education*, is a cry of which Mr. Lowe is the original proprietor. Last year he and the *Times* thought they could not let us hear it too often. Last year Mr. Lowe was never weary of disparaging all securities except this one security of results; he could not sufficiently scout the notion of paying for "means," instead of solely paying for "results;" he had no words strong enough to express his scorn for the hollowness of the old system of the Privy Council Office. He rated tails very cheap then. If he defends them now, it is not because he believes in them a bit more than Mr. Walter does, but because Mr. Walter's crusade against them threatens him with a personal embarrassment. Mr. Walter's motion threatens Mr. Lowe's measure of last year with a practical, immediate *reductio ad absurdum*. That measure,—extolled only by enemies of all State aid to education, by clergymen in search of a bishopric, or by officials to whom all the works of their superiors are very good; condemned most by those who had studied popular education most, and happily described by the best Review of the best educated country in Europe, Switzerland, as "*une soi-disant réforme, inintelligente et mal combinée*,"—that measure rested with its whole weight upon a principle on which Mr. Walter's motion, also, wholly rests; the principle that the State's business in popular education is to ascertain whether or no each child in a school can read, write, and cypher, and to pay accordingly. The absurdity of this principle is proved, as we have already said, the moment it is attempted to give full practical effect to it. Mr. Lowe hoped to avoid this test; he had to deal with but a small portion of the elementary schools of England, and these he hoped to be able, or to pretend to be able, to pay by results. Mr. Walter presents him with an addition of 15,000 schools, and Mr. Lowe begins to perceive what "payment by results" really means administratively. Payment by results would, he told us, ensure one of two blessings—economy or efficiency. It is to be hoped its blessing of efficiency may be great; for assuredly, if Mr. Walter's motion passes, its blessing of economy will be small.

Mr. Norris, a painstaking Inspector, and laudably studious of the goodwill of his superiors, has in this difficulty come to Mr. Lowe's assistance. Mr. Norris begins action by general reflections on the utility of the certificate; by a eulogy on tails in the abstract. What he says is true, but, in the contest between Mr. Walter and Mr. Lowe, not to the point. Mr. Walter's strength lies in Mr. Lowe's inability to use these topics; in Mr. Lowe's own well-remembered cries for free trade in education and payment by results. Mr. Norris then changes his tactics a little. "Let us distinguish," he says: "there are tails and tails. There is the old corrupt tail, and there is the pure and reformed branch which Mr. Lowe has instituted. There is the money-bearing certificate and the barren certificate. The moment the State ceases to pay money to the holder of a certificate, all the blemishes of the certificate-test disappear, all its beauties come out in full bloom." "Fine words," replies the inexorable Mr. Walter; "but free trade in education? but payment by results? So long as you insist on the certificate, money-bearing or barren, you have neither." Mr. Norris then quits the thorny regions of intellectual dispute. He soars into the empyrean of the moral sphere. "Profane man," he cries from above to Mr. Walter, "you know not what you are attacking. There exists in the certificate a mysterious virtue. Like the precious glass in the Middle Ages, which indicated the approach of poison, the certificate—that wonderful, that almost divine instrument—has the power of indicating the approach of intemperance. I have come in contact with uncertificated schoolmasters, of whose general sobriety I could not but feel grave doubts. The hue of Bacchus was on their nose and the odour of juniper upon their lips. I have presented to them the certificate-test and they have shivered into a thousand pieces. Drunkenness is the English vice; and an engine which thus detects drunkenness must be preserved at any sacrifice of logic." Having said this, Mr. Norris passes into the heavens out of our sight.

Meanwhile, Mr. Walter's motion will soon be in the House of Commons. The Goddess of Unreason counts many votaries in that august assembly; and how any matter, which is not a matter of party, but only a matter of good government and good sense, may be there decided, it is impossible to foretell. Mr. Norris's attempt to defend the certificate-test on transcendental grounds is vain. The sun shines both on the evil and on the good, and the certificate rewards both the purple-nosed and the pale-nosed. To defend the certificate-test upon the true grounds is for Mr. Lowe impossible. But it is to be hoped that the House of Commons will save Mr. Lowe from the due results of his own impolicy. It is to be hoped they will say, "You have given us a measure of which Mr. Walter's proposed measure is certainly the legitimate consequence. But then your own measure is said to have none of the signs of life about it; weighty authorities were and are against it; we permitted its introduction only on trial and on your responsibility; the whole question of education will probably soon have to be re-opened by us. Let us leave things for the present as they are. Let us destroy no more of the old system, until we are sure that we have not destroyed too much of it already. Let us have no more of payment by results, until we are sure that what we have of it will give us satisfaction. Let us at any rate reject Mr. Walter's proposal as premature." This is the course which the best friends of education must wait to see the House of Commons take. They will have real ground for uneasiness should the House take a different course, and insist on embarrassing Mr. Lowe by carrying out Mr. Lowe's own doctrines. Even amidst that uneasiness, however, it will be impossible to repress a smile at seeing the engineer hoist by his own petard. *Tu l'as voulu, Georges Dandin, tu l'as voulu!*

THE ROMANCE OF WICKED WOMEN.

The extraordinary success which has attended Miss Braddon's lurid novel, "Lady Audley's Secret," is another proof of the interest that is generally excited by the delineation of female guilt. It is a morbid feeling; but there is undoubtedly a growing tendency to pry into the dark recesses of those feminine natures which, by their own inherent wickedness, or by the pressure of cruel circumstance, have attained that degree of reckless ferocity

Digitized by Google

invoked by Lady Macbeth through the assistance of the evil powers :—

> "Come, come, you spirits
> That tend on mortal thoughts, unsex me here,
> And fill me, from the crown to the toe, top-full
> Of direst cruelty! Make thick my blood,
> Stop up the access and passage to remorse;
> That no compunctious visitings of nature
> Shake my fell purpose, nor keep pace between
> The effect and it! Come to my woman's breasts,
> And take my milk for gall, you murd'ring ministers,
> Wherever, in your sightless substances,
> You wait on nature's mischief!"

Of all Shakespeare's female characters, Lady Macbeth is certainly the one which stands out most prominently from the crowded canvas he has left us. It is the part with which tragic actresses can do more than with any other—the part that is particularly associated with the memory of Mrs. Siddons, and in which Madame Ristori, a few years ago, made so great an impression on the English public. It is true that, in the creation of that character, the poet contemplated something much higher than what we now call "sensational writing." He had a moral purpose, such as makes horror legitimate. But it is doubtful whether more than a few who read the play, or see it performed, think or care about the moral intention. The charm lies in the contemplation of enormous wickedness associated with the external graces and winning ways of the sex which has engrossed to itself the epithet of "gentle." There is even, it must be confessed, a certain fascination in the more exalted and poetical exhibitions of female ferocity—something superbly terrible in that tiger-like union of sleek and supple ways with the abiding wrath that lurks within. A vixen is simply repulsive and contemptible; a Madame Brinvilliers, who to the bright and gliding beauty of the snake can add the serpent's dire and deadly venom, is alluring to ordinary minds even in the midst of the detestation she inspires. Lucrezia Borgia—though, by the way, she seems to have been a good deal maligned by the popular representations of her—lives in the memory like a thunder-storm; awful, menacing, and perilous, yet attractive. It is the same with the great female criminals of real life. Madeleine Smith received offers of marriage on the mere chance of her acquittal of the murder of L'Angelier. Mrs. Manning was the heroine of the autumn months of 1849. She was decidedly the "favourite" when she and her craven husband came out from that fatal prison door upon the scaffold; and the young "roughs" sang songs about her with hideous gallantry. Every one who recollects the state of popular feeling during the progress of that memorable trial must be aware that the murderous Swiss woman was an object of positive interest to all classes. She was utterly remorseless and bloodthirsty; she contrived and carried out (for Manning himself was little better than her trembling accomplice) a murder of unusual atrocity and fantastic horror; yet she was courageous, and almost grand in the defiant might of her guiltiness. However discreditable it may be to our nature, most minds are influenced by a secret and unavowed sympathy with the boldness of crime; with that degree of crime which seems self-centred and self-dependent—which accepts all the chances beforehand, plays for a great issue on the greatest of stages, and, if defeated, submits to the penalties with proud composure. The fact is that wickedness on a scale of unusual enormity is a manifestation of power; and power is the quality which is most readily appreciated by human beings. The transgressions of great empires are commonly forgiven, except by those who suffer from them. The most moralising of historians have little to say in reprobation of the rapacity and violence of old Rome; and, though our own rule in India will hardly bear strict examination in all its features, it is not likely to be visited with any very severe judgment by the writers of a thousand years hence, unless by that time we have attained a higher standard of morality than even Christianity has yet helped us to. In the sublime epic of Milton, it is to the character of Satan that the memory most frequently reverts; to that solitary and prodigious figure, darkened by the shadow of Titanic guilt, scarred by the wrath that has avenged it, despairing of all restoration to the happiness which has been lost, yet confronting the hopeless Eternity and the lidless eye of Divine Power with the steadiness of an evil Fate. To descend to the petty area of every-day novels and plays, it is generally the bad characters which engage most of our attention, and which have evidently absorbed the chief powers of the author. Quiet-going virtue is insipid after audacious sin. It is cold veal after devilled kidney—toast-and-water after brandy-punch. We are not defending the taste; we are simply noting its existence. Partly it proceeds from an unconscious stirring of the vicious elements in our nature; partly also, no doubt, from an instinct which is not corrupt. People feel that the bad characters are at least perfect in their way; they are cast in an heroic, though a devilish, mould; there is nothing mediocre or common-place about them. The same readers perceive that the good characters are, after all, not superhumanly good; not perfect in *their* way, but only tame reproductions of themselves—mere vapid assemblages of half-developed virtues and half-extinguished vices. The vulgarest natures have at times a craving for an ideal of some sort; and they find a nearer approach to this in daring criminality than in faltering goodness.

That this tendency to be interested in wicked characters should be excited with peculiar intensity whenever the character is a woman, is probably due in the main to the force of contrast. When Ristori, in "Medea," suddenly leaps as it were from the ambush of her beauty, her dignity, and her sorrow, into the tumult of passion and savage power, and in that appalling burst of long pent-up ferocity, says, that as the panther in the woods treats the victim he has watched and waited for, so will she treat Jason the moment his destiny has delivered him into her hands—springing upon him from the height of her revenge, and rending him in the cruel gambols of her hate—she awakens in the audience a feeling which is not altogether that of horror and revulsion. To judge from the accounts given by old opera-goers, a similar effect used to be produced by Pasta in the same character. In fact, some of the ancient mythologists seem to have had an instinct to that end, in making Jason ultimately reconciled to the beautiful, fell enchantress. The woman at Manchester, who last year was accused of murdering her step-children, in consequence of the supposed ill-treatment of the family by the landlord's agent, subsequently slain by her husband in the wife's presence, had something of the Medea type in her character; yet the jury acquitted her. Probably she was not guilty to the extent imputed by the prosecution; she seems, indeed, to have been influenced by the stronger will of her husband, to whom she was deeply attached; yet she must have had a disposition strangely divided between love and fierceness. The dramatists of the Shakespearean time would have seized on such a character and such a combination of events. Webster, in particular, would have elaborated this story into one of his most ghastly tragedies. In his play of "The White Devil," he has depicted a woman whose beauty is but a weapon of her guiltiness, yet, for whom, nevertheless, the sympathies of the reader are enlisted. Vittoria Corombona, says Hazlitt, "is made fair as the leprosy, dazzling as the lightning. She is dressed like a bride in her wrongs and her revenge." And he adds, that in the trial scene "the sincerity of her sense of guilt triumphs over the hypocrisy of the affected and official contempt for it" exhibited by her judges. There can be no doubt that this is very questionable and dangerous ground, and Shakespeare, with his wider and more healthy genius, avoided all such seductive horrors; but Webster was what we should now call a "sensational" writer, though one of unwonted power and profundity, and he knew that he was striking on a chord which would vibrate in the breasts of his audience.

A curious psychological discussion might be raised upon the question whether instances of prodigious and superhuman guilt are or are not more common among women than among men. We know, of course, that the larger number of ordinary criminals are males; but we are speaking of criminals who go *beyond* the ordinary standard. Even if it were to be decided that women have surpassed men in this as in some other respects, it would not be to the discredit of the sex as a general rule, because the special instances are simply a perversion of some of the best qualities of the feminine nature. Women are invariably impulsive, and so much good results from their impulsiveness that it would be bad philosophy to quarrel with the habit because of a few occasional ill effects. The excessive caution of men—the tendency to reason about everything, to consider consequences before acting, to view all the possible and even the impossible sides of a question, to make up the mind in theory, and yet to hesitate in practice—saves them, indeed, from many an act of hasty injustice, but often leads to selfishness and moral cowardice, and sometimes precipitates the very evils it was designed to avoid. There are fortunately few men who push this quality to the morbid extreme which our great dramatist has exhibited in "Hamlet;" but still, as compared with women, all men are deliberative, and it is right that they should be. The complex and finely-adjusted structure of civilized society requires something of the judicial frame of mind in those who have the chief conduct of the world's business. Yet it is equally necessary that this proclivity should be balanced by a correspondent leaning in the opposite direction. Women judge by a species of instinct, and in a large proportion of cases they leap to the right conclusion. The absence, or the comparative subjection, of the ratiocinative power,

Digitized by Google

enables them to confine their attention to the one aspect which immediate circumstances present; and by that one aspect they judge the whole question. Hence they are decisive in opinion and quick in action; alert in sympathy and "sudden in quarrel." Hence, also, they are sometimes unjust and unreasonable, and not so prone to make charitable allowances, even for one another, as men are; and hence—to come to the matter we are more particularly considering—they are liable, when their affections are thwarted and beaten back upon themselves, to turn the very energy of their sympathies into wild and avenging ministers. Even women themselves generally admit that a thoroughly bad woman is worse than the worst of men; and this is so because the vehemence of the rebound is necessarily in proportion to the original momentum.

DINING ROOMS FOR THE WORKING CLASSES.

If Glasgow can teach the London artisan how to dine well for fourpence halfpenny, the Scot will do him a great service. At the present moment the labouring man in this great metropolis pays more extravagantly for the two items of house-rent and food, according to what he gets, than any of the classes higher in the social scale, for the simple reason that he is a retail purchaser in both commodities on the smallest possible scale. But as he is at the same time a member of the largest class, and the only one that pays *ready money*, he has only to club with his mates to stand in the position of a wholesale customer on a scale which dwarfs to insignificance the purchasing powers of all other classes. The operatives of Glasgow, or rather those who have undertaken to cater for them, have been the first practically to appreciate this fact; hence the success of the dining-rooms for the working classes in that city. Manchester, we are told, is about to follow this good lead; and London has already two associations threatening to compete with our cook-shops and alamode-beef houses. The great merit of the Glasgow plan is, that these dining-rooms are self-supporting. The tariff at which the refreshments are sold not only pays, but leaves a small profit. There is no petting on the part of lofty philanthropists who, on the score of a twenty pound subscription, condescends to superintend the tastes and appetites of the working man. Another good feature of the scheme is, that only the best food is supplied. Only those who have had a long acquaintance with the artisan, knows how particular he is to have the best his means will afford. This may look like extravagance on his part, but it is really true economy, and possibly lies at the bottom of that superiority he boasts over the *ouvriers* of other nations. A correspondent of the *Times* tells us that for fourpence halfpenny he got in one of these dining-rooms "a pint of pea-soup, a plate of hot minced collops (beef-steaks minced and stewed), a plate of potatoes, and eight ounces of bread," all far better in quality than could be got at a railway tavern—a pretty good dinner for the keenest appetite, and infinitely more nutritious than that provided for the workman in his own home. The *carte* from which he has to choose is not very ample, it is true, but there is range enough, with two exceptions, to satisfy any ordinary appetite. But these two are, however, worthy of note. For instance, why should a working man be compelled, by the rules of these dining-rooms, to eat beef-steaks and roast beef from morning to night, and from one year's end to the other? Surely, this is only repeating the error under which our soldiers so long suffered, and which not only disgusted, but physically impoverished them. We are asked to approve this bovine monopoly, on the score of the simplicity of the arrangement, by "J. O.," in the *Times;* but, on the same principle, oatmeal would have far higher claims. Variety is as essential to the working man, in the article of food, as to the rich man, who, if he had to dine off beef day by day, would, we fancy, sing that national song, "O the Roast Beef of Old England," to a less cheerful air than he does at present. And why, we ask, is the working man to have no beer? Surely these establishments are not set up in order to carry by a side wind what teetotal societies have failed to accomplish in a direct manner. We sincerely trust that the promoters of the London scheme will not follow the lead of the Glasgovians in this particular, as we feel confident of its failure if it does. We will back the eating-house, with its bad meat, its hot steam, its dirty benches, and its slatternly waiters, but where the guest can order his pint of half-and-half from the "Red Lion" over the way, against the best appointed working class dining-room that Glasgow can show that is worked on the cold water system. We should be sorry to see these improved restaurants turned into drinking places; but surely Temperance herself would not "deprive a poor man of his beer" at dinner. Drunkards are not made temperate by such means, and the really temperate will not brook any such interference with their ordinary habits. It will be remembered that an attempt was made by philanthropists to put down smoking in village clubs and reading-rooms, and the total failure of these institutions, in consequence, should not have been lost on those who have engaged in this new movement. Nothing is more difficult than to change the food and drink of a people, and any attempt to do so suddenly or unnecessarily is sure to end in failure. These, though important errors in the scheme of management of the Glasgow Working Men's Dining-rooms, are counterbalanced by much that is excellent. The plan of pricing every article offered at a penny (with the exception of meat) is excellent, as it enables the hungry man to arrange a dinner so as exactly to suit his coppers. Let us contrast such a repast as an artisan will soon be able to get in any quarter of London, with that he at present obtains. If a carpenter, or a bricklayer, or a road-maker is engaged any distance from home, his dinner hour is spent generally as follows:—When the bell rings to knock off work, he generally throws himself down on the ground and has a snooze until his wife, who "stokes" him, performs this operation by means of a basin filled with potatoes and cabbage, and generally a piece of bacon; his fingers and a clasp knife enable him to complete his rude repast in a manner but little removed from that of the hound in the kennel. To such a man the decent cloth, the seat, the well-ordered room, the soup, the collops, and the slice of plum-pudding, would be so many elements of civilization, all tending to lift him in the social scale, and to give him that self-respect without which there is no true manhood.

Whilst, however, to a vast number of the bachelor portion of the artisans, and those who, as we have said, work so far away from home as to prevent their returning to dinner, these Working Men's Dining Rooms will prove of infinite value, we may perhaps be allowed just to hesitate a doubt if their effect upon the family life of the workman will be good. It will be remembered that during the controversy in the *Times*, "How to Live on Three Hundred a Year," it was asserted that young men were spoilt by club life and club dinners for domestic life. How will it be with the young artisan, accustomed to the luxuries of his dining-room, when he takes to himself a wife, and has to share with her the ill-dressed flaps of meat that generally fall to the share of the poor man? And how will it fare with the poor wife in those cases where the husband is enjoying himself on soup, and roast, and pudding, in his well-lit, well-warmed, spacious dining-room? In Glasgow and Manchester, where there is no domestic life for the factory hand, and where husband, wife, and child alike toil in the mill, these dining-rooms are a godsend, and indeed a necessity; but in London the case is somewhat different; and the social meal spent together is certainly an element of domestic life worth maintaining, and we trust it will not be shaken by the introduction of this new Glasgovian scheme. It is not only the mid-day meal that is threatened with revolution, but all other meals. For twopence a man can get a pint of excellent coffee, with milk and sugar, and four ounces of buttered bread, so that he has only to hire a bed, and here is his board found him for about seven shillings a week. It may be asked, Can a working-man spend even so much for food simply on himself, when he has a family? The better class artisan, certainly; but the labourer, whose wage is not more than a pound a week, No. This leads us to the reflection that in all these improvements the class that takes advantage of them is far above that for which they were intended. This was proved when model lodging-houses were first established. These were intended for working-men only, but it often happened that reduced gentlemen were found in them; and on occasions of excursion trains arriving from the country, well-dressed people carrying carpet-bags were often found demanding admission for the night. The pressure of class upon class is, however, so great, that it is often difficult to say whether the wearer of the fustian jacket or the seedy black coat is the better off,—at all events, when these dining-rooms are self-supporting, it matters little what rank in the social scale frequents them, as they can be extended *ad libitum*, and they violate no principle of political economy. It is, however, far otherwise when such schemes are supported by public subscriptions, for then the philanthropist enters into unfair competition with the honest tradesman, and in the endeavour to minister to the needs of the poor, runs a chance of pauperizing respectable people. A knot of active, well-meaning persons of this class seem to have stolen a march upon those who are about to establish dining-rooms on the self-supporting system,—now working so well at Glasgow,—and advertise "The London Association for the Establishment of Dining and Refreshment Rooms for the Working Classes." This scheme is to be partially supported by donations, and we see that the honour of managing or mismanaging the affairs of the association is to be pur-

Digitized by Google

chased for £10 and £25 respectively. Of course a number of wealthy busybodies can always be found to appropriate other people's ideas, but there can be no doubt of the fate of an establishment presided over by such a management. To start with, they propose a bill of fare which is as extravagant as that of Glasgow (in the shape of meat, at least) is meagre. Here it is:—

BILL OF FARE PROPOSED TO BE ADOPTED IN LONDON.

Soups.—Meat soup, jullienne, soldiers', and vegetable, each 1d. per pint.

Fish.—Cod, 1d.; plaice, 1d.; and toad-in-the-hole, 1½d. for 8 oz.

Joints.—Leg of mutton, 2d., 4 oz.; salt boiled beef, 2d., 4 oz.; stewed fresh beef, 2d., 4 oz.; beef pudding, 3d., 10 oz.: soldiers' meat dumpling and potatoes, 3d., 16 oz.; beef pies, 2d.; and "India pot" (a very excellent, substantial dish, cold), 3d., 16 oz.

Miscellaneous.—Kidney and Scotch tripe, 2d., 6 oz.; curried tripe, 3d., 10 oz.; tripe toad-in-the-hole, 3d., 10 oz.

Puddings.—Indian, 2d. for 8 oz.; Yorkshire, 2d., 8 oz.; honey-balls, 2d., 8 oz.; polenta (sauced), 1½d., 16 oz.; ditto (cheese), 1½d., 16 oz.; sandwiches of new mixture, 1d., 4 oz.

Vegetables, &c.—Carrots, greens, turnips, broccoli sprouts, ½d. per plate each; kohl cannon, ½d. for 4 oz.; bread, ½d. for 4 oz.; and butter, 1d. for 2 oz.; coffee, ½d. for three-quarters of a pint; cocoa, 1d. per pint; tea, price not yet fixed.

We should say such a *carte* as this will require the contributions of the affluent, and whilst the guest delicately sips his soup jullienne, and relishes his fish and curried tripe, he will without doubt bless the benevolent individuals who provide him with such excellent fare at so small a charge. The extravagance of such a scheme will, however, correct itself, and the alamode-beef house need not fear any prolonged competition from this charitable institution for feeding the million.

We have, however, the word of Mr. Warriner, the Instructor of Cookery to the Army at Aldershot, that this bill of fare is even more economical to the association than that used in the dining-rooms in Glasgow. If this be really so, what need is there of donations? On the contrary, it should give a greater profit than the self-supporting Glasgow scheme. "Answer me that, Master Brooke!" At all events, whichever scheme succeeds, the working man in search of a good dinner will be sure to be a gainer, and we trust also that the publican will be a loser, which he certainly will if these dining-rooms alter a very obnoxious rule, and supply the working man with his pint of sound table-beer to wash it down, in place of the salted, tobacco-flavoured liquor, cunningly contrived to make him thirst afresh, which he will find in every public-house in London.

THE PADISHAH ON HIS TRAVELS.

THE opening of an International Exhibition of Works of Industry at Constantinople, and the announcement that the Sultan has gone to visit Egypt, are welcome signs of the progress of Western ideas among Orientals. The Exhibition may not have much merit in itself; the building may be in bad taste, the arrangements clumsy, and the collection incomplete. Nevertheless, it is valuable, if only to show that Mohammedan prejudices are not invincible, and that the Turkish mind can be roused from its proverbial apathy to curiosity, and even to something like excitement, by means other than war or religious fanaticism. In comparison with the crowds that flocked to the Exhibitions of London and Paris, it may appear ridiculous to speak of 5,000 visitors at Constantinople as a fact worthy of notice; but when the indifference and contempt Turks not connected with the Government generally evince for Frank ideas are remembered, it will be found less insignificant than it would otherwise appear. It has been objected that the Turks declined the proffered aid of Frenchmen to organize and carry on the Exhibition, and that they decided to do the whole of the work themselves. So far from this determination being a source for regret, it should be a cause for rejoicing, as indicative of a growing spirit of self-reliance. If the Exhibition had been conceded to European speculators and contractors, it might, perhaps, have been more successful; but it would have lost its native character, and would exercise little or no influence upon the Eastern mind. It would have been nothing more than an importation, whereas now it is an adaptation which necessitated a certain amount of thought and ingenuity. What is to be desired is, not that the Turks should adopt our cut and dried notions, or content themselves with the use of our productions; but that they should be stimulated by our example to think and act for themselves. It is comparatively easy to induce them to copy. Mahmoud established Western discipline among his troops, clothed them in frock coats and trousers, and found no difficulty in making them wear the hateful sign of the cross in the shape of braces, to the detriment rather than to the improvement of their character as soldiers. The palaces of Constantinople are filled with the toys and luxuries of our civilization. *La Jeune Turquie* reads French novels, sighs over social anomalies, prates sentiment, and assumes the follies and vices of *la jeunesse dorée* of Paris as easily as it puts on varnished boots instead of orthodox slippers. But all this is the mere semblance of civilization; it is nothing more than a thin glaze upon the surface, and a return to the most savage fanaticism is the ordinary end. Nor is it surprising that it should be so, for the inner man has remained untouched. Neither his reason nor his interests have been affected. What he seemed to be was not the development of influences working from within, but an application from without. It would be wrong, however, to conclude that Turkey has made no real progress. The condition just described may be taken as the result of French attempts at civilization, which never penetrate and take root in the soil. There has been progress, springing from selfish motives and material in its character, but durable and satisfactory, because it arose from the operations of trade, and enlists on its side the interests of all parties. If we take this view, and embrace in it the whole empire, there will be no reason to be dissatisfied with the advance Turkey has made during the last half century. It has been slow, in comparison to what the nations of Europe have achieved in the same period, but rapid, if we compare it with the almost stationary condition in which the Turks had remained during preceding ages. Hitherto the labours of Ottoman statesmen have been employed in preparing the way for improvements by removing obstacles and consolidating the central power, so as to be able to uphold the authority of the Sultan and enforce the observance of his decrees. Now that this has been in part accomplished, and the danger of foreign war averted, we may look for more rapid advance, but its speed and extent will depend very much upon the Sultan; and it is on this account that his beginning to travel acquires importance. Religious prejudices, and the absurd pretension to be the King of Kings, which it is deemed politic to maintain in the eyes of the vulgar, prevent the Sultan from travelling beyond the limits of his empire. It is therefore impossible for him to see and judge for himself of the wealth and strength which result from the maintenance of public order, the removal of religious disabilities, the pure administration of justice, and the establishment of equality before the law; but fortunately he will be able to form an approximate estimation of their beneficent effects by observing the condition of the provinces of his great vassal, the Viceroy of Egypt. In 1814, when Captain Light visited the country, seven years after Mehemet Ali had obtained the Pashalic, there were only two English merchants in Alexandria; and the Frank population, which consisted of about twenty merchants and their families, felt their lives and property to be so insecure that they dwelt apart from the rest of the inhabitants in the Okellah, which was enclosed by walls, and had but one entrance that was capable of being barricaded and easily defended. The chief if not the sole trade was in the supply of corn to the English army in Spain, and that was the monopoly of the Pasha. Now, the Italian colony in Alexandria and Cairo numbers 12,000, independently of the subjects of other European states. If we take the five years ending 1860 as years of ordinary trade, and during which there were no disturbing influences at work as there are now in consequence of the cotton famine, it will be found that our imports of Egyptian produce had steadily increased from 1½ millions sterling to 2½ millions, and that our exports to Egypt had also increased from 5¾ to 10¼ millions. In the last amount the Indian transit trade is included; but even after that is deducted, the balances will be considerable, and show a rate of increase equal to that of our imports from Egypt. If the Sultan compare these figures with those supplied by the trade of his own dominions, he will learn that his subjects' imports of English goods had, during the same period, declined by upwards of £200,000, and that their exports hither had fallen off by a like amount. He will, moreover, learn that the total import and export trade of Egypt is one-third more than the total import and export trade of his own State. In the last year of the period selected for illustration, Egypt sent us as much corn as Turkey, though the latter includes the great grain growing lands of the Principalities. She also sends cotton to the value of 1½ millions, while the Sultan's territories sent none. Yet in Syria and the neighbourhood of Smyrna there are vast tracts of land capable of growing the finest qualities, and for which both soil and climate are admirably suited. Labour there is little, if at all, dearer than in Egypt; there is no great difference in the cost of carriage; and the inhabitants are superior in intelligence, strength, and endurance to the fellahs of Egypt. But what ought to strike the Sultan the most forcibly is the fact that Egypt, with its contracted territory and scanty population,

Digitized by Google

yields a yearly revenue nearly equal to one half the income obtained from his much larger and more populous state.

It may be urged that the prosperity of Egypt is due to its geographical position, to its lying on the route of trade between Europe, India, China, and Australia; and there is no doubt that it does derive considerable benefit from the overland transit, but this through-traffic would have conferred very few advantages if it had not been met by exertions in other directions, and it can have exercised no direct influence upon the grain and cotton trades. Besides, the late Sultan had, and the present one can have whenever he please, an opportunity of sharing largely in the traffic between Europe and the far East without spending a penny or undertaking any responsibility. For years past there has been a company of most respectable capitalists striving to obtain permission to construct what is known as the Euphrates route; but the Firman has been constantly refused, owing, it is said, to the opposition of France, which is desirous of retaining the present line of traffic for the benefit of Marseilles and the railways between that port and Calais. The Euphrates route possesses great recommendations. It affords a second line of communication, which is extremely desirable both for commercial and political purposes. It is the shortest and easiest route—it avoids the tedious and dangerous navigation of the Red Sea, and reduces the sea passage to a minimum which would all tend to make the public prefer it to the Franco-Egyptian line. Now that the Sultan is the guest of his Viceroy, and witnesses the advantages which accrue from offering no impediments to the course of trade, he cannot fail to regret the loss he has sustained through a servile deference to the selfish policy of one of his allies. And if the prospect of a busy, thriving trade should excite his ambition or his avarice and induce him to assert his independence, it will be not the least of the benefits that will arise from the Sultan's travels.

If Abdul Aziz be of an inquiring mind and ask by what means Mehemet Ali was able to attract the capital and enterprise of Europe to Egypt, or how it is that on the Exchange of London, Paris, Frankfort, and Amsterdam, his Viceroy's credit stands higher than his own, he will learn that the potent charm consists in maintaining perfect protection to life and property, and in placing Christians and Mussulmans, natives and foreigners, on an equal footing before the law. To make Franks respected, Mehemet Ali often resorted to summary and sanguinary proceedings. Having one day met two European merchants returning on foot to the city he asked the reason, and was informed they had been compelled to dismount by a couple of soldiers, who appropriated the two steeds to their own use. Without waiting for the formalities of a trial the Pasha had the soldiers decapitated. The punishment was cruel and excessive, but it was efficacious, for foreigners were never again disturbed in their travels.

In holding up the conduct of the Egyptian viceroys as an example, it must not be supposed that their patronage of foreigners has been always exercised with wisdom and discrimination. Said Pasha suffered severely in pocket from the greed of his favourites, and his lazy disposition was scandalously abused. In entering the harbour of Alexandria the Sultan has seen the Egyptian fleet, which is suffered to exist on condition of never going to sea; and he may learn that some of the vessels were sold to the favourite of the late Pasha for very much less than the value of their copper. The same individual obtained an order to supply the Guards with silver buttons and sent in plated ones instead, for which he was paid the price of pure metal. When the mistake was discovered the favourite was forbidden the palace, but he contrived to force his way into Said's presence, and in a costume more eccentric than decent executed a grotesque dance which provoked laughter, disarmed the just anger of the Pasha, and opened the way for his readmission to favour. After this Said Pasha bought back the summer residence on the banks of the canal which he had previously presented to his favourite. These and other like stories will in all probability reach the Sultan's ears, and if they should induce him on his return to inquire into the antecedents and practices of certain European hangers on at Constantinople, he will do well to be as credulous a listener as travellers are supposed to be.

"HIGH CHANGE" AT BETHNAL GREEN.

The merchants of London hold "High Change" in Cornhill; the sharebrokers in Capel-court; the corndealers in Mark-lane; the grocers in Mincing-lane; the butchers at Islington; the fruiterers at Covent-garden; the betting men at Tattersall's. The voices of newsboys have been heard in "High Change," Catherine-street. Most branches of industry in the metropolis have a common rendezvous. Yet thousands who have lived in London all their lives will be astonished to hear that bird-fanciers and dog-breeders have, too, their fair, their market, their Rialto. It is with pain we add that the "High Change" of this section of the "fancy" is held every Sunday morning. The pedestrian has only to walk along Cheapside and up Bishopsgate at the hour when so many respectable and comfortably dressed men and women are wending their way to church. He must see them enter, and walk on to Shoreditch until the church congregations are chaunting the "Te Deum." He has then to turn into a side street just above the Great Eastern Railway terminus, and here a surprising spectacle awaits him.

The thoroughfares are crowded—so much so that policemen are specially employed in making the assemblage "move on." At the first sight the mob would seem to be mainly composed of "roughs." If there be a thoroughly untidy, uncomfortable-looking object in creation, it is the working man living in the "back slums" of London—that is, if you catch him on Sunday morning before he is washed, and shaved, and brightened up for the day. He has a beard of two or three days' growth. He is smoking a short pipe. He wears a greasy cap, a greasy neckerchief, a greasy and ofttimes tattered coat, a greasy waistcoat, greasy trowsers, and boots innocent of blacking. The bulk of the crowd are men of this description; the rest the "cap population" of London—costermongers and lads who have never attained to the dignity of "silk." They come from almost all parts of the metropolis, from Bethnal-green hard by, from Spitalfields, Hoxton, Hackney, Whitechapel, Seven Dials, and even from transpontine Walworth and Lambeth. Many carry birdcages, covered over with cotton handkerchiefs of every shade of dinginess. Others lead or carry dogs, or hug under their arms huge Spanish and Cochin poultry, or carry pokes containing lop-eared rabbits or guinea-pigs. Those who bring nothing are not less interested than those who do. They ask questions, betray a flattering curiosity, and easily get into conversation with each other. There is no pride here. A community of pursuit establishes a certain freemasonry among all.

The streets are remarkable for an eruption of bird shops. Every few doors you come upon a window crowded with cages, small and great, containing every variety of English feathered songster. The birds most in demand appear to be the red-breasted linnet and the chaffinch. These flutter about in large cages, being kept in a constant state of agitation by the alarming hand of the dealer as it follows the index finger of the purchaser. The market price of the male linnet is at present fivepence, and of the chaffinch fourpence. Canaries have sometimes a common cage, but often inhabit singly a small and separate cage, as befits their superior dignity and pretensions. So also do the goldfinches, skylarks, blackbirds, and thrushes. The shrill notes of so many choristers of the grove almost deafen the unaccustomed ear, yet the attentive listeners around the window are criticising each bird's performances by turns, and when they are satisfied go into the shop to inquire the price. The dealers know as well as the buyers what each bird is doing, and can do, and all sorts of fancy prices are asked for surpassing excellence. As much as 10s. or 12s. is paid for a skylark, thrush, or blackbird, and 5s. or 6s. for a canary or goldfinch is an average figure. The shops appear to drive a thriving trade, and are surrounded by so many curious observers, that the police are continually compelled to interfere. The dealers sell bird-lime, bird-gravel, turf for larks, German paste, bird-cages, nest-eggs, and Spanish and other eggs for setting. The lower compartments of the windows are filled with poultry—game-cocks, Spanish, Cochins, Malays, Dorkings, and Bantams. Most of the shops have a few pigeons, and some of the dealers devote themselves almost altogether to their sale. The weavers of Spitalfields and Bethnal-green are among the most successful breeders of pigeons, and it is easy to see that many unlikely-looking men in the crowd have a perfect knowledge of the points and defects of the carriers, tumblers, and other fancy birds, on sale.

Singing birds, pigeons, and poultry form the largest staple of sale and exchange. Yet the dogs have many admirers. The canine traffic is entirely carried on in the streets. The bird-dealers may have dogs in their back premises, but there are none to be seen in the shops. Toy bulldogs with short bandy legs, shivering Italian greyhounds, King Charles's spaniels, toy terriers—some small enough to go into a pint-pot—are the favourite animals. For these high prices, ranging from £12 to £20, are sometimes given. Between the men and the dogs a cordial understanding appears to exist, and the buyer had need oblige himself to look uncommonly sharp after his purchase. The other domestic pets, such as fancy rabbits and Guinea pigs, address themselves to a more limited class.

Whispers of tricks of trade are current among the more knowing.

Those pretty rose-breasted linnets, sometimes fresh from the hand of some Madame Rachel in Bethnal-green, are made, not "beautiful for ever," but only "beautiful for a day." So, too, a blackbird with a choice white feather in his tail, on which an extra value is placed, occasionally owes his fancy price to a white pigment cunningly laid on. Sometimes a fervid youth invests his week's savings in a linnet or a chaffinch that mopes and dies in two or three days. He attributes its death to change of air or diet, little suspecting that its tender breast-bone received a malicious squeeze from the hand that extricated it from its cage. The dealer knows that the fervid youth will come to him the Sunday after for another bird, and in nine cases out of ten he is right, for a lad who takes up bird-keeping is not daunted by a few failures. The law axiom, *caveat emptor*, equally applies to the dog fanciers. It has happened before now, so the tradition runs, that a young mongrel has been swathed in the skin of a deceased poodle, and has not found out his mistake until he began to grow. He then pines and dies from the impossibility of expansion.

"High Change" at Bethnal Green does not consist in buying and selling exclusively. It seems reasonable to conclude that the scores of people who carry cages are either buyers or sellers. This, however, would be a great mistake. The birds are brought out "for an airing," just as people take a dog out for company. They are brought to Sclater-street and Club-street because here the owners meet their "chums." The handkerchiefs are lifted, the growth of young birds is pointed out, their singing described, their habits or food are discussed, and finally the birds are taken home, all the better, as is supposed, for a little "change of air."

The air is vocal with melody. As you recede from a dealer's shop the notes still pursue and surround you. The "shrill delight" startles you by seeming now and anon to come upwards from the ground. You look round and discover that from a tiny cage near you, covered up from view and suspended from a man's hand, some "light-winged Dryad of the trees" is panting forth "a flood of rapture so divine," that the imagination is carried on the viewless wings of Poesy to—

> "The grass, the thicket, and the fruit-tree wild,
> White hawthorn, and the pastoral eglantine."

"High Change" among the bird-fanciers and dog-breeders is also the "High Change" of out-door preaching. At the corner of several streets, young men attempt to gain the attention of the passing crowds, and reason with them of "righteousness, temperance, and judgment to come." These open-air preachers are, we hear, wholly unpaid. They address their hearers in the language of plain and friendly exhortation, and doubtless the seed now and then falls on good ground. They warn the crowd against Sabbath-breaking, and urge them to flee from the wrath to come. Other benevolent persons distribute tracts. Next door to one of the bird-shops a room has been hired by voluntary contributions; and "Hallelujahs," and the song of the New Jerusalem, and the voice of some strong, earnest man wrestling, like Jacob, for a blessing, proceeding therefrom, mingle in strange incongruity with the sounds and hum of the street and the conversation of the passers-by. It is an old observation that in London, in many respects a sink of moral infamy, there is more mastery of the temptations to ill, more practical virtue, more benevolent and philanthropic effort, more energy in doing and suffering against ill fortune, than (numbers for numbers) in any community of the civilized world. Nowhere is the incessant combat between Ormuzd and Arimanes—the principle of good and the principle of evil imagined by Zoroaster—more strikingly portrayed than at Bethnal Green on Sunday morning. "Wisdom crieth in the streets;" yet we may not say that "no man regardeth her," for the most thoughtless give her a casual and momentary hearing.

There is much to regret in the Sunday bird-mart at Bethnal Green, but it has its bright side. The love of the feathered tribe is of itself pure, innocent, and refining. Men and boys must have a "hobby," and it is well for them when, instead of leading them into vice, it attracts them to the pursuit of natural history. The lower classes of the metropolis cherish an indestructible love of the country, and the raw material of many a White of Selborne may be found within a mile or two of Bethnal Green. It were to be wished that the frequenters of Sclater-street would wash and shave themselves on Sunday mornings, and increase the audiences of our churches and chapels. But the lower classes of London—the residents in unhealthy back streets and crowded alleys—cannot be induced to go to church on Sunday. These men must work hard during the week, in order to keep their families decently fed and clad, and Sunday is their only day of rest and recreation. Many make a few shillings by breeding and rearing these domestic pets, and thus help to increase the supply and keep down the price. We have all heard in some sunless street or ill-ventilated court a full-throated little songster pouring out his heart in such happy strains that

> "All that ever was
> Joyous, and clear, and fresh, his music doth surpass."

The poets have wished to "fade away into the forests dim" with these little messengers of Nature, there to forget

> "The weariness, the fever, and the fret"

of large cities. The poor could ill spare the song of birds from their dwellings. They are to them the voice of gladsome Nature, and speak to them of meadows, hill-sides, valley-glades, wild roses, and May-blossom. Instead of calling upon the police to put down the bird-market at Bethnal Green, we would rather leave the earnest and self-sacrificing preachers who raise their voices in the streets to do what good they can until society is prepared to look steadily in the face the question of innocent recreation for the poorer denizens of great cities. It is not cessation of physical exertion and stagnation of intellect that they require, in order to restore the tone of their overstrained powers. "The natural rest of man is change of occupation," and this the poorer classes seek in their own way, with slender aid from those above them. If the religious world would attract them to church, it is worth while to consider whether they must not be provided with an occasional day of recreative occupation, comprising such easy and pleasant exercise and amusement as may set their cheerful spirits in motion, and excite pleasurable feelings in their minds. The subject is too large to be pursued in the present sketch, but hints may be gathered both in regard to the innocent pursuits of the lower classes, and the right observance of the Christian Sabbath, from what goes on at "High Change" in Bethnal Green.

AMERICAN SOOTHSAYERS.

We are familiar with some phases of American character in the development it has received from the war between North and South; and in looking to the Confederate States, we have even been struck with admiration at the resolution with which a people cut off from communication with Europe, and obliged to depend wholly on themselves for the munitions of war, have by the energy of patriotism supplied the heaviest disadvantages, and carried off the palm of victory from an enemy with inexhaustible resources at its command. But the attitude of the Confederates in difficulty and success has not been more striking than that of the North under a series of defeats which would long since have cowed the heart of a European nation, and made it anxious for peace upon any terms. It has turned disgrace and ruin into a crown, and boasts the biggest stampede, the biggest debt, and the biggest "whippings" that the world has ever seen. Magnitude is its idol. Success would be well if it could be had; but in its absence, defeat on a grand scale, bankruptcy such as no other nation can show, a despotism which puts to shame the petty tyrannies of an effete Europe, are the triumphs in which it glories. While its army is melting away before Vicksburg, the prey of fever, of despondency, and lax discipline, it finds solace in the fact that, by cutting the levée of the Yazoo, it has converted a cultivated region of 5,000 square miles of Louisiana into a lake, and by a similar exploit at Lake Providence, has laid under water a territory nearly as large as Scotland. Was there ever such a nation? No matter if fertile lands have been blotted out, and homesteads and their population swept away by these grand exploits. No matter if the object for which they have been undertaken, the reduction of Vicksburg, is still as far as ever from their grasp. A huge result of some kind has been obtained. That is enough. Europe has been outdone, at least in the power of desolation.

But it is not in these features of American democracy that we can read its character fully, marked and indicative as they are. Beneath her vast and incompetent armies, the wreck of her finances, the overthrow of her political institutions—there lies her social life, a puzzle as curious as the hardest headed philosopher could desire to unravel. A few weeks back, at a time when to every other eye the nation was steeped to the ears in every sort of disaster, revelry was at its height; and in the midst of bankruptcy in the Exchequer and disgrace on the field of battle, balls, parties, dinners, and weddings went on as if the country was in undisturbed possession of peace and prosperity. Theatres and concert-rooms were crammed. Never in the happiest times was the trade of the

Digitized by Google

jeweller, the upholsterer, the tailor, and the milliner more active. "Our dry goods stores," said the *New York Herald*, of the 28th of January last, "sell a richer class of stuffs, our jewellers a more costly class of ornaments, and our upholsterers more expensive furniture than they have hitherto been in the habit of disposing of. Even the arts, which usually languish in time of war, are feeling the revivifying influence of this disposition towards extravagance. More expensive pictures have been sold within the last six months than during the previous eighteen." The heights of Fredericksburg had hardly soaked up the blood of the thousands who were driven thither by the Federal Generals to certain slaughter, when New York went mad with rejoicing over the marriage of two dwarfs; and, not many days afterwards, President Lincoln, his lady, and the principal members of his Cabinet could find leisure and philosophy to receive General Tom Thumb and his bride *in state!* Nay, is it not recorded of Mr. Lincoln that, when one of his Generals was captured, together with a hundred and odd horses, he could turn the misfortune into a joke, and say that he was sorry only for the horses, for that he could make a brigadier in five minutes, but could not so easily supply the loss of his quadrupeds? A President who jokes at disaster—a population in carnival and wild with delight at the wedding of a pair of deformities, while ruin after ruin topples down upon their heads—these are strange products of a nation, the freest, the noblest, the best that Nature has ever provided as a blessing to mankind.

But the more closely we look into its features the odder and more inexplicable does this state of society appear. We are not ourselves wholly free from the leaven of that imposture which pretends to look into the future, and communicate with the other world. Clairvoyants, spirit-mediums, table-turners, and fortune-tellers have obtained some slight footing amongst us. The three former, however, have vanished with the whim of the moment, and the operations of the fourth are confined to a servant-girl here and there, who is yet not always willing to be cheated out of her half-crown. But enlightened America, the best educated and most intelligent of nations, advertises in her most respectable journals the imposture which, in the hands of a very few of the basest of our population, skulks about the country lanes and kitchen areas of England under ban of the police. In the last number of the *New York Herald* we find in one column no less than fifteen advertisements from professed astrologers, who, at prices varying from twenty-five cents. to a dollar, promise their dupes to disclose to them and provide them with everything that the mind would anticipate and that the heart can desire. Madame Wilson, "a *bond fide* astrologist," who "tells the object of your visit as soon as you enter," will, for fifty cents, inform you about "the past, present, and future of your life;" will "warn you of dangers," and, what is better, will "bring success out of the most perilous undertakings." N.B. that this lady deals in "celebrated magic charms," whose price or particular line of potency, however, is not stated in the advertisement. Madame Morrow, whose magical powers are vouched by the fact that she is a "seventh daughter," will, for twenty-five cents, tells you "how soon and how often you will marry." The latter fact ought in fairness to be communicated to the gentleman—for none but ladies may consult this astrologist—you propose to make your first husband, or at least he should be provided with one of the "lucky charms" which Madame Morrow offers to her visitors "free." But neither of these ladies can compete with Madame Henri. True, she charges a little more; but what is a dollar compared to the happiness of being told the name and shown "the picture of the one you are to marry," and of knowing that your destiny is in the hands of an astrologist who "brings the absent back, and never fails in lucky numbers"? Madame Henri, though not a "seventh daughter," possesses the power of writing your destiny and sending it by mail, an advantage which can be procured by "persons distant, by sending their age and enclosing one dollar" to "80, West Broadway, near Leonard-street." From Madame Henri we turn to Madame Star. This lady, in America's dire need, "has now arrived from Europe," and as she declares that in her there is "no imposition," that she is a "great phrenologist and astrologist," and "consults on all affairs of life," the Cabinet at Washington would do well to pay her a visit, in the person of Mrs. President Lincoln—for gentlemen are not admitted,—"at No. 101, Seventeenth-street, near Third-avenue, over the drug-store." If her powers in other affairs of life are as great as in those specified in the advertisement, the restoration of the Union is not impossible; for while she "causes speedy marriages" and "shows you a correct likeness of your future husband or absent friends," she can "bring together those long separated,"—exactly what the President wants. All this she does by her "natural gifts;" so that the most scrupulous need not be afraid of underground agency; and "when all others fail," Madame Star succeeds. It is but justice to Miss Wellington, a "beautiful young lady," according to her own advertisement,—and none should know better than the lady herself—who hangs out "at No. 101, Sixth-avenue, opposite Eighth-street," to state that she, too, "has a never-failing remedy for bringing the separate together, by which

> "'Two souls with but a single thought,
> Two hearts that beat as one,'

will be united for ever,"—though this, we fear, does not exactly describe the state of the souls and hearts of North and South. But if this is a drawback in her political utility, she can at least give you "correct statements on all events through life, particularly losses, law-suits, and lucky numbers;" besides which she "has a never-failing remedy for drunkenness;" and is "perfectly certain of her happy acquirements in stating correct facts."

Of the fifteen ladies who, in the advertisements before us, invite the confidence of the intelligent New York public, all lay stress on their beneficent powers with regard to the interesting subject of prospective matrimony. But there are several who can do much more than tell you the name, show you the picture of your future spouse, male or feminine, and expedite the blissful contract. Madame Byron, from Paris, "the greatest wonder in the world," besides being consultable with the strictest confidence on all affairs of life, "restores drunken and unfaithful husbands," and "has a secret to make you beloved by your heart's idol." Madame Ross, who heads her advertisement with "Look Here," asks, "Are you in trouble? Have you been deceived or trifled with? Have your fond hopes been blasted by false promises?" If you have, then "go to Madame Ross for advice and satisfaction." Madame Ray "tells your very thoughts," besides giving lucky numbers and causing speedy marriages; all which cannot be called dear, to ladies for twenty-five cents and to gentlemen for fifty. Madame Clifford, "the greatest living American clairvoyant, detects diseases, prescribes remedies, finds absent friends, and communicates clairvoyantly with persons in the army." From this lady, "persons, by mailing one dollar, will receive a clairvoyant life-chart, past, present, and future." But for the *ne plus ultra* of miraculous powers, commend us to Mrs. Cora Duval, "Independent Clairvoyant," of 156, East Nineteenth Street, between Second and Third Avenues. This astonishing person "gives correct information of lawsuits, lost property, absent friends, 'love matters,' and '*anything and everything*;'" and to show how fully she confides in her powers, she pledges herself, unless she gives satisfaction, to make "no charge." Indeed, this confidence is not wanting in any of the prophetic sisterhood. Most of them "succeed when all others fail;" others "have no equal;" and how with ladies so supremely gifted with second sight there can be such a thing as failure at all, one is puzzled to see.

If we saw such advertisements in an English newspaper, what should we say of the intelligence, the religion, the civilization of our community? Is it not a mad world that provides such a field for impostors home bred, or who cross the Atlantic in the certainty of meeting with a rich harvest of fools steeped in the grossest superstition, to prey upon? The fifteen clairvoyants or astrologists from whose advertisements we have culled a few choice flowers, are but the advertisers of a single day. We cannot doubt, from their number, the cost they incur in making their powers and addresses known, and from the publicity they obtain in the columns of a New York newspaper which, if it were not out of the question to compare a New York to an English newspaper, we might call the *Times* of America, that they drive a flourishing trade, and that there are thousands of our brethren in the New World who really put faith in the monstrous and absurd pretensions of these female impostors. Nor can we read their advertisements without feeling assured that their dupes are not merely the giddy and frivolous of the lower classes. At least, one of them appeals to the serious anxieties of those who are trembling for the fate of husbands and brothers, fighting a hopeless battle, and offers to communicate with them clairvoyantly; others promise infallible information touching law-suits and lost property. But supposing these dupes to be confined to the multitude, and that neither ladies nor gentlemen pay their cents and dollars to learn the names of their future yoke-fellows in marriage, surely the common school system of America, which dispenses knowledge to all classes of the population, has been, like very much else in the vain-glorious and boastful Republic, a dreary failure. One fact is clear—the advertisements are published. The appeal to heathen superstition is permitted; and appears in the same columns which vaunt the perfections of America, and rave at the effete despotisms of Europe.

ART AND SCIENCE.

MUSIC.

THE opening of the Royal Italian Opera on Tuesday last with Auber's "Masaniello" (La Muette de Portici), was an auspicious commencement of what promises to be as brilliant a season as any in the records even of Mr. Gye's munificent management. The revival of "Masaniello," towards the close of last season, was one of the most splendid musical and spectacular efforts ever displayed on the lyric stage; and no better choice could have been made for the commencement of the present season than a recurrence to Auber's great work, mounted as it is with such accessories as even the Paris stage has scarcely equalled.

It was by "La Muette de Portici" that Auber first made a great European reputation; indeed it was his earliest effort in the form of the grand opera, his previous essays having been in the style of the *opéra comique*. The production of "La Muette" in 1828 at once proclaimed the advent of a composer who should rival Rossini in his power of fascinating the public ear; and accordingly the melodies of the great French and Italian masters were soon heard in close conjunction all over the civilized world. With the grand opera of "La Muette" in 1828, and the lighter, but equally admirable work "Fra Diavolo" in 1830, Auber may be said to have really commenced that brilliant and prolonged career, during which he has produced a vast number of operas, all more or less worthy of his genius. It cannot be denied, however, that Auber has generally succeeded less in his few grand operas than in those many brilliant musical comedies in which the real bent of his genius was so much more naturally developed. Neither in the tragic nor the romantic style has Auber achieved such triumphs as in those works of a light and sparkling character in which there is little emotional or earnest feeling to cast a shade over the sunshine of his natural temperament. In such operas, therefore, as "Fra Diavolo," "Les Diamans de la Couronne," "Le Domino Noir," and many others of the like kind, Auber's genius has freer scope and fuller expression than in most of those larger works which deal with deep passion and intense dramatic situations. Among his few grand operas, however, "La Muette de Portici" stands forth pre-eminent in force and beauty; it was here that Auber first put forth his real strength, and developed the chief characteristics of his style, insomuch that this must be considered as his earliest representative work. Although it would be too much to say that Auber has, in "Masaniello," thoroughly realized that intense dramatic passion and pathetic emotion which the subject demands, there can be no question that, of all his few grand operas, this is the one which claims pre-eminence in point of serious musical interest. Neither in his subsequent opera "Gustave," nor his more recent "Enfant Prodigue"—the two works which in ambitious design and serious interest offer the nearest parallel to "La Muette"—has he at all approached the fervid tone and depth of passion which he has attained in the latter works. Although in power of characterization and massive grandeur Auber's "La Muette' can scarcely compare with Rossini's "Guillaume Tell" and Meyerbeer's "Les Huguenots," still, in exquisite grace, careful finish, buoyant vivacity, and complete individuality of style, the French composer's work may fairly challenge comparison with those of his Italian and German compeers. Then the profusion of captivating melodies which the hackneyed reiteration of some five-and-thirty years has failed to render commonplace, and the unmistakeable stamp of genius throughout, render "Masaniello" a work that will long retain an equal charm for the critic and the general public.

On its present reproduction there are two important changes from the cast of last season. Instead of Signor Mario, Signor Naudin is now the representative of the Neapolitan fisherman, while M. Faure replaces Signor Graziani as Pietro. Without at all undervaluing the two absent artists, we cannot but consider the change as an improvement in both instances. Signor Mario's delicate voice is heard to most advantage in that *suave* music of the best Italian school, where the display of the vocal art is as much the composer's object as dramatic effect. The modern French dramatic vocalization, by which the light tenor voices of that nation have been forced up and strained almost beyond even their natural capacity, is quite unfitted for a sympathetic Italian organ, such as that of Signor Mario; and this admirable artist's frequent performance of high French tenor parts can scarcely result otherwise than in some detriment to his voice. Then Signor Mario, as an actor, excels in the courtly, the refined, the chivalrous. Hence his Masaniello wanted more of the recklessness and fierceness of the Neapolitan fisherman. Signor Naudin, while inferior in voice and vocal acquirement to his predecessor in the part, has a more youthful and a fresher, although harder, organ; while there is a rough vigour and a declamatory energy of style in his performance that render him one of the most effective of recent representatives of Masaniello. Signor Naudin at once established himself in the favour of the audience by his delivery of the "Barcarolle," and confirmed his position by his expressive singing of the "Slumber Song" and his declamatory energy in the great duet with Pietro, in which, however, M. Faure, won equal honour. This excellent artist, besides being an admirable actor, is a complete master of that peculiar rythmical phrasing, without which French music loses much of its piquant effect. The remaining parts were cast as last season. Mdlle. Battu, the Elvira, gave her music in the thorough French style of vocalization which it requires. Mdlle. Salvioni, as Fenella, is a most graceful and expressive representative of the dumb girl, and her pantomimic action is more refined and less exaggerated than is generally seen in such parts. Signor Neri-Baraldi, as Alphonso, does all that can be done with a part of small interest, either musical or dramatic, and Signor Polonini, as Borella, is entitled to the same praise. Of the splendour with which this opera is mounted it would be impossible to convey any idea by description. All that can be done by scenery, costume, and stage management has here been effected; and it may be doubted whether so magnificent a result was ever before attained on any stage. To begin with the scenery—Mr Beverley's picture of a "view in the environs of Portici," which forms the scene of the second act, is one of those exquisite displays of bright aërial effects, à la Turner, that raise scene-painting to the rank of a fine art—while the Market-place of the third act is almost equally good as a piece of street architecture. The grouping in this scene, and the subsequent tumult and conflict, have an air of reality sufficient to create an illusion in the mind of the most hardened playgoer. Mr. A. Harris's stage management here is a triumph of combination and apparent confusion, resulting from the most skilful order. Of the orchestra (with its excellent conductor, Mr. Costa, who received a warm welcome on his entry), to say that it is what it has been for some seasons past, is to say that it is unequalled for power, brilliancy, and skilful execution. The overture was taken at such a rapid pace as would have rendered it impracticable to any but a band consisting almost entirely of accomplished solo players. This excess of speed, certainly beyond the composer's intention, tested to the utmost the power and efficiency of the orchestra; and the impetuous climax of the overture was almost drowned in the clamorous demand for its repetition. The chorus singing, especially in the unaccompanied prayer in the market scene, is such as a few years since could only have been heard on the German stage—the gradations of sound, the strong contrasts of *piano* and *forte*, are most impressive and effective. The incidental dances (in which Mdlles. Montero and Duriez made their first appearances), were worthy of the delicious music which accompanies them. The "Guaracha," the "Bolero," and the "Tarantella" in "Masaniello, being among the freshest and most genial specimens of ballet music. "Masaniello," as now given at the Royal Italian Opera, is one of those splendid combinations of composite effects from which the ear of the musician and the eye of the artist cannot fail to receive the highest possible amount of refined enjoyment.

Among the many musical tributes which the Royal wedding has called forth are various pianoforte pieces just published by Messrs. Lamborn, Cock, & Hutchings, New Bond Street. A Fantasia on G. A. Macfarren's "Freya's Gift," by Wilhelm Kuhe, is a brilliant but not difficult arrangement of the principal subjects of Mr. Macfarren's Cantata, embroidered with a few passages of display, within the reach of players of moderate power of finger. "Fantasie Brillante," by Jules Brissac, treats in a similar mode those bold Danish airs which are now becoming popular here. "Bridal Serenade," by Edward Roeckel, and "Wedding March," by Jules Benedict, are original pieces, the one graceful and flowing, the other bold and martial. Among other miscellaneous publications from the same house, a "Summer Song" and "Prayer at Sea," two elegant little pieces, in the *notturno* style, by Mr. H. C. Lunn, are especially noticeable as being admirably adapted for teaching. The piece entitled "Remembrance," in waltz *tempo*, by the same composer, deserves similar praise. All pianoforte teachers know how difficult it is to find pieces which make some show of brilliancy yet do not tax severely the pupil's executive powers. Mr. Lunn seems to possess the art of producing such pieces. His passages lie well for the hands, have a brilliant effect, and are easy of performance.

MEXICAN ART.

A LARGE collection of statuettes in wax, now to be seen in Newman-street, is interesting as the work of Mexican artists, and as forming a complete museum of the characteristic figures and costumes of the population of Mexico. The figures, which are modelled with extreme neatness and with very remarkable imitative skill, resemble those well-known Spanish figures of beggars and muleteers which have been made for a century and more in Spain and in some parts of Italy. Every minute detail of dress is closely modelled, and the texture of the clothes, as well as the colour, is perfectly represented. It is curious to see so much raw artistic faculty, as it may be called, expended thus, which, under the encouragement of a better taste, might be developed with much higher aims, so as to produce works which all the world could admire as true art. These extremely clever figures can only take the ground of imitative art; but, as such, they could hardly in any country be surpassed. We particularly noticed among the groups those of the Lazadori, or lasso-hunters, mounted on their compact little horses, and holding the wild bull entangled and struggling fiercely in the fatal loop of the rope; as well as the figures of the native Indians of the Camanche, Seminole, and Lipan tribes, with their handsome Squaws, the very picture of Amazons. In their kilt and panther-skin scarf, with pretty plumed cap, quiver at the back, and bow and shield in their hands, nothing can be more wildly picturesque than these Lipan women. The Ranchero and his wife, too, are very picturesque figures. These are the civilized rustics who live in huts, and are ready to fight or to rob, or to live peaceably, as their temporary convenience or inclination may lead them. The Muleteer, with his large, loose leather galligaskins

Digitized by Google

curiously ornamented, and his wide-brimmed sombrero, with little bells on it, is a capital figure. The people of the streets of Mexico are all to be seen here, as if one were walking amongst them. Here is the water-carrier, with his large earthen bottle at his back, the charcoal seller, and the general herd of costermongers, all of the same Indian race, described as being like the Servian gypsies, though by no means addicted to the crimes of their class in other and more civilized countries, and generally disposed to accept the Catholic religion. These people seem to have the whole hawking business in their hands; some are selling hot cakes in Holy Week, or glasses of water and fruit, while others offer cups made out of gourds and wooden trays; another has travelled many miles with his butter and cheese. The Tlachiquero, or pulque maker, is shown, sucking through a long stalk the juice of the Maguey plant, a kind of cactus, into his bottle made of a pig-skin, in which it is carried about the streets. A very pretty figure is the Indian girl of Puebla, dressed with the true taste of the savage, in the gayest colours of the shops, with a yellow frock, bright scarlet skirt ornamented with tabs of silver, and a large green scarf, worn over the head, and not ungracefully held on the arm. But the wild Squaw in her purely native war-dress, rich in the charms of fine dark eyes, and with her silky black hair streaming over the naked figure to the waist, is really a creature of such romantic beauty as was never dreamt of except after reading Fenimore Cooper, or when beholding that wondrous specimen of "natural selection," whose habitat is the label of Rowland's Macassar Oil. We are disposed to credit the Mexican artist with fidelity to real life, as all these figures show the most extraordinary ingenuity in imitating the exact appearance, even to the hair of the eyebrows. As specimens, however, of this particular excellence, there is a small collection of the various fruits of the country, which, like the painted grapes of Zeuxis, would deceive the very birds to peck at them. It is worth remarking, perhaps, of this exhibition, that it displays, at work amongst the Mexicans, precisely the same tendency to prefer illusive imitation to subject, which has kept the art of Spain in an inferior condition. Velasquez, the great Spanish painter, never thought of the sublime, and his best works even show his feeling for the exact delineation of objects. Murillo, too, never evinced a lofty conception of the ideal, and is best known for his pictures of character. Even his Adoration of the Shepherds, in the Hertford Gallery, is a pretty rustic interior; his Madonnas are peasant women, and his St. John is a peasant child. Painting demands more of thought and imagination from the spectator. We can understand, therefore, in seeing these curiously exact models, how, while works of true art delight a people of high intellectual feeling, mere waxen imitations are by a people like the Mexicans esteemed far more highly.

SCIENTIFIC BALLOONING.

Ballooning is or ought to be something more than merely going up in the air and coming down again, to be worthy of a special scientific title. And yet show-toy only as the balloon, with very few exceptions, hitherto has been, the skill required in regulating and manipulating its movements, although confined nearly entirely to its upward and downward motions, has not improperly been honoured with a special designation. If we were to see a man lay hold of a gigantic air-bubble and float up from the depths of the Atlantic or the Pacific we should perceive at once what a strange sort of vessel he had to manage. Long and learned orations would not be required to show that if he could hold it tight and load it with weights, he might cause it to rise or sink, but that its horizontal progressive motion must be at the mercy of the currents of the sea. If the bubble were a long object like a fish, a paddle at each side, or the vibration of a rudder or tail-like part, might control its direction or afford it some proper motion of its own; but everyone can see at a glance that a spherical globule could be neither controlled in direction nor artificially propelled.

Now, a balloon is only a gas-bubble confined in a silken case and held fast by a network of ropes, to which weights in the form of bags of sand are attached to balance its lighter gravity with the denser air through which it rises. The equilibrium thus artificially made can be artificially altered; and, instead of rising like a rocket and coming down like a stone, the aëronaut can float up slowly like a cloud, and descend so gently as to press down the tender herbage of the fields without a shock of any kind being felt. It is well to take this simple view because it makes us at once perceive what sort of instrument the spherical balloon really is, and how mad have been some of the wild notions of what it could be made to do.

From the earliest periods men have watched the wonderful flights of birds and wished to imitate them. Some even made the attempt to fly with wings,—John Damian, the Lombard Abbot of Tungland, did so from Stirling Castle to astonish the courtiers of James IV., but "the French Leich" came to grief and astonished himself.

> "He schcure his feddereme thar was schene,
> And slippit out of it full clene,
> And in a myre, up to the ene,
> Amang the glar did glyd."—Dunbar.

A century after (1617), the worshipful magistrates of Tübingen listened to a lecture from the rector of their grammar school on the art of flying. Fleyder studied his lecture for eleven years before he published it, but prudently never outstepped his theory. A poor monk attempting, however, to put his notion into practice, took a leap from a high tower and perished miserably. As science grew, it was distinctly shown that the prodigious force of the pectoral muscles of birds could never be attained by the muscles of man.

In the fifteenth century an Augustinian monk, Albert of Saxony, had conceived the idea that since fire is more attenuated than air, and floats above the region of our atmosphere, a portion of such ethereal substance inclosed in a light hollow globe would raise it to a certain height, and keep it suspended in the sky. A couple of centuries later the notion was taken up by the Jesuit, Mendoza, who saw no real obstacle to the application of fire to balloons, and Casper Schott, who thought that the lucid ethereal matter which swims above our atmosphere was alone fitted for aërial navigation, and proposed to fill a hollow ball of wood and lead with it, then with rudder and sails to navigate this strange vessel through the sky. Nothing practical, however, came of these dreams than did of the bags of dew on which Cyrano de Bergerac despatched his imaginary traveller in his memorable "Comical History of the States of the Sun and Moon." And it was only when Montgolfier in 1782 put the idea in practice, that fire was really known to be able to raise man from the earth, and that aërial journeys were possible.

The discovery by Cavendish about the middle of the eighteenth century of hydrogen gas, and his observation of its being at least seven times lighter than common air, led Dr. Black, of Edinburgh, to astonish a party of friends, by liberating in the room a thin-scraped bladder filled with gas. The balloon rose to the ceiling, but his friends insisted that it had been drawn up by a string until the room above had been searched, and no evidence of any trick detected. Cavallo, in 1782, let off soap-bubbles inflated with hydrogen. But hydrogen was not positively employed for inflating balloons until shortly after Montgolfier's experimental balloon in 1783, when M. Charles filled and dispatched to a height of 3,000 feet, a bag of lutestring twelve feet in diameter, with hydrogen made with sulphuric acid and iron-filings. The first human beings who ventured in a balloon were M. Pelatre de Rozier and the Marquis d'Arlandes, who went up in a Montgolfier fire-balloon in November of that year, and a month later the first air-balloon ascent was also made by M. Charles and M. Robert. The year following there were several ascents both in Paris and London, and from that time balloons have been commonly seen as popular show-toys, while from time to time attempts to apply them to more useful purposes have been made. Blanchard and Jeffries made an aërial voyage across the Channel in 1785; and in 1803-1804 Robertson, at St. Petersburgh, and Gay Lussac and Biot, at Paris, made high ascents for meteorological purposes—Gay Lussac attaining a height of 23,000 feet. Two years later Biroschi, the Neapolitan astronomer, attempted a higher ascent than Gay Lussac, but the balloon burst, and he only by the fortunate filling of the remnant of the balloon escaped destruction.

For more than forty years there was no further attempt to apply balloons to meteorological investigations. In the interval the repeated ascents of Sadler, Green (who introduced coal-gas), and others, had, however, rendered familiar and easy to skilful aëronauts the management of the air-balloon. In 1850 Bixio and Barrel, ascending from Paris, reached 22,900 feet, and recorded a temperature of—38° or 70° below freezing. In 1852, Mr. Welsh, of Kew, went up four times with Green in the Great Nassau, which in 1836 had made with himself, Holland, and Mason, the memorable voyage of 500 miles, reaching 19,500, 19,100, 12,640, and 22,930 respectively on those occasions. Although the subject since that time has never escaped the attention of the British Association, no further scientific ascents have taken place until the memorable series last year by Mr. Glaisher, excepting, of course, in our remarks, all reference to military ballooning, the first application to which purpose was by the French at the battle of Fleurus.

On mountain sides, however lofty the mountain, the influences of terrestrial disturbances and interferences can never be got rid of; and hence the reason why such strenuous efforts have been made to use the balloon for meteorological observations. The attempts that are praiseworthily being made to render useful the important science of meteorology, and to render prognostications of the weather practically useful, as well as to extend our knowledge of the causes of climatal conditions, the effects of changes of temperature, the effects on health and life of the various conditions and states of the atmosphere, and other important hygienic and meteorological topics, will achieve the most important data through these aëronautical explorations. If one could go straight up and come straight down in a balloon through the various currents of air, independent of the influence of their lateral force, the task of gathering facts in the regions of the sky would be far easier than it now is; for all the deviations from a perfect straight line in the balloon's course have to be allowed for, and all the up and down deviations of the balloon's ever vacillating height have to be accounted for in the results. In these respects Mr. Glaisher's latest ascent, briefly noticed by us last week, was the most fortunate, and the balloon's track approached nearer to a straight line than on any recorded occasion; the information, therefore, will be more than usually satisfactory, and will confirm in the best manner his previous deductions.

One of the principal subjects of research in the balloon experiments of last year, was the determination of the law of decrease of temperature with increase of elevation—a subject of great interest, and to which much labour and research have been devoted.

Digitized by Google

Hitherto a theory has been adopted of a uniform decrease of 1° Fahrenheit for every 300 vertical feet; but the results of Mr. Glaisher's first series of balloon observations were inimical to this, and he found that while a decline of 1° took place within 100 feet from the earth's surface, at an elevation of 30,000 feet, a space of fully 1,000 feet had to be passed through before a degree of heat was lost. As the previous ascents were made in July, August, and September, it was of importance to get observations at an early and different period of the year, and the British Association therefore voted £200 for four further ascents—the one accomplished on Tuesday week past by Messrs. Glaisher and Coxwell being the first. The gas was made at the Crystal Palace works by Mr. Ohren; and the instruments used by Mr. Glaisher were made and arranged by Messrs. Negretti & Zambra, as on former occasions. The observations on the decrease of temperature confirm those of last year.

The balloon left the earth at 4.16 p.m., the temperature of the air being 50°; at 4.25 one mile high, temperature 33½°; the second mile was reached at 4.35, temperature 26°; the third mile at 4.44, temperature 14°; at 3¾ miles, temperature 8°. A warm current of air was now met with, and the temperature rose to 12° at 4.58; at 5.2 the balloon passed out of the current, and when 4½ miles high the temperature was just zero of Fahrenheit's scale.

In descending, the temperature increased to 11° at about three miles high, at 5.38; then a cold current was met with, and it decreased to 7°. The balloon soon passed through it, and the temperature increased to 18½° at two miles high, to 25½° at one mile, and to 42° on the ground, which was reached at 6.30 p.m.

The air was dry before leaving the earth. It became very dry at heights exceeding two miles, and at heights exceeding four miles the temperature of the dew point was fully minus 40°.

The course of the balloon on leaving the earth was from the east, and continued so till about 4h. 30m., when it changed, and at 4h. 45m. the Crystal Palace appeared under it; its course again changed, and several different currents of air were met with.

The aspect of the terrestrial scenery on this occasion has been graphically described by Mr. Glaisher in several letters to the daily press, and in them he has specially recorded the strange appearance of the darkness of night creeping over the earth, while at 3½ miles high the sun was still brightly shining on himself. The circumstances of the ascent were very peculiar. Leaving the earth at the declining part of the day, so early in the season, with a cold east wind, to pass up into the still colder regions of the air, the skill of the aëronaut was especially required, and Mr. Glaisher as usual speaks in eulogistic terms of Mr. Coxwell's watchfulness, expertness, and care. It is pleasing to see the meteorologist offer this grateful acknowledgment of his confidence in the aëronaut's ability; Mr. Glaisher never forgets to render to Mr. Coxwell his due praise.

The ozonized condition of the atmosphere has also been one of the subjects of these balloon experiments; and on this point we are enabled, by a communication from Mr. Glaisher, to make known for the first time the results he obtained.

"Some of the papers prepared by Dr. Moffat for the late ascents of last year, have been carefully kept from the air, and were used on this occasion. During the last few months E. J. Lowe, Esq., has made many experiments with the view of getting a more uniformly sensitive paper, and he furnished me with some tests for this ascent. In the course of Mr. Lowe's experiments, he has found more uniformity in the results by using the test in the shape of powder, and he prepared for me two sets of powders made from the formula of 5 ozs. of rice starch, to 2 ozs. of iodide of potassium; the one marked No. 1 and No. 2; the former made doubly sensitive.

"The aperture was fitted for the reception of six sets of each, side by side, with receptacles for four parcels of flour, which of course would remain white, and thus, by contrast, the slightest tinge of colour in the above tests would be seen. The box was opened when about 100 feet high; at the height of half-a-mile one set of tests (No. 1) was tinged, and continued to increase in deepness of colour, till I closed the box at 6h. 17m.; at this time Moffat's paper and Lowe's paper were alike and just tinged, but not so much as 1; Lowe's powder-test was 1; and No. 1, or doubly sensitive, was deeply coloured to 8."

Mr. Glaisher has also forwarded us the following observations on the currents of the atmosphere:—

"On leaving the earth the wind was from the east; at the height of two miles nearly it changed to the west; a little above three miles the current was from the north-east; five minutes afterwards the current was south-west. At 5h. 18m., at the height of nearly four miles, the current was west, and continued west at the highest point; at 6h. 15m. we fell into a south-east current, and for the next quarter of an hour were moving towards London. The wind on the earth was nearly east all the time; when, between three and four miles high, we saw smoke move towards the west, then turn, and move towards the east; then change again two or three times, till we could see it following us on our level."

He has further sent us the following interesting notes from his miscellaneous memoranda:—

"The cumulus clouds were at the height of 1,500 feet, and when at the height of a mile the earth appeared dotted with them.

"At the height of one mile there were lines of blue mist crossing each other.

"At heights greater than three miles the sun's image was seen reflected in water.

"At four miles high Mr. Coxwell's pulsations were 98 and mine were 97 in one minute. On the ground our ordinary pulsations are 76 in one minute.

"The sky was of the deepest blue—dark Prussian blue—at the greatest height.

"At heights approaching four miles my heart beat quickly and loudly; not Mr. Coxwell's. At heights exceeding three miles the face was blue.

"At four miles high I had constantly to break ice to get water for wet-bulb thermometer. Surface ice formed instantly."

CONTEMPORARY SCIENCE.

If anything could awaken the attention of the public and of *savants* to an important commercial and national, and one might almost say peculiarly British topic—fogs and fog-signals—Dr. Gladstone's recent lecture at the Royal Institution ought to produce a sensation. That a man of such eminent ability had nothing more to tell us than to point out the innumerable defects or shortcomings of all the means that were in use or had been tried, and to display the paucity not only of our information respecting fogs themselves, but of real scientific endeavours to provide effective and sufficient warnings to mariners of the approach of vessels to each other, or of the dangerous proximity of land, makes it patent at once in what a deplorable condition this department of maritime science really is. Some time ago members of the Lighthouse Committee drew the attention of Government to the matter, and various returns of the occurrence of fogs in various places have been printed; but little or no practical use appears as yet to have been made of these materials. A fog is simply a cloud resting on the earth. Dr. Tyndall recently described a cloud as the capital of a pillar of vapour; the fog is the capital without the pedestal, and consists of globules of water suspended in the air. The remarkable colour of London fog may in part be due to the presence of smoke, but it is the peculiar property of fog to destroy certain of the spectral rays of light, shutting out first the violet and blue end of the spectrum, then the green space, leaving only the yellow and red rays to penetrate it, the latter being the last to give way before total darkness ensues. An instance of this property occurred during the late illuminations. The electric light contains the blue rays proportionately so intense, that an ordinary observer would term it a blue light; but the electric light exhibited in Trafalgar-square on that occasion appeared to the inhabitants of Hampstead as red in colour. In the official returns of the occurrences of fogs there were seemingly considerable differences between stations even in proximity to each other; but an analysis of the returns showed this to be mainly due to the different ideas the observers making them had of a fog. Now, for any decisive practical advantages to be obtained from such records it is necessary they should be made on a given basis, and it becomes therefore highly necessary to distinguish carefully and absolutely between fogs and mists. Mr. Cunningham has proposed that the distinction between them should be defined by the vanishing from sight of a vertical pole at 100 yards distance; and this datum has been accepted by Mr. Glaisher for the Greenwich Meteorological Department. Some fogs are very local, while others extend over considerable areas, and some months are more prolific of them than others. In London November is regarded as the foggy month, *par excellence*, but it is not so throughout the British Islands. In the southern parts January and June are the foggy months, while February and September are free. In the east of Scotland January is free and so is September, but May and June abound in fogs. So also elevation and situation present their varieties, a high headland presenting numerous fogs, while their occurrence in the lower region of the vicinity may be very rare.

But the practical application of fog-signals is even of more importance than a knowledge of the frequency or absence of fogs. The electric light has vast penetrating power, but the dense fog ultimately shuts it out from the sailors' eyes. Reflectors have been placed behind bells to concentrate and throw the utmost volume of their sound to sea. Gongs, guns, drums, horns, rattles, and other ordinary and extraordinary means are used on shore and on ship-board to prevent wrecks and collisions. The steam-whistle has also been used with very good effect, but its use in lighthouses and shore warning-stations is open to the like objection as guns, bells, drums, and horns—that it is an *ordinary* sound, and it may proceed equally from a steamer at sea and a locomotive on land. It is therefore desirable to have an unusual and unmistakeable sound for shore-stations; and certainly Mr. Holmes, of electric light notoriety, has produced a machine constituted of a combination of numerous trumpet-whistles which gives one of the most horrible noises that ever deafened human ears. But unfortunately fog has no more respect for sound than it has for light, and cuts off the former as effectually as the latter. The only way to get over the fog is, seemingly, to send the warning sound through the water. For the accomplishment of this the famous De la Tour many years ago opened the way in his curious little instrument, the siren, which produces, by means of its rapid vibrations, a sound not unlike that of a tuning-fork, or a mild-toned steam-whistle beneath the water, and which sound is propagated through it for great distances. Like the old steam-whirligig however, the

Digitized by Google

siren remains but a toy, and as yet no Watt has arisen to turn it to the advantage of mankind.

The Annual Soirée of the Microscopical Society took place on Wednesday. The new microscope presented by Mr. Thomas Ross excited much attention. The arrangement is on Wenham's binocular principle, and so constructed that the prism may be instantaneously removed and replaced whilst the object is under examination. In addition to the usual vertical and lateral motions, the stage is furnished with an annular notating plate, and rotates by means of a toothed wheel and pinion. The magnifying power of the glasses, which are remarkably free from colour-fringes and present a wonderfully flat field of view, extends to 4,000 diameter, or sixteen million times superficial. Messrs. Smith & Beck and Messrs. Powell & Lealand, also displayed magnificent instruments.

M. Goldschmidt states that Sirius appears to have, besides the companion recently discovered by Clark, several other satellites that hitherto have escaped observation. Thus the bright "dog-star" may soon be proved to be the centre of an important system of worlds, for M. Goldschmidt has already noted six or seven luminous bodies in its vicinity.

At the Anthropological Society, a paper, by Mr. Gore, "On the Microcephalic Brain of an Idiot," was read. A cast of the specimen was exhibited. It is the smallest on record, weighing only 10 oz. 5 gr. (283·73 grammes), the smallest hitherto known being that recorded by Spurzheim, which weighed 300 grammes. The next smallest is in the museum of St. Bartholomew's Hospital—332 grammes.

The Society of Antiquaries of Picardy have proposed for the congress of 1863 a gold medal of 500 francs for the best manuscript memoir upon a historical or archæological subject relative to the ancient province of Picardy; a gold medal of 1,000 francs, extraordinary prize given by M. Thélu, of Doullens, for the best history of the town of Doullens (Somme). The same society also proposes for the Congress of 1864 a gold medal of 500 francs for the best printed work on a subject relative to the history of Picardy, which shall be published in the years 1862, 1863, or 1864; and another gold medal of 500 francs for the best manuscript memoir on a subject relating to the archæology of Picardy.

M. de Saulez has made an exploration in the Eastern Pyrenees, in conjunction with General Creuly, and believes he has found the traces of the ancient way followed by Hannibal, and which afterwards became the Roman road.

The discovery of a Gallo-Roman sepulture has been made in a field in the territory of Warluis, Bruyeres. M. le Mareschal has investigated the discovery, and describes the tomb as composed of two juxta-posed stones about 10 mètres thick and 5 feet 8 inches long. It enclosed two skeletons, so placed that the head of one corresponded with the feet of the other. On the left of each head, between the shoulder and the neck, there was a small rather coarse earthen vase.

In a tumulus near Chatillon-sur-Seine a skeleton has been found retaining still upon its arm a gold bracelet, and having near the head two magnificent buckles in gold of ear-rings of very remarkable Gallic workmanship. Other very interesting discoveries of Gallic remains have been found at Questembert, in Brittany, consisting of bronze swords, lances, celts, and other articles. These have been placed in the Museum of Vannes.

Two Gallic "hachettes en trac des Vosges" have been presented by M. Chas. Cornault to the Museum of Nancy. One found on the coast of Sainte-Geneviève, near Nancy; the other found in a gallery of the iron-mines of Chaligny (Meurthe). The presence of the former indicates, M. Cornault thinks, the ancient existence of a Gallic settlement; and in the vicinity of the Canton la Trinité are the remains of an enclosure, which archæologists regard as belonging to the same epoch. The second implement he concludes was used in the working of the metal.

Suggestions have been made to apply spectral analysis practically in the casting of steel. It is important to know the exact moment at which to shut down the cover of the furnace during the melting of the metal, for the escape of the gaseous products injurious to the steel must be allowed; but if the time be prolonged beyond their escape injurious changes of another kind set in. The idea is that the gases may be recognized by their spectra as they pass off, and that the spectroscope will thus show the exact period of their cessation and the proper moment for closing the furnace.

Instruments of butchery seem well suited to the murderous phases of American war; and one of the latest inventions of this character is an automatic battery carrying five rifles. The shaft carrying the arms is terminated by a handle that is grasped by the gunner. By means of this lever and its connections the sight is taken and the apparatus discharged. As the lever descends, the opposite end is elevated, and working a series of sliding blocks reloads the rifles. Inventions of an opposite kind are not wanting, and the novelties of this kind include iron breastworks on trucks for the protection of infantry.

Some experiments have been made in the United States by Mr. Calvin Pepper on the effects of fine siliceous sand in facilitating and economizing the boiling of water and generating steam. He states that he can boil water and convert it into steam in one-third less time than without it; but there seems to be need for further experiments before this conclusion can be reliably accepted.

THE PAST WEEK.

HOME.

MISCELLANEOUS.

THE happy event of the Prince of Wales's marriage has been quickly followed by another event, which will no doubt furnish a solace to the heart of our widowed Queen. On Sunday morning last, Her Royal Highness Princess Louis of Hesse (Princess Alice of Great Britain and Ireland) gave birth to a princess at Windsor Castle. The Queen was with the Princess constantly during the night. The bulletins give the most favourable accounts of the progress of Her Royal Highness and the infant princess.

Some time ago it was announced that the wedding presents of the Prince and Princess of Wales would, with the gracious permission of their Royal Highnesses, be exhibited at the South Kensington Museum. Our readers will be glad to know that Thursday next, the 16th instant, has been fixed for the opening of this interesting exhibition. The free and students' days will be kept as usual.

The Archbishop of Canterbury and the Bishop of Durham have addressed their clergy with reference to Dr. Colenso's work on the Pentateuch—the former in reply to an address signed by a large number of the clergy of his diocese. His Grace writes that he is not surprised at the feelings of sorrrow and indignation which that work has raised; but that "it is satisfactory to be assured that the principal objections advanced by Bishop Colenso are for the most part puerile and trite—so puerile that an intelligent youth who had read his Bible with care could draw the fitting answers from the Bible itself; so trite, that they have been again and again refuted—200 years ago by Archbishop Usher, one of the most learned analysts of this or of any other country; more recently by Bishop Watson and others." While, however, such works as Dr. Colenso's are harmless to the diligent student of the Bible, they are pregnant with mischief to the ignorant and half-informed. But the steps which his clergy ask the Archbishop to take for vindicating the Church of England from the scandal arising from them are not practicable, inasmuch as in the case of the Bishop of Natal the primary jurisdiction rests with the Metropolitan of Southern Africa, the Bishop of Cape Town, who has just returned to his province, "and is prepared to institute those judicial proceedings which will try whether the charges brought against Bishop Colenso can be maintained." Under these circumstances, it is his Grace's duty to caution his clergy against admitting Bishop Colenso into their pulpits, or allowing him to minister in the Word or sacraments in their respective parishes, until he shall have cleared himself from the grave imputations which at present attach to him. The Bishop of Durham, alluding to a suggestion from the clergy of some rural deaneries in other dioceses, that the bishops of England "should unitedly suspend Bishop Colenso, authoritatively and by inhibition, from all ministrations in the home dioceses," says that he could not concur in such a proceeding; first, because it would be without legal authority, and therefore practically ineffective; and next, because he is fully satisfied that such a warning to the clergy of his diocese is wholly uncalled for, and would imply a suspicion that some of them are unsound in doctrine, which he is sure it would be a calumny to suppose. He then observes that it is not against such superficial writings as Dr. Colenso's that the clergy should be on their guard, but against "a wide-spread spirit of scepticism" which "pervades in many instances the scientific publications, the popular periodical literature, the daily journals, and even the theological writings of the present day. "In them," he continues, "specious objections to the plenary inspiration of the Word of God are constantly urged, and are cleverly adapted to suit the tastes and habits of thought of all classes; so that alike in general society, and in the pastoral work, every clergyman must be prepared wisely and effectually to defend the faith. This, however, can only be done by those who are diligent, well-instructed students of the Bible."

The correspondence between the owners of the *Peterhoff*—lately seized by Admiral Wilkes and sent before the Prize Court at Key West—and the Foreign Office has been published; and, as far as the statement of Messrs. Pyle, Spence, and Co., the owners, goes, there can be no doubt of the wantonness of the seizure. It seems equally without doubt that as the seizure, however improper, has been made in a legal manner, there is no help but to wait for the decision of the Prize Court. Earl Russell replies to the owners, through Mr. Hammond, that the Government of the United States has clearly no right to seize British vessels *bonâ fide* bound from this country, or from any other British possession to the ports of Vera Cruz and Matamoras, or either of them, or *vice versâ*, unless such vessels attempt to touch at, or leave an intermediate or contingent destination to some blockaded port or place, or are carriers of contraband of war destined for the Confederate States; and that in any such admitted case her Majesty's Government would interfere promptly to obtain immediate restitution of the ship and cargo, without waiting for the decision of a Prize Court. But it cannot legally claim for British vessels any general exemption from the belligerent right of visitation, nor proceed on any general assumption that such vessels may not act so as to render their capture lawful. A belligerent may capture vessels reasonably suspected of attempting to break a blockade, or carry contraband to an enemy—and the situation of the Mexican ports with reference to the Confederate States

Digitized by Google

makes it probable that an ostensible Mexican expedition would be resorted to as a cover for such objects—and "whenever a cause of capture is alleged" the case cannot be withdrawn from the consideration of the Prize Court of the captor. The time for the interference of her Majesty's Government is in general when the Prize Courts have refused redress for a capture, which the evidence shows to have been unjustifiable; but it cannot upon *ex parte* statements deny the belligerent rights which Great Britain has always claimed to exercise. It is admitted that the judgments of the United States' Prize Courts which have been reported to her Majesty's Government during the present war have not evinced any disregard of the established principles of international law. And with regard to the particular case of the *Peterhoff*, as the papers submitted to the Government by her owners disclose no *primâ facie* ground of capture, and as there is every reason to believe the voyage to have been *bonâ fide* and the capture unjustifiable, her Majesty's Government will instruct Lord Lyons to make an immediate representation of the circumstances of that case to the Government of Washington, and "if no legal ground of capture should be alleged, then to press for the release of the vessel and her cargo, with compensation, and without the delay of proceedings in the Prize Court." If, however, legal grounds should be alleged, the case must follow the ordinary course. We may here mention that on Sunday a small wood-built screw steamer, the *Alexandra*, recently launched from the building-yard of Messrs. Miller & Sons, of Liverpool, was seized by one of the Customs surveyors, in consequence of information communicated to the authorities that she is built for a gun-boat, and is meant for the Confederate Government.

The Glasgow Working-class Dining-rooms are the subject of a letter in the *Times*. "The remarkable feature of our entertainment," says the writer, "was *that every article was of the very best quality*. Better broth, soup, potatoes, and meat are not to be had in any club in London than in these Glasgow dining-rooms; at no railway station that I have ever stopped at in Great Britain are such coffee, milk, and bread and butter ever sold at all." What is left after 6 p.m. is sold at half-price; what is left after 8 is given away; "so that none is left at night to disgust, by its staleness, the customers of the morrow." But the fare is so good, and the demand so brisk, that very rarely is there left anything to give away, or even to sell at half-price. The writer warns those who are introducing the system into London, not to attempt a variety of dishes; but to adhere to the Glasgow bill of fare. All the rations are priced at 1d. each, except meat, which is 1½d.; and for 2d. he was served with a large breakfast-cup full of coffee and milk, and four ounces of bread and butter. "For 4½d.," he writes, "I got a pint basin of pea soup, a plate of hot minced collops, a plate of potatoes, and eight ounces of bread. . . . . The quantity of meat was small, but the *ensemble* of the dinner was certainly sufficient to satisfy any one not endowed with an exorbitant appetite."

An extraordinary accident happened on the Great Northern line on Saturday evening, close to Little Bytham station, about seven miles from Stamford, by which an express train was dashed to pieces, strange to relate, without the loss of a single life to the passengers, many of whom, however, were severely hurt. The train had left Manchester for London at 3 p.m., and was about to pass the Little Bytham station, at a speed of forty miles an hour, when the tire of the leading wheel of the engine suddenly snapped and flew off. The whole train immediately left the main line, ploughed up the ballast, and rushed through the metals of several sidings into a number of goods vans and cattle-trucks that were most fortunately in the way, for otherwise the train must have gone over the embankment, which at this point is twenty feet above the road below. The trucks and vans were shivered to atoms; the engine and tender of the train "doubled up," and the carriages shattered and piled about the embankment "in a state of ruin," says the report, "which rendered it apparently hopeless that any of the passengers could be found alive." One carriage rested its wheels upon the metals on the embankment, while the other end was supported by the telegraph wires, and so saved from going down into the road. Of between twenty and thirty passengers, only three appear to have been seriously injured, though several were stunned and bleeding.

Actions for breach of promise of marriage, in which the sexes change places and the man sues the woman for damages, are events which, unlike others that acquire interest for their rarity, only provoke in us the sentiment of disgust. Not that a man may not confess to have blighted hopes and wounded feelings, but because the fact of his putting a price on them is unmanly and contemptible, while, if his action is brought to gratifying a feeling of revenge, the functions of justice are abused, and again, the act is that of a coward. We are therefore surprised to find a jury giving £20 damages to a Mr. Corbett, whose suit was heard at Gloucester on Tuesday last; for hitherto, on the rare occasions when such actions have been brought, juries have resented their impropriety by assessing the plaintiff's damages at "the lowest coin of the realm." But if the trial is unsatisfactory in this respect, it is instructive as a warning to bachelors not to place too much reliance on the fidelity of ladies of a poetic turn of mind, who, as Hamlet says, "protest too much;" while it furnishes another instance of the danger of long engagements and the feeble resistance which even the most sentimental ladies can oppose to the allurements of wealth.

Three years ago Miss Mary Chandler was engaged to the plaintiff. They had long known each other, having been brought up in the same neighbourhood, and their acquaintance ripening into affection they were betrothed. The manner of their wooing is sweetly described in a letter written by Miss Chandler to her "dearest George" on the 9th of March, 1861, from which it appears that Mr. Corbett was so timid and bashful that, but for the agency of pens and pencils, he could never have told his love. If an assailant cannot storm a fortress, his best plan is to undermine it; and so the timid Mr. Corbett used to write his thoughts and feelings on "sundry tiny scraps of paper" as they arose within his fluttering breast, and slip them into his Mary's hands on a Sunday morning or evening; "and perhaps," she writes, "once a year you would venture to send me something in the shape of a letter composed of pent-up feelings and desires of your heart, until at last we discovered that what was breathed by one heart was responded to by the other, and at last the secret broke forth that we loved." And when the secret did break forth, what was the result? Miss Chandler thus relates it. "Why, that one night, when all was hushed and calm in the stillness of slumber, and with the starry canopy of heaven above our heads, we found ourselves side by side, with hand resting in quivering hand and eye gazing into melting eye—'twas then you sought and asked for that one word which would place me in the sight of Heaven as your betrothed, and I gave it." She then protests that she has never repented her consent; that no girl who can deceive a young man can ever again be happy; that it is "all trash" to talk of distance causing estrangement; and that, though her doctor has told her she should marry an old man of fifty, who would know how to take care of her, as she cannot stand rough usage, she would rather be "a young man's slave than an old man's darling." Two hundred sheets of brief paper did this elegant lady's love letters to her "dearest George" fill; and judging of their tone from the specimens we have given, George must have been the most unworthy of lovers if he ever for a moment doubted that as there was only "one Mary in the world for him," so he was that one George of all created Georges who possessed her love. This went on till the 24th of January, 1862, when a Mr. Palmer, a wealthy farmer in the neighbourhood of Ross, obtained an introduction to Miss Chandler's family. And from that very time the star of the plaintiff began to decline. Miss Chandler's rhapsodies about quivering hands and melting eyes gradually disappeared from her letters, like the luminaries from the "starry heavens" on the approach of dawn. Farmer Palmer's star was rising so steadily, that towards the end of May the plaintiff was fain to ask her whether it was true that she had accepted an engagement from him. "I answer," she replied, "no. I have not yet; but one and all of my friends wish me to break off my engagement with you, and perhaps it will be best for me to do so, for try how I will I cannot keep clear of these affairs, and it's the constant source of unhappiness to both of us. I never want it to be said that I turned you off, but I wish you to see it in the light I do, and consider it will be best for us to part. I shall leave it with you to say I am free." George does not appear to have relished this generous offer; and the knot which he would not help her to untie, Miss Chandler resolutely cleft in twain by marrying Farmer Palmer in the following November.

The trial of Joseph and Isaac Brooks, for the murder of a policeman at Acton, was held on Wednesday, and resulted in the acquittal of Isaac, against whom there was no evidence, and the condemnation of Joseph, who was sentenced to death. The evidence was wholly circumstantial, and not particularly strong. It consisted mainly of the fact, that on the night of the murder he had had his gun taken out of pawn; that it was clean when delivered to his messenger by the pawnbroker, and bore evidence of having been discharged when the police found it a few hours afterwards in his bed; and that certain shots which were taken from the head of the murdered policeman corresponded with others found in the possession of the prisoner. Jane Lake, a girl who was to have been married to him two days afterwards, stated that she was at the house where he and his brother lived on the night of the murder; that she went with his brother's wife to take the gun out of pawn, that she delivered it to him, and that presently he went out and came back again in twenty minutes, hot and agitated. As his house was nearly a mile from that of the deceased, twenty minutes was a very short time for him to have gone there, done the deed, and returned. There was, besides, no apparent motive for his act. The jury, however, arrived at the conclusion that he was guilty, in less than twenty minutes, and the Judge passed sentence in severe terms, holding out no hope of mercy. As the prisoner was being removed from the dock, a woman in the gallery, said to be his sister, raised a most heart-rending shriek, and when carried into the street in a pitiable state of grief, shocked the people in the neighbourhood by her despairing cries.

Some weeks back, in noticing the trial of a young man who had fired a pistol at his sweetheart, as he said to frighten her, because she had given herself some coquettish airs, we suggested that his acquittal would encourage other moody youths, who thought themselves neglected, to follow his example. Our fears were speedily verified. On the 1st of the present month a youth named Pye, aged 19, who had been keeping company with Matilda Madlin, but whose addresses were subsequently declined, as the girl had found a new admirer whom she preferred, accosted her in the evening in the Mile-end Road. She told him that his company was not required; but he followed her till she turned up the Bethnal-green Road, intending to return to her aunt's, which she

Digitized by Google

had just left on her way home. When she got to the top of her aunt's garden she saw him raise his right hand three times, and then heard the explosion of a pistol, felt a severe shock, and fell. On being apprehended he asked the constable if she was dead, and said that he had shot her with a rivet, but had only intended to frighten and not to murder her. The girl, however, was injured; and the jury, not approving of this mode of wooing, found the prisoner guilty of shooting with intent to do grievous bodily harm. The judge gave effect to their verdict by sentencing him to six years' penal servitude; observing that offences of this description are at present becoming too prevalent.

The Volunteers mustered to the number of 20,000 at Brighton on Monday for their annual review. This field day was the most successful of any on a large scale in which they have yet distinguished themselves.

FOREIGN.

AMERICA.

We are still in doubt as to the success of the expedition which was to circumvent Vicksburg by the Yazoo River, and letters from Cairo of the 24th ult. state that the expedition *viâ* Yazoo Pass, was only a feint to divert the attention of the Confederates from the real operations of the Federals. These operations consisted in cutting a canal fifty miles below Helena, into the Deer and Sunflower Rivers, communicating with the Yazoo between Yazoo City and Haines' Bluff. It is now said that the canal has been accomplished, and that several gun-boats, with a strong detachment of General Grant's army, have already passed through by this route. These rumours, however, are not to be depended upon. What is certain is, that neither at Vicksburg, Charleston, Mobile, nor Savannah, have the Federals as yet done anything; while the Confederate statement of the repulse of their attack upon Port Hudson, for a while denied by the New York journals, has been confirmed by official reports *viâ* Cairo. The Washington Government, however, is in high spirits, and as it promises the Northern public a series of immediate victories which will utterly annihilate the South, already exhausted by want of food; the public is also in high spirits. Large investments have been made in Five-Twenty Bonds, enabling Government to pay the most pressing demands of the army, and on the 24th ult. gold had fallen to 46¾ premium.

On the other hand, the "exhausted" Confederates have entered Kentucky under General Longstreet and captured the towns of Mount Sperling and Danville, while in Tennessee their reconnaisances in the neighbourhood of Murfreesborough have given rise to alarming rumours. In Indiana the Government has ordered the seizure of all arms in the possession of citizens, and has prohibited the public sale of arms in Cincinnati. These steps have been taken partly in consequence of the fear that the inhabitants would by force resist the apprehension of deserters from the army, who have refuge and sympathy in the Western States in numbers variously estimated at from thirty to seventy thousand. But there exists a still stronger reason for disarming the population, in the outspoken dissatisfaction of these States with the prolongation of the war. While New York is fostering its "Union League" for the restoration of the Union at every cost, Indiana and Illinois have given birth to a confraternity which, under the name and style of "the Knights of the Golden Circle," numbers fifteen thousand members in Indiana. The object of this association is to put an end to the war as speedily as possible, and its indignation has not only been roused by the despatch of troops to seize deserters in spite of the warning that the attempt would lead to bloody work, but, by an act of General Wright, the military governor of the Western department, clearly unjustifiable. It appears that Judge Constable, while the circuit court of Clark County was in session, ordered the arrest of two persons who were accused of kidnapping in Illinois a young man under the pretence that he was a deserter. They produced a commission authorizing two persons named in the instrument to arrest deserters in a certain district of Indiana, but they failed to prove that they were the persons indicated or that they were in lawful possession of the document. The judge, therefore, held them to bail to answer the charge. This no sooner came to the knowledge of General Wright than he despatched a military force of two hundred men from Indiana into Illinois, by whom Judge Constable was arrested and thrown into prison. Seeing that the West has supplied by far the larger number of soldiers to the army, that it has not enjoyed the contracts which have made the war popular in New York and New England, and that, on the contrary, it has been impoverished by the cessation of its flow of grain crops to the Southern States,—all this is hard to bear, especially as the taxgatherer has made his appearance and is taking stock of the property of the Western farmers for the purposes of taxation in support of a war which has ruined them. No wonder that dissatisfaction is wide-spread, or that it is no longer safe to permit the sale of arms in Indiana and Illinois. The *New York World* of the 26th, in summing the American "situation" up to that date, gives a very gloomy account of the state of affairs in Kentucky and Tennessee. The news, it says, "is really alarming." "The rebels are flanking General Rosencrans as they did General Buell. They are in Kentucky in force, and have captured Danville. We hear of more feeble fighting and cowardly surrenders in the department of the Cumberland, and it is clear that General Rosencrans must either soon fight a great battle or abandon Murfreesborough and Nashville. The arrival of General Burnside with his 9th army corps at Cincinnati from the department of the East is significant, and shows that our military authorities are seriously alarmed at the threatening state of affairs at the West, especially in Kentucky." But, threatened at this point and baffled at every other, the Yankees grow daily more insulting in their language towards England. The President is urged to issue letters of marque to sweep the "British pirates"—the Confederate rovers—from the sea, and the *New York Times* insists upon war with England if another American vessel is captured.

While the governors of the Western States have been in council with Mr. Lincoln to devise means for opposing the resistance with which the arrest of deserters, and the enforcement of the conscription bill, and the excise taxes, will be met in their States, the Democratic general committee have held a meeting in New York denouncing the war, and calling for a convention of the States, with a view to an immediate peace. The resolutions, which were enthusiastically agreed to, are very strong. They describe the war as the "most unnecessary, most ineffectual, most devastating, and most cruel war of modern times." To obtain, for this war, a seeming and temporary unity of public sentiment in the North, "requires the suppression of newspapers, the intimidation of the weak, and the lawless imprisonment of brave and consistent tribunes of the people in military bastiles, along with an unexampled profusion of the official favours of a corrupt administration, a lavish distribution of civil and military honours, and the shameless plunder of millions from the public treasury." The war so sustained, after two years of fratricidal struggle, is not a single step nearer the restoration of the Union, "though hundreds of thousands of our best and bravest youth lie in their bloody graves, and the land is filled with mourning and suffering, while bankruptcy and grinding taxation are pressing upon us." After denouncing the Conscription Bill, the despotic powers entrusted to Mr. Lincoln, the banking system, and the Republican party meetings, they appointed the 3rd instant for a public mass meeting to give expression to the opinion of the Democracy of New York on the state of affairs.

POLAND.

The report that the Warsaw Revolutionary Committee has ordered a cessation of hostilities and the dispersion of the Polish bands, proves to be "an invention of the enemy." It is at least certain that hostilities proceed more briskly than ever, and that the number of insurgent bands carrying on the war at various points, and carrying it on with success, too, is on the increase. The *Austrian Gazette* speaks of four different bands who maintain their position in the palatinate of Kalisch; of others in Mazow; of two in Plock; of several in Lithuania. Four corps are mentioned in the immediate neighbourhood of Warsaw, so skilfully manœuvred that they do what they like and slip through the hands of the Russian columns sent against them. In the government of Lublin the Russians were surprised and beaten at Slavin. In the same government, and in Radom, several other bands are active. All accounts testify that the rich and influential as well as the peasants are daily joining the movement; and that the principle on which they act is to maintain a guerilla warfare and avoid any great combat.

Not until it could no longer be deferred, has the Austrian Government interfered in Gallicia to stop the transport of supplies and the passage of insurgents into Russian Poland. Up to the 15th of March, if it did not wink at these proceedings it did nothing to prevent them, and an amusing instance is recorded of the manner in which rifles were conveyed, under this friendly laxity, from Gallicia across the Vistula. While Langiewicz was still giving battle to his enemies, evidences of pious anxiety to supply the churches of Cracow with candles aroused the suspicion of the railway authorities. Candles as long as Minié rifles were pouring into the town; and the director of the railway is said to have applied to Vienna to know whether he was to examine the cases or let them pass. The Catholic Government of Austria did not see why it should prohibit the zeal of the faithful, and an order was sent back to stop only firearms and ammunition, and so the candle-cases, filled with Minié rifles, found their way into Poland. There must, of course, be a limit to this indulgence, and the Austrian Government appears to think that the limit has been reached, for the police make nightly arrests in Cracow, search private houses, and suspicious-looking packets are carefully examined.

Meantime, the Poles have issued a manifesto from their camp at Bialowicza, dated the 24th March, in which they appeal to Europe, and especially to England and France, for sympathy and assistance. They ask that a contingent of 30,000 troops should be sent to Poland, with 100,000 rifles. With this aid, they promise to make short work of the Russians. From another quarter, a document more important has been issued. The Polish Committee of Paris have published a manifesto, in which, with an urgent appeal to the conscience of Europe to aid the cause for which the insurgents are fighting, the Committee offers itself as "a centre to the exertions which will be made with the view of supplying the wants of the Polish cause, and of mitigating the cruel misery which results from the present struggle." "That struggle," the Committee says, "has already astonished the world by its duration, still lasts, and will long do so. Recent checks do not discourage the heroic perseverance of the Polish people. Even the most unexpected abandonment would not shake their confidence in the justice of God..... Let us, therefore, allow no one to believe that the Polish question can ever be buried in defeat or forgetfulness. Let us promptly

Digitized by Google

carry aid to the supreme exertions of this superhuman devotion—aid to the captives, the sick, the devoted villagers, the ruined and famishing populations. Let public sympathy do its work until the concience of Europe, which is already aroused, finally ensures the triumph of this holy cause." This manifesto is signed by the Duc d'Harcourt (chairman), by MM. Odillon Barrot, Ernest Legouvé, Saint-Marc Girardin, Ferdinand de Lasteyrie, Edouard Bertin (of the *Débats*), Count Cambacères, Hippolyte Carnot, A. Guéroult, Pierre Lanfrey, Henri Martin, Count Montalembert, Auguste Nefftzer, and many others.

Cracow telegrams of the 4th and 5th inst. state that the insurrection is increasing in the government of Kowno, in the palatinate of Augustowo, and that Ponsiwicz has been taken by the insurgents. They have also captured Radom, in the palatinate of Sandornier, and seized the public treasury. A fresh body of insurgents has appeared near Cracow, and on the 5th a battle took place at Szyce, near the Austrian frontier, in which the Russians, though double the number of their opponents, were defeated. Another battle took place near Olkusz, the insurgents entirely destroying a Cossack detachment. There is some reason to believe that the Poles were subsequently attacked in turn, and dispersed. At Mariampol, Augustowo, a band of insurgents have interrupted the railway communication between Kowno and Eydonhnew. Lithuania is in open insurrection; a battle has been fought at Janow, near Kowno; and armed bodies of insurgents, actively aided by the peasantry, are in the environs of Wilna, Wilkomierz, Szwale, Towiany, and Poniewicz.

The special correspondent of the *Times* at Cracow, in his letter dated the 3rd instant, warns his readers to expect great doings in Poland shortly. "Before the middle of the month the whole of Russian Poland will be shaken from the Dnieper to the Baltic, and from the coast of Courland to the eastern extremity of Podolia." Lapinski has landed in Courland with a band said to be well composed and officered by men who have served with distinction in various European armies, including one who has just quitted the English service for the sole purpose of assisting the Poles. The Russians dare not withdraw the garrisons from Warsaw and the fortified towns. They will not be able to resist the insurgents in Lithuania, or in Podolia, or in the south of Poland towards the Gallician frontier, from which they must soon withdraw before a force of insurgents twice as numerous as those lately under the command of Langiewicz. "As soon as the news of Lapinski's invasion of Courland is confirmed," says the writer, "you will hear of a movement in the south-east, which will rather stagger the Russians." To the disgrace of Prussia be it said, that while the Russians are allowed openly to purchase steamers at Dantsic for the transport of troops on the Vistula, though the police and government have been informed of it, neither lint nor medical stores are allowed to be taken from Prussian territory into the kingdom of Poland, "but are seized and confiscated, without mercy, at the frontier."

GREECE.

If the *Dagbladet* of Copenhagen correctly represents the policy of the Danish Government, the Greeks are not likely to obtain Prince William for their king on terms so easy as those on which they have offered him their crown. The journal above mentioned is hostile to the candidature, and maintains that if Denmark extricates Greece and Europe from the embarrassment of a monarchy without a monarch, she is justified in making such conditions as, while assuring her right, shall at the same time secure the tranquillity and equilibrium of Europe. "By accepting our terms," it says, "Europe could obtain a king for Greece, and would put an end to the Schleswig and Holstein question." The conditions are as follows:—The guarantee of the independence of Denmark by the great Powers; assistance to maintain order in the monarchy for that purpose; renewal of the guarantees for the possession of Schleswig by Denmark, as obtained in 1720; and the neutrality of Holstein.

LATEST.

A Cracow telegram of the 9th states that the bands of insurgents under Czieskowsky and Oxinsky are augmenting, and that the insurrectionary forces in the district of Kalisch have been largely increased. The insurrection is also spreading in Lithuania, where the peasants are burning the schismatic churches. M. Bentkowski, a member of the Prussian Parliament, and late chief of Langiewicz's staff, was arrested at Cracow on the afternoon of Thursday. The entire Russian army has, says the *Nord Deutsche Zeitung*, been placed on a war footing. It seems doubtful whether Lapinksi has yet landed in Courland. The Cracow correspondent of the *Times* writes that 600 men left Cracow for Poland on the 2nd instant, and 800 on the 3rd. They were almost immediately engaged with the enemy, and the sound of cannon was heard at Cracow between twelve and one o'clock on the 5th. A few hours afterwards four men were brought in apparently mortally wounded. The Russians, however, appear to have been beaten, and forty or fifty of them are said to have taken refuge in Galicia, and to have been discovered and made prisoners by the Austrian troops.

A Copenhagen telegram states, "on reliable authority," that the conditions imposed by Prince Christian for the acceptance by Prince William of the crown of Greece are, first, the formal abdication of King Otho, and secondly, that a suitable allowance should be made to the Prince. The King of Denmark, says the telegram, will give his consent only upon condition that England shall guarantee the present order of succession to the Danish provinces. The Danish Government will on no account agree to the regency of Duke Ernest, of Saxe-Coburg Gotha, during the minority of Prince William.

Correspondents of the *New York World* and *New York Times* give pitiable accounts of the distress to which the once affluent families of the Confederate States have been reduced by the war. At Jacksonville, Florida, now occupied by Federal troops, the women and children are mostly clothed in rags, and have nothing to eat but a small amount of corn eked out with rice. An examination of the houses told a similar tale. Beautiful little children crawled about in rags, with nothing to allay their hunger but uncooked rice.

Victor Emmanuel has arrived at Florence. The town, says the telegram, was decorated for the occasion, and the inhabitants received him with the greatest enthusiasm. The Sultan has arrived at Alexandria. On his arrival he declared that he wished to be considered and treated only as the guest of the Viceroy.

A Madrid telegram of the 9th says that at a meeting of the members of the former Parliamentary majority, it was resolved not to engage beforehand to support the Ministry.

The Bishop of Chichester has addressed his clergy, expressing his desire that no clergyman within his diocese shall permit Dr. Colenso to minister in his church.

A dreadful boiler explosion occurred near Glasgow on Wednesday. Seven persons were either killed on the spot, or so much injured that they died shortly afterwards. Others were more or less hurt.

REVIEWS OF BOOKS.

THE CONFEDERATE STATES.*

THE author of "Life in the South" is a Miss Sarah Jones, an English governess, who resided in Virginia and Florida during the early part of the present civil war. We cannot conscientiously say that this work throws any new light either upon the causes of the conflict or upon the state of society or opinion in the South. At the same time her experience of Southern life furnishes a good many interesting illustrations of its more salient factions; and of the relations which subsist between the slaveowner and his slaves. Although, as an Englishwoman, she feels it necessary to disclaim any approbation of slavery, her descriptions of its actual working are highly favourable to the "domestic institution," so far as the negro is concerned. It was not her fortune to meet with any cruel slaveowners; nor do the sufferings consequent upon the internal slave trade,—the breaking up of families, and the severance of near and dear ties—appear to have come within the range of her observation. She saw a rather eccentric and very perverse race, of slight capacity, no forethought, and no natural inclination for work, living contentedly under the paternal care of the easy-tempered Virginian proprietors. So far as servitude goes, it would really seem to exist quite as much on the part of the masters as on that of the slaves. The latter can hardly be got to do anything without incessant watching and overseeing—not from any want of attachment to their owners or from any distinct discontent with their condition, but from sheer idleness and carelessness. On the other hand, the master and his family are the nurses and physicians of their "property," expected to attend to them in sickness and care for them in old age, and, according to Miss Jones's experience, rarely failing to discharge these duties. It is quite possible that this picture may represent with some approach to fairness the semi-patriarchal relations which exist in the Virginian households; but one cannot help doubting whether slavery does not bear a less unfavourable aspect in ruder and less civilized States, where harsher masters are struggling with keener avidity to raise the largest possible quantity of sugar or cotton by the labour of their negroes. Nor is it unimportant to remark that even in the "Old Dominion" the proprietors obviously do not act upon the undoubted confidence which they express in the fidelity of their sable dependents. So early in the war as Christmas, 1860, it was thought necessary to establish at Richmond a "home guard," in order to protect the city against a negro insurrection. Nor was this alarm entirely without foundation, for our authoress tells us that about that time incendiarisms were so frequent that the inhabitants of that city lived in a state of continual alarm. Scarcely a night passed that they were not awakened by the fire-bells. Sometimes, indeed, fires were raging at two or three parts of the city at once, and the "home guards divided themselves into regular patrols for night watches." On the other hand, there were instances in which the negroes, in the absence of their masters, deserted the plantations and ran away to the woods, because, as they said, they were "feared de Yankees'd cotch us." The truth, indeed, seems to be, that they have, with few exceptions, but little if any desire for freedom; but, on the other hand, they are so susceptible to any excitement, that it is quite a matter of chance in what manner it might act act upon them. Probably their general feelings are not inaccurately represented by a conversation which the overseer of a planter in Florida overheard, while hiding behind the huts of the

The South as it Is. By the Rev. T. D. Ozanne. Saunders, Otley, & Co.

Digitized by Google

negro quarter on his employer's estate:—"Nothing transpired for a time more than general conversation, dancing, and frolics as usual. The war and the Yankees came accidentally on the *tapis*, and they began to argue upon the delights of freedom;—attractions appreciated by only two of the whole party, who said they should like to be free, 'because they knew all about the cards, and could get a good deal of money by gambling, without doing any work.' None of the rest expressed the least desire to be free."

On the other hand, there can be no doubt as to the mischievous effects of slavery on the whites. It had made them, up to the outbreak of the civil war, indolent, shiftless, and thriftless in the highest degree. They had neither decent roads, nor air-tight houses; while they were dependent upon the North for the simplest productions of mechanical or industrial art. Indeed, the extent of this dependence can hardly be appreciated without mentioning a few of the things which ran short as the blockade grew more stringent:—

"Such trifling articles of household requirement as matches, soap, candles, starch, glue, &c., were becoming exceedingly scarce. All of these could be produced at home; but it seemed no one's business to begin. Southern extravagance and affluence had never thought of saving grease for soap, any more than rags for paper, or hides for leather."

Extreme difficulty was indeed long caused by the want of shoes, and writing-paper was an almost unattainable luxury. So long as there was any hope that England would raise the blockade, these manifold wants appear to have been borne with a resignation bordering upon apathy. But as soon as the Southerners recognized the fact that they had only themselves to depend upon, they set to work to create home industries, with an energy and a success which showed, as much as any of their warlike measures, their thoroughly sound and manly character:—

"Manufactories were established in Virginia for envelopes, blacking, lucifer matches, hats, caps; tanneries, shoes for the Government, and iron. Cotton and woollen goods, sword factories, saddles, and harnesses, agricultural machines, oil-cloth, foundries for engines, &c.; sash, door, and blind factories, gun-carriages, waggons, wheelbarrows, camp-stools, tents, tent-poles, &c., and every implement of war. In North Carolina, candles, lamp-oil, cutlery, nearly all from recent inventions and natural products; gunpowder, bayonets, sewing machines, and a repetition of many of those articles made in Virginia. Also, jeans, cotton prints, linseys, blankets, cloths, and a variety of things too numerous to mention."

We need scarcely allude to the enormous exertions made in procuring the material of war. Most of us remember the proclamation in which General Beauregard called, not in vain, for the church and plantation bells to be moulded into cannon. And Miss Jones tells us that the people in the part of Florida where she then resided, had their old bells, copper kettles, brass door-knobs, lead and iron fragments, collected and forwarded to Columbia in Georgia,—there to be melted down for the same purpose. The determination to turn every available object to this use was, perhaps, most curiously exhibited by digging up cannon which had been placed as posts in some of the principal streets of Richmond. Under whatever difficulties they had to struggle, they did not, however, suffer from any of those traitorous tricks which some of their own side played the Federals. One of these, named Cunningham, had a situation in the navy-yard at Washington before the war broke out. "As soon as the orders were given for so many cannon balls and shell he saw very plainly that Lincoln's professions and Lincoln's intentions did not exactly accord; and, as most of the men under him were Secessionists, they set to work making bogus shells and filled them with sand and sawdust." Oddly enough, it subsequently happened that some of these very shells were fired at a party of Confederates, under the command of Cunningham himself.

If any further testimony were required to the unanimity of the South, or to the patience, endurance, and heroism which they have displayed in so unequal a contest, it would be abundantly furnished by these volumes. But these are points on which no further evidence can add anything to the knowledge we already possess. It is, however, clear that the virtue of self-reliance was one of slow growth. At the outset they depended with undoubting faith upon the assistance of England and France, at least to the extent of breaking the blockade; nor can we avoid seeing that the disappointment of these hopes has led to the growth of a feeling of very deep and bitter resentment against this country. However, we must be content to bear this as best we may; and it certainly ought not to detract from our admiration of the ready and cheerful "pluck" with which all classes bore up under their unexpected isolation. Of the gallantry of the Southern soldiers Miss Jones tells several anecdotes of which we can only find room for a few, relating to the incidents at the battle of Bull Run:—

"One of those Georgia 'boys' was shot in the arm, rendering it powerless, but it did not arrest his ardour. By resting his gun on the trunk of a tree he managed to reload it, and with *one arm* shot and killed successively three men, whom he had marked as having fired upon three of his friends. A similar spirit was displayed by a comrade whose leg was broken by a cannon-ball. Crawling to a tree, and partially shielding himself behind it, he loaded and reloaded his gun, and continued to fire till his powder was exhausted, each time picking out his man and sending him to his long account. Another wounded Georgian, whilst lying on the ground, saw his own two brothers shot down. Marking their murderers, and with an almost superhuman effort, he raised himself, faint with bleeding, upon his elbows, took aim, and revenged himself of their death by bringing both of the Federal soldiers to the earth, one with each barrel of his gun."

It is pleasant to know that this stubbornness in the fight was equalled by the humanity shown towards their Northern prisoners. Miss Jones had many opportunities of visiting the hospitals and prisons; and she declares emphatically, "that as long as any comforts and luxuries were to be had, whatever medicines or attendance or what not was required, I know also that they [the prisoners or patients] had it." In consequence of the blockade the supply of comforts and medicines often fell short; but for this the South were not to blame. All that they could do was to treat their enemies as well as their own troops; and this we are assured they did.

The Rev. Mr. Ozanne's work, although the production of one who has lived for twenty-one years in the South, abounds much more in general statement than in specific information. Like most of those who have been brought much in contact with the slave-owners, he takes a very favourable view of their character and abilities. Strongly prepossessed in favour of the justice of the cause for which they are now contending, he speaks in high terms, not only of the united spirit which pervades the Confederate States, but of the gallantry of their troops in war, and of the humanity with which they treat the prisoners who fall into their hands. His experience has convinced him of the general—indeed, the nearly universal—humanity, with which the negroes are treated; and he contends that immediate emancipation would be the greatest curse which could happen to beings who are at present entirely dependent upon the guidance and instruction of a higher race. At the same time he does not regard slavery as the final and permanent condition of the African. He believes that they may by culture be gradually elevated to a condition of liberty; and, moreover, that they would gradually obtain this blessing, much in the same way as the serfs of the middle ages passed into freemen, if the South were left to itself. But he argues that the progress which would be possible in such a state of things is rendered impossible while the Northern abolitionists keep the planters in a state of constant alarm, and compel them to keep their dependents in ignorance and absolute dependence, lest they should be excited to insurrection. There is no doubt much force in this view, for it is impossible to shut one's eyes to the fact that the negroes are at present wholly unfit to be their own masters; and it is equally difficult to see how any slow but certain process of transition could be peacefully or successfully carried on in the presence of an external agitation. This is, however, too large a subject for us now to enter upon; and we prefer to turn to the comparatively small portion of the work which is devoted to personal narrative. The author was at New Orleans while General Butler ruled in that city, and he fully confirms the stories which have reached us of this man's cruelty and rapacity. With regard to the former, he heightens our previous disgust at the execution of Mumford by a fact which we have not seen mentioned before. The wife of the condemned man pleaded earnestly with the General for her husband's pardon, he told her "to go to the place of execution to receive it." She obeyed this order, but it was her husband's death, not his release, that she witnessed. Of Butler's 'cuteness take the following sample. His brother Colonel Butler and Jacob Barker bought up the greater part of the sugar in the market with Confederate notes taken up by them (at the time their circulation was forbidden), at 75 per cent. discount. By the control which they thus obtained over freights, they were enabled in a short time to ship these sugars at 1½ dollars per hogshead (the ruling freights having been previously 16 dollars). By participation in such speculations, and by various exactions, the General is believed, at New Orleans, to have realized a fortune of from two to three million dollars. We will conclude by giving one other instance in which brutal inhumanity was, by this favourite Northern commander, happily combined with shameless encouragement of the most abominable treachery. He sent Dr. Symes, an extensive dealer in drugs, to Fort Pickens for six years, for selling a few hundred ounces of quinine and morphine to parties supposed to be Confederate agents; the doctor's confidential clerk, who reported the fact at head-quarters, receiving as his reward full control over the affairs of his master's establishment. And this occurred while the Federal prisoners taken at the battle of Shiloh were receiving the most careful and sedulous attention in the Confederate hospitals at Jackson and other places. Comment is needless upon facts like these.

THE COST OF A SECRET.*

"THE Cost of a Secret" is a novel written evidently by an author of refinement and imagination, and its faults are precisely those which are oftenest found united with considerable imaginative power. Novels may be divided, like all other productions of artistic minds, into two classes, and belong either to the ideal or to the realistic school. The minute delineation of life and manners, that we get so frequently in novels of the day, is more fatiguing and less pleasant than the ideal and even shadowy conceptions given to us by more dreamy and poetical writers. We live in a dusty and a noisy age; and to educated readers, whose path through life lies in a crowd and in a throng, it is a relief to escape into a volume

* The Cost of a Secret. By the Author of "Agnes Tremorne." In three vols. London: Chapman & Hall. 1863.

Digitized by Google

which seems written at a distance from the roar of commerce and of business. In the greatest art there is a quiet and a calm that refreshes weary spirits. The figures in the scenes depicted by great authors, either of ancient or modern times, look down upon us from their famous pedestals with an air of classical repose. Their passion and their action, intense and deep as it is, seems to be laid in some serene sphere, removed from the littleness and the turmoil of the world. Even crime, under the enchanter's wand, assumes an aspect of dignity. A criminal in bronze or in marble has a fascination for us, where a criminal in rags and in a London thoroughfare would only repel and disquiet. We are tired of common things and daily life, and when we take up a book we do not wish to be plunged back again into the stream from which we are endeavouring to escape. It is a mistake to suppose that practical minds care only for Dutch painting when they betake themselves to works of fiction. As a rule, perhaps, the contrary is the case with people of sensibility and education. Few people ever loved towns so dearly as Dr. Johnson, to whom a coffee-house in the Strand afforded as much pleasure as a thousand green fields. Few writers ever more undeniably showed their love for ponderous abstractions and for imaginative writing. Clumsy as was the imagination of the great doctor, he took refuge in it from the distressing anxieties and sufferings of the everyday world. There are many people who are of the same mind. Fictitious business and fictitious life have little charms for those who see so much of real business and real men and women; they want rather to be transported from themselves into the regions of fancy and romance.

The great difficulty with which a writer has to contend who belongs to the more fanciful and romantic school, is this, that it is not easy to depict character on a large and a romantic scale, when the figures can, after all, be figures of men and women only. The classical artist raises them above the earth by laying the scene of action either in heaven, or at least in that mysterious mythical age of heroes and demigods, the personages of which were surrounded with an indistinct and romantic grandeur. It was something more than human sorrow which spoke to the Greek in the person of an Antigone or an Œdipus. Nor was there any danger of the plot of the story being of necessity either vulgar on the one hand, or improbable and extravagant upon the other. A modern author has no such resources as were vouchsafed by the peculiar circumstances of the age to the classical poet or mythologist. He is anxious to fly from all imitation of common life, and in shunning Scylla he falls into Charybdis. He paints men and women, for he can paint nothing else; and in endeavouring to remove them from the everyday level of common things, he often makes his plot unnatural, improbable, and absurd. The effect is that he challenges and provokes the very comparison with common life that he wishes to avoid. His heroes move about as heroes never moved before in this world. His heroines place themselves in positions which have no parallel on earth. His groups are admirable, but the lights and shadows are overdone, and the background is a background constructed upon untenable assumptions which seem to do violence to our experience, and to contradict all that we have ever heard or seen. Wise indeed is the rare and happy novelist who, in such a dilemma, refrains from mixing in these impossible proportions the ideal and the real, and confines himself to making the interest of his piece turn entirely upon the internal play of the feelings, or at least upon the simple and picturesque grouping of the figures. The more common error is that of the author whose personages and characters charm us by their grace and their truth, so long as they stand still, but, when they move and act, act in violation of the ordinary laws of probability and social experience.

It is seldom that the reader of fiction comes upon a three-volume novel in which there is as much to please and as little to offend as is to be found in "The Cost of a Secret." The conceptions of character in it are graceful and refined; nor are the heroes and heroines built in any except a truthful mould. With the exception of the *Deus ex machinâ* of the tale, a certain M. Corsand, whose virtues perhaps verge upon the superhuman, the other male and female characters possess the rare advantage of being at one and the same time both naturally and elegantly drawn. The literary part of the book is done beyond all question well; and on arriving at the close, we can feel that in point of taste there has not been a blemish through the whole. Like "Agnes Tremorne"—a novel by the same hand—"The Cost of a Secret" is framed on a classical model and by classical fingers. Both tales belong to the gallery of art, in which stand the creations of some of the best modern writers of the classical school. But "The Cost of a Secret" has a fault which will not be found in the exquisite productions of such a novelist as the author of "Transformation." That the plot should be unreal is not in itself an insuperable objection. But the plot, which in reality is improbable and unreal, is meant beyond all doubt for a plot of real life; and as such it provokes a criticism and an investigation which it is unable successfully to bear. The merit of the tale would have been greater but for this. Had the author been contented with elaborating quietly the different admirable characters that had been put upon the scene, without introducing them to an impossible complication of circumstances, "The Cost of a Secret" might have lost something, but it would have gained even more. The author was afraid of being dull, and determined apparently to create an interest from the story itself, independently of the characters of the story. Nor can it be said that the object has been altogether unattained. The secret is somewhat transparent, and a curious inquirer might discover the key sooner perhaps than the author imagines; but the thread of narrative is on the whole well sustained, and—on the assumption that the narrative was possible at all—would be calculated to interest and please. Unfortunately this assumption is untenable. The plan is too fanciful to be human. There have been men and women like the men and women we meet in "The Cost of a Secret," and they have been charming men and women. But never were men and women placed in so singular and unlikely a position as that in which the characters of "The Cost of a Secret" have been placed by its refined and ingenious author.

It is owing, doubtless, to the imaginative tendency of the author that all the heroes and heroines of the story are drawn in some picturesque light or other, and never stand except in an artistic attitude. The author seems to look on them not merely as human beings but as statues or works of art. She places them and walks round them, giving them a touch here and there, or adding in an ingenious way to the effect. When she wishes them to do or say something fresh, she removes them carefully into another light, and there places them and groups them again. Evidently she has a keen interest in her own creations, and is extremely sensitive to the influence of the various lights and shadows in which they stand. The effect of this is to give a considerable finish to the book. It is agreeable to look at a tableau which is so artistically and carefully arranged. Every group is excellent, and every figure has been arranged in the most effective position; and as a series of pictures no fault can be found with the tale. It is, as we have said, to the thread of plot which connects the groups, and along which the figures move from their position in one group to their position in the next, that we take exception. The strings are too slight and complicated, the machinery is too tangled and impossible, for figures to move naturally along it at all. Cordelia, the heroine in chief, while travelling as a girl in Italy, falls in with, and falls in love with Gerard Clayre the hero. The admiration she feels for him is not less than that which he feels for her loveliness and her genius, and they are married. A Princess Bifrons, a Russian lady of some pretensions to talent and to beauty, for whom Gerard Clayre has shown a decided admiration, is on the spot, and determines to revenge herself for his desertion by alienating the newly-married pair. To Cordelia she represents that Gerard has been previously her own lover, producing as evidence a letter in his writing, which, when all is over, is discovered to have been written as part of a charade. To Gerard she represents, on the other hand, that Cordelia has been, and is still in love with M. Corsand, her senior in years, a paragon of all virtue, into whose company she has been thrown. These insinuations are not without their consequence. Coldness and mutual suspicion fall on Cordelia and her husband, a suspicion aggravated by Cordelia's proud and passionate refusal to break gratuitously with M. Corsand, her old and venerated friend. Gerard, weary and indignant, determines to leave his wife at her father's house, and goes to India, whence he returns to find that she has become a great singer at the opera in Italy. They meet to reproach one another, and part again as coldly and as proudly as before. On his second return to England, Gerard finds that malice has coupled again his wife's name with M. Corsand, who, in the interval, has happened to save Gerard's life. This time, if it were not for the good offices of Ivy Clayre, his young sister, who is, perhaps, the prettiest conception of the book, the separation might have been eternal. Thanks to Ivy's persistent courage, and to the opportune discovery of a diary of Cordelia's by her husband, in which he reads the history of her love for him and of her innocent relation with M. Corsand, the evil is avoided. The story closes, after many episodes, with the triumph of Cordelia's innocence, the restoration of her husband to a sounder and less suspicious state of mind, the vindication of M. Corsand—who, like all good genii, is for ever wandering, and who sets out for another philanthropic tour immediately to Algeria—and the discomfiture and late repentance of the wicked fairy, the Princess Bifrons. The intimate connection between Cordelia and M. Corsand is satisfactorily explained by the fact that he was privately and secretly married to Cordelia's greatest friend, and no shadow is left to trouble the future happiness of her married life. We cannot help, however, observing, in apology for Gerard Clayre, that without disrespect to feminine authorship, we discover in the moral of this part of the story the touch of a feminine hand. It is too much to expect from the weak and erring nature of husbands such implicit confidence in female discretion as the author of "The Cost of a Secret" seems to have expected from Gerard. Cordelia makes a decided mystery about M. Corsand, and does not hesitate to avow that he is the noblest of his sex. To play second fiddle to another paragon of virtue is a trying ordeal for a husband, and allowances should be made for the unhappy Gerard Clayre, which the author seems reluctant to make. It is the old story of the painter and the lion. If the lion had been allowed to tell the story, perhaps he would have told it differently. With this protest in favour of M. Clayre we are content to leave the conduct of Cordelia uncriticised, and to close a book which, whatever the improbabilities of its plot, is gracefully and pleasantly written.

ADMIRAL MUNDY AND THE ITALIAN REVOLUTION.*

Admiral Mundy's book derives much interest from the glorious scenes of the Revolution in the Two Sicilies in the autumn of 1860.

He was appointed second in command of the Mediterranean

* H.M.S. *Hannibal* at Palermo and Naples, during the Italian Revolution, 1859–61. With notices of Garibaldi, Francis II., and Victor Emanuel. By Rear-Admiral Sir Rodney Mundy, K.C.B. Murray.

Digitized by Google

fleet at the beginning of 1859, and was an eye-witness of the great drama which began with the landing of Garibaldi at Marsala, and ended with the destruction of the Bourbon tyranny in South Italy, and the annexation of Naples and Sicily to the Italian kingdom. The work now before us is not, properly speaking, a history of Garibaldi's achievements, which have, indeed, been already related to English readers by Captain C. S. Forbes, and by Count Charles Arrivabene. The Admiral's intention has been simply to put forth a condensed narrative of events in which he himself acted a part, carefully noted in his journal day by day.

Apart from the interest which is given to the narrative by the importance of the facts related in its pages, we are attracted by the high and generous tone which inspires it. If the Liberal party of Italy owes a debt of gratitude to Admiral Mundy for his noble conduct during the Revolution of the Peninsula, the debt is increased by the publication of this work. Count Arrivabene has already exposed the barbarities perpetrated at Palermo by the Neapolitan and Bavarian troops; but the statement of the Italian author might have been taxed with partizanship. Here, however, we have the statement of an unprejudiced eye-witness, in the position of an Admiral of the British Navy. Let us learn from the gallant seaman's own pen what he witnessed, when, after the bombardment of Palermo had ceased, he landed in the ill-fated city:—

"When looked upon from the Bay, the devastation could scarcely be perceived, the greater part of the missiles having been thrown over the buildings which face the Marina; but the interior of the beautiful metropolis of the island presented a heart-rending spectacle. A whole district near the Royal Palace, about a thousand yards in length by a hundred yards in width, was a crushed mass of ruins, still smouldering in its ashes. Families had been burnt alive within the buildings, and the atrocities committed by some miscreants of the Royal troops in their retreat from the convents of the Benedictines and Annnnziata were frightful. In the Toledo, and other streets adjoining, convents, churches, and palaces of the nobility had been demolished by the falling shells, eleven hundred of which were thrown from the citadel, and two hundred from the ships of war, before I arrested the fire. Solid shot, grape, and cannister in equal proportion, had also been launched in every direction to which the heavy guns could be trained, but their effect on the massive edifices was as nothing compared with the destructive power of the ten and thirteen-inch shells."

This wanton act of destruction committed by the Bourbon general, Lanza—who, by the by, is now living in his palace at Naples, and enjoying a handsome pension from the Italian Government—was only answered from the shore by an incessant peal of bells from all the churches, and by cries of "Long live Garibaldi!" from the enthusiastic population.

After long and tiresome negotiations, which proved the bad faith of the Neapolitan generals on the one hand, and the straightforward honesty of Garibaldi on the other, an interview between the chiefs of the two contending parties took place on board the *Hannibal*. The author gives minute particulars of this strange meeting, in which the Royalist generals were obliged to treat, upon a footing of perfect equality, with the chieftain whom they had denounced as a filibuster only two days before. Garibaldi appeared in the uniform of a Sardinian general officer. He was calm, courteous, and exceedingly modest in his behaviour. General Letizia, on the contrary, was boastful and impertinent. There was a great deal of altercation in the admiral's cabin about the presence of the French, American, and Sardinian commanding officers, to which General Letizia objected. At last, however, the negotiators seated themselves at a table, and the work seemed about to commence.

"I was now in hopes (says our author) that business would really begin; but, no: there was to be another passage of arms of minor import, and then a terrible explosion, with high dramatic effect. General Letizia, speaking abstractedly of himself, remarked to General Garibaldi, that he was a very old officer, and had seen a great deal of active service; he had fought through many campaigns, had witnessed much bloodshed, and though with this experience he thought little of the present aspect of affairs in the city, he should be glad, for the sake of humanity, if a suspension of hostilities could be adjusted. The Dictator, in a tone of ill-dissembled sarcasm, replied that he ventured to offer his congratulations to his brother General on his great good fortune. He could not himself pretend to equal experience in the art of war, though, perhaps, he knew something about it; he had, however, only acted once during his life with a regular army."

The 5th article of the convention, proposed by General Lanza, was the cause of a third storm, and perhaps the most violent of all. By this article the municipality of Palermo was invited to address a humble petition to Francis II., laying before him the real wishes of the town.

"To this, General Garibaldi, in a vehement and loud tone of voice, replied, 'No!' Then drawing himself up, he added, 'The time for humble petitions, either to the King or to any other person, is past; besides, there is no longer any municipality. *La Municipalité c'est moi!* I am the municipality! I refuse my assent. Pass on to the sixth and last proposition.'"

Immediately after the evacuation of the island, except the fortresses of Messina and Melazzo, by the Royal troops, Admiral Mundy sailed for Naples, where Francis II., pressed by events, had granted a Constitution. In the capital of the South, the British Admiral met with the uncle of the King—Prince Don Luigi, Count of Aquila, whose acquaintance he was obliged to seek, in order that he might refute an assertion that had been made by the Prince, to the effect that English sailors on leave had uttered the seditious cry of "Long live Garibaldi," in the Toledo and other streets of the Neapolitan metropolis. The Prince went on board the *Hannibal*, to return the visit, and the impression which he made on the Admiral was not very satisfactory. Subsequent events, however, showed that this impression was correct:—

"His Royal Highness Prince Luigi was arrested this morning (August 14th) and ordered to leave the country. He had been conspiring for some weeks against the new order of things in the State, and was on the eve of an attempt to overthrow the Constitution by force, and to re-hoist the white flag, when the plot was discovered by means of the secret police. For my own part, I have no reason to regret that his Royal Highness is doomed to expatriation. My interview relative to the British seamen gave me no high opinion of his character."

Events pressed, and Francis II. was compelled to seek safety at Gaeta. Of course Admiral Mundy went to pay a visit to Garibaldi, in the Palazzo D'Angri, where, according to the instructions he had received from home, he was anxious to bring about an interview between the Dictator and Mr. Eliot, Her Majesty's minister at Naples. This interview took place on the 10th of September. We may remark, by the way, that our author speaks of Major Missori as a Hungarian, whereas he is, in fact, a thorough Italian, born and brought up at Milan:—

"General Garibaldi and Mr. Eliot met on board the *Hannibal* at 11 o'clock. The General was accompanied by Count Arrivabene, Colonel Bertani, Major Missori, Colonel Bazzi, and another officer of his staff. Mr. Eliot having expressed to General Garibaldi the astonishment with which, in common with all the world, he had witnessed the marvellous results he had accomplished with such trifling means, informed him that, though he could have no official relations with him, he should remain at Naples until he received further instructions from her Majesty's Government. This information appeared to give great satisfaction to the Dictator, who said he fully understood that official intercourse was not practicable. Mr. Eliot then informed him that Lord John Russell had charged him to express the hope that no attack would be made upon Venetia, as, in his Lordship's opinion, it would be calculated to bring the greatest calamities upon Italy. Garibaldi answered by saying that he would make no concealment of his plans, which were plain and straightforward. He intended to push on at once to Rome, and when that city should be in his hands, to offer the crown of united Italy to King Victor Emanuel, upon whom would then devolve the task of the liberation of Venetia, and in which he would himself be but the Lieutenant of his Majesty. If the liberation could be accomplished by purchase or by negotiation, so much the better. He added, he was sure Lord John Russell, in counselling the abandonment of Venetia, did not fairly represent the generous feelings of the people of England towards the Italian nation, although he cheerfully recognized the obligations Italy was under to her Majesty's Government for the sympathies they had exhibited. Mr. Eliot, with great promptitude, then told the General not to deceive himself with regard to the feelings of the English nation; for that, although for the present undoubtedly almost to a man in favour of his efforts, that sentiment would quickly change if they saw him pushing matters so far as to be calculated to bring on a European war. Mr. Eliot next reverted to Rome, and pointed out in forcible language the danger which must accrue from probable collision with the French garrison, which would at once bring about the intervention of France in the affairs of Italy. General Garibaldi replied with vehemence that *Rome was an Italian city;* and that neither the Emperor nor any one else had a right to keep him out of it."

Although Admiral Mundy, with diplomatic reserve, does not express any opinion on this *vehement* reply of Garibaldi's, we need scarcely observe that Garibaldi was then, and still is, perfectly right in his assertion.

With his narrative of events in Italy, the interest of Admiral Mundy's book is at an end. Readers will care but little for his arrival at Beyrout, his visit to Sureya Pacha, and the accidents he met with on the journey. He gives, however, a valuable estimate of the efficiency of the French navy, and a comparison of its force with that of our own. The gallant sailor's book cannot fail to attract the attention of naval and military men, and above all, to secure the sympathy of all true friends of Italy.

As for the Italians themselves, for whom the book is to be translated into the language of Dante—they would, we are certain, cordially endorse, as a heart-felt testimonial of gratitude, the following lines, which Garibaldi wrote in the author's visiting-book, before sailing for his Island of Caprera:—"G. Garibaldi doit a l'Amiral Mundy pour les preuves bien sincères et affectueuses d'amitié dont il a été comblé dans toutes les circonstances, la reconnaissance la plus vive, et qui durera toute sa vie."

FRENCH LITERATURE.

THERE have been few publications, but some events of literary interest, in France during the past month. We may notice the speeches at the French Academy upon the reception of Prince Albert de Broglie as one of its forty members. The Orleanist *noblesse*, as well as the most distinguished of French professors and writers, mustered strong beneath the dome of the Institute on that day. It was a meeting of parliamentary leaders under the disguise of a scholastic occasion; Catholicism joined hands with Liberalism, and the comedy was fairly played. The Prince de Broglie, son of the Duc de Broglie, had to pronounce the customary laudation of the late member whom he was chosen to succeed. This was the

Digitized by Google

famous Dominican preacher, Father Lacordaire. The new member, of course, began with a confession of his unworthiness to receive this honour. It has, in fact, been insinuated, that his election was partly due to the fact that the Duc de Broglie, his father, was already a member. The sarcastic observation has been made, that the father owed his election to the writings of his son, and that the son is now promoted by the influence of his father's name. The Prince, however, parried these malicious remarks, by admitting that he had not been chosen for any talents of his own, but as claiming, by virtue of his religious convictions, to utter most fitly the eulogy of his reverend predecessor. It is well known that Lacordaire, who commenced life as an advocate, and took to divinity as a pupil of the celebrated Lamennais, still cherished, under his monkish frock, the Democratic sentiments by which he gained his election to the Republican Assembly of 1848. The Prince de Broglie, though not a monk, is a sincere and ardent Catholic; though no Democrat, he is an avowed Liberal. On this occasion, he boldly raised the banner of liberal Catholicism, hoping to reconcile those principles which, in France, have been too long divided. But, along with some very sound remarks upon the mutual services which religion and liberty can render to each other, the Prince ventured upon others which are grossly sophistical and untrue. For instance, referring to the Roman question, he spoke of the Vatican as the last refuge of liberty of conscience; and he described Lacordaire, a monk of the order of Dominic, the founder of the Inquisition, as one whose constant aim was to revive in France the principles of individual liberty and freedom of association! His speech was, nevertheless, applauded by a fashionable and aristocratic audience, but M. St. Marc Girardin, who followed him, did not enter upon the same ground; he skirted lightly around it, mixing with his compliments to M. de Broglie some epigrammatic hits at the present *régime*, which told with much effect. It appears, however, from the comments of journalists upon this academical tournament of the parliamentary Opposition, that the cause of "Liberal Catholicism" does not find many adherents elsewhere; and the adverse party is preparing for its revenge, at the reception of M. Octave Feillet, who, having got elected by the votes of friends of the Government, will pay his debt of gratitude with the same coin in which the Prince de Broglie has discharged his. The new member, at his reception by the Academy, is enabled so to distribute the tickets at his disposal, as to secure an audience pretty much in agreement with his own views; and M. Feillet is expected to praise the Empress, as the Prince de Broglie has praised the Pope. Before we leave the subject of this reception of Lacordaire's successor at the Academy, let us remark that the "Letters" of that reverend father, which have just been edited, are of some interest, as showing what he was in private intercourse as a religious director, while, as a preacher, he is well known by his published sermons.

Among the new books of the past month are to be noticed, first, the history of the Châtelet of Paris, its organization and its privileges, by Charles Desmaze; and the history of the Carmelite Convent and of the Seminary of St. Sulpice during the Reign of Terror, by Alexander Sorel. These are two important works, based upon authentic documents; and one of them throws much light on the police and judicial administration under the old monarchy, while the other shows the summary execution of what was called revolutionary "justice," where its ferocious violence was most displayed. Every English visitor to Paris must remember the Place du Châtelet, where stands, just opposite the bridge, a pretty column and fountain, the architecture of Jean Goujon, with a theatre on each side of the open space, planted with trees, which borders the quay. There stood, in the old Paris which modern improvements have swept away, the fortress both of royal and municipal justice in the middle ages; when, beside the Parlement of Paris, sat the Provost, who was charged to watch over the safety of the capital, to suppress popular agitations, to enforce the regulations of corporate guilds, to keep the turbulent students in order, and to give prompt decisions, as a magistrate, in cases for his summary disposal. This institution played a great part in French history, and acquired high political importance in times of civil war. M. Charles Desmaze, though he is more of a lawyer than historian, gives us an interesting account of it, and of the changes it underwent, successively, at different periods, before it was abolished by the Revolution. The history, likewise, of St. Sulpice and the Carmelite Convent, on the frontiers of the Quartier St. Germain and the Pays Latin, is full of interest. That convent, in which the massacre of the priests in 1792 was perpetrated, still exists, in aspect almost unchanged, at the corner of the Rue de Vaugirard and the Rue Cassette. It is curious to explore the old building, which has alternately been used as a monastery, a barrack, a dancing hall, and a prison, and is now restored to its first occupation. The most affecting recollections arise at every step within those fatal walls, where, in the massacre of September, more than a hundred priests were slaughtered in less than an hour. Here you see the spot where the first of those victims fell; there, in the garden, is the alley in which the Archbishop of Arles met his death; and there is the flight of steps, down which most of them were forced to go, after a mockery of trial, to be butchered by ruffianly hands. In the cells, you may read, inscribed upon the walls by prisoners who were confined there, sentences and verses of French or Latin, expressing their feelings of resignation or despair. Of the three prisons in which the massacres of the Reign of Terror took place, namely, the Temple, the Abbaye, and the Convent des Carmes, only the last remains, a monument of that dreadful time. M. Alexandre Sorel's book gives us a very complete account of its history, written with learning equal to that of M. Desmaze, and with more artistic skill. Aided by many records from the archives of the Hôtel de Ville, the Prefecture of Police, and the Imperial archives, as well as by a minute inspection of the place, the exactness of his narrative and descriptions may be relied on. The book is furnished with plans of the edifice, both old and new, and a photographic copy of the inscriptions on its walls. The history, which begins with the first establishment of the Carmelite order in France, comes down to the present time, when their old convent is the abode of the Dominican fathers, and the site of a college for the more advanced ecclesiastical studies; a sort of normal seminary, for the training of professors of divinity, to teach in the religious schools of secondary instruction.

We have next to mention three new books, which will probably make more noise than the two just described, but which are of a temporary interest. M. Michelet, to atone for his failure of "La Sorçière," has, in a book called "Poland the Martyr," given utterance to the indignation and to the sympathy which he feels, as we all do, in seeing once more renewed the cruel oppression and heroic resistance of the Poles. In this Apocalyptic protest against the Muscovite tyranny, he appeals to the serfs of Russia, as well as to the suffering nation of Poland, to join with each other in breaking the yoke of that despotism which is their common foe. Transfiguring, by the force of his imaginative mind, the disasters of the Polish cause, and the efforts of patriotism to revive it, as well as the obscurer struggles of Russian serfdom in certain provinces, he points to Siberia, that icy hell of rebels against the Empire, as the scene of iniquities which cry for signal vengeance. After thus invoking the compassion, as well as the enthusiasm of his readers, M. Michelet insists, with prophetic solemnity, on the dissolution of the Russian Empire, upon the ruins of which a great Polish Republic is to arise, to be the guardian of the East and of the Danube—and what is more, to take the initiative, by its example, in opening the way to political liberty for the abject Western nations. M. Proudhon, in his "Majorats Littéraires," enters a more peaceful arena, but still in a warlike spirit. He inveighs against the property of copyright in literary and artistic productions, which he compares to the law of primogeniture so odious to Frenchmen. It will be remembered, that a commission has lately been employed by the Government to devise a new law upon this subject, which will be laid before the Council of State; and, so far as we have learned, its recommendation is to vest in the author and his heirs a perpetual copyright, excepting those cases in which an *expropriation pour cause d'utilité publique* may take place, on payment of sufficient compensation. As the sworn enemy of property of every kind, M. Proudhon attacks still more vehemently the extreme proposal to confer upon this species of property a character of perpetuity, which no other sort of property enjoys. Apart from his exaggerated views about property in general, there is much truth in what he says of the growing spirit of mercantile speculation in works of intellect, and of the injurious effects upon literature and art of a system by which they might become mere branches of manufacturing industry, under the control of financial potentates; though we do not see the bearing of these remarks upon the simple question of copyright for a longer or shorter term. The reply of M. Veuillot to M. Emile Augier, entitled "Le Fond de Giboyer," is certainly not one of those literary productions which are destined to perpetuity; and he would perhaps have done more wisely to content himself with the letter, rude enough as it was, published by him when M. Augier's comedy was played. He has wished, however, to take a more ample revenge for the assault upon himself and his party. In the form of a dialogue, he vindicates the aristocratic and clerical factions, ridiculed by the dramatist upon the stage, while he pillories all the Liberals, Revolutionists, Democrats, and *bourgeois*, whom he counts as his foes. This pamphlet is well seasoned with pepper, if not with Attic salt, but as a dialogue, it is very inferior to the "Fils de Giboyer," which has provoked it.

We may notice, in passing, the "Crumbs of History," "Les Miettes de l'Histoire," a volume by that rather fanciful author, M. Vacquerie, who refuses to accept, for historical diet, the plain household bread of common use, or even the dainties of more subtle research, but will pick up the odds and ends of casual information that have fallen under the table. It is to the isles of Jersey and Guernsey, lying between France and England, that he has resorted for this collection; but instead of tracing their history as a possession once contested by two great rival Powers, and as a place of refuge for the exiles of one nation or another, he looks merely for their local curiosities, their quaint old legends, or those more recent associations, —which the sojourn there of tourists, or of more notable persons, have imparted to them. These notices are mingled with humorous and graphic sketches, which display some talent; and the book has been widely advertised. To finish with our chronicle of the month, we have to mention that the grand "Encyclopædia of Literature and Science," projected by M. Michel Chevalier and by Messrs. Emile and Isaac Péreire, seems now to be fairly organized, and almost ready for a start. A strong phalanx of Academicians, professors, and literary men, has been enlisted; they have formed sub-committees, drawn up the programmes of the several departments, and allotted to each section its part of this extensive work, which will comprise forty or fifty volumes. But one incident of an adverse tendency has occurred. We observed, some time back, that M. Chevalier, the Messrs. Péreire, and M. Duveyrier, took part in the St. Simonian movement of 1830; and it seems that the old chief of that movement, M. Enfantin, who is now director of one of the southern railways,

Digitized by Google

was consulted the other day about founding the Encyclopædia. He advised them to attach to it a new institution, to be called the Intellectual Credit Establishment, which was to be for authors, for men of science, and for artists, what the Crédit Mobilier is for those engaged in manufacturing or trading operations; and he would have given to it, perhaps, somewhat of a Socialist character; but neither the influential capitalists who have projected this work, nor the editors to whom it is intrusted, would agree to this addition. The new Encyclopédie will, therefore, belong to no sect or school, but will represent, with perfect independence, the progressive and liberal spirit of literature in the nineteenth century; and with the array of diverse talents which it commands, there is a fair promise of success.

THE QUARTERLIES.

THE *Edinburgh Review* opens with a paper upon Mr. Kinglake's History of the Crimean War, in which the historian's main positions are challenged, not without success. The reviewer is especially offended by Mr. Kinglake's studied endeavours to reduce to a minimum the merits of the French army, and is justly severe on his fierce antipathy to Louis Napoleon. He defends the Emperor against the imputation of bad faith in his alliance with England during the negotiations which preceded the invasion of the Crimea; and believes that "the malignant aversion to the Emperor of the French" and the "studied unfairness—sometimes the poisonous inuendos—against the French troops" will destroy the permanent value of Mr. Kinglake's book. The article, whether we regard the judicious tone in which it is written, or the mastery of facts which the writer displays, is of high importance in the discussion which the publication of Mr. Kinglake's volumes has raised. "Mr. Kinglake," says the writer, "had the good fortune to appropriate the most important and heroic subject of our times; he has degraded it sometimes into a libel, sometimes into a caricature. He had the advantage of some personal knowledge of the men and the events he describes; but his personal experience chiefly manifests itself in the shape of invincible antipathies or prepossessions. He intended, no doubt, to raise a monument to the glory of England, but he has defaced it by injustice to France. For these reasons we are satisfied that the country cannot accept this book as the fitting and lasting record of the Crimean war in English literature; but will rather deplore that the fruits of great talent and labour have been marred by a greater lack of temper and judgment.

"'Some hand more calm and sage
The leaf must fill.'"

There is an interesting paper upon the "Simancas Records," edited by Mr. Bergenroth, and forming part of the series of State Papers published under the direction of the Master of the Rolls. "The Black County" furnishes the subject of an article upon mining in the Midland district; and there are papers upon India under Lord Canning; upon Professor Huxley on Man's Place in Nature; Sir Rutherford Alcock's Japan; and the Greek Revolution. In the "Bible and the Church" the question of the inspiration of the Bible is examined, the writer contending that historical or scientific inaccuracies cannot affect its authority. Its inspiration, he holds, is not of a scientific, critical, or historical character, but distinctly and exclusively religious, and concludes that it is not necessary to say more of it than this:—

"That it is INSPIRED,—replete itself, and pregnant without stint for him that rightly uses it, with that spirit of purity, faith, obedience, charity, which forms the essential temper and characteristic of the Church and family of God:—that it is SACRED,—set by itself, a book apart, fenced from all levity, irreverence, and mere curious handling; a book worthy, if only for what it has effected in the world, of all possible respect and honour; and regarded with too great awe and love by multitudes of the tenderest, most heavenly, and sensitive minds for any one possessed of the commonest sympathy or charity to approach it with the shoes of every-day profanity upon his feet:—and once more, that it is CANONICAL,—or, in other words, that collection of writings which amid the multitude of claimants the Church has 'canonised,' has deliberately and after examination given her sanction to, as her authorized volume of appeal and instruction,—and which so, by a natural transition of meaning, has become her Canon, her rule of faith, her standard whereby to test the accordance of men and doctrines with the Spirit that is in her and with that 'mould of doctrine' into which the first Apostolic churches were cast.

"The Irish Church Establishment" is the subject of the first article in the *National Review*. The writer maintains that the establishment from the time of the invasion of Ireland by the Anglo-Normans has always been the Church of the invader; and says that in our own day, "maintained by force in a nation that detests it," it is "in its way without a parallel in the civilized world."

Mr. Kinglake's "Crimea" is handled almost as severely by the *National* as by the *Edinburgh*. The reviewer gives some curious instances of Mr. Kinglake's mode of working up facts. Speaking of Marshal St. Arnaud, he says:—

"He was a captain at the taking of Constantine in 1837. When the breach was assaulted, a mine was sprung and a panic ensued; St. Arnaud distinguished himself in rallying the fugitives and leading them again to the assault. Combes, Bedeau, and himself, with cries of '*En avant! à la baïonette!*' flung themselves into the gulf which had just swallowed their comrades; and 'our soldiers lowered their heads and crossed bayonets, with cries of "*Hourra! en avant!*"' The breach was carried. Later in the day, St. Arnaud came on a barricade in the interior of the town. He first occupied the houses on either side with sharp-shooters; 'then,' he continues, 'sword in hand, with cries of "*Hourra!*" better known by my foreign soldiers—with shouts of "*En avant, la légion!*"—I threw myself on the barricade, which I cleared.' These two incidents Mr. Kinglake works up into the following marvellous myth:—

"'When a great explosion took place, and many were blown into the air, the French soldiers ran back with a cry that all was ruined; but Bedeau and Combes, withstanding the madness of the common terror, strove hard to rally the crowd, and St. Arnaud having with him in his company of the legion some bold reckless outcasts of the North, he bethought him of the shout, very strange to the ears of Frenchmen, which he had heard in other climes. Skilled in the art of imitation, he uttered the warlike cry. Instantly from the Northmen around him, whether Germans or Swedes, or English, Scots, Irish, or Danes, there sprang their native "Hurrah!" and with it came the thronging of men who must and would go forward. It was mainly the torrent of this new onslaught by St. Arnaud and his men of the "stormy youth" which carried the breach, and brought about the fall of the city.'"

Several other papers are in the present number. Amongst them we may mention that on "Passages from the Life of Erasmus;" "Bolingbroke as a Statesman;" "Early History of Messianic Ideas;" and "The Attitude of Parties—this Session;" which last paper is a thoughtful and dispassionate review of the chief political tendencies of this time.

The *British Quarterly* is rich in eloquent articles, amongst which that upon Professor Wilson must take a high place. It holds the balance evenly between his literary faults and merits, his share in the sins of *Blackwood*, and the noble virtues for whose sake greater sins might easily be condemned. It refutes with some force the disparaging remark of the *Saturday Review*, that the merits of Wilson's writings "lie on the surface;" and gives a picture of the man not unworthy of the original. Professor Wilson was one of those men whom it is difficult to overpraise. Of gigantic mental and bodily powers, he had a heart gentle as a woman's; and when so much has been done to pull the dead lion by the beard, it is gratifying to see the task of vindicating him so well performed. The number in other respects is excellent. Sir Charles Lyell's and Professor Huxley's works, on topics the most interesting of the day, are fairly handled. The first of these works furnishes one of those points of collision at which religion and science may be supposed to clash; and the alleged discovery of human bones and instruments apparently of human manufacture, in sites which seem to indicate a pre-Adamite date, may be supposed at first sight to offer difficulties with respect to the Scriptural narrative of the Creation greater than any which Dr. Colenso has raised. The writer contests this conclusion:—

"If, however" (he says), "the reader should be of opinion that the advocates of antiquity have raised a fair presumption in favour of their views, it becomes necessary to inquire how far this doctrine bears upon the statements contained in the Bible. Should the theory be established by further researches, ought we to conclude that the story of Adam's creation, as chronicled by Moses, is false?

"Certainly not. The discovery of a whole cemetery of skulls like those of Engis or Neanderthal, or of a collection of microscopes and other philosophical instruments, in some pre-glacial formation, would not shake our faith in the veracity of Scripture for a moment. It would indeed be necessary to revise our construction of the opening chapters of Genesis. But since it is nowhere expressly asserted that Adam was the first intelligent creature whom God produced on the earth, we should surely have no right to charge the book with untruthfulness because it contains no allusion to the owners of those 'apelike' crania, or to the manfacturers of those miserable flints. . . . .

"But however this may be, all that Scripture requires us to believe in reference to Adam is, that he was the progenitor of the existing race. It does not assert that no other species ever belonged to his genus, nor does it even affirm that the extant tribes of human beings are the only tribes of human beings which have ever appeared. It is silent on such subjects; but its silence may be simply of the same kind as that which omits all mention of the sun until the fourth 'day,' and all reference to death until after the fall. That such previously created races may have wholly disappeared before Adam was introduced is no unreasonable presumption; on the contrary, it is suggested by the argument on which, as we have seen, the case of the antiquarians chiefly turns, namely, that these primitive men were coeval with the mastodon, cave-bear, and other *extinct* quadrupeds. The bipeds may have succumbed to the same adverse influences under which their four-footed contemporaries perished. Not only from the state of the climate which then appears to have prevailed, but also from the barbaric condition under which they lived, we are entitled to assume that they must have had great difficulty in making head against the miseries of their position. Until, therefore, it can be shown that the flint men of the Somme have left issue which now forms part of the human family, or until the heirs of the Natchez veteran can be traced into the Adamic line, we do not see that the existence of savages twenty or a hundred thousand years ago, even if fully established, could in the slightest degree impair the credit of the sacred Book. But for the present we do not feel that we are obliged to surrender the received ideas on this question. When adequate proof on the side of concession shall be before us, the concession shall be made. We reverence the past or conform to the present on all such questions, according to the law of evidence, and on no other ground."

In the article, "English Thought and the English Church," the intellectual movement in the Established Church, with the change it has worked and is working, is thoughtfully considered, from a Nonconformist point of view. Amongst the other articles in this

Digitized by Google

number, "The Ethics of Periodical Criticism" is one which may be commended to the attention of readers, but especially of writers, whose profession, too often degraded to a trade, is criticism.

Sir Charles Lyell's work on the antiquity of man is one of the leading topics also of the *Home and Foreign Review*. The article is ably written, and shows thorough familiarity with the subject. It is evident that the time has come when the difficulties it presents must be openly met; and we have no doubt that, so far from shaking our faith in revelation, the result of the discussion they are undergoing will be to confirm, and, if possible, expand it. The writer is of this view. "If," he says, "we must admit that, although man is, geologically speaking, very recent, a long period of time has elapsed since his first appearance, what effect will such an admission have on those sacred traditions on which are founded the hopes of mankind? or, in other words, how does such a result harmonize with revelation? We think that it merely affects the chronology which has been adopted, and sweeps away at once a host of difficulties which were true stumbling-blocks to biblical critics." He proceeds:—

"The unity of the human race, if not the original unity of language, is a fundamental principle of revealed religion. The former we hold to be equally important to the well-being of man, whether revelation is admitted or not. But in a period of four or five thousand years it is indeed very difficult to account for the development of races by climatal influence, especially when we find the Negro figured upon the tombs of Egypt of four thousand years ago with the same features he has to-day. It is equally difficult to account for the American race with its six hundred languages. If in three thousand years the Indo-European languages have not lost the evidences of their radical and grammatical relationship, how are we to account for the development of the Chinese, Hebrew, Sanscrit, and Egyptian in a much shorter period? In the discussion of these points, while the advocate of revealed religion may point triumphantly to the wonderful accordance between the account of the creation given in the book of Genesis, and the results of the most recent discoveries in science, he is nevertheless placed at a disadvantage as regards his opponents, by a mere question of chronology. Now, although it would be very absurd to expect a treatise of geology or of any other science in the book of Genesis, we should like to know how much better the exposition of any modern geologist, who had to address people wholly ignorant of physical science, would be than the Mosaic account? If Scripture contained a revelation of the laws of nature, it would have taken away the greatest stimulus to activity by which man is influenced, namely, the desire to know causes. For this his mind is constituted, and the triumphs he has attained prove it. But he possesses no faculty by which he can know of a hereafter, and for this alone was a Revelation accorded. The wonder, therefore, is, not that the book of Genesis should appear to differ in minor points with the results of scientific investigation, but that in so short a space it should be possible to give so perfect a sketch of the creation. And now, by a simple change in the chronology, the Mosaic account will harmonise with the condition of science even better than it did when it served as the incentive and guide to geological investigation."

In this *Quarterly* again, Mr. Kinglake's style is praised, while doubt is thrown upon his facts. There is an article upon Parish Registers, which contains recondite, curious, and interesting matter; and the Review of Contemporary Literature and Current Events is more ample than we generally find it in periodicals in which it forms a feature.

The *London Quarterly* is somewhat more favourable to Mr. Kinglake than its fellows; but like them it doubts the historical veracity of his book. The "air" of his narrative is "stagey and unreal;" we must allow for distortion, for the instant deflection that results when a fact strikes upon the hard surface of the writer's prejudices;" "it is not too much to say that Mr. Kinglake has made this history a terrible weapon, with which he strikes at the man he most abhors." Dr. Colenso, his assailants and vindicators, are treated of in an article upon "English Rationalism." An article on the life and writings of Béranger is perhaps the most interesting paper in the number. There is also an able article upon "Greece and the Greeks," on the American war, and on "Irish Annals," for which the Annals of the Four Masters forms the basis.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 13th April, 1863.

Geographical—At 8½ p.m. 1. "Frobisher Strait proved to be a Bay, and on the fate of five men of the Arctic Expedition in the reign of Elizabeth." By Captain C. F. Hall, of Ohio. 2. "A Visit to Red River and the Saskatchewan." By Dr. John Rae.

Medical—At 8½ p.m. "On Intestinal Stricture." By Mr. Gay.

Tuesday, 14th April.

Ethnological—At 8 p.m. "On the Antiquity of Man." By John Crawfurd, Esq., President.

Civil Engineers—At 8 p.m. 1. Discussion on Mr. Miller's paper on "Structures in the Sea." 2. "Description of the Line and Works of the Scinde Railway." By Mr. John Brunton, C.E.

Medical and Chirurgical—At 8½ p.m. 1. "On the Stricture of the Urethra by gradual distension." By Mr. Henry Thompson. 2. "The Pathology of Crura Cerebri." By Dr. Hermann Weber.

Syro-Egyptian—At 7 p.m. Anniversary Meeting.

Royal Institution—At 3 p.m. Professor Marshall "On Animal Mechanics."

Wednesday, 15th April.

Meteorological—At 7 p.m.

Royal Literature—At 8½ p.m. "On Ancient Ruins in the Neighbourhood of Missolonghi." By D. E. Colnaghi, Esq.

Society of Arts—At 8 p.m. "On the New Art of Auto-Typography." By Mr. George Wallis.

Thursday, 16th April.

Royal Society—At 8½ p.m. 1. "On Ozone." By E. J. Lowe, Esq. 2. "On the Equations of Rotation of a Solid Body about a Fixed Point." By W. Spottiswoode, Esq.

Antiquaries—At 8½ p.m.

Royal Institution—At 3 p.m. "On the Relations of Geology with Allied Sciences." By D. T. Ansted, Esq., F.R.S.

Linnæan—At 8 p.m.

Chemical—At 8 p.m. "Derivatives of Napthylamine. By Messrs. Perkin and Church.

Numismatic—At 7 p.m.

Zoological—At 4 p.m.

Friday, 17th April.

Royal Institution—At 8 p.m. "On the Culture of Fish." By Frank Buckland, Esq.

Philological—At 8 p.m.

Saturday, 18th April.

Royal Institution—At 3 p.m. "On Language." By Professor Max Müller.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Blomfield (Bishop), Memoir of, with Selections from his Correspondence. By the Rev. A. Blomfield. Two vols. Post 8vo., cloth, 18s.

Butler's Argument on the Miracles Explained and Defended by the Right Hon. Joseph Napier. Crown 8vo., sewed, 6d.

Carlisle's (Rev. H. H.) Sermon on the Marriage of the Prince of Wales. Fcap., sewed, 6d.

Cater's (P.) Punch in the Pulpit. Third edition. Fcap., boards, 2s.; cloth, 2s. 6d.

Clarke's (Rev. C. P.) Manual for Communion Classes and Communicant Meetings. Fcap., 3s.

Cruchley's County Atlas of England and Wales. Royal 8vo., cloth, 6s., plain; 8s., coloured; or 10s. 6d., roan, flap.

Deserted House (The) of Hawksworth. Three vols. Post 8vo., cloth, £1. 11s. 6d.

Down in a Mine; or, Buried Alive. 18mo., 1s. 6d.

Dunmaine: a Temperance Tale. Fcap., boards, 1s.

Formby's (Rev. H.) Inquiry of a Retired Citizen into the Roman Catholic Religion. 18mo., sewed, 2s.

Foxe's Book of Martyrs, with Notes by Rev. J. Milner. Edited by Rev. Ingram Cobbin. New edition. 8vo., cloth, 8s. 6d.

Fry's (H.) Shilling Guide to the London Charities. Crown 8vo., sewed, 1s.

Garbett's (Rev. E.) The Kingdom and the People; or, The Parables Explained. Fcap., cloth, 3s. 6d.

Groves' (S. R.) A Yachting Cruise in the Baltic. Post 8vo., 12s. 6d.

Harbaugh's (Rev. H.) Will we Know our Friends in Heaven? Fcap., 2s.

Hassall's (Dr. A. H.) The Urine in Health and Disease. Second edition. Crown 8vo., 12s. 6d.

Hedderwick's Miscellany. Vol. I. Royal 8vo., cloth, 3s. 6d.

Helen Fleetwood. By Charlotte Elizabeth. Fourth edition. Fcap., 5s.

Hibberd's (Shirley) Profitable Gardening. Fcap., 3s. 6d.

Hill's (Rev. Rowland) Village Dialogues. Thirty-eighth edit. Fcap., 4s.

Horace's Odes and Carmen Sæculare. Translated into English verse by John Conington. Fcap., half bound, 5s. 6d.

Howe's (John) Works. Edited by H. Rogers. Vol. V. 8vo., 5s.

Hunt's (J.) Address on the Study of Anthropology. 8vo., sewed, 6d.

Indian Annexations: British Treatment of Native Princes. 8vo. sewed, 6d.

Ingoldsby Letters. Vol. II. Third edition. Royal 8vo., 6s.

Laishley's (R.) Popular History of British Birds' Eggs. New edition. Imperial 16mo., cloth, 5s.

Langley's (Rev. J.) Retributive Justice of God. Fcap., 3s.

Macfarlane's (Rev. Dr. J.) The Railway. Six Lectures. Fcap., 1s. 6d.

M'Neile's (Canon) Sermon on the Historical Veracity of the Pentateuch. 8vo., sewed, 1s.

Marsh's (Rev. W. T.) The Dark Night ushering in the Dawn of Eternal Day. 8vo., sewed, 6d.

Millhouse's (J.) New English-Italian Dictionary. Second edition. Two vols. Crown 8vo., 14s.

——— Manual of Italian Conversation. New edition. 18mo., 2s.

Mitchell's (E. B.) Handbook to St. Luke, for the Poor and Unlearned. 18mo., cloth, limp, 1s.

Nora, the Lost and Redeemed. By Mrs. Fowler. Crown 8vo., boards, 1s. 6d.; cloth, 2s. 6d.

Oppen's (E. A.) Postage Stamp Album. Second edition. 4to., cloth, 3s. 6d.

——— With Catalogue. Second edition. 4to., cloth, 5s.

Open and See; or, First Reading Lessons. New edition. 16mo., 2s.

Pietrowski's (Rufin) My Escape from Siberia. Crown 8vo., 5s.

Practical Mechanic's Journal (The). Second series. Vol. VII. 4to., 14s.

Rouse's Practical Man. Tenth edition. Oblong, 9s.

Squire's (P.) The Pharmacopœias of Thirteen of the London Hospitals, arranged for reference. 18mo. 3s. 6d.

Tonic Sol-Fa Reporter (The). Vol. V. Fcap. 4to., 2s.

Voice (A) from the Motherland, answering Mrs. H. B. Stow's Appeal. 8vo., sewed, 1s.

Wayland's (F.) Elements of Moral Science. Seventh edition. Fcap. 2s. 6d.

Worsley's (P.) Poems and Translations. Fcap., 5s.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY,
13, St. James's-square, London, S.W.
Established 1824.

Financial Results of the Society's operations.

The Annual Income exceeds.....£200,000.
The Assurance Fund safely invested is over .....£1,330,000.
New Annual Premiums for the last year .....£10,017.
Bonus added to Policies at the last Division .....£275,077.
Total Claims by Death paid.....£1,731,779.

The following are among the distinctive features of the Society:—

Credit System.—On Policies for the whole of life, one half of the Annual Premiums during the first five years may remain on credit, and may either continue as a debt on the Policy, or be paid off at any time.
Low Rates of Premium for Young Lives, with early participation in Profits.
Invalid Lives may be assured at Premiums proportioned to the increased risk.
Prompt Settlement of Claims.—Claims paid thirty days after proof of death.
The Accounts and Balance Sheets are at all times open to the inspection of the Assured, or of persons proposing to assure.
Tables of Rates and Forms of Proposal can be obtained from any of the Society's Agents, or of

GEORGE CUTCLIFFE, Actuary and Secretary.
13, St. James's-square, London, S.W.

The Reversionary Bonus at the Quinquennial Division in 1862 averaged 48 per cent., and the Cash Bonus 28 per cent., on the Premiums paid in the five years.
The next Division of Profits will take place in January, 1867.

CONFIDENT LIFE ASSURANCE and LOAN COMPANY (Limited). Established 1855. Capital £100,000. Chief Office—13, Finsbury Place South, London, E.C. All kinds of Assurance and Annuity business transacted by this Company. Seventy per cent. of the profits divided amongst the Insurers every fifth year. Policies made payable during the lifetime of the Insurer. Sick policies, guaranteeing from 5s. to £5 per week during sickness. Stamp and medical fees paid by the Company. Loans are granted in connection with Life Assurance at a moderate rate of interest. Active Agents wanted.

G. W. GIDLEY LAKE, Secretary.

ONE HUNDRED GUINEAS REWARD.

PIRACY OF TRADE MARKS.

WHEREAS, under the provisions of "The Merchandise Marks Act, 1862," every person who, with intent to defraud, or to enable another to defraud any person, shall forge or counterfeit, or cause or procure to be forged or counterfeited any Trade Mark, or shall apply or cause or procure to be applied any Trade Mark, or any forged or counterfeited Trade Mark to any chattel or article, not being the manufacture or production of the person intended to be denoted by such Trade Mark or forged or counterfeited Trade Mark shall be GUILTY of a MISDEMEANOUR, and upon conviction thereof shall be punishable by Imprisonment with Hard Labour for Two Years, or by Fine, or by Imprisonment and Fine; and whereas by virtue of the same Act, every person who shall aid, abet, counsel or procure the commission of any offence which is by the said Act made a Misdemeanour, shall also be guilty of a Misdemeanour, and punishable in manner above-mentioned; and whereas it has come to the knowledge of the undersigned that articles of Condiment and Condimental Feeding Meal, which are not of his Manufacture, have been offered for sale marked with the name of "Joseph Thorley,"

NOTICE IS HEREBY GIVEN, that a REWARD of ONE HUNDRED GUINEAS will be paid by the undersigned to any person or persons who will give such information as may lead to the conviction of any person or persons engaged in the Manufacture of such spurious articles of Condiment and Condimental Feeding Meal, or any person or persons aiding or abetting therein of any of the Misdemeanours created by the above-mentioned Act.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL,
Prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.
Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., F.R.C.P.L.,
Physician to the British Embassy at Paris, &c.
"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Dr. LETHEBY,
Medical Officer of Health to the City of London, &c., &c.
"It is, I believe, universally acknowledged that Dr. de Jongh's Light-Brown Cod Liver Oil has great therapeutic power; and from my investigations, I have no doubt of its being a pure and unadulterated article."

EDWIN CANTON, Esq., F.R.C.S.,
President of the Medical Society of London, &c., &c.
"For several years past I have been in the habit of prescribing Dr. de Jongh's Light-Brown Cod Liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

Dr. LAWRANCE,
Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.
"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:
ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

(Originally established A.D. 1667.)

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

THE PATENT AMERICAN KITCHENER, with recently Patented Improvements,

IS THE CHEAPEST AND MOST ECONOMICAL COOKING RANGE EVER OFFERED TO THE PUBLIC.

It saves half the fuel usually consumed, cures smoky chimneys, requires no brickwork setting, is fully equipped with cooking utensils, and MAY BE SEEN IN OPERATION DAILY at

On Saturday, 25th April, will be published, the FIRST NUMBER of

THE MIRROR. A Weekly Newspaper and Review.

There does not exist any weekly journal in which as much care is bestowed on the narration of news as on the expression of opinion; and, indeed, for educated readers, there is, strictly speaking, no such thing as a weekly newspaper. It is proposed in THE MIRROR to meet this deficiency by digesting thoroughly the news of each week, and presenting it in the fullest, clearest, and freshest manner. If the design be worthily executed, the result should be a picture of the week, bearing the stamp of history. The details of the plan will best be understood from the paper itself: here it is enough to say that they will be carried out by the most able newswriters of the day, and in a mode hitherto unattempted.

Not only will THE MIRROR thus fully set forth the story of the week, it will devote ample space to the review of politics, life, letters, art, and science. Its tone will be quite independent. To say that it will be Liberal, or that it will be Conservative, would, in the present sense of these words, convey little meaning. It will, in politics, as in literature, avoid cant, crotchets, and cliques, and reflect the healthiest thought of the time. For this department of the paper, also, not less than for that allotted to news, a most competent staff has been engaged, and readers may be assured that the criticism, whether of public affairs, of manners, or of books and works of art, will represent the views of some of the best living writers.

THE MIRROR will be issued in a form convenient for binding; and its price will be Sixpence.

6, BURLEIGH STREET, STRAND.

SEVENTH EDITION.

THE BOOK OF BALLADS.

SOVEREIGN LIFE ASSURANCE COMPANY

48, ST. JAMES'S STREET, LONDON, S.W.

Trustees.

THE RIGHT HON. THE EARL OF SHREWSBURY AND TALBOT.

SIR CLAUDE SCOTT, BART. | HENRY POWNALL, ESQ.

Directors.

CHAIRMAN—THE LORD ARTHUR LENNOX.

DEPUTY-CHAIRMAN—SIR JAMES CARMICHAEL, BART.

JOHN ASHBURNER, ESQ., M.D.
T. M. B. BATARD, ESQ.
LIEUT.-COL. BATHURST.
JOHN GARDINER, ESQ.
J. W. HUDDLESTON, ESQ., Q.C.
CHARLES OSBORNE, ESQ.

Bankers.

SIR CLAUDE SCOTT, BART., AND CO.

FOUNDED IN 1845.

REPORT

OF DIRECTORS, AND STATEMENT OF PROCEEDINGS AT THE ORDINARY MEETING OF PROPRIETORS, held on the 7th of MAY, 1862,

LORD ARTHUR LENNOX in the Chair.

THE REPORT OF THE DIRECTORS, made in the Spring of last year, appealed to the Proprietors and others interested in the Office, to assist the Directors in making 1861 the most successful year of the Company's operations; and, notwithstanding the absence of general commercial prosperity throughout the country, the Directors are happy to say that in many respects the desired result of their appeal has been realised.

This year was, however, remarkable in the experience of this Office, as it is believed it was in that of other similar Institutions, for the number of lapsed Assurances, especially in those districts where industry has been impeded by the suspension of our commercial relations with America.

At the same time the business effected has been greater than at any former period, the New Premiums amounting to £6,055 11s. 3d. Assuring £171,250 by the issue of 722 Policies.

The point, however, on which the Directors have most reason to congratulate the Proprietors is, that after a very careful and rigid investigation into the position and prospects of the Company, made in pursuance of the requirements of the Deed of Settlement, by Mr. PETER HARDY, the eminent Actuary, the result, as embodied in the following Report, is of the most satisfactory character.

"TO THE CHAIRMAN AND DIRECTORS OF THE SOVEREIGN LIFE ASSURANCE COMPANY.

"GENTLEMEN,—I have the honour to submit herewith a full statement of the result of the valuation, just completed, of the Assets and Liabilities of the Sovereign Life Assurance Company, up to or as of the 31st December, 1861.

"This investigation has been, on the present occasion, a work of considerable magnitude and labour, as the number of Policies actually in force exceeds 5,000, covering Assurances to over One Million Sterling, and embracing almost every class or description of Life Assurance.

"I am happy to be able to assure you that the condition of the Company is sound and prosperous, and holds out every prospect of increased success. The Bonus, which the Directors may safely declare as the result of this valuation, is larger in amount, both as regards the Shareholders and the Assured, than that declared on any previous occasion; and this Bonus has been fairly earned by the past operations of the Society, *without in the smallest degree touching any portion of the future profits.*

"The valuation has been made with the greatest care and exactness, and the reserve for the future is most ample for the purposes of safety, and quite sufficient, with care and management, to maintain hereafter a proportionately favourable rate of improvement.

"I have the honour to be,
"Gentlemen,
"Your very faithful servant,
(Signed) "PETER HARDY,
"April, 1862." "Actuary."

It may be remembered, that on the declaration of the last Bonus the Actuary strongly urged the propriety of postponing the Actual Division of Profits until the alternate triennial valuation; the prudence of which course, though it naturally occasioned disappointment in some few instances, is now apparent; and it is most gratifying to the Board, while reviewing the peculiar difficulties which those alone who are actively engaged in the business of Life Assurance know to have existed during the last six years, to present so favourable a Report, especially as it emanates from a gentleman of such high character and professional standing as Mr. HARDY.

Without in the smallest degree encroaching on future profits the addition sanctioned by this investigation will give to each Share a Bonus of 4s. 6d. or 9 per cent. on the paid-up Capital, being three times the sum allotted on the last occasion, and 75 per cent. of the divisible Surplus will be added to all Policy-holders, assured at participating rates, on the 31st December last, in proportion to the premiums paid since the last Division.

The Circulars, announcing the allotment to individual Policies, will be issued as soon as practicable.

The Directors recommend that the usual Dividend of 5 per cent., free of Income-Tax, be paid on the Capital for the half-year ending 31st December last.

The Directors retiring are LORD ARTHUR LENNOX, T. M. B. BATARD, Esq., and JOHN GARDINER, Esq., who, being eligible, offer themselves for re-election.

(Signed) ARTHUR LENNOX,
Chairman.

THE BUDGET.

IF Mr. Gladstone's speech on Thursday evening was inferior as an oratorical effort to the speeches with which he has introduced former Budgets, it may not improbably surpass them all in the lasting satisfaction it affords. We are favoured with a Budget containing only one new principle. And on this occasion Mr. Gladstone had the pleasure of announcing that the receipts of the past year had slightly exceeded, and the expenditure had a little fallen behind, their respective estimates; so that his vague anticipation of a balance of £150,000 in his favour had resulted in an actual surplus of £1,300,000. The estimates for the forthcoming year have so far corresponded to the cry for economy, that the expenditure shows a reduction of rather more than £1,500,000, which, added to the previous surplus and the anticipated increase of about £900,000 from the former sources of revenue, gave Mr. Gladstone a surplus of £3,741,000 to distribute on the remission of taxation. When this announcement was made to the gratified House, there naturally arose an impatience to hear how the surplus was to be allotted; but here the Chancellor of the Exchequer was faithful to himself. The accomplished orator, who on a former occasion insisted upon magnifying an already alarming deficiency, and even made it seem worse than it was, before he would take into consideration the means by which it was to be met, had no sooner told the House on Thursday that he had this £3,741,000 to give away, than he proceeded to digress for an hour on chicory, clubs, parliamentary trains, and charitable endowments. By altering or imposing taxes on these things, Mr. Gladstone hopes to get about £133,000; so that he had the increased sum of £3,874,000 to dispose of. The secret of the delay in dealing with this sum was perhaps explained when it appeared that the first taxes to be sacrificed were Mr. Gladstone's own offspring—the petty charges on commerce. Their abolition will absorb in the present year £142,000, and in the future £191,000. The bulk of the surplus Mr. Gladstone proposes to absorb by a reduction of the Income-tax from 9d. to 7d., accompanied by a modification we shall presently explain, costing in all £1,600,000, and a reduction of the tea duty from 1s. 5d. to 1s., costing £1,300,000. There will then remain a balance of about half a million, which he hopes to preserve intact.

On the whole the Budget is most satisfactory, in showing the stability of the revenue under very trying circumstances, and in the promise which the small reduction in the estimates gives us of a return to the principles of economy. The reduction is not wholly trustworthy, since it is obtained not by diminishing our naval and military forces, but by a temporary abstinence from the purchase of stores. Yet it will probably be difficult for any Ministers to recur to the swollen votes of the past three years, and they will be driven to more permanent modes of economy. The stability of our revenue, however, affords unmixed satisfaction: in spite of the suspension of labour in Lancashire, and the destruction of half our trade with North America, the actual revenue of the past year has been £70,603,000, against an estimated revenue of £70,050,000; and the increase appears to be due to the development of the normal portion of the national income. During the past four years the revenue, exclusive of the accidental and remitted portions, has shown an annual increase of about £875,000. The actual expenditure of the last year has been £69,302,000, against an estimate of £70,108,000; whilst the total estimates for the current year amount to £67,749,000. Even this sum shows an increase of expenditure (other than the charge for the National Debt) of more than five millions over the year 1858-9.

The additions which Mr. Gladstone proposes to our sources of revenue are, in general, unimportant, though some of them will probably be hotly contested. Chicory has a bad name, and there has long been a tendency to equalize the duties on it and on coffee. The wisdom of such a course perhaps admits of a doubt; and there is certainly one important difference between the two articles,—that chicory is an article of home as well as of foreign manufacture, and the collection of duty upon it requires additional machinery.

It is impossible to dispute the propriety of requiring clubs to take out a spirit-license, and no one but a publican will object to the alteration of the beer-licenses. The legislation which Mr. Gladstone proposes with respect to railways and charitable endowments admits of more discussion. Much of the existing legislation about railway companies is anomalous, because it is founded on the assumption that they enjoy a practical monopoly, and that the public require protection against their powers. If Mr. Gladstone carries out his proposal to levy a uniform duty on all passenger-trains, there will remain the existing obligation on railway companies to run one cheap train every day, and perhaps the companies may not unreasonably complain of the injustice of imposing the tax and preserving the obligation. As for the charitable endowments, it is evident that Mr. Gladstone has not weighed all the difficulties of the question.

In the division of a surplus there are always some claimants who will be dissatisfied. The day cannot be very far distant when the Malt duty will require to be reconsidered, though an alteration of it could scarcely have been expected in the present Budget. The condemnation of a Select Committee, indorsing the opinion of the mercantile world, had sealed the fate of the petty charges on commerce, and Mr. Gladstone relinquished them with the best possible grace. It would, perhaps, have been better to have divided the

Digitized by Google

reduction of the Tea duty, and to have reduced the Fire Insurance duty, which has not improperly been characterized as the worst tax in our fiscal system; but Mr. Gladstone was undoubtedly right in preferring tea to its rival—sugar.

The modification of the Income Tax requires some examination. It is clear that this, though a useful measure, will not effect all the ends proposed by the Chancellor of the Exchequer. He proposes that the poundage shall for the future be the same on all incomes, but that holders of incomes of £100 (the minimum limit, as heretofore) and upwards, but of less than £200, shall be allowed to deduct £60 from their income, and be taxed on the balance. Thus, the tax being for the next year 7d. in the pound, the recipient of £100 a year would have to pay 7d. on £40; the recipient of £150 would have to pay 7d. on £90; the recipient of £200 a year and of greater sums, 7d. in the pound on the full amount. "The effect would be," Mr. Gladstone said, "to get rid of those very sore places which are found to exist in the case of incomes a little over £100 and a little over £150." This seems to be a mistake. The owner of £200 a year will for the future complain of having to pay 200 times 7d., whilst his neighbour, who has £199 a year, will only pay 139 times 7d. The only way to remove this anomaly is to have the same sum deducted universally, or to have it gradually reduced. The latter plan could be easily worked; *e.g.*, let the owner of £100 a year deduct £60, the owner of £101 deduct £59; and so on; so that the owner of £160 a year should deduct nothing.

It is to be hoped that Mr. Gladstone will, in any case, be allowed to preserve his surplus undiminished. It is little more than £500,000, and nearly the whole of it is due to the Chinese Indemnity, whilst the reductions of taxation proposed will involve an additional loss next year of £898,000. These considerations alone show that the surplus is too small rather than too large. And be it remembered that Lancashire will require at least a million next winter.

THE NATIONALITY OF POLAND.

THE Russian offer of an amnesty will appear contemptible enough to all who are acquainted with the rights of Poland under the Treaty of Vienna, or with the history of Polish complaints since that date. The Poles have raised the standard of rebellion—not simply because they have been ill-treated, but because they have been deprived of what had been guaranteed to them, as well by international compact as by Imperial charter. The Archbishop of Warsaw was right in representing to the Czar that mere administrative reforms would not satisfy his countrymen. Poland has a legal title to more than mere reforms, and those who imagine that liberalised institutions will be a panacea for the evil have not probed the full depth of the Polish wounds. What Kosciusko asked, and the Emperor Alexander promised, in 1814, was that the Poles should be allowed to preserve their nationality, and be formed into a distinct kingdom. This has been the burden of their cry ever since. This is what Clopicki prayed for in 1830, and Zamoyski in 1862. This, lastly, is what Archbishop Felinski, in resigning his post in the Council of the State, puts forward as the sum and substance of all Polish aspirations. Prince Talleyrand's opinion at the time of the Vienna Congress, that the original partition of Poland was the prelude, and in part the cause of the disorders which subsequently convulsed Europe, may yet hold good for subsequent times which he has not lived to see. The Poles, at all events, have this additional grievance in 1863, that they are not only oppressed, but oppressed contrary to the spirit and the letter of European treaties. This is not a case of ordinary insurrection. Poland has not merely a cause for rebellion against Russia, but a *casus belli*. Solemn international agreements have been broken by the Cabinet of St. Petersburg, and if the contracting Powers decline to draw the sword from motives of expediency, at least it must be conceded that Poland, who is the victim of the fraud, has a right to draw the sword herself.

Though a spirit of international jealousy, and perhaps a prudent fear of the growing powers of the Czar, prevented in 1815 the realization of the wishes of Kosciusko, and the formation of a Polish kingdom under the government of the Emperor of Russia, the Treaty of Vienna acknowledged virtually the weight of Polish claims. The constitution of the duchy of Warsaw was recognized as forming henceforward the link which bound that duchy to Russia. "It shall hereafter," so runs the proviso, "be united to the Russian empire, to which it shall be irrevocably attached by its Constitution." These words, it is clear, operate as effectually to guarantee the Constitution in question as they do to annex Poland to the dominions of the Czar, and in this obvious sense they have since been understood by Europe. Had the Constitution been preserved inviolate, the kingdom of Poland proper at all events would have enjoyed a free press, liberty of the subject, and a right to exercise some control over the national taxes and the national expenditures. But, at the close of twenty years, the kingdom of Poland found itself in possession of none of these benefits. Perpetual disregard of the above-mentioned constitution led the Poles, in 1830, to attempt to break their chains. Since that time Russian diplomatists have eagerly asserted that the privileges which Poland proper obtained by European treaty it had lost by insurrection and by conquest. Neither the English nor French Governments, however, has ever admitted the justice of so preposterous a contention. Lord Palmerston, in his despatches to the representative of this country at St. Petersburg, vehemently denies it. The Constitution—such is the indignant message he sends to the Emperor of Russia—exists under the sanction of the treaty. Once given, it became the link which, under the treaty, binds the kingdom of Poland to the empire of Russia, and that link cannot remain unimpaired if the Constitution should not be maintained.

The kingdom of Poland proper was by the contracting Powers distinguished from the other Russo-Polish provinces, and had a destiny assigned to it apart from the rest. But pains were taken in the Treaty of Vienna to protect the nationality of all the Poles in common. An express clause provided that the Polish subjects of Russia who were not to be included in the separate kingdom should, nevertheless, obtain a representation and national institutions regulated according to the degree of political existence that the Russian Government should judge proper to grant them. The stipulation was extended, to comprehend the Polish subjects of Austria and Prussia as well; and every Pole, wherever resident, thus found protectors in the Powers who are parties to the treaty. If the latter part of the clause seems to leave considerable latitude to the Russian Crown to exercise its sovereignty as it pleased in those provinces of Poland which formed no portion of the Duchy, at least it is certain that this nationality was to be preserved to them, and that this was an important object which the Powers kept consistently in view. An early article in the synchronous convention between Russia and Prussia states as much. The Powers themselves, indeed, declared that the principles of free navigation, of free circulation, of the products of the soil, and of commercial transit, should be invariably maintained, just as they had obtained through the length and breadth of the ancient Poland of 1772. Separated in their administrations from the kingdom of Poland, these exterior and outlying provinces retained something, while they retained commercial unity and the privileges of a common nationality. Though they form, no doubt, an integral part of the Russian Empire, it was intended that they should not be torn from their fellow-countrymen more than the exigencies of European policy required. Their welfare also was henceforward in some degree to be a care of these contracting Powers which had not thought it derogatory to the honour of Russia that she should provide by treaty for their happiness and prosperity.

While it is plain that the Poles wish for more than is guaranteed to them by the Treaty of Vienna, it is equally evident, on the other hand, that they have a right to complain bitterly of that treaty's non-fulfilment. The kingdom of Poland proper looks in vain for its vanished constitution. The other provinces ask in vain what has become of their share in the Polish name and nation. They may fairly demand, in conformity with European promises, first, to be governed well, and secondly, to be governed as Poles. If they go further, if they pray that the dispersed tribes should be re-united in a single realm, it is true that they pray for what Europe has not promised them, but is not such a prayer justified by nearly fifty years of mal-government and

Digitized by Google

suffering? However this may be, they have the clearest possible right to be placed, at the very least, in the position guaranteed to them in 1815. If international covenants mean anything, if England and France are not determined to fling aside a protectorship which they both deliberately assumed, the Poles may claim our intercession. Lord Palmerston, in 1863, tells us that though we have the right to interfere, we lie under no obligation to do so. It is sufficient to appeal from the Lord Palmerston of 1863 to the Lord Palmerston of 1831. What appears to him now to be a mere convenience, then was held by him to be "a duty." "The time is come," he writes to St. Petersburg, "when his Majesty feels himself justified, both by his friendship for the Emperor of Russia and *by the duty resulting from the obligations which he has contracted under* the Treaty of Vienna, in addressing to his Imperial Majesty, in the most amicable tone and with the deference due to his rights as an independent sovereign, some observations as to the best mode of resettling the kingdom of Poland under the dominion of the Emperor." The "obligation" has certainly not ceased since the date of that despatch, and, whatever the result of the joint action of England and of France, we are glad that this country has not shrunk from the task imposed upon her by her honour and her plighted faith.

THE LATE SIR G. C. LEWIS.

WE only echo the unanimous voice of Parliament and the Press in saying that the country has sustained a heavy loss in the death of the late Secretary for War. With the exception of the Premier, there was, indeed, no public man whom we could so ill spare; for there was none who united, in so eminent a degree, qualities seldom found together in the same individual. Administrators as able—but none abler; debaters far more ready, ingenious, attractive, and eloquent, are left to us; but where shall we find, in either house, one who has so intimate and thorough a knowledge of the details of politics, with so masterly a grasp of the principles which ought to govern them? It is an obvious remark that Sir G. C. Lewis was at the same time a philosophical statesman, and an active, painstaking, skilful official. But it is not so easy to appreciate the rare combination of mental and moral gifts which this implies. Largeness of speculation is often divorced from sobriety of judgment; amplitude of learning is frequently found incompatible with the modesty and patience requisite to receive new lights or acquire fresh information. Extraordinary acquirements are apt to tempt their possessor into the paths of paradox; while habits of deep and sustained thought yield with difficulty to the exigencies of practical life. That the deceased Minister possessed the merits, without drawback from the defects we have indicated, is, however, universally admitted. It must have been a mind unusually well balanced, which could make its power felt in classical scholarship, in the most arduous and abstruse walks of literature, in the business of the Exchequer and the War-office, and in the debates of the House of Commons. But Sir George C. Lewis's success, and the position which he held, were due to something far higher than mere readiness of mental adaptability. Few men have ever brought to the consideration of questions coming before them so perfect an impartiality, or that less due to indifference and more to earnestness for the truth. The thoroughness with which he compelled himself to master everything that he took in hand, was, indeed, greatly attributable to the honesty which was with him not only a moral attribute, but a characteristic of his mind. His transparent clearness—his passionless serenity of thought—secured him almost entirely against the unconscious self-deception to which most of us fall constant victims; while the instinctive justness and accuracy of his reason shrank from the support or propagation of a fallacy, as nature is said to abhor a vacuum. Not only was his intellect one of great acuteness, and at the same time of great weight and solidity, but when he announced an opinion, men felt they had every guarantee that it was the result of careful and laborious reflection, working sincerely upon the best materials which industry could gather together. His authority with the House of Commons increased almost every session, in spite of—perhaps partly on account of—the defects which appeared to forbid his acquiring influence in a popular assembly. These were partly mental and partly physical. The comprehensive view which he took of every subject, and a naturally critical, if not sceptical turn of mind, often disposed him to give undue weight to objections, and to acquiesce somewhat too contentedly in inaction. His many-sidedness, his impartiality, and his candour, prevented his moving in any one direction with the momentum which a narrower nature would have gathered from its more dogmatic convictions. While he was almost totally destitute of the flexibility and tact requisite for concealing his ignorance—when he happened to be ignorant—or for passing off upon the House a convenient, but fallacious string of official excuses,—when he knew he was wrong, or felt his convictions overborne by the exigencies of the moment, he never could conceal the fact from his audience. They laughed at the perplexities of the Minister, and the shortcomings of the advocate; but they felt increased respect for the sincerity of the statesman. As a speaker, Sir G. C. Lewis never took his place in the first rank; nor was it likely that he could have done so, had he lived. His style was heavy; his anxiety to place the House in full possession of all the information bearing on a subject often rendered him tedious; and, unless he was unusually excited his delivery was sluggish and awkward. At the same time, it was impossible not to be struck by the clearness and exactness of his language,—by the facility with which he rendered plain the most complicated subjects,—by the lucidity and compactness of his argument,—and not unfrequently by the vein of grave irony and humour which ran, with the happiest and most forcible effect, through his more serious reasoning. Occasionally, indeed, he would throw off his apparent lethargy, under the influence of a great debate or the stimulus of personal attack. And the vigour with which he then poured forth a stream of the purest and most idiomatic English—the telling directness and weight of his blows—showed that, had he devoted himself to the art earlier in life, he might have become one of the first debaters of his day.

Had the deceased statesman never entered Parliament or held office, he would still have left behind him the reputation of a sound and learned scholar and a distinguished man of letters. It is probable, indeed, that to the latest hour of his life literature was more congenial to his taste than politics. The laborious research and the severe inquiries in which he engaged as an author, while bearing the burthen of some of the most important offices of the Government, showed in the most striking manner his prodigious capacity for work, though they must have tended to shorten his valuable career. We can, however, only allude here to this side of his life; for it is of the statesman that we must speak to-day. Although he had previously occupied a seat at the Poor-law Board, and had filled two subordinate places in Lord J. Russell's administration, he was almost unknown to the public when Lord Palmerston appointed him to be Chancellor of the Exchequer, in 1855. The three years during which he was at the Treasury, falling as they did either during or immediately after the Crimean war, were not favourable to the production of financial novelties; nor did he show any desire to compete with Mr. Gladstone in the parentage of sensation budgets. His only important remission of taxation—apart from the reduction of the war imposts—was the removal of the newspaper stamp. But he proved himself a shrewd and sound man of business. He won the confidence of the City to a greater extent than any finance minister since Sir R. Peel; and although he had to contend against the united opposition of Mr. Gladstone and Mr. Disraeli, he generally convinced the House that, if his antagonists had the more fluent rhetoric, he had the better arguments. Outside his own department, he took a prominent and effective part in the debates on the fall of Kars, the Persian war, and the introduction of the bill for transferring the government of India from the East India Company to the Crown. When he relinquished office in 1858 he was generally regarded as, next to the Premier, the most important and influential member of the Government. He did not, as is well known, return to the Exchequer on the formation of the present Administration; and it is difficult to suppose that he can have approved of much that has been done by his successor. Indeed, in his last budget speech, in 1857, he denounced, by anticipation, the principle of abolishing the numerous small import duties; while he threw an abundance of cold water on that reduction of the wine duties which he was destined to sanction as a member of the Cabinet of 1860. As Secretary of State for the Home Department, he was a valuable member of the Government; and while he held the seals there was an entire

Digitized by Google

absence of those complaints and controversies which have marked Sir George Grey's subsequent tenure of the office. The most remarkable features of this part of his official career were the "double-edged" speeches with which on successive Wednesday afternoons he used to demolish, while appearing to support, the legislative projects of amateur parliamentary reformers or of political dissenters. It may, however, be doubted whether these displays were due so much to conscious art as to incapacity for hiding the discrepancy between his own views and those to which, as the member of a Liberal Government, he was bound to lend an ostensible sanction. There was no doubt as to the heartiness of his scorn for the "unreasoning opposition" offered by the Nonconformists to the religious census. The speech in which he avenged the defeat he was compelled to bear, was one of the most masterly and effective of his Parliamentary displays. His victims long smarted under the biting sarcasms, in which he compared their "uncontrollable and instinctive" prejudices to those of George III. against Catholic Emancipation, and expressed his hope that, eventually becoming as enlightened as Mussulmans, they might abandon, like the latter, their objection to be numbered. When subsequently transferred to the ministry for war, he did his best to conquer an utterly uncongenial subject; but he never succeeded in replacing the loss of Sidney Herbert, although by dint of most assiduous and devoted labour he discharged respectably the onerous duties of the office. It is not, indeed, as an administrator that his loss will be most severely felt. Both the House of Commons and the Cabinet will sadly miss the calm judgment, the high sagacity, the even temper, and the serene composure of mind, which, under circumstances however agitating, he never failed to bring to their discussions. He was one of the men whose presence adds perceptibly to the dignity and authority of any body to which he may belong; and although the country had not yet learnt to value him as he deserved, those who knew him and had watched his career were almost unanimous in regarding him as a future Prime Minister. For that high place he had many eminent qualifications. His caution, his candour, his tolerance for the opinions of others, and his admirable single-mindedness, pointed him out as one fitted to combine and moderate the counsels of colleagues, and to wield an ascendancy which in his hands would have wounded no man's self-respect. Nor is there reason to believe that he would have been found wanting in vigour of action, either as a statesman or a legislator. It is true that he did not possess the confidence of many of his contemporaries in the efficacy of Acts of Parliament. Looking at human affairs by the light of his great historical knowledge, he had none of the impatience which drives men to seek the removal of evils by empirical remedies that only touch symptoms but fail to reach causes. He was disposed to rely for the improvement of society upon the progressive enlightenment of the people rather than upon the meddlesome activity of the Legislature. But in an age when the tendency sets so strongly and mischievously in an opposite direction, we should have seen with satisfaction at the head of affairs a Minister who was possessed of a manly faith in the capacity of Englishmen to bear letting alone. On the other hand, no one was more unsparing in the attack of proved abuses; and his natural boldness of mind would have secured him against vacillation or feebleness when a real exigency required trenchant and decisive measures. His death has reduced to ominously narrow limits the list of those to whom we can look for a successor to Lord Palmerston. Nor is it impossible that at some future day considerable difficulty will be experienced in finding a Premier who can hold together—as he might have done—the disunited sections of the Liberal party, while commanding the respect of the moderate, intelligent, and educated portion of the community.

THE BISHOP OF DURHAM AND THE PRESS.

WE regret to see that the Bishop of Durham, in a letter to his clergy protesting against the subversive doctrines, and, for an officer of the Church, the scandalous example of Bishop Colenso, has gone out of his way to bring a hasty accusation against the bulk of the English periodical literature of the present day. By the etymology of "Bishop," the meaning of that title is, one who sees; but in this case, Bishop Baring sees a great deal more than is to be seen by the most accurate observer of existing facts; and he must have the rare gift of second sight, popularly ascribed to the Scottish Highlanders, if he can detect, in the habitual conduct of the Press, a general conspiracy to undermine the Christian faith. In justice, therefore, not only to ourselves, but also to the majority of our daily and weekly contemporaries, we must take leave to deny this sweeping charge. We make bold to say that, with a very few exceptions, the prevailing tone of English journalism and its ordinary treatment of subjects incidentally affecting religion are usually such as are consistent with a sincere respect for those time-hallowed convictions of divine truth, upon whose integrity, as we are fully assured, the main fabric of the moral, social, and political welfare of this country depends. What motives indeed could there be to prompt the anonymous directors and writers of these publications, which only exist by virtue of their general agreement with the feelings and prepossessions of the community, to take such a course as the Bishop has rashly imputed to them? Even if there had happened to be some amongst them who were personally unable to share in our common heritage of a Protestant Christianity, bequeathed to this nation by the Reformers of our Church and State in the sixteenth and seventeenth centuries, when the realm of England was cast into that shape in which, under the Divine protection, it has since grown up, they would probably have been restrained, at least by public spirit and patriotism, from wantonly assailing a system of beliefs so closely and familiarly entwined with the temporal prosperity of this land. As mere politicians, and as professors of mere philanthropy, which all journalists claim to be of course, they must have recognized, in the religious institutions of England, the chief historical security for her well-ordered freedom, and the most powerful agency for relieving, instructing, and improving the lower classes. As practised observers and interpreters of the English mind, they could not have failed to remark how, in that pregnant sentence of three words, which the leader of a great Parliamentary party quoted on a late occasion, "industry, liberty, and religion" form the triple chord of popular sentiments to which, as to the key-note of the English character, the hearts of our fellow-countrymen will always respond. More than our vast commercial enterprise and wealth, more than our perfect enjoyment of civil freedom, the English nation cherish in this, as in former ages, the traditional Christianity of the land of our birth. Does the Bishop of Durham, then, suppose that the men whose special calling and trade it is to comprehend the instincts and likings of the multitude of readers, can so far mistake their business as to attempt to destroy that persuasion which lies at the very bottom of our social life?

There is, we believe, no such disinterested zeal now-a-days for the diffusion of infidelity, as should urge the literary profession to employ itself, without thanks or recompense, in a mischievous task, which would prove not less unprofitable than discreditable to those concerned in it. The editors of our newspapers and critical reviews are generally too well acquainted with the conditions of success in the management of these publications, to risk forfeiting the confidence of their supporters for the vain caprice of attacking the established faith of this Christian country,—even if they were not, as for aught the Bishop of Durham knows they are, personally as good Christians as any of their lay or clerical neighbours, including the wearers of lawn-sleeves who sit on the Episcopal Bench.

We therefore beg him to observe, that there is an antecedent improbability in this charge against the periodical literature of the day, which should have induced him to look more carefully into it, before hazarding so injurious an assertion. We do not, certainly, mean to affirm that any department of the press is perfect. Far from it; we more than doubt if anything on earth is perfect. We have never met with a perfect bishop, or heard a perfect sermon, and we dare say that the Bishop has never met with a perfect editor or read a perfect newspaper, or a perfect article in any newspaper, or indeed found a perfect anything, in this fallen world of ours. There is no gold without alloy, no raiment without a moth, no tree without a worm at its root, no bishop or curate without an obtrusive crotchet, or, may be, a twist in his temper; and no public writer, secular or religious, free from a wrong bias or a particular conceit. England is not a Utopia, and our age is anything but a millennium. We confess that here and there things do sometimes find their way into

Digitized by Google

print, which not only bishops, but all other ministers of the Gospel, may peruse with natural displeasure. In reference to matters of religion, it is not so much the spirit of free and scientific inquiry that they have to complain of, but the spirit of mockery and malicious derision. Do a few spoiled children of wit and fashion, joined with an arrogant and presumptuous clique who assume to be the arbiters of scholarship and taste, grow intolerant of every manifestation of those profound sensibilities of the religious nature in man, which an Epicurean philosophy can neither satisfy nor explain; indulge their vanity, and display their talent for ridicule, by scoffing at the faults of manner or phraseology which may be detected in the sermons, prayers, and hymns, of a popular congregation? Surely this is an offence against every rule of good taste and good manners, which the superfine school of essayists should be the last to commit. It is inconceivable that men of a certain degree of culture and refinement, boasting of a liberal education, should thus treat with scorn any genuine expressions of those deep instincts of humanity which have in all ages led our frail and mortal race to assemble for religious discourse and worship. The satirist must indeed be reckless and ungenerous, who, in the pursuit of his prey, will not stop at the door of the house of public devotion, but strike at a minister and a people, communing in their own style upon their own spiritual affairs.

Without, then, taking into account one or two publications which are the avowed organs of anti-Christian sects or parties, and whose insignificance may have escaped the notice of the Bishop of Durham, we know but of one conspicuous example of this abuse of literary power. And this is certainly an exception which proves the rule. For if, as we have remarked, no journal circulating in respectable society could, without risking the loss of public favour, frequently and grossly affront the religious sentiments of the community, the periodical to which we refer has usually taken care to select for the objects of its vituperation the Dissenting ministers and the Evangelical clergy, who are farthest removed from the sympathies of its High Church patrons. And it has atoned for these outrages upon the common charity and reverence due to all forms of Christian faith, by an obsequious and deferential behaviour towards that straitest sect of the Anglican Ritualists, who deny all religious fellowship with believers not addicted to the use of church furniture and ceremonial of the Margaret-street Renaissance type. We are not, however, tempted to dwell longer upon this singular exception to the prevailing attitude and temper of English journalism, in regard to Christianity and its professions or ministrations generally throughout the land. In this respect, as well as in the sound moral tone which pervades most of our newspaper and magazine or review writing at the present day, we believe that it will bear comparison with that of any former period, or of any foreign country. Whether the generally irreproachable conduct of the press, as regards all religious topics, is due merely to the skill of its managers in ascertaining the beat of the national heart, by a superior touch or *tactus eruditus* of its pulse, or is the result of their own individual convictions, neither any Bishop nor anybody else can have a right to inquire.

But of this we are sure,—that the Bishop of Durham never perpetrated a greater blunder or made a more unjust imputation than when he charged the English press, as a body, with infidelity and scepticism. The only upholder of Dr. Colenso in the daily press is one which does not applaud his theology or endorse his criticisms, but takes the ground of liberty of thought, and toleration of opinion,—a ground very defensible in itself, but which, in the special instance of Dr. Colenso, as an appointed officer of the Church, is quite inapplicable and foreign to the question of his consistency. We repeat, however, that whatever Dr. Baring may allege, the press is a stranger to avowed and open attacks on the Christian faith. If it sneers occasionally, it is at the expense of those who profess to expound the Bible, not at the Bible itself. If personalities and invectives are indulged in to gratify the prejudices and animosities of party,—or if there be jests upon topics which should not lightly and irreverently be touched,—it is still observed that, upon great occasions, there is, in most of our newspaper writers, a solemnity of tone, a religious and devout feeling—as, for instance, on the death of the Prince Consort,—which attest the strength of such emotions and convictions as Christianity inspires. We regret, therefore, very sincerely that Dr. Baring has hazarded so indiscreet and ill-considered a charge, not merely because it is unjust, but because it will provoke undesirable retaliation. The way to improve what is bad is to give credit for the good that yet exists. Censure is never more unfruitful than when it is undeserved. We must say, with real regret, that ministers of religion frequently provoke by their indiscretions the assaults they first deplore, and then charge the press with a hostility to religion which is merely the rebuke of some of its inconsistent or intolerant professors. But, returning to our main argument, we insist that no respectable journal can afford to be irreligious. It must be, if it would thrive, the exponent as well as the guide of public opinion. In fact, to charge the press with irreligion is to condemn the people of England. And if the people of England and its exponent, the public press, be what Dr. Baring describes, what has the Church of England been about during the last hundred years?

THE FRENCH EMPEROR AND THE ACADEMY.

A visit from the French Emperor to the French Academy is an unusual event. It was occasioned by the election of M. Octave Feuillet, the well-known author, to the vacant fauteuil in that body. For the first time since the inauguration of the second empire, compliments have been openly addressed by an academician to the reigning family in the presence of his brother academicians, and an armistice seems to have been tacitly concluded for the occasion between Napoleon III. and his most relentless antagonists, the men of letters who belong to the French Institute. When Queen Christina, of Sweden, visited long ago the same illustrious assembly, she inquired of the Chancellor whether the academicians ought not to stand before her instead of sitting down. On consultation, it appeared that there was a precedent to be found in the time of Charles IX., in whose presence more than one meeting of literati had been held, at which all present seated themselves, without regard to ordinary etiquette. As soon, therefore, as Queen Christina sat down, all the members took their places in their respective chairs. Compliments were then addressed to her by the director, M. de Mezeray, and his companions. M. de Mezeray repeated to the royal visitor a treatise he had composed recently upon the Passions. M. Cotin recited some translations from Lucretius. Sonnets followed from a couple of abbés; and last of all a dictionary sheet, which was in course of composition, was read aloud. The word under consideration was *Jeu*; and we learn that one of the proverbial expressions under this head which amused the Queen heartily was "*The game of princes, which only pleases the player.*" The proverb would have had a much bitterer inuendo if it had been presented by the present French Academy to the present Empress. Among the body are to be found the most persistent enemies of the present *régime*; and Paris derives no little amusement at the election of each new academician from the piece of etiquette, which requires that he should be personally presented to his sovereign at the Tuileries by the director and the permanent secretary. M. Villemain, M. Guizot, M. Montalembert and others have had in turn to undergo their part in this uncongenial ceremony, and it is seldom that the visit passes off without some comical incident or *bon mot* to fix it in the memory of the diverted Parisians. His Majesty the Emperor is fully able to hold his own in these little hostile interviews, and the conversation has been known to approach as nearly the pleasant and polished repartee as would be consistent with respect for the Throne. At the reception of M. Lacordaire three years ago, it fell to the lot of M. Guizot and M. Villemain to accompany the new member to the Emperor's apartments, and to receive the congratulations of the chief of the State. "Ah, M. Guizot," said the Emperor, "I am glad to see you again at the Tuileries; pourquoi ne venez vous pas plus souvent chez nous?" Leaving M. Guizot somewhat taken aback by the cordiality of this invitation, his Majesty passed on to M. Lacordaire. "Mon père," he is reported to have said, "l'Imperatrice a ecouté votre discours avec beaucoup de plaisir (M. Lacordaire bowed with evident gratification) il y a dix ans à Bordeaux," continued the Emperor with a quiet smile, leaving M. Lacordaire to make the best of the reflection that his recent pulpit performances had excited less interest in the highest quarters. Napoleon III. came last to Villemain, the witty and ironical secretary of the Academy, whose sarcasms upon Cæsar and the things of Cæsar are generally supposed to be by no means limited in number or in pungency. "It was with the great possible pleasure, dear M. Villemain," observed his Majesty, "that I signed the day before yesterday the nomination of your son-in-law to a sous-prefecture in the provinces." For a single instant, it is reported,

Digitized by Google

even M. Villemain was completely silenced by the equivocal and satirical compliment, the Imperialist opinions of one of his connection being naturally a sore point with him. But M. Villemain was not the man to be beaten by an epigram. "Veuillez croire, sire," he quickly returned, "que j'en ai appris les nouvelles avec au moins autant de surprise que de satisfaction."

On the presentation of M. Octave Feuillet there seems to have been an interview of less asperity between the illustrious head of the French nation and the learned heads of the French Academy. M. Vitel and the Emperor talked for some little time on the "Life of Julius Cæsar," which is being edited by Imperial hands, and M. Vitel expressed the high anticipations that had been formed of the coming work in the Parisian literary world. The Emperor replied —according to the account that has been given of his words—that though something had been done already, much yet remained to be accomplished before publication, as there were researches to be undertaken, and, in particular, several of the old battlefields to be hunted out which are supposed to be scenes of Cæsar's victories. M. Villemain remarked, that "it was a pleasanter task to hunt out old battlefields than to have to make new ones;" and the Emperor in return assured him that nobody could feel the truth of the observation so completely as himself, on whom the campaign in Italy had made an indelible impression. Among other incidents of the conversation the most curious was a casual expression which his Majesty let fall, and which has since been interpreted to mean that he had some idea of presenting himself as a candidate for election to the Academy at a future time. The wags of the French capital are already speculating on the manner in which the canvassing of the other members (which, by the rules of the Academy, must be conducted in person by the applicant) is to take place. The directors of the Academy would be obliged to pronounce an eulogy on the newly-elected academician; who, on his side, is bound to eulogize his recently deceased predecessor; and if the post of Victor Hugo or of the Duke de Broglie, or of some similarly-minded Academician, is the vacant one to which his Majesty succeeds, the complication will be increased. Napoleon III. pronouncing a funeral oration over Victor Hugo would be a quaint and instructive sight. It is, however, a little premature to speculate on the details of a ceremony which will not, probably, ever take place. It is true that the First Napoleon obtained, on account of his scientific attainments, a seat in the French Institute. He was not, however, an Emperor when elected, but a simple general; and moreover he was the private and personal friend of several scientific men. Great as is his imperial nephew, the laurel wreath of the Academy is not within his reach. Though his own genius and education are of a decidedly high order, the present *régime* is too unfavourable to men of letters for the Academy and the Emperor not to remain in the position of antagonistic powers. Intellectual capacity does not seem to be developed under the Second Empire, in spite of the obvious efforts of the present Ruler of France to gather men of learning and literary acquirements round his throne. There are no great generals who have been formed under the Empire, say the French. There are no great authors who belong to the Imperialist cause any more than there are great generals. Whatever be the reason of this, the first seems incontrovertible. Possibly there is an element of vulgarity in Imperialism that upsets the somewhat refined cynics and critics who lead the literary world of France. Certainly the effect of Imperialism has been to close the avenue of political distinction against all literary men except those who have given in their adhesion to Napoleonism; and Imperialist sentiments would sit badly on the greater number of French Academicians. The Emperor is not Augustus, and the Academy will never allow him to take the lead of French literature. The "Life of Cæsar" may prove that the French Emperor deserves under better auspices to be an Academician; but it never will prove that there is not an impassable gulf between the Academy and the Empire.

It is, however, tolerably certain that the French Emperor possesses literary talents of a very high kind. The "Idées Napoleoniennes" contains passages of remarkable merit; and some of the disquisitions in the imperial work are models of clear and condensed thought. The style is somewhat inflated, reminding one, in the more sentimental parts, of Mr. Disraeli, whose oratorical vein, in many respects, is not unlike the Emperor's. Both have the same grandiloquent way of generalizing upon political subjects, and expressing the result of such generalization in a sounding epigram. "France," says his majesty, "is the only country that goes to war for an idea." "England," said Mr. Disraeli in the same magnificent manner, "does not love coalitions." When Louis Napoleon, from the fortress of Ham, tells us that the Government of the Orleanists is an educational tyranny, we seem almost to hear Mr. Disraeli talking of Sir Robert Peel's Ministry as an organized hypocrisy. Whether the French Emperor has been as guilty as his great English antetype of sentimental and romantic writing, it is almost impossible to say. If he has written anything of the kind, it has certainly been suppressed. It is difficult to believe Napoleon III. a poet; yet if imagination, and an impulsive temperament are distinguishing features of a poet, it is not impossible that Louis Napoleon may have sighed and sung in his day, like lesser authors. His political speeches are admirable, though they are only suited for a Continental audience: and his despatches eclipse the despatches of our humble and constitutional Foreign Office both in dignity and power of expression. Of his capacities for reasoning, Mr. Cobden is said to think extremely highly, and he has had no doubt an opportunity of judging; but it is perhaps natural that an apostle should lose himself in admiration of the reasoning powers of his first Imperial convert. What he has published on the subject of artillery was more valuable at the time of its publication than it would be at the present day, since rifled guns have altered in some measure the science of military tactics. Yet it is believed that all the late improvements in French artillery have been made under his direct supervision; and military men are by no means unanimous in their condemnation of the conduct of the Italian campaign. His administrative abilities seem to be consummate; and the general organization of the war, which was undoubtedly admirable, was on all hands allowed to be entirely his own. His merits as a political thinker have frequently been criticised, and must be measured partly by his success. But his fertile powers of invention, his great activity and receptivity of mind, his breadth and liberality of view, his restless ingenuity, his turn for novel schemes and ideas, combined as they are with an extraordinary caution and sobriety, even apart from his mere political talent, would distinguish him as a man of extraordinary character. Whatever he had been—as a general, an engineer, or a merchant,—he could have raised himself to fame and fortune; and though his rank and his circumstances exclude him from the French Academy, there is probably not a single academician of the day who is mentally his equal.

THE LOSS OF H.M.S. *ORPHEUS*.

The wreck of one of her Majesty's ships is literally a national disaster; but when it is not only the loss of a ship, but of a ship's company, that we have to lament, it is a calamity that comes home to the hearts of us all with something of the acuteness of a personal bereavement. As it is often, and justly, said of the recognition of living worth, we do not know how proud we are of our men-of-war until, by some mischance, we lose them.

No Englishman ever gazed without secret emotion at a frigate bearing his country's flag, as she lay at Spithead, under orders for some distant station, or preparing to go into harbour and dismantle after three years' faithful and laborious service. There she is, in all her bravery and promise, like youth in all the restless audacity of life, straining to be gone from home and to try its fortunes on the great highway of the world. To-morrow, at daylight, she will lift her anchor, and her next salute will be to shores upon which the sun is setting as she weighs from England. There she is again, shore-bound and weather-beaten, but as resolute and ready as an outward-bound, reposing in her shadow at the dear old anchorage after her round of duty and adventure.

In that ship dwells, as its very soul, the concentration of all the qualities and virtues that make or keep a nation great,—courage, obedience, honour, daring, patience, enterprise, discipline, self-denial, devotion to duty, love of home. A war-ship is always a striking and picturesque object, but to an English eye a ship that bears a British pennant is as the sacred ark of his country's strength, and in his secret soul he worships her. And so he finds it very difficult to believe that a British man-of-war can actually be *lost*, like a mere merchantman. Indeed, such a casualty is so exceptional, that it seems more like a visitation than an accident. Not only are her Majesty's ships understood to be the strongest and most enduring structures afloat, built of the best materials, put together by the most skilful workmanship, furnished and "found" with the exactest and completest care; but they are known to be commanded and officered by men with whom the glorious traditions of the service are a second religion, who are trained and taught from their youth up to meet and conquer all the hazards and dangers of the sea, to guard against all possible contingencies, to deal with the severest emergencies. In the course of his examinations for promotion, there is no conceivable situation of difficulty or peril, to try the resources of seamanship to the utmost, which a naval officer has not

Digitized by Google

mastered. In the regulations, which are his text-books, it may be said that he is not left an instant, by day or night, without the most precise and detailed instructions for his guidance, whether at sea, or in approaching land, or in port. In short, in his purely nautical capacity the naval officer can seldom be said to be without instructions. It is rather in his occasional diplomatic capacity that the soundness of his judgment is put to the proof. As to coolness, promptness, and decision under stress, they are, of course, the alphabet of the seaman's education. Still, however comprehensive and precise naval regulations may be, they cannot provide for all contingencies. They must leave a wide margin for the discretion of the executive officer in command. It is one thing to regulate in advance the manœuvres of an army, and another to lay down inflexible rules for the thousand unforeseen vicissitudes of a ship at sea. Efficiency and economy, avoidance of all unnecessary risk and all superfluous expense—these are general principles dictated by a due regard for the inestimable national property (of which the ship's material value is the smallest part) committed to their charge. Let us apply them to the melancholy catastrophe of H.M.S. *Orpheus*, wrecked on the 7th of last February on a harbour bar on the coast of New Zealand, in broad daylight, and in fine clear weather.

H.M.S. *Orpheus*, a new corvette of 21 guns, 1,706 tons, and 400-horse power, was commissioned in the autumn of 1861 by Captain Burnett, C.B., to carry his flag as commodore on the Australian station. She was selected for this important command on the most distant and most extensive of stations, as the finest ship of her class. It was her first commission, but she was already a favourite at the yard where she was fitted out; and all who had a hand in her construction and her fitting out were proud of her splendid lines, her spacious decks, her sailing qualities, and her steaming power. The command of the Australian station requires a fast, a powerful, and a roomy ship; and the *Orpheus* was as big as one of Nelson's second rates, and twice as effective for all fighting and sea-going purposes. The *Trent* difficulty found the *Orpheus* at Spithead; and her destination was suddenly changed. She was ordered to convoy the *Melbourne* transport to Halifax. To conduct a clumsy steamer laden deep with stores and munitions of war across the Atlantic in the dead of winter was a trying service, and it was performed most creditably by the corvette in the teeth of a tremendous gale. When the *Trent* difficulty was arranged, the *Orpheus* was again under orders for Sydney, and left Bermuda for her station in the spring of last year. Since he took up his command, Commodore Burnett had visited the principal Australian stations; and at Sydney, Hobart Town, and Melbourne, the *Orpheus*, her officers, and crew were held in the highest estimation and regard. On the 31st of last January the *Orpheus* sailed from Sydney, on her first visit to New Zealand. After a fine quick run of seven days, she made the western coast of the North Island, about eight miles from the Manukau Head, at daylight on February 7; and at about half-past twelve she was seen off the Manukau Bar, under steam and canvas, and proceeding towards the bar with a strong wind, S.W. to S.W.N., "with occasional light squalls, and steering the course laid down in Captain Drury's sailing directions, E. and N.E.E." The signal from the pilot station, reports Lieut. Hill, had been flying since 11.20 a.m.: "Take the bar." The commodore and the master were very attentive with the chart on the bridge, and very particular in the steerage of the ship, and in the orders to the engine-room to keep the steam at command. The signal man and signal officer were on the look-out. It was high water at 12.20. It was 1.20 when the ship approached the bar, and at 1.30 she touched lightly on the afterpart, when the commodore gave the order, "Give her all the steam you can."

At about 1·40 the ship struck forward, broached to with her bows to the northward lurching heavily, and the rollers from the westward making a clean breach over her. The *Orpheus* was doomed to complete destruction. First, the port-quarter boats were carried away, then the decks broke up, then the masts went by the board. Officers and men, inspired by the noble example of their chief, behaved admirably. The commodore ordered the pinnace and cutter away with the ship's books and records, under charge of the paymaster, who was acquainted with the place on shore. These boats had great difficulty in clearing the ship against a strong ebb tide; the launch was capsized. The commodore, commander, first lieutenant, and master took refuge in the tops, and the crew in the rigging; and, one after the other, were swept away into the devouring sea. Out of a crew of 260 souls, only seventy escaped; some into the boats, some taken off by a colonial steamer from pieces of the floating wreck. Commodore Burnett, loved and honoured and prized by all, refused to leave his ship to the last, and died, as British sailors die, an example of heroic duty and devotion.

The causes of this lamentable loss are only too easily explained. The simplicity of the disaster adds to its poignancy. It was not in the darkness of a tempestuous night, or in a fog, but at noonday, in the broad sunshine, that the *Orpheus* deliberately sought and found destruction, "in the twinkling of an eye." From daylight to noon the ship was, it seems, waiting off the bar and getting up her steam to go in. Not one of her executive officers knew anything more of the coast than he found in Captain Drury's sailing directions. And there was a bar harbour of shifting sand liable to a sudden change of depth from tide to tide. Her Majesty's ships, we believe, are not allowed to enter a strange port without a pilot. For the English Channel they have Channel pilots. Did the *Orpheus* fire a gun or make signal for a pilot? There was a pilot boat at Manukau; yet the pilot went on board the colonial steamer, bound to Wellington, at 12.30,—precisely the time when the *Orpheus* was approaching the bar,—instead of going out to her Majesty's ship. The pilot station was content to make signal to a ship of 1,706 tons, drawing at least 22 feet of water, and a perfect stranger to the coast, to "take the bar,"—a bar of shifting sand which was known at the pilot station to have shifted considerably to the northward since Captain Drury's survey, by which alone the *Orpheus* could be steering, was taken. The pilot takes charge of a small local steamer, as familiar with the harbour as a Margate steamer with the Nore, and makes signal to the *Orpheus* to "take the bar." Was the *Orpheus* justified by the regulations of the service, or by ordinary prudence, in taking the bar without a pilot on board, on the faith of a flag flying over the pilot station? No doubt, had the ship driven or scratched across the bar in tolerable safety, it would have been remembered on the station as a daring feat. But prudence in such a case is the first law of her Majesty's service. There was no necessity for the *Orpheus* to go in upon that tide; and it must be remembered that she crossed the bar upon an ebb tide, with a strong wind almost dead aft, and consequently a heavy rolling sea; by no means a favourable opportunity for taking the bar, even had Captain Drury's directions held good; whereas in fact those directions had become nothing better than an invitation to suicide. Across the middle channel a spit of sand had formed; and on this spit the *Orpheus* struck.

And when the ship was irrecoverably lost, it is doubly painful to be assured that there was a lifeboat drawn up on shore; that a local steamer had only left the harbour an hour before; and that within twenty-five miles there were one of her Majesty's ships and a colonial steamer, which were only sent for when all that remained of the *Orpheus* was a stump of mast and a few ribs, and 190 of the bravest officers and seamen in the world lay engulphed among the breakers. All honour to the gallant and lamented dead! But it is due to a mourning nation and to her Majesty's service—that national property of inestimable price—we speak of the lives of British sailors; of Commodore Burnett, Commander Burton, Lieutenant Mudge, and Mr. Strong, and their noble company of seamen,—should not again be thrown away, for want of a pilot, on a treacherous harbour bar.

"THE MIDNIGHT MISSIONS."

Mr. Cobden has been writing to a friend in Nottinghamshire on the prevalence of what is called "the Social Evil" in our large towns. He speaks of the growing disparity in the number of the sexes, of the great excess of women over men, owing to the spread of emigration among the latter, and to the multitudes who are sent abroad in the army and other public employments; and he expresses himself in favour of the police regulations adopted in Continental cities, which he considers more favourable to morality as well as to decency than the absence of such regulations here. Yet the upshot of his letter is that, practically, he "can offer no suggestion" on the subject. That is, unfortunately, the conclusion at which most men who have considered the question have stopped short. There are certain evils which appear incurable, or, at least, only curable by some slow and not very definite process, affecting the whole structure of society, and partially even the tendencies of human nature. The real curative process grows not so much out of conscious effort in the particular direction needing it, as out of the general education and moral improvement of the people. Poverty is one of these grim puzzles; crime is another; the systematic immorality of large towns, and even of rural districts (for they are far from exempt from this particular evil), is a third. And the last is, perhaps, the most difficult of any to deal with. Both poverty and crime fluctuate every now and then in their degrees of intensity,

Digitized by Google

and we see that certain conditions are favourable to their development, and that other conditions have the effect of reducing them to a minimum. The form of immorality to which we now refer is not easily proved to come under such certain laws. Its amount, however, will perhaps oscillate with the rate of wages or with the variations of national prosperity; it may be discouraged, though not suppressed, by the spread of education; and it may be fostered or checked in some degree by the prevalence of certain fashions, habits, and opinions. Still, it holds on steadily from generation to generation, increasing as the people increase in numbers, and seeming to defy all the influences which wisdom, philanthropy, and religion can bring to bear against it. A virtuous or a vicious court has an effect on *manners*, and that in itself is much; but its power over the *morals* of a nation is almost inappreciable. The amount of irregular living in this respect is, perhaps, as great under the pure and matronly rule of Queen Victoria as in the profligate and unblushing days of the Regency. The drunkenness of that period is no longer found among our educated classes; the coarse language, the loud swearing, the brute ruffianism of aristocratic patrons of the ring and the cock-pit, have yielded to more decorous ways; yet the streets of London still bear witness nightly to the corruption that is rife in all classes of society.

It is calculated that, in the metropolis alone, there are fifty thousand women who live by open immorality; that in the three kingdoms there are four hundred thousand; and that upwards of forty thousand perish annually, by disease, by destitution, or by suicide. These numbers are probably much exaggerated; but there can be no doubt that the army which Profligacy has at its command is a very large one. The miseries of this state are manifold; the average duration of life among its victims is only about five-and-twenty years; yet that unhappy army never wants recruits. Mr. Cobden, as we have seen, points to emigration as one of the causes by which a large number of young women, being deprived of their natural protectors and of all chance of obtaining husbands, are made liable to fall into this course of life; but the evil existed before the days of emigration, as it exists now. In Australia, the disproportion of the sexes lies in the other direction; the women are so few in comparison with the men, that wives, to speak in commercial language, are at a premium; yet at Melbourne, we learn, this form of evil flourishes as rankly as it does in London. As the facts of the case are so disheartening, the ladies and gentlemen who, during the last few years, have interested themselves in the reformation of fallen women, deserve all the greater praise for persisting in their humane and self-devoted efforts. We are far from saying that those efforts have been without the good fruit which was to be expected from them. On the contrary, there can be no doubt that they have done a great deal of good in individual cases, and that they deserve the support of all benevolent and thoughtful persons. But, if it be supposed that the "Midnight Missions" will go to the root of the evil, we fear that their promoters are doomed to much disappointment; and it would be a pity if, in the despondency likely to ensue on the failure of exaggerated hopes, this attempt were to be suddenly abandoned, and the positive and practical advantage were to be lost, which we have, with sincere gratification, already perceived.

The good which the movement has effected, and which it may continue to effect, if wisely ordered, is this:—Among the host of abandoned women who disgrace the imperfect civilization of our age, there are some who have fallen from purity, in the first instance, through misfortune or inadvertence, or through the weakness of natures too easily impressionable, or by the treachery of male companions; women who hate the life to which they have been reduced, and who would gladly escape from it, but who are constantly repelled and beaten back, in their conscious misery, shame, and self-abhorrence, by the cruelty of their relations, or by the stern countenance of the world towards them. To all of this class of women, the organisers of the "Midnight Meetings" offer the opening of a better path. The prayer-meetings, or the exhortations of the Hon. and Rev. Baptist Noel and others, may now and then convert to better thoughts some of those women who previously had no desire to change their way of living; but it is probable that in most of these instances the effect is but a temporary impression. In the third report of the "Home of Hope," which now lies before us, the cases alluded to are those of girls who were not originally vicious, but who had erred through misplaced affection, and were afterwards driven to systematic immorality, as a means of getting their livelihood, in despair of recovering the position which they had lost. In most of the cases of those actually reclaimed, they had been in the streets for a brief time only—sometimes but a few weeks, or even a few days. To rescue such unhappy girls from the wretchedness of a mode of life which they had scarcely commenced, and had not sought by choice, is a good and necessary work; but its success in these instances must not lead us to hope that all can be reclaimed. It would be chimerical, and even mischievous, to suppose that the sum of this vice can be greatly diminished by such agencies. The fact is disgraceful to our human nature, but it is not to be gainsaid that female degradation follows the ordinary commercial laws of supply and demand. While men continue vicious and women weak, the Haymarket will not lack its votaries and its victims. Still, that is no reason why a helping hand should not be extended to those who would fain extricate themselves from the toils which circumstances have wound around them. This is the real benefit conferred by the Midnight Meetings on the class to which they appeal. They have offered a means of escape to all who desire it. It is true that penitentiaries and refuges existed before, but not to the extent demanded, and the very fact of their existence was not sufficiently known. The promoters of the movement seek out the women in their nightly haunts, and invite them to meetings, at which they are exhorted to a better life, and offered immediate admission to one of the "Homes" or "Refuges" in connection with the society, if they are willing to accept it. There are now thirteen institutions of this kind in London, besides institutions of an older date.

The girls undergo a probationary period of moral and religious training, and are then sent to their homes, or provided with decent situations. Some of them afterwards marry, and make good wives; others go to the colonies, where a new future of honest industry is open to those who have the moral courage to avail themselves of the chance. All this is excellent; but it leaves the main evil untouched. The statement of results in the "Third Annual Report of the Midnight Meeting Movement," just issued, shows how little the most zealous and painstaking agency can effect. It appears that thirty-three meetings have been held, that 7,500 women have heard the Gospel read, that 50,000 Scripture cards, books, and tracts have been circulated, but that only 500 girls have been rescued. Of these, moreover, a certain proportion (about thirty or forty) have relapsed. This has been the result in London during a period of three years. Taking the whole kingdom, it would seem that the proportion has been about 1,000 rescued out of 10,000 addressed; so that the per centage is apparently greater in the country than in the metropolis. We are the more disposed to dwell on these figures, because we detect a tendency on the part of the organizers of the meetings to exaggerate their influence. The result sometimes contrasts with the language which heralds its announcement, in a way that would provoke a smile, if the subject were not so painful, and, we may add, so sacred. A meeting in the Bagnigge-wells-road, for instance, is thus described:—

"One of the most interesting and successful meetings connected with this 'work of faith and labour of love,' was held in the Lecture Hall, Bagnigge-wells-road, King's-cross, on the night of Tuesday, the 14th October, when the invitations presented in the streets of that locality were responded to by *upwards of one hundred and twenty of our fallen sisters*, who began to assemble about eleven o'clock. They were then plentifully supplied with refreshments. This part of the evening's engagements occupied about an hour, after which the poor girls were addressed by four gentlemen, well acquainted with the work, and the class addressed. The attention was remarkable, and tears flowed down many of their faces. Many earnest and believing prayers were presented at the throne of grace, and the whole assembly of these poor wanderers fell upon their knees, with clasped hands, crying for mercy."

Of these one hundred and twenty, who, we are told, exhibited such fervent devotion over night, only *six* applied next morning at the office of the society in Red Lion-square for admission to the various homes. The other one hundred and fourteen, or upwards (for the numbers are not exactly stated), made no further sign. At another meeting there were only six applications out of nearly 390 women attending. The society, we fear, is sometimes misled by its own enthusiasm—a very natural result, since without enthusiasm a work of this kind could not be carried on. Apparently, the greater number of women following a vicious mode of life do not care to abandon it; and these women are seldom permanently affected by appeals to their conscience or to their religious sense. It is a mistake to suppose that all the girls to whom the society addresses itself are the victims of seduction in the first instance. Many have acted with deliberation and vicious resolve. The woman who was murdered last week in George-street, St. Giles's, was an example of this. She had not even the excuse of poverty. She was a needlewoman—an industrious worker, and usually a quiet girl; but every few weeks she was seized with an uncontrollable tendency to depraved indulgence, which had become the habit of her life.

We are disposed also to object to the tone of self-complacency which appears to have been developed in most of the reclaimed

Digitized by Google

women. One of the vices of some professedly religious teaching is that it encourages in the repentant this high-flown style of protestation. Not a murderer is hung, but we are treated with his exhortations to all the world to do as he has done—since he has been in prison; and there is a peculiarly offensive way on the part of these Newgate saints of ostentatiously "forgiving" all men. The same habit of lecturing others from the pulpit of a false egotistical self-appreciation appears in some letters written by the reclaimed inmates of the "Homes of Hope," which are printed by the association.

The committee of the Home of Hope, in Regent-square, in their report make some remarks upon the frightful prevalence of infanticide, which has increased during the last few years to an alarming degree; and in the hope of diminishing cases of this kind, they "have opened a separate fund, out of which to pay for the child at nurse, while the mother is under their care at the Home, and for a short time when she is at service, or otherwise honestly and respectably employed, until her wages become due, and she is able to pay for the child herself." This design is a very humane one, and it deserves consideration. But we fear that women generally murder their illegitimate infants, not so much from inability to support them as from fear of exposure and shame, and from a desire to conceal the birth of the child. Popular feeling in England bears with terrible severity on all lapses from female virtue; and it is the dread of encountering this condemnation that drives so many women into violation of the very instincts of maternity.

EDUCATION IN ITALY.

We think there is no subject in which the true friends of Italy will feel greater interest than that of education. Free institutions without moral and industrious habits in the people, without manly spirit and self-reliance, without minds trained to respect the laws of the country and the rights of fellow-citizens, would be like an exotic plant obliged to live a forced life in a hothouse, but never take deep root, and cast their beneficent shade over the whole country, so as to foster and protect its moral progress and material prosperity. We are, therefore, as true well-wishers to the new Italian kingdom, particularly anxious to know that the regeneration of the Italian people, and especially of that portion most in need of regeneration, is likely to be promoted by that agency, which, however slow, is the only effectual means of attaining this result—viz., education.

When we speak of popular education in Italy, however, we take a field too large to treat of it under one general point of view. There are historical precedents in each of the old States, which throw some light on their present educational condition and wants.

In Piedmont, of course, the legislation has been more extensive and liberal, and the activity more intense, during the last fourteen years, than elsewhere. In Lombardy the Austrians found a system of primary instruction organized by the government of Eugène Beauharnais, and respected it, though they made the schools instrumental for enforcing upon people's minds peculiar notions of religious and political despotism. The Church Catechism, compulsory in the Lombard and Venetian schools, contained, after the precept that we must love, obey, and fear God above all things, a question, to which the child was made to answer, that, *next* to God, he must love, obey, and fear the Emperor, who was God's representative on earth. In Modena and Parma, the petty sovereigns did not think it necessary to keep such machinery in action as primary schools, even for political purposes. Among the documents of the Ducal Archives of Modena, published in 1860 by Chevalier Farini, the late Premier of the Italian Cabinet, then Dictator of the Emilian Provinces, there is a private letter addressed by the Duke himself to the Rector of the University, in which, acknowledging the receipt of the official report, he congratulated that gentleman that the number of students had sensibly diminished during the last scholastic year!

In Tuscany, from its palmy days of democratic prosperity, rich in endowed schools and institutions for the education of the poor, to which, as well as to the natural docility of her people, she owes her pre-eminence as the most cultivated province of Italy, private and individual exertion filled up the gap left by the negligent public authorities. In the ex-Papal provinces and the Neapolitan States, as in Modena and Parma, the neglect was almost complete. In the first, where all the cities, such as Ferrara, Bologna, Pesaro, Ancona, Sinigaglia, Macerata, and others, had been, till the period of the first French revolution, independent municipalities, under the protection of the Popes, institutions for the education of the people had not been wanting; but the Napoleonic principles of centralization prevailed in Italy at the restoration of the old rulers and destroyed the last spark of municipal freedom, the real soul of that local self-government under which Italy had flourished. Educational institutions were then intrusted to priests, monks, and Jesuits, and, as usual under these circumstances, almost entirely turned from their original purposes. In Naples, the laws for public instruction, like all the laws of that kingdom, were good; but they were laws on paper alone. Ferdinand II. used to repeat the saying of his intimate friend and prototype, the Emperor Nicholas, that he did not wish to trouble his subjects by thinking, as he thought for them all; on other occasions he said that paper, ink, and the printing-press were the plague of mankind, and that the world would be much happier if paper could be bought only at six ducats (one guinea) the sheet.

Such was the disposition of the Italian rulers before they were swept away in the flood of the wars and revolutions of 1859 and 1860. The new era which began to dawn upon Italy was prevented from shining forth in its full light by an all-absorbing political agitation, revolutionary attempts of the extreme parties, brigandage, and extraordinary military and naval preparations and expenses, which have thrown back this like other departments of social progress, not so much, however, but that some work is going on worthy of notice.

As gradually as the union of the various States into one kingdom took place one after the other, the most important laws of Piedmont became the laws of the whole country. This was done, doubtless, too hastily, and without due regard to local wants; but Piedmont had received a new code of public instruction in 1859, which, though not revised by the Parliament (having been promulgated at the period of the king's dictatorship during the war), was a step in advance of preceding legislation. This law, with little change in minor details, has been in the main adopted through the kingdom.

The main features of this new code are the following:—There is a *Consiglio Superiore di Pubblica Istruzione* of twenty-one members, all appointed by the king, of which the Minister of the department is president. There is a central inspectorship of eight members, four for primary and as many for secondary instruction, one provincial inspector for the first, and one *Provveditore* for the second, and as many district inspectors, for primary instruction only, as there are districts in each province. The public instruction is divided into primary, given in municipal schools; secondary, given in royal establishments called in the first stage *Ginnasi*, and in the second *Licei*; technical, divided also in lower and upper stages, called respectively *Schools* and *Istituti*; and last, the Universities, of which there are no less than twenty-two.

We cannot speak in high praise of the way in which all these branches have been made to harmonize among themselves, whilst all connected with the central government, nor of the way in which the courses of studies are arranged. There is a sad chaos of ideas as to the duties of the Government, the amount of its interference, the methods, the discipline, and the training of the youth in keeping with the requirements of the age and the institutions of the country, more especially in the secondary, classical, and technical branches, and in the universities. But we limit our remarks to the education of the people.

The duty of establishing and paying for elementary instruction devolves on the municipalities. The right to instruct the teachers belongs to the Government; the municipalities appoint them on the production of the certificates of the Normal School. When the communes are too poor to pay a master, the prefect, that is to say, the governor of the province, on the advice of the standing sub-committee of the provincial council elected by the people, pays him out of the provincial fund. The number of schools in each commune must be in proportion to the inhabitants. The school is gratuitous. Attendance is not compulsory, but exhortations are to be addressed by the Syndics to the parents who shall neglect the duty of sending their children to school. The instruction begins at the age of six, and lasts four years. The priests have no right to interfere, except that the curate is required to examine the children in religious instruction. Such are the principal characteristics of the law. The infant school and the education of adults are left entirely to the free agency and benevolence of the more enlightened citizens, who choose to assist the helpless age, and seek to improve the more ignorant members of their communities.

And here we are glad to report circumstances connected with the progress of popular education in Southern Italy, which have some interest, as showing the growing activity and benevolent readiness of the intelligent classes to instruct, as well as the readiness of the ignorant to be instructed. There are to be eighty municipal gratuitous elementary schools, to begin with, only in the city of Naples (the private schools, elementary and classical, were, in

Digitized by Google

1861, 454). Many of these are already opened, and the rest will be thrown open as soon as school-houses can be found or built in that most crowded city. In the last year, twelve evening schools for adults were instituted. "And it is most comforting and promising," says a letter we have before us, "to see how eagerly ignorant youths and men of the people have come in such numbers as to oblige nearly all the teachers to refuse attendance to very many for want of room. There are by this time about fifteen hundred young men, and men advanced in age, who would never have cared or desired to learn reading and writing, and who now strive to secure a place in the school-room. These facts, reported to the Municipal Council at their last meeting, so engaged the kind feeling of the Councillors, that they immediately passed a series of resolutions well calculated to promote the education of the people. They have granted a sum for a popular library; they have raised the value of two prizes, already voted, for the two best reading-books, one for boys and another for girls; they have resolved to open three more schools for adults, and to found immediately two normal schools for training schoolmasters and schoolmistresses."

We have, besides, under our eyes the account of a sum collected in 1861 by a committee of benevolent ladies and gentlemen for the establishment of infant schools in Naples. It seems that out of 131,838 francs collected, 112,350 were the result of voluntary contributions. All this speaks for itself. But there is the dark influence of the priests. We mean the rich priests, for the poor clergyman in his long worn, reddish black gown will always be found among the majority of teachers in the provisional normal schools, which the Government has wisely instituted in the southern provinces to meet the immediate want of sufficiently trained masters. These poor clergymen—sometimes young, sometimes grey-haired men—would go and sit modestly beside the laymen, taking notes from lectures, so as to be able to present themselves before the committee of professors and inspectors on the examination day, and get a certificate of proficiency, by which they may be useful to their villagers, and add a few hundred francs to their scanty income.

In the cities, however, where there are richly-endowed churches, conspiring bishops, and stiff-necked canons, it is not the same thing. When the first infant-school was opened in Naples with great solemnity by the Prince of Carignano, the parish priests of the ex-metropolis persuaded the women that the schools were to Protestantize their children, and the women, of course, would not send them. The obstacle was partly overcome when the Government found itself obliged to exile the Cardinal Riario Sforza from Naples, and to remove several curates; but it seems the same influence is still in the way, since the letter we have quoted concludes by saying that the Municipal Council "would vote twelve prizes for each of the twelve sections into which Naples is divided, to the *parents* who would show themselves assiduous in sending their children to school the whole year throughout." This measure may be questionable, but when we take it as a sign of a resolve on the part of the promoters of education not to be overruled by priestly influence, we are disposed to approve it.

In the provinces the movement is not less remarkable, though there are localities where brigandage has prevented any active work in this direction taking place. There is already a normal school in the chief place of each province. The provincial inspectors assemble, from time to time, the masters of each district in conference, and discuss in a friendly way important points of discipline or of the art of teaching. Central inspectors and extraordinary commissioners were sent twice last year all over the country to spur the slow municipal bodies into life and action. Monks and nuns are now and then obliged to give up their buildings to the normal, the primary, or infant school; and frequent petitions to the Parliament, or appeals to the Ministry, ask for a portion of the property of religious communities to be appropriated to the assistance of higher schools. There are also several towns of fifteen or twenty thousand inhabitants, where six gentlemen had agreed to teach, by turns, adult men each evening, and where no less than from three to four hundred men, three-fourths of whom were peasants, gave their names and attended to learn reading, writing, and cyphering. All this is still rough work. It requires method, discipline, and organization; but it is a good beginning, and time will do the rest.

The most wonderful fact, however, concerning the South Italian youth, is that brought before the Parliament by the Minister of Public Instruction under Ricasoli, last February—viz., that the sixty-three chairs of the University of Naples were attended, at that period, by 14,000 students; that is to say, a greater number than attended the whole of the rest of the Italian Universities together. We have good reason, therefore, to rejoice at the benefits, which scarcely more than two years of free government have already brought for that hitherto oppressed and neglected population.

SEWAGE IRRIGATION.

WHAT shall we do with our sewage? is a question asked with some impatience by many who feel the increasing weight of local taxation, ever since the term sewage was introduced into popular language. To most persons, the word conveys ideas of simple filthiness, while others regard it as Johnson did Thrale's brewery, as "the potentiality of becoming rich beyond the dreams of avarice." The first class would be only too glad to learn that the sewage was safely poured into the German Ocean, and Mr. Bazalgette's last bill for getting rid of it duly receipted; while others look upon its prospective loss as the sacrifice of a large portion of our future national prosperity.

Two reports, one by a Government Commission, the other by a Committee of the House of Commons, have been recently published, which will go far to settle this long-vexed question, and to convince all who will give fair attention to the evidence, that the cases must be very few where sewage need be thrown away as valueless; that in most instances a very considerable return may be expected from its judicious use; and that in none need any nuisance from it be endured.

Most persons very naturally suppose that sewage irrigation must be a very disgusting process. This is, however, a complete mistake. Unless used in excessive and wasteful quantity, liquid manure, even when very strong, loses all offensive properties immediately on sinking into the soil; so completely, indeed, that any person unaware of the fact would not discover, a few minutes after its application, that anything except water had been used. Indeed, ordinary sewage has but little odour, and that little may be entirely removed by carbolic acid—an agent so cheap, and the quantity needed so small, that its cost is not a serious impediment to its use. These well-established facts remove all difficulty as to the conveyance of sewage in open channels, wherever that mode of conveyance is expedient and economical, as it generally would be in the open country. The cost of covered conduits *out of town*, and at a distance from dwellings, may, therefore, be entirely avoided, while all need for anxiety is past so soon as the sewage is deposited upon that best of all disinfectants, a fertile soil.

On the next point, namely, the proper quantity of sewage to be used on a given surface of land, there is still wide diversity of opinion; and it is a matter of just complaint, that the Royal Commissioners have not tried decisive experiments to settle this part of the question, as they might have done at least approximately, and certainly ought to have attempted. This much, however, is distinctly proved—first, that very small quantities of manure largely diluted produce very great proportionate increase of fertility; and, secondly, that off land dressed with very large quantities, crops of grass many times as heavy as usual may be obtained. Small dressings produce the greatest returns in proportion to the quantity of sewage used, and large dressings the greatest in proportion to the area of land occupied. As it must cost much less to convey the liquid over a very small, than over a very large area of land, those who seek to get rid of a nuisance without loss will prefer a plan for giving great fertility to a small area; while those who wish to make sewage as productive as possible would willingly encourage a larger first expenditure for spreading the means of fertility over a larger surface. To us there appears little difficulty in so arranging, that the sewage of any town may, in the first instance, be applied to as small a surface as can receive it without becoming a nuisance, and at the same time providing for such a future extension of the works as will afterwards allow such breadth of land to be reached as may be found expedient and profitable; all that is needed being, that no rights to the use of sewage shall be ceded, or be allowed to be acquired, that may afterwards impede useful modifications of the plan temporarily adopted at first.

As no plan for disposing of sewage is likely to find favour with the rate-paying public, which involves a large expenditure, we rejoice to find that at a very moderate cost sewage may not only be "safely got rid of," but be made largely productive. This is proved by experiments conducted at Rugby by Mr. J. B. Lawes, the eminent agricultural chemist, and one of the Royal Commissioners. By these experiments it is seen that extraordinary quantities of sewage may be put upon land without creating any nuisance, without injuring the quality of the grass, and with the effect of increasing its quantity, even in the first season of its use, more than threefold. As the quantity of fertilizing matter contained in the liquid put on the land is double that absorbed by the grass during even the warmer months of the year, when vegetation is

Digitized by Google

most active, it is evident either that much more manure is put on than is absorbed, and, therefore, that less would produce the same effect, or that there is a large accumulation of it for future increased fertility.

The largest quantity of the liquid used was at the rate of 7,200 tons per acre per annum, though 9,000 tons was the quantity intended to be applied. Its strength was about that of the average of London sewage, or such as would be produced by a population in the proportion of twenty to about 1,000 tuns of water per annum; *i.e.*, the sewage of 154 individuals was applied to each acre of land irrigated with 7,200 tons per acre. In that proportion, the sewage of the three million inhabitants of London would supply nearly 20,000 acres of grass-land, *i.e.*, an area of rather more than thirty-one square miles, to reach which would be easy. If this had been the plan originally adopted, a large part of the cost of the main drainage might have been avoided; but that might not have suited either the engineers or contractors of those extravagantly expensive works.

Though this mode of using the sewage produces a far smaller return than may be reasonably expected from distributing it over a much larger area, and therefore using a much smaller quantity per acre, yet, as will be seen, its value even so used is very considerable. Mr. Lawes gives the exact weight of grass cut off plots of the same field, some in their usual condition, the others dressed with different quantities of sewage, showing an increase, for example, from 9¼ tons of green grass per acre off unsewaged land, to 14¾, 27, and 32¾ tons on three plots of the same field treated respectively with sewage in the proportions at the rate of about 2,400, 4,800, and 7,200 tons per acre per annum.

The increase of grass produced varied from three to five tons, and the value of the extra milk obtained from the cows fed on it varied from £5 to £6 for every 1,000 tons of sewage used. The value of the milk produced per acre rose from £10. 14s. on the unsewaged land, to £19, £27. 7s., and £32 on the three plots dressed with different quantities of sewage as above stated, being an increased value of £5 per 1,000 tons of sewage, when the largest quantity of liquid was used, and £6 per 1,000 tons when less was employed. The gross value of the extra milk was from five to six farthings for every ton of sewage used. Supposing, then, that the sewage of London were applied in the same proportions and with the same effect, it would render 20,000 acres fertile to the same degree, producing an increased gross value of milk, at £22 per acre, of £440,000. The quality of the milk was, we should add, found to be unimpaired.

Though there is of course a great difference between the gross value of the milk (even reckoned at 8d. a gallon, or half its retail price) and that of the grass which produces it, yet it is impossible to believe, as some tell us, that sewage used with such effects would not be well worth paying for. In short, its effect would be to add to every farm a productive power equal to three times as many acres of good grass land as may be thus irrigated; nay, the real benefit to a farm would be much greater than this, for good grass land would not continue good, if the grass were carried off, and no manure supplied; but land thus irrigated gets more than twice as much manure as the crop requires, and therefore all the large quantity produced by the numerous cows fed off it would be available for the rest of the farm, and thus much more land may be supplied with the means of fertility than the comparatively small area that could be so very heavily irrigated.

Strangely enough, this very satisfactory experiment has been supposed to show, that though by such a plan the sewage may be safely and easily got rid of, no profit, or only a very small profit, after paying expenses, is to be expected. This notion is the more strange, since by means of sewage, used in a very similar way near Edinburgh for fifty or sixty years, such extraordinary fertility has been steadily maintained, as to make the land, which was naturally a barren sand, worth above £20 a year per acre; and the owner of 344 acres (260 Scotch acres) claimed £150,000 as compensation, if obliged to give up using the sewage, and actually sold some of the grass land at £520 per English acre, its value being so estimated by a railway jury. At the same rate, the sewage of London applied to 20,000 acres would increase the rent of the land from say £4 to £20 an acre, or of 20,000 acres from £80,000 to £400,000 a year, enough to allow for a very handsome profit, after paying the highest probable sum for works of distribution, which at Edinburgh cost about £16 per acre, being much more than is usual.

Probably, what the objectors mean by saying that the sewage would be wasted by irrigating with such very large quantities, is that they think much better results might be obtained by distributing the fertilizing liquid in more moderate proportions over a very much larger surface. In this opinion we quite agree. We consider this to be fully proved by the evidence given to the House of Commons' Committee, especially by that of the Earl of Essex (who is chairman of the Royal Commission), and by that of Mr. Philip Pusey, Mr. Alderman Mechi, and Mr. J. Fenton, all of whom have obtained much greater returns, in proportion to the liquid applied, though less in amount per acre, by using much smaller dressings. It does not, however, follow that the plan which would yield the largest gross returns will also yield the largest net profit. That, of course, will be the balance remaining after paying interest on outlay, cost of repairs, and of management; and further experiments are needed to show what will be the most profitable proportion of sewage to use. Enough, however, has been done to prove, beyond all doubt, that a large stream of sewage may, without difficulty, be converted into a stream of wealth; all that is needed being to guard against its being monopolized for individual profit, instead of being, as it ought to be, used for the relief of the public burdens.

It is evident that the only way of preventing monopoly is by securing competition. This must be done by conveying the sewage conduits so as to give access to much more land than is intended to be used; so that the landowners who wish to apply the fertilizing stream may have to compete with each other for the privilege, and therefore be obliged to pay for it in proportion to its value. For this object it will be necessary for the local authorities of towns to be empowered to construct such sewage conduits as will be necessary to obtain access to an extensive area of land, upon paying full compensation for any property interfered with, and with proper securities to guard against any injury or annoyance being occasioned. If this just power be conferred, and if the unjust, injurious, and illegal practice of polluting rivers by discharging filth into them be effectually restrained, nothing can prevent an early development of sewage irrigation, to the great advantage of all concerned. Rivers may be restored to their native purity, the land increased enormously in fertility, the ratepayers of towns much relieved from the heavy burden of local taxation, and the supply of food, especially of milk, greatly augmented.

ART AND SCIENCE.

THE FRENCH AND FLEMISH EXHIBITION.

The French and Flemish painters seem to have fairly taken their stand upon English ground, and a very good thing it is that the artists of other countries and of different styles in art should meet in fair comparison. There are points in which our own painters may take a hint from both the French and Flemish schools, and if we could have had here some of the larger works of those painters, no doubt there would be found other and even more important examples for improvement. At the same time, it must be said for the English painters—more especially those who study in landscape—that they can still give a lesson to all the world. We have only to compare the painting of M. Achenbach, of the Flemish school, and a very accomplished painter,—of M. Auguste Bonheur, M. Troyon, or M. Frere (Theodore Charlés), with the works of corresponding English artists in landscape, cattle, and Eastern scenery—as, say, the works of Mr. F. R. Lee, R.A., Mr. Stanfield, R.A., Mr. Sidney Cooper, A.R.A.; and for Eastern landscape Mr. D. Roberts, R.A., or Mr J. F. Lewis—to acknowledge the superiority of the English painter of this style for all in all. It is in the style called, for want of a better term, *genre*, that the French and Flemish painters surpass us; we have nothing that can be compared with the works of M. Meissonier and his school, and the highly-finished style of conversation pictures of the Belgian and modern Dutch artists—a style well exemplified in the present exhibition by the pictures of M. Alfred Stevens and M. Pierre Knarren. M. Edouard Frere stands almost alone in domestic *genre*; perhaps the only painter of our school to be likened to him is Mr. Faed, and he possesses more power and a more extended view of his art, without, however, that nice perception of the rude and simple sentiments of peasant life and children which is so remarkable in M. Frere. We fancy it may be perceived that our painters have benefited by looking at the work of such artists as Meissonier, Louis Gallait, Edouard Frere, and the Bonheurs, with Madame Henriette Brown; all of whom have been constantly to be seen at the French Exhibition during the last ten years, thanks to the enterprise of Mr. Gambart. More than one instance of the influence of Meissonier, for example, might have been noticed in the exhibitions already open, and when the Academy comes to be seen, the remark will, we apprehend, be found to hold good in reference to that exhibition. What our painters have to learn may be found in the free and perfect drawing, the living movement, and the exact relations of form and colour arising between figures and objects, as seen in a group of Meissonier's. His single figure of "The Etcher" (79) cannot be taken as exactly indicative of his excellence, because it does not display his power of separating a group such as the admirable "Corps de Garde" exhibited last year; but it abounds with beauties. Perhaps nothing finer in its way

Digitized by Google

has been seen than the painting of the effect of light dispersed through the paper shade upon the objects before "The Etcher." The nicety with which this has been contrasted with the brighter light shed over the figure and throughout the rich-toned interior is something wonderful. There is nothing of that apt expression of some interchange of thought passing between the two persons, which this artist has a great faculty of suggesting by the completeness of his figures in attitude and countenance; still, this Etcher, in his indolent mood, with cigar in hand, is as full of life and as earnest as "The Flute Player" or "The Student." It would be surprising if any pupil of this master could paint as he does. M. Ruiperez cannot do this, nor is he so wanting in good taste as to imitate his teacher; he has learned the method of study, and he practises it with considerable success, as must be said of the four excellent works he exhibits this year. None, perhaps, are quite as happy in colouring as his "Gambling Soldiers" last year, but they are all remarkable for good picturesque grouping and admirable drawing; while, in the "Guitar Player" (96)—a soldier of a party of four in the seventeenth century costume, playing and singing to his comrades, with a delightfully swaggering air—the expression of the men listening and puffing their clay pipes is admirably well given. In the group listening to the reading of a manuscript, the expression of the attitude and face is so precisely true, that we become as it were one of the party, and curious to know what is the subject of their thoughts. Those who fall out with Meissonier and his school,—M. Eugene Pelletan, for example, in his "Nouvelle Babylone,"—despise all this excellence as evincing a degraded taste. It is not "high art" certainly, if by that term we mean the grand and beautiful of Raffaelle or Michael Angelo, since it aims to represent no lofty conceptions of the ideal, but it possesses a certain dignity from its beautiful truth and animated expression. It should be borne in mind, too, that while the greatest of men, after the example of Leonardo and others, first drew their compositions "in little," and afterwards on the grand scale, the method pursued and taught by Meissonier is to study the work first from the life, making a large cartoon of the subject, and then reducing it carefully to the small scale chosen for the finished picture. The method is reversed, but the purpose is the same in both. We say that these small works are not despicable as low art, because they involve the highest study that can be bestowed upon such subjects. It is true Meissonier has become a fashion, and his works have a value not to be guessed at by their size; they would not suit the collection of some millionaires, who hang pictures of the old masters on their walls, because they look comfortable and noble; but it speaks well for the taste of English connoisseurs to find that Meissonier is appreciated here as warmly as Louis Gallait and Paul Delaroche. M. Henry Leys will be remembered as the painter of those extraordinary pictures in the International Exhibition, painted in the style of the fifteenth century, and with the most surprising knowledge of costume. He has contributed a large work to this exhibition, representing in the same manner the entrance of Archduke Charles into Antwerp in 1514, swearing to observe the existing laws and privileges of his new subjects. We will not attempt to describe this picture; it should be seen as a curious instance of a perversity, only equalled by the defunct heresy of pre-Raffaellism amongst our painters. The ability displayed is not to be disputed, but it shows such a disregard of all the artifices of modern painting, that we naturally say, if this be right, then Delaroche, and Gallait, Maclise and Herbert, with a host of their followers, must be wrong.

M. James Tissot, a painter evidently of more sensibility and less antiquarian knowledge than M. Leys, has chosen to adopt a similar manner, in which he shows us how "Faust and Marguerite in the Garden" (117)—that subject so beautifully treated by Ary Scheffer, where Gretchen pulls the flower to pieces as she whispers "Love me, love me not,"—can be represented as repulsive in colour' coarse in suggestion, and altogether unworthy the theme of Goethe. Imagine Faust in a black cloak and Marguerite in an elaborate embroidered skirt, sitting on a crimson painted garden-seat against a pear-tree without leaves, stretching its ugly limbs like a strange demon upon the trellis-work! (118) "Young Luther at Church" has merit in the figure of Luther, looking at the *memento mori* lit up before the people in the church, but as a whole it is but a laboured and heavy production. M. Lugye, in his "Toy-shop of Antwerp, fifteenth century," shows that he is disposed to become an imitator of this style. By M. Edouard Frere there are four pictures, two of which are in his very best manner,—"Breakfast-time at the Farm" (34) and "The Arrival at School" (36). The former of these, which is larger than he generally paints, represents a very humble family of a poor French farmer taking their meal of porridge,—the old grandmother, the father feeding one little child, and the eldest girl another, the scraggy elder boy and the wife filling up the group, which is beautifully lit up by warm light from a primitive window. We have compared the fine qualities in this work with Mr. Faed's painting; it is equally rich and luminous, and the figures are touched with the same feeling for rustic life and character. The picture of "The Schoolboys" is in his humorous vein; a great hulking fellow in corduroy, either by fair words of schoolboy diplomacy or by threats, has made an unsuspecting little chap show how many apples he has got in his basket, with a purpose unmistakeable in his greedy face.

M. Alfred Stevens' picture is (110) "A Conversation at the Window." Three ladies, two of whom, in dark dresses, are sitting within the room at a low glass door, and one, in a light muslin, is outside in the sunlight, working at embroidery, and deep in some story she tells to the other two, who seem to be not so much entertained, as they are inclined to laugh in their sleeves at their talkative companion. All this is told with such a charm of colour, in every *nuance* and quiet repose of tint, as is very delicious to the eye.

M. Knarren's picture of "The Fortune-teller" (59) is chiefly noticeable as an example of the highest finish; the pink silk brocaded dress is really a marvel of technical skill, and the faces are by no means insignificant.

M. Gerome's "Camels at the Fountain" (42) would not indicate in any way, unless it were by the good drawing of the camels, that it was the work of the same hand that painted "The Gladiators" and the "Diogenes;" it is terribly opaque in colour.

The landscapes, as we have already hinted, are almost too poor to call for any remark; there is not one that we have the patience to speak of. They are altogether mistaken in their view of nature; they have none of the airy grace in the trees and other vegetative forms, no atmosphere, and no sun in the sky. The feebleness of colouring is attempted to be overcome by forcing the lights and shadows. There is a general want of reflected warm light, and a lack of that natural sobriety and chasteness which our painters obtain, and which are, in fact, proper to natural land scape.

MUSIC.

Her Majesty's Theatre opened on Saturday last with Verdi's "Il Trovatore," so that the opera season is now in full career at both houses, and the productions promised by the two establishments offer abundant attractions to the lovers of the various schools of music, Italian, French, and German. The principal singers at the Haymarket opera on Saturday were Mdlle. Titiens (Leonora), Madame Alboni (Azucena), Signor Giuglini (Manrico), and Mr. Santley (Conte di Luna). This, it will be seen, was a strong cast, and one that could not fail to give effect to Verdi's music, which is peculiarly dependent on vigorous and animated execution. It is essentially music of theatrical effect—incessant in its demands on the physical powers of voice and gesture; remorseless in its treatment of that delicate organ, the human voice; and presenting a constant succession of spasmodic emotions. Such music, therefore, requires, especially for its stage execution, singers of more than average vigour; and its performance on the occasion referred to left little or nothing to be desired, either vocally or dramatically. Mdlle. Titiens' Leonora is well known as the finest impersonation of that musical-melodramatic heroine since Madame Grisi's best days. For energy of vocal declamation and earnest action it would be difficult now to find a rival to the German songstress in such parts. Her brilliant and facile execution of music (such, for instance, as the air "Di tale amor"), which treats the voice as though it were an instrument of brass or wood, was such as almost to justify the composer in his arbitrary disregard of the amenities of the vocal art. Throughout the opera Mdlle. Titiens' performance was a magnificent display of vocal and dramatic power. Madame Alboni, who appeared after an interval of two years, sang with that *suave* expression and pure Italian style which has always distinguished her vocalization. Among her most successful efforts was, of course, the well known air, "Stride la vampa." Not less admirable, however, was her declamation in the scene where she recites the wrongs that Azucena has sustained at the hands of the Conte di Luna. If one were disposed to be hypercritical, it might be objected that Madame Alboni's Azucena is somewhat too genial in demeanour for the crafty and vengeful gipsy.

Never has Signor Giuglini appeared to greater advantage than on this occasion—he was in excellent voice, and his acting was characterized by a passionate earnestness that is not often seen in tenors of the Italian school. His delivery of the pathetic "Ah! si ben mio," was as expressive and plaintive as his singing of the air "Di quella pira" was earnest and passionate. Mr. Santley, as the Conte di Luna, was fully worthy of his coadjutors; and the pure style of his vocalization, in the best Italian method, was such as few English artists have attained. His singing of the popular "Il balen" was a finished piece of expressive *cantabile*. Mr. Santley, who has also greatly improved as an actor, has now taken an acknowledged high position as a dramatic singer. There is evidence of improvement both in the band and chorus, although the latter is scarcely as numerous as might be expected in an establishment of such importance as Her Majesty's Theatre. Signor Arditi, who retains his position as conductor, wields his *bâton* with firm decision, and has his forces thoroughly under command. It would be difficult to imagine a better performance of "Il Trovatore" than that of HerMajesty's Theatre. A new serenata, in honour of the Royal wedding, was produced on the opening night. Of its title (if it had any), or of its poetical merits, it is impossible to speak, as no programme or description whatever was obtainable (at least by ourselves) in the theatre. As to the music—the manner of its reception by the audience, and its withdrawal after only one night's performance, render any criticism superfluous.

At the Royal Italian Opera, on Saturday last, one of the *débutantes* promised by Mr. Gye made her first appearance as Elvira in "I Puritani." Mdlle. Fioretti possesses a genuine soprano voice, of sympathetic quality, clear articulation, and sufficient compass. Her vocalization, although unpretending, is neat and certain; and, while there is a charm and geniality about the lighter portions of her Elvira there is a gentle pathos in the more serious situations, the combination of which renders her an excel-

Digitized by Google

lent representative of any character of mixed expression. Her "Polacca" air, "Son vergin vezzosa," was given with playful ease and lightness, while "Qui la voce" was full of refined tenderness. In "Vien diletto," she displayed considerable volubility in the bravura passages of this air. In short, although perhaps scarcely adequate to the higher impersonations of lyric tragedy—to which, indeed, she does not appear to pretend—Mdlle. Fioretti has every qualification for such parts as that in which she made her *début*, and in which her success was complete. The other principal characters were filled by Signor Neri-Baraldi, Signor Ronconi (his first appearance after an interval of two seasons), and M. Faure; the latter of whom is becoming recognized as one of the most finished of dramatic vocalists, equally efficient in music of the French or Italian school. On Thursday Mdlle. Fricci re-appeared here, when she essayed, for the first time, the part of Norma with complete success. On the same evening, after the opera, there was a concert in which Mdlle. Carlotta Patti (sister to the renowned Adelina Patti) made her first appearance in Europe, with a result which promises to add another to the list of Mr. Gye's successful engagements.

The Crystal Palace Saturday Concerts have long since established a high reputation both as to selection and performance. The orchestra, some forty or more in number, has been so completely organized under its skilful conductor, Mr. Manns, as to present that intimate combination and sympathetic union and fusion of sound which are too often wanting in orchestras even of great pretensions. Mr. Manns deserves high praise, too, for the special character which he frequently gives to his programmes by the production of some unknown or little known work of interest. Thus, within the last few weeks, the Crystal Palace Concerts have comprised a selection from Cherubini's classical "Medea," and Beethoven's music to "Egmont"—productions which, although ranking among the highest efforts of art, have hitherto remained in comparative oblivion. The concert of Saturday last included Beethoven's Pastoral Symphony, extremely well given, with an attention to light and shade and a general delicacy of expression highly creditable both to instrumentalists and conductor. The chief feature of the concert, however, was the first appearance of Herr Dannreuther, a young pianist from the Conservatorium of Leipzig. This institution has for some years ranked among the highest schools of musical education in Germany. Mendelssohn's residence at Leipzig gave an impulse to that already musical city which still continues to be felt; and the presence there of such artists as Herr David and Mr. Moscheles has helped to render the Leipzig conservatorium second scarcely to any for sound musical education. As regards pianoforte playing, we question whether any other school in Europe could send forth a more finished performer than Herr Dannreuther proved himself on Saturday by his rendering of Chopin's Concerto in F minor. The work was scarcely well chosen for execution before a large and miscellaneous audience. Those delicate and minute details, the fancifully elaborated passages and graceful embroideries and ornaments in which Chopin's music abounds, have a charming and even natural effect when heard in his smaller works such as his Studies, Notturnos, and Mazurkas; but a concerto with full orchestral accompaniments, intended for public performance, requires clearness of design and breadth of treatment, such indeed as we find in all the best concertos, as those of Mozart, Beethoven, Hummel, Weber, and Mendelssohn. The two concertos of Chopin, full as they both are of a certain melancholy grace and passages of delicate fancy, have a want of clear purpose in construction which casts an effect of feebleness over their many minute beauties when these are heard through a succession of three long movements. Few pieces, however, offer a greater test for executive power than Chopin's concerto in F minor; requiring as it does, not only extreme grace and delicacy of expression, but also occasional vigour of touch. Mr Dannreuther's execution was of the best order—he possesses a thorough elastic independence of finger, and a supple and pliant wrist, enabling him to command the lightest and fullest tones of the instrument. His success was so complete, that we have little doubt he will soon be heard again. Miss Robertine Henderson and Signor Emerico were the vocalists. A grand festival performance is announced for May-day, when Mendelssohn's "Athalie" music and Auber's and Meyerbeer's "Exhibition" overtures are to be given in the Handel orchestra, with 2,500 performers.

The Popular Concerts were resumed, after the Easter vacation, on Monday last, when the evening was appropriated to the benefit of Mr. Charles Hallé, whose admirable performances have so largely contributed to the success of these entertainments. The occasion was, moreover, signalized by the reappearance of Monsieur Vieuxtemps, the violinist, who is perhaps the most popular with a London audience after Herr Joachim. The programme, which was worthy of the artists, comprised instrumental pieces by Bach, Haydn, and Beethoven. The singers were Miss Banks and Miss Eyles.

The New Philharmonic Concerts commenced for the season, at St. James's Hall, on Wednesday evening, with an excellent performance of the following programme:—

PART I.

Overture—(Iphigénie in Aulide)	Gluck.
Song—"Love in her eyes"	Handel.
Concerto in A, Clarinet	Mozart.
Duetto—(Guglielmo Tell)	Rossini.
Symphony—(Eroica)	Beethoven.

PART II.

Concerto in C, Pianoforte	Weber.
Aria—"Diamans de la Couronne"	Auber.
Recitative and Song—"Love sounds the alarm"	Handel.
Overture—(Faust)	Spohr.

The orchestra which Dr. Wylde conducts at these concerts, consisting largely of members of the Royal Italian Opera band, is, of course, from that cause, of first-rate excellence; and the instrumental pieces are consequently given with a spirit, force, and precision, that leave little room even for hypercriticism. Apart from the individual excellence of the pieces in Wednesday's programme, the selection possessed the merit of variety and contrast; the greatest instance of which, perhaps, was offered by the very opposite styles of the calm, serious simplicity of Gluck's operatic prelude, and the impetuous and richly harmonized overture of Spohr. The Eroica Symphony would have borne a little more impulsiveness in the first and last movements, which might have been given with a slight increase of *tempo* without sacrificing that breadth and dignity which are the predominant characteristics of the work.

The two concertos were highly interesting both as compositions and performances. That for the clarinet, one of Mozart's later works, is imbued with that tender and graceful expression and refined beauty which scarcely any other composer has equalled. Its performance by Mr. Lazarus was a masterly combination of executive skill and cultivated style. Weber's pianoforte concerto, although not equal to his two later works of the kind, is interesting as an early specimen of the master. It is full of that wayward impulsiveness, that alternate sombre melancholy and flashing brilliancy which are characteristic of the composer of "Der Freyschütz." Its great mechanical difficulties, especially in the last movement, were overcome with that calm tranquillity which can only result from the consciousness of such unbounded manipulative power as Madame Arabella Goddard possesses.

Each of the concertos was received with that warmth of applause which was due in both instances. Madame Lemmens-Sherrington gave Auber's sparkling air (with variations) with great brilliancy, and Mr. Sims Reeves was as successful as usual in Handel's songs; while both artists were worthily associated in the duet from Rossini's "Guillaume Tell." The concert altogether was a worthy commencement of the "New Philharmonic" season.

CONTEMPORARY SCIENCE.

THE meeting of the Ethnological Society on Tuesday last, was the most numerous in attendance and the most important of any that has taken place this session. The paper was an attack by the president, J. Crawfurd, Esq., on the doctrines of the unity of the human race, the Aryan theory of language, and the transmutation of man from the apes, as advocated in Sir Charles Lyell's new work "On the Antiquity of Man." Mr. Crawfurd concurred with geologists as to the great antiquity of the human race, and suggested that the scarcity of human remains, compared with those of the extinct animals with which the flint implements are associated, might be accounted for by the fact that in the savage state men are ever few in number compared with wild animals, and that when they first appeared on earth, the disparity must have been greater even than it now is in the most uncivilized tracts. Sir Charles Lyell adopts the theory of the unity of the human race, as according best with the hypothesis of the transmutation of species, but neither he nor any one else has ventured to point out the primordial stock from which the many varieties which exist have proceeded. We see races of men diverse physically and mentally, as Europeans, negros of Africa, of New Guinea, and of the Andaman Islands, Arabs, Hindoos, Chinese, Red Americans, and Polynesians; and so far as our experience goes, these races continue unchanged as long as there is no intermixture. But recent geological discoveries, and Sir Charles himself was quoted for the authority, give this additional evidence of the most instructive kind, that "the human skeletons of the Belgian caverns, of times coeval with the mammoth and other extinct mammalia, do not betray any signs of a marked departure in their structure, whether of skull or limb, from the modern standard of certain living races of the human family." In the same manner the human skeletons found in the pile buildings of the Swiss lakes, and computed by some to be 12,000 years old, differ in no respect from those of the present inhabitants of Switzerland.

If the existing races of man proceeded from a single stock, Mr. Crawford contends, either the great change which has taken place must have been effected in the locality of each race, or it occurred after migration. Now, distant migration he conceives impossible in the earliest period of man's existence. It is only within the last three centuries and a half that the existence of one half the inhabitants of the world became known to the other half. The civilized Greeks and Romans did not suspect the existence of the New World. Their knowledge of India was imperfect, and of all the great countries east of it their acquaintance amounted to nothing more than vague rumours and gossip. Of the great islands of the Indian Ocean and the Pacific they were wholly ignorant, and even of Africa, so near them, they knew nothing south of the Atlas and Great Desert. Mr. Crawfurd concludes, then, that there is no evidence of any race of man having undergone any appreciable change of form. If none in a thousand years or a hundred thousand years, supposing the latter to be the age of the skeletons of the Belgian race contemporary with the mammoth, it

Digitized by Google

is reasonable to believe that multiplying any of these sums by a million of years would yield nothing but the same cipher. The object of the Aryan theory is to prove that the many languages called Aryan or Indo-European sprang all from a single source. The doctrine as adopted by Sir Charles is extended to all the other languages of the earth, with the hope of reducing them from thousands to a very small number. But the examples of foreign languages infused into native ones are as mysterious and unaccountable as the Oriental words found in the languages of Europe and Western Asia. But were the Aryan hypothesis as true as Mr. Crawfurd believes it to be false, it is hard to see how it illustrates, or, indeed, can have any bearing on the theory of transmutation of species by natural selection, the progress of which is so slow that, as Mr. Crawfurd wittily remarked, no satisfactory evidence of it has been produced. All the languages of the world have been reckoned by some at 4,000, by others at 6,000 ; but it is certain the real number is unknown. There can be no doubt, however, but that there are many, and that, making ample allowance for mere dialects or branches, many real languages will still remain. Some of these are derivative and some primordial : the first prevailing chiefly in Central and Western Asia and in Europe, where an advanced society has given rise to those conquests and intermixtures which produce revolutions in language ; and the last prevail in Africa, America, Eastern Asia, and its islands, where those causes of change have either been of feeble operation or have produced no effect.

In the dentition of man and the apes there is certainly a singular accord. In the Old World apes, the number, form, and arrangement of the teeth are the same as in man. The American monkeys, however, have four additional teeth, or thirty-six instead of thirty-two. The digestive organs also agree ; yet with this similarity, man is an omnivorous, the monkey a frugivorous animal. While the similitudes of the monkey to man were pointedly dwelt upon, it was well, Mr. Crawfurd thought, to state, on the other side, the dissimilarities. The monkeys are chiefly found within the tropics, and even there there exist extensive regions where they are not met with at all. Again, in power of adaptation to the vicissitudes of climate, the monkey is not only below man, but below the dog, hog, ox, and horse ; for all these thrive from the Equator up to the 60th degree of latitude. The natural abode of man is the level earth, that of the monkeys the forest. If there were no forests there would be no monkeys ; their whole frame is calculated for that mode of life. The monkeys, then, Mr. Crawfurd considers, have an outward and even structural resemblance to man beyond other animals, but this is all ; and why Nature has bestowed upon them this similarity is a mystery beyond understanding.

Among the speakers in the animated discussion which followed were Sir Charles Lyell himself, Sir Roderick Murchison, and Professor Busk. In the course of the evening it was stated that M. Boucher de Perthes had within the past few days discovered, in the flint-implement-bearing beds of Abbeville, a human jaw, indicating a race of small stature, as the coeval inhabitants of Europe with the mammoth and extinct great beasts—news, however, which requires confirmation.

This discovery has been narrated by M. Boucher de Perthes in the French local newspaper, *l'Abbevillois*, the statement in that paper being that in a deposit known as the "Moulin-Quignon-lez-Abbeville," was a flint implement, accompanied by a human jaw, both of the same colour, and, as he believes, undoubtedly fossil. The objects were deposited about 13 feet below the surface, and close to the chalk rock which underlies the tertiary deposits at Abbeville.

Both Archæological Societies met during the the past week. At the Archæological Institute Dr. Henry Johnson, M.D., Secretary to the Excavations Committee, communicated a few notes on the recent progress of the investigations at Wroxeter. During the latter part of the past year the old diggings have not been touched, but have been kept open, and are still visited by numerous persons. In October the ground where the old north gate is alleged to have stood was opened for the purpose of ascertaining whether any remains could be found. The foundations of a town wall were traced running towards Norton, but nothing like a gateway was found. A few days were also spent in excavating in the cemetery, when sufficient evidence was afforded that the ancient burial-ground had extended along thus far from the gate.

The Rev. F. W. Baker, M.A., gave some account of recent excavations at Beaulieu Abbey, particularly referring to the tomb of Isabella, wife of Richard, "King of the Romans." Mr. William Molyneux at considerable length detailed the result of the excavations made at Beaudesert, Staffordshire. Mr. Molyneux sent plans of the explorations, and contributed for the inspection of the meeting everything he had found.

Amongst objects exhibited was a stone vessel of Flemish manufacture, found at Beaulieu, by the Duke of Buccleuch ; a plombus or glandus brought by the Count Stuart d'Albanie, a pax and other objects by Mr. Farrer, jun. ; a curious leaden spoon, similar in material to the articles found so abundantly of late years in the Thames. The spoon bore the effigy of Queen Anne, and had the letters A.R.

At the British Archæological Association, Mr. Norman exhibited a fine bronze leopard's head, of Greek workmanship, and a leaden seal, supposed to be that of a magician of the fifteenth or sixteenth century. It is a curious object, and the mystic or cabalistic legends are conveyed in a singular combination of letters, Greek, Arabic, &c. There are also figures of the Pentacle, Double Triangle, &c.

Mr. Vere Irving produced photographs of fragments of stone conjectured to have belonged to an ancient priory at Lesmahago, Lanarkshire, and stated that it was intended to make excavations and trace out the plan of the building which Mr. Edward Roberts, from an examination of the photographs, assigned to 1100-1120.

Mr. Cæsar Long made a communication relating to the discovery of two leaden coffins on the site of the Priory of St. John the Baptist, at Holywell, Shoreditch. Evidence was adduced to show that they contained the remains of Sir Thomas and Lady Lovel, and belonged to the reign of Henry VIII. Sir Thomas died in 1524. Mr. Syer Cuming read a paper on a fragment of an Easter sepulchre, in the Yeovil Museum, obtained from Glastonbury.

The remainder of the evening was occupied in the reading of the Rev. Mr. Hartshorne's revised paper on "Queen Eleanor's Cross at Northampton."

The first paper read at the Geographical Society on Monday was an interesting one on "Frobisher Strait, proved to be a Bay, and on the fate of five men of the Arctic expedition in the reign of Elizabeth," by Mr. C. F. Hall, of Ohio, communicated by Mr. Henry Grinnell, New York, who, with disinterested liberality and a true spirit of philanthropy, has fitted out expeditions in search of the lamented Sir John Franklin. The president said this gentleman had expended between twenty and thirty thousand pounds upon this object, and it was mainly through the instrumentality of Mr. Grinnell that Mr. Hall, of Ohio, had been assisted in his adventurous enterprise to search for traces of Franklin. The boat in which he endeavoured to reach the region in question was lost, and he was accordingly obliged to confine his explorations to the district in which he was embayed during two winters. He availed himself of the opportunity to learn the Esquimaux language, and he obtained, from traditions which had long been preserved among the natives, information respecting the Frobisher expedition in the reign of Queen Elizabeth. He has brought home relics of this expedition, which he found in Warwick Island, and he has made out that what has been long called Frobisher Strait is in reality a deep bay or inlet extending in a W.N.W. direction about 200 miles from the entrance. The paper was prefaced by a short outline of the Frobisher expedition, undertaken in the reign of Queen Elizabeth, to discover a north-west passage to the East Indies. Mr. Hall sailed from New London, in May, 1860, on board the *George Henry*, Captain Buddington, attended by an intelligent Esquimaux, supplied with a boat and necessary equipment, intending to proceed towards Boothia and King William's Island, in the hope of finding some of the survivors of the Franklin Expedition, or of ascertaining something more of their fate, being impressed with the conviction that, "if any of the survivors existed, it was impossible for them to get away unaided by civilized men."

The expedition proceeded first to Holsteinborg, in Greenland, where they were most cordially received by the Governor and his family. They then crossed Davis Strait to Frobisher Inlet, where, finding the season too far advanced to proceed northward, they wintered in 1860 and 1861, and did not escape until the summer of 1862. On an island named by Frobisher the Countess of Warwick Island, and by the natives Kod-lu-narn, or White Man's Island, are still to be seen the remains of a trench, dug out to receive a vessel, with embankments on either side. In the middle of the island are the remains of a house built of stone and mortar, near to which are the ruins of a blacksmith's shop, and a reservoir of water. Strewed over the island are various fragments of tile, glass, iron, coal, and wood. At a place called Ek-ke-lu-zhun, which is about eight miles S.E. of Kod-lu-narn, is a pile of coals containing ten tons. These relics Mr. Hall considers are the remains of the Frobisher expedition, specimens of which he very carefully collected and brought away ; and these were exhibited on this occasion.

The other paper was by Dr. John Rae, entitled "A Visit to Red River and the Saskatchewan."

The *Otago Daily Times* of the 16th February last reports the asserted discovery by some men in the employ of Mr. Rees, of Wakatipu, of the gigantic New Zealand bird, the Moa, supposed hitherto to have become extinct on that island. The men state the bird seen by them to have been about seven feet high, reckoning the head and neck, and a size not incompatible with the bones of the gigantic birds first made known to European naturalists by the late Dr. Mantell. The account, however, which has been generally copied in the daily papers, seems rather suspicious, and must be received with caution.

Dr. Klinderfuss, of Gottingen, notifies a new comet near the constellation Delphinus.

THE PAST WEEK.

HOME.

PARLIAMENT.

PARLIAMENT re-assembled on Monday after the Easter holidays. No business of importance was transacted on that day.

On Tuesday, in the House of Lords, on the motion that the Augmentation of Benefices Bill be referred to a select committee, Lord St. Leonards said that as the bill would affect the privileges of the Crown, the assent of the Crown was necessary to its provisions. Earl Derby expressed his fear that some of its regula-

Digitized by Google

tions would clash with those of the Ecclesiastical Commissioners, and thought that it would have been better had the Lord Chancellor thrown the advowsons of the larger livings into the market, and augmented the smaller ones with the proceeds of their sale. The Lord Chancellor said that he had not the least intention to interfere with the action of the Ecclesiastical Commissioners, and that he had taken every means to ascertain whether the provisions of the bill agreed with their rules. He concurred with Lord Derby in the opinion that, if the principles of the bill were good, it ought to be carried further, and hoped, at some future time, to include a larger number of livings within its provisions. There would be no difficulty, he thought, in finding purchasers for the advowsons of livings when once they were augmented. The select committee was then appointed.

In the Commons, Mr. Layard professed himself unable to reply to three questions put by Lord H. Lennox respecting the throne of Greece. The questions were—whether it was by the recommendation of the English Government that the National Assembly of Greece had proceeded to the election of Prince William of Denmark? Whether it was with the assent of the King and Government of Denmark, and with the concurrence of Prince Christian, that such a decisive step was taken? Whether it was in concert with M. Bille, the Danish Minister in London; and, if not, by whose authority the Greeks were advised in the matter? Mr. Layard, on the intimation that Lord H. Lennox would renew his questions on the following day, replied that he would then be equally unable to give an answer. In the present state of the negotiations, he said, it would not be for the benefit of the public service to make a statement on the subject.

The Speaker now called on Mr. Buxton to proceed with his motion for leave to bring in a bill to amend the Acts of Uniformity. Mr. Buxton and Mr. Walpole rose together, when, after a short delay, during which there were loud and general cries of "Walpole," Mr. Buxton sat down. Mr. Walpole then proceeded, in feeling terms, to move that, out of respect to the memory of the late Secretary of War, the House should not proceed with business that day. "At present," he said, "I can only say what everybody in this House must feel, that we never had among us a man more thoughtful, more considerate, more conciliatory, or more beloved than the late Sir George Lewis." Lord Palmerston, who was much moved, contented himself with simply seconding the motion. "It would be impossible," he said, "for any man to add to the well-deserved tribute which the right hon. gentleman has paid to the memory of the colleague whom we have lost." Mr. Disraeli, in a few words, paid an eloquent tribute to the memory of Sir George Lewis, whose death, he said, was a calamity to the country; and in whom the Queen had lost one of her ablest servants, and the House a member who possessed the universal regard and respect of hon. gentlemen on both sides. "Sir," he said, "I never knew a man who combined in so eminent a degree as Sir George Lewis, both from acquired and from native power of thought, the faculty, upon all public matters, of arriving at a sound and judicious conclusion. Although he was remarkably free from prejudice and passion, yet the absence of those sentiments, which are supposed in general to be necessary to the possession of active power, had not upon him the effect which it usually produces, and he was a man who always brought a great organizing faculty and a great power of sustained perseverance to the transaction of public affairs. I am sure," he continued, "that the rising statesmen on both sides may take him as an example that in many particulars may be remembered and followed with advantage; and I am persuaded that his name will never be mentioned in this House without feelings of deep respect, or without unfeigned regret for what may be deemed the untimely loss of a man whom the country could ill spare."

On Wednesday, in the Commons, the second reading of Sir M. Peto's Burials Bill was lost by a majority of 221 to 96. The object of the bill was to permit Dissenters to have their own burial service performed in churchyards of the Established Church. Mr. H. B. Sheridan obtained leave to bring in a bill to facilitate the appointment of stipendiary magistrates in cities, towns, and boroughs of 2,000 inhabitants and upwards.

MISCELLANEOUS.

We have now the details of the loss of H.M.S. *Orpheus*, in the official narrative of Lieutenant Hill, the senior surviving officer; and they leave us no room to doubt that the catastrophe was one against which seamanship was powerless. The *Orpheus* left Sydney on the 31st of January last for New Zealand, and arrived within eight miles of the bar of the Manukau, New Zealand, on the morning of Saturday, the 7th of February. This bar forms the entrance, by a narrow channel, to the Manukau harbour; but the passage is always dangerous, owing to the shifting character of the sands at the river's mouth, and the tremendous sea which, when the wind blows from the west or south-west, is driven upon the shore. Every necessary precaution was observed when the *Orpheus* neared the bar at mid-day, steering exactly according to the courses laid down in the sailing directions provided for her use, while the signal, "Take the bar," was flying from the pilot station on the shore. "The hands were on deck," writes Mr. Hill, "the ropes manned for shortening sail, the commodore, the commander, and master on the bridge, leadmen in both chains, spare tiller shipped, with relieving tackle hooked, and six men stationed; gratings and hatchway covers were placed ready for battening down." All was going well when at 1.30 the corvette touched ground slightly, when the order was given to put on all steam. At 1.40 she struck forward, and when the attempt was made to reverse the engines, neither engines nor screw would act. The ship broached to, with her head to the north, lurching heavily to port, and the sea made a clean sweep over her deck, taking away port-quarter, boats, netting, and bulwark. Sail was shortened as far as possible, the men being unable to keep the deck; and the moment the ship took the shoal the hatchways were battened down, but in vain, for the fastenings were thrown up by the bumping of the ship. Four port guns were now thrown overboard; the starboard cutter was manned and lowered, and the private signals, public records, and ship's books as far as possible committed to her charge. Two or three times after she got clear of the ship she was reported to be swamped; and Mr. Hill was ordered to take the pinnace, and go to her assistance; but as she was subsequently reported to be safe, Mr. Hill was ordered to go on shore in the pinnace for the purpose of getting assistance. When he got clear, he observed the smoke of a steamer, the *Wonga Wonga*, to the southward, going seaward. It was not, however, till six, p.m., that she could be brought to the wreck, which they now found lying very much over to port, the masts all standing, the crew in the rigging above the tops, the sea at times sweeping as high as the futtock rigging. They hailed the men to jump off the rigging and swim for it. Some did so, and several of them were picked up and saved. But about seven o'clock the flood-tide had made, and the rollers became so high and dangerous that it was impossible for the boats any longer to remain by the wreck. Mr. Hill shouted to those who were still in the rigging to make a final effort, but none would venture. At 8.30 the masts went, and the poor fellows on them gave three cheers, as if taking a farewell of life. Of a crew of 256 officers, seamen, and marines, only 71 were saved. The highest praise is due to the discipline of the men and the courage of the commander. He declared he would be the last to leave the ship, and when last seen was in the mizen rigging. He is supposed to have been killed by a spar. It is melancholy to note the statement that there was a life-boat on shore, by which most of the crew might have been saved if it could have been launched. But there was no means at hand to do this. At daylight on the following morning nothing could be seen of the ill-fated *Orpheus* but a stump of one mast and a few ribs. She was one of the finest corvettes of her Majesty's navy. The perils of the Manukau passage are well known, and a correspondent of the *Times* relates his own experience of the precautions taken on preparing to enter it by the captain of a merchant steamer in which he was a passenger. The captain "sent all the ladies below, had the ports and deadlights shut down, and required all the other passengers to take refuge on the bridge of the steamer. The third mate and an able-bodied seaman were lashed to the wheel, while two men were placed in the mizen-shrouds, ready to take the helm if the others were washed away." It appears that since the publication of the chart and sailing directions which the *Orpheus* took for her guidance, the middle banks and small shoal on which the ship first touched have shifted bodily, and considerably to the north.

Dr. Colenso has written to the *Times*, protesting against the assumption of the Bishops, who have prohibited him from preaching in their dioceses, that he is unable to use the prayers of the Liturgy or to discharge the duties of his episcopal office. He says, further, that the general assertions or insinuations of heresy which they make against him are contrary to the principles of the Ecclesiastical Courts; and that, even in the case of an incumbent, a Bishop is bound to specify the particulars of his offence, before he can take any measures against him. He condemns the course the Bishops are taking against himself, as one not seen nor tolerated in this Church and country since the days of Bonner and Laud. No definite charge, he says, has been made against him, though proceedings are threatened. "Yet," he adds, "the Bishops venture, in public and official documents, to accuse me of scandalous, dishonest, and heretical conduct, and the Archbishop of Canterbury has already pronounced judgment upon me, without a trial, though he would himself be the judge before whom my case would have to be heard should I have to appeal from a decision of the inferior court." Right or wrong in his theology—a question, he says, to be settled by time and investigation—he stands upon his rights as an Englishman, and protests against a course of conduct "which is as illegal as it is contrary to the first principles of the Reformation."

The seizure of the *Peterhoff* by Admiral Wilkes, and the doctrine laid down by our own Foreign Office that a belligerent may seize and carry off to its prize courts any neutral vessel sailing between neutral ports provided it "alleges" a legal pretext, has alarmed the owners of a vessel "on the berth" for Matamoras. Failing to obtain an assurance from the authorities that their vessel, being bound on a legal voyage, should not be detained on any frivolous pretence, as the *Peterhoff* was, they refuse to let her sail. The charterers and merchants whose goods are on board insist upon her sailing, and threaten the owners with law proceedings and a heavy claim for damages if they do not fulfil their contract. The owners reply that they engaged to send their vessel to Matamoras, believing it to be a neutral port and a legal voyage; that, if it is so, the law is bound to protect them in the prosecution thereof; but that, as the law officers state that the law is powerless to do so, the voyage cannot be legal, nor the contract of the owners with the merchants and charterers binding. The argument is convincing; and if the doctrine of the Foreign Office is sound, then no voyage is legal; for wherever an American admiral or commodore finds a

Digitized by Google

British ship, he may seize it on the condition that he "alleges" a legal pretext. Surely this cannot be good law.

The County Courts are not important enough to have their proceedings reported in the daily papers, like those of the superior Courts, and strange things are, no doubt on this account, sometimes done in them. A victim writes to the *Times* to give a specimen of these doings, of which he was lately both witness and subject, in one of the county courts south of the Thames. The judge decided against him, but refused the plaintiff costs. The plaintiff's attorney, who had probably undertaken the case on speculation, displeased at this decision, stepped forward and said confidentially to the registrar, "You must contrive to get me half a guinea." The registrar nodded and smiled, and then turning to the judge said, persuasively, "Oh, your honour, you might allow him something; let him have his railway expenses." Judge—"Very well, give him 6d." Registrar—"Say a shilling, your honour." Judge—"Then a shilling." Registrar—"But he could not travel second class; so let him have two" (the first class returns being 9d). Judge—"Well, take two." Registrar—"Then, your honour, there are his cabs." How far the encroaching registrar would have proceeded with fresh suggestions for more shillings until the desiderated half guinea was reached, it is impossible to say. But just then "the angry spot did lower on Cæsar's brow." "Fortunately for me," writes the victim, "the face of the judge, who was rather irritable, assumed such a red and portentous appearance, that the registrar prudently brought his pleadings, and the giggles in court, to a conclusion." But when, subsequently, the defendant asked what he had to pay, he was handed an account in which, besides the costs of the court, seven shillings was put down for plaintiff's expenses. This was returned for explanation, and the amount was at once reduced to the two shillings allowed by the judge, with the explanation that it was "a mistake." A most suspicious one. We fear that acts of this disgraceful character are not infrequent in the County Courts; and that judges do not turn red in the face as often as they should.

One of the most useful questions of the week has been by what means proper dwellings for working men may best be obtained. A writer, who, in his letter to the leading journal, signs himself "W. D. B.," maintains that the undertaking must not be made in a commercial sense, that is, with a view to recovering a considerable percentage on the money expended. Alderman Waterlow combats this position, and thinks that nothing adequate can be done except upon this principle. He quotes the dictum of the late Prince Consort, who said, "Unless we can get seven or eight per cent. we shall not succeed in inducing builders to invest their capital in such houses." A third writer, "B.," follows on the same side. He points out that through the efforts of private individuals and associations, extending over a period of nearly a quarter of a century, dwellings have been provided for 5,000 persons. But the working classes number at least 1,500,000; and if the whole of Mr. Peabody's gift, £150,000, were permanently invested in a set of buildings for this purpose, it would only provide dwellings for 9,000 men, women, and children. The inference is, that if an effectual change is to be made, it must be on the principles on which capitalists invest their money. In other words, the undertaking must pay.

As far as the Severn is concerned there is a prospect of a fine salmon season. From Montgomeryshire down to Worcestershire the murlets, young salmon, are more numerous in the river than they have been within living memory. At Meifod they are "in thousands." They will go down the river in a few days, from 2 oz. to 3 oz. a-piece in weight, and will come back in July—those that do come back—from 2 lb. to 5 lb. Adult salmon, too, are more numerous than is their wont, in the upper waters. Some have been taken by fishermen, contrary to law; and the offenders have been punished. The "Protection Association" is active in issuing warnings and bringing captors of unseasonable salmon before the magistrates. Persons who write to the papers complaining that young salmon have been offered them for sale, would do well to use the power confided to them by the 24 and 25 Vict., cap. 109, sec. 15, of seizing the fish and prosecuting the persons in possession of them. If they will not do this, the Severn Fisheries Association, Worcester, will do it for them, on receipt of the requisite information.

A shocking murder was committed on the morning of Thursday week in a low den in St. Giles's. A wretched young woman, named Emma Jackson, entered the house with a male companion at seven in the morning, and engaged a room for two hours. At five p.m. of the same day, the servant, surprised that they had not left the house, sent a girl up to see why they remained. The girl found the door unfastened, the window up, and the man gone; but the unfortunate woman lay upon the bed, with her feet on the ground, dead, and covered with blood. The police profess that they have gained a perfect clue to the murderer; but he has not yet been discovered.

Joseph Harcourt, who was committed some time ago for inciting a man named William Smith to murder Mr. Isaac Wightman Dickinson, of Ash Grove, near Newry, was tried on Saturday last, found guilty, and sentenced to ten years' penal servitude. The evidence left no doubt that he had committed the offence; and his motive is said to have been the hope that, Mr. Dickinson dead, he would be able to possess himself of his widow and her fortune.

Another dreadful murder has been committed in Ireland, in the town of Crossmolina. On the night of the 5th instant, Mrs. McNaier was murdered by her eldest son, William, who appears to have been possessed with the delusion that she was the Devil. Horrible to relate, the murder was committed in the open streets, in the presence of four cowardly fellows, who did not move a hand to save the unfortunate old lady from her infuriated son.

Adam Grierson, who was lately shot at Glenreigh by a young man named Francis Bradley, son of a man who, with thirty or forty others, had been evicted by Grierson two years ago, died of his wounds on Monday. Bradley had previously been arrested, and was identified by the deceased as the man who shot him.

AUSTRALIA.

Miss Rye writes from Dunedin, Otago, under date February 16, to say that she and her hundred female emigrants landed safe at Dunedin, on the previous Saturday, "after a glorious passage of ninety-eight days." Storms and sea-sickness were almost mythical; and there was no illness worth speaking about, except in the case of Louisa Haines, who died on the passage. She says, "I shall have no difficulty in disposing of the girls we have here; they will all find good situations and good salaries; but," she adds, "already I see more clearly the force of my reiterated assertion that it is certain destruction to ship off unsteady girls." This remark does not apply to any of the young women she took out with her, of whom she says, "the girls are in excellent spirits, and 'all's well' at present with all."

A very strange story comes to us from Australia. A correspondent who signs himself "Investigator," writes to the *Melbourne Argus*, under date, "Mia Mia Creek, January 4th," to say that he has discovered in a stony creek, fifteen miles from Castlemaine, the bodies of three aboriginals quite whole, and not wanting in the smallest details, but which are petrified into solid marble. "When I first saw them," he writes, "I thought they were actually alive, until, on going closer, I noticed the eyes. They are in a sitting posture, and the veins, muscles, &c., may be distinctly traced through what is now a group of stone blocks; they are in a splendid state of preservation, even the finger-nails, teeth, &c., are as perfect as they were five hundred years ago. One of them has a stone axe by his side without any haft. The group altogether is the strangest concern I ever witnessed." It does not appear, however, that any one else has witnessed it.

FOREIGN.

AMERICA.

The exuberant good spirits which took possession of the people of Washington and New York on the promise of Government some days ago that great successes would be speedily gained which would do more than break the backbone of the rebellion, have given place to a decline of confidence and a rise in the price of gold. The brilliant accounts of the success of Farragut in running past Port Hudson and the arrival of the naval expedition at Haine's Bluff, turn out to be untrue. This, indeed, is the usual fate of the flattering telegrams which are forged by the employés of the Government for the contentment of the public, and the *New York World* does not hesitate to say that while Federal accounts are generally false, those of the Confederates are uniformly true in the main. "The telegrams," it says, "we get from Cairo and Memphis respecting alleged Union successes are almost invariably false; and the information vouched us from official circles in Washington as to military operations in the West is not a whit more reliable." It then proceeds to give instances of this official perfidy. "Within the past few weeks we have been told that the Yazoo Pass expedition was a success, which was false; that twenty odd transports and 7,000 men had been captured at Yazoo City, which was false; that Haine's Bluff had been taken, and Vicksburg evacuated, which was false; that Admiral Farragut's whole fleet had passed the Port Hudson batteries, which was false; that the *Indianola* had been recaptured as good as new, which was false; that the Lake Providence Canal was 'all right,' which was false; that the famous 'cut off' was ready for service, which was false; and, finally, that a Union fleet had reached the Yazoo by means of the Sunflower River, which was also false. On the other hand," it continues, "the Confederate reports and despatches have proved almost invariably to be correct." It is confirmed that Admiral Farragut has succeeded in getting two ships past the Port Hudson batteries—the *Hartford*, his own ship, and the *Albatross*. With these he can for a time cut off, both from Vicksburg and Port Hudson, as well as from the Confederate armies to the eastward of the Mississippi, the large supplies of cattle they have hitherto received from the vast country watered by the Red River. But as the *Hartford* is a wooden ship and the *Albatross* the only iron-clad he possesses between Vicksburg and Port Hudson, and as the Confederates have two powerful iron-clads, the *Queen of the West* and the *Webb*, somewhere between Vicksburg and Warrenton, the Admiral's position naturally causes a sense of uneasiness at New York.

It seems probable that a great battle will ere long be fought at or near Tullahoma, where the Confederate General Bragg is said to have concentrated an army of 60,000 men. Confederate General Joe Johnston has his head-quarters at Atlanta, Georgia, and the Confederates are building immense fortifications at Chattanooga, and have already (March 31) between fifty and sixty siege guns in position. General Rosencraus is still at Murfreesborough with the Federal army, which he has raised to a high state of discipline. That there have been no operations during February and March is accounted for by the impossibility of moving troops, in conse-

Digitized by Google

quence of the ocean of mud with which Kentucky and Tennessee are at this season coated. The ground could not, under the most favourable state of weather, be fit for military operations till the end of March. As to the result of a battle, the Southern correspondent of the *Times* gives his opinion that General Johnston, who will take the command of Bragg's army, will probably not be able to do more than hold his own, in the presence of Rosencrans's superior force. This opinion, however, is given in a letter dated so far back as the 28th of February; and the writer adds that a few thousands more men, not wanted elsewhere, might easily be placed at Johnston's service. If this has been done, the prospect of better success has of course been improved. This writer bears evidence to the difficulties which will be experienced in feeding the Southern armies till the grain crops are reaped in July. These difficulties will be very great, and the South will have to put up with much privation in the meantime. Not that there is not abundance of other food in the revolted States, but because the means is not at hand of conveying it to the mouths which are to be fed. Intelligence to the 2nd instant states that the most recent accounts from Tennessee are of a nature to show the imminence of a great battle at or near Murfreesborough, Tullahoma, or Chattanooga, and that considerable anxiety was felt for the safety of General Rosencrans.

Mr. Lincoln has issued a proclamation notifying that deserters, whose number, by the way, is variously estimated at from 130,000 to 150,000, who will return to their duty by the 1st of April, will incur no penalty except the forfeiture of their pay and allowances up to that date; while those who do not will incur the penalty of death. This warning had not had the desired effect; and the President is advised to give it force by shooting a dozen or two deserters in each State. Hardly a less evil than desertion has shown itself amongst the soldiers who still remain with the army. Encouraged by their officers, they have begun to hold political meetings, condemning the conduct of those citizens who presume to talk of peace. This may be a support to the Government, but it cannot but prove a source of eventual danger to it. Men with arms in their hands, who are taught to intimidate the unarmed public, can hardly fail to retort the lesson upon their rulers when their humour changes. It would be wise policy were Mr. Lincoln to take measures to restrain that brutal ferocity and disregard of the usages of civilized warfare by which his soldiers have distinguished themselves, and rooted still more deeply the hatred with which the South regards the Union. Unbridled licence is the order of the day both with officers and men. "Men of the highest intelligence," writes a Washington correspondent of the *New York Times*, "and most undoubted veracity, do not hesitate to attribute the stubborn and implacable disloyalty of the conquered districts of the South to this cause. They even go further, and say that thousands of Union men have been converted into rebels by the outrages which have been committed upon them by the Union troops, who should be their protectors." Devastation and outrage in the Valley of Virginia, in Alexandria and Fairfax counties, in Tennessee and North Carolina, have alienated the whole population, and destroyed all love for the Union in those districts.

News to the 3rd instant states that the Federal soldiers in the occupation of Pensacola burned the town, when ordered to evacuate it by Colonel Dyer, their commanding officer. Both men and officers are said to be in a state of great demoralization; and all the colonel's efforts could not prevent the work of destruction. An official despatch from General Bragg, dated Tallahoma, March 27, reports that General Forrest had visited Brentwood, burnt the bridge, taken all the property and arms, and captured 800 prisoners, including 35 officers. Brentwood is nine miles from Nashville and Franklin, at both of which places there are several thousand Federal troops. General Sherman's Sunflower River expedition has returned, and was disembarking, on the evening of the 3rd instant, at Young's Point. The expedition is said at one time to have been hemmed in by the river obstructions placed in front and rear of the transports, and to have been extricated with difficulty. The canal opposite Vicksburg has been abandoned, the Confederate cannon commanding two-thirds of its length. The Confederates under Van Dorn are crossing the river at Palmyra, and are endeavouring to flank General Rosencrans on the left. The Confederate armies of Tennessee and the Mississippi are reported to be forming a junction.

POLAND.

A note in the *Moniteur* of Monday says, that "the Austrian Government having displayed views upon the Polish question in conformity with those of the Western Powers, an understanding has been established between the three Courts for acting in concert towards the cabinet of St. Petersburg." It was no doubt in apprehension of such an accord between the three Powers that the Poles are indebted for the amnesty which has been offered them by their oppressors, on condition that they lay down their arms and return to their allegiance by the 13th of May. The amnesty is "full," with two exceptions, which render it perilously empty. These are with regard to "ordinary" crimes, a very comprehensive term, and to such offences as have been committed by the army. The manifesto in which this generous offer is contained further announces that the institutions granted to the Polish people shall be maintained, and, after practical experience, shall be developed according to the necessities of the age and the country. It cannot be a matter for surprise when we hear from Warsaw that this manifesto has produced no effect, and that the insurrection will continue. When the Russian Government claims the allegiance of the Poles under the sanction of institutions "which have been granted," but "the efficacy of which has not yet been put to the test," they must forget the act of kidnapping which testified the humanity and sincerity of those institutions. It is not forgotten by the Poles. The amnesty has been universally rejected, and a protest circulated against it.

Any other course on the part of the insurgents was not to be expected, even were their operations in the field hopeless. They are far from this. Every fresh telegram brings news of the spread of the revolt, and of fresh successful encounters with the Russian troops. A fresh band of 600 insurgents has appeared in Sandomier; and Major Lopacki has occupied Polaniec, on the Vistula. The insurrection is spreading in Augustowo, in Lithuania, and Podlachia. Csacoiski, with 1,500 men, maintains the position formerly occupied by Langiewicz; and not far from him is a body of 1,000 insurgents under Geringer. Battles at various points are reported; and it is confirmed that at Koslawanda, Ciechocineo, Plockie, Kolo and Konin, the Russians have been beaten.

Langiewicz has declared to the Austrian authorities that he can no longer keep his parole, and it is expected that he will be placed under stricter guard. But his aide-de-camp, Mademoiselle Pustovoydova, for this appears to be the correct spelling of her name, has been set at liberty. This lady seems to have lisped enmity to the Russian Government. She is a Russian subject; daughter of Colonel Pustovoydoff, a Russian, in the Russian army, and a Polish lady. When she was quite a child she was shut up for uttering some disloyal sentiment at Zitomir, in a convent, from which two years afterwards she effected her escape, and on the outbreak of the insurrection entered the service of the Dictator. She is beautiful and young, little more than 18. Daring she must be, for she has had three horses killed under her, and led a charge of scythemen at Grochowiska. The Kossanieri, it appears, were hesitating under a well-sustained fire of Russian infantry, and could not be got to advance, when Mademoiselle rode in front of the regiment, and by the force of her personal attractiveness drew it forward.

REVIEWS OF BOOKS.

CANON STANLEY'S SERMONS IN THE EAST.*

As official discourses of religion, these sermons are exempt from our criticism, and the studied simplicity of their composition affords us no occasion for any remark upon the author's literary powers, which have indeed found ample exercise and proof in works of greater compass. There is little to distinguish Dr. Stanley's sermons preached before the Prince of Wales in Egypt and Palestine from such as any minister of the same theological complexion might preach at home, excepting the frequent allusions to local monuments and scenery around him, associated with the sacred narrative from which his lessons were drawn. On board the Nile-boat, when going up to the old capital of the Pharaohs, his congregation were thus invited to remember how Abraham, and afterwards his great-grandson Joseph, had sojourned in that famous abode of ancient civilization. Amidst the stupendous ruins of the Temple of Karnak, they were led to compare the depressing superstitions of Paganism with the spiritual liberty of the Christian faith. In the port of Joppa, while awaiting the appointed hour for them to land from the *Osborne*, and to set foot upon the shore of Palestine, they were bidden to "gather up the fragments that remain," to pick up whatever scattered hints and relics of information are left to be gleaned upon that soil, and so, from these fragments, to piece together a life-like conception of the realities of the Scripture history there enacted. On the Sunday before Easter, they were encamped above Nablous or Shechem, under the shadow of Mount Gerizim, where the remnant of the barbarous Samaritan race still keep up their peculiar sacrifice; and Dr. Stanley then reminded his Christian hearers of that profound truth, first uttered in the conversation at Jacob's Well, "God is a Spirit, and must be worshipped in spirit and in truth." Again, it was in the village of Nazareth, among the mountains and forests of Galilee, through which a fierce storm was at that moment raging, and beating upon the house where the English party had taken shelter, that they listened to his comment on that parable of "The House built upon the Rock," which may have been suggested by such an incident in that very place. By the Sea of Tiberias, on the shelving beach, where, in the dawning light of the third day after the Crucifixion, those fishermen, who had toiled all night in their boats, suddenly beheld the figure of their departed Master, and leaped ashore to meet Him again, the solemn story of the Resurrection was a suitable theme. So, too, when the Prince and his company halted within a few miles of Damascus, they remembered not only the former magnificence of the kings of Syria, and their dealings with the Jewish rulers and people, but more especially the journey of Paul, then called Saul, along the same road, with intent to persecute the followers of Christ, from which he was diverted by the teaching of a vision, changing his heart and mind, so that he became the great Apostle of the Gentile world. In the ruins of Baal's Syrian temple, the preacher once more, as at Thebes, pointed out the visible monuments of that idolatry of physical

* Sermons preached before his Royal Highness the Prince of Wales, during his Tour in the East in the Spring of 1862; with Notices of some of the Localities Visited. By Arthur Penrhyn Stanley, D.D., Canon of Christ Church, Regius Professor, &c. Murray.

Digitized by Google

nature, which prevailed through so many ages of heathenism. Beneath the cedars of Lebanon, on the last day of their roving life in tents, these Englishmen reflected upon the daily experience of Israel encamped in the wilderness, and comprehended their reliance upon the Divine protection at morning and at night. At sea, between the Isle of Patmos and Ephesus, it was from the writings of St. John,—on another Sunday, having just left Athens for Malta, it was from the adventures of St. Paul, that Dr. Stanley chose the topic of his discourse. The last, only, of these sermons was preached in the chapel of Windsor Castle, after the party had returned home. We have merely indicated the circumstances under which they were composed and delivered, as giving them a sort of romantic interest, beside their value for religious edification, of which it is not our province to speak.

To the second part of this volume, containing, somewhat in the form of an appendix, a minute description of several of the most curious places which Dr. Stanley visited, in his attendance upon the Prince, we may give a closer examination; and as a topographer, if not as a chaplain to royalty, the author may come fairly under review. His book on "Sinai and Palestine," which he published some years ago, was the result of much careful study and of his personal observations in 1852 and 1853. Returning after nine years' interval, he found much to learn, and probably as much to unlearn, for the uncertainty of most antiquarian theories of locality must be felt most grievously in a country, the whole face of which has been completely changed by so many convulsions of nature, and by the successive domination of so many races and religions, for twenty or thirty centuries past. Dr. Stanley's long account of the mosque at Hebron, supposed to be erected over the Cave of Machpelah, would be much less tedious reading if we could but share the credulity of Jews and Mussulmans, who believe that Abraham, Isaac, Jacob, and their wives, were actually interred there. But though Dr. Stanley is willingly convinced—having been favoured with that permission to view the patriarchs' tombs, which had scarcely been enjoyed by any European visitor before the Prince and his party obtained it—we do not see that there is any better evidence of the site than the Mohammedan traditions, which cannot be trusted at all. Indeed, he tells us that the name of Machpelah was applied to the whole district, and though we read that its position was "in the face of Mamre," *i.e.*, opposite Mamre, he does not know whether Mamre was to the south of the modern town, or five miles to the north of it.

It may be doubted whether it was worth while for General Bruce to offend the prejudices of the Moslem people, by insisting so vehemently as he did, seemingly at Dr. Stanley's instigation, upon opening to the English party these apocryphal sepulchres, as well as the Tomb of David at Jerusalem, in which none but the Mohammedans believe. We cannot think that it was justifiable, by threatening Suraya Pasha with "the extreme displeasure" of the Prince of Wales in case of refusal, to gratify the curiosity of one or two members of his suite, at the risk of provoking a tumult which would probably have resulted in bloodshed. "What the Pasha feared," says Dr. Stanley, "was a random shot or stone from some individual fanatic, who might have held his life cheap at the cost of avenging what he thought an outrage on the sanctities of his religion." To prevent, therefore, an attack upon our Prince and his companions, as they passed through the town, the streets were lined with a double file of soldiers, while the inhabitants were forbidden to show themselves at their windows, or on their house-tops. "In fact, it was a complete military occupation of the place." The guardians of the Mosque groaned aloud, when the shrine of Abraham was thrown open, and implored their dead patriarch, the "Friend of God," to forgive this intrusion, declaring that, as for a prince of any but the English nation, they would rather have let him pass over their dead bodies, than have allowed him to enter. The Pasha declared that he himself would never dare to approach the tomb of one so holy as Abraham or David; and that even if the merciful Abraham would forgive such an affront, it was not so with Isaac, who was proverbially jealous, and who had driven back Ibrahim Pasha when he attempted to go in there. For the sake of common charity, and as a matter of courtesy, if not from considerations of prudence, it would surely have been better to refrain from violating these scruples; and the tone of exultation in which Dr. Stanley relates the affair is not commendable. If any mischief had happened to the young Prince—and be it recollected that the violence of Moslem fanaticism had been shown in the previous twelvemonth by the massacre of Christians at Damascus, as well as by the outbreak in India a few years ago—those who had led him into needless danger would have incurred the severest blame. After all, what did they see, in the interior of the Mosque of Hebron? "A coffin-like structure, about six feet high, built of plastered stone or marble, and hung with three carpets, green embroidered with gold," marks the supposed tomb of Abraham, and the others resemble this. At the corner of the recess, where Abraham's tomb is erected, Dr. Stanley peeped into a circular hole, eight inches in diameter, opening down to a dark space beneath the pavement, which he believes to be the old original cavern of Machpelah. The clerical guardians, or "Dean and Chapter" of the Mosque, as he facetiously calls them, place a lamp there at night, to light up the saints' true resting-place, and written prayers or memorials are cast through the hole, to be received by the patriarchs who dwell there. In our judgment, these "mysteries of Hebron" were quite unworthy of the attention which Dr. Stanley bestowed upon them. The character of Abraham is venerable indeed, not less to all Christians in England, than to the Jews and Mohammedans of the East; but this ghost of a patriarch, maintained by Moslem superstition in a gloomy underground cellar, to receive the petitions of the faithful prepaid by a fee to the priests, deserves no particular respect.

We cannot, however, charge Dr. Stanley with similar indiscretion in the next instance,—that of his visit to Mount Gerizim, upon the occasion of celebrating the Samaritan Passover, which is the only opportunity that still remains of witnessing the actual performance of the "bloody sacrifice," with the ancient ritual of the Mosaic code. His account of this scene is full of interest, if we consider that the small community of Samaritans, numbering about one hundred and fifty, who come up from Nablous for this ceremony, "at the full moon of Nisan," that was, on the 13th of April last year, represent the habits and customs of a once great nation, whose flocks and herds were pastured over the plains of Western Asia far and wide. Their high priest, claiming to be the last descendant of Aaron, stands on the rocky platform, at sunset on the appointed day, surrounded by the men clad in robes of sacred white. He chants the Hebrew liturgy of prayer and praise, till suddenly up come six or seven youths, each bringing a sheep or a lamb; and then,—as the sun dips below the horizon, at the reading of that passage in the book of Exodus which narrates what was done on the eve of the Passover, ere the bondage of Egypt was broken,—the people raise a wild murmur of acclamation; knives are brandished; the sheep are, in a moment, thrown down and slaughtered; and fingers, dipped in the flowing blood, mark the foreheads of the children with the mystic token of the chosen race of God. They all congratulate and kiss each other as brethren; the sheep, flayed and disembowelled, with many signs and phrases of consecration, and spitted on poles in the form of a cross, are hastily roasted, in holes dug in the rock for that purpose; at midnight there is a wild, eager, hearty feast, eaten on mats spread upon the ground, as though in the hurry of the moment of their departure. The fragments are carefully gathered up, and consumed by fire; the little band of Israelites then leave the mountain top, and return to their homes, after commemorating, in the fashion of three thousand years, the miraculous deliverance, "unhistoric" as Dr. Colenso deems it, of their captive race.

In Galilee, which must, after all, be the most interesting district of Palestine, the Prince of Wales and his company, having come from St. Jean d'Acre up the valleys overlooked by Mount Tabor, spent several days of the Easter week. They were at Nazareth on Good Friday; but the tempestuous weather prevented them from exploring that neighbourhood as they might have wished to do. Dr. Stanley's notice of the birthplace of our Lord is, therefore, so cursory and meagre as to add nothing to what was said of it in his former work. He recognized the village of Cana, distant about four hours' journey from Nazareth, in the ruins of a cluster of houses, now entirely deserted, upon a rocky spur of the hills at the western edge of the plain of Asochis or Buttauf, an upland continuation of the plain of Acre. The ground just below this village is swampy and overgrown with reeds, and from these he thinks the name Khana, which the place still retains, may possibly have been derived. Cisterns and a deep well, from which, perhaps, the water was drawn for the marriage-feast, are cut there in the rock; and a fig-tree, which reminds him of that one beneath whose shade the guileless Nathanael was found sitting, grows close by. This place is at the entrance of a wooded glen, one of the most beautiful pieces of scenery in the Holy Land. The mountains of Galilee, properly so called, stand opposite, on the eastern side of the plain, and Nazareth, enclosed between them, is out of sight beyond. The most striking description, however, is that of the Lake of Gennesareth or Tiberias, shut in by mountains east and west, which appeared to Dr. Stanley, on his second visit, when he suddenly looked down upon it from the overhanging hills of Hattin, above the western shore of the lake, to be a prospect of surpassing grandeur, apart from its sacred associations.

Walking, on the afternoon of that Easter day, along the shores of the lake to the southern end, Dr. Stanley reached the flat, grassy plain through which the Jordan emerges from it, as the Rhone does from the Lake of Geneva, but quietly, and in a scene remote from human dwellings. Next day, the Royal party rode northwards along the smooth white beach, passing the mouth of the deep rocky glen of Beth-Arbel, called the "Valley of Doves," and the traces of an artificial platform, cut high up, on the cliff side, which perhaps mark the site of lofty Capernaum; while Bethsaida is, by an eager imagination, recognized upon the gentle hill, at the northern end of the lake, rising from the marshy plain, overgrown with thickets of oleander and one group of five palm-trees, through which the turbid Jordan, pouring down from Hermon and Lebanon, as the Upper Rhone descends from the mountains of the Valais, carries its brown waters to mix with the crystal waves of the deep inland sea. A broad green level, above the fancied site of Bethsaida, may have been "the much grass," on which the multitude of Christ's hearers sat, and were miraculously fed; still higher, there is a bare ridge, to which "desert place" He may afterwards have retired alone, overlooking the whole length of the lake, with the ship in which the disciples had embarked that evening still tossed about on the stormy water. Dr. Stanley's conjecture about this locality would seem, indeed, to involve a discrepancy between the narrative of St. Mark and that of St. John; since one of them states that they sailed towards Capernaum, and the other says that they went "to the other side unto Bethsaida," which does not agree with his supposition that the grassy platform just above Bethsaida was the place where the congregation had met together. "The disputed sites," however, "of the cities of Gennesareth must remain

Digitized by Google

disputed;" it is only the great unchangeable natural features of the district that we can distinctly trace at this day. A correct map of the topography of Galilee would have been far more useful to the reader of Dr. Stanley's book than the woodcut in which he gives us Captain Mansell's rough-drawn plan of the famous cluster of cedars on Mount Lebanon, whose exact position is of no historical importance.

The royal yacht, on its homeward voyage, touched at the isle of Patmos, the abode of St. John in his exile; and Dr. Stanley of course visited the little Greek chapel, or hermitage, called the κατάπανσις, or "The Repose" (as *Le Reposoir* is the name not unfrequently given to such places in the Alps of Catholic Switzerland or Savoy), which stands half-way up the hill, between the port and the modern town of La Scala, commanding a view of the sea. This is declared by tradition to be the place at which, in a cave under the chapel, the vision of the Apocalypse was beheld. Dr. Stanley, however, remarking that, from the topmost peak in the island, the Apostle might have had an extensive prospect of several of the islands of the Archipelago, including Samos and Icaria, with a portion of the coast of Asia (distant, we believe, some forty miles), has conceived a strange theory to account for the imagery of the Book of Revelations, which he thinks to have been borrowed from various features of the scenery actually before John's eyes. The sea around him, the mountains and islands within sight, the sky, which now and then displayed great white clouds, or was darkened by tempests of thunder and hail, or cheered with a rainbow, did enter into the apostle's common experience at Patmos, as they were beheld by Homer some hundreds of years before; yet it seems rash to presume that these physical accidents of his position really served to illustrate a directly inspired communication of spiritual truths. Dr. Stanley goes so far as to remark that the contorted and sinuous figure of the craggy island which lay beneath John's feet (supposing him ever to have climbed to its highest summit), may well have suggested the monstrous form of the beast with many heads, the huge dragon rising out of the sea, in his sublime allegory of the future trials and triumphs of the Church. This is a grotesque fancy which we cannot approve.

THE ANGEL IN THE HOUSE.*

In this age of rapid writing, we seldom meet with a work which has been so deliberately planned and so carefully executed as the poem which Mr. Patmore now publishes for the first time in its complete form. Fourteen years have elapsed since it was commenced, and during that period he has steadily remained faithful to his original design. Such constancy richly deserves success, and successful his undertaking has proved. For his generous enthusiasm for what is good and true, his appreciation of the nobility of virtuous love, and his courage in maintaining a long struggle with what he considers a poetic heresy, have won him the affection of many, the respect of all. His opponents, no less than his admirers, admit the skill with which he has handled a difficult theme, and allow him full credit for the fruitful labour he has bestowed on the language and versification of his work. And as to the originality of his plan they are agreed; it is his choice of subject on which they are at variance. It is a subject, say some critics, which all preceding poets have left untouched, or dwelt upon but lightly, considering it as belonging to the domains of prose rather than of verse. And at least the second part of "The Angel in the House" must be essentially prosaic, they affirm, inasmuch as it is devoted to the innocent loves of married people. A guilty passion, they admit, is always romantic, and love before marriage is the recognized source of a lyric poet's inspiration, but the wedded life which is unrelieved by intrigue is too dull and commonplace, they say, to be immortalized in song. The poetry of love is sacrificed on the Hymeneal altar, and the words of the nuptial benediction break the spell of its ideal charm. For them

> "Mit dem Gürtel, mit dem Schleier
> Reisst der schöne Wahn entzwei,"

And they hold that Psyche is no longer interesting when Eros has become her lawful owner. Mr. Patmore has thought otherwise, deeming that true love must ever be worthy of the noblest poetry, and that it is only in wedded life that it reaches its fullest development and attains to its highest degree of refinement; and, therefore, that the poet who seeks to analyze its nature and describe its influence, should trace it throughout its career instead of deserting it at the end of the first period of its existence. We fully agree with him, and consider the charge brought against his choice of subject as captious and unfounded.

Mr. Patmore has long been prized by thoughtful readers. The circle of his admirers embraces many of those whose good opinion is a certificate of merit, and whose esteem is an enduring reward. But hitherto, it must be said, Mr. Patmore has never done justice to himself. The poem, which we now possess in its entirety, has been published by instalments, and its fragments, though admirable in themselves, yet seemed somewhat hard and bare when standing alone, wanting the grace and harmony which become fully recognizable only when we see them linked together.

The first two books of the "Angel in the House" are devoted to "The Betrothal" and "The Espousals" of the hero. Their story is sufficiently simple, and no great exertion of the intellect is necessary for its comprehension. Through them the stream of true love runs smoothly, broken only by just sufficient ripple to render its surface a blaze of gold. Fortune has smiled on Felix Vaughan and bestowed on him the three blessings which the ancient Greeks chiefly desired of the gods—health, good looks, and independent means. Moreover he bids fair to become statesman and poet, and he has in addition the appreciation of beauty which accompanies artistic tastes, and the capacity of loving, with which only generous natures are endowed. He falls in love with Honoria, the daughter of his neighbour, Dean Churchill, and in the first part of the work we witness the effect which a noble desire has on an ardent and chivalrous mind. Very attractive is the description of the sweet English home in which Honoria lived:—

> "A tent pitch'd in a world not right
> It seem'd, whose inmates, every one,
> On tranquil faces bore the light
> Of duties beautifully done."

Very charming is the picture drawn of her, and most delicate is the rendering of the changing lights and shadows of his life, shifting according as she is near or distant. We may take as a specimen the description of his visit to the Cathedral Close during her absence:—

> "How tranquil and unsecular
> The precinct! once, through yonder gate,
> I saw her go, and knew from far
> Her noble form and gentle state;
> Her dress had brushed this wicket; here
> She turn'd her face, and laugh'd, with looks
> Like moonbeams on a wavering mere;
> This was her stall, these were her books;
> Here had she knelt. Here now I stay'd,
> While prayers were read: in grief's despite
> Felt grief assuaged; then homeward stray'd,
> Weary beforehand of the night.
> The blackbird, in the shadowy wood,
> Talk'd by himself, and eastward grew
> In heaven the symbol of my mood,
> Where one bright star engross'd the blue."

And how tender is the reserve, how deep is the subdued feeling of these lines:—

> "Twice rose, twice died my trembling word;
> The faint and frail cathedral chimes
> Spake time in music, and we heard
> The chafers rustling in the limes.
> Her dress, that touch'd me where I stood,
> The warmth of her confided arm,
> Her bosom's gentle neighbourhood,
> Her pleasure in her power to charm;
> Her look, her love, her form, her touch,
> The least seem'd most by blissful turn,
> Blissful but that it pleased too much,
> And taught the wayward soul to yearn.
> It was as if a harp with wires
> Was traversed by the breath I drew;
> And, oh, sweet meeting of desires,
> She, answering, own'd that she loved too."

At this point ends the first book. The prize has been sought and won; its effect on the winner has next to be described. The second book traces the influence of happy love on the mind between the periods of betrothal and marriage. The revulsion which takes place in a man's feelings when his queen abdicates in his favour, when his goddess steps down from her pedestal and looks up to him instead of deigning to regard him from above; the rush of love which then takes place to fill the space which reverence has left vacant; the sudden fears and groundless alarms which startle him at times from his dream of bliss; the strange uncertainty and the doubts as to the reality of passing events which beset the mind as the crisis of life draws near; the varied emotions with which the lover's heart is then thrilled, and the shifting fancies which dance before his eyes,—such are the subjects of this part of the song, and very admirably are they treated. There can be but few readers who are not competent from personal experience to test the truth of Mr. Patmore's descriptions, and the singular popularity which this portion of the work has obtained is the best possible proof of their fidelity. With the marriage, the book closes, and at the point where the author usually takes leave of his characters, commences the second and most important part of the poem.

As in "The Betrothal" and "The Espousals" we have watched love's sunny day from early morn to blissful eve, so in "Faithful for Ever" we see the reverse of the picture—the dreary night, lit at first by neither moon nor stars, which steeps in its cold shadow the life of one who has loved in vain. Frederick Graham is as passionately devoted to his cousin, Honoria Churchill, as is his successful rival, Felix Vaughan. But he keeps the secret from her; only his letters to his mother express his feelings. He divines the influence which Vaughan exercises over her, and goes away without daring to ask her to be his. For two years his duties as a sailor keep him from home, and on his return he hears of Honoria's marriage. Then comes the blank despair which blots out the sun from heaven, and even draws a veil between God and man, followed at first by the impulse to seek relief in lower pleasures, and then by the tranquil sorrow which strengthens even while it pains. He sees his lost love and him who has won her, and the effort to conquer himself and worthily to welcome them restores somewhat of

his peace of mind. He is hopeless, but his sorrow is no longer a merely selfish indulgence. It is a sadness which enables him to sympathise with all who grieve, a suffering which purifies and exalts the soul. Six months pass away, and he takes the step to which so many men commit themselves who have given up the one great hope of their lives, and think that all else is of little consequence. He marries a woman whom he esteems and likes, although he can hardly be said to love her. He declares that he is contented and almost happy, and generally he is so, but sometimes, he says, when she is sitting beside him, there falls

> "Dejection, and a chilling shade.
> Remember'd pleasures, as they fade,
> Salute me, and, in fading, grow,
> Like footprints in the thawing snow.
> I feel oppress'd beyond my force
> With foolish envy and remorse.
> I love this woman, but I might
> Have loved some else with more delight;
> And strange it seems of God that he
> Should make a vain capacity."

Meanwhile his wife perceives that she does not hold the first place in his heart, but she strives hard with proud humility to render herself more worthy of him, and to make him as happy as she would be if she could but please him. She is of a commonplace nature, but Love works miracles with her, and some subtle sense within tells her how to make herself dear to her husband. Day by day her natural and acquired faults grow less perceptible, her mind expands, the generous impulses which a cold and rigorous training had numbed are quickened by the sunbeams of happiness, and after a while the woman whom Frederick had taken in despair proves herself worthy of his deliberate choice. The book ends with the seventh year of his married life. He has not yet fully recovered from his old love-fever, nor can he yet calmly witness the wedded bliss of the former mistress of his affections. But he has found a tranquil contentment in his own position, and wanders on through the world with his wife and children, fully acknowledging her worth, and wondering at times why he should still cling to the Past, when the Present bestows on him such precious gifts.

And now come "The Victories of Love." At the commencement of the book we find Frederick and his wife staying at the Vaughans' country-house. Four years more have passed away, and Time, the consoler, has played his appointed part. Frederick has not bated one jot of his admiration for Honoria, but he is able to be in her presence without experiencing any longer a pang of sorrow or remorse. He loves her, he confesses, no less than ever he did, but it is no longer with the feverish passion which once swept across his heart, but rather with the quiet joy which the presence of what is beautiful and noble inspires.

> "For, somehow, he whose daily life
> Adjusts itself to one true wife,
> Grows to a nuptial, near degree
> With all that's fair and womanly.
> Therefore, as more than friends, we met,
> Without constraint, without regret;
> The wedded yoke that each had donn'd,
> Seeming a sanction, not a bond."

He feels that his wife is to him a blessing beyond all that he could have hoped, though he says the lyric time of youth has passed away with him, and he does not possess the joys which once he might have had. Some unrecognized discontent still lurks in his mind, and his wife fears, at times, that he is more resigned than happy, but still she goes on quietly winning her way into his heart of hearts. At last she feels that Love has gained the final victory, but it is only when her earthly career is drawing to its close. Death marks her for his own, and she slowly fades away. Then, as the shadows of night blot out the garish light of day, and the heavenly brightness of her character shines with a clearer, steadier radiance, all other influences give way to hers in Frederick's heart. One night, she says, as she lay apparently locked in slumber, and he sat watching by her bed,

> "I heard, or dream'd I heard him pray:
> 'Oh, Father, take her not away!
> Let not life's dear assurance lapse
> Into death's agonized "Perhaps,"
> A hope without Thy sanction, where
> Less than assurance is despair!
> Give me some sign, if go she must,
> That death's not worse than dust to dust,
> Not heaven on whose oblivious shore,
> Joy I may have, but her no more!'"

Then her last doubts and fears vanish; she feels that his heart at length is hers, and hers alone. All troubles and sorrows flee away. In the presence of this great joy the sorrow of parting is silent, the misery of byegone years is forgotten. In the tenderest, the most touching language, she bids him farewell. It would be difficult to find in the poetry of any time or country as delicate and pathetic an expression of a true-hearted woman's noble affection. In it this poem reaches its climax, speaking in its most thrilling tones, and most clearly unveiling the meaning with which it is fraught throughout. The hope which remains for individual love in death is, from first to last, the burden of the song. In the earlier parts it speaks chiefly in simile and metaphor; as the story unfolds itself, the allusions to the future state and mutual recognition in it become more distinct; and, finally, we have the full assurance of love's immortality expressed in Frederick's letter to Honoria after his wife's death:—

> "All I am sure of heaven is this:
> Howe'er the mode, I shall not miss
> One true delight which I have known.
> Not on the changeful earth alone
> Shall loyalty remain unmoved
> Towards everything I ever loved.
> So Heaven's voice calls, like Rachel's voice
> To Jacob in the field, 'Rejoice!
> Serve on some seven more sordid years,
> Too short for weariness or tears;
> Serve on; then, oh, Beloved, well-tried,
> Take me for ever as thy Bride!'"

With this extract, we must take leave of Mr. Patmore's noble poem. We have not the space in which to quote the lines which describe the full perfection of the love of Felix and Honoria, of their happiness so complete that it leaves no bliss to be desired. In their case, we have watched the progress of the stream of true love, fretting at little obstacles, or singing as it goes between banks rich with fruits and flowers; becoming by degrees a wider and a deeper stream, and at length gliding tranquilly along, a gleaming river, enriching the land through which it flows, and assuming towards the end of its course somewhat of the majesty of that vast ocean into which it will be absorbed. We have seen, while watching the fortunes of Frederick Graham, how the day-star of true love can dispel the darkness of despair, and how the sweet influences of womanly affection can gradually loosen the bands which sorrow has drawn round a wounded heart; and we are shown that deep religious feeling is not only consistent with the existence of passionate love, but is even necessary for its fullest development, and an indispensable agent in its perfect continuance.

Before closing the book, let us draw the reader's attention to the miscellaneous poems which are comprised in the second volume. "Tamerton Church Tower" will be familiar to many, but the shorter pieces which follow it will be new to the majority even of Mr. Patmore's admirers. Those who remember their first appearance will be surprised and gratified to see the alterations which they have undergone. In their case, as in that of the "Angel in the House," the greatest pains have been taken to insure perfection, and no sacrifice has been thought too great which could possibly conduce to it.

GENEVA AND THE REFORMATION IN EUROPE.*

THE reputation which Dr. Merle D'Aubigné owes to the five volumes of his "History of the Reformation in the Sixteenth Century," will be fully maintained by this new work, its natural sequel and completion. We congratulate him, therefore, upon having lived to bring so near its close the noble task which he first proposed to himself nearly half a century ago. He tells us, in his preface, that it was in 1818 that Neander pressed him to undertake a History of the Reformation of Calvin, and that he then entertained the project of doing so, after he should have written the History of the Reformation of Luther. Two portly octavos of the Reformation of Calvin are now before us, and two more are to be published in the course of the year. Judging from the scale on which this first portion of the story is constructed—Calvin, whose "Times" are to be the subject of it, being a student at the University of Orleans at the opening of the second volume—we may look for several more instalments, equal in bulk to the one already issued.

Even if we were inclined to complain of the remote point in time at which the historian has seen fit to begin his narrative, or of the great space occupied by what is only preliminary to the main theme, we should be effectually silenced by the very good reasons which he gives for adopting this plan; and if these reasons failed, by the singular charm, the freshness, and fascination of the preliminary narrative itself. Nothing in human history stands isolated and alone. No life, no fact, but is what it is, by reason of other lives, and other facts, which have preceded it in time, and is only to be comprehended by means of an adequate acquaintance with them. The higher the significance of the life, and the larger and more complex the fact to be studied, the more important it becomes to look well before and after, if we hope to attain to anything like clear perception and real knowledge. We laugh heartily with Knickerbocker, who begins the "History of New York" at the creation of the world; but we have to acknowledge, notwithstanding, that pedigrees both of men and events do reach back at least as far as Adam and the garden of Eden. It is, then, for solid reasons that Dr. Merle D'Aubigné has introduced his "History of the Reformation in the Time of Calvin," by a sufficiently detailed sketch of the history of Geneva, the home of the Reformer and the seat of the theocracy which he established; and especially of the long exciting struggle through which the city heroically maintained, and at length permanently secured, its political independence.

The history of Geneva is, in great part, written from original documents and important manuscripts; the latter including the registers of the Council of Geneva, histories written by two of the Syndics, and many papers found in the archives of the city. It

* History of the Reformation in Europe, in the Time of Calvin. By J. H. Merle d'Aubigné, D.D. Vols. I. and II. Longmans.

will have the charm of novelty to most readers. Many characteristic passages of contemporary documents are reproduced with the happiest effect, frequently imparting such life and startling reality to the pictures of the past, as only the greatest masters, by their most cunning touches of imagination, know how to produce. Without assigning a place in the highest rank of such writers to the historian of the Reformation, we must commend the artistic performance of this work, in spite of his modest expression of regret for its shortcomings in this respect.

With all this, Dr. Merle D'Aubigné never allows his readers to forget that he is a theologian. We cannot help sometimes wishing that he did not feel it necessary to give us, in his valuable works of history, such frequent repetitions of those curious little theological sentences and pulpit axioms which stand at the beginning and end of so many chapters, besides appearing in many other places. Truths do not gain in force by being converted into truisms. The chant of a chorus accompanying the action of a play would not have been very impressive, if it had consisted of nothing more than the monotonous repetition of a few formal phrases. We are further somewhat amused by our author's fondness for *triads*. On page 2 of his first volume we read,—"Three great movements were carried out in this city during the first half of the sixteenth century. . . . . Berthelier, Farel, and Calvin are the three heroes of these three epics." At page 10, "Modern liberties proceed from three different sources, from the union of three characters, three laws, three conquests,—the Roman, the German, the Christian." At page 15, "Three powers in their turn threatened these liberties" of Geneva. A triad of Genevese patriots allied themselves with Switzerland in 1507; and in 1513 six more, a double triad, followed their example (pp. 49, 50). "Three acts" we are told (p. 428), "are necessary to unite man again with God." "The three great nations on earth" are spoken of at p. 538. And so forth. It might be a curious inquiry from what metaphysical speculations he may have derived this disposition to see and to group things by threes.

The relation of the Reformation to modern liberty, treated of in the first chapter of the history, is a subject of profound interest, and involves problems so vast and so complex that all but the very wisest heads may as well let it alone. Our author naturally leans towards that view which would attribute the largest beneficial influence to the Reformation, and we confess that our own sympathies lie that way. For this very reason it is the more needful to be on our guard against hasty conclusions in accordance with our wishes, and to insist on keeping in mind the principle of the Horatian "*Vixere fortes.*" Our author feels the difficulty, but does not see his way out of it. He speaks uncertainly; and after writing a passage which appears to make too large a claim on behalf of the Reformation, he writes another, which reduces that claim to a minimum, returning, however, to the former view immediately and frequently. We notice that he takes a very early opportunity of referring to the delicate subject of the relations of Calvin and Servetus (p. 7-8). Naturally anxious to prepossess his readers, if possible, in favour of the Genevese Reformer, or at least to abate to some extent what appear to himself to be "inveterate prejudices against him," the plea which he puts in is altogether insufficient, not only to set aside the verdict of the world, but even to modify it to any material extent.

Of all the "questions" which at present perplex the world, and await wise practical solution, the greatest and most difficult is perhaps that of the mutual relation of Church and State; and of all the forms in which it presents itself the most momentous is, probably, that of the temporal power of the Pope. These chapters of Genevese history, setting forth in the liveliest way the difficulties, discussions, and conflicts which arose in that city three centuries ago respecting a question essentially the same—namely, the authority of the Prince-Bishop, or Pope in little,—and the end of which was his fall, can hardly fail to be read with that thorough sympathy which is made possible only by similarity of experience.

We shall not attempt to give our readers an outline even of the story, which is crowded with incidents and surprises, with heroic deeds and endurance, and also with foul deeds and shames. For the narrowness of the field—a small city—the variety of characters presented may well astonish us. The dewdrop is big enough to hold an image of the heavens and earth; and a city, closely studied, mirrors an empire. We must select a passage or two by way of fortifying our opinion of the book, and of inducing our readers to lose no time in reading it for themselves.

The Dukes of Savoy were ambitious of becoming masters of Geneva, and had hope of success by the connivance of the Pope, who was asked to give the bishopric of Geneva to one of the princes of Savoy.

"A singular circumstance favoured this remarkable intrigue. Duke Amadeus VIII., who had been rejected by the citizens a few years before, succeeded in an unexpected manner. In 1434, having abdicated in favour of his eldest son, he assumed the hermit's frock at Ripaille, on the Lake of Geneva; and the Council of Basle having nominated him pope, he took the name of Felix V., and made use of his pontifical authority to create himself Bishop and Prince of Geneva. A pope making himself a bishop—strange thing indeed! Here is the key to the enigma: the Pope was a prince of Savoy; the see was the see of Geneva."

Subsequently, John, named the Bastard of Savoy, was appointed by the Pope bishop of Geneva, and he had sworn to give up the temporal authority in the city to the Duke, the Pope pledging himself to force the city to submit. One part of the diabolical policy of Savoy was to irritate the citizens by plundering and violence, and thus provoke a revolt which would be a pretext for the meditated conquest. In 1515, Claude Vandel, a distinguished lawyer, was arrested by stratagem and carried off to the bishop's prison. The city was agitated, and the council met. Philibert Berthelier was present, one of the noblest of the citizens, ever trusted and turned to in the hour of peril, a simple, calm, heroic man, whom the bastard foolishly fancied he had bought by giving him a governorship of a castle.

The arrest was described, and Berthelier exclaimed,—

"'To maintain the liberties of the city, we must act without fear; let us rescue the citizen whom traitors have seized.' John Taccon, captain-general, and at the same time a pensioner of the bishop's, stopped him: 'Gently,' said he, 'if we do as you advise, certain inconveniences may follow.' Berthelier in great excitement exclaimed: 'Now the pensioners are showing themselves!' At these words Taccon could not contain himself: 'It was you,' he said, 'yes, you, who showed me the way to take a pension.' On hearing this reproach, Berthelier pulled out the bishop's letters appointing him governor of Peney, and which he had brought with him to the council, and tore them in pieces before the meeting, saying: 'Since I showed you the way to take them, look, I now show you the way to resign them.'"

The excitement and determination of the citizens alarmed the bishop or his council, and Vandel was set at liberty.

A practical joke of Berthelier on the death of a mule belonging to Claude Grossi, an unpopular magistrate, rose to grave importance as one of the steps towards the overthrow of tyranny. There was an evening gathering of the young patriots the day the mule died, and Berthelier was with them.

"'Gentlemen,' said Berthelier, after supper, 'it is a long time since this merry company has had any fun.' They were all agreed. Berthelier delighted in setting his enemies at defiance without any regard for the consequences. 'The mule of the respectable Claude Grossi is dead,' he continued; 'that judge is a wretch continually beating after us and our friends. Let us play him a trick; let us sell his mule's skin by auction to the highest bidder.' The proposal was adopted by acclamation."

One Littlejohn, a jester, was sent for:—

"'Here,' said Berthelier, 'here's a proclamation for you to cry through the streets. Forward!' All marched out with drawn swords, and, with the drummer at their head, began to traverse the streets, stopping at every place where the ordinary publications were made. After a roll of the drum, Master Littlejohn blew a horn and cried with his squeaking voice: 'O yes, this is to give notice that whoever wishes to buy the skin of a beast, of the *grossest* ass in Geneva, and will call at the house situate between the keeper's and the Hôtel de Ville, it will be sold to the highest bidder.'"

Immediately follows the strange pathetic story of the arrest, torture, and most singular deliverance of Pécolat. Another crime of the bishop, which was also one more step towards his fall, was the arrest and execution of the two patriots, Blanchet and Navis. They were beheaded and quartered at Turin; but the brutal tyrant was not yet satisfied. He had the flesh pickled, and the heads and limbs packed in barrels, to send to Geneva:—

"The bearers of these two pickle-tubs started from Turin, crossed Mont Cenis, arrived in the basin of the Leman on Saturday, October 2, 1518, and lodged on 'the other side of the Arve.' On the bank of this river, which then separated the ducal states from those of Geneva, at the foot of the bridge on the Savoy side, stood a fine walnut-tree, whose leafy branches spread opposite the church of Our Lady of Grace on the Genevan side. The bishop's agents, who had received orders to make an exhibition of the mutilated limbs for the benefit of the Genevans, proceeded to the bridge on Saturday night in order to discharge their disgraceful commission under cover of the darkness. They carried with them, in addition to their casks filled with flesh, brine, and blood, a ladder, a hammer, some nails and cord. On reaching the tree they opened the barrels and found the features well preserved and easily recognisable. The bastard's agents climbed the tree, and nailed the heads and arms to the branches in such a manner as to be seen by all the passers by. They fixed a placard underneath, bearing these words: 'These are the traitors of Geneva;' and the white cross of Savoy above."

The passion for independence was infinitely intensified.

We wish we had space to quote the account of the arrest of Berthelier. He lost his head for liberty, as he had said he must. But he faced death serenely, believing "there could be no evil in life to him who has learned that the privation of life is not an evil." In a lovely spot on the bank of the Rhone, at early morning, he was arrested and carried off, caressing his pet weasel as he walked. It accompanied him into the prison. Strangely pathetic this human sympathy with animal life may at times become! Philibert Berthelier was a man of the noblest character, one of the "selectest spirits" of the world, and far above the comprehension of all mere partisans. Dr. Merle D'Aubigné is evidently impressed by the moral grandeur of this man, of whom he gives us a bold and vivid portraiture, although the admiration which he cannot help feeling for Berthelier is chilled and checked by some doubts about his quality as a theologian.

We have not attempted in this notice to enter upon the wider field opened in the second volume of the history, to which we may return upon a future occasion.

VERNER'S PRIDE.*

It is possible that people will soon get tired of the sensation novel, and young ladies will cease to thrill over bigamy and murder, which fill our fashionable novels as in the days of the Minerva Press. Perhaps, then it will be found that the ladies who write our novels and the gentlemen who compile our dramas are driven to the present fashion by the same cause, extreme weakness of conception. One of Mr. Thackeray's kitchenmaids is laughed at in his Miscellanies for recommending a novel to the heroine as "the gashliest she ever read;" it seems now as if that kitchenmaid had been gifted with prophetic forethought; she was a woman before her age, and, therefore, unappreciated; but she might now be of great use to publishers in guiding the public to books of sufficient "gashliness."

The Newgate style was introduced by Bulwer Lytton, and many people were delighted with Dick Turpin and his friends, who, if they were rascals, were at least genuine characters. Their crimes were fully described, and sometimes applauded; but they stood out in bold relief, with all their repulsive language of habits, and were very likely useful as a study of human nature. But the Simple Newgate has unhappily produced other styles worse than itself. There is the muscular heathen, or Guy Livingstone style: in this the hero is generally a brute, rendered romantic by immense strength and knowledge of Greek, combined with a certain music in the writing and art in the plot. But there is also that style which is just now so fashionable, and which we may call the Renaissance Newgate, a puny imitation of the classical model. This has produced many novels lately, which are much bought and talked about, and which are all full of namby-pamby sentiment and stupid crimes. People feared a year or two ago that ladies would be compelled to substitute the Pastorals of Georges Sand's later style for the Mayfair moralities, but now it is much worse; a lady will soon be thought "a little odd" or "a little fast," who does not confine herself wholly to French novels. The new school combines the viciousness of Dick Turpin with the sham sentiment of Guy Livingstone, without the truth of the first or the art of the second. As women are the chief consumers and producers of novels, and as what they ought to want is "a smooth tale generally of love," to amuse and somewhat instruct them, it does seem very odd that there should be such a run on crime. There is always enough in the *Times*, with the advantage of not being nonsensical as well as shocking. But if the interest felt in these vulgar Lady A.'s and Lady I.'s is merely bred by a literary toadyism, then the case is still more hopeless. We must, however, give up the problem of why these books are read, though we can, perhaps, account for their being written.

A novel written hurriedly to order for a weekly periodical is expected to have a fixed amount of "sensation" in each number, while it would be unreasonable to expect much artistic handling of the plot or delicate finish of detail, such as made "Adam Bede" almost a perfect novel. Just as the readers of the *London Journal* or *Family Herald* are weekly gratified by reading how the Lady Gwendolen shot two ruffians, or the old marquis was smitten by Heaven for his crimes, so the more refined subscribers to the popular magazines expect at least a fresh murder or bigamy started in each number. It is like reading a succession of slovenly reports of a series of Road murders. Some writers take special lines: for instance, a very celebrated authoress has almost monopolized the bigamy department; but the writer of "Verner's Pride" has boldly attempted success in all sorts of crime at once. The extraordinary success of "East Lynne," which appeared in a religious weekly paper, led to a large sale of "The Channings" and "Mrs. Halliburton's Troubles," which are a mixture of diluted "Tom Brown's Schooldays" and reports on petty larceny. "Verner's Pride" is a still more ambitious attempt in the numbers of *Once a Week:* it abandons the evangelical teaching of its predecessors, and is confined to crime. The plot is not over simple, and yet is hardly worthy of being called a plot at all. It has as much complicated action as would fill a story like the "Woman in White" or "No Name;" but the improbability is not redeemed by skilful use of the theatrical apparatus of fiction, which makes those novels amusing for a time.. The owner of the estate of "Verner's Pride" conceives that he is bound to restore it at his death to the son of his elder brother rather than to leave it to his own stepsons. On account, however, of suspecting his nephew to be the hero of a very brutal seduction and murder, he alters his will. The actual murderer might easily have been found by the police, as one of the three young gentlemen was seen with the girl when she was drowned; no one could say which of the three it was, and the matter is allowed to rest. In fact, had the police come on the scene the book could not have gone on, for the uncertainty allows each of the three in turn to be considered the murderer, and in turn to tantalize a melodramatic brother who goes round the pond publicly and continually with a gun, and only wants to shoot the right man in the right place.

Shortly before the old man's death he alters his will again, and gives back the estate to Lionel by a codicil, which is witnessed by an old friend and a doctor, whose daughter has just married the reputed heir for his expectations. Of course, as the doctor was by no means an interested witness, it is strange that he should steal the codicil, and thereby make his daughter the wife of the heir; it is far stranger that no one suspects him, though there was no one else to do it; stranger still that the ousted owner only mutters something about police, but never sends for them; and, perhaps, strangest of all, that the wicked doctor never destroys the codicil, but persists in leaving it about, so as always to be on the verge of discovery. When at last an explosion of chemicals throws it before the right man, the doctor is mildly treated even then. Jan Verner, a comic character, brings the news to the then owner of the land:—

"'That codicil has come to light.'

"John puffed on vigorously, staring at Jan, but never speaking.

"'The thief must have been old West. Only think! it has been hidden all this while (some years) in that bureau of his in my bedroom.

"'What has unhidden it?' demanded Mr. Massingbird in a half-satirical tone, as if he doubted the truth of the information.

"'An explosion did that. To talk of it sounds like an *old stage* trick.'

"'Where's the codicil?' inquired Mr. Massingbird, smoking away.

"'In Matir's charge. You'd like to be present, I suppose, at the time of it's being opened?'

"'I can take your word. This does not surprise me. I have always had an impression that the codicil would turn up.

"'It is more than I have had,' dissented Jan."

All this is rather unnatural, but not so violent as some other transmutations of possession in this book. The reader may say with a certain Sir Henry, who appears at the end with untold gold, "What a very extraordinary course of events seems to have taken place with regard to Verner's Pride! Now your brother's; now not his; then his again, then not his; I cannot make it out."

But we must mention some of the chief characters as well as the plot. The hero, Lionel, is rather like Mr. Carlyle in "East Lynne." He is meant to be perfect, and is only dull; he marries a widow, Sibylla, but is all along making love to and kissing the other perfect character, Lucy. At one time he is certain that his wife's first husband is alive; he thinks it would be unfair to leave her against her will. She, however, remains under a protest that she intends to keep to the real owner of "Verner's Pride," whoever he may be. This brings us to the character of Sibylla. We do not ever remember to have read of a more repulsively vulgar and bad character. She is, however, only meant to be silly and a little unprincipled, though very charming. We should not so much mind her robbing her husband, or even twitting him continually with "her first," but when it comes to her chuckling at him and "chaffing" him for the above-mentioned seduction and murder, which she looks on as a venial peccadillo, it is a little too bad. The real culprit turns out to be her first husband. But it would be impossible to show fully the deep vulgarity of this character without going right through the book, which we have done, but could not conscientiously recommend to any one else. It is not only vulgarity of language and bad English, to which we object, but it is to the whole character, and the evident feeling of the writer, that she has only drawn a frivolous little lady.

The other women in the book are not so objectionable; there is a cold and haughty Lady Verner, a good Lady Mary who makes love to the second hero, a surgeon; also Lucy before-mentioned, who is drawn as the perfection of female character, and who makes rather broader love to the first hero. Then we have a certain Mrs. Peckaby (comic), who wants to be a Mormon, and certain mysteriously bad characters, who are kept in the background throughout the book. We are only told that they *are* bad characters.

The comic characters are better than the serious, because the vulgarity is not quite so apparent here. The second hero is meant to be very comic. Jan is a surgeon, brother to Lionel Verner, who is always very blunt and simple (sometimes to the verge of idiocy), and who always dangles his legs. There is a blacksmith, Peckaby, who laughs at his wife for expecting a white donkey to take her to the New Jerusalem, and a Master Cheese who eats enormously. Each of these characters have their special point of comedy, and they are not in one single instance alluded to without making that point.

It will be seen that the jokes must be very good not to be spoilt by all this repetition.

The Estate of Verner's Pride, after fluctuating between Lionel and his step-cousins, John and Frederick, who are all in turn the owners, finally comes to Lionel. The rough gold-digger, John Massingbird, who was dead for the first volume and a half, finally retires, and does not continue his practice of impersonating his dead brother Frederick, as a ghost running round the pond where the poor girl died. That refined joke produces a good deal of complication in the second volume, and threatens at one time to make out Lionel a bigamist; that is happily prevented by honest Jan garotting the ghost. Then Sibylla is removed, by making her dance to death at a ball, so that nothing remains but the happy marriage of the hero and heroine. This is delayed for a little time by the fact that Lionel is in debt; and there is one pathetic scene where he tells Lucy of it.

"'I am a poor man now, Lucy; worse than without prospects, if you knew all. And I do not know why you should not know all,' he added, after a pause; 'I am in debt. Such a man cannot marry' (!). The words were spoken quietly, temperately; their tone proving how hopeless could be any appeal against them, whether from him, from her, or from without. It was perfectly true; Lionel Verner's position placed him *beyond the reach of social ties.*"

This passage may be taken as a fair sample of the sentimental parts of "Verner's Pride." As we said before, the broadly comic

* Verner's Pride. By Mrs. Henry Wood, Authoress of "East Lynne." London: Bradbury & Evans.

parts are better in style, but monotonous; and we must say that the characters, for the most part, are either insipid, unpleasant, or vulgar. We cannot, therefore, speak in very high terms of this last specimen of the Sensational or Renaissance Newgate School, either as to its plot, its sentiments, or its English.

LIFE IN NORMANDY.*

This is one of those books to which the art-criticism of young Primrose forcibly applies; there can be no doubt that it would have been much better had the author taken more pains. It is sketchy, disorderly, and, above all, too long. These blemishes might, perhaps, have been avoided had the author himself superintended the publication. We gather from the preface that such has not been the case, that the manuscript was "written for pastime in 1848 by a Highland gentleman resident in Normandy, at the suggestion of an honoured friend," and that both the author and his friend have "passed away." Undoubtedly, the task of compression became on this account more difficult, yet it would have been well had it been attempted. The book is a perfect example of the truth of the proverb that a half is often better than a whole. These two volumes would have boiled down into an admirable single volume. As it is, the sweetness is really too much drawn out. Passages of interest are few and far between, and the reader is, on the whole, rather bored. The "honoured friend," we are told, suggested as fitting topics, French cookery, fishing, natural history, farming, gardening, and politics. Cookery appears to have been a leading idea in the mind of the said friend. This work was to accomplish the lofty ambition in which Alexis Soyer failed—was to reform the household pot of the unscientific and wasteful Saxon. In other words, it was to convince the British housewife of the excellence and nutritious qualities of cuttle-fish and limpets. But the bow of Apollo cannot be always bent. A mission so exalted cannot be laboured in without ceasing. Accordingly, amusing sketches of French manners and customs are to relieve such severe instruction, having the same relation to it, to adopt the elegant illustration of the preface, as well cooked "frogs, snails, and maggots" bear to raw salmon. We cannot think that this idea is carried out. The criticism of a plain eater on his pudding recurs to us—"too many plums and too little suet." There is here exceedingly little of the proposed suet, that is, of practical instruction in cookery. On so great a subject an author has most truly the world all before him what to choose, but the author of "Life in Normandy" has chosen precisely that which is worthless. It was open to him to have soared into the highest spheres of the culinary art with the brilliant author of the "Physiologie du Goût," to have reformed the dinners of the middle classes after the fashion of the "Original," or to have instructed the poor by teaching the excellences of the water in which meat is boiled, and the wonderfully good dishes into which a little skill can convert the commonest vegetables. He has done none of these things, and he has conspicuously neglected the last of them. We have a few hints on the higher philosophy of eating not undeserving of respect, but no earnest inquirer of the poorer classes will derive any "instruction" from these pages. They do, indeed, insist on the high argument that slugs and limpets are good to eat, but that is all. The supposed inquirer has, we think, some right to complain of this. It is most true that French cookery might teach many valuable lessons, but these lessons are untaught in this lengthened and useless sermon on the virtues of snails and shell-fish. The ignorant Saxon, his hopes excited by the Preface, seeks for some cheap and nourishing edible, and is proffered a maggot. In plain English the design of the "honoured friend," so far as "benefiting the poor at home" is concerned, has proved an entire failure. The only novel and important culinary lesson we have met with in the book, is the following method of rendering guillemots or sea-crows not merely eatable but even excellent:—

"Take away the whole back, cut up the remainder of your bird, place it in a casserole, and give it five minutes of the fire; empty your casserole into a pan of boiling water, in which you must allow your viand to remain for a single minute, then remove it, replace it in a fresh casserole, and proceed as you would with a salmi of woodcock."

It would hardly convey any very clear idea to the mind of a fisherman's wife to tell her to place a bird in a casserole, and dress it as she would a salmi of woodcock; but the French marquis who gives this recipe adds to it the really valuable information that almost all aquatic birds may be made eatable by cutting away the back the moment they are caught. In the back, it appears, is contained the oil which gives to the bird that rancid taste commonly supposed to be an essential characteristic, but which in reality is only an accident to be avoided by the simple means above mentioned. The following defence of the continental order of a dinner, though certainly in no way instructive, is ingenious and amusing.

"You make a great mistake," says an enthusiastic French marquis, addressing an ignorant Englishman, "by your arrangement; you reserve your palate for the strong food to the last, eating your choicest *plâts* when the stomach is voracious, and you swallow the best exertions of your cook so quickly, that you neither do justice to him nor to yourself. Now, by beginning with a small bit of roast, you imbibe the solid nutriment at a moment when you can best bear this coarser viand; your fish follows, to fire the palate with its mild and delicate juices, and prepare you fully to feel and appreciate the exertions and talents of your cook."

Equally characteristic, and equally calculated to edify "the poor Scotchman's wife," whose culinary education, according to the preface, was the object of the book, is the following description of a French breakfast:—

"Half a dozen (oysters) were offered to each person, and Hope bolted his nearly as fast as the Marquis. He had determined to follow the lead of so able a guide, at least so far as he was able. A plateful of eggs followed the oysters. The Marquis took two; Hope contented himself with one. This was washed down with a little claret, largely diluted with water, and then a dish of côtelettes was handed round. The same proportions were continued by the two Englishmen; that is to say, they helped themselves to one côtelette, the Frenchman to two. In the next dish were the two sand-eels, fried according to the rules so clearly laid down by the Marquis, and of these Hope ate quite as many as his leader; indeed, so amply, that when two roast chickens were put on the table, he could only venture on a very moderate portion, as he kept a small corner of his appetite for the crabs and prawns. These followed the chickens; then came a dish of fried potatoes, and after them two pots of preserves. Of all these the Marquis ate, helping himself to several spoonsful of the preserve, which he swallowed without bread. Some excellent bottled cider was produced and drunk after the sweets; then the fruit and white wine, a sort of vin de Grave; and the breakfast at last concluded with coffee and the usual glass of brandy."

What a meal! and yet the description is not exaggerated, as any one can testify who has ever breakfasted, or rather who has ever observed the natives breakfasting in a French café. Our refined neighbours are fond of sneering at the heavy feeding of the Anglo-Saxon, but the fact is that at dinner they are a fair match for us, while at breakfast no class of society on this side of the Channel can approach them, unless it be Oxford undergraduates just out of training.

Now this sort of thing is well enough in its way; but we must ask, in great wonderment, how it is calculated to improve the scanty dinners of the "poor Scotchman." And, as we said before, there is nothing more practical than such sketches until we get to slugs. Our opinion is that Englishmen, however poor, are just as likely to be induced by this publication to relish maggot soup as they are likely to be made able to eat breakfasts, such as that of the Marquis and his two English friends. To go through the *farrago libelli* given in the preface, "fishing," as here described, does not occur to the English reader as a pursuit partaking in the remotest degree of the nature of sport, and, therefore, he will hardly care for it. "Natural history, farming, and gardening," are not treated of at all; and we have nothing more intimately connected with "politics" than a young reprobate's account of his fighting at the barricades, and of his wanderings over the country afterwards. The best part of the book consists in the reminiscences of the Highlands; and of these the most striking is the description of a great storm in the north, and of the wreck of hundreds of boats away at the herring-fishery. And, *àpropos* of this, we have at last a practical suggestion, and one of great value. The sea that breaks on the coast of Normandy is as wild as the seas of the North. Harbours are there even scarcer than with us, for "they are all half-tide harbours, and the boats are sometimes obliged to stand off and on for hours before they dare run in." And yet we are informed that the French fishing-boats are very seldom lost,—the reason of which would appear to be "that all are decked, the smallest as well as the largest, and it is wonderful how very few lives are lost on this coast. We never hear in this country, as with us at home, of a whole fleet of boats being caught in a gale and the half of them foundering in a heavy sea, and this I attribute to the boats being all decked." In confirmation of this remark, the author assures us that in the Northern storm which he witnessed "all the loss of life and property arose from the boats being open; for every boat that was lost either foundered at the nets or was swamped in the sea." And as a contrast to this, the boats come into the Norman harbour "taking in the green seas clean over all; but then they were up again like a bung. In the nasty cross sea that was then running no boat could keep dry, and an open boat would have filled and gone down in five minutes; whereas these fellows got their feet wet, and had to hold on now and then, and there was the worst of it." We are not sufficiently versed in nautical affairs to express a confident opinion on such matters. But there does appear to be much force in the views here urged; and they are well worthy the attention of those who so lately have been engaged in relieving the misery which one of these fearful storms has brought on the Western Highlands.

"Life in Normandy" is hardly susceptible, from its nature, of any proper criticism, but the above remarks will have sufficiently indicated our opinion of its merits. Considered with regard to the special object suggested by the "honoured friend," and set forth in the foolish preface, it is of course an entire failure. Looked at more generally it is an attempt in a very difficult style of literature—a style in which perfect success has perhaps been only achieved by White's "Natural History of Selbourne." And we pay it a high compliment when we say that it has failed in this attempt mainly from its diffuseness. Better arranged and half as long, it would have been—not indeed a work of genius like the "History of Selbourne,"—but certainly an agreeable and not an uninstructive publication.

THE STUDENT'S GUIDE TO THE UNIVERSITY OF CAMBRIDGE.*

We do not quite know what to make of this little book. From the names of many of the contributors and the titles of their papers, we were at first inclined to anticipate a series of philosophical discourses upon the studies of Cambridge; but the contributors themselves take care to warn us against any such expectation. They tell us that they merely give information as to the actual state of things at the University, without expressing any opinion as to whether that state is good or bad. This leaves the book not without a certain delicate flavour of advertisement. It rather unpleasantly reminds us of those prospectuses of schools which occasionally appear in the columns of newspapers, but which we had certainly thought were quite below the dignity of the University. Perhaps, indeed, the University is seriously going to copy the example of the reverend gentlemen who request their young friends to bring up a set of linen and a silver spoon and fork. It has for some time been customary to publish elaborate notices of the attractions offered to freshmen in the way of exhibitions, and it may be as well to afford information of the cheap terms on which the young gentlemen will be provided for when they come up. From this point of view, we are not surprised to find in one of the papers careful directions to freshmen to bring with them pillow-cases, towels, and breakfast cloths; they are told what they ought to pay for cap and gown and surplice; they are presented with three different estimates of the amount to be spent in crockery, and receive a judicious warning to pay for these articles "in *cash*, as discount is then got, and open running accounts with tradesmen are avoided;" and another warning, equally judicious, if rather obvious, not to buy or sell horses. In one article by the editor, Mr. Seeley, the aspiring student receives careful advice as to the choice of a college, and in another he will find a full list of the various torments that beset his path in every harrowing form of examination from his matriculation to his degree. All this is perfectly unobjectionable, and as far as we can see, the facts are accurately and carefully given. The only question we would raise is whether it can be worth while to write it all down and print and publish it. If there is really any advertising animus, it is a singularly ineffective form of advertisement; whilst, if it is meant *bonâ fide* as a work likely to be useful to a freshman, he can get all the information much more easily, quickly, and appropriately by applying to his tutor or any man of ordinary experience at the University. In fact, after long meditation, we have only found one class of society likely to profit by this part of the work; a country schoolmaster, who wishes to impress parents with his familiarity with the University, may certainly gain from it a morbid familiarity with some of the small details of university life and a few well-expressed commonplaces about education and the choice of a college.

The greater part of the book, however, is taken up with careful accounts of the different courses of study encouraged at the University. This is, perhaps, liable to the same objection of being rather needless; it is either too much or too little; the facts accompanied by an intelligent criticism from such good judges as the authors of some of these papers would be of great interest; the bare facts are nearly as dry reading as that lively work, the "Cambridge Calendar," and not more instructive. Moreover, if any student wants to find them out, he can generally get them much better from living authority. Notwithstanding this, there is certainly food for reflection in them. The contrast between those studies which have thoroughly taken root and become an essential part of the Cambridge system, with those newer studies which drag out an artificial and stunted life, is one of the most striking facts in the volume. Mr. Campion and Mr. Burn describe the usual course of study for the mathematical and classical triposes. Mr. Burn's paper on the classical tripos is most carefully worked out; it gives a great mass of information as to books to be used, and is, on the whole, in our opinion, the best paper in the book. There is, in fact, only one objection to it. It reminds us of an old and true Cambridge story of an unfortunate youth who came up to be admitted as an undergraduate. The College register notes the fact with the melancholy and significant addition, "*sed, Euclide viso, cohorruit et evasit.*" We do not feel quite certain that a glance at Mr. Burn's formidable list of authorities to be consulted and work to be done may not produce a shudder and a bolt in some rash aspirant to classical honours. Both this paper and Mr. Campion's, however, produce one consolatory effect. They have the thoroughly business-like and confident tone of guides who know the ground. There is a good straightforward path marked out for the student, from which he has no business and will have no temptation to stray. The feet of more than one generation have worn the track, and there can never be a question whether he is advancing towards the mark or away from it. Above all things, it is quite clear that he must restrain any tendency to wander at pleasure over the boundless fields of human knowledge. This is by no means the case for the wretch who, despising the ancient ways, plunges into the wilds of moral or natural sciences. The definite prospect which the mathematician or classical scholar has before him, in which each year and each term is marked with an appropriate study, and each study is confined within strict and narrow limits, vanishes hopelessly. He looks over a confused and hazy panorama, where it is very difficult to say what possible provinces of study may not turn out to be useful. It seems as if Cambridge had suddenly been startled out of all propriety at her own narrowness, and had set up these two new triposes as a kind of receptacle for every unaccommodated branch of human knowledge. Whatever can call itself a science, may here find a place of honour for its votaries. Thus the unfortunate wretch who seeks for distinction in the natural sciences has the pleasant prospect of acquiring a knowledge of chemistry (including the laws of heat and electricity), of mineralogy, of geology (including palæontology), of botany, and of zoology (including comparative anatomy and animal physiology). As Professor Liveing justly says, "This is an enormous range, and, without some limitation, quite beyond the powers of any student. Any one of the subjects might be the study of a life." The same, he adds, might be said of astronomy or philology. But this by no means answers the objection to the examination as it now stands. In the mathematical tripos the course is strictly marked out. The candidates have a perfectly definite and intelligible course before them; moreover, it is a course not beyond the powers of the first men thoroughly to explore. The senior wrangler will not have a single question asked him which, if taken by itself, he would be unable to answer. But this is far from being the case with such an examination as we have now described. The limits are so vaguely and uncertainly defined that no man can be expected to be ready at every point where the examiner may attack him. If he has devoted himself, for example, to chemistry, he will have quite enough to occupy his whole time and energies without attending to comparative anatomy. But this at once introduces an element of uncertainty which goes far to make the examination useless as a comparative test of merit. It is clearly impossible to say, if A gets 100 marks for physiology, and B 150 for botany, whether A or B is the best man. It is as if, instead of the ordinary University boat-race, Oxford rowed in a man-of-war's gig on the ocean and Cambridge in an outrigger on the Cam. There is no common measure to be obtained. It is true that, by a kind of rule of thumb, this may be partially corrected. A rough system of justice may be carried out by distributing marks in certain arbitrary proportions to the different subjects. The papers set may practically confine the portions of the various studies in which knowledge is to be tested. But if the practical difficulty is more or less evaded by this means, another objection remains which goes more to the very principle of the examination. An examination such as we have described must, to a very great extent, be one of cram. Cram may be shortly defined as the disease engendered by an examination which merely tests knowledge of facts instead of skill in applying principles. In mathematics, which is better adapted than any other study for a fair examination, it is easy to secure a due proportion of questions which merely test the memory and of those which test the power of working out new problems. But it is hard to see how this can be done effectually in such a science as botany or geology. It is very difficult, if not impossible, to invent any questions in those sciences which shall try men's power of original investigation as distinguished from their mere knowledge of the facts. And we think it will be seen by any one who takes the trouble to look at such papers as have been set in the natural science tripos and elsewhere, that they are, as a rule, capable of being answered by any one who could acquire a certain number of technical names and rules by memory; and therefore incapable of being applied as a sensitive test to discover men of real ability. It is perhaps possible to remove these defects. Time and experience may show that a good examination in natural sciences is not an imaginary desideratum. At any rate, there can be no doubt of the advantage of encouraging such sciences in the Universities. If we turn to the moral sciences, as they are called, we find it hard to speak so hopefully. They are liable to the objections we have made to the natural sciences, and they have special faults of their own. We do not dispute, indeed, the advantage of such studies as Political Economy or Jurisprudence. Neither do we dispute the advantage of studying the Philosophy of History (including, as an aside, a knowledge of the facts of history as referred to in a long list of speculative works), although we would rather ask the questions than have to answer them. But we confess to grave doubts whether the study of Formal Logic, of Moral Philosophy, and above all of Mental Philosophy, is not time thrown away. We are aware that this sounds heretical, that Sir W. Hamilton would have considered us as grovelling spirits, and that lads at Edinburgh and Glasgow are taught to learn the jargon of "Contradictory Inconceivables" and of "Objective-objective theories of Perception," as if it all really meant something. We admit that if a grown-up man likes to study the history of German Metaphysics, a paternal government has no right to interfere, and he may even be doing well in studying a curious part of the history of human thought, or rather of the confusion of all human thought. But we have a distinct objection to encourage young men to get up Kant's "Kritik der Reinen Vernunft," under the delusion that their wisest course will not be to clear their minds of it afterwards as soon as may be. When there is such a thing as Metaphysical Science, it will be time enough to teach it. When any rules are discovered in it, or any definite results are arrived at, no doubt the University ought to disseminate the knowledge of them. Meanwhile we conceive that it is sheer waste of precious time to induce young men to wander over the wearisome wilds of Aristotle, Descartes, Locke, Kant, Sir W. Hamilton, and the other authors recommended. If a clever lad likes to sharpen his mind by polishing it against this very hard material, by all means let him, but don't profess to teach it as a moral "science."

Besides the papers we have mentioned there is a very able paper, by Professor Abdy, on the Law Degree, which merits more notice than we have space to give it; others on medical studies and the theological examinations, and some useful information as to examinations for the Indian Civil Service, by Mr. Latham, of Trinity Hall, and on the local (or "non-gremial") examinations, by Mr. Roby, of St. John's. In many respects they confirm what we have already said. The art of examination has been carried to very high perfection at Cambridge. But it has chiefly been applied to the old University studies, classics and mathematics; it will take the labour of many acute minds for many years before it will be equally applicable to other sciences, if indeed that result is ever obtained. It would be easy to point out many failings (Mr. Latham has noticed some) in the Indian Civil Service examinations and others, owing to this cause. As, however, it is clearly of vital importance to the University that more attention should be paid to the newer studies than has hitherto been done, we fully expect that the same ingenuity which has constructed such delicate scales for weighing classical and mathematical attainments will in time succeed in inventing similar machinery for other purposes.

A SECRET MISSION IN 1808.

THE escape of the Marquis Romana, with the Spanish army under his command, from the Danish Island of Fünen, where they were practically prisoners of Bonaparte, was an object of primary importance to Sir Arthur Wellesley before undertaking the Peninsular campaign. But four agents who had been employed by the British Government to communicate with the marquis had been discovered upon their landing on the Continent and shot. It was necessary to provide a new volunteer, and one was found in the Rev. Mr. Robertson, who for some years had been a member of a Benedictine monastery established at Ratisbon for the education of Scottish youth. This book * contains the narrative of his mission; and as well from the danger of the undertaking, as the earnestness with which it is narrated, the volume is well worthy of perusal. Mr. Robertson had returned to his native country, and was resident in Ireland in 1807, at which time the Duke of Richmond was Lord-Lieutenant. The Duke had visited the Benedictine house at Ratisbon, and Mr. Robertson waited upon him to express his desire of being employed in the public service, in any way, consistent with his profession, that might conduce to the general good. Subsequently he renewed his offer to Sir Arthur Wellesley, then Irish secretary, who, shortly after his return to England, communicated with Mr. Robertson, requesting his attendance in London. After a delay of some weeks, a letter was put into his hands desiring his attendance at the house of Sir Arthur, in Harley-street. "Sir Arthur," he says, "broached the business with his usual affability, which immediately sets at ease those who have the honour of treating with him. 'You tell me, Mr. Robertson,' said he, 'that you are a man of courage.' 'Try me, Sir Arthur,' I replied. 'Well, that is what we mean to do. Will you assist in rescuing the Spanish army, now detained by Bonaparte in the north of Germany? Will you carry proposals from the British Government to the Marquis de la Romana, the commander of that army?'" Mr. Robertson expressed his willingness to do so with the utmost alacrity, and an appointment was made to meet Mr. Canning at the Foreign Office. His embarrassment in the presence of the Minister made Mr. Canning doubt that he was fitted for the mission; but he pressed the grounds of his hope so strongly, and manifested so eager a desire to undertake the task, that it was finally confided to him.

We cannot follow Mr. Robertson through the perils of his journey. His first difficulty was to discover where Romana was, and his next to get to him. At length he discovered that he was on the island of Fünen, and providing himself with sample boxes of cigars and chocolate, he proceeded to the island in the character of a merchant travelling for orders. Driving to the hotel at which the marquis had his headquarters, he was fortunate enough, after much persuasion, to obtain part of a double-bedded room, and, the next morning sent by a French valet an open letter to the marquis, stating his desire to present to him samples of some articles he dealt in, and to solicit from his Excellency facilities for the prosecution of his further journey. He was no sooner closeted with the marquis than he thus opened his mission:—

"'Señor, you see before you a stranger who comes to put his life in your hands. I am a Catholic priest, chosen, perhaps, partly on that account for the mission I am about to explain, as it was imagined that a Spaniard might be disposed to put confidence in the word of a Catholic clergyman. I am directed to your Excellency by the English Government; but let me say at once, I have no papers whatsoever to deliver to you, so that, in the event of my being arrested, you cannot be compromised in the least degree; and, moreover, I desire no writing from you. My message is merely verbal; be your answer the same. All that I can offer in the way of credentials is the knowledge I have of certain particulars of your personal intercourse with Mr. Frere, whom you will remember as our Ambassador in Spain. He desires me to remind your Excellency that the first time he had the pleasure of dining with you was at Toledo. After dinner you withdrew together into a cabinet containing books. In this cabinet there was one picture. That picture was by Mengs, and represented St. Peter and St. John at the gate of the Temple.' 'All most true,' exclaimed the General, his countenance assuming the most friendly aspect. 'Would your Excellency recognize Mr. Frere's handwriting?' I continued. 'Methinks I should!' Here I produced a very small fragment torn from a memorandum I had received from Mr. Frere, which was immediately recognized by the marquis. Having thus established my credit as a confidential agent of the British Government, I added that 'Mr. Frere had assured me I should find in the General a man of strict honour and high principle, and an enemy to French tyranny and oppression.

"'The message,' I continued, 'with which I am charged, is to announce to your Excellency that England is ready to convey you and the troops under your command to any country you may name. We ask nothing of you in return; you shall be free from any engagement to fight for us; in that respect act as you think proper. We simply wish to put it in your power to extricate yourself from your present position. Our transports shall attend your orders on any part of the coast. You may select South America, or Canada, Minorca, England, or Spain, as your destination; we are ready to forward your views, whatever they may be. If you desire a treaty in form, the British Government has authorized Mr. McKenzie to conclude one with you. He resides at Heligoland at present, and will there treat with any officer you may depute.

"'Further, although we do not pretend to dictate to the Spanish nation what course it ought to pursue, yet if resistance to the invader be resolved on, we are ready to co-operate with all our might. Our cavalry were never better mounted, nor our artillery better served. We long for an opportunity to try our strength on land with the French.'"

The marquis took time for reflection, during which Mr. Robertson employed himself in sauntering through the town of Nyborg. On his return to the hotel he was sent for by the Marquis, who asked many questions as to the state of affairs in Spain, of which he and his officers had long been kept wholly in ignorance. Mr. Robertson told him of the rising in Galicia and the Asturias, and the arrival of a Spanish deputation in London to solicit the aid and protection of the British Government. This news was welcome, but the marquis was still undecided; and Mr. Robertson took his leave of him, and proceeded to the shore, hoping to attract the attention of the British fleet, which lay within sight of the town. While waving his white handkerchief, as if accidentally, he was observed by a Danish militiaman, who lay couched on the grass, with his musket beside him. Putting a good face on it, he walked up to him, and asked him how he could manage to get across the Belt without falling into the hands of the English. The Dane, who suspected him, referred him to a fisherman, who was the owner of several boats, and who lived in the next cottage. Proceeding thither, he fell into the hands of six other Danes, who made him prisoner, and carried him to their officer. This gentleman was a Hanoverian, whom Mr. Robertson had already met, and by whom he was treated with courtesy. The officer, however, could not discharge him without taking him to his colonel; but the colonel, on sight of Mr. Robertson's passport, at once dismissed him, with apologies for the inconvenience he had been put to. This delay compelled Mr. Robertson to return to the hotel, when the landlord vehemently pressed him to sup with him. On his way to his room he passed the bottom of the staircase, which the marquis and some of his officers were at the time ascending; the marquis leaned over the banisters, and in a half-whisper and broken English, said, "Come to me—morrow morning—eight o'clock." This appointment was kept, and the marquis informed him that he had finally resolved to accept the offer of the English Government.

Let us now leave Mr. Robertson to effect his return, while we narrate from his book the manner in which Romana effected his escape with his army. He had some time before written to Bernadotte, proposing that he should come to Nyborg and review the Spanish troops. Bernadotte consented, but without fixing the time. Under pretence of a general review and inspection, the marquis collected as many of his troops as he could at head-quarters. Mr. Robertson lost no time in getting back to Hamburg, and reporting to Mr. M'Kenzie, who was at Heligoland, the successful accomplishment of his mission, and requesting that instructions might be sent to the commanders of the British fleet in the Baltic to hold themselves in readiness to communicate with the Spanish General. The marquis having collected all the troops he could, wrote again to Bernadotte, urging him to come and review the army. Bernadotte collected 3,000 men and marched for Nyborg with all possible expedition. La Romana, hearing that he was on his way, invited the principal inhabitants to a grand entertainment, and after déjeûner surrounded the hotel with troops. The Spaniards, to the number of 10,000, immediately marched down to the harbour, seized every boat and bark they could find, and signalled the British fleet for more boats. When all the troops were embarked except 300, Bernadotte arrived—too late. The handful of Spaniards who remained were about to resist him when their colonel, riding in front of them, showed the hopelessness of the struggle they were proposing to challenge, and desired them to lay down their arms. They reluctantly consented. The colonel

"Then dismounted, and, taking the pistols from his holster, shot his charger, ejaculating, 'But, as for thee, they shall never mount thee; and me,' he continued, putting a pistol to his head, 'they shall never disarm.'"

La Romana sailed with his army for England, and subsequently for Spain, where they did good service in the field. The rest of the book is occupied with Mr. Robertson's return to England, in which he ran as much risk as in getting to Fünen. Our notice

* Narrative of a Secret Mission to the Danish Islands in 1808. By the Rev. James Robertson. Edited from the Author's MS. by his nephew, Alexander Clinton Fraser. Longmans.

Digitized by Google

has already exceeded our limit. We can only say in addition that we have read few books more interesting than Mr. Robertson's narrative.

Mr. Bohn proceeds rapidly with his new edition of Lowndes' Bibliographer's Manual,* which he hopes to conclude before the end of the present year. The nature of the work will best be described, for those who may not be acquainted with it, by an extract from the title-page. It contains "An account of rare, curious, and useful books, published in or relating to Great Britain and Ireland, from the invention of printing; with bibliographical and critical notices, collations of the rarer articles, and the prices at which they have been sold in the present century." A glance at the article "Shakespeare" will suffice to show the indefatigable labour which Mr. Bohn has expended on the present edition of this work.

No better guide through the wars of the nineteenth century can be found than Sir Edward Cust, who in the two volumes before us† has given a full and clear summary of military and naval events from the year 1800 to 1809.

Professor Massé's "Grammatologie Française"‡ will be a valuable aid to more advanced students of the French language. A Key, by the same author, is in course of preparation.

Messrs. Virtue have issued No. 141 of their Rudimentary and Scientific Series.§ The present volume contains three articles:—1. On the Motion of Camphor on Water; 2. On the Motion of Camphor towards the Light; 3. History of the Modern Theory of Dew. The present volume maintains the character of the series.

Volume II. of "The Museum"‖ is full of merit.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 20th April, 1863.

Architects—At 8 p.m. "On the Crypt and Chapter of Worcester Cathedral." By Rev. R. Willis, F.R.S.

Asiatic—At 3 p.m.

Medical—At 8½ p.m.—"On the Laryngoscope." By Dr. G. Johnson.

Tuesday, 21st April.

Anthropological—At 7½ p.m. 1. "On the Permanence of Type." By Dr. Julius Schvarez. 2. "The Relation of Man to the Lower Animals." By C. S. Wake, Esq.

Pathological—At 8 p.m.

Royal Institution—At 3 p.m. Professor Marshall, "On Animal Mechanics."

Civil Engineers—At 8 p.m. 1. Discussion on Mr. Brunton's paper, "On the Scinde Railway." 2. "Account of the Coffer-dam, the Syphons, and other Works constructed in consequence of the Failure of the St. Germain's Sluice of the Middle Level Drainage." By Mr. Hawkshaw, C.E., President.

Statistical—At 8 p.m. "On the Direct Imperial Expenditure for the Colonies." By F. Purdy, Esq.

Zoological—At 9 p.m. Dr. Sclater, "On the Known Species of Pheasants." Dr. Hartland, "On Birds collected in East Africa by Captain Speke."

Wednesday, April 22.

Meteorological—At 7 p.m.

Royal Society of Literature—At 4½ p.m. (Anniversary Meeting.)

SECRETARY.

Mr. Augustus Browne.

OFFICES—17 b, Great George-street, Westminster, London.

This Company has been formed for the purpose of affording Southampton, the largest postal steam-packet and passenger port in the kingdom, the accommodation of a large and well-arranged first-class Hotel, on a similar scale of completeness to those which have already been established and conducted elsewhere with such signal success.

The town of Southampton, with its immense passenger traffic to and from the East and West Indies, China, Australia, America, the Continent; and, indeed, to all parts of the world; its rapidly-increasing commercial importance; its charming neighbourhood and extensive waters, so attractive to visitors and yachtsmen, will not only be much benefited by the establishment of the proposed Hotel, but the shareholders in the undertaking have every prospect of a most valuable investment.

An unexceptionable site, peculiarly suitable to the purpose, situate between the Royal Pier and the Docks, and immediately contiguous to the London and South-Western Railway Station, has been secured by a provisional agreement. It possesses the advantage of a frontage to the great thoroughfare to and from the town and railway, and commands a fine view of the Southampton Water and the New Forest, which view, from the nature of the holding of the property lying between the site in question and the river, can never be interrupted.

The hotel will be of a plain but elegant elevation. It will be handsomely furnished, and rooms will be set apart for the use of the nobility and gentry engaged in yachting, and superior accommodation afforded for the numerous passengers passing through Southampton, and other visitors.

There will be two entrances, one facing the Southampton water, and the other Oxford-street—the principal thoroughfare from the railway to the town. Ample accommodation will be provided for families, and for passengers after a long homeward voyage. It is anticipated that its position will attract a large commercial connexion, and special arrangements will be made, both in the construction of the hotel itself and in the future management, to provide the necessary requirements for this particular class of business.

There will be a fixed moderate tariff to enable visitors to have a complete control over their daily expenditure, and a table d'hôte will be provided, of which the officers of various steamers, as well as many of those whose business avocations lie in the town, while their residences are in the country, will gladly avail themselves.

Provisional arrangements have been made for the purchase, at a valuation, of an old-established brewery, with a lucrative trade, and numerous houses attached to it, which will secure an immediate dividend to the shareholders. The valuation of this brewery is to be made by two indifferent persons, or their umpire, in the usual way, and one-third of the purchase-money is to be paid in the shares of the Company.

Large and regular dividends have hitherto been paid to the Shareholders of both Hotel and Brewery Companies; so that by connecting the two branches of business under one management, combined with the great advantages offered by the extensive passenger and shipping trade, and special attractions of the town and port of Southampton, the present undertaking promises to be eminently successful, and the Directors confidently recommend it as being calculated to afford a safe, as well as a highly-remunerative investment.

Interest at the rate of 5 per cent. will be allowed upon all calls previous to the opening of the Hotel, and upon shares paid in advance or fully paid up.

A copy of the Articles of Association may be seen at the offices of the Company.

There will be no fees paid to promoters beyond the legitimate expenses incurred by them; and, in the event of no allotment being made, the deposit will be returned free of deduction.

Application for shares to be made in the annexed form to the Brokers, Solicitors, or to the Secretary of the Company, 17b, Great George-street, Westminster.

Form of Application for Shares.

To the Directors of the Southampton Imperial Hotel Company (Limited).

Gentlemen,—Having paid to the ——— Bank the sum of———, I hereby request that you will allot me ——— Shares in the above-named Company; and I hereby accept such Shares or any similar number that may be allotted to me, and agree to pay the calls thereon as they may be made, and to sign the Articles of Association when required.

I am GENTLEMEN, yours obediently,

(Originally established A.D. 1667.)

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

BIRMINGHAM—Manufactory and Show Rooms, Broad-street.
Established 1807.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

THE NEW STUDIO EASEL,

VERY SIMPLE AND EFFICACIOUS.

WINSOR & NEWTON,

MANUFACTURERS,

38, RATHBONE-PLACE, LONDON.

THE PATENT AMERICAN KITCHENER, with recently Patented Improvements,
IS THE CHEAPEST AND MOST ECONOMICAL COOKING RANGE EVER OFFERED TO THE PUBLIC.

It saves half the fuel usually consumed, cures smoky chimneys, requires no brickwork setting, is fully equipped with cooking utensils, and MAY BE SEEN IN OPERATION DAILY at

J. H. RIDDELL'S AMERICAN STOVE WAREHOUSE,

It contains upwards of 500 Illustrations of his Illimited Stock of Sterling Silver and Electro Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room and Cabinet Furniture, &c., with Lists of Prices, and Plans of the Twenty large Show Rooms, at 39, Oxford-street, W.; 1, 1a, 2, 3, and 4, Newman-street; 4, 5, and 6, Perry's-place; and 1, Newman's-yard, London.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA,
COUGHS, RHEUMATISM, GENERAL DEBILITY,
DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING,
AND ALL SCROFULOUS AFFECTIONS.
Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., F.R.C.P.L.,

Physician to the British Embassy at Paris, &c.

"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Dr. LETHEBY,

Medical Officer of Health to the City of London, &c., &c.

"It is, I believe, universally acknowledged that Dr. de Jongh's Light-Brown Cod Liver Oil has great therapeutic power; and from my investigations, I have no doubt of its being a pure and unadulterated article."

EDWIN CANTON, Esq., F.R.C.S.,

President of the Medical Society of London, &c., &c.

"For several years past I have been in the habit of prescribing Dr. de Jongh's Light-Brown Cod Liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

Dr. LAWRANCE,

Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

PUBLIC OPINION.

A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

MR. J. A. TINNE IN THE CHAIR.

THE SECRETARY READ THE REPORT AS FOLLOWS:—

"The directors have great pleasure in informing the shareholders that the arrangements for the conversion of the bonds and old preference stock have been carried out with the most complete success; every bond has now been settled, and ample funds have been provided for the completion of the railway in accordance with the colonial ordinance, so as to secure the cancellation of the government mortgage. The company stands virtually in the enviable position of being without a single creditor.

"In pursuance of the scheme which had been devised, the affairs of the company were brought to a point on the 30th of September, 1862, all interest on the one hand, and traffic receipts (which for the three months ending 30th September were £4,655. 12s.) on the other, being brought into construction account; and the general balance-sheet to that date shows that the result of this arrangement was to place £40,222. 4s. 1d. in stores and cash at the disposal of the directors for working the railway and completing its extension to Mahaica.

"Following this general balance-sheet to the 30th September are the general balance-sheet and statements of capital and revenue accounts for the three months ending 31st December, 1862; the capital account exhibits the further progress which had been made to that date in the allotment of the new preference stock, and the further sum required for the purposes of the company has since been subscribed.

"The revenue account shows a net profit upon the quarter of £3,790. 17s. 11d., but the shareholders must bear in mind that this embraces the period of the largest returns, and that the rate of working expenses is proportionately light; the receipts of the railway, however, continue to exhibit improvement, and as it is morally certain that they will amply provide in future for the preference dividends, and leave a fair margin, the directors have no hesitation in disposing of the balance above alluded to; the sum required for dividend on the preference stock to the 31st of December, 1862, is £1,605. 4s. 5d., leaving £2,185. 13s. 6d., out of which the directors propose that a dividend of 1¼ per cent. should be paid on the original stock, which will absorb £1,688. 15s., and leave £496. 18s. 6d. to be carried forward to the credit of the revenue account of the current half-year.

"On the 9th March the manager writes:—'I am glad to say that our traffic receipts continue to compare favourably with last year, and that the trains are running punctually, and without accident. I made a beginning last week at Lancaster with the new embankment, and at Hope and Dochfour with bridges across the side-line trenches for the extension line to Mahaica.'

"The members who now retire by rotation from the general committee are H. Bruce, Esq., and G. H. Loxdale, Esq.; and from the local committee, Thomas Garnet, Esq.; all of whom offer themselves for re-election."

The Chairman, in moving the adoption of the report and accounts, said it was highly gratifying to the board to meet the shareholders on this occasion. It afforded a pleasing contrast to former meetings, when he considered how often they had met in this place and left the meeting sick of hope deferred. He was sure they must all feel gratified at the position of the company, and at the receipt of a dividend. Their traffic in goods and passengers was daily increasing. He hoped before the end of the present year that the line would be completed in all its integrity, when its resources would become fully developed. The reports of the manager were extremely favourable as to the new extension, which was rapidly progressing, and most of the materials were on the spot. He trusted that all parties in the colony, seeing the strenuous efforts which were being made to fulfil all obligations, would stand firm by the company. He thought credit was due to the deputy chairman (Mr. Chambers) for his exertions to promote the financial prosperity of the company, and he would request that gentleman, in seconding the resolution, to make some observations on this subject. Before concluding, he had pleasure in reading an extract from the manager's letter of the 23rd of March by the packet just arrived:—"The works for the extension are going on favourably, and I hope in the course of a couple of months to be ready to open up the Clonbrook (1½ miles), so as to get the passenger traffic from the villages of Ann's Grove and Bee Hive. The embankment across Lancaster is also progressing favourably; the contractors promise to have it finished in the course of ten days or a fortnight; when that is done I intend to go on with the work at Mosquito Hall, and by the time we finish there I hope to have possession of the remainder of the land." You will see from the returns that the traffic is still looking up.

Mr. Chambers, in seconding the motion, said it would be readily believed that he quite participated in the satisfaction expressed by the Chairman, for it would be idle for him to say, in the presence of many of the gentlemen attending the meeting, that there had been no difficulties to encounter in bringing the affairs of the company to their present position. Still, however, his opinion of the value of the undertaking had never changed: he knew that the railway was calculated to confer great advantages upon that district of the Colony through which it passed; and he therefore felt, that when all matters were judiciously arranged, it could not fail to be profitable to the shareholders also.

The company had been much hampered by a multitude of claims. There was, first, the colonial mortgage; then there were the bonds, and then there was the old preference stock. The difficulty with respect to the first claim was removed by the liberality of the colonial legislature. The colony said, "You finish the line, and we will give up our claim." A liberal policy was usually a wise policy, and he (Mr. Chambers) was strongly of opinion that the course thus taken by the colony formed no exception to the rule. On then looking into figures, this remarkable coincidence presented itself, that by bringing back the capital to the amount proposed when the railway was projected, it was found that all that was necessary might be done. From this sprang the application for an ordinance to issue £115,000 of preference stock, making, with the £135,000 original stock now existing, the original capital of £250,000.

Everything, he was happy to say, had successfully been accomplished. All the bondholders had been settled with; all the old preference stock had been converted, except £180, held by three persons, two of whom were dead, and their representatives had not yet been traced.

The liberality of the public had provided the funds for completing the railway; all the rails were shipped and paid for except 250 tons, which were about to be dispatched. The company was entirely free from debt, and under these circumstances there was no hesitation in disposing of the profit exhibited by the revenue account. He had therefore great pleasure in seconding the resolution "that the report now read and the accounts laid over therewith be received and adopted, and that the same be printed and circulated among the proprietors."

This resolution was carried unanimously, as well as a resolution "that a dividend of 1¼ per cent. (being at the rate of 5 per cent. per annum) out of the earnings from the 30th September to 31st December, 1862, be paid on the original stock of the company."

Mr. H. H. Maude applied for some information as to the rolling stock, which was furnished by the chairman; and in reply to an inquiry why there was no resolution for the payment of the preference dividend, he was informed that this dividend was made a charge upon the earnings of the railway by the colonial ordinance, which further provided that if the funds to meet it were inadequate in any half-year, the balance would be a lien upon future revenue.

Messrs. Bruce, Loxdale, and Garnett were re-elected as directors, and Mr. Bankart as auditor; and a resolution that the best thanks of the company be given to the chairman of the General and Demerara Committees, and to their co-directors, to the auditors, and also to the secretary, general manager, and other officers, for the zealous attention which they have devoted to the interests of the company, concluded the business of the meeting. By order,

V. PERRONET SILLS,
Secretary.

THE FREEDOM OF THE SEAS.

IT is not strange that the conduct of the American Ambassador in this country should excite the warmest censure. Upon his own showing, Mr. Adams has been guilty of the gravest indiscretion; even if he has not, as was first supposed, committed the serious impertinence of issuing trading licences to British ships. The violent and reckless seizures of British ships trading in the vicinity of the Gulf of Mexico are aggravated very considerably by the fact that the American Minister here ventures to assist American ships to draw a profit from the outrages committed on the British flag. His line of conduct puts a very grave complexion on the acts of the blockading squadron; containing, as it does, a tacit avowal that no mere honesty of purpose—nothing, indeed, but a pass from Mr. Adams—will protect an outward-bound ship from wanton seizure. If the Minister of the North thinks it right that integrity should be protected by a permit against Federal men-of-war, he virtually acknowledges that Federal men of-war are instructed to pounce upon the offenders or the innocent indiscriminately. In the second place, Mr. Adams has chosen to make himself privy to an act of distinct hostility to France. The destination of the ship he charters is not, as was the case with the *Adela* and the *Dolphin*, a neutral port. It is bound for Mexico—a belligerent country; a ship bound for Mexico with contraband of war, in the eyes of all international law, engages in warfare against the French Emperor. Mr. Adams has covered reams of paper to prove the iniquity of England whenever it appears to him that some Englishman in private life is stepping near the frontier of what is illegitimate. Here is an ambassador who has overstepped the absolute limits of neutrality,—not a private merchant, who may be pardoned for a selfish endeavour to evade them. Out of his own mouth he stands trebly condemned. He has mixed himself up with belligerent proceedings while resident here in the capacity of a minister of peace. An ambassador who is so foolish as to act thus violates the most sacred obligations. Sent here to represent a foreign power, he converts his embassy by such malpractices into a focus of intrigue against a friendly sovereign. England and France are both justified in exhibiting real displeasure at this departure from the comity of nations and from ambassadorial etiquette.

The gravest anxiety may well indeed prevail this week as to our relations with America. The *Adela*, which was actually seized within British waters, has been condemned, since then, by an American Prize Court; and we now have the news of the capture of the *Dolphin*, a vessel pursuing—as her owner affirms—a peaceable and legitimate voyage from Liverpool to Nassau. Sensible persons will make every allowance for the vexation which ships of all countries cause to the North by breaking the blockade. It is one of those annoyances which naval belligerents always have to endure. Nor is it at all improbable that Nassau has become a half-way house for which English vessels steer which are meditating a run into some Southern port. For contraband adventures of this kind we have no sympathy; they are a violation of that neutrality which England wishes to preserve; they imperil, for the sake of the selfish ends of their promoters, the peace of the world, and they are clearly opposed to the spirit and letter of international law. But Nassau is not to be put out of the circle of British traffic because some of the vessels that make for Nassau have ulterior and illegal views. The same observation applies to our trade with Matamoras, a port upon the Texas frontier, which trade is virtually obstructed by the practices of the American blockading captains. It is clear and manifest that, if an English ship professedly bound for a neutral is in reality destined for a blockaded port, she may lawfully be seized on the high seas. It is also to be admitted, that English ships may not carry contraband of war to any Southern port at all, whether blockaded or not. The cases of the *Adela* and the *Dolphin* came under neither head. The *Adela* was not captured on the high seas, but within two miles and a half of the shore—that is to say, within the territorial dominions of the British Crown. It is denied that the *Dolphin* was laden with anything approaching to contraband of war; and it is positively asserted that her destination was a neutral harbour. Admiral Wilkes and his colleagues appear to labour under the strangest delusions as to the first rudiments of international law. To justify seizure of a British ship, one of two things must be shown: either the vessel must have started from her last port with the intention of breaking the blockade, or else she must be carrying contraband of war, and carrying it to the belligerent territory. It will not do to prove that she is laden with powder, if her real destination is a neutral port. *Between two neutral ports no commerce is contraband.* As Sir W. Scott said in the case of the *Jemima*, "Goods going to a neutral port cannot come under the description of contraband of war, all goods going there being equally lawful." If, then, the *Dolphin* was *bonâ fide* bound for Nassau, she was as clearly exempt from capture on account of contraband of war, as if she had been crossing the British Channel.

We should be more inclined to believe that there were two sides to the question, and that the owners of these ships—with all their professions—might have given America cause of complaint, were it not for the inexplicable conduct of Mr. Adams. By offering his permits to Americans, he impliedly allows that British ships, whatever their real destination,

Digitized by Google

will have to submit to the annoyance and indignity of seizure and a judicial trial. It may be said, that if innocent, they will be discharged by the Prize Court before which they are brought, and receive proper compensation. We can only say, that this is a very meagre satisfaction. In the first place, Prize Courts are not infallible, or even impartial, if it be true that the *Adela* was taken in British waters, and that she has been condemned by the Prize Court at Key West. In the second place, English ships are not to be stopped, except *bonâ fide* and on reasonable grounds, and a wanton and insolent Federal officer is not to be at liberty to carry all our traders to trial, and to protect himself by the cavalier answer that, if they have done no harm, they need not fear the result. Trade is being seriously damaged by the uncertainty and insecurity which is the consequence of these hasty and rash acts. Insurances at Lloyd's rise. Honest merchants decline to venture on the seas with no security except the forbearance of Admiral Wilkes or the inviolable integrity of Mr. Justice Bragg. In isolated cases of accidental hardship, the duty of our Government might be to refer complainants to the American law courts for redress. But if our Government see a random disposition on the part of American judges to condemn British ships right and left, or a determination on the part of American admirals to stop all trade indifferently, our Government must take the protection of her Majesty's subjects into its own hands. It is, indeed, said that the Washington Ministry have issued a caution to its naval officers, drawn up and revised by the English Government. But the caution has been either purposely or virtually useless in the case of the *Dolphin*, unless, indeed, the owner of the *Dolphin* is stating an untruth; nor does the conduct of Mr. Adams seem to show, that he believes in the effect of the caution so much as in his own permits. Nor does the recent intelligence of the temper of New York permit us to hope much from it. Nor does the Postmaster seem to believe in it, who wisely declines to allow a Post-office agent to accompany the *Sea Queen*, fearing still further to aggravate the evil effects of the misadventure which he certainly foresees. We sincerely trust that the statements made by the unfortunate victims may be untrue. We hope the Americans can justify these various captures. Nothing shall be done by us to fan a flame; let us make all excuses for a people at fever-pitch of excitement; and let us bear much for the sake of peace. But there are limits to English forbearance, and we cannot allow our vessels in time of peace to be driven pell-mell from the seas, or the blockading captains of the North to vent their disappointment and vexation by outrages upon the freedom of lawful English commerce.

Yet we earnestly deprecate a rupture. War is a terrible and disastrous alternative. War with America would be a wretched necessity at best. What Englishman would not receive the news of the bombardment of New York as if it were a national disaster? It is true that the New York press, the case of the *Alabama*, and the demeanour of some few individuals on both sides of the Atlantic, have fomented a spirit of hostility both here and there. But still it is untrue to say that there is a universal anti-Northern sentiment amongst us. The British Government has been consistently though coldly impartial. What infringements there have been of the Foreign Enlistment Act, have been as much to the advantage of New York as of Charleston. By persisting in their determination to insult this country, the Federals will lose what sympathy they find here. They have long since lost the respect that many were inclined to bestow on their cause. Let them not deceive themselves by any idea that an American war would be declined by England if England is driven to it. These outrages are strengthening the hands of the partisans of slavery and the South; and it may well be said that the North will be destroyed by the faults inherent in a popular and Democratic constitution.

NATIONAL MADNESS.

ONE of the lessons most clearly and most repeatedly taught by history is, in how very short a time the origin, the object, and the costliness of a conflict are forgotten by the combatants engaged in it. The dust of the combat obscures the field of action; the passions of the belligerents blind or distort their vision; and the hurry of events renders anything like reflection or calculation well-nigh impossible. Men who saw clearly, and could reason calmly, in January, become the wildest and most fanatical of partisans before July—they will listen to no warnings and will tolerate no cautions; while those who, a few months ago, were mild and money-getting, who shrank from violence and stood aghast at extravagance and waste, are seen, as if by magic, to shed blood like gladiators and to squander treasure like spendthrifts.

If it were not for such teachings, it would be harder even than it is for sober spectators like ourselves to behold without amazement the growing fury and almost insanity of the Northern Americans. By nature and habit they were—or at least they seemed to be—devoted to the pursuits of industry and peaceful commerce, full of enterprise, and lovers to excess of wealth and gain. They were proverbially said "to worship the almighty dollar." They proclaimed and believed themselves to be beyond all other nations obedient to the law—slaves, almost, to the forms of their Constitution and the decisions of their Courts; and in the main the idea was well founded, though no doubt they every now and then took upon themselves to supplement the law when it was inadequate, to hasten it when it was slow, and to supersede it when it put inconvenient impediments in their way. They boasted, too, that they were incomparably the freest nation in the world—*the* one free nation, in fact; that no ruler or monarch dared to trample upon their individual liberties; that their governors and legislators were nothing but their hired servants, appointed to do their pleasure and to obey the law like themselves. Finally, they held it to be the foundation of their whole civil polity—the great practical principle which distinguished them from and placed them far above all the down-trodden people of the Old World, that in America every man had a right to choose the government under which he desired to live, to change it as he wished, to upset it when it no longer pleased the majority of the citizens. They wound up the pæan—not, alas! of thanksgiving, but of self-glory—by exulting in the fact that they kept up scarcely any army, that they paid scarcely any taxes, that they had accumulated scarcely any public debt—or at least that, if they had, they did not always liquidate it.

Look at them now. There is not one of these national points of self-applause and self-congratulation which they have not practically repudiated, falsified, and reversed,—nay, which they do not boast of having reversed in the most flagrant and unequalled manner. They appear not only to be fast becoming the precise opposite of what they were, and of maintaining the precise opposite of all their former doctrines, but to be proud of doing so. They still love money, no doubt, and still make it; but it is the jobbers and contractors and pro-consular generals who grow rich. Their industry and commerce are turned exclusively into the channels which minister to war. Their farmers are busy feeding their soldiers. Their manufacturers are busy clothing the army. Their ships are busy bringing rifles and ammunition and implements of destruction and warlike stores. They are squandering the public money—and in a democracy the public money is their own—with a reckless profusion, a wasteful, mad extravagance, to which there really is no parallel in history. They are devastating rich prairies and flooding vast districts, where they formerly cleared the forest and reclaimed the wilderness. As to law and constitution, both have been ruthlessly trampled under foot. Members of independent State assemblies have been arrested, the doors of legislatures closed, and the elections supervised and controlled, at the will and by the force of single military commanders. The Habeas Corpus Act has been repealed by that very Executive against whose oppressions it was enacted as a safeguard. Judges have been arrested for executing the indisputable law, and citizens imprisoned without the shadow of a process or a warrant. In no police-ridden land in Europe has individual liberty been more scandalously disregarded. Newspapers that ventured to oppose the administration or assail its members, or in any way run counter to the prejudice or passion of the hour, have been suppressed more summarily even than in France, or coerced into hypocrisy more peremptorily even than in Prussia. Dissentient orators have been sent to Fort Lafayette, and spies or talebearers have denounced private conversations and succeeded in consigning their victims to a dungeon. And what is worse, not only have these things been done, but they have been defended and encouraged, and are persisted in, and are not punished.

The men, too, the Secretaries of State and their subordi-

Digitized by Google

nates, who have been suffered thus to violate established law, and to ignore all civil rights, are the ministers appointed and maintained by that Government which is the creature of universal suffrage, so that the whole people shares in the guilt of these lawless and oppressive deeds. The army consists of volunteers; but thousands of these volunteers—who are *citizens*, remember—being sick of the war, sick of their trade, sick of their imbecile and ignorant commanders—have abandoned their colours, and gone home in disgust. Detachments of troops are pursuing them to bring them back by force, and mayors and magistrates are roughly handled by the military when they attempt to keep these pursuing parties within the limits of the law. The number of these deserters is said by some to be 130,000, by some to be 150,000—clearly indicating how wide-spread must be the disaffection which is forbidden to give utterance to its feelings. This army, too—the army of a nation that used to rejoice in having no standing army at all—is in nominal numbers larger even than the enormous host which the first Napoleon led to the Russian war in 1812. The debt, accumulated in order to support them, has risen to £200,000,000 in two years, yet their pay is frightfully in arrears, and their medical attendance disgracefully negligent and inadequate. Conscription, moreover, in this freest of free countries, has been twice decreed by the Legislature, but as yet not put into operation; while taxes without end have been voted, but none, so far as we can learn, have yet been levied.

And for what is all this? For what have established laws been set at naught, solemn tribunals reduced to insignificance and degradation, citizens imprisoned, citizens forced to serve in the ranks, the industry of generations mortgaged, debts contracted that will never be paid, crimes committed that can never be atoned for, infamy incurred that can never be wiped out? Strange enough! all this has been done and borne in order to deny and prevent the exercise of that very indefeasible right which the Republican faith of America proclaims as lying at the base of their whole polity—the right of men to say with whom they will combine in citizenship, and how and by whom they will be governed. All this is done and suffered in order to prevent eight millions of men, citizens of at least ten independent and "sovereign" States, from refusing any longer to form part of a Federation with which they have no sympathy, or to be ruled by men whom they abhor; to put force upon the political will and free action of native Americans; to exercise, in a word, the same coercion that Austria exercises over Venetia, and Russia over Poland. Yet the Federalists—utterly forgetting alike their own origin and their own principles—ignoring, as completely as if they were Spaniards or Egyptians, the fundamental doctrine of Republicanism—speak of those Southern States which have seceded as "rebels;" using the very language, sinking back upon the very ideas, of those Old World tyrants whom they have so long abused and despised, and in whose creed and vocabulary—though not in *theirs*—those words and those ideas have a real and consistent meaning. Is it not passing strange, and as sad as strange, to see a whole people who used to be shrewd and keen-sighted enough, thus striving to bind fetters on their fellow-citizens and to exterminate those who decline to wear them, and yet really fancying in their hearts that they are fighting in the cause of freedom and justice, that they are acting righteously, and that God will bless their arms? What is this but a fit of national madness, which is now spreading and heightening at a frightful rate?

THE NEW WAR MINISTER.

IT is certainly not to the credit of the party which acknowledges Lord Palmerston as its chief, that no one could be found in the House of Commons fit to assume the place of the late Sir Cornewall Lewis. The Prime Minister is notorious for his aristocratic predilections; but seeing that the Foreign Secretary, the First Lord of the Admiralty, and the President of the Council, are all members of the House of Lords, it is difficult to believe that Lord Palmerston can have had any other reason for placing Lord De Grey at the head of the War Department, except that in his opinion no man could be found in the House of Commons capable of filling that office. Even in despotic countries, where it is thought expedient to establish the forms of constitutional government, it seems to be considered essential that the responsible Minister should have the opportunity of explaining his views to the assembly which is called upon to sanction his measures. And unless some Commoners can be found of sufficient rank and intelligence to fill the highest offices in the State, it may become necessary to invent some means by which the members of the House of Lords may be allowed to take their seats on the Treasury Bench, in order that they may explain the estimates, and defend the policy of the higher departments of government which may be called in question. It must be remembered that the army and navy absorb some £30,000,000 of the annual revenue. The House of Commons is alone responsible for this enormous estimate. It is therefore not unreasonable to insist that the Ministers upon whose responsibility they are voted, should be in a position to explain the grounds upon which the public are called upon to contribute so largely.

It is no doubt true that during the reign of the late lamented Minister, Lord De Grey did all the work. It is tolerably notorious that Sir Cornewall Lewis took little interest in the department over which he presided; its duties were not congenial to him, and he was, therefore, content to leave them to be discharged by his subordinates. Notwithstanding this, however, it seems to be admitted that the late War Minister efficiently performed the functions attached to his office; and therefore the conclusion would appear to follow inevitably that a single Minister is quite competent to discharge the duties of the War Office without the aid of an Under-Secretary. If Lord De Grey, as Under-Secretary, could conduct the affairs of the War Department without the active co-operation of so able a man as Sir Cornewall Lewis, it is difficult to understand the public advantage of encumbering the department with an Under-Secretary. If, on the other hand, Lord De Grey has of late been over-worked, and some of the duties of the War Office have been neglected, it is equally difficult to understand how the Minister's hands will be strengthened by those of the Marquis of Hartington. The rapid promotion of this young and ardent nobleman is one of the mysteries of the day. The world acknowledges the justice of putting the young engineer officer who saves a fortress, or an orator who defends a Minister with brilliant effect in Parliament, over the heads of others. But what has Lord Hartington done to justify his advancement? He cannot be said to be unknown in Parliament, for he brought forward the motion which was the occasion of bringing in the present Ministry; but since that period he has taken little part in public business. However, wealth, rank, and leisure are dangerous; and possibly the most useful purpose to which such offices as Junior Lordships of the Admiralty and Under-Secretaryships can be applied, is to furnish some employment for gay young noblemen of tolerable ability.

There is probably no public office which is more difficult to fill than that of War Minister. He enjoys (as it were) a divided supremacy with the Commander-in-Chief. That officer occupies so high a position, and his power of thwarting any measures of reform are so great, that it requires a Minister of no ordinary resolution to carry his plans into effect. It is well known that Lord Herbert was compelled to abandon some of his most cherished schemes by the opposition made to them at the Horse Guards; and it is equally notorious that the late Minister made no attempt to control that department. No man willingly abandons power; nor is it probable that the Duke of Cambridge will be any exception to the ordinary rule. It remains to be seen whether Lord De Grey will succeed better than his predecessors in asserting his theoretical supremacy. Nor must it be forgotten that the War Minister in accomplishing this task has peculiar difficulties. Hitherto the British army has been considered a Royal army, under the direct command of the Crown. To this theory both the Court and the officers in the army cling with desperate tenacity. It is no doubt true that of late years, whenever any question has occurred as to mismanagement, or when the propriety of an appointment has been called in question, the War Minister has loudly proclaimed his responsibility. Both Lord Panmure and Lord Herbert repeatedly declared before committees and in their places in Parliament, that all appointments were submitted to them, and that they had an absolute discretion to sanction or disallow them. But hitherto this responsibility has been more theoretical than practical. The Commander-in-Chief has had his own way. He has not only fixed the number of men in the army, but he has kept the patronage in his own hands. Officers who desire to obtain places on the staff must look

Digitized by Google

to the Commander-in-Chief, not to the War Minister. The War Minister may draw up what regulations he pleases, but those regulations are left to be carried into effect by the officers of the Horse Guards. Impose whatever system of examination you please — establish any number of military colleges—fix any number of years for service on the staff—all is useless unless those who really administer the system honestly desire to give it a fair trial. It is not to be denied that there is a general impression throughout the army that officers, however zealous and however intelligent, are not promoted to the more lucrative and important posts in the army unless they can bring a certain amount of influence to bear at head-quarters. It is constantly asserted that favoured officers are allowed to retain their staff appointments beyond the prescribed five years, and that the promise to employ none upon the staff who have not passed through the Staff College is systematically ignored. But besides this, it is confidently asserted that some of our military establishments, and particularly Sandhurst, are in a most disgraceful condition—that young cadets are not only in a state of the grossest insubordination, but that this scandalous conduct has become notorious in the neighbourhood. It is the obvious duty of the new War Minister to investigate these charges—especially those which affect Sandhurst—with the utmost promptitude, and to take such steps as will not only put an end to grave scandals, but restore that confidence in official promises which has been so seriously damaged.

Lord De Grey has the advantages of youth and energy; and he has hitherto enjoyed the reputation of being a Reformer or something more. The office which he has just reached will test the continued sincerity of his convictions and the strength of his will. If he can succeed in giving practical effect to the numerous suggestions which have been made for the improvement of the army, for securing a fair share of patronage to deserving officers, and for opening the military service to a larger number of the middle classes with moderate fortunes, he will deserve the gratitude of his countrymen. But he must always remember that these results he never can achieve without exercising a vigorous control over the Horse Guards.

THE CITY POLICE.

WHEN the cuttle-fish is pursued and hard pressed, it is said to resort to a peculiar mode of defence. Darkening the surrounding water with mud, it thus conceals its whereabouts, and escapes by literally throwing dirt in the eyes of its antagonist. The Corporation of London have profited by the hint. The question at issue in the proposed amalgamation of the City and Metropolitan police is one of the simplest imaginable. But the clearest and closest reasoner might well lose sight of it amidst the mass of extraneous topics which have been adroitly introduced into the discussion. At first sight, we seem to have before us nothing more important than a practical inquiry as to the desirableness of permitting one twentieth part of the metropolis to isolate itself from the rest in all that relates to the preservation of the peace or the detection of crime. But according to a certain paper of "Reasons," which bears in more respects than one the stamp of civic authorship and authority, "no more momentous subject for the liberties of England has been before the House of Commons since the days when Charles I. in person demanded of them the four members whom he sought to arrest, and who found refuge and protection in the free city of London." There is a slight slip here as to the number of the members, but we may well forgive this to a writer who was no doubt overwhelmed by the conviction that he was standing in the last gap, and defending the freedom of England against the attacks on Sir George Grey. The best informed amongst us might have made a worse mistake, had he been haunted by a vision of Liberty chased from the rest of the country and persecuted by Sir R. Mayne, flying to the City, there "to find a home, as she has done in ages past," behind the impregnable rampart of Captain Hodgson's 608 policemen. We cannot help thinking, indeed, that scanty justice has been done to these gallant men by the official scribe. Why did he not call them at once "the Palladium of the Constitution?" This reticence—shall we say timidity—is unworthy of one who sees that their destruction as a separate body implies the absorption of every local police force into a Government department, and gallantly meets such a project by the defiant challenge, "Is the country prepared for this? Will they like to give any government the power of controlling the liberties of England?" If any one thinks that this apprehension is rather chimerical, let him remember that Louis Napoleon effected the *coup d'état* "because he had the control of the police, and prevented the nation's representatives meeting;" and before he seeks refuge from his alarm in insular pride, and a few common-sense considerations, he had better answer the solemn and oracular question, "Is human nature so different in England that there should be any assurance of its not happening with us if there were the power?" Were there any doubt that this nonsense fairly represents the reasoning of those on whose behalf it is put forth, it would be removed by the speeches in which the Lord Mayor and Mr. Alderman Sidney on last Tuesday evening threatened the House of Commons with the danger of giving the Home Secretary the command over a "vast standing army of policemen." The House of Commons could hardly overlook the patent fact that this "standing army" has been already in existence for some years, and that an addition of a few hundred rank and file could not perceptibly augment its terrors, for worthy aldermen and common councillors see in truth through an atmosphere of unreality. They have brooded over the mythical glories of their municipal history until they have swelled in their own estimation, from the respectable tradesmen that they are, to the dimensions of a new and heroic race of Gogs and Magogs. They neither comprehend the difference between the England of to-day and the England of the past, nor the difference between the London Corporation as it flourished under Charles I. and the same body as it exists under Queen Victoria. Since the period to which we are invited to carry back our thoughts, the constitution has acquired several new guarantees, on which most of us rely with implicit confidence. If it were seriously in danger, it would derive about as much protection from shutting the gates at Temple Bar, as from anything which could be done by a Lord Mayor and his handful of police. There was, no doubt, a time when the Corporation was the City and the City was the metropolis; and it was then only natural that the civic council and their chief should take a somewhat swelling tone, and repel with imperious gesture all foreign interference within their sacred precincts. But everyone knows that the City is now only a fraction of the metropolis, while the Corporation is only what remains of the city after those who confer importance upon it have been deducted. The Committee of 1838, which included Sir R. Peel amongst its members, observes in its report, that ancient privileges, which were granted by charter for the benefit of the whole metropolis, "are now limited to what under altered circumstances is only a portion;" and they naturally infer that these musty parchments, whose object is thus defeated, ought not to stand in the way of any improvements which will be beneficial to London generally.

We may get rid, therefore, at once, of all the historical and antiquarian haze in which it is sought to envelope the present question. But before we can approach the gist of the matter, the great "centralization" bugbear lies in our path. Now, for a proper and useful jealousy of centralization we have every respect; but this, like everything else, may be overdone. We cannot see how the great principle of self-government is strengthened, or how anybody's liberties are secured, by a minute fraction being cut out from the heart of the metropolitan district, and erected into a separate police jurisdiction. So far as police is concerned, the application of the principle in London is practically abandoned. The liverymen and freemen of the City will preserve intact all their present privileges of managing the rest of their affairs —including a pretty sharp supervision of the Continental powers—although they may be deprived of the empty boast of commanding a corps of constabulary. For all political purposes, the metropolis is already in the hands of the Government, which nowadays means in those of the House of Commons. There, for our own part, we think it may safely be left. If a centralized system of police be mischievous or dangerous, the mischief is done and the danger is incurred. All the Corporation can do is to continue withholding from us the counterbalancing advantages which such an arrangement offers. But then it is said that if the City is deprived of the control over its peace officers, this will form a precedent for a similar treatment of other municipalities. Perhaps it might, in respect to any borough similarly situated. It is, however, notoriously impossible to

Digitized by Google

find one which resembles it, in forming an undistinguishable part of a larger and surrounding town area. Still less is there any other town which is in the centre of one whose police is under the command of a Government officer. The state of things in the metropolis is so exceptional, that it can never form a precedent. It does seem to us, therefore, that the town councils which are lending themselves to the organized agitation which is being got up throughout the country, are meddling with a matter which in nowise concerns them, and either feel or feign an alarm which is utterly groundless. Their conduct is, indeed, only explainable by the morbid tendency of the average municipal mind to find pleasure in petitioning and memorializing—in vindication of everything in general, and in glorification of itself in particular.

The practical question that is left really seems to us a very simple one. Common sense points out that when a small district forms—as we have said—a perfectly undistinguishable part of a large one, one police force must operate over the whole area with greater unity and efficiency than two. It is no doubt possible to make two such bodies work in harmony, and perhaps, under ordinary circumstances, without any serious inconvenience, so long as their respective heads are on good terms. But it is rather a serious matter that this should depend upon the personal relations of independent officials. Moreover, the small district must be unable to keep a reserve adequate to meet any extraordinary pressure, such as attended the entry of the Princess of Wales. In introducing the Amalgamation Bill on Tuesday evening, Sir G. Grey wisely declined to renew the controversy as to the character of the arrangements made by the Lord Mayor and Captain Hodgson on that occasion. We are quite disposed to follow his example; only, however, remarking that the more completely do the City authorities exonerate themselves from blame, the more strongly do the occurrences of that day and of the following Tuesday tell in favour of the Ministerial measure. That on both the police were overpowered by the masses, is incontestable. If this was inevitable (and no doubt it was), under a system which left rather more than 400 men to deal with such enormous difficulties, the natural inference would be destructive of the system. The Home Secretary had no difficulty in showing that the separation of the Metropolitan and City police had been condemned by every Commission or Committee which had considered the matter. But there was one authority of some weight which he might have adduced, but did not, in favour of his scheme. We allude to the late Commissioner of the City Police, Mr. Daniel Whittle Harvey. When that gentleman was examined before the Commissioners of 1853 he was, of course, disposed to make the best case he could for the force under his command. He said, what no one disputes, that the everyday duties of the police are by them efficiently performed. He contended that it was necessary to have in the City some one of higher rank than a mere superintendent, to answer inquiries, receive complaints, and communicate with the Lord Mayor and Aldermen. But he added, "if there were a Commissioner, or person of suitable power, always to be found in the City, and there were a recognition of the right of the City to be protected to the extent which experience tells us is the proper extent, I can see some advantages which would arise to the City [from the amalgamation of the two forces] which they do not at present possess and cannot now possess." He then went on to say that as the City police was a very small body, and as every man had his allotted beat, "if his services are required elsewhere, he is diverted from his allotted duty, and to that extent the protection of the beat or section which may be assigned to him is enfeebled." It not unfrequently happened, he told the Commissioners, that seventy or eighty men were obliged to be detached for attendance at the Central Criminal Court, in charge of cases before the magistrates or, in those days, for extra duty in Smithfield on market-days. He concluded with the frank admission, "There can be no doubt that if it were one force, and a certain amount of extra strength were brought to supply the deficiency upon occasions like those of which I speak, the City to that extent would be benefited, because there would be uniformity of protection." If the want of a reserve is thus felt under very ordinary circumstances, it is obvious that the City force must be in a condition of standing incapacity to meet extraordinary pressure. We need not add a word of comment upon this evidence. It is, in fact, an admission of our whole case; since there can be no difficulty in providing for the two points upon which Mr. Harvey insisted as the preliminary conditions of union. We are told, indeed, that the City not only requires on ordinary duty a larger number of men in proportion to its area than suffices for the rest of the metropolitan districts, but that it so differs from other parts of London, as to require a separate and different regular force for its protection. But when that view was suggested to Mr. Harvey he promptly replied, "I think there is nothing in it." The Lord Mayor dwelt the other evening upon the peculiar excellence of the City detective force and the desirableness of keeping it distinct. Mr. Harvey, on the other hand, stated in the strongest manner his sense of the advantage which would accrue from having a detective force common to the whole metropolis. The late Commissioner evidently then did not share the opinion, that two forces acting separately in what is virtually but one city are as effective for the prevention and the detection of crime as they might be rendered under one head. Of course, if the citizens were alone interested in this matter, we should not have a word to say against their indulging their peculiar tastes. But the inhabitants of the metropolis generally suffer from the defects of a double system which facilitates the escape of criminals, and now and then interposes an insuperable difficulty in the way of protecting life and preserving the peace. At the same time we have no desire to impute insincerity to the Lord Mayor and aldermen, when they tell us that no improvement on the present state of things is either possible or desirable. One of the most distinguished of their predecessors—Sir Peter Laurie—no doubt believed what he said, when he told the Committee of 1838 that the then existing *régime* of "old Charleys" was as near perfection as might be; and that the establishment of the Metropolitan Police had in no wise tended to the diminution of crime.

SIR C. WOOD AND THE BABOOS.

EVEN those of us to whom it may seem a surprising thing that a public meeting anywhere should display enthusiasm for Sir Charles Wood, must observe with satisfaction that one of our most valuable institutions is being naturalized in India. Recent Indian papers have brought us an interesting report of a meeting of natives held at Calcutta, which had for its object nothing else but the glorification of the Indian Secretary, and the system of which he is the head. The proceedings, we may say, were exactly what those of a similar assemblage would have been in England. On the motion of Baboo Ghose, Rajah Radhakaut Bahadoor was called to the chair, resolutions were moved and seconded by a succession of Rajahs, Baboos, Cowars, and Moolvies, and the proceedings were wound up in orthodox fashion with a vote of thanks to the chairman. The speeches, if we may judge by the reports, were, with one or perhaps two exceptions, remarkably good in point of style—compact, neat, and business-like—being in respect of these qualities decidedly above the home average. As to their substance, if mistakes were made, they were not nearly so great as are constantly made about us by nearer neighbours of ours; and if there appears a disposition to make comparisons between the governing class of India and people at a distance, to the disparagement of the former, it is, perhaps, worth while to remember that we have known something of the same kind at home. If the unpronounceable, though no doubt highly respectable, names of our distant fellow-subjects have a painfully foreign look, and if, on the other hand, the criticisms made upon the civil service must be taken as showing that Indians regard our rule as a foreign yoke, it is well that the people of India should be acquiring the habit of speaking out their thoughts of us, and gratifying to find them, on the whole, doing justice to the disposition by which the British Government is actuated towards them. We could not, if we would, prevent an acute and intelligent people like the Hindoos from forming their own opinion of our acts; and publicity and free discussion must be immensely useful to us by obviating discontent and hindering the growth of feelings which might endanger our supremacy. The Society under whose auspices this meeting was held, the British Indian Association, employs itself, to use the words of Rajah Radhakaut, "in keeping the native people informed of the general features of the Indian Government by vernacular translations of their proceedings, and inviting discussions

Digitized by Google

on questions connected with the welfare of the country." It is obvious that the discussions on Indian affairs which take place in England are closely watched by them; and English journalists would be more careful how they treated Indian questions, if they kept in mind that what they write is read and commented upon by a multitude of keen-witted but imperfectly informed critics, by whom loose statements and reckless charges are often received at much more than their real value.

The first resolution adopted by the meeting states that Sir Charles Wood has deserved the gratitude of India "for the wise and beneficent policy which has distinguished his administration;" because he has "steadily sought to govern it in consonance with justice and the true interests of its teeming millions." The second, while affirming that "to a certain extent" India must be governed in India, declares the control of the Home Government, as regards questions of principle, advantageous, because the Home Government is "divested of local prejudices and influences," and so enabled to act impartially. The address to Sir Charles Wood is simply an expansion of these resolutions, with the statement, which had been anticipated in the speeches, of particular benefits conferred by him upon India. Sir Charles Wood, it seems, has all the credit of the establishment of local Councils, of the admission to them of non-official Europeans and natives, of natives being made eligible to the Bench of the High Court, and of their being put on a more nearly equal footing with Europeans in respect of the public service. The despatches upon the law of contracts, upon the question of waste lands, and upon that of the permanent settlement, are cited as illustrations of the beneficial influence of the controlling power of the Home Government; and it was obviously the vetoing of the Contracts Bill which provoked this demonstration of approval. The meeting did not stop short of full approbation of existing arrangements (as they understand them), for the government of India, and Sir Charles Wood's Council came in for a share of their admiration. They seem to have thought there must be all the difference in the world between a Minister in England assisted by old Indians, and an English Governor-General assisted by civil servants, whose experience has not yet been carried over seas. And, indeed, some of the speakers talked as if a statesman's fitness to solve the most difficult and important of Indian problems must be exactly proportionate to his distance from the country, and probable ignorance of it.

That Sir Charles Wood has done something of late to earn the thanks of the people of India, we are far from denying; we will add that he has deserved the thanks of his own countrymen as well. And we do not care to insist upon the fact that the suggestion of various measures which his Indian admirers ascribe to him really emanated from Calcutta. The despatch decreeing the Permanent Settlement was creditable to the Indian Secretary as an economist and as a statesman, and had the merit of putting the drag upon the impetuosity of Lord Canning's reforming ardour; while, by his rejection of the Contracts Bill, Sir C. Wood undoubtedly saved India from a great trouble and England from a serious danger. Were the controlling power of the Indian Office really exercised only on questions of principle, as assumed by its admirers at Calcutta, we should have even less to say upon their second resolution than upon their first; but Sir Charles Wood and his Council are, unfortunately, addicted to vexatious and mischievous meddling with the details of Indian administration.

All the speakers seem to have had a very exaggerated notion of the difficulties which Sir Charles Wood has had to overcome in carrying out his views of Indian policy. Baboo Romanauth Tagore, in proposing the first resolution, lamented that there was a party in England which desired to govern India for English objects; Baboo Kissory Chand Mittra denounced the nefarious projects of the Manchester Chamber of Commerce, and held up Mr. Hugh Mason, of Ashton, a cotton manufacturer, to the scorn and indignation of all the East; and Baboo Coomar Tagore held that "it argued a high degree of moral courage in Sir Charles Wood to have risen above the clamours of his countrymen." All this, with reference to the Contracts Bill, the vetoing of which, as everybody knows, required no degree of moral courage beyond that requisite for snubbing a subordinate, in which, throughout a long tenure of office, Sir Charles Wood has never been found wanting. There is no party in this country which would govern India for English objects, and if there were, it would have not the slightest chance of success. Instead of "sacrificing his popularity with his countrymen," as one of Sir Charles Wood's admirers supposes he has done by his rejection of that measure, it may be doubted whether any official act of his career has been so great a success as this. And the reason is, that the British people, like Sir Charles, desire that India should be governed for the good of its inhabitants, and that, with rather a bad name in the world for selfishness, we shrink, as no other people would do, from the notion of oppressing a dependent race for the sake of profit.

The repeated mention of "local prejudices and influences," as prevailing amongst the governing class in India, and of the prevalence of "greater breadth of views and liberality of principle as to the natives," as existing in England, shows that the feelings with which the Civil Service is regarded in India are not particularly favourable. This was to be expected, and probably no exercise of wisdom and forbearance on the part of the governing class could materially alter the case. But it would be easy to show, that Baboo Kissory Chand Mittra is very far from accurate in telling his countrymen, that "most of the liberal institutions we possess, and the inestimable privileges we enjoy, have emanated from the British Legislature and the British Government." What of truth there is in the statement, is in a great measure due merely to the reservation of large powers to the Home Government. A moment's consideration will show how much more largely Governors-General have left their mark upon Indian history than Presidents and Secretaries of State. From the nature of the case this has been and must be so; the Home Government must, on the whole, be the controlling, the Indian Government, for good and for evil, the originating power; the former a conservative, the latter a progressive element. The Indian Government, however, seems to bear the blame of the Home Government's mistakes as well as of its own; and it is well that a Governor-General should be a scapegoat for the British nation, so that in times of discontent the latter should still be looked to with some feeling of kindliness, or at least of hope. The gratitude towards the Home Government now displayed does seem to be of the kind which anticipates future favours.

THE STUDENT STATESMAN.

It is now many years since a celebrated lawyer and statesman still living was reported to be dead. It was rumoured at the time that he had drawn up the account of his own death in order to see what the world thought of him. Nor was he disappointed. Instantly the daily journals were filled with elaborate criticisms on his life and character; and although some of them were somewhat bitter, it must be admitted that upon the whole they must have afforded the subject of them considerable gratification. It is natural to exaggerate the merits of the dead and to deal tenderly with their defects. The statesman to whom we allude had occupied so conspicuous a place, and had acquired his influence by such popular displays, that his reputation some few years after his career is closed is more likely to diminish than to grow in the eyes of posterity. If the statesman whose loss the country still deplores had followed the example of the nobleman in question, he would probably have found that he stood even higher in the opinion of his countrymen than he imagined. In truth, although Sir Cornewall Lewis occupied a prominent position amongst public men, few estimated him at his genuine value, for his time had not yet come, nor did any one anticipate that he was destined so soon to pass away from amongst us. Now that he is gone, there is but one opinion as to the irreparable loss which the country has sustained. There was, indeed, a general conviction that Sir Cornewall Lewis was the only man whose character, knowledge, and sagacity, would enable him to assume the lead of the great political party which now rules the destinies of the country; but until the melancholy event occurred which deprived us of his services, his character was far from being thoroughly appreciated. It is well known that his colleagues, and those who were most intimate with the late Minister, entertained the highest opinion of his powers, and proved the sincerity of the opinion by constantly consulting him and deferring to his judgment. The House of Commons and the public generally have, during the last few years, furnished unmistakeable proofs that in this opinion they cordially concurred.

Sir Cornewall Lewis was not a man who carried people by storm. He had no charms of eloquence—no fascination of manner.

Digitized by Google

He relied simply upon his personal character and his intellectual power. That he succeeded in reaching the high position which he occupied at the time of his lamented death, was creditable not only to himself but to the mixed assembly in which he played a distinguished part. It may not, therefore, be uninteresting to consider a little more closely those qualities which enabled him to achieve the eminent place in public estimation which he ultimately attained. Mr. Disraeli has said that the late Minister may be taken by the rising British statesmen, on both sides, as an example which deserves to be followed. Nor can it be doubted that his career furnishes a striking illustration of the truth, that solid attainments combined with perfect honesty, strong common sense, and political sagacity, will enable a modern statesman to reach as lofty a position as a man of the utmost versatility and the most brilliant eloquence.

It is strange to contrast the estimate which is formed of some men by the intimate friends and contemporaries of their youth with the estimate which is formed of them when they enter the House of Commons and engage in public affairs. At school and at College one meets men who are amusing in conversation, ready at repartee, and brilliant in the debating club, but whose superficiality and inaccuracy inspire neither confidence nor respect. But such men when they enter Parliament, if they are fortunate enough to possess the advantage of social position, good fortunes, and prepossessing manners, impose upon those by whom they are surrounded, and soon take a considerable part in the management of public affairs. Other men there are who by their accurate and extensive knowledge, profound thought, and sound practical judgment, command the respect and guide the opinions of the circle in which they move. But men of this temper are rather advisers than actors. At the bar they are Chamber counsel, not *nisi prius* advocates. In the Church they are learned theologians, not popular preachers. In politics they are the Burkes and Mills, not the Broughams and Gladstones. They are too theoretical and judicial to lead a party, and too passionately fond of truth to stoop to Parliamentary tactics. They are driven from the arena of such an assembly as the House of Commons by lively speakers; they are hustled out of the advancing column of rising politicians by more noisy and adroit tacticians.

Sir Cornewall Lewis was a singular exception to this general rule. It cannot be said that he owed his rise to any special advantages which he enjoyed in social position or in private fortune. Many higher in rank, and of larger possessions, have failed to reach even the dignity of Cabinet Minister. Men such as Canning rose to the top, but then Canning was distinguished for eloquence and power in debate. Even Mr. Gladstone, shorn of his oratorical power, would occupy a very inferior position to that which he now fills. Take him as he is, it cannot be said that his advice upon any political subject would prove as valuable as that of Sir Cornewall Lewis. Looking back to the brilliant but erratic career of the present Chancellor of the Exchequer, it is difficult to imagine him the leader of a great party. Like the late Sir James Graham, he is an admirable lieutenant when his friends are in power; and in Opposition a terrible power to be cast upon the flank of an enemy. But he is not the statesman either to forecast the future or to command the obedience of a large political party. In short, he wants those solid qualities which distinguished Sir Cornewall Lewis. And, indeed, so obvious was this to those who had considered the subject, that the Minister whose loss the country deplores would certainly have been selected in preference to Mr. Gladstone to fill the place of Lord Palmerston.

Before the times of deliberative assemblies and constitutional governments, there would have been nothing at all surprising in such a man as Sir Cornewall Lewis filling the first offices in the State. His knowledge was vast, his political judgment was thoroughly sound, and his power of exposition in the council chamber and on paper was considerable. But he had none of those qualities which have generally been deemed essential for swaying the opinion of an assembly or for achieving that popularity which seems to be required in the leader of a political party. Look back through the last hundred and fifty years, and see if there be any man who has attained the same position as Sir Cornewall Lewis without possessing qualifications in which he was singularly deficient. During the last century the leaders in the British House of Commons were all men remarkable for their power in debate. Take the leading statesmen of our own time—Peel, Cavour, and Guizot—every of whom was an accomplished speaker. Indeed of late years it may be said that this power of tongue has acquired an undue prominence, and that the House of Commons is too much swayed by oratory. At such a crisis to find a man who at first found considerable difficulty in addressing an assembly at all—who did not enter Parliament until he was above forty years of age, and who, in the short period of eight years, not only rose to the highest offices, but was acknowledged as the future leader of the party to which he belonged whenever the office became vacant, was surely a striking phenomenon. If Sir Cornwall Lewis had won his position by pandering to popular passions, or by a course of political intrigue, his premature death could scarcely have been considered a calamity. But his public career was marked by far nobler achievements. In him there was nothing petty—nothing mean-spirited. He was the soul of honour. Magnanimously candid, he disdained to distort the arguments of an adversary. Armed with strong reasoning powers, and filled with all knowledge, he met him face to face, and fairly grappled with him. No taunts could disturb his imperturbable temper; no love of display could induce him, for a moment, to put off that guise of unassuming modesty which so eminently distinguished him; no weak sentiment could mislead his judgment, or turn him aside from the path which his unerring sagacity had marked out for him. As a practical statesman, as a man of learning, as a high-minded and most honourable gentleman, Sir Cornewall Lewis was without a superior. At the same time, he had his defects; and it may be questioned whether these defects would not have stood in his way as a party leader. No doubt, any one who came to consult him would have received excellent advice. In the council chamber he was invaluable. But it may be doubted whether he was sufficiently adroit to steer his party through a difficult emergency, or to control such men as Mr. Gladstone, if indeed that statesman would submit to assume the position of a subordinate. It is certain that, in the opinion of his countrymen, no statesman stood higher than Sir Cornewall Lewis. In times of great national difficulty, no one would have commanded more attention. But under ordinary circumstances, it is questionable whether he would have succeeded in long holding the reins of power.

CORNISH WRECKERS.

The age of chivalry is not past. Gentle knights are indeed no longer seen pricking o'er the plain, nor will any wanderer over the bushless downs of Wilts encounter Sir Percival or Sir Galahad coming out of Camelot on his perilous quest; but Arthur, as we know on the highest authority, cannot die. "*Hic jacet Arthurus, Rex quondam, Rexque futurus*," was the legend on his tomb; and the laureate has told us that the "blameless king" oft reappears, though in divers fashions and under divers forms. It would be dangerous to pretend to identify so shifty a monarch; but some shadow of his presence we believe we have lately encountered. The circumstances are all favourable. If he is no longer a knight of the round table, he appears as a knight of the shire, and the son of Uther, born at Tintagel, and the friend of Sir Tristram, of Cornewayle, very properly comes before us as M.P. for West Cornwall.

The narrative should be told in numbers; and there may, perhaps, yet arise a sacred seer to sing its fame. At present it is contained in the inglorious columns of a Cornish newspaper, and we can only hope to tell a plain tale in homely prose. Mr. Bramley Moore first appears on the scene. That gentleman, who is, we believe, a Liverpool merchant, sits in the seat of Sibthorpe as M.P. for Lincoln. Early last month, as all the world knows, he brought before the House the miserable affair in Brazil; but it is too probable that few even of the constant readers of the *Times* waded through the speech he made on the occasion. It seems that in the course of it he took occasion to palliate the alleged offences of the Brazilians by imputing similar conduct to his own countrymen. If the Brazilians were wreckers, what were we at home? "It was well known," thus runs the report of the speech in the *Times*, "that there was a time when it had been, and even now was partially, the practice, not only in Cornwall, but on other parts of the coast of this country, to use stalking-horses to lure vessels on shore in order that the wrecks might be plundered." The grammar is confused, but the sense is tolerably plain: in Cornwall, and on other parts of the coast, vessels are occasionally lured ashore for the sake of plunder. Such a statement ought to have been received with laughter such as greets the Frenchman's story of wives sold at Smithfield-market; the utmost it deserved was a simple denial of its accuracy, accompanied with a laugh at Mr. Bramley Moore's gullibility. Unluckily, the man who would have eagerly given this denial was at the time out of the House: the claims of dinner, or the eloquence of the honourable member for Lincoln, had sent him to the kitchen or to the sedative influence of the smoking-room. Not till the next day did Mr. St. Aubyn learn what had been said,

Digitized by Google

whereupon he rushed to the defence of his county. Your true knight-errant never considers the prudence of an assault; his temper was formed before the days of strategic movements. Had Mr. St. Aubyn reflected for a moment, he would probably have let Mr. Bramley Moore's slipshod statement alone; but "One and All" is the motto which Cornishmen bear to attest their fidelity to one another. An imputation on a single inhabitant of the county is a slight upon all, and who is so fitting for their defence as a knight of the shire? In right courteous wise did Mr. St. Aubyn address his brother M.P., and ask what authority he had for the statement he had made. So was opened the correspondence which the Cornish newspapers publish—a correspondence in which no less than nine letters were interchanged; so that we must perforce be contented with a few extracts.

Supposing it were worth while to take up the matter at all, it must be allowed that Mr. St. Aubyn discharged his office extremely well; his letters are short and to the point, and he never allows his adversary to slip away from him. Mr. Bramley Moore's defence is, on the contrary, sadly wanting in science; he hits out very wildly at starting, and although plucky to the last, he may be described in the end as mentally gasping and exhausted. The match was so hollow, that to an outsider its only interest is as an illustration of the advantage of training. Mr. Moore can neither parry nor hit; he is powerless at warding and he never knows when he has got an opening.

Mr. St. Aubyn's first letter is dated on the 7th of last month; Mr. Bramley Moore's reply to it is so characteristic that it deserves to be reproduced in its entirety:—

"Gerrard's Cross, Bucks, March 15, 1863.

"Dear Sir,—Absence from town is my apology for not sooner replying to your letter of the 7th instant. I did not preserve the memoranda from which I read about wreckers, but I may refer you to the *Annual Register*, McCulloch, Haydn, and other authorities on this subject. Cornwall has enjoyed an unenviable notoriety up to a recent period, and I feel constrained to say I am not a believer in the improved character of wreckers in Cornwall or any other part of the kingdom; they have, in my opinion, been restrained from carrying on their lawless system of plunder to the extent of former years solely by the increased means of prevention through the constabulary and coast-guard. Opportunity is all that a wrecker still requires to practise his nefarious calling, and I may instance the recent case of the plunder of the cargo, with acts of violence, of the *Regina*, wrecked at the entrance of the Thames.

"Cornwall has long enjoyed a bad reputation, and if there has been an improvement of late, I attribute that improvement solely to the strong arm of the law. It is well known that up to the death of a man* a few years ago, there was a regular organized band of wreckers with a regular code of signals and passwords along the coast.

"These facts are notorious and well known, and I am informed the best cellars of port wine exist in Cornwall at this time—the produce from wrecks on the coast.

"I am, dear Sir, faithfully yours,

"John St. Aubyn, Esq., M.P." J. Bramley Moore."

No comment is necessary on the cheerful frankness with which Mr. Moore refers his correspondent to the *Annual Register*, McCulloch, Haydn, and other authorities. The "other authorities" probably include the *Gentleman's Magazine*, the *Encyclopædia Britannica*, and the *Acta Sanctorum*. To search through a few hundred volumes more or less, without a hint that anything can be found in them bearing on the subject, is a task to which no one can object. In some one of the authorities there must be found something about stalking-horses,—well, perhaps not stalking-horses, but, at all events, wreckers,—or, if not wreckers, why certainly wrecks. What can Mr. St. Aubyn wish for more? Besides, if the inhabitants of Cornwall are no longer wreckers, they would be if they could; the facts are notorious and well known, and the best cellars of port wine exist in Cornwall, the produce of wrecks on the coast. The last argument is curious, and the facts involved new and interesting. The best cellars of port wine exist in Cornwall,—and we shall certainly make an early visit to the county to test this statement,—but port is improved by being wrecked, consequently, the port wine of Cornwall is the produce of wrecks. If it be true that port is improved by being wrecked, the fact is important, and it might be desirable to wreck a ship now and then on the coast elsewhere, that other counties might enjoy such an advantage. Mr. St. Aubyn was, however, strangely dissatisfied with this letter, and forthwith replied, pointing out to Mr. Bramley Moore that he had failed to furnish any authority for the stalking-horses. "As to the port," he added, "I can only say that, although there is excellent port wine in Cornish cellars, I have never had the fortune to meet with or even hear of any derived from the source you mention."

* Mr. Bramley Moore added in a note, "Name well known."

On receipt of this letter, Mr. Bramley Moore began to feel that he was in a false position; and, naturally wishing to get out of it in the shortest and most conclusive way, he suggested that Mr. St. Aubyn should ask him a question on the subject upon the House going into Committee. The Cornish member was instantly ready with a reply: he would have asked the question in the House in the first place, but he found it would have been out of order. Well, replies Mr. Bramley Moore, I think it would been better if you had; and there can be no doubt that for the peace of mind of the honourable member it would have been much better. Any answer, however inappropriate, would then have been final, but to a correspondence with a pertinacious man who will stick to the point there is no end. However, the M.P. for Lincoln addressed himself once more to his task. At this point, he demurred to the right of his questioner to require any authority. "Except as a matter of courtesy, I don't admit that I am called upon to give the explanations you ask on behalf of a county; if I had made any charges of a personal character it would then assume a totally different aspect." It is clear that Mr. Bramley Moore has never realized the "one and all" clannishness of out-of-the-way districts; but he proceeds:—

"It would be impossible for me to give proof of stalking-horses having been used of late years, or indeed I might say at any period, but the fact is nevertheless notorious and an accepted truth. My remark was not confined to Cornwall; . . . . a thousand things occur, which we believe, but cannot prove by evidence. I believe Mr. Pilkington was garotted, but I could not prove that he was, although I left the House of Commons in his company, and separated from him only a few minutes previous to this occurrence."

Mr. Bramley Moore's notions of evidence and proof are perhaps not peculiar to himself, but they are at the least remarkable. That we believe many things without having the evidence for them formally adduced is undoubtedly true, but that we believe many things which cannot be proved by evidence is as undoubtedly a mistake. The example he gives is most unfortunate for him; nothing admits of clearer proof than the question whether Mr. Pilkington was or was not garotted, though the evidence on the point would not be of the character that Mr. Bramley Moore uses. In this letter he proceeds to quote the definition of "wrecker" from the Imperial Dictionary, and he then adduces the only facts at all bearing on the point, viz., that four persons were convicted in Cornwall in 1857 and nine in 1859 of appropriating to themselves the spoils of a wreck, though it would go but a small way to convicting a man of murder, to prove that he had quietly pocketed a purse he had picked up in a shop. Mr. Bramley Moore's notions of evidence are most fully exhibited in the close of this letter:—

"After the debate on the 6th instant, I received a letter from a gentleman of the highest respectability, from which I give you the following extracts:—'I have just been told by a Cornishman, that the little children in that region (which you are said to have maligned) used to repeat in their prayers, God bless dear papa, and dear mamma, and send a ship ashore before morning.'

"This may or may not be true, for anything that I know, *and I might with equal justice call upon you to prove it is not true*, or that delusive lights are not occasionally used to lure vessels to destruction, as for you to call upon me to prove that which is next to impossible, owing to the refusal of parties to give evidence."

After this even Mr. St. Aubyn saw that he might let Mr. Bramley Moore alone: it would be only necessary to publish that gentleman's letters to secure the due appreciation of his random statement about the use of stalking-horses.

"I am perfectly satisfied," wrote Mr. St. Aubyn in reply, "with your statement, 'that it would be impossible for you to give proof of stalking-horses having been used of late, or indeed at any period;' and living as I do on the coast of Cornwall, I can only express my regret that you should have been imposed upon by any such idle tales, as far as regards the customs of the present day;" and he concludes by asking permission to publish the correspondence in the Cornish newspapers. To this the M.P. for Lincoln consented, though in happy ignorance of his best interests he wished the publication not to be confined to the Cornish newspapers, a wish which we have at least the pleasure of gratifying. The notion of being imposed upon he, however, indignantly repudiated. History, tradition, painting, and public belief, all went, he declared, to support the truth of the statement, that such things did exist, and if so, why should they not exist still? Mr. Bramley Moore has, we must own, the strongest reasons for believing that there are some things that are unchangeable, and perhaps the lesson which Mr. St. Aubyn should learn from this correspondence, will be found in so old a production as the Proverbs of Solomon.

GEORGE CRUIKSHANK.

THERE is a very large oil-painting, still on view at Exeter Hall, in which Mr. Cruikshank has put on the canvas a very wonderful assemblage of several hundred figures,—the drinking, the drunken, and the demented,—consequently, the despairing, the disorderly, the dying, and the damned,—all brought in to bear witness against the use of fermented liquors. What shall we say to this? A man of rare genius, and of equal benevolence, which is happily not so rare, he has laboured exclusively on behalf of the total abstinence mission, for some ten or twelve years past, from a sincere persuasion that, as an agency of moral and social reform, it ought to command the entire use of his extraordinary powers of illustration for the remainder of his life. We heartily respect the motives and the spirit of Mr. Cruikshank in taking this course, although we may differ with him in regard to the principle of total abstinence, as a universal rule, and as the proper remedy for those evils caused by the habit of intoxication, which we all agree to deplore. For reasons which need not here be stated, we may prefer the system of liberty and self-restraint, with habitual moderation and temperance in all things, to that of an absolute denial of this particular thing, which we find to be harmless, wholesome, agreeable, and even beneficial, when soberly and prudently enjoyed. But we are not inclined to argue with a picture, or to object to such a one as he has drawn. If it were not for the provocation of hearing a didactic showman recite, in front of this canvas, a dismal commentary upon the incidents which are there depicted, we might be content, without surrendering our own discretion in the choice of a narcotic or a stimulant which exhausted nature will sometimes demand, to admire the marvellous vigour, the fertile invention, the dramatic power, the graphic skill, the imagination, the liveliness of sympathy, the humour and pathos in Mr. Cruikshank's latest design.

It is, however, a remark obvious to the least experienced critic of works of art, that this composition, as a whole, lacks that epic unity of conception and of interest, which is most essential to every work of art. Strictly speaking, there is no general composition at all. It consists of many isolated groups, each of which stands quite apart from the rest, so far as any common action is concerned. Each of them is attending to its own business; either conversing, or carousing, or complimenting somebody with the insidious glass,—or else perpetrating some hideous crime, or undergoing some dreadful doom of misery, in consequence of the pernicious old custom of wishing your neighbours a good health, accompanied by those genial libations which, taken in due measure, the laws of health itself may approve. Here, then, we are pledging a bride and bridegroom at their wedding-breakfast, or christening their first-born babe, or feasting at the Lord Mayor's table, where the great golden loving cup goes decently and merrily round,—there, we are transformed into fiends, or madmen, or idiots, upsetting a railway train, or burning down a house, or jumping with savage fury on the lifeless body of a policeman, or going to the workhouse, or finally going to be hanged. And if wine be not a good familiar creature, when it is rightly used,—if there is no chance for anybody to be virtuous, until there shall be no more cakes and ale,—there can be no question that Mr. Cruikshank's Inferno is the proper place for us, the moderate drinkers; and we have all deserved our fate. But he has failed, we think, both logically and artistically, to show the slightest connection between those decorous and gentle convivialities in the front of his picture, and the scenes of bloodshed, havoc, shame, and misery, with which its background is filled. Though we must decline to pursue here the ethical controversy to which he invites us, we cannot therefore shut our eyes to the great artistic fault of his picture,—its want of unity of subject. The idea of Drink, as the sole cause of all these manifold shapes of human woe, is symbolized, in a merely conventional form, by the central statue of the god Bacchus, surrounded by his acolytes and immediate worshippers in a classic garb. These might as well be on a separate canvas, for anything they seem to have to do with the hundreds of small figures, attired for the most part in Cockney dresses of the Georgian era, or in robes and vestments of office, whose motley aspect reminds us of a masquerade, occupying, in distinct parties, all the remainder of the space. They are not adoring Bacchus, for they do not stand in his presence or even within sight of him; nor does the group over which he presides come into the same scheme of perspective with these minor groups; nor are they related in perspective with each other. The effect of the picture is thus dispersed and frittered away in so many different portions, which might, without injuring their vitality, be severed from each other by cutting up the canvas into as many pieces; and it is only in this way, by taking them in detail, that we can study the fragmentary materials of which the picture is made up. We find, however, in many passages of this disjointed procession, abundant proof that the artist's fancy has not yet been dimmed by advancing age, and that his hand has not yet lost its cunning; that his perception of character is no less keen, his sense of the ludicrous and terrible is no less exquisite, his skill as a draughtsman is no less remarkable, than at any time in the last half century, during which he has toiled incessantly to amuse and instruct the world. And though, in the painting now on view, the patchwork of colour, which defies all rules of harmony, must displease an instructed eye, the engraving, upon which Mr. Cruikshank is now busy, will preserve whatever characteristic elements of his genius are displayed by this interesting work; and we doubt not that it will be cherished by his posterity, for another half-century at least, as a memorial of the clever, kind-hearted veteran, the father of our pictorial humourists, one of the earliest and most delightful friends of this age.

Meantime, as Mr. Cruikshank, though his mental and bodily faculties are happily quite unimpaired, seems now, for some years past, to have abandoned to younger artists the active exercise of his profession, we would invite men, women, and children to visit his room at Exeter Hall, before it closes, and to renew their acquaintance with a few hundred of those diverting, charming little pictures, etched by his industrious hand, which have long been out of print, and which will some day be eagerly sought after, when perhaps for neither love nor money they may be procured. Those who care for George Cruikshank as we do may either listen to the teetotal lecturer denouncing the rites of Bacchus, or may turn a deaf ear to him, as they please; but we beg them not to be distracted from a leisurely and fond review of the rich collection of prints and drawings, the creations of a rare genius, which cover the walls and screens in the same apartment. For let us remind our younger readers, whose memory can scarcely go back to the time when *Punch* first made its weekly appearance, that long before that era George Cruikshank was, to more than one generation, a constant and pleasant companion, to whom the middle-aged men of this day, aye, and their fathers before them, have owed many an hour of innocent mirth. If John Leech, who amuses and edifies us now, should be spared until about the commencement of the twentieth century, will it not be well that the boys and girls of that future age should look again and still laugh, as we do, at his admirable comedy of the Rising Generation of this? Do we wish those remote youngsters of A.D. 1900 to suppose that we had no failings, no follies, no frivolities in the decennial period of A.D. 1851 to 1862, between the first and second of the famous historical Great Exhibitions? Would we have them to believe that there was nothing ridiculous, or queer, or odd, or funny about us,—in our fashions, in our dress, in our domestic arrangements, in our daily life and habits, in our pork-pie hats and crinoline, in the frequenters of our Epsom races and Ramsgate sands, in the solemnity of our heavy swells, in the frippery of our sixpenny snobs, in the sporting pretensions of our Mr. Briggs, in the continental tour of our Triad of Cockneys abroad, in the precocity of our Master Jacky, in the servant-galism of one sex and the plush-covered pomposity of the other sex of a pampered menial class below-stairs in our Belgravian mansions,—in all the "Manners and Customs of the English," as depicted from contemporary observation by the graceful Leech and the inexhaustible Doyle? Would we burn all the tell-tale books and papers and pictures, in which our newsmongers, our novelists, our satirists, and—though last, not least—our caricaturists, have delineated the most trivial, as well as the gravest, incidents of our social life?

George Cruikshank has been so long busy, with his fine finger scratching on the copper-plate, in giving form and body to the grotesque, the sublime, and often the beautiful creations of his fine fantastic genius, as well as in the realistic portraiture of all that was ridiculous in contemporary London life! Amid such a medley of the Ideal and the Actual, we know not where to begin—we are carried far back to fabulous ages of English history—in dealing with the endless list of his works. It is not that he is, after all, such an old man. Threescore years and ten, we believe, are not far from his mark. We rejoice to know that he has still preserved a vigorous body, a fresh unclouded mind, an alert and gallant port, which did much credit, in the Brighton Sham Fight last Easter Monday, to the uniform he wears as an officer of some corps of Middlesex Volunteers. As a born artist, he began in his very childhood, when he was but twelve years old, to make etchings for a London publisher; his early taste for drawing, which had already in his artless infancy become a master passion of his life, having been indulged, by wise parental consent, in the choice of this calling, instead of that of a lawyer's clerk, for which he had been originally intended. Here, indeed, is a sketch, made in the exulting moment

Digitized by Google

of his deliverance. We see the interior of the attorney's office, and George Cruikshank's notion of the master from whom he had escaped. Here are his first rude drawings, made in 1788, before the dear little boy was breeched; here is a portrait of "My Lord," a favourite hunchback, a *lusus naturæ*, whom this precocious observer of human curiosities one day discovered in the neighbouring streets, and whose outline he committed to paper, with as much innocent glee as he may have afforded, perhaps, to some of us, long, long afterwards, when we in our turn were children, and when his renowned performances were our continual delight. And does not the poet Wordsworth rightly tell us, that "the child's the father of the man?" Which of us, therefore, being a man of some forty years or thereabout more or less, will deny the filial affection that binds him to a happy youngster in the early days of the Melbourne Ministry, or *Consule Planco*, as Mr. Thackeray would say, who used to pore over the funny pictures in the *Comic Almanack* with such wondering, delicious pleasure, as it is the privilege of youth to feel? Mr. Thackeray himself, whom in those days we knew not of, as we knew not of his contemporary, Mr. Dickens—though destined to be the immortal authors of a mighty revolution in English literature, which has since been accomplished in the last five-and-twenty years,—Mr. Thackeray himself tells us that, so far back as 1820, when he had his turn of boyhood, the works of George Cruikshank, then already famous, were the study of his sweetest hours. Does he keep an old well-thumbed copy of *The Humourist*, which was published in that year, and eagerly purchased with the schoolboy's pocket-money, and begrimed, not improbably, with sticky effusions from a jam-tart, or ink-blots from an unwiped pen, in the careless keeping of the future progenitor of Pendennis and Philip?

It is, therefore, simply attempting to pay off a long debt of gratitude, if we touch on this extensive and complicated subject of the genius of George Cruikshank, as displayed in the astonishing variety of his works, in view of the revolutions which he has witnessed and recorded in English society, manners, and sentiments, along with the progress of English humouristic art and literature as exemplified by his contributions thereto, since "the good old days when George the Third was king." In the mean time we desire, once more, that the very interesting exhibition, chiefly of his small etchings done on copper or steel to illustrate the popular stories and the serial publications of miscellaneous entertainment in his day, with several water-colour drawings worthy of price, may be seen and studied in the aggregate, as the evidence of that marvellous inventive power which has created a miniature world, peopled with many thousand figures, the ugliest and the prettiest, the saddest and the merriest, but mostly the queerest imaginable—all the fruits of great knowledge of mankind, all the teeming poetry of a true artist's brain, condensed upon a few square inches of printed paper—just as playful Science, in the tiniest photograph, will show an enormous multitude of objects by the aid of the microscopic lens.

THE LIABILITY OF INNKEEPERS.

Even before the days of Ulpian and Gaius, "mine host" had a grievance. That stringent edict of the Prætor was always, in his eyes, a crying injustice: "Nautæ, capones, stabularii, quod cujusque salvum fore reciperint, nisi restituent, in eos judicium dabo." Roman landlords, no doubt, wagged their beards in fierce invective against so exceptional and lavish a decree. And in our own day the grievance remains. An innkeeper receives no compensation for mere custody of luggage. He is not, like a carrier, paid to convey goods from one point to another, and therefore naturally responsible for their safe keeping. Guests arrive; he is compelled to receive them, whether they bring twenty packages or travel with only a clean collar and a tooth-brush; and then the law requires that he shall be answerable not only for the acts of his servants, but of any improper characters whom he may have innocently received under his roof. In the words of the old writ, he must see that the goods and chattels of his guests *infra hospitia* are kept safe from robbery or loss by day or by night, so that no harm shall come to them in any way, whether through the default of his servants or of other persons by him entertained. If even he tries to get quit of responsibility by expressly refusing to take care of the goods, because, as he supposes, there are suspicious characters in his house, for whose conduct he does not wish to answer, the law takes no notice of his disclaimer, and will not permit him to escape from what it holds to be his proper duty. So if an innkeeper at York is honoured by the patronage of half a dozen swell-mobsmen who have come from town to attend the Spring Meeting, he must not, on this ground, send them away; for, having no positive proof of their vocation, he might thereby lay himself open to half a dozen actions for slander. Again, the common-law says that, if he has proper accommodation, he must not refuse to receive anybody who is ready to pay for such accommodation; and if, upon false pretences, he does refuse, it renders him liable to an action. Having thus forced him to harbour suspicious guests, it makes him liable for any acts of wrong-doing committed by them upon the property of fellow-travellers, even, as we have said, in the face of express warning to the inmates and of an express disclaimer of responsibility. It is not necessary to prove that goods have been lost by his negligence, for in the eye of the law it becomes him to do an impossibility—provide honest servants and admit none but honest guests.

According to "mine host," this is scant justice, and on the face of it he seems to complain with reason of the severity of the rule to which he is subjected. He declares that in many cases compensation is claimed from him, and is obtained, for losses which never occurred, at all events in the inn; that these claims are sometimes made in mistake and without any intentional fraud, but that in many cases he is made the victim of deliberate fraud by persons who allege that they have sustained utterly fictitious losses; and that unscrupulous fellows, to whom hard swearing comes easy, are encouraged by the present state of the law to insist on claims which he cannot disprove. Why, he asks, should an innkeeper be compelled practically to insure the goods of travellers, who pay him no premium for his risk? Jones, who stops for one night at the Red Lion, having with him £500, is, in point of fact, insured against robbery as soon as he crosses the threshold, though his whole reckoning may not come to more than a few shillings. This seems hard on the Red Lion, and we wonder that when indignant travellers or tourists have written to the papers, exposing outrageous charges for waiters and wax candles, landlords have not replied that these items only veiled the perfectly legitimate allowance which, upon an estimate of losses, was necessary to satisfy claims for watches, purses, and portmanteaus stolen by stranger guests.

With a view to relieve licensed victuallers from what they regard as a crying wrong, the House of Commons has this week agreed to the second reading of Mr. Wykeham Martin's bill for limiting their liability. In the case of carriers and ship-owners, to whom much the same rule applied, the Legislature had interfered, and had defined the extent to which they shall be responsible for goods. But these persons are paid expressly for certain service done in respect of the goods, the safe keeping of which is properly a part of that service. Not so the innkeeper, who receives nothing in respect of *impedimenta*, whether bulky or otherwise, whether costly or mean. So Parliament is invoked by Mr. Martin, with a "whereas," and a preamble asserting that, from the great facility now given to travelling, the quantity and value of the property brought by travellers to inns is much increased, and it is therefore expedient to relax the old common-law rule, which has now "rendered the trade of an innkeeper extremely hazardous and dangerous." Accordingly, it is proposed to enact that no innkeeper shall hereafter be held responsible for goods or property belonging to his guests where the value exceeds £20, except such goods are expressly deposited with him for safe custody, in which case the innkeeper may require that each article shall be exhibited to him, and its value declared. Another provision is that where goods or property so deposited are stolen or lost, it shall be incumbent on the guest to prove the actual value.

Now we are not inclined to dispute the right of innkeepers to some relief at the hands of Parliament, but whatever may be the exact measure of relief to which they are entitled, there is no doubt that in principle the rule of making them responsible is a wholesome and a sound one. "Rigorous," says Sir William Jones, "as this rule may seem, and hard as it may actually be in one or two particular instances, it is founded on the great principle of public utility, to which all private considerations ought to yield. For travellers, who must be numerous in a rich and commercial country, are obliged to rely almost implicitly on the good faith of innholders, whose education and morals are none of the best, and who might have frequent opportunities of associating with ruffians and pilferers, while the injured guest would seldom or never obtain legal proof of such combinations, or even of their negligence, if no actual fraud had been committed by them." And this is the very reasoning of Ulpian and Gaius in vindication of the civil law on the same subject. Confidence is necessarily placed in innkeepers; travellers necessarily commit to them the custody of goods; and unless such a rule existed, they would have an inducement to conspire with thieves against those who trust them. The doctrine thus asserted in the Roman law has been generally incorporated

Digitized by Google

into the jurisprudence of Europe, and in our own Common-law the responsibility of innkeepers, which is said to be founded on the custom of the realm, may be traced up to the same source. We do not think that "mine host" now deserves the ambiguous character given him by Sir William Jones. But unless some restraint like that now imposed were continued, he would be subject to much temptation, and travellers to no little risk. The limit of responsibility suggested by Mr. Martin is a question of detail. The guest should not be put to needless trouble and formality in obtaining protection for his goods. It must not be forgotten that, though an innkeeper is not paid in money for securing a traveller's trunk, yet the guest *facit ut faciat*, and alights at the inn, not solely for his own refreshment, but also that his goods may be safe; so that the custody of the goods may be considered as accessory to the principal contract, and the money paid for the guest's lodging as extending to the care of the guest's property. Again, the law invests the innkeeper with peculiar privileges, for he has a lien upon his customer's goods for the amount of the bill incurred. These are points to be borne in mind in any legislation which is attempted upon this not unimportant social question. While Parliament is merciful to innkeepers, it must not forget to be just to the "weary traveller." The bill of Mr. Wykeham Martin requires to be carefully examined in its progress through the committee of the House.

OXFORD LEGISLATION.

We drew attention, a few weeks ago, to the new Examination Statute at Oxford, which had then been adopted by a large majority in Congregation, or the resident body of Masters of Arts and higher graduates. In Congregation, ninety-seven voted for the measure, and fifty-eight against it. In Convocation, which comprises the non-resident members of the University as well, the same statute has this week been thrown out by a large majority. Thus, the deliberate and strongly expressed decision of the resident body has been reversed by the non-residents. For the first time since the establishment of the present Constitution, in 1854, Convocation and Congregation stand in open hostility to each other. Of course, there are some questions on which non-residents are fully justified in expressing and giving effect to their opinion. But it is not surprising that the tutorial and professorial body should feel some indignation at the course pursued by Convocation in this instance. Here was a proposition which introduced no important change in principle, but which was merely intended to give fuller effect to the Examination Statute of 1850, by affording every facility for men to compete for honours in the subjects of study then for the first time recognized; one which was asked for in a memorial signed by a large majority of tutors and professors, who based their demand on the result of ten years' experience of the working of the present system; and this is thrown out by a concourse of country clergymen!

It is difficult to conceive what there could have been in this simple measure which aroused such destructive wrath in the bosoms of so many well-meaning men. From the numbers in which the High Churchmen mustered, it might almost have been supposed that some great theological question was at stake. But that scent must have been keen, indeed, which could detect the slightest taint of heresy in the two simple propositions, that men capable of taking classical honours should be forced to finish their education with six books of Euclid; and that those who obtained honours in mathematics, modern history, or natural science, should be excused one out of three classical passes. It appears, however, that this last proposition actually did excite some vague idea that the classics were in danger. We can only say, that if this was their apprehension, the vote of the majority does no credit to their judgment.

It is not probable that the residents will accept their defeat with resignation. With a working majority in the Hebdomadal Council and in Congregation, it is not very likely that a measure which had obtained so much influential support will now be ignominiously defeated and abandoned. But, possibly, this may be the beginning of a series of unseemly struggles between the residents and the non-residents, which will not tend to elevate the character or dignity of the University in the public esteem. Still, it may be hoped, that if this conflict does arise, the Legislature will once again assert its right of interference.

There is only one other remedy, and that one for which it is almost too much to hope. It is, that some sense of responsibility may at last grow up amongst the voting body at Oxford. It is by no means creditable to them, but it is nevertheless true, that, taken as a whole, few public bodies are so slow to weigh the real merits of any proposition before them. The request of an old friend,—the excuse for a holiday,—the pleasure of dining once more in Hall,—the opportunity of refreshing old associations,—personal feeling in some form or another,—such motives as these are far more potent to induce non-residents to come up to record their votes, than an impartial examination of the change which may be proposed, with a desire to do some good, or to prevent some mischief. On the other hand, we are sorry to say, that these Oxford contests appear to present some of the worst evils of parliamentary party tactics. We should at least have expected that men of the high character and position which must be necessary to have influence among so respectable a body as the graduates of Oxford, would be calm and temperate in their statement of facts; and that they would wish all those who are to vote on the measure to be in full possession of all the circumstances of the case. Unfortunately, we are compelled to believe that this is not always their disposition, if we may judge from some of the fugitive sheets, which are printed in large numbers, before every Oxford contest, in order to influence the votes.

At the close of the Easter vacation, the supporters of the statute, finding that "papers had been circulated amongst the non-resident members of Convocation, urging them to vote against the new Examination Statute, on the ground that it is adverse to classical education and learning in the University," published the memorial to which we referred the other day, with the signatures appended. To counteract this memorial a paper has been circulated, with the signature of "R. Michell," who seems to have been the leader of the opposition party. He begins with the observation that "it is but right that the real state of the case should be known;" but he goes on to say that "the statute, in its present form, embodies provisions *far different* from those contemplated by many of the memorialists." This, of course, would appear to imply that the statute had been so altered as to make it more opposed to the views of Mr. Michell and his party than the original proposition of the memorialists was. But we learn from the rejoinder published by the advocates of the new statute, that this is not the case. Two alterations have, it appears, been introduced, but they have been introduced "in the interests of classics as concessions to conciliate Mr. Michell's party." This fact, which is, we believe, notorious, certainly does not justify that party in laying any stress upon the alterations, with a view to upset the statute.

We should not have devoted so much space to this subject of an academical contest, if it were not that the interests of education make it necessary that the press should watch with a vigilant eye the proceedings of the great universities. That of Oxford is the principal educational body in the kingdom. It has its constitution, its council, and its parliaments, established by the law of the land. It has its own internal politics, with its parties of Liberals and Conservatives. And in order that the public good may not be altogether sacrificed to personal and party interests, it is necessary that its measures, and the conduct of those who promote or obstruct them, should from time to time be brought within the wholesome influence of public opinion.

THE BREAD WE EAT.

We do not, as an inspired writer says, "live by bread alone;' and, according to the report not long since made to the House and country, with respect to the condition of London journeymen bakers and bakehouses, it is well that we don't. The journeymen bakers, it appears, have long been restive under the many evil conditions which surround them during their hours of labour—their long night-work, the frightful condition of the dens in which they work, the impurity of the air they are obliged to breathe, and the early time of life at which some of the hands are employed in the baking trade. These evils are, in all conscience, bad enough; but we question if they would have attracted so much of the public attention, if it were not for the disgusting fact brought to light during the course of the inquiry, with respect to the mode of making the staff of life we lean upon. The corn comes out of the ground, and the bread comes out of the ground—or, at least, from a fœtid basement—but the one is turned into nutriment by the aid of the refuse of the animal body; would that we could say the same of the other! There are some subjects so disgusting that there is no excuse for the bad taste that dwells upon them in the press; but we feel that the full force of public disgust is required to reform our present system of bread-making. Paterfamilias, when he cuts the loaf for breakfast on the Gothic wooden platter, surrounded by some highly spiritual motto, is certainly not aware of the physical impurity he is manipulating. But it is well that he should know the whole truth at once, for the remedy lies in his

Digitized by Google

own hands. It is scarcely necessary to say that the art of bread-making has not advanced in the least from the condition it was in thousands of years ago. If the reader would verify this assertion, he has only to look at the process of bread-making as represented on the Assyrian marbles, in the British Museum. We make the toys our children play with, the pins we use, the pens we write with—the smallest items, in fact, that are called for by our civilization—by the most elaborate machinery; yet the bread we eat is made by the naked arm, the rough hairy arm of the not over clean workman.

Everybody knows the whereabouts of a London bakehouse by the indescribable hot odour that comes up the gratings; but we are not all permitted to see the den whence issues the main food of the people. We must, therefore, depend upon the descriptions of Mr. Tremenheere. In all cases there is defective ventilation; in many cases the most polluted drains are to be found in the bakehouse itself; and as the ovens are generally placed in the cellar under the pavement, the inevitable result is that the foul air in its draft towards the fire is drawn over the dough while it is being manipulated. In many bakehouses the heat, often at 90°, causes the apartment to swarm with rats and mice, beetles, ants, and even worse vermin; and its action on the human skin during prolonged exertion may be imagined. Now the first process of bread-making—the kneading process, or "making the dough," as it is called,—is a very laborious piece of business. The kneading process is carried on in a trough, the dough having to be turned over and over and thoroughly mixed with the bare arms. If you can imagine, good reader, a person making a bed at the bottom of a bath, the bed being very weighty, and the operation being carried on for half an hour in a temperature of 90°, the person leaning over the process the whole time, the inevitable result must be a copious perspiration which flows from the face and arms and drops down into the dough—"plenty of it," as one of the witnesses says,—and becomes incorporated with the bread. This sickening process is inseparable from the handicraft, and we may say, without fear of contradiction, that no loaf we eat, or that any one eats, from the Queen to the beggar, is free from some admixture of this vile animal impurity. But this is not all; one witness, James Reilly, says, "After the dough is made the journeymen first rub their arms out,"—*i. e.*, get off all the dough they can by rubbing, and using dry flour to get off what adheres; after that they wash off the rest in a pail. If they are not looked after they will throw this away; "*but a careful master keeps it and compels them to use it in the next batch*, with the rest of the water used in making the dough." Item, as old Pepys would say, beware of the "careful" master baker.

Need we say more as to the necessity for reforming this disgusting handcraft altogether? As long as it was only a question of the men's nightwork, and of the bad sanitary condition of bakehouses, the matter would have been viewed by the public with comparative indifference; for, as the world goes, you may spoil a man with impunity, but not our bread. Happily, however, the health of the men and the purity of the bread are ends attainable by the same simple means—the production of bread by machinery; the process is purely mechanical, therefore it should be performed by iron arms instead of by human muscles. There are two such machines at the present moment before the public—that invented by Mr. Stevens, and the machine working the far more scientific process, invented by Dr. Dauglish, and producing the well-known "aërated bread." This bread is not only free from any animal impurity, inasmuch as the hand never touches it from first to last; but it is infinitely purer and more nutritious than the ordinary bread as an article of diet, for it is raised, or aërated, not by means of the ordinary ferment, which often renders it obnoxious to dyspeptic persons, but by the simple mixture of a small quantity of carbonic acid gas with the dough. This bread, then, consists of the best flour, for that alone can be used, a little salt, and water. We all luxuriate in the bread at Paris during our annual holiday; but excellent as that is to the eye, it is not equal either in purity or nutritious qualities to the aërated bread, which Dr. Sieveking, the lately appointed physician to the Prince of Wales, predicts will speedily supersede all other kinds of bread for domestic use. The highly nutritious qualities of Dr. Dauglish's bread is owing to the use of the flour dressed in the manner patented by Mr. Bintz, of America, which removes the outer or siliceous skin of the wheat without destroying the inner skin adhering to it, as is done by the common process of dressing. The inner skin, termed cerealine, is found to be the most nutritious part of the grain. It cannot be used in the ordinary fermentive process of bread-making, as it turns the bread brown, and people, as a rule, will not eat brown bread; but by the aërated process the bread can be made white. Dr. Dauglish states that this valuable element is now thrown away as an article of human food by our ordinary branning process, to an extent that may be estimated at £8,000,000 per annum, and Mr. Tremenheere says he thinks this estimate is made on "good grounds." The introduction of Dr. Dauglish's process in the making of bread at once gets rid of the strongest grievances complained of by the journeyman bakers, inasmuch as it reduces the time requisite to prepare a batch of dough for the oven from a period of from eight to twelve hours to less than thirty minutes; and it also obliterates that fertile source of lung disease so common in the baker, the inhalation of the flour dust, which, according to Dr. Guy, causes one journeyman baker out of every two to spit blood; and, finally, it will have the effect of elevating the method of bread-making from a handicraft into a scientific process. The model bakery, at present at work in Islington, is as far removed in a sanitary point of bread from a common bakehouse, as a cellar is from a kitchen. We may therefore congratulate the public that this inquiry has clearly pointed out the means of ridding itself of the present disgusting method of making our chief article of food, and also of alleviating the sufferings of a very important trade. We scarcely know of an example, where the introduction of machinery is so clearly an unadulterated good, as in this new process of manufacturing bread.

OPEN-AIR PREACHING.

As the summer comes on, there will again be crowds of people listening to men preaching out of doors. What do they hear, and who speaks to them, and what comes of this preaching? It is worth while for us to try to answer these inquiries; for the practice has now become an ordinary institution among us. Twenty years ago, if a man was heard talking loudly in the streets, he was at once set down as a fanatic or a demagogue. Of late, the custom has been adopted by more sober advocates of religion and morality, who were determined not to surrender so fair a field to mere ranters. They justify it by the example of Christ himself, who lifted up His loving, solemn voice in the streets of Jerusalem. So, a few years ago, that reaction set in, which sooner or later must always take place, when a practice in itself good has become obsolete only because it was abused; and when there was something solid, useful, and true in it, after all. Ministers and earnest laymen now stepped forth from the threshold of the churches and spoke directly to the passing crowd. Soldiers came from their barracks, and lawyers from their chambers, to speak to the work-a-day people, in groups arrested by their voice. For some years the sneers and persecution, with which downright missionary work must struggle, checked its extension, but speedily it became right and orthodox, and then even fashionable to preach out of doors. All sorts of people were thus encouraged to come forth and speak on all manner of things. Not only the Gospel is preached in the streets and open places of London, but so are Mormonism, Spiritualism, politics, and infidelity. Anybody may speak, and everybody will listen; a man who talks earnestly, on any subject whatever, within hearing of the people, is sure of a large audience. The Christian laymen who had engaged in this work soon recognized one another, and were drawn by sympathy into an organization of their own. They fixed on about sixty regular stations, and mapped out London into corresponding districts.

It is curious to watch the manner in which an open-air preacher will begin. He first speaks at the chosen corner to a little child, and perhaps shows him a picture. Another boy will come, and soon a little audience is there. Grown people then collect, just "to see what is going on;" and before the preacher has got ready three sentences, a congregation is there to hear him. A few kindly and judicious words bespeak attention, and then he may go on for hours, with a throng only limited by the sound-carrying power of his voice. The faculty of doing this is a terrible power, if wrongly used. But good service may be done, if this liberty to speak and readiness to hear be wisely employed. The hearers are not always silent. Indeed, it would not always be a good sign if there were no interruptions. As the work in London progressed, certain stations soon became settled arenas for hard controversy. The Secularists met at King's-cross, the Infidels at Paddington-green, the Romanists debated on Tower-hill, and the unctuous Mormons battled for Nauvoo at the Southwark Obelisk. These and other such prominent posts gave, however, no example of the quiet, useful work that was being done in lanes and alleys and far-off back streets, to which a sensible, kind-hearted preacher had found his way. The squalid herd of dull and ignorant paupers there welcomed a pleasant face, and a plain-spoken tongue, with the words of love and wisdom to utter. As the preacher took his stand, up went

Digitized by Google

the windows in the houses all around, so that the women in the top rooms might hear, while the men collected below and lounged towards the preacher, puffing smoke from their short pipes, but standing still to hear him. It is a curious and interesting scene. The grateful thanks of the crowd are often paid for such efforts to tell good news to the sad and weary poor. There are not less than two hundred members of this open-air mission thus employed in London—all laymen, and all unpaid. Even in the winter there are still crowds to hear; in the wet and cold of November the preacher can always get listeners enough to justify an hour's work. The men who may be seen hanging about public-houses on Sunday afternoons, or prone and snoring on the grass of the parks, or yawning listlessly at a street corner, are nearly all in the public room of some common lodging-house at eight o'clock. The preacher follows them there, and they let him in with right good will, for they are tired of their own vapid talk. They have exhausted their stale comments on the last police case, read or spelled out from a penny paper; and it is no wonder that such a stupid company hails with delight the appearance of a new face, cheerful, kind-looking, and willing to sit among them half an hour, and tell some pleasant anecdote, leading to good religious advice, ending, may be, with a few verses of some chapter of the Bible. This in-door visitation is made more easy since "Lord Shaftesbury's Act," by which the 1,800 "common lodging-houses" of London are now regulated. For, instead of the stolid neglect of former times, the poorest inmates of these houses find that the law now insists on their having reasonable comfort; the space, water, light, warming, ventilation, and drainage are all rigorously under police superintendence. In these lodging-houses a hundred vagrants may be assembled round a blazing fire on Sunday evening, all ready, and waiting for the "gentleman's" visit. A very little oratory suffices for such an audience, if only it be kind, earnest, and plain; and all the while he speaks, the men—a motley group, including some crossing-sweepers, negroes, Chinamen, and Lascars—must of course be allowed to move about and do their own business. Some smoke, others cook, some sleep, others wash their garments, and others may pretend to read, but all will probably be civil to the visitor. Even the veriest bear in the street will behave better when he "receives" at home and puts on his best manners to show how he can treat a stranger. Then, again, some members of the lay mission follow these people into the country. They find them chiefly at the rural fairs, of which there are 3,000 held every year in England. They also follow them to the races, of which there are 200 every year. Practical dexterity and skilful tactics need be exercised at the fairs and race-grounds to get an opportunity of speaking, but in every such place crowds are to be found who will listen with avidity and will even thank the open-air preacher. The clown and harlequin of a travelling circus will sometimes let the preacher mount the front platform on the Sunday when the show is closed.

But there is still a lower depth. It is among the very worst scum of our people that meet round the gallows at a public execution. Thousands may there be met with, packed close together for long, idle, waiting hours, and even the vilest heart may then be impressed with the certain knowledge that a human being is about to die. For such occasions, men from London, or from the country branches of the Mission, assemble the townspeople at a meeting the evening before. Ten, twenty, or sometimes forty brave fellow-workers are enlisted, and long before sunrise they take post near the gaol. Tracts, handbills, leaflets, and cards with appropriate verses, are distributed among the expectant thousands. If we were to trace the beneficial effects even of such efforts at the foot of the gallows, there would be ample evidence to show that they are not in vain. And what if it be said that there are many injudicious preachers, and much bad preaching, in streets and lodging-houses, at races, fairs, and executions? Are there no bad sermons in churches and chapels,—no bad books in schools and colleges,—no "injudicious" teachers in every department of common life? The man who decries all work that is not perfect will have little to praise. The open-air preacher ought, indeed, to be criticised, improved, and rightly directed, but not jeered at and put down. The very spirit of independence in this man, which urges him to undertake such work, will induce him to resist with British courage all unkind endeavours to browbeat and flout him out of his calling. After all, if men firmly believe that there is a truth which makes them happy, they will speak it out, whoever tries to stop them. "Yes," it may be answered; "but then there is a time and a place for everything, and so for this religion." But what time, they may answer, and what place? If men and women really will not come to be taught in churches and chapels and schools, are we to leave them ignorant, idle, and perishing the while for lack of knowledge?

"Propriety" and "order" are not words of sufficient power to keep these earnest reformers back. They tell us that it is criminal apathy and cowardice to make these considerations an excuse for doing nothing. Open-air speaking is not disreputable in itself. See, for instance, the candidate for Parliament, who has an *earnest* desire to win men's votes; how readily he puts up with the rabble around the hustings as a fit assembly for him to address in the open air. Why should not the voluntary preacher do the same with his earnest desire to win men's souls? In some way or other religious truth must be carried to the masses of our population; and those who choose this way of doing it may plead the command, "Go out into the highways and hedges and compel them to come in."

There is one mode of carrying on this work of the open-air instruction which had been much used and abused, till last autumn a police order was issued to prevent it. The public parks in London were opened every Sunday in fine weather to all sorts of preachers, speakers, and wranglers. This custom was brought in by the permission given to private bands to play in the parks on Sundays; for it was impossible for the open-air preachers to be kept out of the parks when these bands were let in. The present Commissioner of Works, reversing his predecessor's decree, had allowed them all to go there together. What was foretold by more prudent counsellors soon came to pass; there arose the Chartist spouter, and the loud shouting demagogue, and at last the tumult came to a battle, with blows, and bloodshed, at the Garibaldi riots in Hyde Park. Upon this, the authorities were again convinced that the parks are meant for peace and quiet, and they rightly excluded all orators of any kind. It is to be expected that they will apply the same rule to the bands of music, and that the parks will be left for the Londoners' quiet Sunday walk, since musical performances in the streets are certainly not stinted on week-days all over the town. It has been observed, by some of those who are most eagerly engaged in open-air preaching, that the desire to make an oratorical exhibition before a holiday crowd in Hyde Park, is a very different spirit from that which carries the earnest preacher to some dingy alley, where misery and wretchedness are to be consoled; and it is a very grave question whether more good is stopped or more evil by closing up the parks to all meetings whatever.

Meantime, the institution of open-air preaching, under proper regulation, has been approved by the sanction, and even the example, of bishops, clergy, and dissenting ministers, as well as of many respected laymen. These do now go forth and "speak unto the people the words of this life," and the people come to hear and thankfully too. Many and great are the drawbacks, no doubt, on this use of such means, which are as powerful for evil as for good. There are bad speakers, and foolish speakers, and stupid speakers, and vain, ignorant speakers, who only mis-spend the hearers' time. Nevertheless there are hundreds of good and sensible men who diligently and reverently use this freedom, the right of every Englishman, to address their fellows in a tone which every Christian must approve.

ART AND SCIENCE.

WATER COLOURS, OLD AND NEW.

The water-colour artists of England have completely created the delightful form of art which they have cultivated with so much success and such original genius, for the last half century and more. Turner, the greatest master of landscape of the naturalistic order, made his first efforts in this form under the very simple teaching of Girtin, and his first picture at the Academy was a water-colour drawing exhibited in 1790; in little more than ten years he became an academician and professor of perspective. There must be abundance of scope, then, for the art of water-colour painting, and we are not disposed to say that the artists have not both developed their own powers to the utmost and extended the limits of the style. That they have done both is evident from the increasing interest which attaches to the Exhibitions of the two Water-colour Societies, one of which has favoured us this year with an extra display of their works which possessed a peculiar merit. The two Societies, as we distinguish them by the names Old and New, were necessarily rivals—friendly rivals, in a good sense—for they have been equally animated with a genuine spirit of study in their art, and there are to be found members of each side who stand alone in their particular excellences of style and execution. However, the old stock became strong enough to throw out a shoot, and this has taken root and blossomed so well during the last thirty-two years, that the name of "New Society," which had been felt as a misnomer for some time past, has now been cast off without Act of Parliament, for the name of "Institute," but not without accession to a new estate, in the shape of a much better lighted and more appro-

Digitized by Google

priate gallery. We are led to conclude, from the notice appended to the catalogue, that the new impulse thus given is due to the handsome donation from the late Mr. Woodburn, the picture dealer, whose services to art in this country, and indeed to the fine arts generally, have been highly valuable. The separation between the water-colour painters seems more marked than ever, but it is not altogether improbable that they may be brought together under some expansion of the Royal Academy which seems to be looming in the future. That the capabilities of water-colour art are now such as entitle the artists to take rank as Academicians, as Turner, their great teacher, did, we think there can be no doubt whatever. Those who are familiar with the many admirable examples of landscape, the work of the members of the two Societies, or with those drawings of finely-coloured, picturesque figures, always to be seen in their Exhibitions, must own that the style has the highest merits, and in some qualities—as in the more delicate and transient effects of light and atmosphere,—it is a question whether the water-colour artist has not surpassed his more robust and energetic rival the oil painter, who commands an advantage by his transparent tones, his scumblings, and his solid lights. It is this feeling that has gradually been at work, leading the water-colour painter on and away from the unaffected suggestiveness of Paul Sandby and Girtin, Varley, Copley Fielding, De Wint, and even Turner himself in his early days, to more ambitious aims at a more intimate companionship with Nature. An excellent opportunity was afforded at the recent sale of Mr. Mozley's collection of observing this transition. Here was an early drawing of Turner's, with the great man's first attempt to paint a rainbow, and a double one too, in a drawing of Schaffhausen. The feat has often been accomplished since by many water-colour painters. It is a step from the plain washes of colour, true enough in tint, of the drawings by De Wint, to such finished pictures as the "Old Mill by Moonlight" by Duncan; from the happy dash and lucky chance effects of David Cox to the sober mastery with equal boldness in Duncan's "Wreck on the Goodwin Sands." Compare, again, with the works of the past in water colours, those extraordinary pictures of fruit and flowers by W. Hunt, or those achievements in still more novel methods by Mr. J. Gilbert and Mr. Birket Foster. Compare, also, the prices realized by these last-named pictures, and they will be found to be nearly ten times the amount obtained for the De Wints, the Copley Fieldings, and the David Coxes. This advance in value is not to be attributed to mere fashion, though that had something to do with it, as in the case of drawings by Mr. Hunt, Mr. Gilbert, and Mr. Foster; it is due to the greater merit of the pictures as works of art.

We have referred to certain novel methods of work adopted by modern painters in water colour; these might have been noticed in strong contrast in the collection exhibited at Christie & Manson's sale room. Nothing could be more opposite than the drawings of Mr. Foster, minutely touched with body colour, and those of Mr. Duncan, Mr. Fred. Tayler, or Mr. Cattermole, broadly touched, and without any opaque colour. The same difference is to be observed in the drawings by Mr. Edmund Warren in the exhibition of the Institute and those by Mr. W. Bennett, Mr. Whymper, Mr. Leitch, Mr. Rowbotham, and others, who all adhere to what we suppose must be called "the orthodox school." Mr. Warren chooses to strike out into the domain of oil painters; he paints his trees much as the oil painter does with his "medium;" he gives his cornfields the same force and rich colour, and his ferns the same almost tangible reality that Mr. Vicat Cole and young Mr. Linnell heap in such luxury upon their canvas. Indeed Mr. Cole paints in water colour precisely as he does in oil, and a very fine example of this was to be seen in Mr Mozley's collection: high-spreading beeches hanging over a deep clear pool, with a water-hen splashing away across the water, frightened at the deer coming to enjoy the cool shade.

To return to the Institute Exhibition and Mr. Edmund Warren. Where this method is apt to fail is, in expressing the peculiar sense of life and movement in the open air. It is comparatively dull work to show us every leaf and prickly bramble. What we would see is the grand and glorious face of Nature. We should never be artists if we were always looking into the minutiæ of Nature's garments, testing their quality, and seeking if the same stuff could not be imitated by an inferior hand. If we look at the skies in all painters of this manner, and in Mr. Warren's pictures especially, we see at once the want of feeling, the absence of impression, and the lack of memory. The hand has failed because the eye has not prompted it, and the eye has become insensible to the changing beauties of the vast heavens, because the mind has been occupied with the mechanical task of imitation. A certain amount of vagueness and mystery should belong to a painted landscape, as it does to the natural scene; we wish to be cheated into a reverie, and not to be prompted to pull out our eyeglass to examine curiosities of painting. Mr. Warren's cornfields should be compared with a similar subject to illustrate the point; as in Mr. Moles's "Stubble Field, with Children Gleaning" (152), or his "Folding Time" (139), with a drawing of similar scenery by Mr. Whymper, 81, "A Common near Haslemere." As admirable pieces of landscape in the ordinary style, should be looked at Mr. Bennett's "Barden Tower" (37), Mr. Rowbotham's "Sorrento," and his "Castle of Ischia" (192). In the latter is most charmingly expressed the pure blue of the Mediterranean misty air of evening, and the sunny warmth over the shore.

Mr. Aaron Penley's "View of Buttermere" (200) has good points of airy effect, although it incurs the fault of being, as all very violent effects are, a little too like the red and blue fire of the sensation dramas. Mr. McKewan, Mr. Maplestone, Mr. Leitch, Mr. D'Egville, Mr. Fahey, are all very capable men, following the beaten track, though never slow to enter upon fresh fields.

Mr. Carl Werner's drawings are always a feature in this gallery; this year they are all of Eastern subjects, and chiefly from the half-ruinous buildings of Jerusalem, with the exception of one. This one is an attempt to call up, in Mr. Murray's room, the great departed,—Byron, Scott, Hallam, Gifford, Canning, Barrow, Disraeli,—in their habits as they lived; and the result is not more happy than it is invariably found to be in all pictures of this kind. But as for Mr. Werner's Eastern scenes, in his regular *métier*, they are wonderful for precision of light and shade and for the making out of every detail, as in "The Entrance to the Church of the Holy Sepulchre," or "The Entrance to the Hall of Justice, Jerusalem," and "The Wailing Place of the Jews." They are all faultless, except in the sky, and here we perceive a feebleness and untruth that leads us to wonder the more how the effects of sunlight and shade have been so accurately obtained. As fac-similes in colour they are superior to any photograph, but as for their spirit and feeling, they seem to be over-precise and pedantic. They are invaluable as illustrations, but want something of the charm we often feel in very inferior works.

Mr. Louis Haghe, as a painter of rich-toned interiors, with splendid architectural ornament and decoration, displaying some historical incident, with groups of figures admirably touched in, though only as picturesque suggestions giving interest to the place, takes a position quite parallel to any painters in oil. He has two superb examples in this Exhibition. The chamber at Fontainebleau, a splendid work of Italian Renaissance, has recently been touched up and improved upon by the Emperor's architect. In this, besides the beautiful work of the carved entablatures, inclosing pictures by Primaticcio, seen down the whole of one side of the apartment under a charming effect of light, we have Benvenuto Cellini showing a work of his to Francis I. and his mistress, Mdlle. D'Estampes, with cardinals and other pompous dignitaries in attendance. The other work is larger, but not finer in quality. The subject of it is the old Doge Dandolo, after having taken the Cross in St. Mark's, Venice, being led out through the crowds of the populace by the Marquis de Montferrat and the Grand Master of the Templars.

Mr. Corbould's "Memorial Design," painted for the Queen, represents the late Prince Consort, in golden armour, seen as if forming the picture in a triptych, the leaves of which are open and painted with subjects from the Old and New Testament. It is a beautiful piece of painting, whatever may be thought of the taste of such a design. Mr. Wehnert's picture of Lucrezia Buti and the painter Filippo Lippi, who fell in love with her when she was in a convent, and though a monk, persuaded her to elope with him, is curious as an instance of how an able artist may be betrayed into the absurdities of caricature when he is not satisfied with the reserve which the greatest painters never forsake. Mr. Augustus Bouvier seems to have erred in the opposite direction of inanity, in his drawing of "Princess Elizabeth entering London a Prisoner of State" (286). Mr. Fidey, one of the younger members, exhibits a clever commonplace kind of composition, on the subject of "Christ Blessing Little Children," a large work, but not, as we imagine, exactly suited to the style of this artist. The still-life pieces, especially Mr. Margett's "Mayflower" and "Bird's-nest," are most of them remarkably good; and, on the whole, we may consider that the first exhibition of the Institute augurs well for its future prosperity.

Having referred to Turner as the great exemplar of landscape art, it should be mentioned that there have been exhibited, during the last three days, before the sale which takes place to-day at Christie and Manson's, ten pictures by Turner, of which eight are in his finest manner. The "Ehrenbreitstein" is a beautiful work, frequently spoken of by Mr. Ruskin, painted in 1835. There is also the large picture called "Palestrina," painted in 1850; the "Antwerp," 1833; "Wreckers," a splendid example of sea-painting; two Views of Venice, gems of his later style; "Port Ruysdael," "Helvoetsluys," and two of his early works. There has never been such a sale of Turners as this, and the prices will probably be reckoned in thousands.

MUSIC.

In our last week's notice we briefly recorded the appearance, at the Royal Italian Opera, on Thursday week, of Madlle. Fricci as Norma, and the *début*, on the same evening, of Madlle. Carlotta Patti as a concert singer. The part of Norma, for many years one of Madame Grisi's most powerful impersonations, is a severe test for any but an artist of very high vocal and dramatic power. The requisites of finished musical style and tragic stage action are so rarely met with in combination, that any approximation to excellence in this double capacity merits a kindly welcome. There is so much that is good in Madlle. Fricci's Norma, that only hyper-criticism would dwell on some small shortcomings. The extreme tremulousness of the voice, and an occasional tendency to sing (only slightly) out of tune, were largely attributable to the nervousness inseparable from a first essay in a part which must challenge comparison with one of Madame Grisi's best representations. Madlle. Fricci has a voice of sympathetic quality, and a flexible vocalization; while her action is dignified without being stilted, and passionate yet refined. Her Norma is full of intention, and carefully studied

Digitized by Google

throughout. In the most violent transports of passion belonging to the several highly-wrought dramatic situations, Madlle. Fricci combines the majestic deportment of the Druid priestess with the human tenderness of the woman; while in her greatest climax of tragic wrath she never approaches coarseness. If her Norma is not of the highest excellence, there is still much to admire in the general intention, both vocal and dramatic, and it improves on repetition. Madlle. Carlotta Patti, who appeared after the opera in a miscellaneous concert, is a singer of the brilliant rather than of the expressive school. Her voice, a high soprano, is more adapted for rapid execution than for music of sentiment and passion—it is of somewhat penetrating quality but without the least shrillness, and thoroughly under command in passages of the bravura kind. Her chief performances were Donizetti's Aria, "O luce di quest' anima," and the Queen of Night's song ("Gl' angui d'inferno") from "Die Zauberflöte." In the latter of these, Madlle. Carlotta Patti sang with facility those extremely high notes (reaching to F in alt.) which Mozart introduced as a means of displaying the peculiar voice of the singer for whom the part was originally written. The effect of these passages, forced out as they must be in a kind of "head voice," is generally rather surprising than pleasing, but is more admissible in the concert room than on the stage, where such an exhibition of mere vocal gymnastics is opposed to all truth of dramatic situation. The calm, not to say cold, tranquillity which Madlle. Carlotta Patti preserved throughout her several performances, argues her more accustomed to the concert-room than the stage. Her pleasing appearance, a combination of cool confidence and arch simplicity, at once enlisted the good-will of the audience, and secured for her a favourable reception, which was confirmed by the after-judgment of the house. It is impossible, however, to form an estimate of this artist's powers without hearing her in a more extended range.

At Her Majesty's Theatre, where the ballet is to be restored to something like its former importance, the new piece of this kind, "La Farfaletta," has been thoroughly successful; the dancing of Madlle. Ferraris being the chief attraction.

The third Philharmonic Concert, on Monday last, was "by special desire;" their Royal Highnesses Prince Alfred and the Princesses Helena and Louise being present. The selection, as will be seen from the following programme, was from composers that are universally accepted as "classical," with the single exception of Verdi; respecting whose merits there is as much conflict of opinion as exists with regard to the very opposite style of Robert Schumann:—

PART I.

Sinfonia in E flat	Mozart.
Recit., "Hai già vinta," Aria, "Vedrò mentr' io," Mr. Santley (Le Nozze di Figaro)	Mozart.
Concerto in E flat, Pianoforte, Mr. W. G. Cusins	Weber.
Scena, "Ocean, thou mighty monster," Mdlle. Parepa (Oberon)	Weber.
Overture (Leonora)	Beethoven.

PART II.

Sinfonia in A major	Mendelssohn.
Duet, Mdlle. Parepa and Mr. Santley (Rigoletto)	Verdi.
Overture (The Ruler of the Spirits)	Weber.

The Philharmonic orchestra is fast ripening into a band of first-rate excellence. As we recently pointed out, the changes to which it has been subject within the last few seasons could not but result in unsettling that union and fusion which are only attained by long association of the same performers. These adverse influences, however, belong to the past, and the manner in which the symphonies and overtures were given on Monday, was such as to leave little or nothing for the most cynical critic to object to. Perhaps the first movement of Mozart's Symphony would have borne a little increase of speed—the time marked being "Allegro," unaccompanied by any qualifying term such as "moderato," or "non troppo." This, however, is greatly dependent on the individual temperament of the conductor, and we are bound to receive, with respect, the reading of so accomplished a musician as Professor Sterndale Bennett. No greater test could have been found for the steadiness of both orchestra and conductor than Beethoven's gigantic "Leonora" overture, the syncopations in which may easily lead to confusion of accent. Still more difficult are the passages for the violins which lead to the climax of the overture, where the slightest deviation on the part of the conductor, or even of one of the instrumentalists, may throw the whole into disorder. Nothing could be better than the entire performance; and we may here especially note the brightness and resonance of the string band, not forgetting to add that the wind instruments are, generally, of equal merit. Mendelssohn's "Italian" symphony and Weber's romantic overture were also worthily interpreted. Mr. Cusin's performance of Weber's difficult (perhaps his most difficult) concerto was characterised by great neatness and certainty of execution. This gentleman has an excellent mechanism, great rapidity of finger, and pliability of wrist; a little more power, which would be gained by occasionally throwing the force of the arm into the *forte* passages, would give an effective contrast to the delicacy and refinement of his general style. The performance, on the whole, was a very satisfactory one; and was warmly greeted on its conclusion. The vocal pieces call for no special remark; with the exception, perhaps, of the duet of Verdi; but we reserve some remarks on that composer's merits, demerits, and characteristics for the more fitting opportunity of the promised production of his last opera, "La Forza del Destino."

The third concert of the "Musical Society of London" took place on Wednesday evening, when the following selection was performed:—

PART I.

Overture (Lenora, No. 3)	Beethoven.
Recit., "Grazie clementi Dei;" Aria, "A te riedi," Madame Sainton-Dolby	Mercadante.
Concerto (Violin) in D minor, Mr. Carrodus	Molique.
Duet, "Now for him I lov'd" (Jessonda), Madame Lemmens-Sherrington and Madame Sainton-Dolby	Spohr.
Overture (Melusine)	Mendelssohn.

PART II.

Symphony, No. 1, in A major (Op. 19)	Silas.
Aria, "Jour de mon enfance" (Le Pré aux Clercs), Madame Lemmens-Sherrington	Hérold.
Overture (Preciosa)	Weber.

The speciality of this concert was M. Silas' new Symphony, a private hearing of which had been previously given at the society's trial concert in February last. A symphony is, in music, much what an epic is in poetry; and the musician, equally with the poet, who essays this, one of the grandest forms of composition, at once challenges comparison with the greatest productions of the art: a comparison that cannot fail to be to the disadvantage of any but a very high order of genius. The ambition to produce a work of such importance is much more frequently met with than the combined invention, imagination, and technical skill, which alone can justify a composer in addressing his hearers at such length and from so high an altitude. The external form of the symphony, and its component details, may be well constructed, the instrumentation may be skilful, and the work may bear general evidence of great musical attainments, but unless the composer have some special power, his symphony can scarcely be anything but an imitation, more or less clever, of existing models; and in this latter class only can we place the work of M. Silas. This gentleman has long been known as an excellent pianist and a composer of much graceful music for his instrument; and we would gladly have hailed in him a symphonist promising to add to the store of works of permanent value. With much to commend in the earnest endeavour and musician-like skill displayed in M. Silas' Symphony, however, we fail to discover that originality of thought and coherently sustained treatment of subject which are to be expected in a work of such pretension. Beethoven would appear to be the model whom M. Silas has had in view, especially in the first movement, in which we are occasionally reminded of the overture to "Egmont" and the seventh symphony. There is a frequent use of that broken rhythm which Beethoven uses with such gigantic effect, but which is a dangerous feature for imitation. Some of the instrumentation is effective and masterly, but there is an occasional redundancy of sound and an excessive use of the brass instruments which are oppressive. The subjects of his last movement too are commonplace, occasionally approaching vulgarity, and not redeemed (as is sometimes the case in Haydn's Symphonies) by such unexpected and learned treatment as makes us forget the triteness of the theme. If M. Silas, in his next effort of the kind will not take quite so high a flight, he will probably produce a work of more real merit, and avoid disagreeable but too obvious comparisons. It is but just to record the great success which the Symphony met with on Wednesday, and the call for the composer, who came forward and bowed his acknowledgments. Mr. Carrodus, in Molique's concerto, achieved a success which requires no word of qualification. His tone, if not very strong, is pure and liquid, while his execution is irreproachable. The great mechanical difficulties with which the concerto abounds were surmounted with the calm ease of perfect mastery. The passages of octave-playing were especially noticeable for their accurate intonation, and the general style was of high finish. The applause which followed the conclusion of the concerto was loud and general, and a deserved tribute to an excellent performance. The remaining instrumental pieces were given with that energy and finish for which the orchestra has long been remarkable, and which has earned for Mr. Mellon the reputation of an English Costa. The vocal music was scarcely worthy of the rest of the programme. Mercadante's Aria is one of those vapid pieces of Italian musical conventionalism, the only merit of which is that they afford some opportunity for effective vocal display. Hérold's air, too, is of flimsy substance, and would produce little effect but for its brilliant obligato violin accompaniment, which, in this case, was played to perfection by M. Sainton. Spohr's exquisite duet, however, compensated in some measure for the poverty of the other vocal pieces, which appeared all the poorer by the contrast. At the next concert, on May 27, a new pianist, Miss Madeline Schiller, is announced to make her first appearance.

That excellent pianist, Herr Ernst Pauer, has commenced his series of historical performances of pianoforte music; the plan being similar to that of last season, but with some change of illustrations. Herr Pauer's admirable playing, and the research and information displayed in his analytical programme, render these performances delightful and instructive to amateurs and students of the pianoforte.

The Oratorio, "Israel's Return from Babylon," by Mr. Rudolph Schachner, which was performed in July last with so much applause at Exeter Hall, has been selected by the committee of the Worcester Musical Festival, for their performance early in September next. The other oratorio performances on that occasion will be the "Elijah" and the "Messiah."

THE REPORT ON SMALL ARMS.

THE report of the Committee on the experiments on Small Bore Rifles, and the various systems of rifling tried last year, has just been printed, and contains results of a very important nature. By the seventeenth paragraph of the Government programme issued before the trials, it was notified to all makers that, whatever might be the general shooting of the arms, the ultimate value would be judged by the results of shooting with *wax* lubrication, which the same paragraph stated to have been "proved by experience to be the best adapted for all climates and conditions." The lubricant being determined, and the powder supplied of the same quality and quantity, the preliminaries were equal in all cases; the merit of the shooting must, therefore, be fairly indicative of the value of the gun. Under such equal circumstances, a higher interest attaches to these results than has ever before accrued to merely experimental tests, for these trials have been practical and final rather than experimental. The Government having got the best lubricant, their object was to find out the best rifle. We have before in this journal advocated, on purely scientific grounds, the principle of the Lancaster rifling; but what is best in theory is not always, though it generally is, best in practice. Mr. Lancaster's rifles have, however, maintained their superiority in these tests, as they had previously done in actual service in India and elsewhere, wherever they have been tried. The first and primitive idea of rifling was to get a grip on the shot, by which the vertical rolling over and over that it performed when projected from an ordinary smooth bore, might be changed into a spiral motion—screwing its way as it passed horizontally from point to point. After a time, elongated bullets were designed to assist this motion, various lubricants tried to destroy friction in the barrel, and assist the passage of the ball. Experience showed the differences of fouling attendant upon different plans of grooving and channeling; but the ultimate simplicity of the best method of rifling had to be found out by practice and thought, as the final results of every other investigation have ever had to be.

It is thus the result of innumerable attempts and experimental ideas that has produced the special varieties of rifling which are characteristic of the guns of our best manufacturers, and which, if not scientifically perfect in principle, are near enough so for our most eminent practical makers to have produced most effective and wonderful weapons. That these makers must yield the palm of pre-eminence is no degradation to them, because they are by the patent laws prohibited from using the correct principle of what is now the chosen arm of the national service, while the highest appreciation is due to them for those efforts that have helped in the attainment of what is the chief point to the nation—a good final result. Nor is it a mere matter of personal advantage of one maker over another. The adoption of the Lancaster rifle is a matter of national advantage.

The fouling of a rifle spoils its shooting. The fouling of a rifle hinders and finally prevents its loading. Bad shooting and incapability of being loaded are not qualities desirable on the battle-field. It would be little use to train men laboriously as exquisite marksmen and brilliant sharpshooters if the fine and costly weapons we supplied them with would only fire ten or a dozen shots with precision. In the Indian Mutiny, when other rifles choked up and became no better weapons than the now despised "Brown Bess," the Lancaster rifles alone were clean and effective. When that great portion of our empire hung by a thread, it may have been that the few Lancaster rifles amongst our troops were all that at some moments stood between our Havelocks, our Outrams, and a different destiny from that they have so gloriously accomplished.

It is for this important consideration, namely, that the Lancaster rifle is less liable to foul than any other small-arm, that we are gratified at its last unmistakeable success; for the delicate weapon that, in accomplished hands, projects in a shooting-match its bullet with unerring accuracy, might not be best adapted to the rough usage of war, and it might have been that a less accurate but more enduring weapon would have been more suitable for the horrid slaughter of the battle-field. As it is, however, there are grounds for popular rejoicing that the truest rifle in match-shooting is the simplest and best for war, and that our soldiers will be armed with a weapon that will fire its last shot in the fight with all but as much precision as its first. The Government report, and the tables of the trials will show that with pure beeswax—the selected lubricant—the Lancaster rifles were incomparably the best.

With the Whitworth ammunition, with tallow only—for subsidiary trials were also made with other lubricants than wax—they were very slightly inferior to the Whitworth at some distances. With grease and wax they were also inferior at some distances and superior at others; but after 100 rounds, when the other guns were all dirty, the Lancaster beat with *every kind* of lubricant. The tables also show that with the specified wax lubrication the Lancaster shooting was better than that of any other rifle, even when the contesting makers used whatever lubricant they pleased. The systems of rifling which have been under trial included the Enfield (three or five broad shallow grooves); the Lancaster (oval bore); the Whitworth (hexagonal bore); and Westley Richards' breech-loading applied to an octagonal bore—the two last in the smaller calibre only.

"Having, then," so runs the report, "carefully weighed and considered the relative advantages of the Enfield and Lancaster systems applied to large calibres, and adapted to one and the same ammunition, viz.,—bullet, 530 grains; diameter, 0·55,—wood plug; powder, 2½ drachms, J²; cartridge, service; lubrication, pure wax,—the committee are led to the following opinion:—1st. As regards precision when clean, the Lancaster rifle has the advantage. 2nd. As regards precision when foul, the Lancaster has a decided advantage. 3rd. As regards non-tendency to accumulate fouling, the Lancaster is considerably superior. 4th. As regards simplicity of management, the Lancaster has the advantage, a smooth barrel being more easily cleaned than a grooved barrel. 5th. As regards penetration. About equal (average penetration at 30 yards in ½-inch elm boards placed half an inch apart), Lancaster, 12·00; Enfield D, 11·40. 6th. Rapidity of fire, equal. 7th. Total weight of arm the same; weight of barrel same as the D Enfield.

	Lancaster. Feet.	Enfield D. Feet.
"8th. Initial velocity, arms being clean	1,234·9	1,248·6
With foul arms. After firing 1,020 rounds the initial velocity was	1,211·8	1,157·3
Showing the effects of fouling loss	23·1	91·3

"9th. As to flatness of trajectory, the Lancaster has the advantage. 10th. Cost of manufacture, about equal."

The estimation of the value of the shooting or "figure of merit" as it is technically called, is made by measuring the distance of each shot from the most central hit on the target, and striking an average from the total by dividing it by the number of shots. The *lowness*, therefore, of this average, shows the greater closeness of the shooting. The following results, eliminated from the detailed shooting-tables in the Government Report, will show at a glance some of the practical evidence on which the Committee has decided Mr. Lancaster's superiority.

SUMMARY OF TABLES, Nos. 54, 55, 62, 63, 64.

PURE WAX (Selected lubricant).

	yds.	yds.	yds.	yds.	yds.
Range	300 ...	500 ...	800 ...	1,000 ...	1,200

Of the old Enfield rifle, this Government report admits, as an excuse for its shortcomings, that it was introduced into the service "when comparatively limited experience had been acquired in this country with respect to elongated rifle-bullets, and when no fixed and generally-accepted principles had been established as to rifling small arms." The Enfield rifle, with its present twist, fails in precision at distances above 600 yards, and any attempt at improvement by increasing the spiral entails a tendency to foul the rifle, and thus mars its efficiency as a military weapon. Another defect inherent in the system is the large frictional surface presented to the descending bullet by the broad lands between the grooves, and which necessitates the use of a smaller bullet than the capacity of the bore, and, consequently, involves a loss of power by windage in order to effect the loading of the piece. Mr. Whitworth, whose name is so famous, wisely competed with small bores only, knowing, no doubt, full well that the larger the bore the more apparent would become the principal defect of his hexagonal system. The examples of tact, skill, and sharpness with which Mr. Whitworth has masked this defect border on the marvellous to those who can appreciate his ingenuity. For military purposes, however, the Committee do not speak favourably of the small-bores, and they state that, although the reduced bore has shown a great superiority in precision over the large calibre, yet the wear that takes place in the percussioning is so considerable that the rifle in a very short time is rendered unserviceable. In the course of these experiments, and before 500 rounds had been fired from any one of the small-bore rifles, eleven hammers had been broken by the force of the gas escaping through the nipple. The threads of the screw in the nipple-lump had commonly blown through; and there are further difficulties in using ordinary cartridges, which are for the small-bores required of such length as to be very liable to break in the pouch. The Westley Richards' breech-loaders are recommended for cavalry, that method of loading presenting great advantages for horse soldiers.

There seems to us, however, in the Committee's report one defect, which is apparently common to reports of this nature. It treats of mere results attained without displaying any deep amount of knowledge, on the part of its authors, of the *principles* by which they have been accomplished. Some paragraphs, too, are evidently only complimentary to certain competing makers, as the inferences drawn in them cannot be logically collated with the

Digitized by Google

results of the experiments or the decisions of the Committee. It is less than doubtful, however, whether anything more than strict and impartial truth should be admitted to appear in papers of so much practical importance.

Without referring to other of such paragraphs, we select the following, and we ask how it is possible to reconcile the statements made in them with the facts *displayed* in the tables of the very report in which they occur, and the actual decisions of the Committee itself:—

"68. Although the Committee have assigned reasons above for not recommending the general adoption of a rifle of the reduced calibre of 0·451", they think it only just to Mr. Whitworth to acknowledge the relative superiority of his small-bore rifle even as a military weapon, over all the other. rifles of similar calibre that have been under trial.

"69. With reference to the latter part of No. 3 question, they are of opinion that as the makers of every small-bore rifle, having any pretension to special accuracy, have copied to the letter the three main elements of success adopted by Mr. Whitworth, viz., diameter of bore, degree of spiral and large proportion of rifling surface, it is not probable that any further modifications or *quasi* improvements, that might result from the question being now thrown open to the gun trade, would be attended with any practical advantage.

"70. With the exception of the defect already noticed as to wear, and the difficulty of obtaining ammunition suitable for the rifle as well as the service, the Committee are of opinion that the Whitworth rifle, taking all other points into consideration, is superior to all other arms as yet produced, and that this superiority would be retained if Mr. Whitworth could ensure all the arms being made with equal mechanical perfection."

Now, the small bore principle was Mr. Lancaster's. It was submitted by him, in 1852, to the Select Committee of Small Arms, under the presidency of Colonel Alexander Gordon, and a model of the arm made for that occasion is now in the Enfield Factory. How, too, can this assertion be reconciled with the shooting in the table we have first given? It may be very well in ordinary life to show courtesy towards a favourite or pen a sympathetic eulogium for a non-successful competitor, but notorious as it is that Mr. Whitworth obtained the idea of small-bore arms and the manner of making them most effective by the generous unreserve of Mr. Lancaster himself, whose original idea it was, how can the writers of this report justify either the words they have used or the recommendation that the trade should be prevented from competing with a maker who is not even the inventor of the principle he has adopted? The points this committee claim for Mr. Whitworth were long ago claimed as Mr. Lancaster's right, as any one may see by turning to the *Mechanics' Magazine* for 1857, page 445; and that challenge then given in our contemporary Mr. Whitworth has never met.

For ourselves, however, having consistently from the first advocated the theoretical superiority of the Lancaster system, we can but be satisfied with the decision of the Committee, that "a strict but impartial comparison on all points connected with military efficiency establishes the superiority of the Lancaster rifle."

SCIENTIFIC BALLOONING.

On Saturday last Mr. Glaisher made his tenth ascent in Mr. Coxwell's balloon from the Crystal Palace at 1 P.M. After some hesitation as to starting, the wind blowing in the upper currents towards the sea at the rate of forty miles an hour, which would render a base line of eighty miles necessary for Mr. Glaisher's observations in an ascent of 4½ miles, the height it was intended to go. Length of journey being incompatible with height of elevation, a voyage across the Channel was impracticable, and the landing must, therefore, take place before the shore was lost. The balloon rose rapidly, in the first two minutes attaining 3,000 feet; the second mile was attained at 1h. 29m.; third, 1h. 37m.; fourth, 2h. 0m.; highest point, 4½ miles nearly, at 2h. 30m. On attaining this elevation Mr. Coxwell expressed his conviction there was not a moment to lose in getting within view of the earth. He, therefore, let off gas freely, and brought the balloon down a mile in four minutes (2h. 36m.); the descent was continued, the balloon passing three miles at 2h. 40m., and at 2h. 46m. it was at two miles from the earth, the barometer reading 21·20 in., when Mr. Coxwell caught sight of Beachy Head and the coast through a break in the clouds, and exclaiming, "There is not a moment to spare, we must save the land at all risks," directed the packing up of the instruments, and the making ready to throw out ballast, himself all the while using the great valve to let out gas, with a freedom which Mr. Glaisher laconically remarks would have alarmed any one not thoroughly convinced of Mr. Coxwell's competency and skill. On breaking through the clouds the balloon appeared already over the water, but, as the ground *seemed* to come up under them, it was evident there was land yet beneath. Mr. Glaisher, and the gentleman who accompanied him, threw out large quantities of ballast as they neared the earth, and the rapidity of descent was by this means, as well as by the balloon being thrown into a parachute form, in a great degree arrested; the balloon, however, striking the ground with sufficient force to break all the instruments except, fortunately, the two glass bottles containing the air that had been trapped above the clouds for Dr. Tyndall. The site, where the balloon landed, was within half a mile of the Railway Station at Newhaven; and the last two miles were dropped through in four minutes, for had the descent been less rapid the balloon would have fallen into the sea. Mr. Glaisher praises Mr. Coxwell's decision and expertness, which were put, he says, to as severe a test as it is possible to imagine.

Mr. Glaisher has kindly sent us the following notes of observations made on this occasion:—

"In my ascent on March 31 I took several observations with a spectroscope, with a view of observing the black lines in the spectrum; these I saw till I got above the lower atmosphere, when I began to lose the spectrum, and ultimately lost it entirely, the field of view becoming quite dark. This result was unexpected, and I could not avoid coming to the conclusion that the observations were all but valueless, owing to the late hour of the ascent; and hence I was desirous to ascend about mid-day, when I hoped to observe not only the sky, but the solar spectrum as well.

"Before leaving the earth, on looking at the sky, or rather clouds, chiefly, if not wholly to the south, the spectrum extended from B at the red end to G at the violet end; and on looking at the sun, B was then the limit at the one end, nearly H at the other, and all the prominent lines between these limits were seen.

"When below the clouds, or within a mile of the earth, the results were almost identical with those on the earth; but on ascending above the clouds, I began to fail in seeing any spectrum at all when looking at the sky, excepting in the immediate neighbourhood of the sun. The sky was blue and bright, and at last I became fearful that something was out of order, for the field became quite dark. I thought at first I did not look fairly through the telescope, from my constrained position; then, that in my anxiety I had breathed on the eye-piece, and I became very uneasy, lest I should lose all my time, and fail. At 2h. 15m., I succeeded in getting an admirable adjustment on the sun. We were now above four miles high, and the balloon was slowly revolving at the rate of one revolution in five minutes. I kept my eye at the telescope till a beam of light entered the slit; I was looking at the violet end, which was greatly lengthened; and the two lines of H, usually nebulous, were broken up into many lines. On passing off the sun, the limiting line of the spectrum was G; and as the balloon revolved, line F became the limit, and then the spectrum soon was lost entirely. On approaching the sun, I saw the spectrum again appear, and lengthen to G; I then diverted the telescope to the red end and saw B; and when the light came from the sun I saw A, a, B, c, and very many lines. On passing off the sun B was the limit for a short time, and the spectrum shortened as before, till it was lost entirely. On coming round to the sun again I unclasped the telescope; and moved it up and down, and a long way beyond H were the limits; there was every line I had seen on the earth, and a great many more. This was the last observation I made on the spectrum, but it seems to me conclusive, and shows that the solar spectrum includes all the lines we see from the earth, and that the sky proper has no light in itself. The several sky spectra experiments on this occasion confirm those I made on the previous ascent.

"At the height of four miles I opened four exhausted glass bottles for trapping air. These had been prepared by Messrs. Negretti & Zambra, with their necks drawn to a fine point. On opening them the air entered the small aperture with a hissing noise, which continued for some time; on its ceasing I sealed them up, and succeeded in bringing two down safely. In my previous ascent all the bottles I took up were broken on the descent.

"At 2h. 33m. I looked carefully at the sun through a blue glass, yellow glass, and red glass, for red prominences, or anything different in its appearance; but I observed nothing different from his appearance on the earth.

"Ozone papers, prepared by the formulæ of Schonbein, Moffat, and Lowe, were exposed, and their colouration during the whole journey was very nearly the same, and amounted to 1 on a scale whose darkest colour is represented by 10; during the same interval of time no ozone was detected at the Royal Observatory. Lowe's powder tests were not exposed till we had attained a height of 2 miles; they were coloured to 3 at the height of 4½ miles, and the colour deepened afterwards to 4 or 5.

"Before starting, my pulsations numbered 76 in one minute. At 2h. 0m., at the height of 4 miles, mine had increased to 90, Mr. Coxwell's was 113, and Mr. I.'s was 130. These experiments were repeated after a little time, when mine was 95, Mr. Coxwell's 98, and Mr. I.'s still steadily at 130. Mine was so weak that I had difficulty in counting; Mr. Coxwell's varied, no doubt, according to the more or less exertion he had to undergo. The difference between 98 and 113 with Mr. Coxwell, would be accounted for by the fact of his having raised a bag of sand of 60 lbs. and discharged it.

"The great difference in our pulses, viz., 90 to 130, is very remarkable, but quite agrees with what was observed in the pulsations of the same three persons in an ascent last year."

THE PAST WEEK.

HOME.

PARLIAMENT.

The Prison Ministers Bill and the City Police Bill have been the main subjects of interest during the week. The second reading of the former was carried on Monday by a majority of 152 to 122; a small majority, looking to the fact that the bill was a

Digitized by Google

ministerial one, and was supported by Mr. Disraeli and the leading members of the Conservative party. Sir George Grey explained that the bill merely extended a principle adopted by the House to Roman Catholic prisoners, of whom there is a very large number in the county and borough prisons of England and Scotland. He observed that in Ireland there was a paid Protestant chaplain in every prison, even though it did not contain a single Protestant prisoner; and he explained that the provisions of the bill empowered the Court of Quarter Sessions to appoint Roman Catholic chaplains in prisons with a reasonable remuneration, and to remove them. Mr. Disraeli thought that those who objected that the bill would injuriously affect the interests of the Church of England must have a very mean opinion of the position of that Church. The privileges of the Church of England, entirely in theory and greatly still in practice, embody and represent popular rights; and he could not see what popular right is represented by the Church of England exercising an arbitrary power to prevent the captive who is not in her communion from enjoying the consolations of his religion. Such a policy, he thought, is injurious to the Church of England, whose interest it is to favour the development of the religious principle. Lord Palmerston said that, in his view of the bill, it was a question between sound sense and most respectable and honourable prejudice. Parliament, when it repealed the penal laws, affirmed the principle that no danger to the Protestant religion is to be apprehended from the intercourse of Catholic priests with any part of the community. It affirmed the principle that there is no danger to the Protestant faith in the access of Roman Catholic priests to the members of either House of Parliament; or in the intercourse of priests with the officers and soldiers in the army. Would it then say that there is danger if a priest is allowed access to men confined in prison, suffering for their crimes, and whom it is the duty of the State, if possible, to reform? That would be to act in opposition to the policy of the country for the last thirty-four years. On the other hand, Mr. Gore Langton, in moving that the bill be read that day six months, insisted on the fact that out of the large number of Roman Catholic prisoners, very few had desired the attendance of their priests, and that those who did so obtained it. He observed that however liberal the Catholic laity might be, intolerance always followed the predominance of the Roman Catholic priesthood. Colonel Barttelot said that the fact that in some prisons there was a large number of Roman Catholic prisoners was no reason why they should legislate for the whole of England and Scotland. The bill would be a brand of dissension thrown amongst the visiting justices, who at present worked harmoniously. Mr. Newdegate maintained that the proportional excess of Roman Catholic prisoners showed that the religion which produced fewest criminals was the best for the criminals themselves; and, both for the sake of the prisoner and the community, he refused to debar him from the benefit of Protestant teaching. No grievance to call for the bill had been proved; and it was brought forward, not for the sake of the prisoner, but to gratify the Church of Rome. Mr. Whalley, after a storm of interruptions, which prevented a connected sentence being audible for nearly ten minutes, said that the Government, by their attitude, discouraged those Roman Catholics who desired to emancipate themselves from priestly intolerance. Catholic emancipation had not answered the expectations formed at the time it was passed. The Roman Catholic religion was the cause of all the misery, all the pauperism, and all the crime in Ireland; and the time would come when the civil war to avoid which the Duke of Wellington consented to pass the Catholic Emancipation Act would have to be fought. The division involved a curious political medley. Many Liberals voted against, and many Conservatives for, the Government measure. And, on the other hand, many Conservatives voted against their leader.

Sir George Grey moved, on Tuesday, for leave to bring in a bill for the amalgamation of the City of London police with the Metropolitan. The measure, he said, was not founded on the mismanagement that occurred on the 7th of March, though that mismanagement proved that the opinion which had been the result of inquiry was confirmed by facts. He read extracts from the reports of several commissions which were in favour of amalgamation; and expressed the hope that the House would not be influenced by the powers of resistance possessed by the Corporation of London. Mr. Crawford said that on the motion for the second reading he would move that the bill be read that day six months; and after the Lord Mayor and others had spoken for or against the bill, leave was given for its introduction.

MISCELLANEOUS.

The capture of the *Peterhoff* by Federal cruisers has been followed by the capture of the *Dolphin*, and as there is no knowing where this interference is to stop, the merchants, charterers, and owners of the *Peterhoff* and the *Sea Queen*, a vessel now at Falmouth and bound for Matamoras, have had an interview with Earl Russell upon the subject. At this interview it was stated that the captain, officers, and supercargoes of the *Peterhoff* had been treated as criminals on board the vessel, and were not permitted to communicate with either the agents of owners or merchants, or with the British consul. The conduct of the Federal commanders has rendered the trade between this country and Mexico impossible, and Mr. Adams, the American minister in London, has undertaken to limit that trade to such vessels as carry his certificate that their purpose is lawful. A letter was shown to Earl Russell, in which Mr. Adams vouched that, "amid the multitude of fraudulent and dishonest enterprises from this kingdom (Great Britain) to furnish supplies to the rebels in the United States through the pretence of a destination to some port in Mexico," it gave him "pleasure to distinguish one which has a different and a creditable purpose." The agents of this vessel are a Mr. Howell, an American contractor, and General Zirman, of the Mexican army; and the "creditable purpose" on which the vessel is bound is to supply munitions of war to enable the Mexicans to fight the French. Mr. Adams's letter is addressed to Admiral Dupont, commanding the Federal fleet, and it has been circulated at Lloyds', in order to effect, at as low a rate as possible, an insurance of £110,000,—£80,000 in arms and ammunition, and £30,000 on the ship and freight. The manifesto, both of the *Peterhoff* and the *Sea Queen*, was offered for the closest inspection, to prove the legal nature of the voyage of both ships; and it was urged upon the Foreign Secretary that, if a mail agent were placed on board the *Sea Queen* in charge of the Post-office letter-bags, his presence would be a kind of official guarantee that the vessel would proceed to the port for which she was cleared. Earl Russell promised to consider this suggestion. In the mean time, the Post-office authorities have shown his lordship a way out of the difficulty by offering to relieve the owners of the duty of carrying the mail. So far, then, it would appear that British merchants are left in the lurch by their Government, and that the United States cruisers are at liberty to outrage our ships with impunity.

The case of the *Dolphin* is as follows:—She sailed from Liverpool on the 10th of February last, bound to Nassau with a cargo of lawful merchandise, and duly reached St. Thomas's on the 25th of March. She sailed thence for Nassau; but when about three miles from Calebra Island, off Porto Rico, she was fired at and stopped by the Federal ship of war *Wachusetts*, from which a boatful of armed men presently boarded; and, notwithstanding that the legal character of her voyage was attested by her papers which were produced, the Federal officer seized her. Our Government must do something promptly to put a stop to these outrages if we are not to become contemptible.

On Monday the Lord Mayor made an important statement at the Mansion House police-court with reference to the distress in Lancashire. It was, in effect, that the present system of relief cannot long be maintained; first, because its tendency is to demoralize the recipients; secondly, because the prospect of a revival of the cotton trade is remote and uncertain; and finally, because the subscriptions which are coming in are inadequate to the prolonged maintenance of the present system. He said that the time had now come when we must devise other means of supporting the operatives, and that the most feasible and effectual remedy lies in emigration. He stated that the Mansion House Committee, at their meeting on Friday week, had set apart from the fund at their disposal a sum of £5,000 to aid and encourage emigration from the cotton districts; and that, should the public be of opinion that it is desirable to assist such a movement, he would be happy to receive contributions to a special fund to be set apart for this object. This is more than an intimation; it is an appeal; and one which will be sure to meet with a liberal response. The old proverb, "A stitch in time saves nine," is well in point in this case. The English community abhors stagnant industry as Nature does a vacuum. Our Lancashire vacuum will swallow up far more than we find to fill it. There seems to be a growing opinion that the best course is to send a portion of our idle operatives to our colonies, where they will not be idle.

At the last Guildhall sitting before the Lord Chief Justice, an action against the *Saturday Review* was tried at the suit of the Rev. Dr. Campbell, editor and part proprietor of the *British Standard* and *Ensign*, resulting in a verdict, with £50 damages, against the defendant. The plaintiff, in his journal, had written certain letters entitled "Missions to China;" and in the numbers in which they appeared appeals were made to the public for co-operation in the great work of evangelizing the Chinese, by purchasing copies of the plaintiff's letters; while lists were set forth of persons who had subscribed for a considerable number of copies. The writer in the *Saturday Review* treated these lists as fabrications, and charged Dr. Campbell as guilty of "a most scandalous and flagitious act," in putting forward the pretence of spreading the Gospel in China, as a means of puffing his newspaper. The Chief Justice directed the jury that if they thought the effect of the article was fairly to discuss the proposal of the plaintiff, they should find for the defendant; but that if they thought that its effect was to impute base and sordid motives, then they should find for the plaintiff. It was, moreover, clearly proved that the subscription list was genuine. On Saturday Mr. Bovill moved for a rule to set aside the verdict, on the ground of misdirection, and also on the ground that the verdict was against evidence. But the court refused a rule. The Lord Chief Justice said that the line must be drawn between hostile criticism upon a man's public conduct, and the motives by which he may be supposed to have been actuated. He said, "You have no right to impute to a man whose conduct you assail, and who may be fairly open to your attacks, base, sordid, and dishonest motives, unless there is so much ground for the imputation that a jury should think, not only that you had an honest belief in the truth of your statements, but that your belief is not without foundation. Now, in this instance, it turned out that the charges were wholly and utterly without foundation. It may be that the doctor, in addition to religious zeal, may not have been wholly insensible to the collateral object of promoting the circulation of his paper. But there

Digitized by Google

was no foundation for saying that he had assumed the character of an impostor, and that he had resorted to false devices to induce persons to subscribe to his newspaper. That being so, the defendant took his stand upon the ground of privilege, and asserted that because he had a *bonâ fide* belief that the statements were true, therefore he was not liable for the libellous imputations he had made. I cannot assent to that doctrine." Justices Crampton, Blackburn, and Mellor expressed similar opinions. Our readers may remember that this was the view of the law which was taken in an article which appeared in the *London Review* at the time of the trial.

FOREIGN.

AMERICA.

At last Charleston has been attacked. At two o'clock on the afternoon of the 7th inst. nine Federal Monitors opened fire on Fort Sumter, at a distance of 3,000 yards. But at four o'clock the ironsides withdrew, leaving the *Keokuk*, one of their number, sunk on the beach of Morris Island. It appears that the reception they got from the batteries and the Confederate iron-clads, which took up their position between the forts, was so satisfactory that they have since shown no disposition to renew the conflict, but have anchored outside Charleston bar. The Federal land forces were not, it is said, to co-operate in the attack till after the effect of the bombardment of the fleet was known. The Confederates admit a loss of one man killed and five wounded. Elsewhere the victories which were promised by the Washington Government are substituted by perils or defeats. General Porter, who lately took 2,000 men with him on a reconnaissance up the Tarr River, is surrounded at Washington, North Carolina, by a superior force of Confederates, and a reinforcement which has been sent to him has been stopped by Confederate batteries. He is cut off by land and by water, and is expected to capitulate. On the 28th ult. the Confederates captured the Federal gunboat *Diana*, at Brashead City, Louisiana, killing and wounding 25 Federals and capturing 170. In this district the state of affairs is so alarming that General Banks is reported to have left New Orleans with 10,000 men to join General Weitzel in a campaign on the Bayou Teche. Two Federal steamers have been captured and burnt on the Cumberland River, near Clarksville, Tennessee.

But the most stirring piece of news which reaches us from the great Republic is a semi-official report from Washington that Mr. Seward has forwarded despatches to Mr. Adams to the effect that, if any other vessels of the character of the *Alabama* and *Florida* are allowed to leave British ports, the British Government will be held responsible for the injuries that may result to American commerce!

PRUSSIA.

M. von Bismarck has given the Prussian Chamber another taste of his quality. On the 17th inst., M. Twesten brought forward his interpellation on the recent acts of the Danish Government. On the 30th March the King of Denmark, by proclamation, gave the Federal duchy of Holstein a position of isolation and independence of the rest of the monarchy. He assigned it an independent army, a share with the rest of the monarchy in the civil list, the appanages, the public debt, the navy, the department for foreign affairs, the customs and the postal arrangements, reserving to the Holstein estates the right of deciding upon details. Against this arrangement Austria and Prussia have protested. M. Twesten said that protest was not enough; at the same time sarcastically admitting that Prussia, with the king in opposition to its Parliament, could not go to war. "Gentlemen," said M. von Bismarck, in his reply, "in foreign countries people are not quite so credulous as here. If we find it necessary to go to war, we shall do so with or without your approbation." The debate continuing, the Premier rose and left the Chamber. Dr. Loewe, who was speaking, went on: but when he had finished Dr. Virchow got up and said, that as it was useless to carry on a debate the object of which was to produce an effect upon the Ministers, and especially on the Minister-President—which could not be done in his absence—he moved the adjournment of the debate, and that Ministers should be invited to attend its continuation, in virtue of Article 60 of the Constitution. Immediately upon this M. von Bismarck appeared at the ministerial table. "To tranquillise the gentlemen," he said, "I wish to remark that both the last speaker and the one who preceded him were perfectly intelligible in the next room." Upon this a deputy rose and objected to this unbecoming treatment. "It is known," he said, "that Germans have a large stock of patience, but when we are treated in such a depreciating, unbecoming manner it is, I think, the business of the President to point out its impropriety. We do not sit here for our pleasure but to discuss serious matters." M. von Bismarck replied that the deputy was at liberty to consider what he said proper or improper. He did not sit there for his pleasure either; he had many other important matters to attend to; he had to transact business with persons whom he could neither keep waiting nor receive in the Chamber. And he did not see why, if a speaker was so fortunate as to have a voice that could be heard in the next room, he (M. von Bismarck) should not profit by the opportunity of working there. The Prussians must, indeed, be largely stocked with patience when a Minister can indulge in such insulting raillery.

At Wednesday's sitting, during the debate upon the bill respecting ministerial responsibility, M. von Bismarck said that the preliminary condition requisite for such a bill is that the constitution should offer a clear and complete basis, which, in the opinion of the Government, could not exist so long as there were material differences of opinion between the Crown and the Chamber upon the bearing of important portions of the constitution. The Government was, therefore, unable to sanction the bill. Notwithstanding this declaration there is no doubt it will be carried.

DENMARK.

The Legislative assembly for Denmark-Schleswig (the Rigsraad) was opened in Copenhagen on Wednesday, by the President of the Council reading a speech from the throne. The speech adverted to the marriage of the Princess Alexandra; and the King expected that the Rigsraad would vote her Royal Highness a dowry. The speech then turned to the royal proclamation of March 30, and the opposition it had encountered from the great German Powers. The Government of the King, it said, would not allow itself to be led astray by that opposition from the intentions it had expressed.

The *Berlingske Tidende* of Wednesday says that Prince Christian has had an interview with the British Minister, at which his Royal Highness declared that the only obstacles which had hitherto opposed the acceptance of the Crown of Greece—namely, the abdication of King Otho and the state of the Greek finances—having now been fully removed, he definitively accepted it for his son, Prince William.

POLAND.

It appears, if the statement of *La France* may be credited, that the notes of England, France, and Austria have caused a great sensation at St. Petersburg. A Privy Council was held on the 19th inst., at the Palace of Tsarzkoe-Seloe, near St. Petersburg, at which the notes were simultaneously presented, to the astonishment of the Czar's Government, which was not prepared for the expression of views so completely in unison. The *Pays* of Monday last gives an analysis of the French note. M. Drouyn de Lhuys states that the troubles in Poland have occasioned uneasiness in Europe as they are not the result of a temporary crisis. The periodica, convulsions which take place in Poland are symptoms of an inveterate disease, leaving no doubt of the inability of the combinations attempted up to the present time to reconcile the country with the situation in which it has been placed by the treaties of 1815. The note points out that such disturbances are a subject of alarm to Europe; they excite the public mind, and might, if prolonged, disturb the relations of governments in such a degree as to produce the most lamentable consequences. It is thus the interest of all the Powers to see dangers incessantly reviving definitely removed. The note concludes with a hope that Russia will recognise the necessity of adopting measures which will place Poland in a position of lasting peace. The *Pays* further states that the Russian amnesty will effect no change with regard to the notes of the three Powers, as the intention of the Czar to promulgate an amnesty was known to the Powers previous to the despatch of the notes.

The text of the proclamation in which the Provisional Government of Poland rejects the amnesty has been published. It declares that Poland has no faith in Russian concessions; that it was not to obtain more or less liberal institutions that Poland took up arms, but to get rid of the detested yoke of a foreign Government, and to reconquer her ancient and complete independence; and that arms alone must decide the issue of the struggle.

Of the progress of the insurrection there is nothing important to record, except the fact that it does progress, and satisfactorily.

LATEST.

On Thursday Earl Russell explained in the Lords that the legal advisers of the Crown have given their opinion that, on a *primâ facie* view, there were no grounds for the seizure of the *Dolphin*; but that there might be facts which afforded reasons for sending her before a Prize Court. The American cruiser, however, was clearly wrong in respect to an un-neutral use of a neutral port, that is, for the purpose of watching British merchant vessels; and also in taking a part of the crew out of the *Dolphin* and landing them on neutral territory. These grounds of complaint would be brought before the American Government by the next mail. With regard to the certificate given by Mr. Adams to a vessel about to sail for Mexico, his lordship said that was a very extraordinary and most unwarrantable act, and improper in a person holding a diplomatic position in this country. He should not think, however, of complaining to Mr. Adams, but should bring his conduct under the consideration of the United States Government.

In the Commons Lord Palmerston moved a resolution for granting to her Majesty £50,000 towards erecting a suitable memorial to the late Prince Consort. After some discussion, in the course of which Mr. Disraeli said he thought the Government had taken a judicious and well considered course, the vote was agreed to.

Mr. Roebuck called attention to the conduct of Admiral Wilkes in the West Indian waters, of which he spoke in terms of the strongest condemnation, adding, amid "loud cheers," and cries of "oh, oh," from the peace members, that the people of England were ready for war. Lord Palmerston replied that the subject was under the consideration of the Government. The feeling of the House against Admiral Wilkes's conduct was very strong.

REVIEWS OF BOOKS.

MEMOIR OF BISHOP BLOMFIELD.*

A LIFE of Bishop Blomfield can hardly fail to interest a large circle of readers; for it was the fortune of this prelate to preside over the See of London during a very critical period in the recent history of the Church, and to exercise a marked, if not preponderant influence, in her counsels during this time. He was the author of the greatest and most successful scheme of church extension which has been carried out in England, and if he was not, as his friends claim for him, "a great statesman of the Church," he was certainly one of the ablest and most indefatigable administrators whom she has ever counted amongst her dignitaries. His readiness and power as a debater rendered him for some time her most conspicuous representative in the House of Lords, and his position between the two extreme parties in the Establishment gave peculiar importance to his utterances at several junctures. It may safely be asserted, that in any history of the Church during the thirty years which immediately preceded and followed the passing of the Reform Act, he will always be one of the principal episcopal figures. His son has therefore done well in presenting us with this biography, which tells simply and well, although with some natural bias, the story of his useful life.

Charles James Blomfield was born in 1786, at Bury St. Edmund's, and received his education in the grammar school of that place, and subsequently at the University of Cambridge. His career at the University was one of great distinction, for he came out third wrangler, and afterwards took the highest classical honour then attainable—the Chancellor's gold medal. At this time he was devoted to Greek literature, and his letters show that his ambition lay rather in the line of scholarly than of ecclesiastical distinction. He not only applied himself sedulously to the task of editing Æschylus, at which he worked for some years, but wrote many critical articles on classical subjects in the *Museum Criticum*, and the *Quarterly* and *Edinburgh Reviews*,—his connection with the latter being finally severed in 1815, by the appearances of some article which he thought injurious to religion or morality. His early connection with the great Whig organ may, perhaps, excite some surprise, but as a young man he was inclined to liberalism in politics; favouring Catholic emancipation, and scandalising the Tory squires of Bucks, where he held a living, by taking in the *Morning Chronicle*. We need not, however, dwell upon his achievements as a scholar, for although abundantly creditable in his own day, they have long been thrown into the shade by the remarkable progress made during the last half century in this department of literature.

His first living was that of Quarington, in Lincolnshire, to which he was presented by the Earl of Bristol, a warm and sincere friend of his family, in the latter part of 1810. He afterwards held other country preferments through the kindness of the same nobleman and of Earl Spencer; but it was as rector of the parish of Bishopsgate (which he became on the nomination of Lord Liverpool, in 1820) that he first displayed his remarkable capacity for administration and for the transaction of business. Not only was he most assiduous, both in preaching and in the visitation of his flock, but he took an active part in the proceedings of the National Society and of the Societies for Promoting Christian Knowledge and for the Propagation of the Gospel; was one of the earliest and most zealous promoters of infant schools; and yet found time for writing pamphlets in defence of the Church of England against the attacks to which it was then exposed; for composing his excellent "Manual of Family Devotion;" for contributions to the *Quarterly* and other reviews; and for the discharge of the duties of the archdeaconry of Colchester, to which he was appointed in 1823. The prominent position which he had now attained marked him out for elevation to the bench. This took place in 1824, when he was appointed to the see of Chester. After presiding for four years, with great vigour and success, over the affairs of this diocese, he became Bishop of London in 1828. He resigned this dignity in 1856, and died in the following year.

Bishop Blomfield was frequently accused of vacillation both in his opinions and his conduct, nor can it be denied that the charge derived some countenance from more than one passage in his life. At the same time it is fair to recollect that much which looked like vacillation on his part, was due to a desire to maintain the comprehensive character of the Church. He sought to confine within narrow limits the essentials of conformity, in order to retain within the fold as many as possible of those who differed on minor points or on speculative articles of faith. Without those limits he was willing to sacrifice much for unity; and it was inevitable that earnest men, who regarded as matter of principle what he deemed merely matter of expediency, should on more than one occasion resent with some bitterness a temporizing policy which was perfectly justifiable from his stand-point, but quite unjustifiable from theirs. With the instinct of a ruler and something of the temper of a statesman, he naturally, and we believe quite sincerely, gave up to considerations of expediency a larger province than was allotted to them by those who were more purely influenced by exclusively theological views. It cannot, indeed, be said, that he was either a profound or a speculative theologian. In point of doctrine he held a middle position, which rendered him particularly open to misrepresentation. Although he entertained a strong repugnance to extreme Calvinistic views, he was equally adverse to the opposite extreme; nor could anything be more emphatic than his repugnance to a compromise of the Protestant character of the Church. He accepted unaffectedly and completely its liturgy and articles as his rules of faith, and in more than one charge he dwelt very strongly upon the close and punctual conformity to these, which was, he conceived, binding upon every clergyman by his ordination vow. Conformity to the liturgy, too, implied as he thought an exact observance of the rubrics. It was, therefore, quite consistently that while strongly discountenancing the Romanist tendencies of the authors of the "Tracts for the Times"—and especially of the well known No. 90—he should, in his charge of 1842, impress very strongly upon his clergy the duty of strictly following the rubrics in the celebration of divine service. At the same time he failed to perceive that in the then excited state of public opinion this course would be associated by a great body of the laity with the sanction of doctrinal views of the most obnoxious character. He looked with not unnatural favour upon the efforts of the more moderate members of the Oxford school to revive the ritual and reinvigorate the worship of the Church. He forgot that the more extreme members of that school had almost inseparably connected any departure from the existing practice with a return to the tenets of the Roman Catholic faith. The consequence was, that this celebrated charge was the signal for an unexpected outburst of Protestant indignation which might or might not be justified by the circumstances, but which at any rate might have been easily foreseen by any one who had an adequate idea of the movement of popular thought or the strength of popular feeling. The result was that, under strenuous pressure from without, he was compelled to acquiesce in the non-observance of the disused rubrics, and to permit clergymen whose congregations clung to the existing practice, to continue in what, on his own showing, must be considered a lax observance of the discipline of the Church. Of course those clergymen who found themselves in difficulties with their flocks in consequence of adopting his suggestions, complained that they were abandoned by their diocesan. It is evident that he felt very keenly, as, indeed, he ought to have done, the reproaches which he thus incurred. And although the great rubrical controversy of 1842 gradually died away without leading to any very important events, the Bishop's share in it proved that he did not possess the foresight or the appreciation of the religious tendencies of the time, which would have entitled him to be considered in the highest sense "a statesman of the Church." We will pass over a controversy involving similar points in which he became engaged some years later with certain well-known high-church clergymen; nor can we stay to notice the Gorham case, in which he differed from the majority of the members of the Privy Council (including the two archbishops), in holding that the articles and formularies of the Church required a belief in the doctrine of baptismal regeneration. His prudence, and we may add, his clear perception of the actual bearing of the judgment upon the character of the Establishment, were shown in the steady exertion of his influence to prevent the contemplated secession of an extreme section of high churchmen. It was fortunate that he failed to obtain the sanction of Parliament to a bill which he introduced for converting the Upper House of Convocation into a court of appeal in matters of doctrine. The erection of such a tribunal would have tended to promote controversies and foment internal dissensions rather than to secure union; and his support of such a project was another proof that while he was keenly alive to immediate and external dangers, he was comparatively blind to those of a more remote and contingent character, and especially to such as had their seat in the bosom of the Church itself, and were of a religious rather than a political character.

As a spiritual peer he enjoyed unquestionable influence, to which his skill as a debater and his practical sagacity both contributed largely. Very soon after his elevation to the Bench he took a prominent part in opposing (contrary to the early inclination of his opinions) Catholic Emancipation, and in supporting the repeal of the Test and Corporation Acts. His conduct in regard to the Reform Bill was hesitating and ambiguous. When it first came before the Upper House, he absented himself from the second reading; although he seems to have thought that it should at least receive consideration in committee. But he subsequently became an avowed convert to its necessity, and an active agent in those negotiations between the Government and the bishops which ended in the latter giving to it, in 1832, a nearly unanimous assent. His share in the introduction of the New Poor-law, first as one of the Commissioners of inquiry, and afterwards as its steady and consistent advocate, is well known; it was highly creditable both to his sagacity and his courage. He took, however, but little part in general politics, nearly confining himself to the Church questions which occupied no inconsiderable portion of the attention of Parliament during the Melbourne Administration. He will be principally remembered in connection with the Ecclesiastical Commission, of which he was from the first a very prominent member. Indeed, Sydney Smith asserted that it was "the Bishop of London diluted with some watery additions;" and on one occasion the Archbishop of York remarked of himself and the rest of his colleagues, "We never do anything more than nib our pens till the Bishop of London comes." Even before this body was appointed, he had seen the necessity of meeting the reforming temper of the times by measures for the gradual extinction of pluralities, the enforcement of residence, and the application of a portion of the cathedral

* A Memoir of Charles James Blomfield, D.D., Bishop of London, with Selections from his Correspondence. Edited by his Son, Alfred Blomfield, M.A., Fellow of All Souls' College, Oxford, and Incumbent of St. Philip's, Stepney. Murray.

Digitized by Google

revenues to the augmentation of poor benefices. This is not the place for any discussion of the working of the Ecclesiastical Commission, which has no doubt failed in many respects to realize the expectations originally entertained of it. At the same time it is fair to recollect that, if too much of the funds at its disposal have been swallowed up in solicitors' bills and bishops' palaces, it has added, in twenty-five years, £108,500 to the incomes of the parochial clergy. Much of the good which it effected was undoubtedly due to what Sydney Smith called the Bishop of London's "ungovernable passion for business;" nor ought we to forget the substantial aid which it rendered to the great work by which his lordship will be long—and by all gratefully remembered—the erection and endowment of sixty-three new churches in the metropolis in the short space of ten years. Assisted as he was by the liberal contributions of the faithful, the Bishop's own subscriptions were on the most munificent scale; and although here again all was not obtained that the most sanguine anticipated, and all was not done so wisely as it might have been, the deceased prelate must ever retain the enduring credit of having been the first to take effectual steps for bringing within the influence of the Church the masses of our metropolitan population.

We can but allude in the most cursory manner to a few other points. Although he was rigid in exacting from his clergy a strict adherence to the standard of discipline and faith laid down by the Church of England, his general liberality of mind was shown by the uniformly good terms which he maintained, both as a parochial clergyman and a bishop, with the Protestant Dissenters, and by the warmth and openness of his sympathy for the Reformed Churches abroad. He was zealous in the promotion of the various religious and educational societies established in connection with the Church of England. At the same time, his conviction of the importance of definite principles, the high value which he set upon regular organisation, and his deep sense of what he deemed that Churchmen owe to their own body, rendered him throughout life indisposed for associated efforts with the members of other religious denominations. Of mixed or secular education he was an uncompromising opponent. Both as a bishop and as one of the committee of the National Society, he struggled manfully for the recognition of the clergy as "managers" in schools founded by them, but brought under the operation of the Minutes of Council. He was, however, characteristically ready to accept the compromise which Lord John Russell's government proposed in 1847; and he eventually succeeded by a happy suggestion in terminating the contest which subsequently raged on this subject in the ranks of the society itself between the high and the low church parties. He was, of course, warmly attacked by both, because he prevented either gaining a decisive triumph.

We have dwelt upon the points we have just noticed because it is impossible to judge the late Bishop fairly unless his position as a thorough Churchman, and yet a member of neither extreme party, be thoroughly understood. It was inevitable that in such a position he should frequently disappoint both, and occasionally excite in turn the vehement anger of each. Moreover, he had a quick and sensitive temper, which was apt to hurry him into saying or doing more than on subsequent reflection he quite approved, or was prepared to maintain. Nor can it be said—as we have already intimated—that he possessed either the large foresight or the clear perception of religious tendencies which would have enabled him to steer a course altogether direct and consistent. Though a man of marked ability, he was by no means a great man. He never contributed anything of importance to theological literature; nor is it probable that he could have done so had his life been one of less activity. For he was not a close or a profound thinker, nor had he the imagination which makes the thoughts and feelings of other men a reality to its possessor. His mind was entirely of a "practical" character. His strength lay in administration; in the transaction of business, and the enforcement of discipline. He exerted his powers strenuously in the service of the Church, and she owes him for what he did a deep debt of gratitude. But he cannot be numbered amongst those whose massive intellects, eloquence, and genius are her most illustrious possessions.

LISPINGS FROM LOW LATITUDES.*

THE passion for Eastern travel is invading the highest circles. Nobody of literary taste or consequence can consider his life rounded and complete until he has drunk bottled beer under the shadow of the Pyramids, and wandered, as it is said, by moonlight among the nightingales in the valley of Jehoshaphat. From the Prince of Wales down to the young Oxonian who has just taken his degree, all laymen perform the fashionable pilgrimage. It is needless to add that every divine of distinction has turned his footsteps in the same direction. Even the Rev. Mr. Bellew has been a "lingerer" in the sunny East. It can hardly be a matter, therefore, for surprise that the British heroine, who is never so grand and imposing upon her travels as when she is totally unprotected, should have followed the example set her by the British hero and the British divine. *Omnes eodem cogimur.* It is merely a question of time. Sooner or later we all have to take tickets from the Peninsular and Oriental Steam Company, and perform the necessary sea-voyage in the midst of Oriental missionaries, brown-looking ayahs, babies, dragomans, artillery officers, young English ladies, and Albanian Greeks. The Hon. Impulsia Gushington—who appears in the literary world under the patronage of Lady Dufferin—has been seized with the universal infection. She has been induced to turn her thoughts towards the rising sun, partly in consequence of the advice of her esteemed medical man, who believes in travel as an efficacious panacea for all mental and bodily ailments, and who spends all his own autumn vacation in trips to the Sandwich Islands or to Central Africa. Partly he is animated by the natural longing of a maiden for something more satisfying and romantic than the attachment of her faithful Minikin and the caresses of her playful Bijou can supply. But last, and not least, she has felt the bewitching and enticing influence of "Eöthen;" a volume that has not only given her an increased desire to visit the East, but has inwoven an imaginary portrait of its author into her dreams.

"*2nd January.* 'Eöthen' is indeed a delightful book! I fell asleep over it last night, and dreamt that, mounted on an ostrich, I was careering over the boundless sands of Arabia, with the author by my side! What a fascinating being he must be!—simple, earnest, full of reverential feeling and mild enthusiasm! he has taken complete possession of my imagination. I know by instinct what his personal appearance must be: *dark*,—with the rich bronze of travel on his manly cheek,—wild masses of raven hair, and flashing eyes of jet! Something Manfredy or Corsairish in expression, perhaps,—but mellow and softened, no doubt, by the gentle influences of a more ornate civilization.

"I wonder—does he still wander on those distant shores? or, like the honey bee laden with exotic sweets, has he returned to garner his perfumed memories in his native land—and another volume? If in England—*where?* I gather from the book that he is still unmarried—if so, *why?* Ah, Frolic Fancy, whither wouldst thou stray?

"The answer from Sir Merlin just arrived. 'The author of "Eöthen" is *not* dark, and he *is* married.'

"*4 o'clock p.m.* I have been reading a page or two of my favourite poet, Moore. What beautiful lines these are:—

"'"'Twas ever thus: since childhood's hour,' &c.

"*Mem.*—Moore infinitely superior to Dryden! Far deeper knowledge of the human heart!"

The bitter gush of disappointment about the colour of Eöthen's gifted author's hair seems to have stimulated the Hon. Impulsia still more to follow in his glowing footsteps to the East. The faithful Minikin—her attached personal attendant—in vain pleads for Margate. Corkscrew, the butler, who has understood from a gentleman's gentleman of his acquaintance, that "there was a good deal of going up rivers in the East in native boats called 'dabyers,'" begs, with some asperity of manner, to be informed whether he should be expected to black his own boots on the journey?—whether he should find a proper pantry and steward's-room on board "these here 'dabyers'"?—and, above all, "whether or not there will be a second table in the servants' hall?" The Hon. Impulsia is obliged to confess her inability to promise anything except crocodile haunches and pelicans' eggs; and Corkscrew is left behind. Even the faithful Minikin deserts at Alexandria, upon being required to mount a donkey, which species of animal she thinks are all very well at Highgate or Hampstead, but ought to be kept in their proper place when people go abroad. Impulsia, accordingly, is left alone, and starts on her expedition in all the confiding innocence of girlhood, united to the sober courage and determination of maturer years. She hires a dragoman before she leaves Alexandria, whose name is Dimitri, and who is a noble-looking being, in Albanian costume, realizing very much the Hon. Impulsia's notion of what Byron must have been in the first flush of his romantic manhood. Cairo she enters in a railway carriage, missing much the caravan from Mecca, the merchants from Bagdad, and the princes disguised as camel-drivers, whom her imagination had promised itself. Where, oh! where, are the Ginns and Afreets, the tomb-haunting ghouls, and mahogany-faced magicians of her dreams? The shriek of the locomotive has scared the delightful phantoms away for ever. Though the East is not what it was, Impulsia's acquaintance with it is destined to be eventful. The usual adventures befall her at the Cairo hotel. Her bed-room door is broken open by the rush of weary travellers on the arrival of the Indian mail; she is fleeced by her dragomans and deceived by the natives. She strikes up a warm friendship, meanwhile, with the MacFishys, an estimable Scotch family, with whom she takes luncheon at Thebes, by the tomb of King Rowdedowses, the fifty-seventh of the eighteenth dynasty, and with whom she agrees to share the expense of a boat up the Nile. At Edfou she tires of her companions, whose society pleases her less and less the more she sees of them, and decides upon parting company from them; and at Edfou begins the solitary tour of Impulsia Gushington. She has two camels across the desert all to herself, and her only comrades are Arabs, whose language she cannot speak. It is at this period of her existence that she learns the true misery of being unprotected. Her own camel first runs away with her and then from her; and ultimately she is robbed and stripped by her escort, and flings herself in despair on the protection of a village sheikh. He furnishes her with a donkey and a negro driver to take her back to Cairo; and the following description of her driver—of the negro's continual and insatiable desire for a gratuity—speaks for itself:—

"The negro who accompanied me was certainly the most disagreeable specimen of the race that I ever met with. He grinned and stared in my face unceasingly, while in a loud voice and rambling

manner he poured forth a voluble monologue. I think he was insane, but there was a certain method in his madness; the word '*Bakhshîsh*,' constantly reiterated, gave me an intimation of the nature of his discourse. Sometimes he half-shrieked it in an angry determined tone, as if his rights had become too patent, and his necessities too pressing, for any further delay. Sometimes he stopped my donkey, and placing himself in front, he put it to me in a reasonable argumentative form, whether it were possible to resist the evidence he adduced as to the absolute propriety of making him a present. By and by, in a whining apologetic tone, with real tears dropping over his oily cheeks and shining nose, he would adjure me to consider his humble request. Then he would as suddenly recover his spirits, flourish his stick in the air, and pour out a song of praise and thanksgiving for the reward he knew I was going to bestow on him. Soon after, a sense of my obduracy would seem to weigh him to the earth, and, with moody brow and sepulchral voice, he would merely boom out the words, 'Bakhshîsh, Bakhshîsh,' with the mournful regularity of minute guns.

"Alas! I had nothing to give him, or I would willingly have purchased immunity from his ceaseless harangue; but it was quite useless to attempt to convince him of my destitution. Lying is such a matter of fact and matter of course institution in this country, that it almost assumes the value and simple dignity of truth. I mean that, as nobody believes anything that anybody says on any subject, no deception is really practised, and by a somewhat roundabout process society is fast arriving at the transparent integrity of the Golden Age.

"My donkey only fell twice, and once kicked me over its head: on each occasion my companion demanded an immediate reward for picking me up. Again, towards evening we arrived at a large village on the banks of the Nile, and I at length got rid of my dreadful negro, who saluted me at parting with a volley of execrations, in which the fatal word, 'Bakhshîsh,' still predominated."

A boat belonging to a Dutch engineer, who is fat, sleepy, and unimpassioned, conveys Impulsia from the village in question as far as Luxor. There, thanks to the kindness of the English vice-consul, she is able to repair the losses of her toilette, and there she passes long bewildering days, wandering about the fallen columns at Gourneh, and watching the sun to his rest behind the purple Hill of Tombs. It is on one of these occasions that she falls in with Major and Mrs. Cornelius O'Whacker, of Ballybosh Castle, Fibbereen, County Kildare. They have a magnificent castle in Ireland—a place of great antiquity—to which they give Impulsia the most pressing welcome; and they insist upon her returning to Cairo in their "dahabiêh." The Major's sentiments are all chivalrous and elevated. Mrs. O'Whacker is amiable and kind. Impulsia feels at last that she has met those whom she may consider friends for life. With the proverbial generosity of his countrymen, the Major presses his purse upon Impulsia, and is really annoyed to find that a large balance in the hands of Messrs. Coutts's Egyptian agent relieves her from the necessity of trespassing on his goodness.

"Me chawrming frind!—to-morrow our deloightful mission will have tarminated, and we shall relinquish our swate charge to more worthy, though certainly not to more deeply attached and interesting protectors. Now, me beloved Miss Gushington, away with false delicacy!—which is a thing me very soul abominates, loathes, and detests! Spake to me with the openness you would use to a raal frind—to an elder brother!—shall we say, to an adopted father? Be intirely sincere with me, me sweet frind. Let me have the happiness of smoothing away any little pecuniary difficulties that may visit ye on your arrival in Cairo; consider me purrse as your own—me whole fortchune, such as it is, is at your disposal. I have told my beloved Letitia to intimate as much—has she recollected to mention the unimportant matter to ye?"

The Major's amiable wife informs Impulsia, next morning, that the Major had not been able to sleep all night, from dwelling with regret on the fact she had communicated about the balance at Coutts's. A happy chance affords Miss Gushington the pleasure of repaying the Major's kindness. By some strange remissness on the part of the Major's agents at Cairo, a large sum that he had expected to find waiting for him had not arrived. Miss Gushington is anxious to lay her purse at his feet, but the Major, who is the rigid soul of honour, will not hear of her lending him more than one hundred pounds, though he forces on her his note of hand in return, against her will.

"No, me sweet frind! in all other things ye shall command my entoire obedience, my implicit subsarvience to your wishes; but in all things connected with pecuniary obligations, Cornelius O'Whacker is adamant!"

The lifelong friendship between Impulsia and the O'Whackers is broken by a sudden summons which the latter receive by telegraph to the death-bed of a near relative at Aleppo. They have not even time to bid Impulsia a personal farewell. They take leave of her in a letter containing a pressing invitation to Ballybosh and a promise that the first remittance shall be spent in discharging their obligations to their charming friend. Miss Gushington is a little sobered by the incident, and an awkward episode that follows between herself and an Indian cousin, Sir Marmaduke Fitzdoldrum, if anything, tends to lower her opinion of the sincerity of mankind. The volume closes with a scene in which Impulsia accepts the hand and heart of Monsieur de Rataplan, a Frenchman she meets at her hotel, and with a promise that the history of her adventures in love shall be forthcoming on a future occasion. The illustrations, which are clever and amusing, form an important part of Miss Gushington's diary. The diary, in fact, is made for the drawings, and not the drawings for the diary. There is so little literary pretentiousness about both, and so much fun and good humour, that it is an invidious task to offer the unfavourable criticism, that, for a drawing-room book, the fun sometimes goes a little too far, and the frolics become almost uproarious. The picture of the Hon. Impulsia appearing in the cage of her crinoline to the Sheikh, after her dress is stolen, approaches the limits of pictorial propriety; and the Fitzdoldrum episode turns upon a mistake of Miss Gushington's, about which the less we say the better. There is nothing harder for a writer of good spirits and a sense of humour, than to keep fun within bounds, but a drawing-room book should be as innocent as snow. Mr. Leech is the true model for humourists of this kind to follow, who never forgets for whose eyes his pictures and jokes are designed. The Hon. Impulsia Gushington, when writing her diary, should remember where her diary will lie when it is printed. *Virginibus puerisque cantat.*

SIR G. C. LEWIS ON GOVERNMENT.*

Some new and melancholy interest is given to the little treatise, which we propose to notice here, by the too early and lamented death of its learned and sagacious author. Fate has willed that this "Dialogue on the Best Form of Government" should be, such as it is, the last literary product of the mature thought of Sir G. C. Lewis; and though it advances no pretensions to being a methodical and exhaustive discussion of the subject, yet it will in nowise diminish the reputation of a man who, in a somewhat brief political career, administered more than one great department of the State with success, while he held a conspicuous place among the speculative political thinkers of his time. Rare is the union in one man of political power and philosophy; and this was the new feature in society which, above all things, Plato desired to see. "Never," he says, in his immortal "Dialogue of the Republic," "will mankind be delivered from evil,—never will states and individuals be happy, till the true philosophers, now despised and rejected of men, are compelled, whether they like it or no, to undertake the government of states; or until the present rulers of the world become divinely inspired with a true love of true wisdom." And by this happy change alone did he hope to establish and maintain what he himself conceived to be the best form of government. The late Secretary of State was just such a man as Plato would have delighted to place among the "guardians" of his ideal republic. Of simple and temperate habits,—kind and just and true in all his dealings,—of great natural capacity, developed to its highest point by severe, unceasing study,—comparatively indifferent to the power and the honour and the glory which this world can bestow, and loving best to linger in the regions of speculative thought,—it is scarcely too much to say of him, that he was the living image of an ideal governor of the state as painted by the fancy of the old Greek philosopher. The quality, however, in which especially Sir G. C. Lewis overtopped other men, was the exquisite fairness of his mind. Some, though very very few, among his contemporaries, may have been as learned—others certainly surpassed him in power of imagination—and he was deficient in that half mental, half moral stuff out of which the great leaders of men are made; but in the passionless serenity of his intellect, his calm breadth of view, his freedom from prejudice, and the even balance of his judgment, he was second to none. This singular fairness of his mind is breathed through every line of the "Dialogue on the Best Form of Government."

"I have supposed," he says in his preface, "the dialogue to take place in our own time and country, between four Englishmen, belonging to the educated class. My object has been to conceive each of the three recognized forms—Monarchy, Aristocracy, and Democracy—as represented by a sincere partizan, and to attribute to him such arguments as a judicious advocate might properly use. I have attempted, in succession, to place each government in the light in which it would be regarded by an enthusiastic admirer, and to suggest all the strongest objections to the other governments which the advocates of each would naturally urge. My aim has been to conduct the controversy in such a manner as to represent the strength of each case; but I have not endeavoured to exhaust the subject." . . . . "As the best mode of accomplishing this object, I have selected the dialogue form, which affords facilities for bringing on the stage the advocates of conflicting opinions, without any attempt at a decision, or at leading the reader to a dogmatic result." . . . . . "The philosophical dialogue possesses peculiar advantages for presenting distinctly, and in a small compass, the opposite arguments on an unsettled question. It is neither a debate nor a conversation. It has not the long speeches of the one, or the incoherent rambling and extemporaneous character of the other. It enjoys the benefit of the dramatic style, and it enables conflicting arguments to be put forward with an appearance of conviction on each side."

What Sir G. C. Lewis attempted in his dialogue, that he has done. Whatever form of government he may himself have preferred, his own predilections are carefully hidden out of sight; and no unworthy arguments are placed in the mouth of either of the three rival partizans. The diction of the dialogue is clear and easy; the historical illustrations are varied and apposite; and the general cast and tone of the discussion bear the impress of a mind which had studied men as well as books, and had been conversant with the practical conduct of affairs.

The scene of the dialogue is laid in the house of a certain

* A Dialogue on the Best Form of Government. By the Right Hon. Sir G. C Lewis. Parker, Son, & Bourn.

"Crito," who sets the ball of discussion rolling. Himself denying that there is any one form of government which is best for every state, he invites his three guests, who agree only in thinking that there is but one best form of government, to advocate the claims of that form to which each has given his entire and unswerving allegiance. In reply to Crito's challenge, Monarchicus undertakes to prove that monarchy is the one best form of government for all states; and for a first proof, appeals to the universal testimony of mankind in all ages and countries. "The great majority of nations," he says, "always have been, and are now, governed as monarchies." To this sweeping assertion, Aristocraticus takes exception as being in point of fact untrue and contradicted by history read aright; and it becomes necessary to arrive at some common understanding with respect to the meaning of the term "monarchy." Aristocraticus, dividing governments into monarchies and republics—"by a monarchy understanding a government in which one person is practically sovereign; and by a republic understanding a government in which the sovereignty is divided among a body of persons"—places limited or constitutional monarchies in the category of republics, while Monarchicus claims them for his own by right of their very name, and on the ground of those dynastic and social privileges which place a constitutional monarch on a level with his autocratic brother, and of that hatred which both alike arouse in the democrat. Monarchicus, however, is ready to abandon constitutional monarchies, as being far too few in number to weaken the strength of his argument drawn from the testimony of mankind. But reason, as well as experience, is all on the side of monarchy. The very simplicity of the machine commends it to the use of all nations, whatever may be their degree of civilization. The rapidity, the consistency, the firmness, and the stability, which are the fruits of unity in government, more than outweigh the dangers and evils of singleness of power. "A monarchy *may* be, but a republic *must* be, unwisely governed;" for in every legislative assembly the wise and good are in a minority, and the exercise of their wisdom and virtue is perpetually fettered by the necessity of obtaining the consent of the majority—who, unhappily, are inferior to them in everything but political power. Can, indeed, any contrivance for obtaining a right decision be more absurd than that of decision by a majority,—counting votes instead of weighing them? Nor is this all,—for wherever the political power is divided among a body of men, rivalries and factious conflicts are the inevitable result. While, therefore, a republic *must* be afflicted by these evils, the monarch, if he be a good one, as he *may* be, dwelling above the atmosphere of conflicting passions, will bear beneficent rule without let or hindrance, consulting only the voices of wisdom and justice.

To all this Aristocraticus replies that absolute monarchs, living in constant peril of their lives, are prone to cruelty, the child of fear; and, moreover, the undivided possession of sovereignty is an ordeal out of which only a very rare nature comes unscathed. To this is due the evil reputation which belongs to kings as a class. The vital principle of government for which Aristocraticus contends, is "plurality of persons, as opposed to unity, for the possession of the sovereign power." Thus the exercise of power is placed beyond the reach of purely personal and individual passions; and the student of history meets at every step some tale of horror, which has grown out of the anger, lust or jealousy of absolute rulers. But "in a corporate sovereignty, the exercise of the supreme power can only be influenced by those feelings, passions, interests, and motives which belong to several persons in common." To the Greeks, who held despotism in abhorrence, belongs the honour of having invented corporate government, but they failed in the application of the principle. "They either divided the entire sovereignty among a few men, determined by birth or wealth, or they divided it among the entire body of free citizens." And thus it was left for modern times to discover "the philosopher's stone of politics,"—the representative system. The best form of government, therefore, in the judgment of Aristocraticus, is, as it were, "an aristocratico-democratic representative constitution, provided it be understood that the aristocratic element is real and not fictitious or formal, and that the aristocratic class has a substantive voice in the government." Pure democracy, like pure monarchy, is fraught with evil, because it is founded on a false principle, namely, that all men are equally competent to be judges of public affairs, which they are not, and never will be. The working classes have not the knowledge, the intelligence, and the "proprietary feeling" which are requisite for the proper use of political power. Tutelage is, therefore, necessary for the lower orders; and the real interests of those orders are safer in the hands of an enlightened aristocracy, than they would be if committed to their own unfettered control.

These latter arguments are expressed by Aristocraticus in controversy with the third partizan, Democraticus. Being the advocate of unmixed democracy, he maintains that a section of the community cannot, any more than a single man, be safely entrusted with the entire sovereignty; for the aristocracy, like the monarch, will pursue their own interests at the expense of the people. No theory of government, according to him, is sound "which is not founded upon mistrust." "Democracy rests upon this basis, and gives no man credit for good intentions. It neutralizes his sinister interests by merging him in the majority;" and the advocate of democracy is in no wise driven to maintain that all men are equally competent judges of public affairs; it is enough for his purpose that all men are sufficiently competent judges for the exercise of the electoral suffrage in choosing representatives. To deny that some races and nations are utterly unfit for democratic representative institutions is a doctrine inconsistent with religion, for it supposes, without warrant, a natural inequality in mankind; and if democracy has only been too rarely found among men, this rarity is owing to its excellence. Simply because it is the best form of government, the governing classes have selfishly used their power to prevent its establishment. Yet, notwithstanding their efforts, it will surely spread over the face of the earth; for "democracy is the natural goal of all civilized society. As men become more intelligent and orderly, the dislike of artificial and legal distinctions increases, and the desire of equality is strengthened."

Such are the main arguments advanced by the three disputants in behalf of that form of government which each believes to be the only panacea for human ills; and as the dialogue grows, there gather round the central stems diverse appreciations of passages in history and existing institutions, and the exchange of conflicting opinions on hereditary privileges, the feudal system, the ballot, the government of dependencies, the working of federal and state institutions in America, the possibility of a millennium of peace, and other kindred topics. These, the undergrowth as it were of the dialogue, we have not space to notice at greater length; but perhaps the chief interest of the discussion will be found in them. Very few, if any, Englishmen of the present day are likely to agree with Monarchicus, at least as far as their own country is concerned; more, no doubt, would agree with Democraticus; but a large majority, probably, would range themselves under the banner of Aristocraticus, while all, we may believe, would share Crito's conviction, that it is hopelessly impossible to establish any best form of government applicable to all communities. The design, which alone the three partizans have in common, of thrusting each his own favourite government upon all states alike, making no allowance for habit, association and historical recollections, is on the very face of it absurd. To discuss and settle the form of government to be adopted without any reference to the wishes of the community, as did the Persian conspirators in Herodotus, would in these days be an idle childish form of procedure, that could only suggest itself to the King of Prussia and a few fanatical *doctrinaires*.

Notwithstanding these difficulties, we are loth to believe that there is no best form of government, no ideal commonwealth towards which all societies should look and guide their steps as towards a polar star. Some may be nearer, others farther; but towards it, when found, all should tend. In a search for the best form of government, it is as well to start with some tolerably definite conception of the objects of government, about which the speakers in Sir G. C. Lewis's dialogue have not a word to say from beginning to end. Stating it broadly, we may say that the object of government should be to make the governed as healthy, intelligent, and virtuous as they are capable of being made; in short, to make the sum total of happiness in the community as large as possible, for all are agreed that health, intelligence, and virtue are the fundamental elements of happiness, out of which other blessings will assuredly flow both to states and individuals. There is, however, the happiness of cabbages and sheep, as well as the happiness of good, enlightened, and active men and women; and we must take care that government tends to promote happiness in its higher form. Despotic government, if prolonged without relaxation through a succession of able and virtuous rulers, would raise the governed to no higher condition than of contented but dependent children; and for this reason Mr. J. S. Mill has, in his treatise on Representative Government, entered a vehement protest against the common saying, that if a good despot could be ensured, despotic monarchy would be the best form of government. This he looks upon "as a radical and most pernicious misconception of what good government is;" and we will conclude with quoting the summary of his masterly and exhaustive argument:—

"From these accumulated considerations," he says, "it is evident that the only government which can fully satisfy all the exigencies of the social state, is one in which the whole people participate; that any participation, even the smallest public function, is useful; that the participation should everywhere be as great as the general degree of improvement of the community will allow, and that nothing less can be ultimately desirable than the admission of all to a share in the sovereign power of the state. But since all cannot, in a community exceeding a single small town, participate personally in any but some very minor portions of the public business, it follows, that the ideal type of a perfect government must be representative."

ADMIRAL FITZROY'S WEATHER-BOOK.*

THIS "Weather-book" is, more or less, a compilation of the official pamphlets Admiral Fitzroy has issued during past years, and chiefly in his capacity of director of the Government Meteorological Department, with additions and interlineations, which are made up of facts, extracts, and ideas, seemingly on the Captain Cuttle principle of "when found make a note of." Still the book, with all its defects and irregularities, is a good book; and if the pamphlets were good pamphlets, and contained useful practical matter, there is no harm, but much advantage, in collecting them into a volume. The "Weather-book" is full of sound, sailor-like, practical matter, communicated in a plain way; but it has a certain want of compactness and uniformity, which is not agreeable. We should wish, however, to make allowances for any failures, caused by deficiency of observations and information in

* The Weather-book: a Manual of Practical Meteorology. By Admiral Fitzroy. London: Longman & Co. 1863.

Digitized by Google

the present condition of meteorology, for Admiral Fitzroy's essays in storm warning are made *con amore* and in excess of his specified duties.

The first two chapters of the "Weather-book" contain practical instructions for gathering weather wisdom from the indications of barometers, thermometers, the appearance of the sky, and other ordinary means. The details, however, of Admiral Fitzroy's official department are scarcely worth so much space as is taken up with them; for they have as little to do with the science as the description of an observatory has to do with astronomy, and their introduction has the ill effect of wearying the reader before he gets to the more practical portions of the work.

As the admiral himself occupies so prominent a position as a meteorologist, his book must have some importance. But as the superintendent of a department of the Board of Trade his business is essentially of a practical character, and pure theory does not pertain to his office; nor can it now be said that the mere collection of scientific facts engrosses his attention. He has to deal with the practical application of the information he receives. To call him a "weather-prophet" would be to class him amongst those empirics through whom "weather-wisdom" has come into contempt. He warns us of coming storms, but on very different grounds of anticipation from those which "weather-prophets" are wont to do. A storm has taken place, say on the borders of the Mediterranean; it is telegraphed from several points at once to Whitehall, and, long before the tumultuous waves of the aërial ocean have reached our coasts, the electric impulse has heralded its approach. Its course has been laid down on the map as readily as the position is marked of a ship at sea, but the accuracy of its anticipated direction depends on the fulness and completeness of the information received. It is possible that the storm may traverse a tract not well supplied with instruments and observers; and, therefore, the forecast would be less accurate than when fuller information had been received. And this should be well borne in mind before we ridicule the admiral for his failures.

We differ greatly from him in some important matters, but in common justice to his well-meant efforts, we should not lose sight of the fact that many years must elapse before the warning system can be perfected, before the laws that regulate the rate of travelling of storms in the mean and higher latitudes can be accurately ascertained, and a fuller acquaintance with exceptional cases attained. Increase of knowledge in these respects, with a more extended system of telegraphy, will no doubt render the meteorological department useful in the highest degree, and by the precision of its warnings enable it to establish itself finally in public favour.

We would, however, now dive deeper into the admiral's pages, and deal with his scientific opinions and practical details. First, we find him differing from popular ideas as to the thickness of the earth's atmosphere—usually conceived at thirty to forty miles. He tells us from ten to twenty miles seems a probable total depth, and not too small for its depth as air. Ten to twenty miles is rather a wide range; but when some meteorologists put auroral phenomena a hundred miles high, and infer from their exhibition the presence of air there, rather wide ranges may be admissible. The admiral, however, has a reason for his opinion, which is more than is always the case for a new idea. No mention of ancient meteorology is made until the fourth chapter, when, under the head of historic sketch, a few lines of the leanest observations are given. The admiral accounts for the origin of the mythological story of Prometheus, by supposing that that personage really made a "Franklinian Essay" with the lightning conductor. Most of us have been led to believe that the story had its origin in the half-learnt narrative of the fall of man; but Prometheus might have been, for all we know, the first practical electrician. The admiral's later history of meteorological science—that is, of its progress and condition during the last and present centuries, is concise and full of interest, although it is rather an account of what has been done for the sailor than a history of meteorology proper. Two chapters are devoted to a general view of the air in motion, and are exceedingly interesting, especially to the sea-going reader. There has been much more discussion on the origin and propagation of winds than the case at a first glance would seem to have permitted. The simplicity of the first cause, heat, and the chief detective impulse—the rotation of the earth—however, would have been apparent long ago, but for the modifications that the wind-currents undergo from the unequal heating of the sea and land, the unequal degree of solar radiation, owing to the interposition of clouds, the absorption of heat by evaporation, and the mechanical obstacles the currents themselves meet with in passing over the globe. These interferences render the interpretation of the law that was at first simple extremely difficult and complex, and requiring a vast amount of collateral knowledge to reduce observational data to practical results. Thus the multiplication of observatories in localities previously meteorologically unexplored, has completed, as it were, a network of instrumental readings over the greater part of the world, and enabled the admiral give us the most perfect idea of the rise and progress of atmospheric waves that we anywhere possess.

From the waves of the air he is not unnaturally brought to speak of the waves of the ocean, and he gives some interesting facts, chiefly gathered from Maury's "Physical Geography of the Sea." The chapter on barometric curves is interesting, as the author denies the existence during storms of a mechanical modulation of the atmosphere—a theory which the previous sheets of Espy had seemed to place beyond a doubt. Future observations must decide who is right.

Among meteorologists, the "gulf-stream" is a favourite agent, and supplies, not unfrequently, an answer to questions relating to the occasional warm winters of Europe, when the true reply should have been "We don't know." Admiral Fitzroy goes a good way towards demolishing this notion. He says—

> "Whatever effect the gulf-stream may have locally, it is obvious—comparing its extreme limits, source, and direction—that the great bodies of tropical air which incessantly traverse both temperate zones towards the poles and eastward, must have far more effect on climates than air from over any comparatively small tract of ocean."

From this to the end of the twelfth chapter, the pages are taken up with a general view of the development and characteristics of air-currents over different parts of the globe. The thirteenth chapter is reserved for the explanation of the system, theory, and practice at present pursued in the admiral's department for forecasting the weather. Those who have followed up the matter have already been made familiar with the processes employed by the official papers issued at various times; to those who are not so informed it is sufficient to say that the data from which the forecasts are drawn are—direction and force of wind, tension, temperature, and humidity; and which data are telegraphed to the meteorological head-office in London from numerous outlying stations. Those who read this and the succeeding four chapters will perceive that the office of meteorological superintendent is no sinecure.

In Chapter XVIII., a new theory is advanced to account for the disturbances created about the periods of the equinoxes, for which, as the admiral observes, the mere fact of the sun's position is not sufficient to account. His new theory is that "the united tidal action of moon and sun upon the whole atmosphere, which at the equator is a maximum force, causes lateral offsets; streams overflowing towards each pole, and as they go, preserving more or less a momentum, are at those times more powerful, and their effects are more felt everywhere." Although we are not prepared to assent to this idea, we admit we have always felt that some such theory was wanting to explain those bi-annual disturbances which experience has taught us occur over the whole face of the earth, and for which the sun's astronomical position cannot be the only cause. The two succeeding chapters contain nothing new,—they are chiefly a collection of data from various authors illustrative of hurricanes. The last has a discussion (illustrated with charts) on British storms, including that disastrous one, the *Royal Charter*. Chapter XXI. treats of extreme cases of storms at sea. Nervous individuals, about to venture on the "deep waters," had better not read it. Lastly, we come to an appendix of something more than a hundred pages, followed by a series of charts and diagrams. The first twenty pages are taken up with descriptions of the method employed in telegraphing the information, and with directions and instructions to the observers. Some comments on thermometric scales and a memorandum respecting a moistened thermometer are, however, included in them, and are as much out of place as some other things in the book. Following these we have remarks on tides written by the admiral, when captain, many years ago. Then Luke Howard's descriptions of clouds, to which, as the admiral does not think them sufficiently numerous to describe all the forms of clouds required to be noted, he has made many additions, chiefly by adding the termination "onus" as an augmentative and "itus" as a diminutive; thus, cirronus, cirritus, &c. Very nicely executed plates, illustrative of these modifications, are annexed. We are next favoured with a reprint of the letter of the Royal Society, containing the suggestions made to the Board of Trade by their invitation, in 1854, as to the best way of carrying out a system of meteorological observations at sea. Unconnected papers then appear on vapour, temperature of the air, climatology, temperature of the sea, thunderstorms, and on charts of the magnetic variation. The last, although not properly belonging to meteorology, we are very glad to see, for the advances that have been made in the past fifteen years in our knowledge of the secular changes in magnetic declination in different latitudes and longitudes,—a knowledge that has been materially assisted by the establishment of self-registering magnetometers,—will, we trust, help to furnish the mariner with more perfect charts, on which should be given the approximate annual rate of change. Many a vessel has been lost from the want of sufficient knowledge on this point.

The remaining pages are occupied by descriptions and tables, illustrative of improved wind-charts and an account of the handy little anemometer invented by Dr. Robinson, of Armagh. A note on the dew-point comes in here. At page 437 is a notice of those very ancient weather-indicators called "storm-glasses." The admiral says they are reliable to a certain extent, and that they are acted upon by the *direction* of the wind and by *electrical tension*. We should incline to think more experiments on this head are required before deciding what does and what does not affect them. Examples of the reports, charts, and index, bring the volume to an end. The charts, every one must admit, are exceedingly good, both as regards design and execution. Those of the *Charter*-storm are remarkably perfect.

In taking leave of Admiral Fitzroy's "Weather-book," we would remind those who have read it, and those who intend to read it, that the admiral is a sailor, thinks and writes like a sailor and for sailors. He invents, or aids in the invention of small aneroids for sailors to carry in their pockets; his warning-signals are for sailors; he makes rude rhymes on his barometers to impress the most important points of observations or results upon the sailors' mind; in short, having had charge of ships and of sailors, he feels the dangers they are exposed to, and a humane desire to lessen by

Digitized by Google

the applications of science those numerous perils which surround them. Let us, then, rather strive to assist him than attempt to check his hopeful and energetic perseverance, which seeks to attain unmistakeably useful results.

SHORT NOTICES.

Mr. Edgar, who has written for the rising generation "The Boyhood of Great Men," aims, in his "Danes, Saxons, and Normans,"* at a narrative of the Norman conquest, which shall be popular without any sacrifice of historic truth. We must regard this book as also written for the youth of England; and in saying this we by no means wish to disparage it. When they have read of the Norman Conquest in school histories, they will have but a limited idea of the men who were the actors in that decisive battle; and it is a matter of high educational importance that they should know much more, both of the men and of the event, with what led to it and followed it. But the difficulty is to place a larger knowledge of the subject before them, in a form sufficiently comprehensive and at the same time not encumbered with dry details. We do Mr. Edgar no more than justice when we say that his book supplies this want. Without sacrifice of historical truth it is pleasant as a romance; and the profuseness and excellence of the illustrations make it clearly a boy's book of the most acceptable character. Not only for this class of readers, however, will it be found of value, but for all whose knowledge of our early history is defective. Mr. Edgar wisely goes back to give the origin of the Norman power in that expedition of Rolfganger and his comrades, in 876, up the Seine, which ended in their defeat of the French and the cession to them of Neustria, to which, mindful of their Norwegian home, they gave the name of Normandy. From this he passes at once to the Conqueror's parentage, and the perils of his youth after the death of his father, Robert the Magnificent. Leaving William at this point, he turns to England, and briefly traces the advent of the Saxons and the invasion of the Danes, till he brings the reader to the reign of Edward the Confessor, and that mission of Harold to Normandy which ended in the compact between him and Duke William, by which the Norman bound him to aid him in obtaining the kingdom of England on the death of Edward. In every page there is some anecdote or dialogue taken from the old chronicles, which lightens the narrative and impresses it upon the mind,—in a word, gives flesh and blood to the dry bones of the school manuals. The account of William's preparations for the invasion of England, of the battle of Hastings, and the subsequent events of the Conqueror's reign is ample and most interesting. And the story is continued to the death of Henry Beauclerc, giving a picture of the times which is as correct as a faithful adherence to the best materials at the author's disposal could make it, in the space to which he has limited himself.

A few years have caused such a revolution in our Australian colonies that the Australia of to-day is no more the Australia of twenty years ago than if they were separated by many generations. Now we see great cities sprung up as if in a night; Parliaments the pictures in little of our own. The convict, the bush-ranger, and the native have disappeared; and though the settler still survives, he is not the settler as he used to be, but a farmer within easy reach of the comforts and luxuries of civilized life. In the midst of this new creation, which has suddenly filled up the measure of civilization with all its conveniences, it is refreshing to go back a few years, and see what Australia was before the gold discoveries; what were the perils, the shifts and contrivances, and the rough pleasures of life in the bush; and Mr. Graham in a book,† which he tells us is not a tale, a novel, a romance, or any form of fiction, but "sketches of the real life of a real man," gives us ample means of doing so. Laurence Struilby left Ireland for Australia in 1832. At that time bush-ranging atrocities were very common, and in Van Diemen's Land police and settlers could hardly preserve the island from barbarism. There was a force called the Field Police, who were volunteer convicts that had served a certain time, and by additional service got a ticket of leave or emancipation. Few of these men would scruple to swear a man's life away for a crown. "It was very common in those two years of which I write," says the narrator, "for Government to offer a pardon and a free passage to England to any convict who should capture an armed bush-ranger living *or* dead. And it was no uncommon thing to see one come down the country in company with a policeman having a man's head wrapped up in a piece of blanket or in a pocket-handkerchief." No wonder that the colonists dread a return of transportation. Leaving Van Diemen's Land, Mr. Graham's hero proceeded to Bathurst Plains, and found employment at a cattle-station forty miles from Bathurst. Here he gives us an amusing account of the aborigines, and especially of a hunting expedition which he made along with them, and which at times reminds us of similar narratives from the pen of Captain Mayne Reid, in which adventure and natural history are amusingly conjoined. This part of the book is highly interesting. Here is an account of a kangaroo hunt by the natives:—

"By this time it was near noon; and Dick, looking up anxiously at the sun, said—'Ha ha, euroka jump up high, high above waddy; poor fellow, kangaroo, all tumble down, I b'lieve.' If I must interpret for Dick, he said—'The sun has mounted to noon, over the tree; the kangaroos are all killed by this time, I guess.' We walked as fast as the broiling heat would permit; and, after six miles over brown detached tufts of kangaroo grass, we came to an outlying water-hole, which was surrrounded with great gum trees. From behind these old Eagle-Hawk and about fifteen black fellows made their appearance. He looked daggers at Dick for being late; but some conciliatory grunts in Warragera about 'boombilly' (tobacco) made all right. They had been delaying the hunt for us. The gins were in a knoll of trees within beckoning distance. Old Hawk ordered one little fellow, with an enormous mouth full of white teeth, to ascend a tree and look out for game. He did so; and descried a troop of kangaroos in the distance. These they had tracked from the water, and they were now within reach. Then all advanced to the trees nearest the open feeding-grounds of the game. The gins were beckoned in; and they advanced with long thick branches of gum and mimosa which they gave to the men. They threw out detachments to surround the kangaroos; and each man advanced behind his screen of branches at measured pace. We got up on a tree to see the battue. All is exciting, but quiet as midnight. Now the kangaroos take long leisure hops among the tufted grass, and appear disposed to play as they feed. Anon they alternately stoop to eat and rise to look around; the black fellows watching the opportunity to advance, silent as shadows; sometimes standing still as if growing from the ground; but again crawling on. As they receded from us, they became almost undistinguishable from the branches they carried. At last the circle drew close, and the kangaroos rose on end to gaze; to what a height those enormous boomers can rise! Just then the branches were thrown aside; and the blacks rose shouting and yelling, and hurling their spears at the affrighted game, which ran together, and against each other in consternation, one after another falling by the spears. Some eight fell, and as many more probably escaped. I often afterwards saw the natives hunt emeus in a similar way, and with like success."

The subsequent process of cooking is also worth remark:—

"The blacks brought in the carcases under the trees beside the water-hole. And *such* jabbering of men, gins, and pickaninnies, as was there over one of the richest captures ever even Eagle-Hawk had seen! He walked about giving orders for dinner. The gins, with their connois—long flat sticks which they always carry for digging roots, &c.—dug out four grave-like holes, in the bottom of which they laid flat stones, filled up with dry wood, which they burned till the pit was hot as an oven. They then cleared it out, and putting in the carcases for dinner, covered them up with hot stones and embers to stew. Roots were dug, grubs taken from the roots of a gum tree, calabashes were filled with water, and by-and-by the stewed kangaroos produced. And oh! ye admirers of venison, what a meal was there! Such splendid cookery of venison I never saw before. The carcases were cut up; the entrails and the fore-quarters, which are bony and dry, were given, or rather thrown, to the gins and pickaninnies, who ate at a distance; while the hind-quarters were eaten by the sable lords of creation."

A round game composed of extracts from the British poets is, in this country at least, a novelty; but whether the discovery is worth much is another matter. Mr. Smith, whose book we notice,* confesses that he has taken his idea from a similar work, which has been produced in America. The plan of the game is simple enough. Thirteen questions are proposed, and to each of these fifty answers are given, culled from the writings of our most distinguished poets. A questioner is selected by the "round party," and he asks, for instance, "What is your character?" Each person selects any number from one to fifty, and if he selects, say 15, he finds that he is—

"A wilful man, half wit and half a fool;"

or if the person questioned is a lady, she is told that—

"Probity and truth,
Prudence and patience marked thee from thy youth."

There may be some amusement in all this. For instance, if the person questioned happens to be unpopular, it will please every one but himself if he selects a number, through which he is told that he is—

"Grave as owl and just as witty;"

or that he is—

"Peevish and malcontent,
Clownish, impertinent,
Dashing all merriment."

But his capacity to add to the pleasures of the "round party" will not be improved by the information. It is clear, too, that a good deal of fun may be derived from the answers to the question, "What is the personal appearance of your lover?" Miss Polly's friends will be delighted to hear, on the authority of Spenser, that her swain is—

"An uncouth, salvage, and uncivil wight,
Of griesly hewe, and fowle, ill-favour'd sight;"

or, on the authority of Swift, that—

"He's lean and he's lank;
His nose, long and thin,
Grows down to his chin;
His chin will not stay
But meets it half way."

We need not multiply samples of Mr. Smith's "Oracles." They are, for the most part, well selected; and as the book has reached a third edition, we conclude that it has found favour with "round parties."

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

MONDAY, 27TH APRIL, 1863.

GEOGRAPHICAL—At 8½ P.M. 1. "Visit to Ode, the capital of the Jjebu Country, Western Africa." By Capt. Bedingfield, R.N., F.R.G.S. 2. "Explorations of the Elephant Mountains, &c., in Western Africa." By Capt. R. Burton, F.R.G.S., H.M.'s Consul at Fernando Po, &c. 3. "Travels in Equatorial Africa (Gaboon, Corisca, &c.)." By W. Winwood Reade, Esq. 4. "Notes on Madagascar." By Lieut. Oliver, R.A.
ACTUARIES—At 7 P.M.
MEDICAL—At 8 P.M. Special Clinical Meeting.

TUESDAY, 28TH APRIL.

CIVIL ENGINEERS—At 8 P.M. 1. Discussion on Mr. Hawkshaw's paper, "On the Middle Level Drainage." 2. "The Charing-cross Bridge." By Mr. Harrison Hayter, C.E.
ROYAL INSTITUTION—At 3 P.M. Professor Tyndall, "On Sound."
MEDICAL AND CHIRURGICAL—At 8½ P.M. 1. "On a Remarkable Case of Injury of the Head." By Dr. A. T. H. Waters, of Liverpool. 2. "On the Therapeutics of Continued Fever." By Dr. T. K. Chambers.

WEDNESDAY, 29TH APRIL.

ZOOLOGICAL—At 1 P.M. Anniversary Meeting.
METEOROLOGICAL—At 7 P.M.
LONDON INSTITUTION—At 12 Noon. Anniversary Meeting.
SOCIETY OF ARTS—At 8 P.M. "On the Varieties of Minerals Used Economically Considered in Reference to their Geological Position, and Relative Value for Certain Purposes." By D. T. Ansted, Esq., F.R.S.

THURSDAY, 30TH APRIL.

ROYAL SOCIETY—At 8½ P.M.
ANTIQUARIES—At 8½ P.M.
ROYAL INSTITUTION—At 3 P.M. "On Geology." By Professor Ansted.

FRIDAY, 1ST MAY.

ROYAL INSTITUTION—At 2 P.M. Anniversary Meeting. At 8 P.M., Evening Lecture, "On Japanese Art." By John Leighton, Esq., F.S.A.
ARCHÆOLOGICAL INSTITUTE—At 4 P.M. "On the Crypt and Chapter-House of Worcester." By the Rev. Professor R. Willis.
LONDON INSTITUTION—At 7 P.M.
PHILOLOGICAL—At 8½ P.M. "The Letter R." By R. F. Weymouth, Esq.

SATURDAY, 2ND MAY.

ROYAL INSTITUTION—At 3 P.M. "On the Science of Language." By Professor Max Müller. Second series.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

A Dark Night's Work. By Mrs. Gaskell. Crown 8vo., cloth, 10s. 6d.
A Simple Woman. By Author of "Nut-Brown Maids." Crown 8vo., cloth, 10s. 6d.
Agnes Falconer. 18mo., cloth, 1s. 6d.
Aimard's (G.) The Freebooters. Illustrated. Fcap., cloth, 3s. 6d.
——— The Pearl of the Andes. Fcap., bds., 2s.
Anderson's (G. & P.) Guide to the Highlands of Scotland. Fourth edition. Fcap., cloth, 10s. 6d.
Andrews' (L. J.) The Life of Our Lord upon the Earth. 8vo., cl., 12s.
At Odds. By the Author of "The Initials." Two vols. Post 8vo., cl., 21s.
Balfour's (J. H.) Botany and Religion. New edit. Fcap., cloth, 3s. 6d.
——— (Mrs.) A Mother's Lessons on the Lord's Prayer. New edition. Folio, bds., 2s. 6d.
Bancroft's Handbook Almanac for the Pacific States. 1863. 12mo., cloth, 5s. 6d.
Bertha's Repentance; a Tale. By J. F. Corkran. Crown 8vo., cl., 9s.
Bessy's Money: a Tale. By Author of "Mary Powell." Fcap., cl., 1s.
Bibliotheca Classica. Virgil, with Commentary. By J. Conington. Vol. II. 8vo., cloth, 14s.
Black's New Map of Australia, Tasmania, and New Zealand. Coloured. 14s., in case.
——— New Map of the World, on Mercator's Projection. Coloured. 20s., in case.
——— Guide to London and its Environs. Second edition. Fcap., cloth, 3s. 6d.
Boucherett's (Jessie) Hints on Self-Help. Fcap., cloth, limp, 1s.
Buckmaster's (J. C.) Elements of Chemistry. Second edition. 18mo., cloth, 3s.
Cæsar de Bello Gallico, with English Notes. By Dr. Anthon. New edition. 12mo., cloth, 4s. 6d.
Chambers's Standard Reading Books. Book IV. 12mo., cloth, 1s. 4d.
——— Ditto. Book V. 12mo., cloth, 1s. 6d.
Chronicron Abbatiæ de Evesham. Edited by W. D. Macray. Royal 8vo., half bound, 10s.
Daumas' (E.) The Horses of the Sahara, and the Manners of the Desert. 8vo., cloth, 10s. 6d.
Dean's Moveable Books. A Visit to the Birds and Beasts. Royal 8vo., bds., 2s.
De Burgh's (W.) The Messianic Prophecies of Isaiah: Donellan Lectures. 1862. 8vo., cloth, 6s.
De Porquet's (L. P. F.) First French Book. Twenty-seventh edition. Fcap., cloth, 2s. 6d.
Dicey's (E.) Six Months in the Federal States. Two vols. Crown 8vo., cloth, 12s.
Dick and his Donkey. Fcap., cloth, limp, 6d.
Disraeli's (I.) The Calamities and Quarrels of Authors. New edition. Crown 8vo., cloth, 3s. 6d.
Dixon's (H. D.) Digest of Cases connected with the Law of the Farm. Third edition. 12mo., cloth, 21s.
——— Appendix to ditto. 12mo., sewed, 3s.
Dorner's (Dr. J.) History of the Doctrine of the Person of Christ. Division II. Vol. III. 8vo., cloth, 10s. 6d.
Dresser's (Dr. C.) Popular Manual of Botany. Fcp. cloth, 2s. plain; 2s. 6d. coloured.
Erskine's (Rev. Ralph) Works. New edition. Seven vols. 8vo., cloth, £3. 3s.
Fairy Book (The). By Author of "John Halifax." Fcp., cl., 4s. 6d.
Fisher's (Col.) Narrative of Three Years' Cruise in China. 8vo., cloth, 16s.
Freytag's (G.) Pictures of German Life. Second Series. Two vols. Crown 8vo., cloth, 21s.
Gertrude Winn; or, Our Nation's Curse. Fcap, sewed, 1s. 6d.
Green Hand (The). By G. Cupples. New edit. Fcp., sewed, 1s.
Happy Family (The), and other Tales. 16mo., sewed, 1s.
Haps and Mishaps of the Simpleton Family Abroad. Royal 16mo., cloth, 2s. 6d.
Harley's (Dr. G.) Jaundice; its Pathology and Treatment. 8vo., cloth, 7s. 6d.
Harris's (J.), A Story of Carn Brea; Essays and Poems. Fcap., cl., 4s.
Harrow Junior Modern Atlas. New edition. Folio, cloth, 7s.
Hawkins' (F. V.) Treatise on Wills. 8vo., cloth, 10s. 6d.
Hicks's (S.) Life. By J. Everett. New edition. Fcap., cloth, 3s.
Hills (The) of the Shatomuc. By Miss Wetherell. New edition. Fcp., cloth, 2s.
Hittell's (J. S.) The Resources of California. 8vo., cloth, 9s.
Holden's (Rev. G.) The Ordinance of Preaching Investigated. Fcap., cloth, 3s. 6d.
Hugo's (F. V.) Commentary on the Merchant of Venice. 8vo., sewed, 1s.
Hutton's (H. E.) Principia Græca. Third edition. 12mo., cl., 3s. 6d.
James' (G. P. R.) Morley Ernstein. New edition. Fcap., sewed, 1s.
Jevons' (W. S.) A Serious Fall in the Value of Gold. 8vo., cloth., 4s.
Kalisch's (Dr. M.) Hebrew Grammar. Part II. 8vo., cloth, 12s. 6d.
Keith's (T.) Complete Arithmetician. Revised by S. Maynard. New edition. 12mo., roan, 4s. 6d.
Kingsley's (Rev. C.) The Water Babies. 4to., cloth, 7s. 6d.
Knox (C. E.). A Month with St. Paul. Crown 8vo., cloth, 6s.
Laurie's Entertaining Library—Sandford and Merton. 32mo., 9d., sewed; 1s., cloth.
Longfellow's Poetical Works. Fcap., cloth gilt, 3s. 6d.
Lord's (S. W.) Fifty Arithmetical Exercises. On Cards, 3s.
McDowall's (J.) Exercises on Euclid and in Modern Geometry. 8vo., cloth, 8s. 6d.
Maclaren's (C.) The Plain of Troy described. 8vo., cloth, 7s. 6d.
Magee's (Rev. Dr. W. C.) Scepticism: a Lecture. Cr. 8vo., sewed, 6d.
Milton's Poetical Works, with Life. By the Rev. J. Mitford. New edition. Two vols. 8vo., cloth, 21s.
Moore's (T.) Poetical Works. Illustrated. Fcap., cloth gilt, 3s. 6d.
My Sermon Remembrancer. 8vo., cloth limp, 1s.
Napier's (Right Hon. J.) William Bedell: a Lecture. Crown 8vo., sewed, 3d.
National Magazine (The). Vol. XIII. Royal 8vo., cloth, 7s. 6d.
Norton's (A.) The Pentateuch, and its Relations to Jewish and Christian Dispensations. Crown 8vo., cloth, 2s.
Parlour Library—Recollections of a Detective Officer. By "Waters." Fcap., boards, 2s.
Papers for the Schoolmaster. Vol. XII. Crown 8vo., cloth, 3s.
Peacock's (W. F.) Guide to the Isle of Man. Crown 8vo., cloth, 3s.
Phillipps' (C. S. March) Jurisprudence. 8vo., cloth, 12s.
Ridge's (B.) Ourselves, Our Food, and Our Physic. Third edition. Fcap., cloth, 1s. 6d.
Sally Rainbow's Stories. By Mrs. W. G. Smith. 18mo., cloth, 2s.

SOLICITORS—Messrs. Minet & Smith, New Broad-street.

INSPECTOR OF AGENCIES—William Bentham.

The Business of the Standard Life Assurance Company has increased steadily year by year, until it has attained its present large amount; and during the last sixteen years The Standard has transacted a larger average amount of Business than any other Office.

From 1846 to 1851 the amount of Assurances effected was ...	£3,345,461	13	0
From 1851 to 1856 the amount of Assurances effected was ...	2,541,840	5	1
From 1856 to 1862 the amount of Assurances effected was ...	3,309,078	14	5
Total in sixteen years ...	£8,096,380	13	6

Thus the average amount of new Assurances during the sixteen years from 1846 to 1862 has been upwards of Half a Million Sterling per annum.

The Revenue of the Company in 1846 was £120,815:19:5; in 1851, £180,208:5:8; in 1856, £254,484:10:8; in 1862, £323,896:18:8.

INVESTMENT OF FUNDS.

The funds of the Company, now amounting to upwards of Two Millions Sterling, are invested in Government Securities; in Loans on the security of Lands, by Bond or Mortgage; in Landed Property; in advances to the Company's Policy-holders, and in other ways affording undoubted security.

WILL. THOS. THOMSON, Manager.
H. JONES WILLIAMS, Res. Secretary.

London, 82, King William-street.
Edinburgh, 3, George-street (Head Office).
Dublin, 66, Upper Sackville-street.

TEETH.—Mr. EPHRAIM MOSELY'S INVENTION.—Secured by Letters Patent, December, 1862.—ARTIFICIAL TEETH, to last a lifetime, are made and fitted in a few hours, without pain or extraction, on chemically-prepared India-rubber, the colour of the gums, to which they are self-adhering; no wires or fastenings required; they defy detection, and afford an amount of comfort unattainable by the use of any other material. Consultations free.—9, Grosvenor-street, Grosvenor-square. No connection with any one of the same name.

SECRETARY.

Mr. Augustus Browne.

OFFICES—17 b, Great George-street, Westminster, London.

This Company has been formed for the purpose of affording Southampton, the largest postal steam-packet and passenger port in the kingdom, the accommodation of a large and well-arranged first-class Hotel, on a similar scale of completeness to those which have already been established and conducted elsewhere with such signal success.

The town of Southampton, with its immense passenger traffic to and from the East and West Indies, China, Australia, America, the Continent; and, indeed, to all parts of the world; its rapidly-increasing commercial importance; its charming neighbourhood and extensive waters, so attractive to visitors and yachtsmen, will not only be much benefited by the establishment of the proposed Hotel, but the shareholders in the undertaking have every prospect of a most valuable investment.

An unexceptionable site, peculiarly suitable to the purpose, situate between the Royal Pier and the Docks, and immediately contiguous to the London and South-Western Railway Station, has been secured by a provisional agreement. It possesses the advantage of a frontage to the great thoroughfare to and from the town and railway, and commands a fine view of the Southampton Water and the New Forest, which view, from the nature of the holding of the property lying between the site in question and the river, can never be interrupted.

The hotel will be of a plain but elegant elevation. It will be handsomely furnished, and rooms will be set apart for the use of the nobility and gentry engaged in yachting, and superior accommodation afforded for the numerous passengers passing through Southampton, and other visitors.

There will be two entrances, one facing the Southampton water, and the other Oxford-street—the principal thoroughfare from the railway to the town. Ample accommodation will be provided for families, and for passengers after a long homeward voyage. It is anticipated that its position will attract a large commercial connexion, and special arrangements will be made, both in the construction of the hotel itself and in the future management, to provide the necessary requirements for this particular class of business.

There will be a fixed moderate tariff to enable visitors to have a complete control over their daily expenditure, and a table d'hôte will be provided, of which the officers of various steamers, as well as many of those whose business avocations lie in the town, while their residences are in the country, will gladly avail themselves.

Provisional arrangements have been made for the purchase, at a valuation, of an old-established brewery, with a lucrative trade, and numerous houses attached to it, which will secure an immediate dividend to the shareholders. The valuation of this brewery is to be made by two indifferent persons, or their umpire, in the usual way, and one-third of the purchase-money is to be paid in the shares of the Company.

Large and regular dividends have hitherto been paid to the Shareholders of both Hotel and Brewery Companies; so that by connecting the two branches of business under one management, combined with the great advantages offered by the extensive passenger and shipping trade, and special attractions of the town and port of Southampton, the present undertaking promises to be eminently successful, and the Directors confidently recommend it as being calculated to afford a safe, as well as a highly-remunerative investment.

Interest at the rate of 5 per cent. will be allowed upon all calls previous to the opening of the Hotel, and upon shares paid in advance or fully paid up.

A copy of the Articles of Association may be seen at the offices of the Company.

There will be no fees paid to promoters beyond the legitimate expenses incurred by them; and, in the event of no allotment being made, the deposit will be returned free of deduction.

Application for shares to be made in the annexed form to the Brokers, Solicitors, or to the Secretary of the Company, 17b, Great George-street, Westminster.

Form of Application for Shares.

To the Directors of the Southampton Imperial Hotel Company (Limited).

Gentlemen,—Having paid to the ——— Bank the sum of———, I hereby request that you will allot me ——— Shares in the above-named Company; and I hereby accept such Shares or any similar number that may be allotted to me, and agree to pay the calls thereon as they may be made, and to sign the Articles of Association when required.

I am GENTLEMEN, yours obediently,

(Originally established A.D. 1667.)

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

BIRMINGHAM—Manufactory and Show Rooms, Broad-street.
Established 1807.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

THE NEW STUDIO EASEL,

VERY SIMPLE AND EFFICACIOUS.

WINSOR & NEWTON,

MANUFACTURERS,

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA,
COUGHS, RHEUMATISM, GENERAL DEBILITY,
DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING,
AND ALL SCROFULOUS AFFECTIONS.

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., F.R.C.P.L.,

Physician to the British Embassy at Paris, &c.

"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Dr. LETHEBY,

Medical Officer of Health to the City of London, &c., &c.

"It is, I believe, universally acknowledged that Dr. de Jongh's Light-Brown Cod Liver Oil has great therapeutic power; and from my investigations, I have no doubt of its being a pure and unadulterated article."

EDWIN CANTON, Esq., F.R.C.S.,

President of the Medical Society of London, &c., &c.

"For several years past I have been in the habit of prescribing Dr. de Jongh's Light-Brown Cod Liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

Dr. LAWRANCE,

Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

THE LIFE OF LORD BOLINGBROKE, Secretary of State in the Reign of Queen Anne. By THOMAS MACKNIGHT.

CHAPMAN & HALL, 193, Piccadilly.

On Saturday, 25th April, will be published, the FIRST NUMBER of

THE MIRROR. A Weekly Newspaper and Review.

There does not exist any weekly journal in which as much care is bestowed on the narration of news as on the expression of opinion; and, indeed, for educated readers, there is, strictly speaking, no such thing as a weekly newspaper. It is proposed in THE MIRROR to meet this deficiency by digesting thoroughly the news of each week, and presenting it in the fullest, clearest, and freshest manner. If the design be worthily executed, the result should be a picture of the week, bearing the stamp of history. The details of the plan will best be understood from the paper itself: here it is enough to say that they will be carried out by the most able newswriters of the day, and in a mode hitherto unattempted.

Not only will THE MIRROR thus fully set forth the story of the week; it will devote ample space to the review of politics, life, letters, art, and science. Its tone will be quite independent. To say that it will be Liberal or that it will be Conservative would, in the present sense of these words, convey little meaning. It will, in politics, as in literature, avoid cant, crotchets, and cliques, and reflect the healthiest thought of the time. For this department of the paper, also, not less than for that allotted to news, a most competent staff has been engaged, and readers may be assured that the criticism, whether of public affairs and manners, or of books and works of art, will represent the views of some of the best living writers.

THE MIRROR will be issued in a form convenient for binding; and its price will be Sixpence.

6, BURLEIGH STREET, STRAND.

This day, Demy 8vo., price 5s.

UTILITARIANISM. By JOHN STUART MILL. Reprinted from *Fraser's Magazine.*

PUBLIC OPINION.

A Weekly EPITOME of FACT and OPINION for all Classes of Readers.

PUBLIC OPINION every SATURDAY, 2d.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

PUBLIC OPINION is invaluable to Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

TO ADVERTISERS.—The extensive circulation attained by PUBLIC OPINION amongst all classes of society, renders it a valuable Advertising Medium. Appealing to no restricted class, but to the great body of persons interested in the discussion of the topics of the day; aiming to interest alike the Politician, the Clergyman, the Student, and the man of Business, it is peculiarly adapted for Advertisements of a Literary, Artistic, or Scientific nature, the announcements of Assurance Companies, &c., while its lighter pages, attractive to the various members of families, render it a valuable medium for general commercial firms.

SCALE OF CHARGES FOR ADVERTISEMENTS.	£.	s.	d.
Four Lines and under	0	2	6
Each Additional Line	0	0	6

A CONCISE RECORD of EVENTS connected with LITERATURE, the FINE ARTS, MUSIC, the DRAMA, the CHURCH, the ARMY and NAVY, and the LAW, kept in PUBLIC OPINION, so as to give all Facts of Interest connected with each, and to show their General Progress.

THE COLENSO CONTROVERSY.—PUBLIC OPINION (Nos. 60 to 65) contains a Digest of the Reviews of Bishop Colenso's First Work on the PENTATEUCH, showing all sides of this important question. Nos. 72 and 73 contain a comprehensive Analysis of Bishop Colenso's Second Volume, shewing the scope and design of the work. The set complete may be obtained of any Newsagent, price 1s. 4d.; or, by post, 2s.

KINGLAKE'S HISTORY OF THE WAR IN THE CRIMEA.—PUBLIC OPINION, Jan. 31, 1863, contains a comprehensive digest of the Reviews of this important national work. Price 2d.; stamped, 3d.

THE ROYAL WEDDING NUMBER of PUBLIC OPINION.—PUBLIC OPINION of Saturday, March 10, 1863, contains full particulars of the Reception of H.R.H. the Princess Alexandra, the Procession in honour of her Arrival, full details of the Marriage Ceremony, and the various Public Rejoicings, forming the most complete and concise record of this great national event.

THE WAR IN AMERICA.—All the Great Battles and other Events connected with the Civil War, given in the words of the English and American Press in PUBLIC OPINION, Vols. I. and II.

IRON-CLAD SHIPS.—The History of Iron-clad Ships and the Debate upon them, to be found in PUBLIC OPINION, Vols. I. and II.

ARMSTRONG, WHITWORTH, and LANCASTER GUNS. The question of the relative merits of the above Guns discussed in PUBLIC OPINION, Vols. I. and II.

THE BRITISH COLUMBIA EMIGRATION QUESTION. Is British Columbia a Fit Place to Emigrate to? See PUBLIC OPINION, Vols. I. and II.

THE EDUCATION QUESTION, the REVISED CODE, &c. All arguments for and against the New Code to be found in PUBLIC OPINION, Vols. I. and II.

THE ROUPELL FORGERIES, and other CAUSES CELEBRES. For the fullest Accounts see PUBLIC OPINION, Vol. II.

COMPETITIVE EXAMINATIONS.—The Merits of the System Reviewed in PUBLIC OPINION, Vols. I and II.

THE COTTON QUESTION fully discussed in PUBLIC OPINION, Vols. I. and II.

FEMALE EMIGRATION.—For the *pros* and *cons* of this question, see PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF BLOCKADE EXAMINED in PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF INTERVENTION ventilated in PUBLIC OPINION, Vols. I. and II.

THE GREAT EXHIBITION OF 1862.—The Opening, Progress, Incidents, and Close of. See PUBLIC OPINION, Vols. I. and II.

THE THAMES EMBANKMENT.—The Rise and Progress of this Project. See PUBLIC OPINION, Vols. I. and II.

ALL NEW STANDARD WORKS found described, together with the conflicting Criticisms of the Press put in juxtaposition, in PUBLIC OPINION.

THE COLENSO CONTROVERSY.—The Opinions of all the Organs of the Press, together with a mass of Interesting Letters on BISHOP COLENSO'S WORK on the PENTATEUCH, in PUBLIC OPINION, Vol. II.

THE TICKET OF LEAVE SYSTEM.—THE GAROTTE ROBBERIES and TRANSPORTATION examined in PUBLIC OPINION, Vols. I. and II.

THE DISTRESS IN LANCASHIRE.—The whole History of the above Calamity and the Efforts made to relieve it, in PUBLIC OPINION, Vol. II.

THE EMPLOYMENT OF WOMEN.—The various Arguments for and against, as brought forward by the different Organs of the Press, in PUBLIC OPINION, Vol. II.

THE ABOLITION of CHURCH-RATES.—For the Agitation in favour of the above, and the Opinions it elicited, see PUBLIC OPINION, Vols. I. and II.

THE VOLUNTEER MOVEMENT.—For the Progress of the above during the Past Year see PUBLIC OPINION, Vols. I. and II.

THE EMANCIPATION OF THE SLAVES.—For American and English Opinions on, see PUBLIC OPINION, Vols. I. and II.

THE YELVERTON CASE.—The whole History of the above Case in PUBLIC OPINION, Vol. II.

DR. LUSHINGTON'S JUDGMENT in "ESSAYS AND REVIEWS"—How looked upon by the Press. See PUBLIC OPINION, Vols. I. and II.

THE TURF SCANDAL thoroughly and impartially sifted in PUBLIC OPINION, Vol. II.

RAILWAY ACCIDENTS and TRAVELLING, and its effect on Health, considered in PUBLIC OPINION, Vols. I. and II.

THE INCOME TAX, its Good or Bad Aspects.—See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH, FRENCH, and ITALIAN PRESS on the ROMAN QUESTION. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the COMMERCIAL TREATY with FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the PRESS in FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE "ROME OR DEATH" GARIBALDI EXPEDITION, related in the words of the Italian Papers, with the Opinions of the English, French, and Italian Press on the whole affair, in PUBLIC OPINION, Vol. II.

THE GREEK REVOLUTION, the INSURRECTION at NAUPLIA, &c., the Signs of, Cause and Effects of, stated in the Words of the Greek, English, French, and Italian Papers, in PUBLIC OPINION, Vol. II.

THE MEXICAN EXPEDITION.—The Triple Alliance: the Withdrawal of England and Spain; the Campaign of the French; the Debate in the Spanish Parliament upon, and the Views of all Parties concerned, given in their own words, from the English, French, and Spanish Papers, in PUBLIC OPINION, Vols. I. and II.

THE TURKISH LOAN and the PROSPECTS of TURKEY as discussed in the English, French, Italian, and Turkish papers, in PUBLIC OPINION, Vols. I. and II.

THE HISTORY of the STRUGGLE BETWEEN the KING of PRUSSIA and his PEOPLE, from the German, English, and French points of view, in PUBLIC OPINION, Vol. II.

THE RATTAZZI MINISTRY in Italy: its Rise, Progress, and Fall, with Public Opinion in Italy, France, and England upon it, in PUBLIC OPINION, Vols. I. and II.

A COPIOUS CLASSIFIED INDEX to facilitate Reference to the above and all other Subjects of General Interest, given with each Volume.

MR. STANSFELD AND THE LIBERAL PARTY.

THERE is nothing so wearing to the spirits and aggravating to the temper of the truly Radical Reformer, as the continual tendency of his most cherished friends to accept office under Government. It is not as if the accident happened only once or twice. Like Mr. Pickwick's sufferings, this kind of misfortune is chronic. Never have Mr. Cox and Mr. Hadfield loved a young gazelle,—never have they trained him up to cheer them with his glad bright eye, but when he came to know them well, and love them, he was sure to be carried off by Lord Palmerston to the Ministerial benches. This it is that makes political life unutterably trying to the people's friend. It is one long course of disappointment. By some curious fatality, he finds that it is invariably the Admiralty which exercises this fatal fascination on his companions. Perhaps it may be, that the unhappy Government department in question is managed in a way to attract the especial notice of a patriot,—who, however, little knows where he may expect to go to when he looks up the subject of marine retrenchment for the first time. Perhaps, occasional promotion is only Lord Palmerston's way of cutting off the heads of the tallest Liberal poppies. At all events, the thing occurs too often to be merely a coincidence. It happened to Lord Clarence Paget. It used to be always happening to poor Mr. Bernal Osborne. No sooner had they laid their guns for an assault upon the Administration trenches, than they were picked off by some Ministerial rifleman. After a short interval they used to reappear on the other side of the wall, radiant with new found glory, very much as Romulus appeared to his astonished countrymen after his deification. From their new position these transfigured heroes used to waft the fondest messages back to their old associates. "Weep not for me," Mr. Bernal Osborne was wont upon such occasions virtually to tell the Radicals, "I am not dead, but sleeping here. Lord Palmerston has got my body, but my soul still belongs to my country." Mr. Layard's fate, though slightly different, was equally distressing. Cruel destiny had marked him out for one of those Government offices of which he had spoken slightingly so often. It is Mr. Stansfeld's turn at last. Lord Palmerston has come for the Radical pilgrim, as the Angel came for Christian in the "Pilgrim's Progress;" and Mr. Stansfeld has taken leave of his friends at Halifax in the same touching spirit of mingled resignation and hope.

Mr. Stansfeld is too clever a man not to know where he is going to be taken. As Julius Peregrinus was "banished into the Senate," Mr. Stansfeld feels evidently that in accepting office he is banishing himself to the Ministerial benches. The erratum which Mr. Stansfeld is so anxious to correct in the *Times* really is of no consequence. Whether he was "*kicked* out" of the Liberal camp or "picked out," is all the same in its results. The virtuous Cox will think nothing of him now. In time, Mr. Bright will come to denouncing him together with the rest of the bloated oligarchs. The distressed Poles are already beginning to give him up. The champions of the runaway negroes seem to gaze after him more in sorrow than in anger. They have taken a kindly farewell of him, and they are good enough to say that they think it right of him to go. But he can no longer sincerely flatter himself that he belongs to that bright band. It must have been a harrowing thought to any of the number who formed part of the Halifax audience, to feel the conviction creeping on them as he spoke, that the white feathers of office might already be seen growing on the new-fledged official swan. Short as was the interval that had elapsed, Mr. Stansfeld, by the time he had got to Halifax, had begun to look on the Admiralty as a rather ill-used public body. It was a great mistake to regard that excellent branch of the public service as a mere Augean stall. "I should not be speaking the truth," Mr. Stansfeld told his constituents, "if I did not say that the present Board of Admiralty had already gone some way, and with an earnest purpose and with great personal labour, in the path of reform." We do not say that Mr. Stansfeld has ever attacked the Administration as a demagogue or a firebrand; on the contrary, he has uniformly conducted himself, in his short political life, as a high-minded and liberal gentleman. But when the Halifax reformers saw their representative assuming the part of charity, and hoping all things and believing all things of the Admiralty board, they may well have moaned in spirit, and thought that the world was out of joint. "It is impossible all at once to return to a condition of expenditure which would be as satisfactory as a normal state of things. But I look forward confidently to a gradual, well-considered, and progressive diminution in the burdens of the country." Was this the Lancelot of debate, who had so often shot like a star before the eyes of lords and ladies in tournament at Westminster? It is probable that the hearts of the friends of the people marked and appreciated the sudden growth that had taken place in Mr. Stansfeld's confidence in the economical resolutions of the Whigs. With a corresponding acuteness Mr. Stansfeld bade them good-bye, very much as if he was going not to Downing-street, but to New South Wales. This is a changing and dangerous world, and he well knew that the sweets of office could not be tasted without loosening the ties that bound him to his political school. The moment was a

Digitized by Google

painful one. A creditable ambition alone enabled him to sustain it :—

"A tear stood in his bright blue eye,
But still he answered with a sigh,
Excelsior!"

Leaving the amenities and commonplaces incidental to the condition of the lady who accepts her petitioning lover, the clergyman who takes the proffered bishopric, and the young member who feels it his duty not to refuse an Under-Secretaryship of State, we confess that it is with satisfaction that we find Lord Palmerston's offer to Mr. Stansfeld has been made and not declined. The leaders of the Whig party have been much to blame for recruiting their ranks so little from among the independent members of the House. The result is as might have been expected. The Whig flame is on the point of dying out for want of fuel. If Lord Palmerston were to retire suddenly from public life, a Liberal ministry would find it difficult to hold their own in the House of Commons. There is no school of rising Whig statesmen to hand down to posterity the sacred torch of Whiggism. It has been the fault and it will be the death blow of the Palmerstonian *régime* that the spirit and nucleus of the system is nothing but Palmerston. There is no successor to the English Metternich. The men on whose shoulders his mantle would fall by right of political tradition have little or nothing in common with him; and Lord Palmerston cannot, like Charles V., go on governing his country from his tomb. The ablest and most vivacious of his colleagues are not Whigs. Ten years hence Mr. Gladstone may perhaps lead the House of Commons, but he will not lead it to the same green pastures or beside the same still waters. Other views in foreign and domestic politics will have to supersede the views upon which the policy of the present Ministry is based. Could the present Prime Minister leave a trained troop of disciples and an armoury of political ideas, as Sir Robert Peel did, the Liberal party might have to undergo no great change upon his retirement or his decease. As it is, he will have no faithful interpreters of his creed when he is gone. Nothing but tall Whig weeds will be found growing round the tomb of the most active and vigorous of modern statesmen.

That Palmerstonianism will come to a sudden conclusion or collapse, whenever that period arrives which we hope may long be deferred, will not be the least evil of the exclusive system which has been too much adopted by the Whig leaders. The band of able men, who are obliged by the fashionable traditions of party to stand aside and resign all expectations of office, do not improve in temper, in charity, or in political wisdom by seeing themselves tabooed. Lord Derby's foolish insult, a few years back, has not made Mr. Bright a greater friend to Lord Derby's "Order." In the same way, the Manchester School have become more *ultra*, thanks to the exclusive airs that the Whigs have chosen to give themselves. Lord Palmerston cannot imagine that many outsiders, who are both able and honest men, do not feel their isolation, for he was pointedly reminded of it at the famous meeting at Willis's Rooms, which preceded the accession of the present Ministry. His friends will have to thank themselves for what will be by no means an unmixed advantage to the country. The Liberal party will be re-formed, and re-formed on a wider basis than would have otherwise been necessary. Men who have been driven into *doctrinaire* opinions will find the ball within their reach at last. Ten years' more denial of office would perhaps have converted Mr. Stansfeld's present somewhat extreme opinions into a settled hostility to the Constitution. He enters office now as a mollified philosopher; ten years hence he would enter it a furious and confirmed democrat. During the last few years we have heard of a Conservative reaction a good deal. We may well doubt whether we are not destined to see a Liberal reaction. That a man of Mr. Stansfeld's ability should, even at this late hour of Lord Palmerston's career, be taken into the counsels of the Sovereign before he has committed himself to any extravagant political propaganda, shows a symptom of returning prudence among the Liberal chiefs. In the name of the future quiet of the country, we trust we may see this step followed up by other measures conceived in the same spirit. Nor on other and more popular grounds can we regret Mr. Stansfeld's appointment. We should be sorry to pledge ourselves to all Mr. Stansfeld's opinions; but the country is a gainer when she receives an additional guarantee of administrative and financial reform, and of a liberal foreign policy based not so much on the traditions of English interests as on the recognized interests of civilization.

ADMIRAL WILKES, MR. ADAMS, AND THE *ALABAMA*.

JOURNALISTS are bound in honour and conscience to write under as strong, and cogent, and even vigilant sense of responsibility, as diplomatists or statesmen; for, even more than diplomatists and statesmen, they may be influential in determining not only the general policy, but often also the special line of action, adopted by great nations, where those nations possess free institutions, and are accustomed to think for themselves and to influence, when they do not actually choose, their own government. More especially should this sense of responsibility lie ever close to the mind of the writers in reviews or newspapers when such great issues as those of peace and war, and of peace and war between civilized and kindred nations, are at stake. While it is difficult for them not to share in some measure the prejudices and the irritations of the common public, they are bound to form their conclusions upon fuller information and with greater calmness, to fan no anger which is not righteous, to echo no demands which are not just, and to make no charges which they do not feel confident are borne out by facts. As they write *to* the nation, they should endeavour to think *for* the nation, and to warn it against its own prevalent tendencies and its own natural bias.

There never was greater need to remind ourselves of these solemn obligations, and seldom greater difficulty in acting upon them, than while discussing the present state of feeling between England and America in reference to recent maritime transactions. But we shall do our best, and try to look at the foreign side of the question as well as at our own. Both nations are growing very angry, and both think honestly that they do well to be angry. A little more exasperation, a few more fierce words, a few more rash actions, and we may find ourselves involved so far in the preliminaries of a quarrel, that neither country may be able to draw back with honour or without humiliation. There is enough to account for all the irritation both here and in the United States, and enough, probably, to justify a good deal of it. On the one side we can well understand that the Federals—knowing that their best if not their only chance of reducing their antagonists to submission lies in the strictness with which they can maintain the blockade of the Southern ports—should feel indignant at the constant endeavours of British ships to evade this blockade, and to supply the Confederates with warlike stores—endeavours which, as we well know, are often successful. It is even possible that some parties may persuade themselves that much of the long-continued and triumphant resistance of the South may be traced to the illegitimate aid thus rendered to it by Englishmen. We can well understand, also, how the successful and damaging exploits of the *Alabama* against Federal commerce should have roused the bitterest animosity towards the people who are supposed, however unjustly, to have connived at her construction, equipment, and escape. And it is by no means unnatural that, while smarting under the injuries and losses inflicted by that clever steam cruiser, many of the Americans should choose to believe that the delay of our authorities to seize her before she left Liverpool was either wilful or so culpably careless as almost to amount to downright unfriendliness, if not to actual guilt. *We* know that this was not so; but we can scarcely expect an angry and suffering nation thoroughly to believe us. And although we have at their instigation seized the *Alexandra* on suspicion of intending to imitate the *Alabama*, yet if (as is by no means improbable) a British jury should determine that there was no valid ground for detaining her, and should thereupon order her release, we shall not be surprised if the Americans should choose to regard such an ordinary result of British law proceedings as only another and still more flagrant proof of the resolute enmity of the British people. Thus far we may, and we ought to put ourselves in the position and look at matters from the point of view of the United States.

On the other hand, may we not ask from them a similar mental and moral effort? Cannot they comprehend that, while we have been suffering most severely in our most prosperous industry, and in the persons of our most energetic and worthy artisans, in consequence of the blockade, and

Digitized by Google

are conscious of having borne that suffering and those losses with unexampled patience, we might have expected from them not only a little expression of regret that they should have been forced thus incidentally to injure us, but also the greatest possible care and forbearance in exercising those undoubted belligerent rights which press so hardly upon us? Is it not obvious that we must watch with the utmost jealousy and irritation any instances in which their cruisers act against our *innocent* merchant vessels with manifest injustice and without real warrant from international law? Can they not perceive and admit that the least we can demand from them is, that since they must *necessarily* injure us so much, they should on no account injure us gratuitously? How can they suppose that we shall endure without the greatest indignation to see our legitimate commerce interfered with on the flimsiest pretext, and even virtually transferred into American hands by letters of protection issued with national discrimination by a foreign Minister residing in a British capital? In short, why cannot they see that we, like themselves, are suffering severely, and that we, like themselves, are made, perhaps, unduly and abnormally irritable by that suffering?

The truth is that each party would be better able to make kind and liberal allowances for the other's difficulties and susceptibilities, were each really assured of the other's desire to remain on friendly terms, and to do mutual justice. Unhappily this assurance is felt on neither side. The much that we have borne, in the way both of language and of action, from American officials, semi-officials, and ex-officials—at first without resentment, and still without retaliation—has not succeeded in persuading the Federals that England does not anxiously desire the dissolution of the Union; and this being so, they appear to count for nothing the circumstance that we not only have carefully abstained from giving aid or countenance, as a nation, to the Confederates, but that, as individuals, we have done twenty times as much for the North as for the South. And on our side the case is much the same. What perplexes us, and what makes us in doubt what course to adopt, is, that we cannot comprehend what the Government at Washington really mean by their language and course of proceeding. We should be ready enough to stretch our forbearance to the utmost possible extent, in favour of a nation at a crisis so difficult, so perilous, and so painful, that it might well drive wise men mad, but they will not give us any chance of doing so. We could excuse any vivacity or virulence of language, if we were satisfied that on the whole they wished to be friendly; and we could put up with any occasional irregularity and lawlessness in their proceedings, if we were satisfied that on the whole they meant to be just. But unhappily we can feel no security on either of these heads, and there are some circumstances which make us grievously doubt both suppositions. When a mistake has been made, and the law has been overstepped, in the interference of Federal cruisers with British commerce, there has been no promptitude in the direction of apology or restitution. The rights of belligerents have been so habitually stretched to the uttermost by American naval officers, as to indicate the absence of all anxiety to avoid pressing them *beyond* that uttermost. British ports have been all but blockaded, and vessels have been actually captured within British waters, and no instantaneous amends made, or regret expressed for the outrage. To crown the whole, the appointment of Commodore Wilkes—who had already once brought the two countries to the verge of war and his own into a most discreditable position by a previous insult to our flag—to a command in which he would be under a perpetual temptation to repeat the blunder and the offence, appeared incompatible with the supposition that the Washington Government sincerely desired either to behave well towards England or to remain at peace with her. It is considerations such as these that perplex us. If the American Government and nation are merely wild with embarrassment and danger, we can afford to be gentle and patient and bear whatever can be borne with honour. But if they are "trying it on," —if either they are deliberately desirous to provoke us into a war as a means of escape out of their own difficulties, or are merely venting a vulgar spite or indulging their vanity by showing how much they can venture to annoy and insult us, —then it may well be that a mild and much-enduring policy may be an unwise one. If they are inclined to force a quarrel upon us, they may easily do so, and we cannot prevent them; all we then have to do is to take care that on our side the precise cause and pretext of the rupture be just and irreproachable. If, however, as we would fain hope, they have no such absurd and suicidal intention, but are merely indulging their ordinary habits of insolence and venture, then it may be well to let them know by the promptness and decision of our action in the first *clear* case of outrage, that they are playing a dangerous game, and that the danger lies here; that a few more proceedings like the seizures of the *Labuan*, the *Adela*, and the *Peterhoff*, and a few more blunders like the *laissez-passer* of Mr. Adams, may bring both countries into a position from which even the Americans will not be able to retreat in time; may compel England to make demands which the Government at Washington will have committed itself too deeply to dare to concede; or may rouse a degree of indignation in this country which no amount of apology and restitution will be able to allay. Moreover, it should be remembered that though a government may honourably offer regret and atonement for hasty or inconsiderate injury and insult, amends for *studied* and deliberate outrage and wrong cannot be tendered or conceded without humiliation and disgrace. Meanwhile, however, and in our present uncertainty, the course our Government appear to have resolved on is the right and wise one,—viz., to endure everything within the recognized limits of international law, however harshly interpreted,—but not one inch beyond those limits.

LANCASHIRE DISTRESS.

HOW to deal with the unemployed operatives of the manufacturing districts, is a problem which must occupy the attention of English statesmen for many a month. Other questions will arise and be disposed of, whilst this will too probably remain to baffle our attempts at its solution, and may in the end disappear through causes as much beyond our control as those which gave it birth. The House of Commons may be convulsed by the mighty question whether Mr. Gladstone shall secure his petty additions to our fiscal system; but the triviality of such a debate is apparent when we turn from it to a consideration of the condition of Lancashire. Next to the preservation of pacific relations with the United States comes the treatment of the unemployed workmen in the County Palatine.

It seems a cruel irony that a subject so delicate in character and so wide-spreading in its relations should have fallen a prey to such crude thinkers. When Mr. Kingsley and S. G. O. essayed to compass it, we thought that no other persons so incompetent would have been so rash. Mr. Busfield Ferrand has convinced us of our error. In him we recognise a lower depth than can be traced in the Cambridge Professor of Modern History. No one can be surprised that the speech of the M.P. for Devonport was received by the House with ironical cheers and laughter. The jumble of ignorance and prejudice, socialistic fallacies, Protection, anti-manufacturing feeling, and the history of Sir John Bowring, mixed up with the condition of a starving province, could not but excite any sense of humour latent in the assembly. We are tickled with the same feeling of incongruity that we experience in looking at a tableau of the Mediæval Dance of Death, where a king is laughing with his jester, whilst the skeleton in cap and bells grins behind him. Yet our thanks are due even to Mr. Ferrand. Though his speech was inconsequent, and at the end of it he had nothing to propose, he forces us to consider a question, the difficulty of which is so overwhelming, that we are all too willing to neglect it.

There are two facts connected with Lancashire which have been established by the most recent reports: the first, that the demoralization of the unemployed workmen, if not already begun, is imminent; and the second, that the supply of charitable contributions is for a time exhausted. The impossibility of continuously supporting half a million persons on the gifts of the benevolent, or even on the poor-rates of the district, has long been confessed, and these two facts only prove the accuracy of previous conclusions. Whether idleness be coupled with fulness or with scarcity of bread, the deterioration of the idle is certain, and it is not doubtful which condition is the worse of the two. The spirit of independence and self-reliance—the very backbone of a man—is destroyed, and he who at first accepted help with a proud reluctance and aversion soon begins to trust to it exclusively, and perhaps to seek it after his necessity has passed away. To the two

Digitized by Google

facts which are noticeable in Lancashire itself, a third must be added of vital importance as an element of the problem; the hopeless permanence of the main cause of the distress—the war in America. Whatever opinions we may entertain as to the desperate or even immoral character of the Federal struggle, we must confess that there is no prospect of its being abandoned. Whether our sympathies be with the North or with the South, our wishes cannot discover a gleam of light to promise peace. And even if peace came it is clear that for a long season the supply of cotton will be small and uncertain; the agriculture of the South is totally deranged. The last manifesto of Jefferson Davis confirms the previous reports of the conversion of large tracts of country from cotton into corn lands, a conversion which the escape from the best cotton-producing districts of no inconsiderable fraction of the slaves must tend to make permanent. We have to deal, therefore, with a state of distress at home which must prevail to a greater or less degree for a lengthened period.

The modes of action at present proposed are, assisted emigration, and the institution of public or the furtherance of private works. The equilibrium between workmen and work which has been disturbed may be restored either by diminishing the workmen or by increasing the work; or, as is most natural, both processes of restoration may go on simultaneously. It is, however, worth while to inquire which has the better claims to our approval—whether, in the face of the large working power existing in the manufacturing districts without the means of profitable employment, we should endeavour to subtract from the power or to add to the employment. The objections to the attempt to remove from Lancashire its redundant power are, that it can only be accomplished to a very limited extent, that it is very expensive, and that in the result it only transfers the unemployed workman to some other scene, where he will be as little able as ever to find suitable employment. All these objections have some weight, though one or two of them are perhaps over-estimated. If we may credit the success of the experiment which has been tried in North Devon, it is not necessary that the unemployed workman should be carried out of the country. The labourers who were imported into Devonshire have, we are told, fairly earned wages more than adequate to support life; and that without sensibly affecting the labour-market of the county. The rate of wages, however, in the agricultural counties of England, even where farm labourers are most highly paid, forbids our looking forward to any considerable absorption of labour in such districts. Emigration, if it takes place at all, must in the main be emigration to our colonies; and the expense of transit at once acts as a limitation on the extent of emigration. Here, however, the suggestion of Mr. Henry Baillie, backed up as it is by past experience, deserves consideration. Twenty-five years ago, he tells us, when the kelp manufacturers in the North of Scotland were thrown into great distress by the abolition of the duty on barilla, a line-of-battle ship was fitted up as a passenger vessel to carry some of them to Australia. There seems no reason why a large number of our ships of the line, now lying idle in our harbours, should not be so utilized. Such a step would materially diminish the expense, and consequently increase the extent, of emigration. Nor could the ordinary ship-owner complain that an abnormal traffic, the gains upon which he could never have anticipated, has been diverted from his own ships. The objection that the transported spinner will be found unfit for any employment in the colonies has at least equal force as an objection to finding him employment at home; if he is unable to perform out-door work in the mild climates of Australia, New Zealand, or the Cape, he cannot be fit for hedging, ditching, draining, and road-making, in Lancashire. The force of this objection is, however, much overrated; there is no such loss of *physique* in the mill-hand, as the inhabitants of the south are sometimes led to believe; nor need we be deterred by the fact, that to him agricultural labour will be a novelty. Agriculture is, indeed, an art not to be learnt in a day; but of all occupations it is the one in which the unskilled workmen can be most easily trained to do a fair day's work. Against all these objections there are to be found two principal advantages attendant on the promotion of emigration—the first, that every step in that direction is doubly beneficial in result, and the second, that the benefit is permanent. It is doubly beneficial, because the emigration of a workman out of employ is not only a benefit to himself, but to those who are left at home; it tends directly to restore the balance between workmen and work, of which good wages are the symbol. The permanence of the benefit does not require serious discussion; the population of our colonies admits at present, and will for a long time admit, of considerable increase, not only without any diminution of the means of living, but as seems probable with an actual increase. The North American Colonies alone, in many respects the most inhospitable of all our possessions, absorbed in the year 1847 more than 109,000 emigrants.

We have already noticed the objection to employing the mill hands on out-door works at home, founded on their supposed inability to compass such labour: the objection is of no great weight, and if it stood alone it might be disregarded. There are, however, other objections of more importance. The great question with reference to these works, whether public or private, is will they pay? Take for instance the case of private works. Mr. Villiers told the House of Commons that there were 850,000 acres of wet lands in Lancashire and Cheshire, the draining and levelling of which might employ 100,000 able-bodied men during two winters. If such drainage works would pay, there is a difficulty in seeing why they have not been begun: the landowner has not even to find the money to pay for the work. The Enclosure Commission and the Land Companies which work under its sanction have about six millions to advance for such a purpose at little more than 3 per cent. interest, repayable by a terminable annuity which is made a first-charge on the property, and the House of Commons would not hesitate to increase the sum at their disposal if that should be found insufficient. But it is impossible to force a landowner to undertake works which in his judgment will not sufficiently increase his rental to meet the charge upon his estate, and it will scarcely be suggested that the State should confer any greater benefit upon landowners than it has already done by providing capital for their improvements. As to public works, it must be confessed that they offer no adequate return for the expenditure upon them: the planting of a park and the decoration of a town are desirable objects, but only when the municipality is rich enough to engage upon them. The objection that the works proposed are unremunerative is not merely pedantic, for it rests upon the ground that work of this kind degrades the workman more subtly, but not less surely, than the direct donation of relief. The labourer who is conscious that his work is not profitable to his employer, that the wages paid him do not return an equal value to the wage-payer, becomes rapidly demoralized. Compare, for instance, the character of the navvy and the ordinary labourer on parish roads. The navvy knows that every yard of way he makes is worth its cost to the employer, and that he has fairly earned the wages he has received: the labourer on the roads knows that the work is made for him, and he becomes dispirited and inert. And, after all, it must be remembered, that employment of this kind is but a temporary make-shift; it keeps the mass of workmen in the country, and things, instead of getting better, will have a tendency to get worse. It affords no hope of a diminution of the numbers of the people, whilst the mere fact that the workman is conscious that he is engaged in a transitory occupation, and not at the trade which he must adopt as a permanent employment, is alone sufficient to demoralize him. On the whole, though the diversion of the unemployed poor to public works is a method which is for a time desirable, it should never be looked upon as an expedient to be retained in use for one moment longer than is absolutely necessary. The gist of the case may be summed up in a sentence. Our object should be to bring back the labourer to that condition in which he may once more be safely left to take care of himself: if he emigrates this will soon be the case; but if he remains at home, it seems too probable that he will pass from one state of dependence to another, and, after all our care, end in a condition of hopeless pauperism. If we would save Lancashire from such degradation of her workmen, we must either reduce their number or discover some scheme of permanent and remunerative employment which shall preserve their integrity and their spirit.

COMPANY-MONGERS.

SOME recent police cases have demonstrated—what was perhaps not doubtful before—that if a man can call himself a lord with sufficient impudence, and maintain the

Digitized by Google

assumption with corresponding firmness and circumstantiality of detail, he may draw to any fair extent upon the credulity and upon the pockets of the public. To an ordinary person who happened to be in want of a dog cart, a couple of glasses of gin and water and the loan of five shillings, it would hardly occur that these necessaries or luxuries of life might be obtained by walking into a tavern and representing that he was Earl Russell, that he had missed his train, forgotten his purse, and was in a hurry to get down to his family circle at Richmond. But a bold and self-relying genius tried the experiment, and found it perfectly successful, with the exception of some ulterior consequences at a police-court. An attorney's clerk, who had penetrated with even greater acuteness the possibilities of life, has just maintained for a time a magnificent existence as the Marquis of Ormond, the Earl of Coventry, the nephew of the Duke of Beaufort, and the Duke himself. And yet the present is called an age of scepticism! If, however, the essence of faith be the belief in things unseen, there is a yet stronger proof that Bishop Colenso has fallen upon evil times. After all, Earl Russell and the Duke of Beaufort are existing individuals of undisputable solvency, and the mistake made by too-confiding publicans and too-aspiring upholsterers was merely one of identity. The gullibility of an average Englishmen is never thoroughly tested until he has been tried with a Company. Lord Thurlow said that a corporation has neither body nor soul. A Company is the shadow of a corporation. But an unknown wire-puller has only to open some doors wide enough in its name, to advertise its merits strongly enough, and to invest its impalpable existence with a directorate sufficiently ornamental, in order to draw from the heart of the British capitalist the most touching tribute of his devotion in the shape of hard cash.

This is not a period when opportunities are neglected. The field in which Mr. Montague Tigg's agricultural energies were prematurely cut short has since been cultivated by labourers who have matured his processes, while they have borne striking testimony to the justness of his leading idea. Impossible but plausible patents have yielded a hard and scanty subsistence to some plodding but uninventive speculators; the golden promises of distant mines have been worked with a moderate result in actual specie to the discoverers of their names; banks, which shed around them a savoury odour of universal benevolence, have given a modest competence to the men who found them a title, showy premises, and a broken-down aristocrat for chairman. But none of these enterprises have proved so richly remunerative to their promoters—or, in the long run, have been such taking baits for the public, as Insurance Companies. It is not difficult to see why. They are started with the utmost facility, and can be at once invested with an appearance of brilliant prosperity. In almost every other undertaking you have, from the very beginning, to pay as well as to receive. But although a young Assurance Company may, like the Anglo-Bengalee, be "brought down to a grand piano" by a couple of unfortunate deaths, it has a right to hope for better things. If fortune be fairly propitious, and the managers eschew middle-aged lives, its early course can hardly be other than a smooth one. In the infancy of these institutions it was indeed natural for a timid and narrow-minded speculator, like Mr. Jonas Chuzzlewhit, to feel the misgivings implied in his remark, "It's all very well when the Office is young, but when the policies begin to die — that's what I am thinking of." In those days, even so accomplished a financier as his friend could only reply by a whispered sentence, whose last word sounded like "bolt." Had Mr. Tigg lived until now, he would never have contemplated such a contingency. His line might not have been so brilliant as it was; but it would have been far safer. Instead of aspiring to be a Company in himself, he would have been contented to figure as a "promoter;" he would not have dispensed with the magnificent offices, the "green ledgers with red backs, like strong cricket-balls beaten flat," the painted coal-scuttles, the rows of fire-buckets, or the wonderful porter "in a vast red waistcoat and a short-tailed pepper-and-salt coat, who carried more conviction to the minds of sceptics than the whole establishment without him." These things still have their value. But he would have known that the easiest instrument for an impudent man to obtain, and the readiest resource for an ingenious man to turn to account,—is a Chairman and a Board of Directors of ostensible respectability. He would have introduced the Anglo-Bengalee to the world under such auspices. He would then have first made something by rigging the market in its shares, either with or without the collusion and assistance of his Board; he would next have netted a good round sum in the shape of a gratuity for founding the Company; and lastly, when liabilities began to fall in, instead of "bolting," he would have earned the eternal gratitude of the proprietors and policyholders, and a substantial bonus into the bargain, by securing an advantageous amalgamation with a Company in a less advanced stage of insolvency. Or, perhaps, instead of raising this third crop off the same ground, he might have diffused his energies over a wider surface, and, following "promoting" as a profession, have lived in comfort and esteem, by setting traps for the cupidity and credulity of mankind.

It is partly for the reasons we have already given, and partly from the fact that it is always difficult to prove there is no room for a new assurance office, that undertakings of this kind are the favourites of that very mischievous class of men who make a regular livelihood by stimulating unhealthy speculation. Not only are companies pushed into notoriety, whose rates convey to any actuary the sure promise of future bankruptcy; but during their first years—if their existence be measured by years—they are peculiarly subject to those ingenious manipulations which may not benefit the shareholders, but are not for that reason unprofitable to everybody. At the same time they enjoy no monopoly of fraud. They are not the only associations which are foisted on the public under cover of a Board of Directors who are but the tools of a projector; nor are they the only ones in which Boards, of apparent respectability, fail lamentably to secure fair dealing between the Company and the public. There is too much reason, for instance, to believe that that particular device known as "rigging the market" is resorted to very extensively for artificially enhancing the value of shares in many new Companies. The *modus operandi* is simple. An enterprise is brought out with a loud flourish of trumpets, which probably attracts applications for many more than the whole number of its shares. A part only of these are allotted; and at the same time extensive purchases for future delivery are made by or on behalf of the promoters or Directors. The result is to drive the shares up to a premium. The public seeing this, jump to the conclusion that the Company must be a good thing; they enter eagerly into the competition; a still further rise is established, and eventually, when prices have reached the highest point to which it is supposed they can be pushed, the unallotted shares, and those which the "riggers" have bought, are thrown upon the market, and the general body of flats find themselves in possession, at a fictitious value, of the commodities which have been thrust into their hands by a select band of sharps. There is no doubt that the latter render themselves liable to an indictment for conspiracy to defraud. But it is not easy to establish the offence by legal proof, and the ends of justice are, moreover, too often defeated by the promptness with which the criminals disgorge their plunder at the approach of danger. The recent proceedings in connection with the City of London and General Life and Fire Insurance Company show pretty clearly both what is going on and how faint is the prospect of obtaining a judicial exposure. The shares of that Company soon after it was launched stood at the preposterous figure of 5 premium upon ten shillings or twenty shillings paid up. No one could imagine that this premium was entirely the consequence of a fair demand arising out of an urgent need for a new insurance company. And, accordingly, some one whose name did not transpire summoned the Directors before the City magistrates upon a charge of fraud. In the absence of proof to the contrary, we are bound to believe the inculpated gentlemen when they tell us that they knew nothing of what had been going on, although it appears from their own Report, that while there were 20,000 shares in the company and 23,182 were applied for, only 13,653 were allotted. But that something very wrong had taken place, their conduct abundantly proves. Instead of boldly meeting the charge, they struck their flag at the first summons. They agreed to dissolve the Company, to take upon themselves the whole burden of the preliminary expenses, and to return the shareholders the money they had paid without any deduction. The result of this was to prevent any settling in the alleged "rigging" transactions. When that end was attained, everybody concerned was per-

Digitized by Google

fectly satisfied, the summons were withdrawn, and the solicitors for the prosecution became lost in admiration of the very creditable manner in which the directors had acted. We are bound to say that, in our opinion, the less that is said about the conduct of any one concerned the better. It is palpable that a fraud has been committed by some one; that it has been irregularly hushed up; and that the criminal law has been used most improperly to further private ends. The Directors would have far more effectually cleared their characters by allowing a full investigation, to fix upon the real culprit the guilt which they disclaim. It would have been satisfactory to obtain a sight—we do not care in what part of the court he might have stood—of so eminent a professional "promoter" as their late manager. The world would have listened with attention, had counsel been permitted to extract from him an autobiographical narrative of the remarkable career, which is said to have commenced behind the counter of a tailor's shop in Hull, to have scattered upon the world unnumbered blessings in the shape of new Insurance Companies, and to have been solaced by the reception of more than one handsome gratuity of £5,000 in the shape of "promoter's" fees. The public would have been the better for being brought face to face with one of the men in whose hands the Directors whom we so blindly trust are often little better than puppets. This much we may, however, learn from the case to which we have alluded. Accepting the statement made on behalf of the board, it is clear that even when that position is held by men of business habits and of respectability, there is little security that the shares of a Company will be honestly dealt with. After all, those who understand drysalting or colonial produce very well may be very ignorant of the purposes for which joint-stock enterprises are now started, the ends they are made to serve, or the "dodges" for which they afford an opportunity. The Committee of the Stock Exchange have shown their sense of the gravity of a growing evil by emphatically warning their members against the consequences of introducing or dealing in the shares of Companies which are brought out for improper purposes. We have no doubt that the leading members of that body will do their best to protect the public. But their efforts will be in vain if the public will not protect itself by the exercise of a reasonable caution.

THE ATTACK ON CHARLESTON.

THE defeat which the Federals under Admiral Dupont have lately sustained at Charleston conveys some important lessons. It is surely idle to insist, because the North is not disposed to give up the contest—or because the officers and men fought gallantly—or because the loss did not exceed ten men—that therefore the failure is of no consequence. The object of all war is the restoration of peace at the shortest possible period, with the smallest loss of human life, and the least possible destruction of property. To suppose that Admiral Dupont or the Government at Washington should have organized an expensive expedition during the last three months—that they should have directed an attack with the distinct knowledge that the fleet would be compelled to retire discomfited in a few hours, with the loss of several ships and some valuable lives, would be to suppose the Federals more reckless and inhuman than their worst enemies have yet thought possible. It is certainly true that the attack on Charleston from the sea was a gross error, but it was an error which has not now been committed for the first time. It was precisely the same in character as that committed by ourselves in the Baltic, and by ourselves and the French in the Black Sea. Whatever changes may have taken place in the science of attack and defence within the last ten years, it is abundantly clear that no fortified place, which is occupied by reasonably good troops, can be successfully assailed, unless it be first invested. The history of the Crimean war was a striking illustration of this maxim, and the history of the American civil war has furnished fresh illustrations of the same principle. So long as an army behind fortifications or intrenchments is allowed to repair its losses in men and its waste of ammunition, it is practically impossible to defeat troops by a mere bombardment. Houses and other buildings may be destroyed; a few men's lives may be lost; but unless the bombardment is followed by an assault, or unless possession is taken of the place attacked by landing an army, no practical result will ensue. Thus it was at Richmond—thus it has been at Charleston. At Richmond M'Clellan completely failed to penetrate even the first line of intrenchments—and at Charleston Admiral Dupont scarcely got within the first first line of forts. Nor, according to the original plan, do Federal officers appear to have contemplated the possibility of taking Charleston by the fleet alone. It was said, that General Hunter was destined to co-operate with an army of some 40,000 men; and if this had been done the result might perhaps have been different. If such a force had occupied all approaches to the city from the north and east, there would have been investment—Charleston would have been deprived of all means of renewing the loss of men and ammunition, and it might eventually have fallen. But this was not done, either because it was found impracticable, or because the officers in command were ignorant of their business. The result has been, that the Federals have suffered a deserved defeat, for their plans were formed in direct opposition to the principles of military science and the dictates of common sense.

Nor does the folly of the Federal officers stop here. Deaf to the lessons of experience, they are steadily pursuing the same fatal policy which has hitherto proved so disastrous. They have so divided their forces that they have no superiority in any quarter. At Fredericksburg it is said that Hooker is about to cross the Rappahannock, and to turn the flank of General Lee, who bars the way to Richmond. The enterprise would not be easy for a thoroughly efficient army; nor is there anything to lead us to suppose that Hooker's army is at all superior, either in numbers or in discipline, to that of M'Clellan before he suffered his disastrous defeat in the peninsula. In South Carolina there is a large force, which, now that the attack on Charleston is abandoned, must be comparatively useless. In the West again there is Banks in New Orleans, Rosencranz in Tennessee, and Grant, who has just been compelled to abandon the attack on Vicksburg. According to the latest news Grant was about to join Rosencranz, and then to resume the attack on that place. But so long as the Federal officers persist in attempting to carry such a position as Vicksburg, without first investing it, they must suffer discomfiture. The same principles which apply to Charleston apply to Vicksburg. The same results which have followed the neglect of these principles in the East, have followed and will continue to follow the neglect of them in the West.

But to return to Charleston. There can be no doubt that the attack of Admiral Dupont throws considerable light upon the question as to the best mode of defending harbours and arsenals. It is certainly true that English ironclads are much more powerful than the American ironclads, and that the number of guns in the forts defending Charleston harbour were much more numerous than those on board the fleet. But it is equally true that the number and weight of guns on forts which can be brought to bear upon ships must always be much greater than the number of ship-guns which can be brought to bear upon ships; and, therefore, in this respect, fixed forts must always have the advantage. Indeed, it has never been pretended by the most obstinate opponent of fixed forts, that if a ship were anchored opposite to a fort the ship would not be destroyed. The real question has been whether the ships could not run past the forts and destroy the arsenal and building which lay behind them. Fortunately, this is the very point upon which the action at Charleston will prove of peculiar value. Assuming that if any iron-clad can be detained for fifteen or twenty minutes under the fire of a fort it will be destroyed, the only question is whether it can be so detained. The experience at Charleston shows that nothing can be easier. All that requires to be done is to allow the attacking ship to steer into a certain position, where she will find herself stopped by old hulks and other obstructions, and where a mass of nets and other contrivances will be so placed as to foul the screw and to delay her further progress. This done, and the precise position thoroughly ascertained, nothing more remains than that the surrounding batteries should open their fire upon her, and if possible sink her. Nor is this all. The attacking ships run other risks. The steering apparatus may be deranged—the vessel may become unmanageable, as happened to the flag ship of the American admiral, and she may be compelled to retire from the contest; or if she be one of the cupola ships, the efficiency of which depends upon the cupola turning in its groove, and so permitting the gun inside to bear upon the desired point, it

Digitized by Google

is proved that a single shot may so damage the cupola as to render it totally unmoveable. It seems to follow, therefore, that either by means of artificial obstructions or by the accidents to which every iron-clad, under fire, is subject, there is no real difficulty in detaining any ship in its attempt to run the gauntlet of a line of forts. And, as has been said, if any ship is so detained, it must inevitably be destroyed, or, at all events, disabled from continuing the conflict. As upon land, so upon sea, to defend is more easy than to attack; and the late improvements in artillery have greatly increased this facility. The lessons which this fact ought to teach us are so obvious, that it is needless to repeat them at length here. This country has seaport arsenals which must be defended at all hazards. Fortunately, plans have been suggested for their defence, the wisdom of which are now confirmed by experience.

THE PRINCE CONSORT'S MEMORIAL.

It is pleasing to find that such unanimity has been exhibited by all classes in the desire to honour the memory of Prince Albert in a manner worthy of his noble qualities and of this great nation. But he was so different in character from those to whom our monuments have usually been erected, and his labours were so unlike theirs, that it has been felt that the ordinary statue or column which we are accustomed to raise for princes, heroes, and statesmen, would be unsuitable to represent the place which he occupied in the public esteem. We have, too, advanced far enough in the knowledge of art to have learned that sculpture should not be divorced from architecture, and that a solitary column is an architectural absurdity. The consequence is, that we have become very exacting and difficult to please. We have erected an ideal standard, to which it is by no means easy to attain, and hence form schemes beyond our means to realize.

When the question was first mooted as to what form the national testimonial should take, it was proposed to raise a monolithic column to surpass in grandeur the most imposing of Egyptian obelisks, and to decorate its base with groups of sculpture. But the inability to find a block of granite large and long enough to yield an obelisk of the required dimensions, the difficulty of conveying it through the streets of London, and the doubts that were beginning to be entertained of its fitness for the site and purpose, led to the abandonment of the scheme, much to the satisfaction of all who desired that the Memorial should have a high artistic character in accord with the Prince's labours to promote the knowledge and practice of art among us. When the obelisk was given up, the Committee proposed to erect a personal Memorial to the Prince on the site of the first International Exhibition in Hyde Park, and to carry out, in conjunction with it, a scheme, suggested by the Prince himself, for "the establishment of an institution for the promotion, in a largely useful sense, of science and art as applied to productive industry;" by constructing a hall to form "a centre of action for men of science and art, where the results of their labours could be communicated," and at the same time to afford "the means of establishing the connection between them and the public, which would secure permanent relations of reciprocal interest." The Memorial Committee, which it will be remembered consists of the Earl of Derby, the Earl of Clarendon, Sir Charles Eastlake, and the late Lord Mayor, invited seven distinguished architects—W. Tite, Esq., Sydney Smirke, Esq., J. Pennethorne, Esq., P. L. Hardwick, Esq., T. L. Donaldson, Esq., G. G. Scott, Esq., and M. D. Wyatt, Esq., to assist them with their advice. The result was a plan for erecting the proposed Hall of Science and Art on the vacant piece of ground at the northern boundary of the estate purchased out of the surplus from the first International Exhibition, and for placing the Memorial opposite the centre of the area occupied by the hall, but on the higher ground north of the Kensington-road. It was also decided that the Memorial should, "in an architectural sense, be in intelligible relation and connection with that estate, in itself a monument of the Prince's efforts for the promotion of science and art." The advising architects were next invited to furnish designs for the works they had recommended to be carried out. Messrs. Tite and Smirke having declined to do so, their places were supplied by the two sons of the architect of Westminster New Palace, Messrs. Charles and Edward M. Barry. The drawings were submitted to the Queen, and her Majesty gave preference to Mr. G. G. Scott's design for a Gothic or Eleanor Cross. The committee, who appear to have subsequently had the drawings submitted to them, also pronounced in favour of Mr. Scott's design, but strangely enough they do not give the reasons for their preference in the report which they have addressed to the Queen, but rather leave it to be inferred that their choice was influenced by the superior magnificence of the design, without regard to the question of cost. We are not disposed to quarrel with them for the choice they have made—although, perhaps, they are open to censure for not having stated at the outset that the amount of subscriptions was not to be taken as the limit of cost—for, with the exception of one, all the estimates exceeded the then available amount. Under these circumstances, and to admit of Mr. Scott's design being carried out, the committee recommended that the project for a Hall of Science should be abandoned, or temporarily relinquished. As in the case of the Obelisk, the scheme was too grandiose for realization; and the Queen, while regretting that the Hall and Memorial cannot be erected at the same time, trusts that the original project will be completed by the construction of a Hall as part of the buildings which are to stand on the estate of the first Exhibition Commissioners, whenever they are in a position to appropriate the ground to the purposes for which it was bought.

For the present we have to deal with Mr. Scott's design for the Memorial alone, and fortunately it is so complete in itself, that the abandonment of the Hall will not mar its beauty or diminish its effect. It is to consist of a Gothic Cross, adapted from the type known as the Eleanor's Cross, a designation which conveys a very imperfect idea of the plan and character of the structure. Upon a portion of the site of the great International Exhibition in Hyde Park will be constructed a pyramid of steps, 135 feet square at the base, in front of the estate purchased by the Commissioners of the '51 Exhibition. On the platform at top, seventy feet square, is to rise a square pedestal or podium to carry the statue of the Prince in the centre, beneath a canopy or shrine, supported by groups of four columns standing at each of the angles of the podium. Crowning the canopy and rising to 150 feet above the level of the ground is to be a spire of rich tabernacle-work in partially gilt and enamelled metal, terminating in a cross. At each of the angles of the base of the pyramid of steps is to be a large pedestal to receive a group of allegorical sculpture; and a similar but smaller pedestal at each of the angles of the podium will carry a group to illustrate some of the industrial arts, while the four sides of the podium are to contain bassi relievi representing groups of the most eminent sculptors, musicians, painters, and architects of all ages. In working out his ideas Mr. Scott set before him two chief purposes to be fulfilled. The first was to design an architectural structure to protect the statue of the Prince, and the second was to give to the structure the character of a shrine to indicate the *preciousness* of the object it protected. With this last object in view, he proposes to make the pillars that support the canopy of polished granite to fill in the tympana of the main arches of the shrine with mosaic pictures, to decorate the mouldings with carving, or inlaid mosaic work, enamel and polished gem-like stones, and to cover the roofs with scales of enamel and gilt metal. There can be no doubt that if the design be carried out according to these indications it will be rich beyond precedent, so far as regards the materials of which it is composed; but it becomes a question whether the idea of preciousness cannot be imparted to architecture by beauty of form, produced by the exercise of human skill, as well as by the quality of materials.

Hitherto the labours of polychromatists have not been crowned with any great success, except where colour has been very sparingly introduced, to warrant us to proceed far in this direction. Judging from the examples of the use of party-coloured building materials in London, the result is generally a spotty appearance, that cuts up the design instead of giving it point and emphasis; and where the main features are of a colour different from that of the body of the exterior, the effect is even worse. The character of repose is destroyed; there is an incongruity of parts instead of a harmonious ensemble, and the chief architectural effect, which should be the result of the play of light and shade, is missed. Moreover, admirable as may be this style of decoration for a shrine inside a temple or church, we are by no means sure that it will be found suitable for a large architectural work unsheltered from the weather. What is charming *en petit*, oftentimes becomes ugly *en grand*, and the ornament that suits an interior is out of character on the exterior. We trust that the error committed in the Houses of Parliament, of employing ornament which cannot be seen sufficiently well to be fully appreciated, will not be repeated. The means from which the cost of the work is to be defrayed are limited. The subscriptions, which "barely exceed £60,000," with the addition of the £50,000 voted, on the motion of Lord Palmerston, by the House of Commons last week, will hardly suffice to pay for the Memorial according to present estimates, and we all

Digitized by Google

know how much actual cost exceeds first estimates. In the case of Westminster Palace they have been increased threefold; and as the Commons evinced a strong disinclination to receive future applications, although their vote will be insufficient to pay for laying out the ground and preparing the approaches, it will be desirable, since Mr. Scott's design is to be modified according to the report of the Committee and the speech of Lord Palmerston, that the architect should sacrifice the quality of the materials rather than he should reduce the dimensions of the Memorial or diminish the amount and value of artistic labour bestowed upon it. People will infinitely prefer a moulding carved by an art-workman to one studded with crystals and cornelians. The qualities required for the materials are durability, agreeable colour, and fitness for working. Their cost is altogether beside the question. We look with apprehension on the proposal to employ bronze and other metals, in combination with stonework, on positions where they will be exposed to the weather. Our atmosphere is so foul that it speedily blackens bronze statues and works of art to such a degree as to greatly diminish the artistic effects of their design. The bassi-relievi in the base of Nelson's column are indistinct; and of the features of bronze statues in our streets and squares, it is hardly possible to form an idea; they afford no opportunity for the play of light and shade, being black all over. In other cities, where the atmosphere is not loaded with minute particles of unburnt coal, bronze oxidises on the surface without losing its metallic aspect, and the prominent parts remain brighter than the rest, instead of being coated uniformly with layers of blacks which effectually conceal the character of the material. For anything that appears to the contrary, the bronze statues of London might be of any material painted over with a dull, dark pigment. Nor is this all; the rain-water which falls from bronze on the stone-work inflicts upon the latter indelible stains which very much disfigure it, and all the more so if it be carved or wrought into ornamental designs. As regards the height of the structure, about which misstatements have been made, it is fixed by the committee at 148 feet, and by Mr. Scott at 150 feet. If the latter be adopted, the cross will be 80 feet less in height than the steeple of Bow Church, that is to say, the top of the spire will reach to about the centre of the columns in the peristyle that crowns the tower of the steeple. It will be 8 or 10 feet loftier than the tower of St. Luke's, Chelsea, and as the whole fabric of that church cost £20,000, while the Memorial is to cost £110,000, it will be seen how incorrect it is to speak of it as a mere Gothic cross, how considerably it must differ from this in style and character, and to what a great extent works of art and costly materials are to be combined with the architectural design. For a work so magnificent as Mr. Scott's promises to be, can a site be found which will admit of its being seen to greater advantage than the one selected? If so, there should be no hesitation in adopting it, for the Memorial is to bear witness to the nation's respect and admiration for the Prince's character as a whole, and not to commemorate his connection with the International Exhibition, as though that was the chief business of his life; whereas it was but one of the many services he rendered to society. In the Horticultural Gardens is Durham's memorial of the Exhibition, crowned with the Prince's statue, and distinctly identifying him with it. The Hall of Science, which is to contain a colossal marble statue of the Prince, will repeat the same idea, and if it be reiterated in the Memorial by the association of site, it will seem as though he never did but that one thing that is worthy of notice, or else it will betray that there is a singular poverty of artistic invention among us.

HALLS FOR WORKING MEN.

If it was truly said that the love of money is the root of all evil—that is, that there is no evil under the sun which may not follow when a greed after money holds possession of the mind—we are persuaded that a rival source of mischief is to be found in the love of drink. Beer-swilling is emphatically one of the curses which afflict these islands. There are, no doubt, other crimes which tend to degrade the mind of their victims and to affect their health. There are other evils which keep men from settling in homes of their own, and which tend to alienate their affections from home ties, when formed. But there is none which brings so much poverty, degradation, misery, and quarrelling into British homes as the love of drink. We should like to know what proportion of what are called "ragged homes," and how many of the poor wretches who are collected together in "ragged churches" and "ragged schools," are the direct victims of an excess of beer, or of an inordinate craving after gin. Ask any man who, either in town or country, has attempted to promote the moral welfare of any labouring population, what is his chief antagonist, and we suspect that, while he will not omit the other haunts of iniquity, he will place the public-houses in the very first rank. Happily, in the higher classes of society, the habits of drinking are very different from what they were. We no longer hear of Irish regiments in her Majesty's service, in whose mess-rooms the decanters and wine-glasses were so formed that they would not stand upon the table, but must be passed on from one man's hand to another's, and emptied at once of their contents. We no longer hear tales which living men, younger than the century, can tell, of being sent to school with a hamper of claret as regularly as our own sons carry with them the contents of the store cupboard. Nor do we now see, as men under fifty have seen in their boyish days, hospitable heads of houses produce a bottle of port wine for each individual at the table, youngsters included, as soon as the ladies had retired to the drawing-room. But it is to be feared that this improvement has not spread, to anything like the same extent, if to any extent, among the lower orders of society. Here habits of over-drinking still prevail to a most enormous amount. We allude not only to actual drunkenness and long drinking bouts, but to the vast quantities of intoxicating liquors which are consumed by diligent and painstaking mechanics, under the impression that they really require it. There are thousands of such men, who very rarely allow themselves to be overtaken with drunkenness, and who are considered good husbands and valuable servants, who yet imagine that they cannot get through their day's work without an amount of drink which nothing but long habit and a well-seasoned brain could enable them to consume without "being the worse" for it. We have been positively astounded to hear of the quantities of raw spirits, for example, consumed in the early morning, on the way to their before breakfast labour, by decent steady-going mechanics, who are hardly ever known to be really overcome by their liquor. If you question these men as to their reasons for persisting in so pernicious a habit, they will smile at your well-to-do ignorance of hard manual labour, and will simply declare that it would be as impossible to do a fair day's work without a large amount of stimulant, as it would be wrong to expect them to do it without a fair day's wage. It is essential, they will tell you, to their existence as day labourers; and no argument or medical assertions to the contrary will for one moment shake their belief.

If such habits prevail among the better sort of labourers, what is to be expected of the worse? Pernicious as this unnecessary stimulant may be in a physical, social, moral, and financial point of view, it sinks into absolute insignificance when compared with the habits of the more degraded and demoralized portions of the community. If these more respectable labourers declare that they drink that they may live, there are tens of thousands whose ways assert for them that they live that they may drink. In their case, not social or domestic happiness is the object of their labours, but drink. For this they rise early and toil beneath the mid-day sun. For this they half-starve their wives, leave their children in ignorance and nakedness, and strip their houses of every comfort. For this they sacrifice wholesome food, a decent coat, a happy home; to say nothing of character among their fellow-men and favour with Him who desires their welfare in all things.

We must not here enter into the facilities which are offered for indulgence in drinking habits by the licensing system which prevails in this country. We can but allude, in passing, to the disgraceful fact that, as a consequence of that system, in so-called Christian towns and villages, public-houses, beer-shops, and gin-palaces form a numerical proportion of the dwelling-houses within their bounds, immeasurably beyond the legitimate wants of the inhabitants. Any one who will take the trouble to count the houses in passing down the streets of any large town, and especially towns in which there are barracks or a seafaring or manufacturing population, will stand aghast at finding, in some neighbourhoods, that fifteen out of twenty of those houses are dens of iniquity, where, night after night, the mortal and immortal parts of our fellow-men may be, and are, ruined by strong drink. We are convinced that the country, with all its ineradicable love of liberty, will ere long demand a revision of the laws of licensing, and that magistrates will be compelled to exercise a more sound discretion in this important portion of their duties.

Our object, however, is not now to speak of legislative enactments. We have no faith, indeed, in any but such as would proportion the number of licenses to the legitimate wants of the people. We do not feel sure that even this would materially reduce the number of drunkards; but, at any rate, it would clear the national conscience of its present complicity in wrong. We are convinced, however, that no vice, and especially not the love

Digitized by Google

of drink, will be cured by act of parliament. We have no doubt, accordingly, that the bill lately introduced by Mr. Somes and Mr. Pease for closing the public houses on Sundays, will be rejected by the House of Commons. If there were no other objection to it, it has this fatal blemish,—that it seeks to legislate for the poor in a matter in which it would be impossible, even if the authors desired it, to legislate for the rich. An Englishman's love of fair play will never, surely, allow six hundred English gentlemen compulsorily to debar their less wealthy neighbours from that which they can themselves procure, in any quantities, from their own cellar or their club. This is a class lawmaking which would not be tolerated in any country, and in no country would it be tolerated so little as in our own.

While, however, we do not look to legislative enactments for a remedy to drunkenness, we believe that a vast deal more may be done by individuals, and especially by the employers of labour, than has hitherto been attempted. We believe that in what are called "Working Men's Halls," especially, we have a "platform," to borrow a phrase from our trans-Atlantic cousins, on which all parties might meet, and an engine of moral usefulness which, in our opinion, has not been surpassed by any effort for the amelioration of the poor. Halls for working men are just now cropping up here and there, both in country villages and towns. We have been at some pains to visit them in both; and we are glad to speak of all those of which we have read, and which we have personally inspected, not only as thoroughly sound in theory, but as eminently successful in result. They are purposely placed only indirectly under the management of the wealthier classes, the executive committee being chosen by the workpeople themselves. By the executive committee every rule is sanctioned, and every programme for amusement or mutual instruction digested, and, for the most part, carried out. The readers of the *Times* will have read with deep interest some letters from a working man at Scarborough, detailing the good results effected by a Working Men's Hall which is only six weeks old. We hope that this correspondent and others will forward to the daily papers their plain-spoken and homely details of working men's views of this important movement. We have ourselves visited within the last few days three admirably conducted establishments in the town of Southampton. Having had the advantage of inspecting them under the leadership of Sir George Pechell, the courteous and unwearied president of the system as carried out in that town, we were able to arrive at a clear idea of its advantages, and of the degree to which it is appreciated by the classes for whose benefit it has been established. Our space compels us to defer the details of the scheme to our next week's issue. We shall then hope to lay before the public an outline of a thoroughly manly and unsectarian, while benevolent and successful, effort to provide an antidote to the public-house. It will be seen that there is no attempt, in a sour and narrow spirit, to curtail the working man's enjoyments or to limit his amusements,—no endeavour to deprive him of congenial society or to destroy his sources of instruction,—but a well-digested scheme, under the working man's own management, for increasing his pleasures and shielding himself from vice.

HIGH MASS IN A VILLAGE CHURCH.

In reply a fortnight ago to the Bishop of Durham's letter, we pleaded that the periodical literature of this day is not hostile to the accepted religion of the country. Our daily and weekly contemporaries, while they leave it to the appointed ministers of Christianity to enforce its claims, are usually respectful and even friendly towards the various institutions in which its profession is embodied. But there is a notorious exception. There is a set of writers who habitually indulge a spirit of reckless mockery by the wanton derision of Evangelical preachers and congregations both within the Church Establishment and outside its pale. They are not content to proclaim, in their own words, "scepticism about the whole theory of religion that satisfies the Bishop of Durham and his friends." Sitting in the seat of the scornful, they will not tolerate the existence of "that peculiar form of Protestantism," which still commands the intelligent assent, as well as the hereditary affection, of a large majority of the English people. They will not allow the obnoxious Low Church clergymen or Dissenting ministers to continue unmolested the services and the teaching to which the great body of their hearers are accustomed. Several, indeed, of the most popular expounders of that doctrine, which obtains most widely among the middle classes, and which the poorer classes, so far as they are brought within the fold of religious communion, are most apt to receive, are bitterly assailed week after week, month after month, year after year, with such pertinacity and virulence, as can only be ascribed to an intolerant detestation of the Evangelical "theory" itself. It is, perhaps, quite in keeping with this, since Low Church and High Church are the opposite poles of the ecclesiastical world in this country, that the same journal should indirectly favour that party which, under fashionable and aristocratic patronage, contends for the sacramental or sacerdotal "theory," which is shortly called the Tractarian. We have indeed remarked that, while this self-appointed censor of religious vagaries and extravagances makes so free with the sermons, hymns, and prayers in vogue among Evangelical Christians, it sedulously refrains from exposing the practices of a minority of the Anglican clergy, who, by the introduction of a fantastic ritualism, and by their pretensions to priestly power, labour insidiously to bring the National Church into conformity with the Romish system. Now, we are certainly not about to follow the bad example of treating with levity and ridicule any observances which, though scandalously improper in the services of our Protestant Church as by law established, are regarded with veneration by many of our fellow-citizens, and deemed by them symbolical of the ideas of Christian worship. But we would seriously invite attention to a very strange instance of the Romanising tricks which are played with impunity in some of our parish churches, especially in rural districts, to the extreme perplexity and distress of the people.

In the village of Claydon, four miles from Ipswich, as we learn from the *Suffolk Chronicle*, the Rev. George Drury, incumbent of the parish church, performed the morning service on Easter Sunday in a very extraordinary style. The officiating clergyman was aided by a couple of mysterious strangers, attired in long woollen gowns, whom the people of the village, awe-struck by this unwonted apparition, conceived to be "monks;" but one of them, bearing the "religious" name of "Father Ignatius," was an eccentric clergyman of the English Church whom we remember to have heard of before. There was also a procession of boys, dressed in "white surplices, with scarlet underskirts hanging down to their feet, and small black velvet skull-caps on their heads." These marched in from the adjoining rectory, at eleven o'clock, bearing a number of large wax candles, which were lighted at the church door; but one boy carried "a long brass standard, tipped with a crucifix, on which was exhibited the body of Christ," and some other boys had small coloured banners, with the head of the Saviour painted on them. The two "monks," chanting Hallelujah as they walked along, directed this curious parade, while the Rev. Mr. Drury, wearing a garment described as "a chasuble, with embroidered stripes," and a small four-cornered hat, which he took off when he reached the altar, brought up the rear. The church itself had been decorated for this occasion with more than a dozen pictures of Christ bearing the cross, and similar subjects, which were hung upon the walls. Besides these, several banners and shields were suspended from various parts of the interior; and some crosses, flowers, and lighted candles were arrayed upon a ledge in the recess of the east window, on a line with the top of the communion-table and behind it, so as to appear as if these things were actually placed upon the communion-table or "altar," as it is sometimes called. The altar and the pulpit were adorned with evergreens and with artificial flowers of paper. If all this frippery had been designed merely for the ornamentation of the building, it might not have caused any serious alarm, but we are told that on Good Friday evening, when the pictures were hung up, Mr. Drury went round, and knelt in turn before each picture, whilst an attendant held a cross over his head, and the children, who followed in his train, were bidden to kneel in the aisle behind him. It is no wonder, therefore, that the honest farmers of Claydon parish, in mortal dread of Popery, kept their families away from church on the Sunday morning. The congregation, indeed, when the morning service commenced at ten o'clock, consisted but of two boys, a young lady, and two gentlemen from Ipswich, besides "a young man wrapped up in what looked very much like a white sheet," who sat in a pew by himself. A few of those poor creatures, to be found in every rural parish, who may be engaged, by a dole of alms, to figure as supernumeraries on any such occasion, were presently got together; and some other visitors, perhaps from motives of curiosity, looked in as the service progressed. The informant of the *Suffolk Chronicle*, who was there early, when he saw the big wax-candles lighted, and a youth in a black gown and a short surplice entering with a censer in his hand, naturally enough turned to the person next him, a young countryman, and asked him if this was an ordinary part of the service. "No," said the villager; "something fresh to-day." "Do you come to church on Sundays?" was the next inquiry. "Yes." "Then, can you tell me what those

Digitized by Google

candles mean?" With a broad grin, the young fellow replied, "*That's thar religion*" (meaning the religion of his parish clergyman and of those who assisted him in this performance). "Do these poor folks"—pointing to the half-dozen of helpless old people just mentioned—"know what all these things mean?" "'Tan't much likely," the rustic answered. "What do they come for?" "I don't know." "What do you come for?" "Only just to look at 'em." This conversation was interrupted by the entrance of the procession which we have described. Having passed solemnly up the nave to the chancel, the boys, with their lighted candles, were ranged at the foot of the altar-steps and on either side; Mr. Drury then read the communion service, and one of his clerical assistants read the epistle and gospel. A boy held a candle on each side of the prayer-book, while a third boy held aloft something which the reporter believes to have been a crucifix. The liturgy was followed by the sermon, of which we read this specimen; and we will not here comment upon the doctrine implied in it:—

"In the course of his sermon he took the opportunity of saying there was one thing he must mention as a warning to persons who had been to communion for the first time that morning; it was a most painful thing for him to have to tell them of. The blessed step of the altar was sprinkled about with the sacrament—little pieces of the sacrament had been dropped about on the steps, and there were some on the altar still, which the people had dropped that morning. How was it they dropped it?—that they dropped about that of which Jesus had said, 'This is my body?' It was because they did not receive it in a proper way. It should be received in the palm of the hand, for if the finger and thumb were used, little pieces would be dropped; and *fancy dropping that which the catechism told them was verily and indeed the body and the blood of Christ!* The clergy had had to pick up the pieces that were dropped by the people, and it had caused a great deal *of perturbation, and agony, and trouble of the mind to the clergy, to see the solemn bread of everlasting life dropped about!*"

After this sermon, the offertory collection was made "in a small scarlet bag," with the reading of the prescribed sentences; and the sacrament was then administered, with the unusual accompaniments of twenty candles burning upon or around the altar steps, and a boy swinging a censer full of burning incense, the fumes of which partly veiled with a mystic haze the imposing gesticulations of the priest. Something was done in front of the altar with the bread and wine, or the cup and wafer, or whatever it was; but this was not distinctly visible to the congregation. At the close of the service Mr. Drury and his assistants, in the same procession as before, returned to the rectory, chanting all the way. In the evening, as had been announced by a notice fixed upon the church door, there were "solemn vespers and sermon, with procession." A large number of the good people of Ipswich and its neighbourhood, attracted by the fame of these novelties, went to the evening service. If they were disappointed by a scantier display of ecclesiastical pomp and ceremony than they might have witnessed in the morning, they had some compensation; for we are assured by the reporter of the *Suffolk Chronicle*, that the sermon in the evening "savoured somewhat of common sense, and the preacher did talk plainly to the people about sin." Let us hope that it did them more good than the rest. But what shall be said of the fantastic mimicry of a Popish ritual, with which Mr. Drury and his friends had frightened his parishioners away from church that Sunday morning! Surely the exposure and correction of these abuses is a matter of general public concern. The Church of England is still a Protestant, and we trust, a popular institution. Its integrity should be guarded with equal vigilance against the denial of its creed by clerical aceptics, and against the corruption of its forms of worship by Romanizing priests, who still more inexcusably betray the trust confided to them.

SEEKING A MURDERER.

No man, we suppose, who could help it, would walk through the streets of London, just now, with weak eyes, a moustache, and a little beard of a light complexion; especially if he happened to be a stout man of middling stature, and to wear a hat of that singular make which leads people to doubt whether it is a hat or a cap. No one who has a dread of that kind of notoriety which the police reports confer, would care to make himself conspicuous in a country town, or even a village, if these were the features of his personal appearance. Yet nature and habit must have made a large number of men who are walking about town and country every day, with these very weak eyes, this doubtful hat, and this middling stature; and since the momentous question, "Why shave?" was met by the very common response, "I don't shave," a light beard and moustache have been placed under all sorts of eyes, and hats, and on bodies of all sizes. And all these people are daily pursuing their work or pleasure, happily unthinking that the night may bring any one of them into a police-station, and into a cell of durance vile, and that in the morning their names may form sensation titles on the penny newspaper placards, and that the report of their examination before the magistrates may fill half a column of the newspaper, under the popular heading of "murder!"

These lines may be read by some quiet, nervous gentlemen, who will feel that such a description, in large type, accompanied by the offer of a reward of one hundred pounds for the apprehension and conviction of the person answering to it, might place their own liberty in jeopardy. For such, we fear, there is little consolation, though the usual number of "courses" are open. The first, and most satisfactory course, if it be practicable, is to find out where you were the whole of the day on Thursday, the 9th of April, and to get together as many respectable people as you can who are able to speak to your whereabouts on that day. It would be desirable, if an opportunity were allowed by the present state of our criminal laws, then to go with your witnesses to the nearest police court, to prove your *alibi* to the magistrate, and endeavour to get from him a certificate of "Not guilty," which might be shown to any policeman who should tap you on the shoulder, or to any of the numerous tribe of informers who, being in want of a hundred pounds, might seek, in these days, to cultivate your acquaintance. In such a case, even if the magistrate should decline, as he probably might, to record the evidence in exculpation of a person not formally given in charge, you will have made some acquaintance among the police force which may avail you on a future emergency. The next course is to wait until you are fairly apprehended, and placed in the dock on the agreeable charge of having murdered a woman whom you never saw; and this course may, perhaps, in its results, lead to nearly the same conclusion as the first, while it may afford you a good deal of gentle excitement. You will certainly get your name printed in the newspapers; you will hear what your wife and daughters think of your situation; and your neighbours will be sure to stare after you every time you go out of doors, and to wonder how long you have had weak eyes, and who is your hatter, and whether you ever played at pitch-and-toss before you committed murder and were discharged for the want of evidence. The third course—undoubtedly the worst of the three—is, unfortunately, the most likely to suggest itself to those whose weak eyes are accompanied by a deficiency of moral courage. Let no man say, "I will hide my weak eyes beneath green spectacles; I will cut off my beard and moustache, or dye them; I will wear six under-waistcoats to increase my bulk, or take three Turkish baths a-day to reduce it." Let no man say these things, or attempt to do either of them; for though the police are on the look-out for the individual such as is described, they are still more sharply on the look-out for him with the changes which he may since have made in himself. Weak eyes, with any of the other features described, might create suspicion; but eyes behind a pair of green spectacles might suffice for the wearer's detention at once. Weak eyes and a small, light beard, might simply involve your apprehension and a week's remand; but weak eyes, and a chin from which a light beard had just been cut, might induce your apprehension and committal for trial. Why shave, then? Why shave, indeed! These, however, are the three courses which an innocent man, unwilling to fly his country for the sake of escaping arrest as the St. Giles's murderer, might, under the circumstances, be inclined to pursue.

The apprehension of some half-a-dozen honest men, on suspicion of having murdered the unfortunate woman Emma Jackson, in George-street, St. Giles's, suggests these remarks. In nearly every case there seems to have been no reason whatever, except their exhibiting a not uncommon type of visage, for the apprehension of the persons taken; and as the actual murderer has not yet been apprehended, and the police seem determined to apprehend him, or somebody for him, two or three times a week, it becomes necessary to ask, in the interest of men with weak eyes and small light beards, which so frequently go together, how far the town and country police are, "from information they have received," to proceed in this direction. It is no pleasant matter to be accused of murder, even though you should be released in the next minute, and should escape the polite attentions of the penny-a-liner; but to be the subject of a disagreeable sensation paragraph in the newspapers, merely because nature has blessed you with a light beard, and cursed you with eyes with which you cannot see very well, is a serious calamity indeed. It must be admitted that, in the case of two of the men who were thus apprehended, one was only a German sugar-baker, or something of that kind, and that the other had been to Cork to hang a man, and had spent all his wages by the time he got to Newport on the return journey. But

Digitized by Google

what would the world have said if a popular preacher, or a mayor, or a beadle, or Mr. Calcraft himself, had been locked up on this charge? If the killing of a bishop on a railway is at all calculated to prevent railway accidents, the best chance that the light-bearded, weak-eyed men have of saving themselves from annoyance, is that one of the "upper ten thousand," an M.P. or a peer, may be locked up for an hour as the murderer of Emma Jackson.

The assassination of this unhappy woman was one of the foulest crimes ever committed, and the confusion of the police on the subject is a matter for grave regret. Everybody would like to see the murderer brought to justice, and nothing should be allowed to interfere with any reasonable and likely endeavour to bring him to justice. But this wholesale and ill-advised apprehension of innocent people is about the best thing that could have been devised to further his escape. If there were a fair chance of tracing the crime home to him, every time the criminal was supposed to have been arrested, his opportunities of wiping out the traces of his crime would, in the midst of the consequent excitement, be increased. We fear the prospect is, that the chances of his detection are now very remote; and these sensation captures are very likely to induce people who have seen so many false Simons to forget that there is a real Simon somewhere, and that he ought to be discovered. If this were merely an isolated case, we should not have thought it worth our while to notice it at all. The clue that the police have to the murderer of Emma Jackson is of the slightest kind, and there is just a possibility that they might actually blunder into the detection of him. The exhaustive process, however, of trying all the weak-eyed, light-bearded men in existence, and rejecting them one after another as they are proved not to be the man who is "wanted," is wearisome, and very uncertain. It has failed so often that it might be modified, if not abandoned. Given a murder, out of which the criminal escapes without leaving tracks behind him, the first thing to be done is to learn something positive about somebody who ought to be suspected. Then a description of him must be had, and perhaps it is supplied by a little boy, who saw a dark man in a black coat in a passage, and a young woman who saw a dark man in a brown coat in the street. The coroner holds his inquest, examines witnesses who can tell him nothing excepting what the jury have before read in the morning paper, and adjourns the inquiry for a week, that he may examine those witnesses who are already waiting to give important evidence, so as to give them an opportunity of forgetting a good deal of it by the week's end. In the mean time, that useful body of gentlemen who get up the murders for the newspapers have been hard at work, and every policeman in London has got the "description" off by heart. One intelligent officer has apprehended a discharged cabman in Shadwell, another has taken an Irish "jintleman" into custody in the Borough; while the chief constable of a town in Worcestershire has drawn the eyes of Europe upon him for a day, by apprehending a rascal who was never out of the county in his life, but who, at the time of capture, had not got the wherewithal to pay his lodgings, and therefore was naturally apprehended on suspicion of being the greatest criminal in England, who happened to be "wanted" at that particular time. Eventually, perhaps, some quiet detective, who has brains enough to take a line of his own, independent of the coroner, the newspapers, the boy, the young woman, or the "description," unearths the fox, and settles the business. The work, to be sure, is difficult and unpleasant in all cases. But is the best plan of dealing with it generally adopted? If a murderer is at large, it is clearly the duty of the guardians of the peace to secure him, if they can; but in a doubtful case like the present, the police can hardly help suspecting a number of persons whom they see in the course of a week. The question is whether their work is done skilfully or hap-hazard; whether, for instance, the innocence of all these men, who have been seized as the murderers of Emma Jackson, might not have been established without a word in the newspapers, or even without the suspected parties themselves being aware that they had ever been suspected? A paragraph in the newspapers, each day for a fortnight, to show that a policeman, having his eyes too wide open, has arrested the wrong man for a capital crime, is readable sensation news, but it neither advances the prestige of the public force, nor gives the lieges a sense of perfect security. Neither is it encouraging to read the report of a coroner's inquest in a case of murder, and to see that the most important questions absolutely suggested by the statements of the witnesses are yet not put to them. Have the anomalous relations between the police magistrate's court and the coroner's court anything to do with the slow march which justice so frequently makes, even in the discovery of clear and simple cases of crime? When a person, reasonably suspected of murder or manslaughter, has been taken into custody, the *onus* of proving his guilt rests almost entirely with the police, as does the duty of apprehending him. But at a coroner's inquest they have no *locus standi*, and few means of even putting a question, however material. In a case like the present they must depend, in a great measure, on the witnesses examined before the coroner; and they may be led in search of an old man or a woman, while a young man is the offender, or *vice versâ*. An experienced barrister or a magistrate might have elicited evidence at the inquest on Emma Jackson, which would have considerably cleared the atmosphere of doubt, and given the police a clue that they might have followed with reason, and with some advantageous results. But the coroner is one power, and the magistrate is another, and in the absence of a better system, the police may go on apprehending the men with light beards and weak eyes till they are tired of the profitless work; or till every man who answers that description has been arrested and discharged in his turn.

LEICESTER SQUARE.

Some evil fate seems for a long time time past to have loured upon Leicester Square. It was not always so. The time has been when this despised and doubtful locality was a residence for the sons of our kings; for Leicester House, at the north-east corner of the square, belonged to George, Prince of Wales, afterwards George II., and subsequently to his son Frederick, the father of George III. The dwelling was already famous in London annals. It had been originally built by the father of Algernon Sydney. The unfortunate Queen of Bohemia lived and died within its walls. Colbert, Minister to Louis XIV., resided in that princely mansion when he was in England on an embassy to the court of Charles II.; Prince Eugene was there in 1712; and the sanguinary Duke of Cumberland was born there in 1721. For many years, indeed, Leicester-square was one of the most fashionable spots in town. Then it became the resort of middle-class gentlemen—of philosophers and artists. Sir Isaac Newton dwelt in one of the streets turning off from the south side; at a later period, Hogarth occupied a house in the square itself; and, later still, Sir Joshua Reynolds was the tenant of another. John Hunter, the great surgeon, was also an inhabitant of the square, and formed there, at his own abode, the celebrated Hunterian Museum of Anatomy. It would be difficult to put one's finger on any part of the map of London more haunted by memories of great men. For nearly a century and a half, this dingy place, as it now is, was familiar with the patriots, the statesmen, the generals, the artists, the poets, the wits, and the philosophers, who have made England famous. Fashion, however, is capricious, and never abides very long in one locality. Like the sun, she moves westward; and in process of time Leicester-square fell from one degree to another, till in our own days it has acquired a reputation for incurable shabbiness, and for amusements of a questionable character. It is now the centre of a colony of emigrants, many of whom, doubtless, are men to be pitied and respected, while some are hardly desirable as an addition to our permanent population. Lowering and greasy-looking foreigners hang about its purlieus; and in April, 1856, an Italian made a murderous attack on four of his countrymen in the neighbouring thoroughfare of Rupert-street, and got clear off, brandishing his stiletto in the faces of the passers-by. In the square itself, disreputable betting men congregate in groups on the pavement, making fraudulent memoranda in their rascally little books. At night, the seething flood of proffigacy in the adjacent Coventry-street and Haymarket overflows its bounds, and breaks upon the shores of the open space, a scattered spray of vice. In a court not far off, Lani, in 1858, killed his nocturnal companion, as, the other day, "some person or persons unknown" killed Emma Jackson in that St. Giles's den. Where Leicester House and Saville House once received the magnates of the land, wine-cellars and billiard-rooms and "Halls of Amusement" now collect a motley crowd of pleasure-seekers, not over-nice as to the pleasure which they find. In short, Leicester-square is very generally voted a nuisance, and, like other nuisances, it seems to defy reform.

It cannot be said that no attempt was ever made at reform. A great deal has been done within the last twenty years for this frowsy and thriftless domain. First of all, the narrow and mazy courts to the east of its northern boundary were cleared away, and the broad line of Cranbourn-street now connects the square with Long-acre and Lincoln's Inn-fields. Recently, the new thoroughfare from King-street, Covent-garden, has given freer and more direct access to the neighbourhood of the Strand. In 1851, great things were promised as the result of the erection of Mr. Wyld's Globe. We were told that a handsome building, dedicated to science, was to rise in the centre of that dismal waste made ghastly by a hideous statue of George II.,

Digitized by Google

and that lectures on physical geography were to be delivered where the living cats wrangled and the dead cats rotted in thickets of decaying bushes. The edifice was constructed, and it proved to be anything but handsome. However interesting its contents, and however instructive the discourses uttered within that hollow orb, the speculation failed to restore the damaged character of Leicester-square. For ten years or so, the ghastly statue, shut up between the walls of the Great Globe, disappeared from the eyes of the outer public, and ceased to vex the tenants of the surrounding houses. The cats, living and dead, were dispossessed of their old heritage; the grimy and withered vegetation no longer held sway over the miscellaneous deposit of old hats, old shoes, and battered saucepans, which constantly accumulated within the enclosure; and the rusty iron railings vanished into the marine stores for which they had long been qualifying themselves. But, somehow, respectability would not come back to Leicester-square. The external appearance of the spot was certainly a little improved, though Mr. Wyld's architecture was none of the handsomest; but the place did not go up in public estimation. Now that the Great Globe has dissolved (as Shakespeare long ago told us it would), desolation once more reigns around the equestrian statue, and the cats have it all to themselves.

A project has lately been set on foot for making a meat and vegetable market in what is called, by courtesy, the garden of Leicester-square. The space appears to be rather small for such a purpose; but that is a consideration for the projectors. Whether it be desirable to have a market there at all, is a consideration for the inhabitants; and they are strongly agitating against it. Since the removal of the Globe they have made some advances towards reclaiming the desert on which it stood, and they do not wish to be deprived of an open space which will at any rate give them air, and which they hope in time to bring into something like cultivation. If we could join in that hope, we should be equally disinclined to see the ground occupied by a market; but there seems to be little probability of any such result. Trees will not flourish in such a neighbourhood; even grass sickens and pines; flowers, except of the dullest and poorest sort, are out of the question. The state of Leicester-square, for many years previous to 1851, was not of a kind to encourage much faith in its future. Whether from the utter inability of the soil and air to grow anything worth looking at—even so much as respectable iron railings—or whether from recklessness on the part of the inhabitants, the enclosure was a disgrace to the metropolis. Wits levelled their shafts at it, but with no effect. It went on from year to year, getting worse and worse. Even Mr. Wyld's ugly brick and mortar edifice was an improvement. So would a handsome market be, though the business it brings with it might perhaps be an obstruction in such a thoroughfare. The great objection, however, is on grounds of health and ventilation; but it should be recollected that markets are built now on much better sanitary principles than formerly; and, as the buildings need not be high, there might still be a good current of air overhead, as there is in Covent Garden. The inhabitants, nevertheless, held a meeting, under the chairmanship of Sir De Lacy Evans, and raised a fund for opposing the bill, which, fortunately for them, was rejected this week by the Committee of the House of Commons. By an arrangement made in 1788, the holders of the ground forming the garden were bound to keep it as an open space for trees and shrubs; and in 1848 the Court of Chancery granted an injunction restraining the parties from erecting any building there. The prohibition, however, was got over only three years later; and so it may be again. We see no serious objection to a market on the site; but it is doubtful whether such a thing is required. The inhabitants may not unreasonably question whether a market would confer on them any advantage which they have not at present. The original object of retail provision markets was to give the purchaser a greater choice, at lower prices, than he could find in shops scattered about over a wide extent of ground. They may have answered that purpose in old times, and may do so even at the present day in small country towns. Our ancestors undoubtedly found them economical; for the very word "cheap" comes from the Anglo-Saxon synonym for market. But the rule no longer holds good. Housewives tell you that markets are *not* cheap; nor are they for the most part (we mean in London) paying speculations. Even as long ago as the latter part of the seventeenth century, the mart built by some adventurous spirits at Hungerford-stairs proved a failure; and, although it prolonged its existence until last year, it never throve. The fact is, that retail markets in large towns are the children of barbarism; they belong to the old days of monopoly, of artificial restraints on trade, and of the arbitrary confining of particular pursuits within particular localities. They do not suit the more unrestrained and open habits

Lutheran Church. The baptism was performed in German by t
Rev. Mr. Bender, court chaplain to the grand-ducal family
Hesse, who came from Darmstadt specially to officiate. The spo
sors present were her Majesty the Queen, his Grand-Ducal Hig
ness Prince Alexander of Hesse (representing the Grand-Duke
Hesse), her Royal Highness the Princess Mary of Cambridg
his Royal Highness the Prince of Wales, and his Grand-Duc
Highness Prince Henry of Hesse. The infant was named by t
Queen, who held the child at the font, "Victoria Alberta Eliz
beth Matilda Mary."

On Tuesday their Royal Highnesses the Prince and Princess
Wales paid their first state visit to the theatre, the Royal Italia
Opera, Covent Garden. The performances were given "by co
mand of her Majesty."

The alarming increase of small-pox has called forth co
munications upon the subject from several medical men, some
them medical inspectors of their districts. One of the most effecti
causes of the disease appears to be the omission on the part
poor parents to have their children vaccinated. There is, indee
a compulsory Act of Parliament on the subject; but it is qui
clear that it is inefficient. The registrar is bound to give notice
the person registering a child's birth that it must be vaccinate
and a penalty is incurred by the parents if they neglect to ha
the operation performed within a certain time. But the Act pr
vides no machinery to test that it has been performed; and tho
who have the best means of knowing testify that in very ma
cases it is not. There is no law to compel adults to undergo t
operation a second time. But the law of self-preservation shou
be sufficient.

The *Daily News* of Wednesday published a letter and a pr
gramme, forwarded to the editor by a correspondent, the lett
announcing a joint adventure, in which there are a few shares le
to run the American blockade, and the programme setting fort
the advantages to be gained by those who take part in it. Th
letter is dated November 26, 1862, and states that the vessel h
just sailed. It is signed "W. J. Grazebrook, per J. L," and t
programme bears the impression of an office stamp: "W.
Grazebrook, Liverpool." Now another letter, signed "W.
Grazebrook, Liverpool," was published, a few days ago, addresse
to Earl Russell, and representing that the steamer *Dolphin*,
which the writer was the owner, had been seized by Feder
cruisers while on her "legitimate voyage to Nassau," an
claiming the protection of the British Government, with fu
compensation for the injury done to Mr. Grazebrook's trad
and for the insult to his captain and crew. The *Daily News* stat
that the friends of one of the crew of the *Dolphin* have received
letter from him, dated March 3rd, stating that he had joined h
for the purpose of running the blockade. The inference is, that t
Dolphin was not on a "legitimate voyage to Nassau." And if thi
prove to be the fact, the Government will be relieved from
serious difficulty with regard to this vessel, while Mr. Graz
brook will be involved in serious disgrace. It would be ver
unfair, however, to form any opinion upon this evidence, unt
authenticity has been proved.

The reverse sustained by the Federal iron-clads at Charlesto
proves to have been much more serious than was at first suppose
Out of the whole number, nine, one, the *Keokuk*, was sunk; tw
had their turret bent, and two others were more or less disable
This action settles the question between forts and ships, as far
America is concerned. The Washington Government has receive
Admiral Dupont's report, but withholds it at present, on the groun
that it "does not consider it sufficiently explicit;" from which w
may conclude that it is only too much so. But the correspondent
of the New York journals concur in representing the defeat as signa
The correspondent of the *New York Times* is loud in condemnatio
of the Government, in sending Admiral Dupont with such a force
meet a concentrated fire from groups of batteries which woul
have surrounded him in his whole passage from the mouth of t
harbour up to Charleston. He says that the place is impre
nable, and that Sebastopol was nothing to it. "Our fleet,"
writes, "got but to the entrance of the harbour; it never g
within it. Had the iron-clads succeeded in passing the obstru
tions (lines of piles driven into the bed of the harbour across t
channels), they would still have found three miles of batteries
run. Not a point at which they would not have found themselv
'mid upper, nether, and surrounding fires.'"

The Washington Government, thus unable to fulfil the promise
success with which it cheered the North some weeks ago, has,
would appear, given the word to the ministerial journals to abu
England, and England, accordingly, is very cordially abused a
threatened with hostilities. The correspondent of the *World*
peats the semi-official rumour which we mentioned in our last, th
Mr. Seward has sent a despatch to Mr. Adams, submitting to t
English Government the alternative of preventing vessels alleg
to be building in England for the Confederate service from leavi
port, or the rupture of diplomatic relations between the tw
countries. With the exception of the *World*, the New Yo
journals make this rumour the cue for assuming a belligere
tone towards England. The *Herald* calls for an extra sessi
of Congress, to consider what measures ought to be adopt
in case of a collision with England. The *Times* says it
"physically certain" that America will exact atonement for Briti

Digitized by Google

pass it over, and recognize the election of Prince William. The *Moniteur* says that the English Government has proposed a conference of the three protecting Powers, to be held in London.

In the House of Lords on Thursday, Earl Russell stated that he had learnt, by a despatch from Lord Lyons, received that day, that the United States Government had determined to send the *Peterhoff* before a Prize Court, and to forward the mail-bags to their destination. Mr. Seward has informed her Majesty's Government that in future any mail-bags seized will be forwarded to their destination without breaking their seals.

The Prussian police have paid a domiciliatory visit in the province of Posen at the palace of Count Dzialinski, a member of the Prussian Chamber of Deputies, and have, it is said, discovered there the entire plan of an intended revolutionary organization in the province. The count has joined the insurgent camp in the palatinate of Kalisch.

The French Government has received despatches from General Forey confirming the investment of Puebla by the French forces. The French head-quarters are established on the Cerro San Juan. The town is completely invested. The convents have been fortified, and earthworks are erected in the open country. The garrison is estimated to number 18,000 men. The telegraph line between Puebla and Mexico has been destroyed. The whole population round Puebla is favourable, says the telegram, to the French intervention. "The sanitary condition of the French troops is excellent, and the army is full of ardour. The official report says, in conclusion, 'We have cut the aqueduct, and command all the roads.'"

Brookfield House, Binstead, near Ryde, the marine seat of Lord Burghley, has been destroyed by fire. The furniture and effects were saved, and no lives were lost.

ART AND SCIENCE.

SALE OF THE BICKNELL COLLECTION.

A TRIBUTE, eminently English, has been paid to the genius of Turner. His presence in the market-place has changed it for the time into a temple of art and a hall of fame; but no doubt every picture, even the "Madonna di San Sisto," the "Spasimo," or any other masterpiece of Raphael, has a price. Immortal works of genius are not priceless, as Marshal Soult discovered when he accepted the £26,000 for the "Concezione Immacolata" of Murillo. Probably, if the Correggio Magdalen of the Dresden Gallery were offered for sale at Messrs. Christie & Manson's, it would realize as many thousands as Earl Dudley, in the flush of his younger enthusiasm, gave Prince Odescalchi for his reputed replica of that famous picture. Now, the *connoisseurs* have been talking for the last fortnight of the thousands that the "Palestrina" alone, one of Turner's latest and larger pictures, illustrating his own poem of "The Fallacies of Hope," would fetch. When it came to the last wave of Mr. Manson's *bâton*, the "Palestrina" hung in doubt for a moment at 1,890 guineas, the next it fell at 1,900 guineas. If Turner could have known this, it must have given him a twinge, because all his later pictures were pet fancies of his heart, emanating from the same source as his "Fallacies of Hope," as any one will remember who saw the catalogues of the Academy in those days. It was a work much in the vein of his "Childe Harold," but more vague, and not quite so artistic; yet it has fine passages, and a glorious air of poetic landscape feeling pervades it, free from any of his prismatic fancies. An avenue of trees leads away on one side of a foreground rich and varied with herbage, rock and water, with a bridge, and still, clear, deep pool running over the rocks, and becoming a torrent as it rushes to the valley far away. The hill, with its famed city clinging to its sides and shining in the sun, is also finely painted. The sky is, for Turner, rather crude, and not so luminous as his skies generally are. This picture was hung in the sale-room as a centre, and immediately beneath it was placed the "Ehrenbreitstein," on each side of which ranged out the four splendid sea-pieces, flanked by the two early pictures, painted 1813–14, somewhat in the manner of Wilson; now changed to a mournful brown, like faded laurel wreaths gained by the first triumphs of some young poet—the "Ivy Bridge, Devon," and "Calder Bridge, Cumberland," and they were purchased as relics for 880 guineas and 500 guineas respectively. The "Ehrenbreitstein" was the picture often appealed to by Mr. Ruskin for its beauties, when he cried like a voice in the wilderness about the advent of Turner's glory. The idea of this picture was suggested, perhaps, by Byron's allusion to the spot in "Childe Harold," and Turner has painted it in the tomb of General Marceau. It is extremely grand and noble in the idea of the glorious sun shining upon the tomb of a hero, while the pale moon looks on, in the clear, calm blue of the heavens above the hills, like the face mournful at the fate of heroes. There is a wonderful delicacy and brilliancy of colouring in the opaline tints spread over the hills and blending tenderly with the blue mist that hangs over the town in the distance, and again harmonizing with the broad sweep of afternoon sunlight that strikes through the trees and lights up the groups of figures and soldiers at the tomb of the soldier. This fine work was sold to Mr. Agnew, the dealer, for £1,890. It was painted in 1835, and measured 3 feet by 4.

The "Antwerp," with Van Gozen, the Dutch sea-painter, supposed to be looking out for a subject in the fishing-boat tossing about nearest to the shore, ture. The light bea cathedral and churcl of pearls. The free and the buoyancy extraordinary life ar the others, was purcl size, 36 by 48 inches bid for this was 1,00 was eventually knocl

and the public are never distant more than five minutes from any office for the reception of messages. As the area becomes more extended these stations are more scattered; but along all the great lines of road telegraphic stations are sure to be found within a mile of each other. At the present moment there are upwards of eighty stations in the metropolis and its environs belonging to this company, all of which are in direct communication with the head office in Cannon-street; indeed, all the lines must, by present arrangements, speak through this centre, just as all nervous impressions must be conveyed through the brain. This is by no means a necessity of the system, but only a condition of progressive development, which will be altered as the public call for more accommodation, and they are doing so every day. Before long, district centres for collecting and re-distributing messages will be adopted, as they have been by the Post-office authorities. Meanwhile, the delay caused by the circuitous routes taken by the wires is not very great. We wish particularly to call attention to the question of time in the forwarding of messages by this company, as many persons are under the impression that a *commissionnaire* can do his "spiriting" quicker, in consequence of the delays in transmitting a message and its porterage. We may say that in no case, except by culpable neglect, should a telegraphic message take more than half an hour in reaching its ultimate telegraphic destination, a delay, sometimes unavoidable, in consequence of the wires being already engaged; but all delays consequent upon the little boy who generally acts as Mercury being out or engaged when the message arrives at the suburban or other stations, are inexcusable, as by a rule of the company the office-keeper, who is generally either a proprietor of a district post-office or a small tradesman, is empowered, after ten minutes' delay, to call in an extra messenger, of which there are always plenty hanging about. If, then, any person should experience any extraordinary delay in receiving a message, he should, as a matter of duty, complain to the secretary in Cannon-street, for it is only by so doing that the sound working of the system can be insured. We have been very slow in adopting the new system, but the public are beginning rapidly to see the value of the wire in intra-metropolitan communications. For instance, the messages have increased from 73,480 received in 1860, to 251,548 received in 1862; and the trading community, as well as individuals for domestic and social purposes, are beginning to use it. For instance, Mr. Chubb notifies, through public advertisements, that in case any person should have left the key of his safe or desk at home, by telegraphing to him, he will send a duplicate to any address. Tradesmen, again, inform their customers, that they may give their orders free of charge by means of the telegraph. In order to foster this branch of business, messages at the rate of one hundred for twenty shillings are now issued. As the head office in Cannon-street (city) is in communication with all the electric lines both land and submarine, these district offices may be considered as not only for the use of the metropolis, but as gathering points for the country and continental telegraphs. The London District Telegraph Company have been laying out private wires for the use of individuals requiring to telegraph between their own establishments, but this is a line of business in which they cannot compete, we think, successfully, with the Universal Private Telegraph Company, for reasons which we shall explain.

The Universal Private Telegraph Company make no outward sign like the District Company; indeed, they have no points of contact with the crowds who pass along the streets. The company simply undertakes to put the merchant's country-house in direct communication with his office, houses of business with their branches, public offices with public offices; in fact, its mission is to supply renters with so many miles of *private wire* to run between house and house at a given price, and to provide telegraphic apparatus which can be worked by persons in the office, or counter, or drawing-room, as the case may be. Of course, it would be impossible profitably to provide a separate wire with its appropriate suspending posts to every renter at any reasonable price. Consequently, a system of combined action has been adopted for which Professor Wheatstone has taken out a patent. For instance, supposing that a hundred renters of wires lie on either hand of some great main thoroughfare, these hundred wires, for such a distance as they can be conveniently made to run together, are enclosed in one cable, carefully insulated from each other by india-rubber. These cables are so arranged as to form nearly equilateral triangles, each angle having a base of nearly a mile; the cable, however, being supported by wires slung from posts erected on the tops of the houses at every two hundred yards. At the intersection of every angle a mile apart, straining posts are erected for tightening the wires and for giving each individual wire its direction of departure. If the spectator only observes one of these posts, he will see that it gives off filaments of wire in every direction,—these private wires, having come along the cable in common with others for a given distance, are now making their way down into the offices and houses of their renters in the most direct way they can consistently with the triangular system of laying out the lines we have mentioned. Although a hundred wires are in some instances embedded in the same cable, the Company find no difficulty in finding out instantly the fault that may occur in any one of them, as at every two hundred yards the suspending pole is provided with a connecting box or plate pierced with small holes, through which every separate wire, going or returning, spreads out from the cable, and, having thus passed, is bound together again on the other side and proceeds to the next point.

alone; and if the spawn are not let alone they will certainly die. In from 30 to 35 days the fish are developed.

The attempts to introduce salmon into Australia, and the general transmission of fish-spawn and fish-fry were the topics next discussed, Mr. Buckland exhibiting eggs which had been experimentally kept in a block of ice for 90 days still alive; and another batch kept 59 days. He also showed spawn of grayling trout received on the evening of his lecture from Switzerland, and finally referred to the important results attained by artificial pisciculture in France; and the annual value of fish exported and imported at various places. The images of the young fish, transparent enough to show the action of their lungs, heart, and circulation of blood, were, in the course of the lecture, beautifully exhibited on the screen through Dr. Tyndall's admirable manipulation of the electric light microscope.

Last week Mr. Alexander Herschel delivered at the same institution a discourse upon "Luminous Meteors." The class of shooting-stars and fireballs, included under the term, have been occasionally and improperly illustrated by the reputed appearances of globe-lightning. The occurrence of these discharges is not, however, sufficiently supported by evidence to serve for the explanation of fireballs, nor are the circumstances of their supposed production analogous to those under which meteors usually appear. The heights and velocities of eleven fireballs, which passed over England in the two years 1861–3, were calculated for the British Association of Science, and from those it appears that 196 and 30 miles high are the extreme limits of the appearance of the meteors, and 65 and 15 miles high the limits of disappearance. In the rare air at these heights electrical discharge is always extremely feeble; but, on the contrary, meteors are occasionally dazzling by day, and sometimes brighter than the full moon at night. The fireball which exploded over Lancaster, in December, 1861, was equal to a shell of inflamed gas forty yards in diameter, and two feet thick, near the front of which a small parcel of solid substance may be supposed to have been placed, moving at a speed of 12 or 15 miles in a second; but the light may have been stronger than this and the size much smaller. The train of sparks pursued this fireball sluggishly, like smoke behind a flame. From the recent experiments described in Paris, upon the dissociation of water by heat, and from the elementary spectra perceived in compound gases by Dr. Plücker, it is conjectured that the heat of compressed air may completely destroy the chemical affinities of the solid meteoric surface, and cause the train of sparks and the phosphorescent streak by a slow and gradual recombustion of the elements in the rear of the meteor. The annual epoch of shooting-stars on August 10th was first pointed out in this country in the year 1827, while that of November 13th was indicated in America, by Professor Denison Olmsted, in 1836. The heights and velocities of shooting-stars have been found quite similar to those of fireballs, and like them always descending towards the earth. The falls of stones or aerolites are always preceded by a fireball, and although from daylight or a cloudy sky this may escape notice, a detonation is usually heard, followed at some interval by continued concussions and the fall of stones. To illustrate the history of these stones, of which 111 examples are now exhibited at the British Museum, thin sections of them, prepared by Professor Maskelyne for the microscope, were presented by Professor Tyndall on the screen, when the metallic and other ingredients peculiar to the stones were plainly seen. The rotation of the electric discharge about powerful electric poles, and other experiments illustrative of the phenomena of the Aurora, were also introduced into the lecture.

Those who are interested in the varied life-forms of the different regions of our earth—and the public at large, judging by the thousands who visit the magnificent Regent's Park menagerie, must be regarded *en masse* as taking the liveliest and most inquisitive interest—will be gratified by the report made, on Tuesday last, by the Council of the Zoological Society of London, of the flourishing condition of its finances, and the satisfactory state of its stock. The number of visitors to the garden during the past year was 682,205, the income £27,397 5s. 6d. The naturalist, however, will turn to the report with other motives besides those of interest in the society's affluence. One of the most interesting of these topics are the species bred in the gardens during the past year. There were amongst the mammalia—the Arabian baboon, wolf, silver fox, African civet-cat, lion, tiger, leopard, puma, Polar bear; wapiti, Persian, Japanese, sambur, Rusa, and hog deers, alpaca, Punjab wild sheep, doudad, eland, yak, zebu, peccary, hyrax, agouti, Australian hapalote, vulpine opossum; amongst the birds were various pigeons, swans, fowls, ducks, pheasants, geese, and paroquets, the weaver-bird, kaleege, Cape francolin, mooruk, American rhea, Mantchourian crane, and the herring-gull. The only reptile recorded is the American water-viper.

At the last meeting of the Institute of British Architects, a letter was read from Lieut.-Gen. Knollys, announcing that H.R.H. the Prince of Wales had consented to become patron of the Institute. Mr. William Lightly, the honorary secretary of the Architectural Publication Society, called attention to the photographs of the sculptures of Wells Cathedral, just issued by that society, and taken specially for its members. A paper was then read, "On the Crypt and Chapter House of Worcester Cathedral," by the Rev. Professor Willis, detailing some most interesting discoveries made by him during recent researches prosecuted under unusually favourable circumstances, caused by the work of restoration now in progress at that cathedral. He described the unique and beautiful arrangements of the Norman arcades and vaulting of the apsidal east-end of

tone of bitterness and hostility towards England, which he says is by no means confined to the lower or less thoughtful classes in the Northern States. He attributes it, no doubt with justice, to their morbid anxiety for our favourable judgment; to their undue sensitiveness to our opinion; and to their disappointment at our neutral attitude. We have been long aware that they counted on our moral support against the Confederates; but, from an observation of Mr. Sumner's, it would seem that some of them looked for much more. In a conversation about the time the emancipation proclamation appeared, "he suggested, as the only hope of escaping the calamity [of war between the two countries] that England should join America in crushing out what he then conceived were the last struggles of the insurgents!" It was inevitable that we should disappoint anticipations such as these. But we are certainly less likely than ever to regard the Federal cause with favour when we find the subjugation of the South compassed in a spirit which could lead respectable and phlegmatic New Englanders to cheer a blasphemous parson named Brownlow, for declaring "that there never would be peace in the Union till the North awoke to a sense of its duty, and made South Carolina what Sodom and Gomorrah were of old."

TITAN.*

The greatest work of Jean Paul Richter has at last been translated into English. Those only who are acquainted with the original can measure the magnitude of the undertaking. We are afraid that it is a task for which the translator, even if he deserves it, must not look for popular reward. The "Titan," with its world of gorgeous imagery, its endless cycle of sentiment and of romance, its giant figures built in a cloudland of their own, its grand episodes, its majestic unity of movement—octaves upon octaves, ranging over every note, from the most passionate tenderness to the wildest fancy, yet still carrying out the purpose of the piece—its sunlight and moonlight, its music, its fruit, its odours, its gardens of Paradise, with the shadowy angelic forms that light and guard them, and the glitter of the serpents that haunt them,—the "Titan," we say, with all this, is not written for the public which confers immortality upon "Aurora Floyds" and "Roundabout Papers." The refinement of English sentiment, which comes from our domestic and social habits, has purified English literature from the monstrous undergrowths that choke the channels and streams of modern Continental romance. A model English novel is frequently as fragrant and as pleasant and refreshing as a scented English rose. Mr. Dickens, Mr. Thackeray, Mr. Trollope, and their respective imitators, all set before us, if not a gorgeous banquet for the imagination, at least a pure code of honour and of delicacy. Club-room loungers and Belgravian belles grow sincere, as they feed on this nutritious and healthy pabulum. The circle for which Jean Paul wrote was a different one—more imaginative and less commonplace; more impulsive and sentimental, less practical and busy; more susceptible to and intent upon the inner life of their own souls, with its sunshine and its storms, its changing currents, and its unfathomable depths. The same tendencies and temperament which unfit many Englishmen and Englishwomen for philosophic speculation, unfit them also for the enjoyment or even the appreciation of a work of splendid imaginative power. Metaphysics are not a plant that takes root in British soil. We are not given to idealism, and we take for granted the existence of matter. Our scepticism often goes so far as to question whether the highest reflective and imaginative genius is of much use to a nation or the reverse. Those who are destined to push forward in the world's van and to be the pioneers of luxury, of commerce, and of progress are built in the most practical but by no means in the most massive or most ideal mould. On the other hand, let us confess that we love something. We love the gorgeous subtleties, the glowing fancies, the airy creations, the cloud-capt towers and palaces, by which the noblest human minds have endeavoured to reach the infinite depths of nature and of thought. There is something, after all, to be said for the idealists and the philosophers. Philosophical scepticism and its opposite both play their becoming part in the evolution of the world's history. To their respective votaries both systems have a reality and a truth, the force of which is far beyond all argument and discussion. If truth is that which touches the inmost consciousness and rests upon the certain dictates of the inmost soul, the "Titan" is as full of truth for the gentle band of sentimentalists for whom it is composed, as it will seem unreal, fantastic, and dreary to the English novel-reader and the English *belle*. The voices that spoke to Jean Paul Richter fall coldly upon the ear of those whose life, whose training, and whose pursuits are uncongenial. The English literature of to-day and Jean Paul stand at the opposite poles of thought and of fancy. Even his melancholy summary of life—for there is a scepticism and a restlessness at the bottom of all idealism in the world—is of a different description from the more Epicurean melancholy of which Mr. Thackeray is the fashionable and popular exponent. We doubt very much whether English people would be easily persuaded to believe that there is an intellectual pleasure to be found even in pain. Those of us who think the past is sad and the future deceitful take refuge eagerly in the present. But Jean Paul does not cling less lovingly to the past and the future. His dreams end in disappoi

For several years the young student-noble—a rare character in those days—travelled over Europe, "trusting to chance, on foot, living on alms, always finding some abbot, or lover of good verses; or the hospitable table of a peasant." At Pavia, in 1512, he had a narrow escape of his life during the siege, and afterwards served in the Imperial army. Two years later a tragedy of crime roused him from scholarly, knightly, and patriotic dreams, and made him known all over Germany as a fearless lover of justice, a fiery avenger of wrongs. About the same time the attack on the famous Hebrew scholar, John Reuchlin, by the theologians of Cologne, brought Hutten into the field as a religious reformer. The brilliant "Triumphus Capnionis" was his manifesto. A great league was formed of statesmen, preachers, and literary men to oppose the Obscurantists, or "Dunkelmänner," as the monkish opponents of Reuchlin were called, and at its head was Ulrich von Hutten. He had the chief hand in that vigorous satire on the vices and the pedantic and barren learning of the mendicant orders, "Epistolæ Obscurorum Virorum." It is in the form of letters written by monks in their bad Latin, and is so marvellously and eminently true that it deceived the monks themselves, and even, as Sir William Hamilton has shown, one of the most learned men, and one of the wittiest satirists of England two centuries afterwards. The masterly irony of Defoe, in his "Shortest Way with the Dissenters," achieved a similar triumph.

To gratify his father, who wished his son to *be something*, Ulrich went to study law in Italy. He visited Rome, and saw there what Luther had seen five or six years before. He returned home without obtaining the coveted degree of Doctor of Laws, but he received the honour of knighthood from the Emperor Maximilian, and the still higher honour of a laurel crown, with the title of Imperial poet and orator. This was in the spring or summer of 1517. Before the end of the year he dealt a heavy blow at the pretensions of the Papacy by the publication of the work of Laurentius Valla on the so-called Donation of Constantine. He dedicated it with a happy boldness, not without touches of irony, to Leo X. The book was as good as a battle and a victory. It reached Luther just as he had entered upon his conflict about indulgences, and contributed powerfully to sustain him in it. Speaking of it in one of his letters, Luther says,—"I am so agitated, that I scarcely any longer doubt that the Pope is Antichrist. All agrees: what he does, what he says, what he decrees." It is curious to see on the other hand that Hutten at that time treated with contempt the disputes going on at Wittenberg, as a mere affair of vulgar ignorant monks.

Attached for a short time to the Archbishop of Mentz, serving in the war against the tyrant of Würtemberg, engaged in the cause of literature, and carrying on a correspondence with men of note in all parts of Europe, a momentous change took place in Hutten's mind. He saw the *religious* character of the coming conflict, the place which the truth must hold in it, and the total self-renunciation to which he was called. Though he longed for repose and a settled home, he shrank not from the battle or from death. Braving the worst himself, he showed the tenderest affection and care for his family, and, to save them from ill, he begged them neither to send him money nor letters. He then published his "Trias Romana." In the dedication he says, "I have never satisfied myself so completely as in this work." It produced a profound impression, and called forth a papal brief requiring the archbishop to punish the author. There was no more repose for Hutten. In June, 1520, he first wrote to Luther, assuring him of entire sympathy in his "great enterprises," and offering him a retreat at one of the castles of Franz von Sickingen. At Ebernburg, one of them, he soon took refuge himself; and the history of the Reformation has few more fascinating passages than those relating to the intercourse of these two noble knights in that feudal stronghold. From a printing-press in the castle, Hutten continued to send forth letters, addresses, and poems, boldest words exhorting to boldest deeds. "Let us strike with the sword," he said, "if so it must be." And again, "It is with swords and bows and javelins and bombs that we must put down the devil's fury." When Luther answered that he liked not to defend the gospel with violence and bloodshed, Hutten promptly and frankly acknowledged that his own weapons were human, and Luther's divine. But, indeed, his own were not human only. Truth, courage, self-devotion—are not these divine? "Never," he says, in words that still live and breathe, "never shall I retreat a hair's breadth from anything that I have spoken: I shall remain free, for I fear not death. . . . . I quit towns because I cannot forsake the truth. I can die, but not be a slave."

The Diet of Worms was summoned, and Luther was cited to appear. Hutten would fain have been at his side, but could not. He wrote an earnest appeal to Charles V. before the Diet, and was in frequent communication with Luther. He also published several dialogues during the sitting of the Diet. But the edict appeared, and Luther was put under the ban of the empire with all his friends and adherents. Sickingen and Hutten were induced by Charles V. to take part in an expedition against France, which was unsuccessful. They then formed a league of Rhenish knights, and began the first war of the Reformation with the siege of Treves. Sickingen, soon compelled to raise the siege, was in turn besieged in the castle of Landstuhl, and there he was mortally wounded, compelled to surrender, and died.

The time for repose had not yet arrived for Hutten, but it was not far distant. There was no choice for him but to quit his fatherland and seek a refuge in Switzerland. A home, wherever he chose, and a pension sufficient for his wants, were offered him by Francis I.; but thoug

But the highest lesson we can learn from him is to be unlike him. Very few are the traces of a worthy emotion which his vice suffers to accompany it. If it leaves any sympathy in the breast of its victim, its object is generally some brute. Thus we read in Mr. Redding's "Memoirs" of a female miser, who, though she denied herself the necessaries of life, sumptuously regaled twelve cats. These, when she went to bed, arranged themselves from her head to her feet, and remained there till the morning. She was so fond of these animals that, when any of them died, she stuffed them and placed them in a room which in time was full of her deceased favourites. Another shared her meagre meal with a rat which daily paid her visits at dinner time; and when she died a nest of mice was found in her bed. Even for the rat, however, her affection was limited by the ruling passion; and as it ate more on one occasion than she thought it entitled to, she flew into a passion, struck it, and killed it. Rarely is anything like compassion for a fellow-creature exhibited. It is worthy of note, also, that the miser's passion seems to eat up even those vices which are commonly associated with degradation, absorbing at once both intellectual life and the animal passions. This makes it the more inexplicable. We can understand that the drunkard and the profligate find a utility in their excesses in the pleasure, base as it is, which they afford them. But the miser is the strangest of human mysteries. He is a rational being, with intellect defaced; an animal without animal instincts. His vice is the most useless of passions, and at the same time the most absorbing of all others. His one happiness, the sight of his money, is a torture to him. He wakes in the night fevered with dread lest it be stolen from him. The same horror pursues him through the day. Add to this the idea which perpetually haunts him, that the smallest expenditure will involve beggary and starvation, and our wonder that such a being can exist is complete.

Even amongst misers, however, there are exceptions to the rule of uniform penuriousness. Elwes, who added to his own fortune another inherited from his uncle, both amounting to half a million sterling, would dine off a hard-boiled egg, or a piece of pancake which he had kept for two months in his pocket. But he would lose thousands at play to men of fashion, pay his debts and never ask for his winnings, which he thought would be ungentlemanly. He would not lay out a penny on the education of his two sons. He thought that "putting things into their heads was taking money out of their pockets." But when Lord Abingdon had made a match for seven thousand pounds, Elwes, who knew he had not the money, offered to lend it to him. He would walk from one end of London to another in the rain to avoid paying a shilling for a coach; would eat his meat putrid rather than order a fresh joint; and sit in wet clothes rather than light a fire to dry them. He wore a cast-off wig which he had picked out of a ditch; and having torn his only coat, took one from the family chest which had belonged to an ancestor, with slash sleeves made of green velvet. But to a merchant who conciliated him with a present of wine he lent seven hundred pounds; and a trifling present, or work done for him for nothing, was tolerably sure to be followed by a loan of money. He would let a poor man starve before he would aid him; yet, in bonds to peers and others, and on some American property, he is said to have lost one hundred and fifty thousand pounds. There were occasional touches of humour in him. At a shooting party, a bad shot firing carelessly wounded him in the cheek. "I give you joy," he said, "of your improvement; I knew you would by-and-by hit something." At another time, having cut both his legs deeply, he was with difficulty persuaded to employ a surgeon. But he would only incur this expense in favour of one leg. He would manage the other himself, and offered to bet that it would get well first; and it did. Thomas Guy was another exception. His wealth was enormous; and at one time he had promised to marry his maid, the only servant he kept. He had ordered the pavement before his door to be mended up to a particular spot. The girl, observing a broken stone beyond this point, told the workmen to mend it also. "Tell Mr. Guy," she said, "I bade you to do it, and he will not be angry." The marriage was to have taken place two days afterwards, and the girl reasonably presumed she might exercise this little piece of authority. But she soon discovered her mistake. Guy was so angry at the additional expense in which she had involved him that he broke off the match. Yet he built three wards on the north side of St. Thomas's Hospital; endowed them with a hundred pounds a year for eleven years; and afterwards built and endowed the hospital which bears his name, at a cost of £219,000.

Miss Bolaine, of Canterbury, again, is an exception to the rule of continent misers. She was handsome in her youth and attracted many admirers, with some of whom she lived, refusing to relinquish her liberty by marriage. She was a fury as well as a miser. She attempted to stab her brother and her maid-servant; she starved her mother to death, and ill-treated and starved her niece till she too succumbed in the bloom of youth. One of her paramours was, like herself, a miser. He suited her exactly, for he could wash, iron, sweep the house, and eat a mouldy crust or tainted meat. This wretch was forty years older than herself; and as his years increased she treated him with fiendish cruelty. He had made over the whole of his property to her; yet she fed him upon cow-heel broth; drew the bed from under him before he was dead; locked up the body, till she had gone to St. Lawrence and secured his property; and on her return ordered the bell to toll for him. She refused to let any one but herself put him into his coffin; but the undertaker's men managing to peep into it afterwards found that she had stolen the s

first part of a tale, entitled "Lindisfarne Chase," from the inexhaustible pen of Mr. Anthony Trollope. Miss Rossetti follows with some lines on poor L. E. L., "whose heart was breaking for a little love." Then Mr. R. H. Hutton gives us a sensible paper on "the unspiritual world of spirits," that is of such spirits as Mr. Home is in communication with. Mr. Hutton shrewdly remarks that the world of the spirits is much less spiritual than our own, and that the most remarkable of their faculties is the muscular power, which, however, is for the most part limited to lifting things up and putting them down. Mr. N. W. Senior gives the first part of "A journal kept in Egypt in 1855 and 1856;" Mr. Meredith Townsend, "The Career of Englishmen in India," and Mr. Tom Taylor the first portion of a paper on "The Great Actors of 1775." A *resumé* of the Social Science and Literature of the Month completes the aricles of the present number, on the production of which Miss Faithfull is entitled to congratulation.

ENGLISH POETRY FOR CHILDREN.*

We have here a selection from the best English poetry for the use of children. The task of making such a selection falls naturally to feminine hands. Our mothers know us better in our childhood than our fathers do. Their opportunities bring them more in contact with us, and their love and anxiety reveal to them our growing tastes, our opening faculties, as well as the best means of safely developing them. They choose for us our toys and our story-books; why not our poetry? We doubt, however, whether the lady who has compiled the volume before us has exercised a wise discretion in including the mystical "Ancient Mariner" in her selection, and we might extend our objection to one or two other pieces. This, however, is a trifling fault, even if it be one. The selections generally display a sound judgment; and the book will, we are sure, prove an efficient aid in encouraging in young minds a taste for the highest order of poetry.

Any of our readers who desire to possess themselves of a plain and easy account of British Fungi, and to learn how much good food is annually wasted by the neglect of these esculents, will do well to purchase Mr. Cooke's work upon the subject.† Apart from its scientific interest, the book will be found useful to mushroom-eaters, in informing them not only what to eat but what to avoid; and on this point the coloured engravings are a valuable aid.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.
Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., F.R.C.P.L.,
Physician to the British Embassy at Paris, &c.

"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Dr. LETHEBY,
Medical Officer of Health to the City of London, &c., &c.

"It is, I believe, universally acknowledged that Dr. de Jongh's Light-Brown Cod Liver Oil has great therapeutic power; and from my investigations, I have no doubt of its being a pure and unadulterated article."

EDWIN CANTON, Esq., F.R.C.S.,
President of the Medical Society of London, &c., &c.

"For several years past I have been in the habit of prescribing Dr. de Jongh's Light-Brown Cod Liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

Dr. LAWRANCE,
Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

capacity, so many breaches of trust, that his own affairs had to be wound up in Chancery. No innocence or good faith can avail to intercept the results to those involved in such transactions, whether they are the trustees or the so-called beneficiaries. Nine-tenths of the boxes in a lawyer's office are concerned with trusts, and scarce one of these but holds broken hearts besides the parchments.

The evil is introduced by civilization and a complicated state of society, and the progress of these causes is every day enhancing it to such an extent that it is difficult now to find any one willing to encounter the danger it involves. Can the causes, however, suggest no remedy? We venture to think they can. It is not a dozen years since we groaned under what seemed as hopeless a burden, only that it was undertaken for the sake of our living friends rather than for the dead. Within that time we have in a great degree escaped from the system of suretyship, which before ruined every year so many honest men, and made uneasy so many pillows on which hard-worked brains ought to have found rest. We got rid of the incubus by establishing Companies, in which men might insure for themselves their own honesty, and which on the doctrine of chances were able to make a small premium from all, to cover the defalcations of a few. Men laughed at the idea of guarantee associations before they were started—after they were set going they paid the premiums and accepted the security. May we not hope for a somewhat similar relief in the case of trusteeships? Could not a Company of large capital, conducted by men of credit and ability, work the pecuniary business and undertake the responsibilities of a number of trusts at comparatively slight expense? Would it not give a security far exceeding that of any private trustee, and would it not by concentration execute many trusts at no more than the present cost of one? If these questions can be answered in the affirmative, the institution of such an association would be an unquestionable boon to thousands of testators, trustees, and beneficiaries. We must defer to a future occasion their more detailed consideration and answer. It must suffice for the present to say that when the idea was last mooted, they were regarded as capable of a favourable solution by men of such eminence as Sir John, formerly Mr. Justice Patteson, Mr. Headlam, now the Queen's Judge Advocate, the Chief Justices of Ceylon and Madras, and other sound-headed lawyers. And it is not the least encouraging fact, that similar institutions are already in successful operation in one of our own Colonies, the Cape of Good Hope. That once styled Cape of Storms will, by its modern name, symbolize our fortunes, if we can, by help of its experience, exchange the dismal terrors which now haunt the creation and the acceptance of trusts; for the prospect of having them safely and economically carried into effect under superintendence of an institution, as trustworthy, and guided by men as competent, as the Bank and its Directors, to whom we commit already so much of the management of our private estates.

THE REPLY OF RUSSIA.

THE Russian notes have at last arrived, and we learn, after anxious expectation, what Russia proposes to do for Poland. Time is not required to interpret them. It comes simply to this: that Russia is prepared to do nothing. Under the mask of a prudent courtesy, she hides an evident desire to wave off all offers of advice. A touch of the old diplomatic skill, of which every day we see fewer traces in the game of modern political chess, is to be found in the accuracy with which she fixes on the one weak point in the action of the Western Powers. Happily the movement on the part of England and of France was—as we urged from the first it should be—simultaneous and concerted, but unhappily the two Governments had severed into two what should have been a single and united appeal. Prince Gortschakoff is too skilled an intriguer not to fix his eye upon this diplomatic flaw. He replies—as he was addressed—separately; and perhaps the foxes of the Russian Chancellerie smiled to think that, in so doing, they were nailing the Cabinets of the Tuileries and of St. James's still closer to a fatal policy of separate instead of joint action. We can afford in our turn to smile at the artifice, to draw a wholesome lesson from it, and then to put it by. There is nothing else in either note which is not impotent, foolish, and unsubstantial. One advantage at least Western Europe gains from receiving two several answers to her protest. We are enabled to compare them one against the other.

more lame and impotent conclusion. The subject of endowments is one deserving the gravest consideration: the evils attendant upon them are notorious, and may possibly be unavoidable; but the matter is not one to be disposed of in a side-wind by the aid of imperfect knowledge and unsound reasoning. The subject is no new one in this country, still less on the Continent. When Turgot first sought to reduce the finances of France to order, he had to consider the large exemptions which revenues devoted to religious and charitable purposes enjoyed; his memoir on Foundations is a monument of his genius and his industry. Mr. Gladstone is content to bring to the subject the valuable facts collected for him by the Education Commissioners; he even seems to be ignorant of such an elementary condition of the problem as the provisions of the Law of Mortmain. Had he consulted the Solicitor-General, he would never have indulged in his extraordinary misconception of the wishes of Jervis. Jervis, says Mr. Gladstone, dying in 1793, left £100,000 for the poor of three parishes in Herefordshire; "but he absolutely forbade building, probably with a view of supplying the current wants of the poor." The consequence was such a demoralization that it was found necessary, in 1852, to get an Act of Parliament, under which £30,000 have been devoted to that very thing that old Jervis forbade—viz., building. Mr. Gladstone pictures to himself the ghost of Jervis bemoaning such a misappropriation of his money, the truth being that it would no doubt be a source of great satisfaction to him. It is the very thing he would himself have directed to be done had the law permitted such a direction to be carried into effect; but Jervis knew very well, what Mr. Gladstone is ignorant of, that, had he ordered his trustees to spend the money in building, the whole legacy would have failed. The case furnishes a strong argument for the revision of the Law of Mortmain, and at the same time illustrates the extent of Mr. Gladstone's researches in the matter. The law of charitable gifts and endowments does, in fact, require the most careful consideration—a consideration of a kind wholly different from that hitherto bestowed upon it. The Charity Commission in St. James's-square, sitting at a cost to the country of £18,000 a year, supervises the due distribution of charitable funds to the objects designated by the donors; but what we want is a Commission which shall supervise the objects themselves. It should be laid down as a general rule that, at the end of some definite interval, possibly the limit for which testators are permitted to tie up their property, every charitable endowment should be held at the absolute disposal of the State, and its administration should be continued, modified, or abrogated, as may seem expedient on grounds of public policy. Our thanks are due to the Chancellor of the Exchequer for his courage in attacking such a subject, but we can award him no higher praise.

As the House of Commons has refused to grant the Income Tax on Charities, it will most likely continue to support the tax on Clubs. Some illogical notion of compromise will probably actuate its members in assenting to this impost, which indeed they cannot resist with any very good grace. The most conclusive demonstration of the false analogy on which the proposal is founded comes with indifferent effect from those who will have to bear this most trivial of burdens.

The effect upon Mr. Gladstone's surplus of the resistance of the House of Commons is a more serious matter. That surplus, as originally contemplated, was about £530,000, and it has now to be reduced by the abandoned taxes on Carriers and Charities. The diminution in the present year is not very important, but it is still sufficient to negative the idea of any further remission of taxation. Mr. Sheridan may bring forward his Fire Insurance Duties Bill, and the House of Commons may not improbably again assent to the second reading of it, as a warning to the Chancellor of the Exchequer that he must take this tax into consideration next year, and as a practical reply to the fallacies which have been recently put forward by Mr. Coode, under Mr. Gladstone's sanction. The ultimate withdrawal of the Bill is, however, certain. As soon as the reduction of the Income Tax and the Tea Duties was resolved upon, in the face of the disposable surplus, the fate of the Fire Insurance Duty for this year was sealed. The only defence of the duty is that money must be had, and that defence must be allowed to be valid for another twelvemonth. This is the defence of Rob Roy, but even that freebooter, like his English original, Robin Hood, had a wholesome respect for public opinion. Mr.

Gladstone cannot

rate imposture of this highly-wrought demonstration. These is something absolutely grotesque in that unconscious exaggeration of their own importance, which permits the inhabitants of a small district to assume airs which would scarcely befit them if that district were now, as formerly, the whole metropolis. The commercial magnates who figured for a day in the civic line of battle, might speak with some authority, if they did not steadfastly avoid more than occasional contact with the body they defend. The rallying cry of "Municipalities to the rescue!" would come far better from any corporation than the one whose selfishness and exclusiveness have condemned to incorporate desolation the dwellers beyond its ancient limits, in Southwark, the Tower Hamlets, and Finsbury. Had not the City persisted in regarding its privileges as the property of the citizens, rather than as a trust for the metropolis, there would be now no conflict between ancient rights and modern convenience. By a process of gradual expansion, it might have kept pace with the growth of London, and have continued a reality instead of degenerating into a sham. Having itself brought matters to this pass, there is no ordinary audacity in now preaching a corporate crusade in defence of an exceptional police jurisdiction which would not be tolerated in any borough in the kingdom. However, this preaching has received the sanction of success. It is probably in vain to resist—it is certainly useless to argue against—a municipal stampede. But we may be permitted to express our surprise at the enthusiasm of the reformed bodies, on behalf of an impenitent and unregenerate sinner that still boastfully cherishes all ancient abuses.

Notwithstanding much that was said at the Guildhall, we need scarcely state once more why we think that the constitution of the country will not be seriously imperilled by placing 610 additional policemen under the command of Sir R. Mayne. To the panegyrics upon local self-government and municipal corporations we heartily subscribe. Indeed, we probably go further than some of those who spoke the other day would follow us; for we are not content to see these advantages confined to a small fraction of the metropolis. We desire to see the City take its proper place as a part—it may be as the centre—of one great municipality embracing the whole of London. When such a body is constituted, the control of the police will fall naturally into its hands. But its claim to this will in no degree be strengthened by the existence of a separate City force. The ability of the new body to fulfil the correlative duty will be a far better ground for entrusting it with power over its own constabulary, than can be furnished by the fact that a small corporation which it absorbs had possessed the power without discharging the duty. In the mean time we can see no reason why we should submit to the inconveniences of the present state of things. We were told, indeed, the other day, that the existence of a City police force does not, in fact, involve any inconvenience. But those who sought to prove this contented themselves with showing (what no one ever disputed) that the men under Capt. Hodgson's command do ordinary street duty admirably, and that there are two or three excellent detective officers in connection with the body. If the City were, in fact, isolated from the rest of the metropolis, this might be enough. The advocates of the Amalgamation Bill have, however, always contended that this is a fallacy; that the whole district known as London has a common interest; and that all suffer if one district, by refusing to derive the advantage of a general police reserve, exposes us every now and then to the risk of finding ourselves without any protection to life or property. This aspect of the question was entirely ignored by the municipal advocates, who passed by, in equal silence, the evidence of the late Mr. Harvey in favour of a united detective force. They did not, indeed, attempt to grapple with the really practical issues; but they probably showed a just appreciation of the taste and the intellectual calibre of their audience, by threatening them with "old Bogie" in the shape of a prefect of police. The frequenters of the Guildhall have always preferred that political subjects should be treated in a highly sensational style. As Sir George Grey stated that he did not base his measure upon the events of the 7th and 10th of March, it was superfluous in the Lord Mayor and Aldermen to refer to them. But we cannot help complimenting them upon their complete success in proving to themselves that they were entirely without blame for what then occurred. At first they adopted a somewhat apologetic tone; but they now declare boldly, through their chief magistrate, that they had nothing to do wi crushed in front of t Poultry, the respons Grey and Sir R. these Royal impersonations easy and impalpable. In England, says M. Montalembert, Royalty is nothing more than liberty crowned—*la liberté couronnée*. Partly, no doubt, M. Montalembert is right, but he does not exhaust the idealizing tendencies of humanity, if he supposes that the Crown and Court in this country are simply popular from political reasons. Royalty is not "liberty crowned" only, though no doubt it is something "crowned." A few months back, it was domestic happiness and Goodness crowned. Of late it has been Widowhood and noble grief. To-day and for our present purpose it is, as we have said, youth and beauty crowned. We see, or think we see, on a Royal eminence, the qualities which interest us most in private life. The distance at which we stand prevents us from criticizing too narrowly the drawbacks or the blemishes in the tableau. For us the picture has no dark side; all is radiant and bright. Between the Royal carriage, as it drives along the Serpentine, and the gaily-dressed ladies and gentlemen who look on, there is sufficient space and interval to enable them all to idealize a little. What they admire so much is a creation of their own hearts, which imagination allows them to transfer to the inside of the passing equipage. It is not the Prince and Princess that are seated there; it is *La Jeunesse Dorée*—the sunshine of a Golden Age—Youth and Happiness and Beauty; and we people the palace with the figures and the attributes that more properly belong to Cloudland.

Beyond this sentimental feeling, however, and in some measure strengthening it, there is no doubt a political feeling which invests the members of the English reigning family with a particular sanctity which men attribute to them in different degrees, according to our different degrees of education. Loyalty is the term given more particularly to the instinct which makes men feel ready, upon occasions of need, to rally round the throne, and to place it safe in the centre when danger approaches. In all political nomenclature there is no term so indefinite, for it ranges over all possible shades of meaning. It is often personal, it is as often without a tinge of personality; it is sometimes called out by the man, sometimes by the monarch, frequently by neither, but by something quite beside the two, which the man and the monarch feebly represent. The Italians are loyal to Victor Emmanuel, without being necessarily attached to monarchy as an institution; while they are most loyal of all to the name and idea of Italy, a pure abstraction which they have erected for themselves partly out of the fossil relics of an extinct age, and still more out of a glowing imagination. The Emperor of the French accepts the loyalty that his subjects give him on other grounds. He has not made their hearts warm to his person; but he is a manifest impersonation of the will of a great democracy, and he recalls the kindred memories of a military glory that has illuminated in its time the emblazoned annals of France. The Czar is loved, again, because he is the political centre from which all blessings flow to Russia; and in addition to this, he is the organizing head of a vigorous and pushing national system. The Queen of Spain has loyal subjects like the rest, yet she is not famous as a queen, and something less than famous as a woman. What does she represent, except so far as she is a pious daughter of the Church, and pays money to the Pope? It is difficult to say; yet events have shown that she is not easily shaken from her throne. The King of Prussia, in his turn, wears the crown securely, in spite of his own folly and the insolence of his Ministers. This security consists in the fact that Prussia recollects with gratitude that it is the monarchical system which has raised her to her present position in Europe; and in the second place, the Prussians rightly think, in the present unsettled state of Europe, that the monarchy must be strong, if the army is to be strong, and if the Prussian frontiers are to be preserved intact. Is there, then, no single monarch of whom it may be said that his subjects are loyal because he governs well? A rare instance of this class comes last—the King of Belgium. Belgium has no historical traditions linked with any reigning house. Her king does not represent any particular idea. She is not an aristocratical country, nor a conservative one. King Leopold is as popular and liberal as a sovereign well can be, for the best and simplest reason of all, because he suits his people and they are happy under him. The affection the Belgians feel for this Royal personage may in reality be described, in the words of Mr. Tennyson, as "a sober passion for a temperate king."

It is not difficult to understand how the personal qualities of Queen Victoria have won for her the hearts of the nation. But English loyalty is of older date than the present reign—it goes back to a period when English sovereigns were neither wise nor virtuous, and is a kind of ivy that has clung in its day to some extremely discreditable-looking oaks. There is something in it,

every evening without the introduction of beer, it would plainly be madness to infringe the existing rule. To meet the wants of the members, tea, coffee, cocoa, and ginger beer, together with biscuits, bread and butter, and cake, are sold at cost prices. Any member can order meat or bacon, and have it cooked for him on the premises. We felt glad, on the whole, to hear that it is the lighter refreshments which are the most in request, and that not many men are tempted to take their more substantial meals away from home.

The only two remaining questions are patronage and finance. With respect to the former, it has been thought desirable, at Southampton, to have laymen only on the general committee, so as to avoid any appearance of giving a sectarian character to the movement. The object, therefore, is not strictly a religious one, but Sir G. B. Pechell is unhesitating in his opinion that the workmen's halls have tended very largely to aid the work of the ministers of religion, as well as to make the homes of the members happy, and to replenish the cupboards of their wives. With respect to finance, we were sorry to find that none of the halls are self-supporting. Indeed, when we think of a largish house being rented in the thick of a town, requiring both male and female attendants,—when we read a long list of daily and weekly newspapers, and look at the well furnished bookshelves, and think of gas and firing, it is quite evident that it would require very many hundreds of weekly pennies to keep such an institution afloat without the subscriptions of the wealthy. These are freely offered, and we cannot but feel sure that the givers are conferring an unspeakable boon on their poorer neighbours, and are providing, at a very small cost, a most successful antidote to the gin-palace and the beer-shop.

UNDERGRADUATES AT PLAY.

"Apostolic blows and knocks" have played a signal part in the history of religious controversy, and orthodoxy of all shades has been willing, when the secular arm has failed to support its views, to try the efficacy of its own. But in all the subtle inventions which the stronger party has employed to revenge its failure upon the souls of its antagonists by making them smart in the body, we have never till now heard of the use of clay pipes. This invention is due to the gentlemanly taste of a bevy of Cambridge undergraduates who have taken offence at the existence of a Roman Catholic chapel in Union-road, and who appear to have resolved that, if pipes could effect it, the chapel should be shut up, and the priest smoked out. The idea has never before, as far as we are aware, been utilized in the domain of theology, and the undergraduates are entitled to all praise for the ingenuity of their invention. The discoverer of a new idea in this used-up world is a man not lightly to be passed by. A grateful world should make much of him. He quickens the dull current of existence; gives us something to think and to talk about; makes us feel that life is not altogether a plodding monotony. Happily, as this stimulus comes to us from one of the ancient seats of learning, the merit cannot be monopolized by the individual inventors. It is reflected on the body to which they belong; and Cambridge may add to its glories the honour of having produced men who have discovered a new and simple method of dealing with the Pope. If Victor Emmanuel, with an army of 200,000 men, cannot turn him out of Rome, the undergraduates can demolish him in Cambridge with no heavier weapon than their "clays."

The invention, moreover, is valuable as marking the high tone of gentlemanly conduct which animates at least a few of the more select undergraduates. They repair to Mr. Quinlivan's chapel during the evening services, and "interrupt the priest by laughing derisively, smoking long clay pipes, and other unseemly conduct." They do this, not once, but time after time; and to his appeals to their good, or their better, feelings, they reply by repeating the same silly, useless, and disgraceful conduct. Putting respect for the consciences of others out of the question, one would think that mere manliness would have warned them from an encounter in which they had strength, numbers, and the influence of position upon their side; while opposed to them was one man, incapable, from his office and the services in which he was engaged, of coping with them, and wholly at their mercy unless he called in the aid of the police. Even his forbearance, however, to adopt this resource seems not to have touched the instinct of generosity in their breasts. It rather encouraged them to persist in their disgraceful conduct, which at every repetition became "more bold and insolent." Last Sunday evening, "they conducted themselves," says the report, "in so outrageous a manner that the two police constables, who were in attendance for the purpose of preserving order, found

nature of the various charitable trusts and the mode in which they are administered. He showed the baneful operation of those numerous charities which distribute annual doles to the poor, in creating a pauper population, and sapping the foundations of industry. Especially he dwelt on the mischievous effect of charities which are dispensed upon the condition of attendance at church, and constitute a sort of spiritual bribery, operating as an inducement to men to go to church for the sake of receiving temporal alms, which they do only when alms are to be received. The effect of these charities upon the tone of the population is such, that in Coventry, for instance, which is particularly rich in them, the labouring class is laid prostrate upon the first approach of distress. He cited the report of the Education Commissioners of 1861 to show their pernicious operation at Bristol, in teaching indolence, mendicancy, servility, and falsehood to the poor almost as effectually as industry, the love of independence, and veracity, can be taught by means of the funds which the State supplies in aid of the Bristol schools. Again, he took the case of Jarvis's charity. Mr. Jarvis died in 1793, and left about £100,000 for the poor of three parishes in Herefordshire. The population had increased in these parishes, solely through the temptation of this charity, from 860 in 1801 to 1,222 in 1851. In this district wages are lower by 2s. a week than in others, and the dwellings are the most miserable and scandalous that disgrace any part of the country; but people go into them to wait for the doles which nearly double their income. The statement of the authorities who have investigated the case is that the morals of these parishes are such as they are forbidden to describe. Then he turned to the Canterbury charities, and singled out one called Lovejoy's charity, part of which is to be applied to poor, ancient, and sick people not receiving parish relief. Of the 500 persons receiving relief from this charity, the Commissioners reported that as to 113 they could obtain no information; but of the remainder, there are 145 of whom they give the following account:—There are 51 persons in good employment, not needing relief; 36 paupers; 18 occasional paupers; 18 drunkards; 17 bad characters; 4 brothel keepers; and 1 convicted felon. But whatever he could allege against these and other charities evidently furnished ground not for taxation but for reformation; and his argument had so little weight with the House that, when the Speaker was about to put the question, the Chancellor of the Exchequer rose, and said that as the Government had not intended to press the clause as a merely official proposal, and as the debate had come to a close without any independent member having declared himself on the side of the Government, it would not be consistent if he were to take the sense of the House upon the clause.

Sir Page Wood has given judgment in the case of Gurney *v.* Gurney. It will be remembered that Mr. Gurney some time ago obtained a divorce from his wife and cousin, who, on the 13th of December, 1859, eloped from her husband's house in Kensington Palace Gardens with a man named Taylor, a groom in Mr. Gurney's service. On the 4th of May, 1861, Mrs. Gurney was confined of a full-grown male child, which, there cannot be a shadow of a doubt, was not the child of her husband. In January, 1862, after his divorce from his wife, Mr. Gurney made a settlement of £2,000 for the benefit of the children of the marriage, and instituted a suit in the Court of Chancery to carry out its trusts and to obtain a declaration that his two children born before Mrs. Gurney's elopement are the only children of his marriage, and are absolutely entitled to the property comprised in the settlement. Virtually, Mr. Gurney sought to obtain from the Court of Chancery a declaration of the illegitimacy of the child born after the divorce, and it appears that, simple as this proceeding is, it has never been resorted to before. Sir Fitzroy Kelly, for the defendants, the trustees of the settlement and the child born in 1861, contended, that if the suit were to succeed a most dangerous precedent would be established, and it would go forth to the world that any stranger, however malignant his motive, and however overwhelming the misery he might occasion, would have nothing to do but create a trust deed, invest some hundred pounds in the funds, and raise the question of a child's legitimacy. The Vice-Chancellor did not feel the force of this argument. Questions over which the Court had jurisdiction were often created for the very purpose of raising these larger and more important questions. On the settlement before him he could not escape from determining who were the objects of the trust, by the circumstance that he might happen to know the position and fortune of the father, and that he had made the settlement for the express purpose of raising the question who were and were not his children. This decision is most important. In a commercial point of view, one equally so has been given by the Court of Queen's Bench, establishing the fact that photographic

roast fowls were ever trussed and cooked nearer the Scilly Isles than Gunter's.

Mr. C. Landseer, R.A., has been inspired this year to paint a subject which we conclude has its charm, and which may be common enough to be true if we believe all *Punch's* jokes about domestic matters. It is the master of the house filling up his schedule for the census and brought to a dead lock by an obdurate cook, who looks as if she'd rather be passed under the mangle than tell her own age. Amusing enough all this, if it were not told by the painter in the most direct and inartistic manner, without a thought of any of the niceties of colour that arise in a group such as he paints.

Mr. Redgrave, R.A., seems to have set himself deliberately to work to read the artist a lesson on canvass upon the discrimination required to represent naturally without copying. In his work, 220, "Strayed Lambs," children with a pet lamb lying under a hedge, with a background of dark wood—he has painted every blade of grass, every bramble, thorn, and leaf, and almost every hair on the heads of the children and the back of the lamb; in fact, he has tried to copy and failed to represent. This is rather an odd mistake for the Government Fine Art teacher to make.

We have thus said sufficient about the productions of the academicians to justify the point with which we set out; viz., that the exhibition, so far as the Academy is concerned, is a very unsatisfactory and an unfavourable one to art prospects. It indicates want of energy and interest by the small importance of the pictures by academicians and by the number of idle hands. It is positively bad in the influence of some works of very mistaken aim and style which we have named, and on the whole it does not fully and adequately respond to the vast amount of patronage now bestowed upon artists, and it is decidedly below the ideal standard that exists in the minds of the cultivated class of the day. It must be a time for renovation and reform when the painters and the sculptors are, in general terms, no longer the leaders of art but the led.

There are certain pictures of the past grand masters of the Academy which we are not disposed to find fault with, out of respect for time-honoured names, belonging to the best works of the English school. To point with an assumption of enthusiasm to beauties in these now, in the face of bright visions of their pictures passed away, would sound to our ears like a flattering sarcasm. We could feel great interest in these works anywhere but on the walls of the Academy exhibitions, and happy it is that, as the catalogue inscription from Cicero says, "These studies make old age pass pleasantly," but at the same time we would remind the Academy that their new class of "Honorary retired academicians" contains only two names.

Those pictures, which really throw an interest into the Exhibition, are Mr. Millais's delightfully fresh and vigorous paintings of children, Mr. Goodall's fine work of "The Widow of the Desert," Mr. F. Leighton's "Elijah Rebuking Ahab and Jezebel," Mr. Marks' "How Shakespeare Studied," Mr. Calderon's "Huguenots," and Mr. Yeames's "Parting of Sir T. More and his Daughter." To these we must devote our attention in a future article.

THE WORKS OF SIR EDWIN LANDSEER.

Among our living English painters, whose most recent productions are this week displayed on the walls of the Royal Academy, Sir Edwin Landseer is conspicuous by his absence. We may look forward to seeing, as we hope, in many future years, fresh evidence of his genius and skill. But, on this occasion, let us console ourselves with a retrospect of the great artist's career.

There were painters four thousand years ago who represented animals so well that naturalists in the present day can determine the species, and even the varieties, depicted by them. It is a fact equally remarkable that many of their works are still in excellent preservation. In form and colour the Egyptians, it is reported, excelled all artists of the remote old time.

The Greeks paid especial attention to this branch of art, and many of their great painters are said to have distinguished themselves by the results of their careful study; but the Italian masters showed a strange disregard of it, and we rarely see even a horse in their pictures except as an accessory and then drawn with so little knowledge as to be strikingly ludicrous. The love of accuracy and detail which characterized their Flemish rivals led them to animal painting as a congenial pursuit, and they invented that treatment of the subject absurdly called "still life." Rarely did they represent animals in action, and when they did so it was mainly as accessories, as in Snyders' most famous pictures. It was reserved for an English artist of our own time to raise the art of animal painting to its present important place.

The subject of this notice, Sir Edwin Landseer, was born in 1802. He is the third and youngest son of the late John Landseer, A.R.A., historical engraver in the line manner, and author of a learned work on Babylonian antiquities, under the title "Sabæan Researches." John Landseer died in 1852, aged eighty-three.

The eldest son, Thomas, adopted the profession of his father. He has had a long and prosperous career, having engraved with admirable fidelity and force many of his brother's finest pictures, Rosa Bonheur's "Horse Fair," and others of the most popular subjects of our day. Thomas Landseer, following with a devout fidelity the characteristics of his brother's graceful handling, so elaborated his etchings that his so-called mezzotinto works, by a steady onward progress in depth and force of style, became *line* engravings.

At Her Majesty's Theatre, Mdlle. Trebelli resumed her place on Tuesday as Rosina in "Il Barbière," singing with the same grace and charm of manner that characterized her performance of last season. Signor Zucchini is an excellent Bartolo, and Signor Gassier a tolerably lively Figaro; while Signor Bettini sings carefully, if he does not act forcibly, as Count Almaviva. Altogether, "Il Barbiere" at Her Majesty's Theatre is a finished and spirited performance. Signor Schira's new opera, "Nicolo de' Lapi, or the Siege of Florence," was produced on Thursday night, but we reserve our notice until next week.

Monday's Philharmonic Concert, the fourth of the season, was honoured by the presence of the Prince and Princess of Wales, whose several visits to the Opera thus early in the season appear to indicate a strong predilection for the art. The selection was one of considerable interest, as the following programme will show :—

PART I.

The music to the "Egmont" of Goethe	Beethoven.
Mr. Bartholomew's "Illustrative Poem," read by Mr. Arthur Matthison, vocal pieces sung by Miss Banks.	
Aria, Signor Delle Sedie, "Deh vieni alla finestra"—("Don Giovanni")	Mozart.
Concerto in F minor, pianoforte, Madame Arabella Goddard	W. S. Bennett.

PART II.

Sinfonia Pastorale	Beethoven.
Scena and Romanza, Signor Delle Sedie—("Maria Padilla")	Donizetti.
March in the Opera of "Tannhauser"	Wagner.

Beethoven's "Egmont" music, so little known, with the exception of the overture and march, depends so much on the accompanying progress of dramatic action, that its performance in a concert-room must fail to realize anything like its full effect. Notwithstanding the device of the illustrative poem and its recitation, it is impossible to attain such an amount of dramatic illusion as is realized by scenic action; and the music has, consequently, a fragmentary effect which is not felt in its theatrical performance, where every phrase has its tangible illustration. Of course, in music of this kind, which follows the rapid fluctuations of dramatic action or passion, there cannot be that coherent construction which characterizes regular compositions; and hence, in the concert-room, no contrivance can give it its full significance. The melodramatic music to "Egmont," although one of Beethoven's minor works, abounds in traces of the master's genius; and, as it is not very likely to be heard here with its theatrical accompaniments, we are thankful to the Philharmonic Society for its performance. Professor Sterndale Bennett's pianoforte concerto is written in emulation of the similar works of Mozart and Hummel. It contains many delicate and elegant passages, frequently reminding us of the two composers just named, as also of John Cramer. From the frequent reiteration of the same phrases, however, there is a want of that clearness and coherence of thought and construction which characterize the best concertos almost equally with the best symphonies. Still, although Professor Bennett's concerto cannot be ranked with those of Mozart, Beethoven, and Hummel, it is a work of great merit, admirably written for the instrument which it is intended to display. Its performance by Madame Arabella Goddard was in the highest style of finished execution. Beethoven's Pastoral Symphony, the *pièce de resistance* of the evening, was admirably given by the orchestra, which continues to gain in finish and refinement. Wagner's march is one of the few rhythmical pieces of a composer whose style consists in a defiance of all preconceived standards of musical rhythm. It is a bold and effective composition, brilliantly instrumented, and reminding us, in its phrases, of Weber, who would appear to have had a large influence on Wagner's earlier style. The miscellaneous vocal pieces, which call for no special remark, served to vary the interest of a most attractive programme.

That excellent institution, the Royal Society of Musicians, gave its annual performance of the "Messiah" at St. James's Hall, on Wednesday evening. With such singers as Mdlle. Titiens, Miss Parepa, Mr. Sims Reeves, Mr. Santley, and Mr. Weiss—all singing their best, as though the cause they were engaged in added to their powers—the performance could not fail to be a very fine one, and it is to be hoped that it will largely benefit the society for whose aid it was given.

REVIEWS OF BOOKS.

MILL ON UTILITARIANISM.*

Mr. Mill has in this short work given a statement of the utilitarian theory of moral philosophy, vindicated it from objections, shown what are its sanctions and proof, and, finally, entered at greater length into the relation of Justice to Utility. We have here neither the code of morality nor the detailed analysis of the growth of the feeling. For the former we have at present to resort to Bentham; but his system would require considerable additions before it corresponded to the principles as explained by Mr. Mill. For the latter we may refer to Bain's treatise on the Emotions and the Will; and we have to some extent Mr. Mill's authority for doing so. Whether Mr. Mill will ever undertake to treat either of these matters himself, has yet to be seen. A revision of Bentham's system

* Utilitarianism. By John Stuart Mill. Reprinted from *Fraser's Magazine*. London: Parker, Son, & Bourn.

Digitized by Google

from the ennobled merchants of the great cities. The middle of the century found an oligarchy composed of these elements everywhere the ruling class—engrossing all the places and emoluments of Church and State; but—

"The enormous number of these Court places was not advantageous to the manly character of the noble. To be able to endure with smiles the humours and roughness of an unbridled sovereign, to be complaisant as the pliant servant of the despot's licentious desires, and of the mistresses' establishment, was not the worst effect. He was in imminent danger of becoming so base that the coarseness of the poor *Krippenreiter* appeared comparatively virtuous. It was a period when the noble mother gave her daughter with pleasure into the arms of the profligate prince; and when the courtier gave up his wife to him for money. And it was not only done by poor nobles, but also by the offshoots of royal houses. The nobles in some German provinces took the opportunity of practising similar complaisance, even in our century, towards Napoleon's princes and marshals. But the worst was that the great mass of the Court nobility drew also the families of landed proprietors, who were related to them, to their residences. Sensible men were never weary of complaining that the country nobles no longer dwelt on their properties, to the great damage of their coffers and morals; but thronged to the neighbourhood of the princes to ruin themselves, their wives and daughters, in the pestilential atmosphere of the Court. But these were fruitless warnings in the greater part of Germany till the middle of the eighteenth century."

It was at this period that the bureaucratic class, which has ever since been an incubus upon the country, began to take form and shape; that the separation between different classes became more than ever hard and rigid; that taxation was carried out with grinding severity and cruel ingenuity; that the administration was corrupt, and the courts of law were venal; that servility, whether to officials or persons of rank, became a national characteristic; and that a gloomy, hopeless, discontented, and ironical disposition pervaded all except the privileged orders. The people calmly recognized the evils of their position "with a shake of the head: even their literary teachers were rarely roused to manly indignation, or even to form fruitless projects."

The first breath of air which stirred the stagnant waters of this Slough of Despond came from a religious movement. "Pietism," of which Jacob Spener was the apostle in the latter part of the seventeenth century, was not theological, but evangelical in its tendency. Like Methodism, or the modern Revivals, it arose out of the deep-felt want of a more personal and active piety than was to be found in the Churches of the period. From a transitory impulse, which, as the author tells us, bloomed and withered in less than a century, he considers that it had spent its force by the middle of the eighteenth century. It was not free from extravagances, and, like most movements of the kind, it was attended by this great drawback, that it tended to separate those who came under its influence from what they called the "world." Still it did something to break down the exclusiveness of ranks; it led the rich to care once more for the poor; it prompted the earliest voluntary efforts of a philanthropic kind in Germany; and from the households that fell under its influence sprang the greatest scholars and poets—Goethe and Schiller amongst them—of the next generation. The latter part of the period during which it was actively at work was contemporary with the rise of the new school of philosophy under Leibnitz, Thomasius, and Wolf:—

"The new life forced its way, about 1720, with irresistible power into the houses, writing-rooms, and workshops of the citizens. Every sphere of human activity was searchingly investigated. Agriculture, commerce, and the technicalities of trade were made accessible by hand-books of instruction, which are still in the present day the groundwork of our technological literature. Books were written on raw materials, and the method of working them; on minerals, colours, and machines; in many places popular periodicals appeared, which endeavoured to make the new discoveries of science available to the artizan and manufacturer. Even into the hut of the poor peasant did some rays of bright light penetrate; for him, also, arose a small philanthropic literature. The moral working of every earthly vocation was also exhibited; much that was elevating was said concerning the worth and importance of operatives and of officials; the inward connection of the material and spiritual interests of the nation was proclaimed; incessantly was the necessity pointed out of abandoning the beaten track of old customs, of taking interest in the progress of foreign countries, and of learning their character and requirements. Men wrote upon dress and manners in a new style, with humour, irony, and reproof, but always with the wish of remoulding and improving. The spiritual failings of the various classes and professions, the weakness of women, and the roughness and dishonesty of men were incessantly criticised and chastised, undoubtedly in an uncouth style, and sometimes with pedantry and narrow-mindedness, but in an earnest and upright spirit."

To the question "How did the citizens live at this time?" Herr Freytag gives a copious answer, shedding curious and instructive light upon the domestic life of the period by extracts from the quaint autobiography of Johann Salomo Semler. We cannot now do more than allude to the nearly contemporaneous revival of German poetry and drama under Klopstock and Lessing; but it is important to remark that, notwithstanding this re-awakening of the natural intellect, literature and literary men were held in but slight respect by the possessors of power. "When Frederick William the First called upon the professors of his University of Frankfort to engage in a public disputation with his reader, Morgenstein, who stood on the lecturer's platform in a grotesque

documents, to say at what time, or under what different circumstances, these several branches of the Turanian family issued from the northern parts of Asia and pushed their way to their several settlements. It is, however, by the nature of these settlements alone that Dr. Latham would explain the difference of their present condition. The Voguls and Ostiaks remained on the Obi to find no higher culture near them than that of the Samoiedes. The Fins advanced to the shores of the Gulf of Bothnia to become enterprising sailors and imbibe the spirit of civilization from their neighbours, the Swedes; while the Hungarians poured down on the Danube and the Theiss to mix with the advanced Germans and Poles, and catch the language and traditions of the adjoining peoples, who prided themselves on being descendants of the old subjects of Rome.

We should be sorry to give our readers the impression that, amid all the facts of ethnology, history, and literature, culled in a great degree from the works of the best foreign authorities, which these volumes contain, there was not much both of knowledge and interest to be derived. In the sketch of the history and condition of the Caucasian tribes, and the influence exerted on the national struggle by that curious movement of Mahometan nationality entitled "Muridism," of which Shamil, originally the disciple, afterwards became the champion—in the notice of the Yejids, the Kurd race on the Tigris, whose tenderness on the subject of the "puir deil" Mr. Layard shocked so by calling one of their boys "a young Satan," with their extraordinary "bird-worship," and a creed neither Christian nor Mahometan,—and (to come to more familiar subjects) in the outline of the origin and development of the several races that filled the area of Germany when at its widest extent—the results of considerable research are put forth with much skill. But even those who care little for ethnology will find some interest in the specimens of national literatures afforded by Dr. Latham.

Of the Kalevala, the famous epic of the Fins, he has given a sketch, which for those who cannot read it in the German or Swedish translations, and wish to have a better idea of it than can be gained from Longfellow's "Hiawatha," will have its attractions. For ourselves we confess, after reading it, that Professor Max Müller appears to have somewhat over-estimated its merits when he places it in the same rank with "the Ionian songs and the 'Nibelungen Lied' as the fifth national epic of the world." We have also extracts from Lithuanic, Esthonian, Basque, and Samoiede songs and legends, to which we wish Dr. Latham had added, when on the subject of their nationalities, samples from the Servian and Romaic,—each of which nations possesses a large stock of native poetry. We have only room for a short Esthonian song on the formation of the rainbow:—

"The Rain had five children,
Foster-children at the font;
The first lived in the cradle of the sea,
The second lived in the lap of a lake,
The third was the foster-child of the springs,
The fourth lived as a maid in the river,
The fifth was a widow of the fountains.

They flew up aloft to the clouds
To build the bridge of the rain,
And they wove the woof of the mist
Of the hue of gold.
They made the vapour
Of the red of the sunset its lining.
The path of the Maker they made like a bow,
And the bridge of Mary bright blue."

We close our notice with the following curious statements respecting the lineage of two remarkable personages of our day. "During one of the revolts of the Tzakones (the modern representatives of the old Greek blood of Laconia) a part migrated to Corsica; amongst them, a certain Kalomeros, καλὸν μέρος, or Bonaparte." "With the Bavarian invasion a very modern name makes its first appearance, that of Garibaldi; the Garibalds being the chief family of the Bavaria of the times under notice." We should question whether emperor or patriot were either aware of the fact or would be disposed to welcome its discovery.

SPIRITUALISM "AT HOME."*

Many and various have been the contributions to what may be called "spiritualist literature" during the last fifteen years. Mrs. Crowe led the way with her "Night Side of Nature;" Mr. Howitt has written we know not how many volumes of the like character; Mr. Dale Owen, in his "Footfalls on the Boundary of another World," favoured the Anglo-Saxon public of both hemispheres with a capital collection of ghost stories, together with an able exposition of the so-called philosophy of ghost-seeing; America has already created a perfect library of supernatural narratives; and even more sober-minded England has its *Spiritual Magazine* and other publications devoted to the new science which is to eclipse all other sciences. Mr. Daniel Dunglas Home, though undoubtedly the chief apostle of the movement, is rather late in the day in giving formal expression to his views. We are not aware of any previous volume having proceeded from his pen; but we have here an elaborate account of his experience as a seer and

* Incidents in my Life. By D. D. Home. Longmans & Co.

irreparable loss, and dismayed by the victory of the tyrant and the imprisonments, torturing, and hanging that followed it, remained passive and speechless. But this "reign of order" did not last long. In a few months the Duke of Savoy and the Bishop quitted Geneva, and their despotic decrees were speedily revoked. The Pope, on the petition of the citizens, even ordered the Bishop not to return to the city. About the same time (1520) the influence of Luther first showed itself among the Genevese patriots, and the priests, taking the alarm, got up processions "to avert the wrath of heaven." Ere long John of Savoy, Prince-bishop of Geneva, the sordid, corrupt, and miserable oppressor, lay on his death-bed at Pinerolo. Dr. Merle d'Aubigné draws a fearful picture of the last moments of this great sinner. His bodily sufferings, the penalty of his foul life, were horrible; hirelings attended him, and conscience, awakened, filled him with remorse and despair.

"The shadows of the victims of the expiring man were traced on the walls of the room by an avenging hand, and when at last the priests desired to administer extreme unction, he imagined they were covering him with blood. They presented him the crucifix; he seemed to recognise the features of Berthelier, and asked with a wild look:—'Who has done that?' Far from embracing with respect and submission this emblem of eternal salvation, he rejected it with horror, heaping foul abuses on it."

He spoke some words of penitence, and warned his successor, who waited beside him, not to tread in his footsteps.

The quiet and depression of the city was broken by the visit, in August, 1523, of the Duke of Savoy, with his beautiful imperious duchess, Beatrice of Portugal. It was hoped that by the presence of a court, and the power of its seductions, the obstinate independence of the people might be vanquished and the coveted sovereignty at last obtained. A little earlier in that same year some copies of Lefèvre's French New Testament had been brought to Geneva by poor pedlars. The great conflict which was going on was shown in the performance of two *mysteries*, one on the discovery of the cross by the Empress Helena, and the other on the discovery of the Bible and the need of reformation. A sharp and terrible blow fell on the patriots in the following year. Aimé Lévrier, the just judge, a calm, unselfish, inflexible man, as practically wise as he was courageous, firmly withstood the usurpations of the Duke. He was seized, as he left the cathedral, by the Duke's orders, and carried off to the Castle of Bonne; and there, after the mockery of a trial, with scourging, was beheaded. It was late in the night of Sunday, 11th March, 1524. The noble martyr thought much of Berthelier. "Death will do me no harm," he said.

"Alone in the night, in those sublime regions of the Alps, surrounded by the barbarous figures of the Savoyard mercenaries, standing in that feudal court-yard, which the torches illumined with a sinister glare, the heroic champion of the law raised his eyes to heaven and said: 'By God's grace I die without anxiety, for the liberty of my country and the authority of St. Peter.' The grace of God, liberty, authority—these main principles of the greatness of nations were his last confession. The words had hardly been uttered when the executioner swung round his sword, and the head of the citizen rolled in the castle-yard. Immediately, as if struck with fear, the murderers respectfully gathered up his remains, and placed them in a coffin. 'And his body was laid in earth in the parish church of Bonne, with the head separate.' At that moment the moon set, and black darkness hid the stains of blood which Lévrier had left on the pavement of the court-yard."

Well may the historian say, "Berthelier, Lévrier, and others, have hitherto been only Genevese heroes; they are worthy of being placed on a loftier pedestal, and of being hailed by society as heroes of the human race."

The approach of hostile armies to his States compelled the Duke to quit Geneva soon afterwards. In the exciting times which followed the people found a new leader, and one worthy of his martyred compatriots, in Besançon Hugues. Full of rare interest are those passages of the story relating to the flight of the patriots to Friburg on the approach of the ducal army sent to capture them. The escape of Hugues was remarkable. The crafty commandant of Gex, who was to seize and kill him, went to sup with him as a friend: they spent the evening in conversation; and then Hugues, justly suspicious, had his guest to bed, and galloped off in the night on his guest's horse for Friburg. The Swiss gave manly welcome to the fugitives, who were soon afterwards joined by their wives and children. The Duke entered the city; the wavering citizens were encouraged by a Swiss embassy; the "Council of Halberds" named Charles the Good Protector of Geneva; the protest of the Hôtel de Ville was signed; Huguenot syndics were elected; and the exiles returned.

"The syndics on horseback, carrying their bâtons, followed by all who had horses, went out to meet them, and the people collected near the Swiss gate to receive them. A salute of guns announced their approach. They walked three abreast; in the middle was a Genevese fugitive, on his right and left a deputy of Berne and of Friburg; this order, continued through the whole line, announced more clearly than all the rest the close union of the three cities."

A conspiracy, promoted by the canons against this Swiss alliance, failed, and the canons fled from Geneva. A few days later, envoys from the Swiss cantons arrived, and the alliance was sworn to amidst enthusiastic joy.

At this happy crisis, Dr. Merle D'Aubigné breaks off for a time the story of Geneva, and opens to us the wider and more familiar

He went up to the wheels, and first promised speedy death, and afterwards proffered them a free pardon, if they would confess sincerely. But when upon the very wheel he found them more obstinate than ever, and that they would give no other answer than that they would confess nothing, and that their penalty was nearly paid in full, the Czar left them to the agonies of death."

In one case only did he show any signs of clemency. He had been greatly struck by the extraordinary firmness with which one of his victims bore the tortures to which he was subjected, and the resolution with which he maintained silence, though four times put to the rack and the fire. At last "the Czar, perceiving that tortures were of no avail, turned to enticements, and having kissed the person under the question, promised to pardon him, and give him a colonel's commission, if he would confess the truth." Such unusual kindness produced the desired effect, and the prisoner made a full confession. He stated, besides, that he was the president of a society into which nobody was admitted without being previously tortured, and in which no member could be promoted to the higher grades without passing successive examinations in the science of bearing pain. Aspirants for membership who broke down under the first tortures were put to death, and he and his comrades had made away with about four hundred unsuccessful candidates. He said, moreover—

"The knout was a mere nothing; that the roasting of the flesh after knouting was nothing; that he had to go through far more cruel pains among his associates: 'for,' continued he, 'the sharpest pain of all is when a burning coal is placed in the ear; nor is it less painful when the head is shaved, and extremely cold water is let to fall slowly drop by drop upon it from a height of two ells.'"

This is the only instance in which the Czar evinced any feeling of generosity or forgiveness. In every other case his behaviour was consistently inhuman, and proved how little his savage nature had been refined and civilized during his much-vaunted labours in the dockyards of Saardam and Deptford, or by the brilliant society in which he had moved at Paris and Vienna. Nor was it only by his conduct towards his rebellious soldiers that he rendered himself unworthy of the name of Great. He treated his friends as roughly as his foes, and his playfulness was often as dangerous as his anger. Our author relates several instances of the royal wrath. At a banquet given by General Lefort, the Czar suddenly "startled all the guests by striking right and left, he knew not where, with his drawn sword. Knes Romadonowski had to complain of a cut finger, and another of a slight wound on the head. Mikitim Mosciwicz was hurt in the hand as the sword was returning from a stroke. A blow far more deadly was aiming at the general-in-chief, who without a doubt would have been stretched in his gore by the Czar's right hand, had not General Lefort, catching the Czar in his arms, drawn back his hand from the stroke." On another festive occasion, "catching his favourite Alexasca dancing with his sword on, he taught him the fashion of laying it aside by inflicting a box, to the force of which the blood that spouted abundantly from his nose bore witness." This favourite often came in for such marks of royal attention. One day he "was whispering something in the Czar's ear, which put him in a sudden passion, and he inflicted some boxes on his importunate monitor, so that he lay stretched at full length, quite like a dying man, at the feet of his irate Majesty." As a specimen of the Czar's comic powers we may take the following story:—"Baron Golowin had, from his cradle, a natural horror of salad and vinegar; so the Czar, directing Colonel Chambers to hold him tight, forced salad and vinegar into his mouth and nostrils, until the blood flowing from his nose succeeded his violent coughing."

Such was the man whom history has been delighted to honour, and whose virtues have been eulogized by the philosophers and moralists of all nations. A more savage, cruel, and selfish tyrant has seldom existed. His ferocity and sensuality made him a disgrace to humanity, and to the religion which he outwardly professed. Undoubtedly the services which he rendered to Russia were immense. He prepared the way for the rapid steps which she has taken since his time. He organized her army, he created her naval power. He commenced the policy in accordance with which she has gone on conquering and annexing, till her throne at one time threatened to overshadow the world. He roused her people from the lethargy into which they had fallen, and made a mighty nation out of their obscure tribes. And for all this he deserves, and has justly acquired, a great renown in his native land. But he is none the less to be condemned and detested as a man, even by those who admit his merits as a monarch. After Napoleon's retreat from Moscow, the half-grateful, half-fearful inhabitants of Germany bestowed on the Russian soldiers, with whom they made acquantance for the first time, the name of *Rettungs-Bestien*. They could not call them "Guardian Angels" without compromising the angelic character, so they styled them their "Guardian Brutes." Some such *Rettungs-Bestie* we may consider Peter. History has hitherto honoured him with the title of "The Great;" but if Truth had been consulted on the subject, he would have been more justly designated by the epithet of "The Brutal."

"'I can very easily suppose that, with you by me,' said he, filling up her pause.

"'Oh! but I don't mean myself at all,' replied she, reddening. 'I am only thinking of what might happen; and suppose that this girl knew of some one belonging to her—we will call it a brother—who had done something wrong, that would bring disgrace upon the whole family if it was known—though, indeed, it might not have been so very wrong as it seemed, and as it would look to the world—ought she to break off her engagement for fear of involving her lover in the disgrace?'

"'Certainly not, without telling him her reason for doing so.'

"'Ah! but suppose she could not. She might not be at liberty to do so?'

"'I can't answer suppositious cases. I must have the facts—if facts there are—more plainly before me before I can give an opinion. Who are you thinking of, Ellinor?' asked he, rather abruptly.

"'Oh, of no one,' she answered in affright. 'Why should I be thinking of any one? I often try to plan out what I should do, or what I ought to do, if such and such a thing happened, just as you recollect I used to wonder if I should have presence of mind in case of fire.'

"'Then, after all, you yourself are the girl who is engaged, and who has the imaginary brother who gets into disgrace?'

"'Yes, I suppose so,' said she, a little annoyed at having betrayed any personal interest in the affair.

"He was silent, meditating.

"'There is nothing wrong in it,' said she, timidly, 'is there?'

"'I think you had better tell me fully out what is in your mind,' he replied, kindly. 'Something has happened which has suggested these questions. Are you putting yourself in the place of any one about whom you have been hearing lately? I know you used to do so formerly, when you were a little girl.'

"'No; it was a very foolish question of mine, and I ought not to have said anything about it. See! here is Mr. Ness overtaking us.'"

But with these objections the story is admirably told. The young barrister, whose love is strong but whose ambition masters it, is a faithful sketch of a nature not incapable of generous emotions, but more fascinated by worldly advantages, and with some struggles with his better feelings watching an opportunity of crying "off" from his love bargain. Mr. Wilkins, too, the country conveyancer, over-educated for his career, and debarred by his birth and profession from mixing with the society for which his intellectual accomplishments qualify him—chafing under the lot which dooms him to be only "Wilkins the attorney," and lapsing, after his wife's death, into habits of intemperance, till he is obliged to confide his practice to a partner whom he dislikes, and whom, in a fit of passion, he kills, is a character faithfully elaborated. One of the best scenes in the book is that in which the explosion takes place between Wilkins and Ralph Corbet, which gives the latter his desired pretext for breaking off his engagement with Ellinor. Ralph is trying to bring the attorney to terms about Ellinor's portion, in pursuance of an arrangement to which Mr. Wilkins had consented some time previously. Mr. Wilkins is drinking cognac pretty freely after dinner, and complains that he has been troubled with headache during the day:—

"'I am sorry for it," said Ralph, 'for I wanted particularly to speak to you about business—about my marriage, in fact.'

"'Well! speak away; I'm as clear-headed as any man, if that's what you mean?'

"Ralph bowed a little contemptuously.

"'What I wanted to say was, that I am anxious to have all things arranged for my marriage in August. Ellinor is so much better now; in fact, so strong, that I think we may reckon upon her standing the change to a London life pretty well.'

"Mr. Wilkins stared at him rather blankly; but did not immediately speak.

"'Of course I may have the deeds drawn up in which, as by previous arrangement, you advance a certain portion of Ellinor's fortune for the purposes therein to be assigned; as we settled last year when I hoped to have been married in August?'

"A thought flitted through Mr. Wilkins's confused brain that he should find it impossible to produce the thousands required without having recourse to the money-lenders, who were already making difficulties, and charging him usurious interest for the advances they had lately made; and he unwisely tried to obtain a diminution in the sum he had originally proposed to give Ellinor. 'Unwisely,' because he might have read Ralph's character better than to suppose he would easily consent to any diminution without good and sufficient reason being given, or without some promise of compensating advantages in the future for the present sacrifice asked from him. But, perhaps, Mr. Wilkins, dulled as he was by wine, thought he could allege a good and sufficient reason, for he said:

"'You must not be hard upon me, Ralph. That promise was made before—before I exactly knew the state of my affairs!'

"'Before Dunster's disappearance, in fact," said Mr. Corbet, fixing his steady, penetrating eyes on Mr. Wilkins's countenance.

"'Yes—exactly—before Dunster's——' mumbled out Mr. Wilkins, red and confused, and not finishing his sentence.

"'By the way,' said Ralph (for with careful carelessness of manner he thought he could extract something of the real nature of the impending disgrace from his companion, in the state in which he then was; and if he only knew more about this danger he could guard against it; guard others: perhaps himself). 'By the way, have you ever heard anything of Dunster since he went off to—America, isn't it thought?'

"He was startled beyond his power of self-control by the instantaneous change in Mr. Wilkins which his question produced. Both started up; Mr. Wilkins white, shaking, and trying to say something, but unable to form a sensible sentence.

of different salts. We thus see that mechanical force will counterbalance the forces concerned in the phenomena of solution or crystallization, according to definite laws, and thus a *direct* correlation is proved. Some may question whether solution and crystallization should be looked upon as chemical changes. Mr. Sorby has, however, described experiments that go far towards proving at least the high probability that mechanical pressure will decrease or increase the exercise of chemical affinity, according as mechanical force has to be overcome in the change, or comes in to assist it. In the former case, mechanical force is set free at the expense of chemical energy, which is thereby, to a certain extent, diminished; and, in the latter, mechanical force ceasing, as such, gives rise to chemical activity.

This new phase in the correlation of forces is the first step in an almost new branch of scientific research that ultimately may prove one of high interest in throwing light on the phenomena of chemical affinity and crystallization, as well as in explaining various geological phenomena—the results of rock-masses having for long periods been subjected to pressure, and during which such mechanical force may have materially modified those chemical changes that were dependent on weak affinities and on slow action taking place through long periods of time.

MR. GASSIOT'S SPECTROSCOPE.

When Fox Talbot first noticed, many years ago, the power of a prism in analyzing the light of coloured flames, perhaps no one had dreamed that future analysis of the solar beams would reveal the incandescent condition of the bright orb of day and of the glittering stars of night, and a vast number of other important truths. To the energy and liberality of British merchants Science seems to be as much indebted as to its specially devoted pursuers. De la Rue, with his clockwork telescope and the photo-heliograph from Kew, did the most important work at the last total solar eclipse; Carrington, at Red Hill, has stored for years more regular and important details of the sun-spots than any professional astronomer; Nasmyth, of steam-hammer notoriety, discovered those strange bright streaks, the "willow leaves," with which the sun's whole surface is covered; but no one has for a longer period more continuously, more practically, or so modestly and so unassumingly, done such magnificent deeds in behalf of the progress of knowledge and in aid of certain branches of scientific investigations as Mr. Gassiot, of Clapham. Of his wonderful electrical apparatus there are but few who have not heard, but there are not many who have seen; indeed, all that the world knows of Mr. Gassiot's scientific doings is obtained far more from what is spoken of them by others than by any prominence he himself gives to his labours and his almost lavish expenditure. At the Royal Society last week there was described and exhibited the most exquisite and wonderful spectroscope that has ever been constructed. We need scarcely say it was Mr. Gassiot's. Rumour says it has cost £200; but the cost had not been a consideration with the owner. He had been brought, as one of the jurors during the Great Exhibition of 1851, into communication with Mr. Browning of the Minories, and at a subsequent period he had been shown by that clever manufacturer an admirable spectroscope with two prisms and a magnifying power of 40 linear. When Professor Roscoe figured in his book on "Spectrum Analysis" the instrument made by Steinheil, of Munich, for Kirchoff and Bunsen, with three prisms of 45° and one of 60°, Mr. Gassiot's attention was attracted by some elementary experiments of Mr. Browning, to show the practicability of constructing a spectroscope of far higher power. The order which one might have expected was given—to construct the most complete and powerful instrument that was possible for practical use. It has been done, and the instrument, with its micrometers, verniers, telescope-scales, collimator, eye-pieces, and every devisable means for accuracy and minuteness of detail in observation, and facility of repeating experiments with the greatest certainty, is before the world. The means for the latter result will be appreciated by every operator that has been obliged to work with minute portions of substances or limited extents of surface. Not only is the instrument of the finest possible workmanship, but there have been introduced into its construction so many practical contrivances for facilitating its use, that it will be difficult indeed for any future instrument to surpass it. The refracting portion consists of a train of nine prisms of Chance's extra-dense optical flint-glass of nearly 4 specific gravity—the prisms increasing in size in the order they occupy, so as not in the first case to offer more resistance than could be avoided to the passage of the light, and ultimately, as the rays were spread open in passing from prism to prism, by their gradual enlargement of size to prevent any escaping beyond the boundaries of the prisms themselves. The prisms are all made to the angle of 45°, and not 60°, or right-angled, as commonly employed, whereby the rays of light are much more economically preserved, loss of light by reflection prevented, the largest surface presented to the telescope, and many other advantages obtained.

The result fully justifies the adoption of this arrangement, as the simple experiment of using a common spirit-lamp with a salted wick at once proves, the light passing readily through the whole train of prisms, and the familiar double lines D being distinctly visible even with a magnifying power in the telescope of a hundred diameters.

As an illustration of the cost, care, and difficulty of manufacturing the prisms, we may mention that in one case no less than

PUBLIC OPINION.

A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

CONTENTS of No. 85, MAY 9, 1863:—

HOME:—
- Income Tax and Public Charities.
- Mr. Walter and the Revised Code.
- Sir George Grey and the City and Metropolitan Force.
- The Registrar-General's Annual Report.
- Church-Rate Commutation Bill.
- Mr. Gladstone and the Oxford University.
- What is the Curse of Ireland?
- Mr. Gladstone's Taxes.
- Construction of War Ships.
- Cheap Dining-Rooms and Working-Men's Halls.
- Dangers and Difficulties in Japan.
- Rural Reformation in the Punjab.
- Church Progress.

AMERICA:—
- The War News.
- Are we Drifting into a War with England?
- The Premier at Glasgow—Coxcombry at its Climax.
- The "Cry against England."
- The Starvation Dodge of Jeff. Davis.

RUSSIA:—
- Russia's Reply to the Three Powers.

PUBLIC OP

A Weekly EPITOME of FACT and OPINION

PUBLIC OPINION every SATURDAY, 2d.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

PUBLIC OPINION is invaluable to Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

TO ADVERTISERS.—The extensive circulation attained by PUBLIC OPINION amongst all classes of society, renders it a valuable Advertising Medium. Appealing to no restricted class, but to the great body of persons interested in the discussion of the topics of the day; aiming to interest alike the Politician, the Clergyman, the Student, and the man of Business, it is peculiarly adapted for Advertisements of a Literary, Artistic, or Scientific nature, the announcements of Assurance Companies, &c., while its lighter pages, attractive to the various members of families, render it a valuable medium for general commercial firms.

SCALE OF CHARGES FOR ADVERTISEMENTS.	£.	s.	d.
Four Lines and under	0	2	6
Each Additional Line	0	0	6

A CONCISE RECORD of EVENTS connected with LITERATURE, the FINE ARTS, MUSIC, the DRAMA, the CHURCH, the ARMY and NAVY, and the LAW, kept in PUBLIC OPINION, so as to give all Facts of Interest connected with each, and to show their General Progress.

THE COLENSO CONTROVERSY.—PUBLIC OPINION (Nos. 60 to 65) contains a Digest of the Reviews of Bishop Colenso's First Work on the PENTATEUCH, showing all sides of this important question. Nos. 72 and 73 contain a comprehensive Analysis of Bishop Colenso's Second Volume, shewing the scope and design of the work. The set complete may be obtained of any Newsagent, price 1s. 4d.; or, by post, 2s.

KINGLAKE'S HISTORY OF THE WAR IN THE CRIMEA.—PUBLIC OPINION, Jan. 31, 1863, contains a comprehensive digest of the Reviews of this important national work. Price 2d.; stamped, 3d.

THE ROYAL WEDDING NUMBER of PUBLIC OPINION.—PUBLIC OPINION of Saturday, March 10, 1863, contains full particulars of the Reception of H.R.H. the Princess Alexandra, the Procession in honour of her Arrival, full details of the Marriage Ceremony, and the various Public Rejoicings, forming the most complete and concise record of this great national event.

THE WAR IN AMERICA.—All the Great Battles and other Events connected with the Civil War, given in the words of the English and American Press in PUBLIC OPINION, Vols. I. and II.

IRON-CLAD SHIPS.—The History of Iron-clad Ships and the Debate upon them, to be found in PUBLIC OPINION, Vols. I. and II.

ARMSTRONG, WHITWORTH, and LANCASTER GUNS. The question of the relative merits of the above Guns discussed in PUBLIC OPINION, Vols. I. and II.

THE BRITISH COLUMBIA EMIGRATION QUESTION. Is British Columbia a Fit Place to Emigrate to? See PUBLIC OPINION, Vols. I. and II.

THE EDUCATION QUESTION, the REVISED CODE, &c. All arguments for and against the New Code to be found in PUBLIC OPINION, Vols. I. and II.

THE ROUPELL FORGERIES, and other CAUSES CELEBRES. For the fullest Accounts see PUBLIC OPINION, Vol. II.

COMPETITIVE EXAMINATIONS.—The Merits of the System Reviewed in PUBLIC OPINION, Vols. I and II.

THE COTTON QUESTION fully discussed in PUBLIC OPINION, Vols. I. and II.

FEMALE EMIGRATION.—For the *pros* and *cons* of this question, see PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF BLOCKADE EXAMINED in PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF INTERVENTION ventilated in PUBLIC OPINION, Vols. I. and II.

THE GREAT EXHIBITION OF 1862.—The Opening, Progress, Incidents, and Close of. See PUBLIC OPINION, Vols. I. and II.

THE THAMES EMBANKMENT.—The Rise and Progress of this Project. See PUBLIC OPINION, Vols. I. and II.

Johnstone, in a speech remarkable for its manner and matter,—assuming a happy and sagacious attitude of independence, on so cosmopolitan a question, to mere partisan considerations,—showed that the Italian Government were labouring in earnest to improve the internal organization of their kingdom. The real question must be, whose fault is it that they are slow in carrying out their plans? Lord Normanby and his friends entirely ignore the fact, that in succeeding to the Two Sicilies, Victor Emanuel succeeded in effect to a regular Augean stable. The States of the Church were also in a deplorable condition; and they would now be as badly off as Naples, were it not for the superior intellect of the leading men of the northern provinces, and for the habits of administration they had retained from their old municipal organization. Succeeding to provinces where good government was absolutely unknown, the Piedmontese Government have had not merely to create it, but to create it in one Italian mould—a task which, considering the differences of life and interests in the various States, may well seem insuperable, and is only undertaken because of the imperative importance of Italian unity. Victor Emmanuel and his Ministers have not merely been compelled to reform the Naples prisons, and to give the prisoners white bread instead of black; they have had to deal with such vast questions as education, taxation, the administration of justice, coinage, the endowments of the Church, the civil rights of the clergy, in many distinct provinces at once, all of which had to be brought under one system, and to undergo extensive and sweeping change. They have been driven to do all this with the question of religion hanging suspended over their heads—in the teeth of the Church of Rome and the prejudices of large masses of the population—with an exiled dynasty intriguing on their frontiers—amidst the discouragement of diplomatists and the avowed disapproval of the French—in danger any moment of a revolutionary explosion from the democratic party—and in the midst of the excitement caused by the restlessness of Garibaldi and the prolongation of foreign occupation at Rome. This is what they have had to bear, and it is while they are toiling to accomplish their duty, that Lord H. Lennox comes back to us, and talks about the dirt of prisons, which certainly were dirty enough long before the Savoy dynasty ever were at Naples. This is the happy conjuncture which Mr. Disraeli seizes for comparing the Italian Government to Cossacks, and for lecturing them on their political incapacity.

It is said that Italy's business is to give up all idea of Rome, and to think only of her internal organization. This, indeed, is Mr. Disraeli's point of view, and it is one that does equal honour to his head and to his heart. It is easy to prescribe for a newly constituted kingdom an entire abstinence from all agitating emotions. Mr. Disraeli might as well prescribe a trip to the sea-side as a recipe for the distressed Lancashire weavers. How is it possible for Italy to forget that Rome is the keystone of the arch? The religious difficulty is one that paralyses the organization of all the provinces. More than this, Rome is the nucleus from which are produced all the disturbances in the Two Sicilies. Mr. Bentinck chooses to deny it, the Italian Government and Lord Palmerston affirm it, and we should be glad to know which of the two have the amplest means of information. Lastly, it is very well to say that the Turin Cabinet forget Rome—but the masses will not and ought not to forget it; and should any Minister be less patriotic than the masses, the extreme party of action reap the benefit of his mistake. The French occupation of Rome is perpetual fuel to the revolution. Every Italian Ministry treads on smouldering fires. The Mazzinians will always be powerful till Italy is one; nor can the King of Italy—if even he wished it—afford to leave the cry of Rome as a battle cry for his enemies. What the Italians can do, and ought to do, we believe the present Ministry are doing. They are working at a disadvantage, as they always will work at a disadvantage, till Italy is free both from foreign and priestly intervention. But they have left off the servile habit introduced by Signor Rattazzi and his crew—of kneeling to the French Emperor with open mouths, waiting for the Italian pear to drop. They have risen to their feet; they have not taken their eyes off Rome; but they are girding themselves for the contest which will give them Rome. It may not be on the battle-field they will win it. The contest need not be a bloody one, provided it is one of moral dignity, of resolution, and of patience. France will not give Rome to Italy, so long as Italy is a suppliant, but she will be forced to give it, when

aggrieved, however much they may regret that they should have separated from the old Union at all, and still more that they should have chosen such a questionable ground of separation. All such men, we can well believe, must be half maddened by their present position—the position, that is, of being forced to aid, by loan, by tax, by conscription, and to seem to approve, by compelled silence, a war which they feel to be unrighteous, and scarcely hope to be successful.

One of their most painful sensations must be one of deep humiliation: we are speaking, remember, of citizens of the Free States, of Americans who were proud of the Great Republic, and would fain have preserved it from dissolution at any cost, save that of surrendering everything that made it worth preserving. They see installed in the high places of power, exercising dominion over the country at home and representing it abroad, speaking in its name to Europe and damaging its reputation over the world—men whom the most loyal cannot respect, even in virtue of their office; whom even in ordinary times they would not have seen wielding even ordinary authority, but who, at this most critical instant of the nation's life, are wielding such authority as was never before conferred, even for an hour, upon any American citizen. They are compelled to sit by and witness that saddest and least dignified of spectacles—strong measures inaugurated by weak men,—schemes so lawless and audacious that only the holiest cause and the most consummate sagacity and the most signal success could suffice to justify them,—set on foot on behalf of a cause which they scarcely regard as righteous, and which, even if just at the outset, has been desecrated long ago, carried out with no skill or wisdom, and ending in failure after all. They behold a crisis so momentous, issues so vast, a struggle so gigantic, that it might well have called forth all the genius, all the virtue, all the wisdom of the nation, and made these rise to a stature never reached before; and as its net result they perceive only an exhibition of littleness and incapacity, which America's worst enemies and most insolent despisers could scarcely believe possible. The war has developed great vices, but neither great virtues nor great abilities—plenty of great contractors, but not one great man. Successful or "Heaven-born" generals, perhaps, we were not warranted in expecting, for such come rarely, and usually come only after long training and through bitter tribulation; and the antecedents of America, happily for her, had provided no nursery for military genius. But surely, great administrators and great legislators might have come to the surface, for the whole life of the people was one continued exercise of self-government. And if citizens who are politicians to a man and from their cradle, and any one of whom may any day become a governor, a senator, a Congressman, a statesman, or a President, cannot in their hour of utmost need produce a Ruler, a natural and real "king of men,"—then either the school must be bad, the education radically faulty, or the material hopelessly defective. In any case, and in any supposition, the American Republic has been an elaborate and ambitious failure.

Again, the men whose sentiments we are conjecturing—the sober, thoughtful, patriotic citizens of the great Republic—were proud of their country because she was free, because they were governed by sacred laws, and not by despotic or individual will. They feel that they can no longer be proud of her on this score. Laws have been trampled under foot, individual rights truculently set at naught, judges threatened and arrested, duly elected representatives driven out by the soldiery, as used to be done in France, citizens imprisoned without warrant, without trial, and without crime, and the very Habeas Corpus Act, enacted to be a safeguard against the tyranny of the Executive, annulled by the mere decree of that Executive itself. State rights, too, which a great proportion of the Americans value more than even personal liberty, have been not only systematically violated, but openly denounced; and there are indications enough not only that the old Federal Constitution is rapidly merging into a despotism, but that this despotism will take a military form. The conscription itself is proof enough of this. A war, waged in the name of the whole Northern people—assumed to be by their desire, and the expression of their all but unanimous passions, and which could have no plea or justification on any other assumption—is so little popular, people are so sick of its purpose, or so hopeless of its triumph, or so disgusted at the incapacity which has marked its every movement, that even the most enormous bounty can

Mission to public support. There is no distinction of party, sect, or class, which can warrant professed philanthropists in denying their aid to this great work of humanity.

THE TURNPIKE NUISANCE.

IT was the opinion of Mr. Weller, senior—and his prolonged experience as the driver of a stage-coach gave weight to his authority—that the keepers of turnpike-bars are "all on 'em men as has met with some disappointment in life. Consequence of vich they retires from the world and shuts themselves up in pikes; partly with the view of being solitary and partly to rewenge themselves on mankind by takin' tolls." Since the delivery of this dictum, the establishment of railways has greatly favoured their indulgence in a taste for seclusion. At no time has the most misanthropic amongst them had cause to fear that he was wearing away life without sensibly augmenting the sufferings of his race. Their exactions drove half a dozen counties to the semi-revolt of the Rebecca riots. In many parts of England bars hem in the country towns with impenetrable lines of circumvallation, which make locomotion a nuisance, and the possession of a horse and a vehicle, an expensive torture. Even if the tax upon our pockets were less considerable than it is, the constant blister to our tempers would still be a serious grievance. No other bodily pain is equal to that inflicted by water falling drop after drop upon the head. Nor can there be a worse fiscal infliction than an impost which perpetually lies in wait for victims, and is ever ready to punish by mean exaction of coppers the slightest indulgence in a vagrant habit. As a general rule we recognize in direct taxation the convenience of making a man pay once for all the annual sum at which he is assessed towards any given object. Our streets and parochial highways are kept up by a parochial rate, and not by the daily and hourly extortion of contributions towards their maintenance. We know how it happens that the expense of repairing Fleet-street is defrayed in one way, and that of repairing the turnpike road to Barnet in another. But to account for an anomaly is not to justify it. As the street and the road are equally matters of public concern, there can be no reason why one should be supported by a general rate and the other should depend upon payments made for its use. In no other country but England are the main lines of communication in the hands of private proprietors, who are authorised to make travellers stand and deliver at the distance of every few miles. There is, no doubt, an apparent fairness in making every one who rides or drives on a road pay for the advantage he derives—and pay just as often as he derives it. When the subject is more closely considered, it will, however, be seen that this is rather specious than real. Not only do the tolls fall so unequally upon those who do and those who do not live near a bar,—upon those who can and upon those who cannot evade them; but their rate necessarily depends on the amount of the traffic. If that is large, they are low; if it is small, they rise to an exorbitant height. No objection could be made to this if the existence of the roads were matter of indifference to all except those who traverse them. That, however, is not the case. They are required for the general interests; and it is therefore not just to secure a public benefit by a charge which is extortionate in reference to the accommodation directly afforded to those who pay it. On the other hand, it often happens that a road is constructed mainly for the accommodation of through traffic; and that when this falls short, the local traffic, in the neighbourhood of intermediate towns, is compelled, by increased tolls or more frequent bars, to bear a very disproportionate share of the expense of a road which was laid out without much regard to their wants, and in which, as a whole, they have but a slight interest. The extension of railways has, of course, greatly aggravated the evil, which is increasingly felt as they spread over the country. It is superfluous to do more than allude to another grievance of the present turnpike system—the numerous exemptions from tolls enjoyed by the agricultural and other classes. These frequently, if not always, involve a corresponding increase in the rates imposed upon the public at large. It is probable that the declining condition of the turnpike trusts in many parts of the country will before long force upon Parliament the consideration of this question. There is a point beyond which tolls cannot be

shall ensure them respect, and they will no doubt be proper and steady-going establishments in their way. But if this be the case, do not let shareholders or the public fancy, that they will return inordinate dividends upon the capital invested; for if such an impression be encouraged, it will terminate only in the most serious disappointment. It must be distinctly borne in mind that, though the prospectuses of the three establishments recently formed furnish satisfactory names for directors, and particularly two, the *International Financial Society* and the *Société Générale of London*, include many of the best and most familiar of the leviathan capitalists of the City, yet while this may show confidence in the merits of these enterprises, it does not afford much warranty for their ultimate advantageous issue. They are wealthy, and may be satisfied to hold their investment in these institutions; or they can, if they choose, provided the premium runs to a high and tempting figure, reduce their number of shares by allowing the public to take them at the enhanced price; and they may eventually discover, in the course of a short period, that it will be to their benefit to realize all they possess and quietly retire. Such things have occurred before, in many of our best and leading financial institutions, and it is not improbable that they may, under peculiar circumstances, occur again.

The memorable history of the Grand Trunk of Canada Railway,—its parallel instance of the Great Western of Canada Railway, where Mr. Samuel Laing was one of the motive powers,—gives us some experience of what has been accomplished by a strong combination of capitalists, and therefore the public should look to the protection of themselves, and not be led astray by the well-turned phrases of the advertisements. The whole of these societies may succeed if conducted in a legitimate manner, and hereafter are likely to pay respectable dividends; but there is, in reality, nothing in them to carry them out of the ordinary run of other adventures, such as are frequently promoted for general patronage. It only shows, too, that their very introduction has been viewed with an eye of jealousy by many of our capitalists of rank; and, at the same time, it must be admitted that this circumstance speaks well for the vigilance displayed to shield our large national banking establishment from any complicity in jobbery suspected to be lurking at the bottom of these companies. When the International Financial Society was first announced, four or five of the principal Bank directors were ushered into print as the guiding geniuses of the enterprise, and among them was the firm of Messrs. Finlay, Hodgson, & Co., the partner, Mr. Hodgson, M.P., the Governor, being supposed to take office. This excited surprise, and it is said a proprietor waited upon him, and distinctly requested to be informed whether he seriously proposed, whilst he was Governor of the Bank, to continue in that position and also allow himself to be placed on the board of the new company. An explanation was entered into, which it is to be presumed was satisfactory to both parties, and the name of the firm the next day was asserted to have been introduced by mistake. The propriety of Bank directors allowing themselves to be mixed up in projects of this description has been very seriously discussed, and not without reason and advantage. Incidents of this nature pretty strongly illustrate the feeling aroused by the introduction of the *Crédit Mobilier* principle, and will show, like other pertinent facts, that the antecedents of the Parisian establishments are not held in the highest veneration. Returning to the principal points of distinction between the English and French Mobilier companies, they are prominently as follows:—The French Mobilier companies have succeeded, or *primâ facie* they have prospered, through Court patronage, Court speculation, and wholesale Government concessions; from these their chief profits have been derived, and their maintenance is principally due to the expectation of additional favours from Imperial sources. The English companies are to be conducted without the least approach to speculation; and since there is at St. James's no Court patronage such as exists at St. Cloud, no Count de Morny or other satellites to pull the strings, and no concessions to be received either from Lord Palmerston, Mr. Gladstone, or that strict old red-tapist Sir C. Wood, the ground of business is considerably narrowed. Loan contracts, foreign companies, and the other multitude of schemes may invite co-operation, and receive a fair share of attention from any of the companies, but it is scarcely to be anticipated that everything they touch will turn to gold, or that the dividends will increase with the lapse of every year. The public, after receiving this warning, will investigate for themselves, and not be too ready to launch extensively into these gigantic enterprises.

cousins. Whatever be their vulgarities or their faults, they have certainly considerable manly virtues, and they are labouring at the present moment under the extraordinary excitement of a vast civil war. We learn, then, that nothing excuses illbreeding in the eyes of Mr. Roebuck, nor is there any time at which it is not right to remind the illbred of the enormity of their offence. Yet it is difficult altogether to understand what Mr. Roebuck calls being unfit for the government of oneself. Nor is it more evident what is his idea of the "courtesy and community of the civilized world." Neither self-government nor courtesy, it seems, prevents a man from insulting his neighbours when they are anxious and distressed, so perhaps it makes less difference to America whether she ever arrives at these unimportant Christian virtues in the course of her social development. The next amiable bite that Tear 'em gives at the trousers of our transatlantic cousins has also reference to the clumsiness of their social manners, which the trueborn wellbred Briton never can abide. He is affable enough to reproach them with displaying "the sneering insolence of an upstart race." When a man is angry, he generally lets out truth, and from this honest avowal we learn three distinct facts about Mr. Roebuck. First of all, Mr. Roebuck objects to people who sneer; secondly, he objects to people who are insolent; last of all, he cannot abide upstarts. These are three very reassuring facts, and we cannot but compliment the honourable member for Sheffield on the clear view he takes of the impropriety of these three characteristic sins. So much for Mr. Roebuck on the subject of America. It is clear from this that he approaches the subject of the Ionian Islands at an advantage, for he comes to it prejudiced in favour of courtesy, self-government, and civilized habits, and as the enemy of sneering, insolence, and innovation. We cannot all be expected to rise up to the same high standard; nor, perhaps, did the unhappy General Storks know whose eye was upon him, or he would have been more cautious. As it was, he managed to offend Mr. Roebuck by not interfering arbitrarily to insist upon the re-election of two judges whom, on account of their violent political views, the Ionian Senate had refused to re-elect after their term of office had expired. It is not to the purpose that such a step on the part of the General would have been both impolitic and unconstitutional. Mr. Roebuck is above the constitution; nor was he contented with proclaiming the fact, that England's honour was already tarnished, and with intimating that General Storks was like James II., while the two judges were treated as badly as the seven bishops; he went further and *àpropos* (as it will seem) *des bottes*—for no personal question as yet had been involved—told the House of Commons and the world that he looked on General Storks as "a rude, ill-conditioned soldier." Here, again, we reap the benefit of Mr. Roebuck's righteous indignation, for we learn fresh facts about the moral nature and predilections of Mr. Roebuck himself. We infer, accordingly, from this ably administered poke—which the unhappy General Storks must take and be thankful for—that Mr. Roebuck hates people who are rude. In the second place, he cannot endure an ill-conditioned soldier,—though, for that matter, he would no doubt object equally to any other class of ill-conditioned dog. It is to the manners, and not to the profession, that he entertains an invincible repugnance. Sometimes, however, the two are found united; for Mr. Roebuck very naturally argues thus: "The Lord High Commissioner of the Ionian Islands is of a different opinion from myself about the re-election of the judges in question: therefore the Lord High Commissioner is wrong. Yet very probably he will go on thinking he is right, after I have solemnly said he is wrong. And he is a soldier, which will account for anything. Therefore he is an ill-bred, ill-conditioned person." Having thus argued the cause of good breeding upon the prostrate General Storks, Mr. Roebuck, like a destroying angel, passes on to the Duke of Newcastle. The Duke's crime is an awful one. He had plenty of time to reflect. He ought to have guessed the General's conduct would have displeased Mr. Roebuck. And yet the Duke of Newcastle had neither dismissed Storks nor re-appointed the dismissed judges to their offices in the teeth of the Senate. No wonder Mr. Roebuck was bound to take a gloomy view of the Duke's character. On an impartial survey, he found the same class of fault running through it, that ran through the mental organization of General Storks. It happened also to be just the fault most alien to Mr. Roebuck's feelings.

"The noble Duke at the head of the Colonial Office believes himself infallible."

Another bright illuminating ray then flashes over the moral character of our great corrector. We have a clear token that Mr. Roebuck abominates the vain and empty folly of the man who thinks himself infallible. He also objects—and he is quite right—to obstinacy.

the hard winter of 1861, the funds received at the thirteen metropolitan police-courts for the relief of the special distress then existing reached, according to the computation of Mr. Sampson Low, the sum of £58,000. Such is the raw material of our love and pity: the manipulation of so much good should be as free from defects as human honesty and skill can make it.

THE FOSSIL PREADAMITE.

Who has forgotten, or can forget the scene, in which Sir Walter Scott describes the mingled fury and confusion of the Laird of Monkbarns, when Edie Ochiltree broke in upon his lecture on the Kairn of Pinprunes? Three sides of the ancient square, indeed, had vanished beneath the plough, but traces of the fourth were extant. It needed but the simple alteration of "pruinis" into "Pinprunes," in a line of Claudian, added to the discovery of a stone inscribed with a "sacrificial vessel," and the letters A.D.L.L., and there was proof sufficient to identify the spot as the scene of the last fight between Agricola and the Caledonians. "Is not here," cries the enthusiastic antiquary, "the Decuman gate? And there, but for the ravage of the horrid plough, as a learned friend calls it, would be the Prætorian gate." We have often envied the enjoyment of Lovell, when the rugged Bedes-man came suddenly in sight with the unqualified assertion, "Prætorian here, Prætorian there, I mind the bigging o't." The laird's crest-fallen look must have been worth seeing, as the inexorable Edie proceeded, step by step, to account for the "sacrificial vessel," the inscription, and the ditch. Despite the fury of the laird, he pronounces on the best authority, viz., his own, that "about twenty years syne," he, "and a wheen hallen-shakers" like himself, "and the mason lads," "and twa or three herds maybe, just set to wark, and built this bit thing here that ye ca' the Prætorian."

Something akin to the exquisite delight of Edie Ochiltree, as he unravelled the mystery, must, we imagine, be the satisfaction of the *terrassiers* of Abbeville, if it be true that they have played a successful trick on M. de Perthes, one of the leading Monkbarns of the day. M. de Perthes is a celebrated French antiquarian, who has joined heartily in the crusade against the Biblical narrative, claiming a far higher antiquity for the human race than our commonly received ideas would accord to it. Sir Charles Lyell, in his recent work on "The Antiquity of Man," while he hesitates to accept some of his conclusions as to the tens of thousands of years which M. de Perthes claims for the formation of certain peat mosses in the valley of the Somme, yet offers the French *savant* as one of the authorities on whom we are to lean in disturbing the received chronology of our race. It would appear that some supposed ancient flint weapons have been found in the gravel beds in the neighbourhood of Amiens and Abbeville, and the great desideratum in the eyes of all who are looking on this controversy with anxiety, has been the discovery of human bones in close proximity with the weapons. Up to the end of last March, however, no such human remains had come to light, to gladden the eyes of the antiquarian, and incontestably to establish his theory. But suddenly at the very close of the month (pity it was not on April the first), was the intelligence conveyed to Paris that the genuine remains of a real fossil man had been discovered. Who cannot picture to himself the modern Monkbarns posting on the wings of science and excitement to the spot? Arriving at the gravel beds, he beheld, in deed and in truth, some real human bones projecting from the cliff. Ιω τριυμφε, ἑυρηκα, ἑυρηκα. The proof is given. The controversy is ended. The bones were seized with avidity, and hailed as the veritable under-jaw of a human being, in a fossil state. What could be more satisfactory and delightful, especially as flint hatchets were discovered near the same spot, belonging no doubt to the venerable Preadamite whose jaw-bone had come so conveniently to light? The precious relics were conveyed instantly to Paris—a molar tooth, which had become disengaged from the jaw, having, however, fallen into the hands of our own learned Dr. Falconer. He declares, in a long letter to the *Times*—and he has hitherto received no contradiction—that, on sawing up the molar tooth, it was found to be not pre-Adamite, but very recent. He asserts, moreover, that on comparing the drawings of the jaw-bone with others in his own possession, he finds that the supposed antiquarian remains may be matched from any graveyard in London. The flint hatchets are pronounced equally spurious, about equal in value, we suppose, to the inestimable coins which are manufactured at Birmingham, and the genuine Waterloo relics which are produced in unlimited quantities, according to the demand, at Brussels. In Dr. Falconer's view of the case, the whole discovery is a clever and profitable trick of the *terrassiers* or quarrymen of Abbeville. "What is that you say, Edie?"

Digitized by Google

of Ranger. Where all exerted themselves so laudably, it is almost invidious to make particular mention of any. But we cannot refrain from bestowing a word of praise upon the actor who played the subordinate part of the policeman. When refusing to take Ranger into custody, unless a distinct charge was made against him, he displayed a touch of true domestic morality in the reply, that, as the gentleman's wife was there, he did not like to remove him. This went to the hearts of the audience, and many of the ladies in the pit and gallery wept. But the actor must share the merit of this point with the dramatist. It was a happy conception of Mr. Boucicault's to contrast the virtuous sentiment of a constable with the infamous conduct of his accomplished hero.

CHEAP AND PURE READING.

Our new penny is a smaller coin indeed than the old-fashioned penny was, but it buys so much more that in these days the people can be "penny wise" without being "pound foolish." You can take a voyage in a steamboat, eat an ice-cream, purchase a newspaper, send it to your cousin in Australia, get your shoes blacked, and look at the moon through a telescope,—all for six round pennies. While we enjoy all these cheap luxuries we must look a little closer at the cheap periodical press, which pours forth a flood of printed paper, duty free, welcome to a people thirsty for the stream of literary entertainment. The full information and the general tone, vigour, and propriety maintained by the penny daily papers are a credit to England; but our business just now is with the weekly periodicals, which bring not the passing news, but other good wholesome reading, into the homes of the million.

This kind of serial literature is almost a creation of modern times, but our forefathers made a commencement of it. In 1698 the first association for this purpose was started, which is still famous as the Society for Promoting Christian Knowledge. The great Duke of Marlborough's soldiers and brave old Benbow's men-of-war's men had large grants from its early publications. It grew and grew for a century and a-half, till, in 1860, six millions of books and papers were sent forth from its shelves; and now you may get a prayer-book sold for twopence and a Bible for sixpence, well printed and bound, under the auspices of this Society. Half a century later came the Book Society, which now expends about £5,000 a year in its own work. The Scottish Religious Tract Society, instituted in 1793, was the first to use *colporteurs*, of whom more than a hundred are now employed by it. Six years afterwards the Religious Tract Society began. It was designed to contend against the spread of a bad literature. At that time it was reckoned that there were 20,000 hawkers of indecent and polluting papers; and although, in the year of our first Great Exhibition, about thirty million copies of various infidel and immoral publications are believed to have been issued, the increase in the distribution of good papers, chiefly by means of this society, has been so great as to raise its annual total to more than forty millions, at an expenditure of £100,000; so that the powers of evil, in this department, were met with superior energy by the friends of morality and religion. The British and Foreign Bible Society had its beginning in 1804, and it now distributes annually a million and a half copies or portions of the Scriptures, in 190 languages, into only fifty of which the Bible had ever been translated before for the printing-press. Female *colporteurs*, or Bible women, are a new feature in this work; but in London alone about 200 of these are now employed. Besides these agencies, Lord Brougham and Lord John Russell established the Society for the Diffusion of Useful Knowledge in 1826, and the *Penny Magazine* had a weekly sale of 200,000 copies. Next came a society for publishing coloured diagrams, maps, and pictures, with descriptions useful for the lecturer. This is the Working Men's Educational Union, founded in 1852, and now selling about 12,000 of such diagrams annually; while about forty millions of pamphlets and books have been sent forth, within the last eight years, by the Dublin Tract Depository. Into this great swelling tide of cheap and good popular literature, countless rivers flow from other sources which we cannot here enumerate—educational books from the numerous school agencies, sanitary tracts from Jarrold's, temperance papers from Tweedie's, religious publications from Drummond's, and about thirty millions of Cassell's issues, every year. Like the fruitful waters of a beneficent irrigation over the land, these streams of knowledge are conducted to remote fields, through many different channels, through the bookseller's shop, the village huckster's window, the postman's bag, and the book-hawker's pack, the hawkers being regularly organized by the Church of England Book-hawking Union and the British Colportage Association.

There are certain times when a man is in a mood to read an advertisement, and others when he is not. Two-thirds of the persons, for instance, who have to dispatch their breakfast and skim the cream from the *Times* in ten minutes, never look at an advertisement; in fact, the "double supplement" is only useful to those persons who are in want of something—a very large class; and not to the mere newsmonger. There are two places, however, in which we always notice an advertisement, especially a pictorial one—the suburban railway stations, and the splash-board of a Hansom cab. When the mind is undergoing any suspense, it is singularly alive to little trifles that come within its cognizance. Dickens has illustrated this fact in the Trial Scene of Fagin, who, whilst his fate is pending in the jury-box, falls to counting the rails in front of the dock, and wonders how they became broken, and when they were dusted last. This extraordinary attitude of mind is often found in the railway traveller, who, in a moment of excitement or anxiety, finds himself pacing up and down a platform waiting for a train. On such occasions the reader will, perhaps, remember how deep an impression was made upon his mind by the drawing of Clarke's gigantic manglewurtzel, or of the pictorial illustration of the effect of Thorley's Food for Cattle. The best spot in the whole world for an advertisement, to our mind, is the little oval splash-board of the Hansom cab which faces you as you sit down. A ride in one of these vehicles is very exhilarating, and the effect upon the brain is to impress objects upon it vividly. Again, it is the only object in the foreground to be seen, and, without doubt, an advertisement in this situation is more deliberately read, than in any other place in the world. Yet what a wide subject advertising is, and how many people successfully perform it without letting others know what they are about! But the subtle and indirect method of doing it belongs to the fine art of puffing.

THE PAST WEEK.

Mr. Gladstone has withdrawn another of the objectionable proposals in his Budget. The bill for exacting from clubs, as from public-houses, payment for a spirit licence, has been given up, and those who are interested in charities and clubs now breathe more freely. The annual fright which is inseparable from a Gladstonian Budget is over, and people have leisure once more to look around them at a threatening political horizon on every side.

In France, the general elections are being arranged in Imperial fashion, so as to secure a legislature which shall make the will of France appear to be the inspiration of one sole mind. It will be curious to note the direction which French policy will now take. Should it tend towards the consideration of Polish grievances, the Czar must quickly set his house in order, and the King of Prussia may tremble for his Rhenish provinces, no less than for Posen. Unfortunately for Prussia, M. von Bismarck and his Royal master, despite the perilous position of affairs in Poland, Schleswig-Holstein, Sweden, and France, and the averted glances and angry commentaries of England, are seeking daily fresh opportunities of widening the breach between the Crown and Parliament of Prussia, and heaping insults and defiance upon the representatives of the nation. Austria seems to waver on the Polish question; but the publication of the full texts of the Russian replies to England, France, Austria, Sweden, Spain, and Italy, has enabled the Austrians to discover, by contrast, the contemptuous estimate which the Czar has formed of the head of the German empire, and the result is said to be a very strong feeling of resentful anger. Sweden is calculating her naval power and comparing it with that of Russia in the Baltic, should war arise between the Czar and France upon the Polish question. In Denmark some addresses have been sent to the king, assuring his Majesty of loyal support, and urging him to defend his rights in the disputed Duchies against the pretensions of Prussia.

The Polish insurgents still hold out in a contest which excites the wonder no less than the sympathies of Europe. Each week is looked to for the closing scene of a terrible, a gallant, but a hopeless struggle against overwhelming odds; but week after week the scythemen are still here and there the victors, and the battle is prolonged. The hopes of the Polish patriots are now said to rest upon the French elections, if they can only hold out until the meeting of the new Legislative Assembly.

The first piece of American news this week was very painful to English ears. It was another appalling shipwreck. The *Anglo-Saxon*, one of the finest iron-steamers that ever left the port of Liverpool, a vessel of extra strength, divided by bulk-heads into four water-tight compartments, went ashore near Cape Race, on her voyage to Quebec, and was totally lost, almost as quickly as the ill-fated *Orpheus*. editors are determined to err, if they err at all, on the side of caution. Any emendation is required to establish its claims almost beyond the possibility of suspicion before they will admit it into the text. It must be "the only probable one." If the defect can be made good in more ways than one, all equally probable, they have registered, without adopting, the suggested improvements. The same rigid conservatism is apparent everywhere. It has been no part of their task to improve the poet's grammar or to correct his oversights; even errors, that seem to be Shakespeare's own blunders, have been allowed to stand. For instance, the mistakes about Padua and Verona in "The two Gentlemen of Verona" have been retained, because it is impossible that the words can be a mere printer's or transcriber's error; and the inaccuracies are, moreover, interesting, as showing that Shakespeare had written the whole of the play before he had finally determined where the scene was to be laid. Such being the scrupulous forbearance of the editors, the reader will not be surprised to learn that they have been strictly sparing of their own conjectures. These do not, in fact, through the whole of the present volume, amount in number to more than twelve or thirteen, which are for the most part of a very slight character. The following sentence shows, however, that we have had a narrow escape from an abuse of the conservative principle in the matter of orthography:—

"It was not," we read, "without much consideration that we determined to adopt the spelling of the nineteenth century. If we had any evidence as to Shakespeare's own spelling, we should have been strongly inclined to adopt it; but to attempt to reproduce it by operating by rule upon the texts that have come down to us, would be subjecting Shakespeare's English to arbitrary laws of which it never yet was conscious."

In this conclusion we perfectly acquiesce; but, except as a matter of pure curiosity, we question whether the knowledge of Shakespeare's method of spelling is at all worth even a passing regret. Let any one open an edition of Spenser that follows the senseless fashion of retaining the orthography which, we suppose, received the negligent sanction of the poet himself. He will find the same word spelt in three or four different ways in the same page, and this without any apparent reason, such, for example, as the stress of rhyme. When we once know that, in the matter of spelling, every Elizabethan author did what was right in his own eyes, it can surely answer no good end to compel us to learn also the several forms in which their caprice manifested itself. But, as regards metre, the case is very different. There has been too great a tendency to tamper with Shakespeare in order to make him scan; and the editors have done wisely to point out some of the differences between Shakespearian versification and that which has now become our normal prosody. To take a single specimen, Shakespeare introduces many lines of a trochaic movement, such as—

"Twelve year since, Miranda, twelve year since,"

which in their place are often very impressive. These have excited an ambition of correcting in later editors, to the detriment alike of rhythm and of historical accuracy in tracing the development of modern verse. Instances of various so-called licences, supposed to be unmetrical, are given, with one only of which are we disposed to quarrel. The following line, we are told, is defective of a syllable:—

"Dashes the fire out. O, I have suffered."

Now, even if the word "fire" is here a monosyllable, there is no reason why we should not read "suffer'd," merging "I have" into the time of a single syllable, and so complete the natural cadence. But this is one of those passages in which we may feel certain that Shakespeare pronounced the word "fier." The word must otherwise come in with a click, which is entirely alien from the tone of the context. We quote the lines:—

"The sky, it seems, would pour down stinking pitch,
But that the sea, mounting to the welkin's cheek,
Dashes the fire out. O, I have suffered
With those that I saw suffer!"

The point is, perhaps, hardly worth remarking; but when so many examples could have been adduced, without a shadow of objection against them, it seems a pity that this one, where there is, to say the least, an apparent ambiguity, should have been selected. It is, perhaps, worth while to quote the following:—

"One thing remains to be said in reference to our text. It is well known, that in James the First's reign, a statute was passed for rescinding profane expressions from plays. In obedience to this, many passages in the folios have been altered with an over-scrupulous care. When we have seen the metre, or, as is sometimes the case, even the sense marred by these changes, and the original contains no offensive profanity, we have recalled Shakespeare's words."

But the most interesting part of the preface is that in which the editors speak of their predecessors. They are very cautious of committing themselves either for or against the genuineness of the corrections in Mr. Collier's famous folio. Conceding their general authenticity, however, no one who has at all imbued himself with Shakespeare's poetic feeling can hesitate to pronounce them valueless from their occasional imbecility. It must be remembered that two or three palpably weak or absurd emendations are sufficient to annul the *authority* of all the rest, and to reduce them to more or less successful guesses. But the assertion of this would be no imputation whatever

Although neither the object with which his lectures were originally composed, nor the limits of space which he has assigned to himself, permit his entering much into detail, or indulging in any elaborate disquisitions, there is none of the usual dryness of a summary, and there are everywhere marks of the exercise of independent thought. The style throughout is perspicuous and pointed. In the first lecture there is perhaps a little stiffness; but this disappears as we proceed. The story of the reigns of Edward I. and Edward II. is told with real vigour and animation. We ought to add that the book is copiously illustrated with woodcuts, and a chromo-lithograph view of a tournament copied from the Cotton MSS. It also contains several maps, and a plan of the battle of Bannockburn, which will be found very useful to students.

THE HOUSE OF SCINDEA.*

WHILE we, naturally enough, boast of our Indian empire, we fear it must be admitted that, with regard to the means by which much of it has been obtained, the least said the better. Still it is impossible quite to overlook this phase of the question. Though we might ignore it, the natives have memories and resentment; and in order to measure the responsibility which lies upon us of securing what we have gained, we must consider the impressions we have left upon the native mind, impressions which, under similar circumstances, we ourselves would be very ready to receive and very unwilling to forget. None can estimate better than we the truth that power alone is not a permanent basis for any Government. We have seen its capabilities tried in Europe; and at the present moment we are witnessing the struggles of a people crushed for three generations under an iron oppression, but setting it at defiance, and thus far with success. It makes no difference that in India we have not shared the work of fraudulent annexation with any other Power. But upon pleas not very dissimilar to those on which the three Northern Powers dismembered Poland, we have gradually extended our rule from one province to another, in the names, indeed, of humanity and the welfare of the people, but without convincing those whom we have pretended to bless, that we are quite the benefactors we have called ourselves. What is done, however, is done; and the better system of government established since the suppression of the mutiny will, in the end, do much to lessen, perhaps will wholly obliterate, the memory of annexations, which, in dealings between man and man, would be called by another name. It is by bearing in mind by what by-paths and crooked ways we have gained our empire in India, and proportioning the justice and mercy of our administration to the disingenuousness by which we reached it, that we shall succeed in attaching the goodwill of the natives to a Government which has been forced upon them.

Mr. Hope, in the volume before us, has written one of those chapters in the history of our career in India which will be useful for the purpose we have mentioned. The attempt to get possession of the country of Scindea was made by two Governors-General—Lord William Bentinck and Lord Ellenborough. It is to the manner in which these attempts were made that Mr. Hope addresses himself. The Government had fallen upon the young chief Junkojee Scindea, who had been adopted by Dowlut Rao. Rao's widow, Baiza Bye, a woman of great capacity and undaunted courage, exercised the powers of regent during the chief's minority, and contrived to render herself so eminently unpopular that she was obliged to seek shelter in the British territories. Lord W. Bentinck had an appetite for annexation. When Major Sulterland was appointed Resident at Gwalior, the capital of Scindea's country, he waited upon his lordship to learn whether his policy was to be intervention or non-intervention. Lord W. Bentinck replied, "Look here, major;" and throwing back his head with his mouth open, placed his thumb and finger together, like a boy about to swallow a sugar-plum, and continued, "If the Gwalior state *will* fall down your throat, you are not to shut your mouth as Mr. Cavendish (the prior resident) did, but swallow it; that is *my* policy." In pursuance of this policy, Lord W. Bentinck had permitted the ex-regent to take up her quarters at Agra, on the confines of Scindea's country, calculating that this proximity to the young chief's territory would serve to embarrass his government and distract his people, and furnish a plea for British intervention. It did all this; and intervention was not long in coming. A demi-official letter—a missive which would be authoritative if events were favourable, and could be disowned if they were not—was despatched to Mr. Cavendish, "desiring him to learn, at a private interview, by way of a feeler, if the Maharajah, encircled as he was by serious troubles—troubles mainly caused by our Government—would like to resign; assigning over the country to the British Government, and receiving a handsome pension, which would be paid out of his own revenues." Mr. Cavendish declined to make this suggestion. He adopted the more honourable course of advising the young chief to remove the incompetent Brahmin administrators, and place his army under the command of a Christian, the celebrated Jean Baptiste. These measures restored peace through the rest of Junkojee Scindea's reign. But Mr. Cavendish paid dearly for his candour. He was denounced at Calcutta. The Deputy Secretary of the Foreign Department wrote him another demi-official letter, protesting against his proceedings, and concluding with these words: "You have thus allowed a favourable chance to escape of connecting the

mented with coins of various kinds, silver and copper, some even of gold." Immediately on the arrival of the visitors, a lamb is dragged forward to their tent. The moment it is slaughtered, it is placed in the pot and boiled for the hospitable repast. The people are inquisitive to a degree—so much so, that, on one occasion, when our traveller was making her preparations for the night, she suddenly raised her eyes, and discovered a perfect gallery of eager eyes streaming through the raised covering of her tent. The lady herself was the chief object of attraction. Nothing so much surprised the Kirghis as the respect paid to her by her husband. Among these tribes the women are down-trodden and oppressed. It surprised them beyond measure that her husband should permit her to take her meals in his company, instead of treating her as a baby or a slave. On the principle of the superiority of the male sex, she found boys of ten or eleven years of age still drawing nourishment from the breast, an indulgence which was not permitted to the girls. The heat in the mountain passes and on the Steppes is at times intolerable. Water is very scarce, and, when reached, is often so impregnated with salt as to be quite undrinkable. Travelling on the Steppes is, as may be imagined, full of difficulty and even of danger. Great mountain ranges have to be crossed, and, on reaching one summit, our travellers saw the unbroken Steppe extending 3,000 versts before them like a map, with nothing to bound the horizon. They found signs by which they judged that these arid deserts had once been under water. Some exciting stories are told in this volume by which we judge that travellers are by no means free from marauders. On more than one occasion deadly contests, in preparation for which Mrs. Atkinson had accustomed herself to the use of a rifle and revolver, were necessary to protect their property, and even their lives, from falling a sacrifice to pillagers. Hooping cough and measles are unknown among the tribes, but small pox and king's evil are prevalent. Bugs, mosquitoes, wolves, and venomous serpents abound. One of the latter was found by Mrs. Atkinson beneath the blanket of her child.

But enough. We have but whetted the appetite of our readers, and we end, as we began, by pronouncing Mrs. Atkinson's book to be a very readable volume, which we are pleased to commend to the favourable notice of our readers.

SIR JAMES GRAHAM.*

We live, perhaps, too near the times in which the lot of Sir James Graham was cast, to be able to form, as yet, a true and accurate estimate of his character. Though ranking in turn as a leading member of both of the great parties in the State, and fully impressed with the necessity of the principle of "party" in carrying on the responsible Government of a free nation like our own, he never became the leader of a party, or gave his name to a sect of followers, like his contemporary, Peel. Yet it may be doubted whether any individual member of successive governments within the last half century had more influence over those with whom he acted than the late Baronet of Netherby, of whose life and times Mr. M'Cullagh Torrens has given us an account.

Mr. Torrens has acted wisely in coming forward thus early with the biography of a man of note, the reminiscences of whom are somewhat scanty in proportion to his public services, owing, no doubt, to the reserve and *hauteur* which marked his character from first to last, and which always prevented him from "winning" followers and friends. Sir James Graham never was a popular man, even with his own party; and a perusal of Mr. Torrens' personal recollections of him show us that, however worthy of esteem and respect, he never could be popular. There are in existence, no doubt, many official and confidential papers which, if they could have been published just now, would have aided us in analyzing the inmost thoughts and motives of Sir James Graham; but, as Mr. Torrens remarks, these documents are at present "necessarily and fitly a sealed book."

Holding, as Sir James Graham did, a middle place between the contending factions of Whig and Tory, he seems to have reproduced in his political life the character of his semi-mythic ancestors, cadets of a Scottish clan who, piqued at the ingratitude of their sovereign, are said to have withdrawn to the English border country, and to have settled on what was known as the "debateable" land.

Yet so close were the ties which bound Sir James Graham for most of his life to one political party or another, that the present work may very fairly be regarded as a history of the politics of the day; and that, too, without it being possible to accuse the author of travelling out of his beat. The late Duke of Buckingham, as we all remember, published a few years since a work which he called the "Court and Cabinets of William IV.;" but those volumes do not contain a whit more information than the present unpretending book, as to the inner history of the times included in its subject.

It was first in his official capacity as First Lord of the Admiralty, with a seat in the Cabinet of Earl Grey, that Sir James Graham, though evincing no symptoms of the highest order of genius, was enabled to show administrative talents of no common mark. He believed, and he was right in believing, that a large saving of

THE ELOPEMENT.*

This story is intended to remove the impression which the Old World has received of the Southern States of America, through the medium of publications issuing from the North. It is well timed for its purpose. Late events have shown fully the hollowness of Federal sympathy for the negro, and we have for a long time more than doubted the terrible revelations of slave-life in the Southern States, which Mrs. Beecher Stowe's imagination conjured up for us in "Uncle Tom's Cabin." Those who have read "Uncle Tom" should read "The Elopement." Mrs. Stowe described, or pretended to describe, the condition of the negro in the Slave States. Mr. Fairfax tells us, and his evidence is confirmed by what we know, what it is in the Free States. But he by no means writes with that vehement pursuit of a "purpose," which betrays itself in Mrs. Stowe's work. There is a tone of candour in his book, which convinces us that he has not written in a spirit of malice or exaggeration. Moreover, for those who would like to read the book, we may say that they will find it, viewed merely as a picture, full of well-told incident and racy description of American character, of that sort which delights us so much in Mr. Dickens's "Martin Chuzzlewit."

The heroine, Amanda, is a young girl, beautiful, and of pure white breed, whom her uncle, in order to dispossess her of her property, passes off as a white nigger. She is decoyed by a scoundrel from her happy home in the South to the Free States, where, in a succession of events, she experiences what sort of freedom a man or woman with the slightest taint of negro blood may enjoy there. She sees them driven out of omnibuses, churches, hotels. The man who adores her drops her hand when a jealous rival tells him she is a slave. From one misery to another, American prejudice pursues her, till at last she finds a friend in a Southern gentleman, who undertakes to convey her back to the home from which she eloped. There she discovers the secret of her birth and her uncle's villany. Finally, on the breaking out of the war, she and the lady who reared her from her childhood find themselves at New Orleans under the tender mercies of General Butler, who figures in this story as a General Felun, who had been a butcher in his youth, was afterwards an unscrupulous attorney, and became at length a general in the Federal army and governor of New Orleans. The ruffian who duped her to leave her home has now, after being gambler and forger, become a captain in the Federal ranks; and having destroyed her hopes of a happy marriage with Mr. Carlton, the gentleman who had fallen in love with her, he exults that here at last he has her in his power. He surrounds the house where she resides, and drags her before General Felun and denounces her as a female traitor. Felun decrees that she shall be made an example of, and Captain Julius hurries her off, telling her that her destiny and his are irrevocably intertwined. By what dreadful alternative she escapes our readers may see for themselves.

The story, though well worth reading for its own sake, is mainly a vehicle for some racy descriptions of American Abolitionists, political preachers, Bloomers, and strong-minded ladies, who marry under protest. Amanda is taken to church. Colonel White, "a red-hot Abolitionist," occupies a pew in which there is no one but himself. The pew-opener is about to introduce into it a negro, but the Colonel holds the door. "This pew's engaged," he says. "This is a distinguished gentleman from Hayti, and not an American," says the pew-opener. "I can't help it," says the Colonel; "the pew is going to be occupied." The gentleman from Hayti, quite comprehending what this means, turns, and, with an angry look, leaves the church. The Rev. Hard Preacher (Ward Beecher?) enters the pulpit. "A well-shaven, sanctimonious, red, hard, shining, chubby face, glistening black clothes, sparkling rings, heavy watch-chain hanging over a shirt of dazzling whiteness, and a delicate cambric pocket-handkerchief fluttering with his emotion, were the specialities of his personal appearance. In a gruff, but not intelligible voice, he uttered a short prayer, at the end of which he rose, and somewhat abruptly announced to his congregation that he had discovered a wolf in sheep's clothing in his flock." "Yes, I repeat it," he went on; "there is a slave-holder among us; a woman whom I once thought the model of excellence and piety, lives, I grieve to say, by the sweat of the black man's brow. She owns a dozen slaves at least, dresses in purple and fine linen, and lives grandly. But she will learn that no slave-owner enters here but to be rebuked." It turns out that the wolf in sheep's clothing is an old lady who, feeble with age and indignation, rises and totters from the church, "the second who had on that day been morally driven forth from a sacred place, where all should worship freely and equally." The next day Amanda goes to an Abolition meeting, at which the Rev. Caroline Cleverbawl is announced to speak in behalf of an escaped slave. The hall is crowded, the majority of the ladies dressed in Bloomer costume; and near a table at one end of the hall sits a very ugly negro. A tall gentleman rises, and is happy to state that "the meeting to-night promises to be an unusually interesting one:—

> "A slave, a crushed and degraded man, free at length, after many hardships and

The "Book of Bible Prayers" * is the title of a *brochure* "containing all the prayers recorded to have been offered in the Bible," with a short introduction to each. The design is good. By bringing together the prayers of the saintly men of old, the reader is impressed at one view with the deep and tender humility of the patriarchal and Christian spirit, contrasting strangely with the arithmetical spirit in which the truth of Revelation is approached by some modern Christians. Mr. Marsh has rendered good service to the cause of religion in this valuable little book.

Messrs. Smith and Elder have issued a new edition of Mrs. Beecher Stowe's "Agnes of Sorrento."† It is too late to discuss the merits of this work. In the pages of the *Cornhill Magazine* it satisfied a few readers. In its collected form it was tenderly dealt with by the critics. But the recollection of Uncle Tom was against it; and Mrs. Stowe was hardly at home with her Italian puppets. All we need now say is that the present edition is neat and cheap.

Dr. Lankester's work on the microscope‡ has become a standard book. Seven thousand copies have already been sold; and this success justifies the issue of a new edition, with additions and improvements. The amateur microscopist will find this beautiful little work a reliable guide.

Mr. Stanford has published a map of Poland,§ showing the portions taken by each of the dismembering Powers, at the three several partitions. This map gives the student at a glance a view of the past and present extent of the kingdom, and the share of the plunder held by each of the Powers. The limits are well defined, and the map is at this moment particularly welcome.

A volume of characteristic tales and sketches illustrative of Lancashire life, has been published by Mr. Heywood, of Manchester.|| They are clever and amusing, and will well repay perusal.

The same publisher issues a "History of Modern Europe," in one volume.¶ It is a work of great industry, and admirably fitted for the use of schools.

FINE ARTS.

THE ROYAL ACADEMY.

With the few exceptions which we pointed out in our first notice of the exhibition, there is nothing in the works of any members of the Academy to save it from the reproach of that partial paralysis which is the besetting malady of all such institutions. There is nothing to indicate that they keep pace with their contemporaries, either in thought or productive energy. Two or three of them, indeed, may plead that their attention is absorbed in great public works of art, and several of them may command our indulgence as veterans, but, for the rest, they fall into the category of apathetic indifference. Indeed, admission into the Academy seems to have a baneful influence upon genius, for many artists might be named who have collapsed as soon as they get within the charmed circle of the forty. Then, unaccountable as it is, we cannot overlook the singular perversity shown repeatedly in the choice for promotion of painters, whose canvasses never displayed one spark of genius, as if the race in their curriculum were to end with a climax of conventionality, and not go on with fresh creative power, producing beauty in infinite variety.

The pictures in the exhibition which, with all their faults, evince the most genuine feeling, with no small power of execution, are, in our opinion, those of Mr. F. Leighton, even now a young painter, and not of the Academy, but who, some twelve years ago, made a sensation with his large fresco-like work, "The Cimabue Procession," which was purchased at once by the Queen. It denotes something like power when we see from this painter no less than four pictures. One, the "Elijah rebuking Ahab and Jezebel" (382), of the largest proportions, with full-length figures; and at least two of the others, which are incomparably the finest examples of high finish in painting, and unique for the peculiar sentiment of colour they possess. These are—429, "A Girl feeding Peacocks," and 406, "A Girl with a Basket of Fruit." Colour, in its more delicate Æolian-harp sort of form, seems to be quite a *culte* of Mr. Leighton's, and we must own ourselves, with him, amongst its votaries; still, there remains that kind of abstract and invented colour which we recognize as "fine colour," which is much opposed to mere natural effects of daylight, and which lends such magnificence and solemnity to the works of the old masters, and sometimes to the modern, as we saw in Gallait's picture, "The Last Moments of Count Egmont." This, strange to say, in Mr. Leighton's "Elijah," is exactly the quality wanting. The draperies offend the eye by the large masses of heavy blue, with dull brown and red, and the general colouring wants richness and depth of tone. But when we come to consider the expression of the pic-

combined with so much power of finger and fulness of tone. A young American boy, Master Pape, also performed on this occasion, and exhibited a command of the instrument and a vigour of touch very remarkable in so young a player. He can scarcely fail to become an artist of eminence.

The third New Philharmonic Concert on Wednesday exhibited the following interesting programme :—

PART I.

Overture (King Stephen)	Beethoven.
Aria, "Il mio tesoro"	Mozart.
Cavatina, "Ernani involami"	Verdi.
Concerto, Pianoforte, in D minor	Mozart.
Duet, "Dove mai" (Mose in Egitto)	Rossini.
Symphony, "The Power of Sound"	Spohr.

PART II.

Bolero (Vêpres Siciliennes)	Verdi.
Concerto, Violin	Mendelssohn.
Aria, "La mia letizia" (I Lombardi)	Verdi.
Overture (Abon Hassan)	Weber.

Beethoven's overture, one of his smaller works, written for a special occasion, is yet characterized by that intention and design which a great master cannot avoid displaying even in his lightest productions. Although inferior to most of his other overtures, still it is immeasurably superior to some of those laboured orchestral preludes to which composers of less genius have sought to give a factitious interest by coupling them with well-known dramas and tragedies. The grand orchestral piece of the evening was Spohr's symphony, "The Power of Sound," in which the composer evidently intended to break a lance with Beethoven, the design (although not the form) of whose pastoral symphony would seem to have suggested the work to Spohr's imagination. A long essay might be written about so-called (and miscalled) descriptive music. Music is not, and never can be descriptive ; it is merely suggestive, and by expressing the sensations of the composer excited by certain external circumstances, it may raise analogous sensations in the mind of the hearer, modified by his particular temperament. When music becomes literal by imitating positive sounds, such as the notes of birds, thunder, &c., it loses in some degree that poetical indefiniteness which constitutes one of its greatest powers and charms. Several composers have fallen into this error, among others, Haydn ; and Spohr is not entirely exempt from it in the great work just referred to ; which, however, with this exception, and dismissing much of that metaphysical purpose which the composer professes (and which is somewhat too subtle for so fixed a style as his), is one of the grandest pieces in the whole range of orchestral writing. For sweetness of melody, vigour of style, and the gorgeous colouring of the instrumentation, there are few works of the greatest masters that surpass it—indeed, in the feature last mentioned, it has seldom been equalled. The performance of this magnificent symphony by Dr. Wylde's orchestra was in every respect admirable. It is truly gratifying to observe how such works, which could formerly only be rarely given to a select audience, are now enthusiastically received by a St. James's Hall crowd. The pianoforte concerto, the noblest work of its kind previous to those by Beethoven, was carefully performed by Mr. Barnett ; with an occasional tendency, however, to hurry the time beyond that intended by the composer. The two *cadenzas* (Mr. Barnett's own, we presume) were ingenious and full of very elaborate mechanical difficulties, in the performance of which the player produced more effect than in most portions of the concerto itself. It is doubtful whether Mendelssohn's violin concerto was ever played at a more rapid pace than on this occasion by Mr. Sainton, whose consummate mastery of his instrument seems to have almost vanquished the impossible. There is an impetuous character in most of Mendelssohn's allegro movements which frequently justifies an extreme rate of speed in performance ; but we should prefer at least the opening portion of his violin concerto at a somewhat more moderate pace than that at which it is the custom of most performers to take it. There is a vocal character about much of the commencing movement which is destroyed by the extreme haste with which it is usually performed ; while the rapidly reiterated notes in the accompanying wind instruments would be absolutely impossible to any but the highest class solo players, such as Dr. Wylde's orchestra mainly consists of. M. Sainton, however, is justified in his estimate of *tempo* by the example of most of the greatest violinists of the day, and his performance was such as in other respects deserves this comparison. His light and brilliant execution, excellent intonation, and, in the slow movement, refined expression, were worthy of all praise. Mdlle. Fioretti was welcomed with a warmth which must have assured her that her success at the Royal Italian Opera is not a partial one. The vocal honours of the evening were divided between this lady and Signor Tamberlik, so that both in singers and orchestra Dr. Wylde's concert was of first-rate attraction. The last Monday Popular Concert was for the benefit of Madame Arabella Goddard, when that lady's chief performances were Beethoven's Sonata in A flat (with the fugue), and Mendelssohn's first Pianoforte Trio. The occasion was also signalized by being the farewell performance of M. Vieuxtemps.

The Crystal Palace has commenced its series of special Saturday Concerts, at which some of the principal opera singers are to be heard. For that of to-day, Madame Alboni is announced, together with pianoforte performances by Mr. Charles Hallé.

require another half-century to convince the public that the present drainage system is at best but shifting the evil, increasing in its noxious character as it goes along from spot to spot. Both papers offer points of importance for the consideration of those whose duty it is to consider the sanitory conditions of our towns and houses.

The Pugin Memorial Committee have signified their intention of placing the sum of £1,000, collected by them, at the disposal of the Institute of British Architects in trust for the establishment of a students' travelling fund.

Mr. W. Winwood Reade read at the Zoological Society meeting some notes on the Derbyan Eland, the African Elephant, and the Gorilla, founded on information obtained by him during a recent visit to Senegambia, the Gaboon, and the adjacent parts of Western Africa. The conclusions Mr. Reade has formed with regard to the Gorilla, as derived from the evidence received from the hunters of the Gaboon, were that Mr. Du Chaillu had obtained his specimens of this animal second-hand, and that its reputed ferocity had been vastly exaggerated.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

MONDAY, 18TH MAY, 1863.

ARCHITECTS—At 8 P.M. 1. "Description of the Tribunal of Commerce now erecting by M. Bailly, at Paris." By Thos. L. Donaldson, President. 2. "Heads placed over Arches." By Sir Gardner Wilkinson, F.R.S. 3. "Polychromatic Construction at Aston Church." By M. E. Hadfield, Esq.

ASIATIC—At 3 P.M. Anniversary Meeting.

TUESDAY, 19TH MAY.

CIVIL ENGINEERS—At 8 P.M. 1. Discussion on Mr. Watson's paper "On the Communication between London and Dublin." 2. "On the Manufacture of Duplicate Machines and Engines." By Mr. J. Fernie, Assoc. Ins. C.E.

ETHNOLOGICAL—Anniversary Meeting at 4 P.M.

PATHOLOGICAL—At 8 P.M.

ARCHITECTS—At 8 P.M. "On the Prevailing Ornament of China and Japan." By Dr. C. Dresser.

STATISTICAL—At 8 P.M. "On the Pay of the Soldier as compared with the Wages of the Labourer." By Major-General Sir A. M. Tulloch, K.C.B.

ROYAL INSTITUTION—At 3 P.M. Professor Tyndall, "On Sound."

WEDNESDAY, 20TH MAY.

GEOLOGICAL—At 8 P.M. 1. "On Devonian Plants of Maine, Gaspé, &c.; and 2. "On a New Species of *Dendrepeton*, &c. By Dr. J. W. Dawson, F.R.S. 3. "On the Upper Old Red Sandstone and Devonian Rocks." By J. W. Salter, Esq., F.G.S. 4. "On the Relations of the Sandstone of Cromarty with Reptilian Footprints." By Dr. G. Gordon and the Rev. J. M. Joass.

ROYAL LITERATURE—At 4½ P.M.

SOCIETY OF ARTS—At 8 P.M.

PHARMACEUTICAL—At Noon. Anniversary Meeting.

THURSDAY, 21ST MAY.

ROYAL SOCIETY—At 8½ P.M. 1. "On the Nature of the Sun's Magnetic Action upon the Earth." By C. Chambers, Esq. 2. "Numeric Elements of Indian Meteorology." First series. By Hermann de Schlagintweit. 3. "On the Structure of the so-called Apolar, Unipolar, and Bipolar Nerve-cells of the Frog." By Dr. Lionel S. Beale.

NUMISMATIC—At 7 P.M.

ANTIQUARIES—At 8½ P.M.

CHEMICAL—At 8 P.M. "On Certain Effects of Intense Heat on Fluids." By W. R. Grove, Esq., Q.C.

ROYAL INSTITUTION—At 3 P.M. "On Geology." By Professor Ansted.

FRIDAY, 22ND MAY.

ROYAL INSTITUTION—At 8 P.M. "On the Sun's Chemical Action." By Professor Roscoe.

LONDON INSTITUTION—At 7 P.M. "Economic Botany." By Professor Bentley.

SATURDAY, 23RD MAY.

BOTANIC—At 3¾ P.M.

ROYAL INSTITUTION—At 3 P.M. "On the Science of Language." By Professor Max Müller.

THE INDEX TO THE "TIMES,"

AND TO THE

EVENTS and TOPICS of the YEAR 1862.

Who has not often wished to possess an Index to the wondrous photographs of passing events depicted in the columns of the leading journal? If any one now wishes to refer to the files of the *Times* for information, he has to strain his eyes and turn over sheet after sheet, till his patience is exhausted, he gets discouraged, and frequently abandons the task as hopeless. The INDEX will remedy all this: in it the Statesman, the *Littérateur*, the professional man, and the man of business, will find an able assistant always at hand to lighten their labours and researches, or to refresh their memories.

"To all who may wish to refer to the events of the past year, or to ascertain the date of such events, the INDEX will be found most useful, if not indispensable; for it is confidently asserted that no event of the slightest importance, either at home or abroad, has been omitted, whilst the alphabetical arrangement of the work makes such reference an easy and simple matter. In addition to the events and topics chronicled and discussed in the daily press, there is also a vast amount of the newest information upon almost every subject sown broadcast throughout its columns. To this information the INDEX will afford ready access.

"The plan adopted has been to place a number upon every copy of the *Times*, beginning with No. 1 for that of January 1; to these numbers reference is made in the INDEX, and whenever necessary the page of the daily sheet is also indicated. The Table annexed to the work shows at a glance the dates of the papers so numbered.

Orders for copies of the INDEX, to be paid for on delivery of the work, should be sent immediately to the Publisher, as on the day of publication the price will be 7s. 6d.

London: WILLIAM FREEMAN, 102, Fleet-street.

Now ready, Fcap. 8vo., price 5s.

BALLADS AND SONGS.

By BESSIE RAYNER PARKES.

"The spirit that inspires the pleasant verses in this little volume is one of large and simple piety, of pure and deep affection, of religious devotion to all noble and unselfish causes, of tender love of nature, of yearning human charity, of innocent delight in the beauty of common things."—*Daily News.*

"Poems of this kind, when the mind and heart of which they are the utterance are of a high tone, have always a sort of grace which saves them from rough handling. Earnest thought and true feeling are invariably touching."—*Nation.*

London: BELL & DALDY, 186, Fleet-street.

ILLUSTRATIONS OF THE BEAUTIES OF TROPICAL SCENERY,

AND SKETCHES OF OBJECTS OF INTEREST.

With Notes, Historical and Explanatory.

BY THE AUTHOR OF "THE NUPTIALS OF BARCELONA."

"This work contains many beauties."—*Morning Post.*

"A volume of word-pictures."—*Observer.*

"His descriptions make the reader's mouth water for the luxuries and charms of both sea and land in those parts. The Notes at the end are by no means the least interesting or valuable portion of the work."—*Era.*

"The gorgeous scenery of those climates might well inspire a poet."—*John Bull.*

London: ROBERT HARDWICKE, 192, Piccadilly.

This day, Crown 8vo., cloth, price 6s.

WHAT IS FAITH?

A REPLY to DR. BAYLEE'S CHALLENGE to DR. COLENSO.

A Letter addressed to the Rev. Joseph Baylee, D.D., St. Aidan's College, and to all Theologians and Divines, Roman Catholic as well as Protestant.

By A. B., a Layman.

This letter raises a new and startling question, namely, whether Revealed Truth is indeed incomprehensible, and whether God ever expected men to believe without understanding. The author maintains that it is a downright absurdity to say that Truth of any kind, natural or revealed, is incomprehensible; that Truth is to the understanding exactly what light is to the eye, and that Revealed Truth in particular is so simple and easy that it was understood by illiterate fishermen, and is revealed to children and babes, and is only hidden from the wise and learned, in whom preconceived ideas and prejudices hinder the perception of truth.

London: Printed and Published for the Author by ROBERT HARDWICKE, 192, Piccadilly.

DR. CUMMING'S ANSWER TO BISHOP COLENSO.

MOSES RIGHT AND BISHOP COLENSO WRONG; being Popular Lectures in reply to Parts I. and II. of BISHOP COLENSO ON THE PENTATEUCH. By the Rev. JOHN CUMMING, D.D. Complete in one Volume, 3s. 6d. cloth.

First-class Weekly Illustrated Gardening Publication,

Price Threepence; Stamped, Fourpence.

THE

JOURNAL OF HORTICULTURE,

Cottage Gardener,

AND

COUNTRY GENTLEMAN,

Edited by GEORGE W. JOHNSON, F.R.H.S.,

AND

ROBERT HOGG, LL.D., F.L.S.,

Assisted by a Staff of the best Writers on Practical Gardening, and numerous Correspondents engaged in the pursuit of Horticulture and Rural Affairs.

This Publication some time since commenced a New Series of that old-established and popular Periodical, THE COTTAGE GARDENER, permanently increased to Thirty-two Pages, and richly Illustrated with Wood Engravings in the highest style of the Art.

The subjects treated on embrace every department of Gardening, and Rural and Domestic Economy—from the small plot and allotment of the Cottager to the villa garden of the Country Gentleman and Merchant, the grounds of the parsonage-house, and the more extensive establishments of the Nobility and Gentry.

The Horticultural Department consists of all out-door and in-door operations of the Fruit, Flower, and Kitchen Garden; Notices of all the new Fruits, Flowers, and Vegetables; Arboriculture, and more particularly Fruit Tree Culture, and Pomology; Landscape Gardening and Garden Architecture; descriptions of all the newest inventions in Garden Structures, Tools, and Implements; and a detail of work to be done in each Department during every week in the year.

In Rural and Domestic Economy it treats of the Farm and Poultry Yard, Allotment Farming, the Dairy, the Pigeon House, and Rabbit and Bee Keeping; the treatment of Soils, Manures, Cropping and Rotation of Crops, Brewing, Wine-making, Vegetable Cookery, and the Preserving of Fruits and Vegetables.

Natural History and Botany, so far as they relate to Gardening and Husbandry, are simply treated on, and embrace Zoology, Geology, Mineralogy, Meteorology, and Physiological, Structural, Systematic, and Popular Botany.

Biographies and Portraits of the most celebrated Horticulturists.

Reviews of New Books relating to the above subjects; Reports of Horticultural and Poultry Societies' Meetings throughout the country; and Scientific Notices.

To ADVERTISERS, the JOURNAL OF HORTICULTURE will be found a valuable and effective medium, from the extent of its circulation among the middle and higher classes.

A SPECIMEN NUMBER FREE BY POST FOR FOUR STAMPS.

fusion; and had it not been for the advance of General Berry's division Hooker's communications with the river would have been completely cut off, and his whole army would have been lost. Even as it was, the Federals lost twelve guns, the advancing centre was compelled to fall back, and, indeed, it became absolutely necessary to make a night attack in order to restore the line of battle. But on Saturday night the Federal line, instead of facing east towards Fredericksburg, faced south, and was, in fact, parallel to the road passing through Chancellorsville, though still in advance of that place. Nor was the battle yet over. On Sunday morning, the 3rd, it was renewed at an early hour. It is impossible to make out the details. Probably General Lee used his utmost efforts to break Hooker's centre and to obtain possession of the fords in his rear. Although unsuccessful in this the Confederate General compelled his adversary to fall back behind Chancellorsville, which until that time had been the Federal head-quarters, and night closed with the Federal line of battle covering the United States Ford and probably Ely's Ford—Hooker's right flank being protected by the Rapidan and his left by the Rappahannock. There, according to the latest accounts which come down to Tuesday, the 5th of May, Hooker remained, and in order to protect himself he was busily engaged throwing up intrenchments. According to the same account General Lee occupied "a slope facing the Federal main position," and he had drawn up his army in "a formidable double line of battle."

But there was another part of the field where important events had been passing. It will be remembered that a corps had been left with General Sedgwick some two or three miles below Falmouth. After Lee had withdrawn the greater part of his army to meet Hooker, Sedgwick appears to have crossed the river. On Sunday morning he stormed the heights above Fredericksburg which were practically abandoned, and marching north-westward about four miles and a half attempted to join Hooker at Chancellorsville. But this was all Sedgwick was able to accomplish. On Monday, the 4th, whilst Lee lay in front of Hooker he dispatched Longstreet, who is said to have come up from Suffolk beyond Richmond, to attack Sedgwick's corps, and to drive it if possible over the river. Advancing on that Monday from the heights eastward of Fredericksburg, Longstreet gradually drove the Federals towards Banks Ford, and after some hard fighting compelled Sedgwick to cross the Rappahannock under the fire of the Confederate guns which swept the bridge of boats and crushed the retiring columns. It is said that after Sedgwick crossed he marched up the river towards United States Ford to join Hooker. Thus closed Monday night. Let us sum up the result.

General Hooker occupies the end of the arc which is formed by the Rapidan and the Rappahannock; but his line is some distance to the rear of Chancellorsville. His flanks are thus protected, but he has a river in his rear, so that his line of retreat can hardly be said to be absolutely secure. He is twelve miles from his immediate base of operations at Falmouth, and between eighty and ninety miles from his real base, Washington. On the other hand, the Confederates' army is closely watching the Federals. Their right flank is so near the Federal left that their batteries are scarcely two miles below the United States Ford, and command the road which runs along the opposite side of the Rappahannock. Unless the Federals can assume the offensive, the Confederates are in no danger. But if the Confederates are strong enough to detach some 20,000 men across the Rappahannock, they may very seriously embarrass the Federals. They may plunder the stores at Falmouth—break up the railway way which runs north of Falmouth, and is Hooker's means of communicating with Washington—and in fact compel that officer to retreat across the Rappahannock at any loss or to capitulate. Whether Lee will venture to do this depends upon the strength of his army. In the meantime, it is difficult to believe that Hooker would have remained where he is unless he had felt himself strong enough not only to protect his base of operations and his line of communication, but to assume the offensive should Lee attempt to detach any considerable number of men for a raid north of the Rappahannock. These, however, are questions which must remain in doubt until the arrival of the next mail, which is daily expected.

Digitized by Google

detail, is a concession, and a step. On the other hand it must be remarked that it is very probably the beginning of an era of agitation and excitement in the Imperial Legislative body. The honour of those who swear is a pledge that the Electoral oath will be kept, and that no direct attack upon the Imperial family will be made. Yet the history of France during the century shows that the most constitutional tempests in that most unconstitutional of countries have a way of shaking the dynastic edifices of years. A sea of political conflict in the Corps Législatif may roll its waves to the very foot of the throne itself; and it is impossible to predict with certainty the effect upon the French nation of the noise of free Parliamentary discussion, once more revived and reverberating through the land.

The Emperor, however, is a bold political thinker, and it has always been his dream, if possible, to rally statesmen of all parties around him. More than once he has directly appealed to such men to return to political life, and though the sudden acceptance of the offer seems to have taken aback the Emperor's immediate satellites, his Imperial Majesty is known to be satisfied at heart with the event. For more than ten years the Government of France has been in the hands of a coterie of personal friends—who are of average ability at the most—and, putting aside such names as those of Fould, Thouvenel, and Drouyn de l'Huys, we may admit, without demur, that the successive Imperial ministries have only been kept straight before the eyes of the world by the tact and temper of their Imperial master. It will be a gain to the country, and no loss to the Emperor himself, if abler discussion is brought to bear upon the taxation, the administration, and the foreign policy of France. A semblance of self-government and independence on the part of the Assembly can but lighten the Emperor's shoulders of so much anxiety. He is enabled thereby to get rid of part of his responsibility without dividing his power. The voice that gives can always take away, and the master of a hundred legions who is on the whole popular with his subjects can always lay a heavy iron hand upon a noisy or destructive Legislature. But the chiefs of the old school who this week consent to acknowledge Cæsar as the virtual master of Rome, have come to this conclusion from the wise reflection that there is no alternative but Imperialism at present possible for France. The nation has expressed its unequivocal resolve not to have another Legitimist or Orleanist epoch. A turbulent republic is the only form of government that can rise on the ruins of Napoleonism until the present generation of Bourbons and of Orleanists are extinct, and sane men know that any republic must be at best a short-lived reaction that would once more lead surely and swiftly to another period of empire and absolutism. There was then nothing to be done but what they have done, unless they were prepared to die in some obscure corner at a distance from the political stage, and without making any sign.

Nor can M. Thiers, M. Montalembert, and their friends reproach France for having heartily accepted Imperialism for the present. The Empire appeals to much that is dear to all Frenchmen. The enemies on both sides of the Channel have been in the habit of maintaining that it is the *régime* of pure materialism. No criticism could be more one-sided, or, on the whole, more unfair. The internal prosperity of the country has been certainly developed in a marvellous degree in the last ten years; and trade and commerce bear testimony to the fact that France thrives upon the system, whatever it may be worth. It is said that she only does so at the expense of all that is noble and free; and that she is bartering her birthright for a mess of pottage. That is the way in which Frenchmen, who belong to the educated and ambitious classes, read the history of the present Empire, but that is far from being the way in which the mass of the French nation would consent to read it. These latter would say that they do not care for constitutional politics, by which they mean that they do not want to see France ruled by the journalists and lawyers of the country. What makes the Liberals of Paris so sore at hearing M. Persigny call Orleanism "a *régime* of rhetoricians," is that they know the nation are half inclined to agree with M. Persigny. Are then the French people, Englishmen may ask, prepared to give up all political life? Far from it. The difference between us and them is that they attach a different meaning to the word. In one sense, indeed, France has not been enjoying political life. Her writers in the press have been gagged, her orators in Parliament have been borne down; and the French bar has fallen under the

afterwards be convicted of publishing heresies; and this conjecture is borne out by the fact that he declined to join in the resolution of the Upper House of Convocation upon Dr. Colenso's book, expressly because, as a member of the Judicial Committee of Privy Council, or as an assistant in the jurisdiction of his Metropolitan, he might be called to sit in judgment upon Dr. Colenso himself. Not so with the Bishop of St. David's, who is likewise a supporter of Lord Ebury's motion, but who opposed the synodical condemnation of Dr. Colenso's book upon very different grounds, namely, that the book had not been examined by the Bishops for themselves, and that they ought not to rely upon a mere report from the Committee of the Lower House of Convocation, who had extracted certain propositions out of the book, which were, he admitted, dangerous enough. We must forbear, however, to analyse further the views respectively taken by their lordships upon either of these occasions, or to comment upon the diversities of opinion among the members of the Episcopal Bench, with respect to the best means of preventing the introduction of doctrinal unsoundness, or of purging it when discovered.

THE ISTHMUS OF SUEZ CANAL.

THE project of uniting the Mediterranean and Red Sea by means of a canal, crossing the Isthmus of Suez, is one of the most interesting and curious schemes, as it is one of the oldest ever brought before the world. It dates from prehistoric periods, and may have been considered an exploded fallacy before Pharaoh set Joseph over all Egypt. Somehow or other we link it in our minds with the attempt to build the Tower of Babel, "whose top may reach unto Heaven." Not that we can pretend to say it is a physical impossibility, after the triumphs of engineering skill that we have witnessed during the present century. Still we know that it is an idea which has been entertained by some of the most powerful rulers of men, and abandoned by them as impracticable with the greatest reluctance and regret. The first Napoleon favoured the project from an ambitious desire to achieve a work that had baffled the science and resources of antiquity, and with a view to divert the trade of the far East through the countries of southern Europe; but more particularly to benefit Marseilles, and also to destroy the chief branch of English commerce. He imagined that if he could possess, and could debar us from, the shortest and most direct route to the East, he would be able to conquer our Indian Empire, and to break our power. Strangely enough he was induced to desist from making the attempt by a stupid scientific blunder, namely, the representation that the level of the Red Sea was so much higher than that of the Mediterranean, that if the canal were made the water would rush through it and overflow the low lands of all the countries bordering the Mediterranean. Although Napoleon delighted in spreading the fires of war over Europe, he recoiled from subjecting it to a partial deluge, and abandoned what he conceived to be the quickest and surest means of vitally wounding this country. We do not believe, and should be very loth to say, that it is from a deep-seated vindictive wish to injure us that the scheme has been revived and made popular; notwithstanding that our neighbours have proclaimed the canal to be the weapon destined to pierce the *défaut dans la cuirasse* of England. We prefer to think that the marvellous character of the scheme, its connection with the remotest period of time, the ambition to surpass the ancients in their most gigantic conceptions, and the desire to stand forth as the most enterprising of nations, have induced Frenchmen to venture their savings in what it is to be feared will prove an unprofitable speculation. For the experience derived since the opening of the overland route has proved that whatever tends to facilitate commercial transactions conduces to the benefit of English trade. Egypt and France have gained greatly by our light and best paying traffic passing through them; but, after all, we have reaped the greatest advantage, and have seen no portion of our trade leave us. Were the canal to be opened to-morrow, we should be the chief gainers by it, the first to profit by it, and the best customers of the proprietors. Our interest is that the shortest route should be opened. We can afford to pay as high a toll as any one for using it, so that it is quite absurd to suppose that we have any hostility to the scheme *per se*, as stated in certain organs of the foreign press. If Englishmen have not supported it with their capital, it has been

in general very little of family discretion to be exercised. The trustees are agents to receive and pay over money, to collect rents, to invest funds till wanted. They execute these functions through their paid lawyer; only they are personally responsible that all shall be done in strict accordance with the terms of the deed appointing them. Why cannot strangers, the directors of a company, act in accordance with the terms of a deed of settlement as well as relatives, provided it is made worth their while? In the very few matters involving discretionary power, why cannot the consent or direction (without pecuniary responsibility) of some family friend be made essential to their acts? In truth, the highest authority affirms that a too close connection with the family is an objection to a trustee, by its leading him to disregard the strict duties imposed upon him by law. The present Master of the Rolls is understood to object on this principle to the appointment of a relative as trustee. The probability, then, is, that the real wishes and intentions of the settlor would be far more accurately carried out by paid men of business than by unpaid friends influenced by the entreaties of the parties, and acting after all entirely through their paid lawyer.

But, though we have thus shown that those who are owners of landed property need not despair of finding relief from the embarrassment of seeking for trustees to guarantee fulfilment of their directions, and that, in the majority of instances, a trustee company would be found a preferable machinery, it may perhaps be judicious that such a company should at first confine itself to mere money settlements. When in these simpler cases it has proved its success and safety, it need not fear that landowners will be tardy in seeking to share its benefits. This course we observe was adopted by the inchoate company of 1855, which dropped in Parliament the clauses empowering it to accept settlements of real estate.

There is, however, another great source of domestic embarrassment which the Company is well fitted to relieve us from; the choice of an executor or trustee under a will. Into the details of the duties exercised by such a personage we shall not enter; they are known more or less to almost every one. As a rule, the executor's duty is to collect the estate and pay the debts and legacies, which obviously a company can perform as well as an individual. Where complications occur, such as the winding-up of business, the discretion can be as easily vested in a personal friend as it can in the case of a marriage settlement. And where the funds are to be held for behoof of individuals at a future date, the case resembles that of trusts created on marriage, and is as appropriate to the capacity of a company.

Thus, then, will be found to disappear in practice, as soon as such a company comes to be fairly in operation, the bugbear of its want of "personal discretion." Let us now glance more briefly at the other objections which the "Humble Petition of Attorneys and Solicitors," and the Law Peers, started against the scheme in 1854-5.

One allegation was, that family secrets would be disclosed. Considering that all such family secrets as are ever put into wills may be inspected by any of her Majesty's subjects at Doctors' Commons for the small fee of one shilling, and that any which are of the smallest interest to the public are weekly announced by our contemporary, the *Illustrated News*, throughout the full extent of its cosmopolitan circulation, the suggestion that a board of directors would blab affairs otherwise inscrutable, must have demanded considerable control of the facial muscles in those who gravely propounded it. The case of marriage settlements is not very different. They are not indeed enrolled in a public register, but they are drafted probably by a conveyancing barrister with half a dozen pupils, who pay him large fees expressly that they may inspect all his deeds and discuss all their difficulties; they are perused by another conveyancing barrister with half a dozen more pupils; they are fair-copied by a clerk in a lawyer's office, and they are engrossed in a law-stationer's shop. If the secret amount of jointure, of children's provisions, and of incumbrances, does not become notorious to all the world through these sources, it is because the world in general cares nothing about them, except in the case of a very few great people, and in the case of these it always does know as much as it cares to know. In either alternative, their consideration by a board of directors would add nothing to the publicity. In point of fact, they would be the only parties who would feel themselves bound to silence respecting what they thus learned,

abridgements, its statement of its "objects," and of the means by which the promoters "propose to carry them out:"—

"It will be the aim of the Council of the Union to assist in extending and improving existing associations . . . . as well as to promote the establishment of Clubs, or Institutes, where no such associations may now be found. In order to consolidate and strengthen the action . . . of these various associations, &c., the Council will invite them to become registered members of the Union. . . . . The Council propose to carry out the objects of the Union—

"1. By correspondence with officers of existing Associations.
"2. By personal visits, by their own officers and by honorary deputations, to such places as may seem to require to be visited . . . .
"3. By the dissemination of . . . . special papers.
"4. By supplying instructions for the guidance of persons who may wish to establish Clubs, &c.
"5. By grants or loans of books, apparatus, and diagrams.
"6. By grants of money in special cases, by loans or otherwise, towards building, enlarging, or altering Club Houses, or procuring recreation grounds.

The "conditions on which local societies will be received into membership with the society," are set forth in a paper which has been drawn up for the purpose, and which can be procured at the office. The advantages to be derived from membership strike us as sufficient to warrant the affiliation of local institutions. There must, we think, be something pleasant and strengthening to individual efforts, in the consciousness of union with a vast body of fellow-labourers in all parts of the country. Added to which, it is of no small importance to have a central body as a referee, or as a resort for mediation, if occasion should arise—to say nothing of the details of the experience of others which the Council proffers to all corresponding associations.

In heartily commending this Society to our readers, we are glad to avail ourselves of the opportunity of pressing on their notice the really valuable principles on which its labours are based. Philanthropists have to acknowledge, that while there is much in the working classes that is capable of being turned to excellent account, there is extremely little perception of their own powers, and a thorough apathy on the subject of improvement. That there must be a splendid substratum in the humblest classes of Englishmen, let the annals of every part of the known world, and the high positions occupied by self-taught men in every profession at home, bear witness; let the marvellous self-denial and touching delicacy of the poorer women, and the thoroughly *gentlemanly* (we write the word advisedly) feelings of numbers of our country labourers, declare. We could point to large estates admirably managed, after the death of a husband, by ladies who but a few years back were occupying most humble positions among the dependents on the same estate. We have read essays, and heard speeches, and listened to music by men in fustian, which would have done credit to the assemblies of the highest. But it cannot be denied that, in spite of these powers, there is among the labouring classes, speaking generally, absolute ignorance of the stuff of which the English poor are constituted, or, at any rate, indifference as to their improvement. The great mass are living far below their capabilities, and are content to have it so.

True, many efforts have been made in the right direction. We do not wish to monopolize the credit of philanthropy to men of our own times. The fault has not been in the want of effort, but in the mistaken direction of the effort. Take the Mechanics' Institutions as a specimen. A few years ago these were to be the panacea, and we all put our shoulder to the wheel to give them a prospect of success. What has become of them? Scores of the hands which will finger these pages, as well as the hand which traces these lines, have been engaged more or less frequently in preparing lectures for Mechanics' Institutions. To whom have those lectures been delivered? To begin with, wife, sister, or daughter, will certainly go with us to the lecture-room. The front benches will probably be occupied by ladies, whose neat little red or blue mantles but half conceal the elegant dresses in which their owners have just been seated at the dining-table. On either side of the platform are their husbands, sons, or brothers, who have escorted the fair listeners to the evening's entertainment. In the next rows will be seen the respectable tradespeople, who relinquish their snug parlours for the nonce, to encourage a good object. Behind is a sprinkling of the better disposed mechanics, who, if they had not come to the lecture, would probably have been conducting themselves respectably elsewhere. Now, we do not say a word against giving these classes such information or amusement as the lecture-room may afford, only they are not the persons whom you desire to reach and elevate. You want to reach that fine specimen of humanity who, if the Queen's officers had got hold of him, would have stood in the solid square of British infantry at Waterloo without flinching, or would have made an effort to be first in

second-class project or prospectus, but acts like a celebrated promoter, who, when asked to father a scheme which involved hundreds of thousands, significantly bowed the applicant from his presence, saying he never dealt with anything under a million. The second-class director holds himself in reserve for good companies that float readily at a moderate premium; he too seeks special privileges and a certain amount of patronage. If he possesses a weakness—and second-class directors have their foibles—it is when he is asked to bolster up a failing adventure, in the hope that his name will give a stamp of respectability to others of a rather shady character. His reply is, "Get the shares to a premium, then I shall come in with *éclat*;" and, of course, he has his complete apportionment at the best quotation. The third-class director—and his name is legion—does everything and anything to secure status; aims at allotments, patronage, and the several waifs and strays pertaining to a board-room—possibly a little commission on the printing and stationery, if there is not a very vigilant secretary—for he is desirous of making way in the world, and that by the shortest route. Unhappily he is too frequently only his own enemy, since not being brought within reach of the top branches of the great Pagoda-tree, he is unable to make those fortunate pulls at the fruit which his more elevated brethren obtain; and after getting heaps of worthless shares and scrip certificates, and incurring liabilities as plentiful as blackberries, he subsides into insignificance, and, if pressed, "skedaddles" to the Continent. This picture is no exaggerated outline of the position and character of the leaders in the great game of speculation which is now being played within a circuit of a quarter of a mile of the Royal Exchange. Let the reader pause and judge—not half the iniquities of the system are here exposed—whether there must not come a day of reckoning for all this plotting and counter-plotting and excitement. It has frequently been urged, when this matter has been discussed, that the public, learned in their own generation, are wise enough to take care of themselves. We hope it may be so; but notwithstanding the lessons of the past, we very seriously doubt it, and shall be only too pleased if we eventually discover our apprehensions to have been misplaced.

VACCINATION.

It is certainly a startling fact that in the land of Jenner we should be liable at intervals of a very few years to epidemics of small-pox. At the present moment the metropolis is suffering under one of these visitations, and a complete panic exists among certain portions of the community respecting it; we hear, indeed, of people leaving town for fear of the increasing scourge; and if all the exaggerated reports that are afloat had sufficient foundation in fact, we might indeed despair of the impenetrability of that armour against a deadly disease to which we have implicitly trusted for these last fifty years. That there is some foundation for the statement that we are now visited by a rather severe epidemic of small-pox, the figures furnished by the Board of Health leave no doubt. The epidemic may be said to have commenced as far back as March, 1862; for while we find that throughout the five Superintendent Registrars' districts of the metropolis only seven deaths occurred in February of that year, in the March following the number rose to 19, and went on month by month gradually increasing until the present year, when the deaths rose to 136 in January, 170 in March, 240 in April, and the mortality is not decreasing; in short, more deaths by 77 occurred from small-pox in the months of last March and April than during the whole previous twelve months, abnormally high as the small-pox death rate of that year was. These figures, whilst they are enough to alarm the public, are also calculated to compel the attention of the Government to the fact that there must be some serious defect in the public working of the Compulsory Vaccination Act of 1858.

At this time of day it is quite unnecessary to re-enter the old field of dispute as to the absolute immunity afforded by the act of vaccination against the scourge of small-pox. Doubts may still be held as to the length of time this immunity holds good, but that when well performed in infancy it secures the individual for a long period of years against infection, and almost certainly against death from this cause, there can be no manner of doubt. The statistical returns of several great European countries prove this fact, and they also prove, to our disgrace, that we are one of the worst protected countries against small-pox in Europe. Whilst, however, the value of vaccination against the special deadly enemy at which it is aimed is now admitted on all hands, some of the old charges have been revived with respect to its power of inoculating other diseases, as well as of protecting us against the small-pox venom. We hear no longer, it is true, that we are in danger

Digitized by Google

the early part of the year at the Princess's; and for some time expectations have been raised by the promise of a new comedy from the pen of the Countess of Gifford, that the prose drama would re-appear, if only for a season, in its former comeliness, and graced with the refined wit which delighted our fathers. For the author was grand-daughter of Sheridan, the orator, poet, statesman, wit, and dramatist, in whose family genius has chosen to depart from her rule of capricious visitation, and has taken up a permanent residence. His son was a brilliant wit; and of his three grand-daughters, two have distinguished themselves in literature,—the Hon. Mrs. Norton and Lady Dufferin, now Countess of Gifford. Would the latter lady's comedy revive the memory of "The Rivals," and "The School for Scandal"? Would it inaugurate a new dramatic era, and encourage authors who are not under the necessity of importing ideas to write for the stage? That she was not destitute of the family wit and humour we already knew; but a play requires something more. There must be plot, dialogue, development of incident and character into a well harmonized picture of life. Good spirits and a turn for the ridiculous are enough for a farce; but comedy and farce are very different things.

Unfortunately, in the play which was produced at the Haymarket on Saturday, they are one and the same; in other words, the comedy is no comedy at all, but a very broad farce, relieved here and there by some touches of pathos. Nothing could be more disappointing than the contrast between the title, "Finesse; or, Spy and Counter Spy," and the work of which it is a palpable misnomer. Instead of a refined strategy dominant throughout the three acts, which the title promises, we had a succession of scenes full of boisterous mirth and grotesque incident, amusing and laughable, but as little like comedy as Sir Peter Teazle is like Macbeth. The plot, such as it is, has little or nothing to do with the play, and it is so confused that we are satisfied no two persons who witnessed the first performance could agree in giving an account of it. Happily, this did not affect the success of the play. Occasionally we had an uneasy sense, as the piece proceeded, that we had dropped the character of Hamlet on the way, though we were getting on very well without it. Indeed, from the moment we are told that a pair of knaves are conspiring to betray the English garrison of Messina, and that the doctor of the garrison, a Frenchman who hates Napoleon, is finessing to thwart their manœuvres, the plot almost wholly disappears, and the comedy resolves itself into a series of amusing scenes, any one of which might form the subject of a separate interlude. But to give any lucid account of the manner in which these scenes are connected, is a task which utterly defies our penetration. We know that Dr. Bertrand, the French physician, has employed a young naval officer in the British fleet to take the place of a spy who is expected by the two conspirators above mentioned; and that for some reason or other altogether beyond our comprehension, it is necessary to convey this youth, concealed in the case of an Egyptian mummy, to the house of the Baron Freitenhorsen, a German enthusiast, who believes he has discovered an *elixir vitæ* which will not only render men immortal, but will restore life to the dead; that the wily Bertrand accomplishes this feat under pretence of sending the Baron the body of a man who has been hanged, stipulating that he, the doctor, shall administer the potion himself; that the young officer thus makes his escape from some peril which is so nicely stated that no one can understand it; and that when the two conspirators, finding they have been outwitted, enter the Baron's house with a warrant to arrest the young officer, who turns out to be Bertrand's son, they discover that he has escaped, and that Mr. John Poppleton, an Englishman afflicted with the desire to pass for a sailor, has, waking up from a fit of intoxication, taken the officer's place as the revived malefactor on whom the Baron's elixir has been tried.

This is a most abominably lame account of the plot; but we could give half a dozen others equally inefficient. We may say with Hamlet, "The play's the thing," for the plot is nothing. Taking it from the French doctor's point of view, we might say that the finessing old Frenchman has unwittingly put his own son in peril of death, admiring the lad's courage, but always checking himself when on the point of yielding to the sentiment of pity by observing that the youth's risk is no business of his—"c'est son affaire;" and that when he discovers who he really is, and that by his father's finesse he is brought within the verge of death, the physician, who has learned the lesson of heartlessness from the teaching of oppression, displays a noble burst of natural affection, which is duly rewarded. Then we are taught to contrast French finesse with downright British honesty in the person of Captain Mortimer; though what he does to exemplify the superiority of

Digitized by Google

on our table. It is curious to observe how, in the brief space which has elapsed since the earliest of those dates, we have altered in many ways, so that the manners, and even some of the ideas, of fourteen years ago, seem now rather old-fashioned. In feminine dress, for instance, it was the pre-crinoline and pre-Balmoral boot period; and the women in Mr. Leech's drawings look odd to our eyes—though very agreeable—in their natural-sized skirts and their pretty little shoes. *Punch* himself has altered since those days. Though even then he had lost some little of the youthful enthusiasm of still earlier years, he had not acquired the very *distingué* tone which he now affects. The genial, though trenchant wit of Douglas Jerrold still dreamt of peace and universal brotherhood in its columns; and the execution of the Mannings gave him and Mr. Leech occasion to enter a protest against "the Great Moral Lesson at Horsemonger-lane Gaol," which would now be considered "humanitarian" and sentimental. The shock of the French Revolution and of those which succeeded it, with their visions of socialism and confiscation, had indeed begun to have an effect on English opinion, but the influence had not gone far. There seemed to be an instinctive sense that the excesses of the Red Republicans would burn out of themselves, and that the world would be the better for the convulsions which had taught so many rough lessons to kings. It was not until after the *coup d'état* at the end of 1851—not until the re-establishment of the Bonapartes at the head of French affairs—that the reaction against reforming principles set in strongly. In 1849-50, political ideas had not merged in the mere desire for self-protection from without. The military rage had not yet arisen, and Sir Francis Head was ridiculed by the same *Punch* who now talks bayonets and great guns for his alarm of a French invasion. Though monarchs and peoples were at deadly feud, and the Hungarian subjects of the Austrian Emperor were in arms against their tyrant, it was internationally a time of calm. The long peace succeeding to the final spasm of Waterloo was still unbroken. The expenditure of our own Government was much smaller then than it is now; yet Mr. Cobden brought forward a motion for reducing it by ten millions, and another for International Arbitration. Both, it is true, were rejected by large majorities; but they undoubtedly found a greater amount of support amongst the general public then than they would find now. *Punch's* old caricatures exhibit a certain kindness to the party of Cobden, Bright, and Hume. In one of them, Mr. Cobden is admiringly shown to John Bull as "the cleverest *cob* in England." He is represented as a horse with a human face, labelled "Financial Reform." Joe Hume, as the stable-man, holds the bridle, and Mr. *Punch* himself, as the horse-dealer, displays the beast with evident pride to the somewhat doubting customer. We have also a little Financial Reform story, in which we are told of "a small boy, whose name was John Bull, and he felt much pain from a rod"—the said rod being exorbitant expenditure; and it is related how he and Dick Cob. together pulled out the twig which gave the most pain. In another caricature, Britannia is telling Lord John Russell to take care of the baby he is nursing (Financial Reform), "for she's the brightest gem that ever sparkled on your early brow." In yet another, Mr. Cobden, as the usher of a school, admonishes the little boys (members of Parliament), who are re-assembling after the holidays, that they must be "more attentive to arithmetic this half." Yet there was evidently a division in the staff between the old opinions just going out and the new opinions just coming in. In one page of the volume for 1849 we find Jerrold making *Punch* say:—"We bow down and worship an Iron Duke, but we pay no distinction to an Iron Genius. The battle of Waterloo was a splendid affair, no doubt; but, to my poor thinking, of much less account to the interests of mankind than the tubular bridge across the Menai Strait. That is an iron victory of a somewhat nobler kind. However, nothing like gunpowder to make a reputation." In another page not far off, Mr. Bright is ridiculed as "the Peace Recruiting Sergeant," trying to enlist the Duke of Wellington, and putting forth a prospectus of a pacific expedition to the Continent, for the establishment of universal brotherhood. In 1850, the telegraph just laid down between England and France was hailed pictorially and poetically as the forerunner of peace and good-will from the one nation to the other; though in truth it has been followed by the bitterest recriminations that have been known for years. On the other hand, in the early part of 1849, there is a caricature which completely anticipates the self-congratulatory tone of later years. The cartoon is called "No Place like Home," and represents John Bull, his wife and family, sitting cosily by the fire, well-fed, peaceful, and happy, while all round the main design stretches a panorama revealing the wretched condition of foreign countries, desolated by fratricidal contests between rulers and ruled, threatened with socialism and anarchy, here cowed by the assassin's knife, and there trampled down by savage soldiery amidst the roar of artillery and the bombardment of cities. We recollect this picture drawing forth indignant comments from a Radical newspaper, which not unreasonably argued that the sketch of English life only reflected the well-to-do section of society, and left entirely out of view the black shadow of poverty, wretchedness, and vice to be found in England, as elsewhere. The same idea was repeated only the other day in the cartoon allegorically figuring the triumphal wedding procession of the Prince and Princess of Wales.

With a sad interest we count up in the political caricatures the faces that have long since dropped out of contemporary history. Fourteen years must needs make a difference in the working life of any nation, and our losses in that period have been many. Here is Sir Robert Peel, bland, smiling, and watchful, always with

were overwhelmed by Hoche, while the advanced transports of the British regiments, destined for their support, were tossing in the channel waiting for a favourable wind. His mismanagement of this enterprise furnishes conclusive proof of the incapacity of Mr. Pitt as a war Minister. Notwithstanding the great naval victory of the 1st of June, 1794, and the conquest of Ceylon and the Cape of Good Hope, it is not wonderful that the English nation became desirous of peace.

In the meantime the domestic policy of the Government had been marked by little more sagacity than that which distinguished their military operations. Although there can be no doubt that at the outbreak of the war the whole country was nearly unanimous in its favour, and that sympathy with the French revolutionists and terrorists was confined to an utterly insignificant party, Pitt and his colleagues, under the apparent influence of a panic, immediately commenced an onslaught on the liberty of speaking and writing, such as had not been attempted since the time of Charles I. Prosecutions were instituted against the most insignificant persons for the most insignificant offences. A host of spies and informers were let loose on the country; and the quarter sessions—tribunals quite unfit to entertain political prosecutions—were employed in trying and punishing all whom the wretched tools of the Government reported to have expressed discontent with the existing order of things. This course, followed up as it was by the suspension of the Habeas Corpus Act, naturally provoked a reaction. When Hardy, Horne Tooke, Thelwall, and the other members of the Corresponding and Constitutional societies, were tried for high treason in the latter part of 1794, the popular sympathies were enlisted on their side; their conviction would probably have been followed by serious disturbances if not rebellion in each of the three kingdoms. Their acquittal restored confidence in the administration of the law, and the public tranquillity was unbroken. The pressure of taxation, however, began now to be felt severely; the country was disgusted with the conduct of its allies; the downfall of Robespierre and the cessation of the reign of terror removed one great obstacle to any treaty with France. The wish for peace grew amongst all classes, and was, no doubt, materially strengthened by the distress resulting from a succession of bad harvests under which the country suffered in 1795, and which led in the latter part of that year to an outbreak of political discontent.

Thus pressed upon all sides, the Government made a serious attempt, early in 1796, to treat with the French Directory. But their persevering efforts, pushed almost to a humiliating length, were foiled by the insolence of the latter body, and by the impossibility of agreeing upon any common basis of negotiation. The result, however, was to strengthen the Government materially; it was generally felt that the war was now imposed upon the country by the enemy, and the general election which soon afterwards followed left Mr. Pitt in full possession of the parliamentary power he had hitherto wielded. It was fortunate that something like national unanimity was thus restored, for the first few months of the following year were the darkest in the whole war. Cash payments were suspended in consequence of a rapid drain of specie. The fleets in the Channel and at the Nore broke out into open mutiny, which was palliated, if not justified, by the scandalous manner in which our seamen were then oppressed, insulted, and defrauded. In April, Buonaparte compelled the Emperor to sign the preliminaries of Leoben, and we thus lost our last ally. Another attempt on our part to treat with France followed, but it was again unsuccessful. A plan for landing a force, under Hoche, on the coast of Ireland, was, however, defeated by the victory of Camperdown, which crushed the Dutch fleet. This was the period chosen by the small band of Whigs who still followed Mr. Fox for that formal secession from the House of Commons which has ever since drawn down upon them the severe censure even of their warmest admirers. The conduct of this remnant of a great party was, indeed, marked by singular extravagance. At a public dinner to celebrate the birthday of Mr. Fox, the Duke of Norfolk reminded the company that Washington had no greater number of followers than were assembled in that room when he undertook the liberation of his country; and at a later period of the evening he proposed as a toast, "Their Sovereign—the People." For this proceeding his Grace was dismissed from the lieutenancy of the West Riding and deprived of his regiment of militia. It appears, indeed, that Mr. Pitt at one time contemplated the prosecution of Fox; but from this extreme step he prudently refrained.

Our space will not permit us to enter upon the history of the Irish rebellion of 1798, to which Mr. Massey devotes a long and interesting chapter. Foolish and hopeless as were the schemes of its promoters, it is impossible to deny that it was provoked by the most wretched misgovernment to which a nation was ever subjected; nor can any words be too strong to describe the infamous cruelties which, under pretence of suppressing it, were inflicted by the Protestants upon their fellow-countrymen. It was perfectly clear that, after what then occurred, it would be impossible, without a legislative union, to preserve the connection between the two countries, and to this object Mr. Pitt now bent his mind. The Catholics, who were excluded from the Irish House of Commons, and smarted under the odious rule of the Orange party, were for the most part readily won over by the promise of a provision for their clergy, and by the distinct hopes held out to them by the Lord-Lieutenant and his secretary that their civil disabilities would be removed. A portion of the Protestants were persuaded to stand neutral. But there still remained to be dealt with a small but high-spirited party, who were attached to their existing

carries on the work of Gaelic independence by opposing a firm and spirited front to the insolence of the *noblesse* of Paris. The ascent of the Seine by the Northmen pirates is one of the ablest passages in the volume; though here, again, the idea has been anticipated by other and not inferior writers. Rolf, the sea-king, sacks the abbey of Saint Denis, rescuing the descendant of Joel from captivity and his daughter from outrage, and ultimately marries the daughter of Karl the Fool. Feudal France, in the eleventh century, is represented, in the family chest of the linen-draper Lebrenn, by a pilgrim's shell. It is the age of the Crusades, of Peter the Hermit and Walter the Penniless. Among the crowds that troop to the Holy Land is found Fergan the quarryman, of the tribe of Joel of Karnak, his wife Jehanne the hunchback, and his child Columbaik. The lineal representative of his hereditary foes, Nerowig, lord and Count of Plouernel, surnamed Worse-than-Wolf, joins the expedition also, and meets Fergan in the desert. As usual, the poverty, the misery, and the virtue are the portion of the Brenns. For his masters are reserved the titles of King of Jerusalem, of Baron of Galilee, of Marquis of Nazareth. The book ends abruptly, but not infelicitously, with the inauguration of the town house of a commune in the twelfth century. After long struggles with the nobles, the burghers of the borough of Laon have succeeded in obtaining a charter for their town. In a house at the corner of the street leading to the Exchange may be seen seated Fergan the *ci-devant* pilgrim. On the table before him lies a casket with his family relics, the sickle of the Virgin Hena, the iron collar of Sylvestus the Slave, the dagger of Ronan the Vagre; the arrow-head of Eidiol, the boatman of the Seine. He is transcribing the new charter, the original of which, sealed and signed by the Bishop of Laon, and by Louis the Fat, king of the French, lies in the mayor's house. The procession is about to pass to uncover the tower of the new town-house, and before long it is seen winding its way through the streets amidst the groans and sneers of the knights and nobles. With shouts of acclamation from the crowd, the moulded campanile is unveiled, and stands glittering to the sun. Full of enthusiasm from the spectacle, Fergan the quarryman thus concludes his portion of the history and the book.

"O sons of Joel! look with pious respect upon our town-houses!
They, also defying the centuries, will tell you one day of the obstinate,
Laborious, and bloody struggles of our fathers in re-conquering and bequeathing
Liberty to you! O sons of Joel! the borough town-house is the
Heroic and holy cradle of the enfranchisement of Gaul!"

Despite the length of the three volumes,—which are, however, merely condensation from nineteen volumes of original French,—and despite the extraordinary difficulties of the plot, it is no slight praise to say that the interest of "The Rival Races" does not flag for a moment from first to last. The separate episodes are admirably and dramatically finished, and they are all strung together so as to form as admirable and as dramatic a whole, which well repays perusal. The theory of continuity is no doubt most extravagant, viewed from the point of view of historical credibility. Yet each of the series of pictures in the work is done with a masterly historical touch. In attributing to the heroic family of Joel, whom he constitutes his favourites, grand virtues and a consciousness of their supereminent position in the world, M. Eugene Sue has, indeed, done no more than is common among novelists of every age and nation who write with a strong moral theory. If Mr. Kingsley with impunity infuses muscular Christianity into the barbarians of the time of Hypatia, why should not M. Eugene Sue attribute the consciousness of democratic virtue to the Gauls of the Forest of Karnak, and to their successive descendants? As a political idealist and philosopher, he has a theory about the Gaelic race. As a poet, he simply endows them with a glimmering perception of their high calling through their various vicissitudes. It is a romantic and legendary fancy; but "The Rival Races," or "Les Mystères du Peuple,"—as its title is in the original,—may well be termed a legendary romance. There is a residuum of truth at bottom of these theories of nationality and blood, as far as the Continent is concerned. French history, far more than our own, presents us with spectacles that seem to justify the notion of rival and antagonistic races; and at least Eugene Sue was as correct in ascribing perennial cruelty to the victors as he was imaginative in ascribing unblemished patriotism and virtue to the vanquished.

BALDWIN'S AFRICAN HUNTING.*

From time to time, for some years past, the name of Baldwin has reached us as that of the Nimrod of Natal. In letters from friends in the colony, and in the brief intercourse afforded by the occasional visits of some of them to the mother country, he has always been mentioned as the mighty hunter who had ranged farther and bagged more game than any of his compeers, and whose narrative of hair-breadth escapes and perilous adventures, whilst most exciting, had also the crowning merit that it could always be accepted without reserve. In the handsome book before us, these virtues are happily preserved. The greater part of it consists of a transcript of the author's diary, written under many difficulties, sometimes with ink, sometimes with a mixture of gunpowder and

* African Hunting. From Natal to the Zambesi. By William Charles Baldwin, F.R.G.S. London: Richard Bentley. 1863.

says George Herbert. In this volume is decidedly a vein of silver, and it will much help thinking.

The volume opens with some "Thoughts on Christianity," of which we notice only the short chapter (p. 45) headed, "What if Christianity is not true?"—an important question amidst the controversies of the present day. "As for that Christianity" (it has been said by Niebuhr) "which is such according to the fashion of the modern philosophers and pantheists . . . . without historical faith, it may be a very subtle *philosophy*, but it is no Christianity at all." Now, what if there be "no Christianity at all?" Dr. Macleod rejoices to believe that the historical facts on which, among other foundations, the evidences for Christianity rest, have never been shaken. But he supposes these facts to be disproved, and the millennium of infidelity to have arrived. Let the world pause, and count the fruit of the victory. Will the substitute, if there be any, rest on any surer foundation? Will it better meet our wants and difficulties in every period and condition of our varied existence? Will it do better work, and produce better fruit? To those who now believe in Christianity, it is plain that there would be a loss of everything, with no corresponding gain. And what would be the gain to the unbeliever himself if he could finally and satisfactorily prove Christianity to be false? If Christianity should cease to exist as a reality, still other realities would remain; as existence, death, sin, sorrow, and suffering. And what if these continue, while we have driven away the physician who can relieve them? Will the substitute for Christianity be more attractive, if it leaves us without forgiveness, without trust, without duty?

The author has a striking passage (p. 54) as to the spirit in which any announcement disturbing the truth of Christianity should be given to the world:—

"Picture to yourselves a person entering a family whose members were rejoicing in the thought of a father's return, and announcing the intelligence of that father's death, with a smile of pity or a sneer of contempt at their ignorant happiness! Imagine such an one professing to be actuated by a mere love of truth! Oh, if the terrible duty has been laid upon any one with a human heart, of announcing to others intelligence, which, if true, must leave a blank to them which can never be filled up; what tender sympathy, what genuine sorrow, becomes him who breaks the heavy tidings! And such *ought* to be the feelings of every man who, from whatever cause, feels called upon to announce that the Christian religion is false. If he *must* make known that terrible fact . . . . if he *must* tell men that the supposed Source of all their life and joy has no existence . . . . let this be done with the solemnity and sorrow which a true brotherly sympathy would necessarily dictate. . . . . The missionaries of an infidelity which professes only to destroy, and not to build up, should go forth on their dreadful vocation with the feeling of martyrs, and with no other notes of triumph than sounds of lamentation and woe."

In pp. 281, &c., is a highly interesting chapter on sorrow. We turned instinctively to it on first opening the volume, that we might judge, at starting, as to the author's manner of dealing with this most human of interests. We at once found that he had a human heart, and was to be trusted to view our highest interests from our own level. Speaking of the family in Bethany, he says,—

"We are able in spirit to cross their lowly threshold, and to understand all that took place in that humble home. The head of the house is laid on a bed of sickness. We need no details to enable (us) . . . to realize how the symptoms of illness, treated at first perhaps lightly, would become more serious, then alarming, until foreboding thoughts of death pained every tender affection. . . . We see it all. . . . But ere the last moment was reached . . . they are in full hope that it may be averted, for they have a secret source of relief in a Physician of body and soul. . . . They can send for Him. . . . The messenger has departed. With what anxiety must they have measured out the time within which it was possible for him to receive the intelligence. They who have sent far away for a physician in a critical case, when every moment was precious, can sympathize with their anxiety. Time passes; has He received the tidings of their grief? Probably not, for there is no improvement in the sufferer. . . . Time passes; now He must have heard! Yet Lazarus is no better. . . . Alas, it is in vain; Lazarus is dead. . . . Swathe him then in the garments of the grave; make ready for the funeral; let him be buried for ever out of sight; follow him to the ancestral tomb. . . . Lay the body gently down beside those who have been so long sleeping there; look at it; remember the past, since childhood; weep and say farewell; return, Martha and Mary, with wrung hearts to your home, and see the empty room, and listen for a voice that is no more, and experience a second death in the emptiness, the silence of this changed abode. . . ."

We have no space for an extract from pp. 291, &c., in which the reasons for delay, in this memorable instance, are detailed. But we are taught that there is something of more importance to human beings than mere *comfort*—that to get quit of grief, to have tears dried up and smiles restored, to be freed from all anxiety and relieved from the heavy burden of sorrow, never mind how, is not the highest end of our existence, and would not be the primary object of One who had our truest welfare at heart.

Prominent among many chapters replete with much that is highly interesting, stand some "Thoughts upon future life." At first sight, such subjects appear suitable only to the theorist. Many would consider the time little better than wasted, that was occupied by thoughts concerning any time beyond the present. Yet it must sometimes have occurred to most of us to question how far our present powers of mind and capacities of enjoyment

and prides himself on his "passivity." Elizabeth describes him as—

"The drollest looking creature imaginable; short, thick, stumpy, as broad as he is long, and yet with the thinnest little legs in the world, that seem to totter under him. Then, one eye squints; still, one can't help liking him. He is of high family, but lately he confided to me, in the most mysterious manner, that he would rather have been the son of a baker; for 'to throw in the leaven and watch the dough rising, was the sole important work in the world, and he envied every baker's boy he saw. Besides, a baker was busy the whole day, and all his works were good and useful. He was the sustainer of daily life; the growth of humanity depended upon him; the world could not exist without him. His father indeed was a baker, but of a very useless sort—he kneaded up a tough dough, called philosophy; and the leaven was bitter enough, and by no means nourishing. He never heard of any one being the better or stronger for it.'"

He was the jester of the little circle, and was a good musician. He liked to dash into a solemn discussion with a Swiss melody, and to interrupt mirth by a funeral dirge; "but especially he exulted in interrupting some grand transcendentalisms of Madeline's by a common waltz." Once when Elizabeth was in a feverish and painfully agitated condition from ill health, loneliness, and the reading of Hoffman's tales, Robert sent for Everhard. He came, "opened the piano, and stormed over the keys, raging through the most horrible discords," the poor invalid on the sofa trembling the while.

"Still the performer never changed his style. The discord of hell seemed his theme, with its weeping, and wailing, and gnashing of teeth, and peals of demon laughter. But gradually the sounds softened, the discords travelled on through plaintive minors to harmony; full, mellow tones rolled along the chords, and swelled, by degrees, into a hymn of triumph.

"Robert sat by his wife, holding her hand. As the soothing influence of the music came over her, the tears gathered slowly in her large open eyes; then Robert drew her gently to his arms, and she sobbed, and wept upon his bosom. He spoke no word, only let her lie there and weep. And ever softer and lower became the music; and ever calmer and stiller the weeping one, till at length she lay quite still and calm; the evil spirit had left her, and she slept."

Of Bertram, Baron von Schussen, the enthusiastic young painter, of whom much deserves to be said, we must say least of all. He sees in Elizabeth the realization of the Madonna of Perugino, before which he had "lain prostrate for hours in ecstacy of adoration." She sees in him all that she had only dreamed of finding in Schartel; but she conquers her love, though she cannot quench it. And when the shock and tumult of life's storm is over for her, and she lies calmly down to die on the cottage bed, Everhard and Bertram are beside her. Everhard plays a hymn, and then the *Magnificat* of Palestrina; Elizabeth smiles, says "I hear the Angels singing," and sinks back to die.

"Everhard held one hand of the dead, and looked up to Heaven with tearful eyes, as if following the freed spirit's flight; but the Baron held the other clasped to his bosom, and bent his head over it and wept; and silently renewed the vow by which he consecrated himself to the faith in which Elizabeth died, that so he might meet her again in Heaven.

"Like Goethe, he had a horror of seeing what he loved consigned to the cold earth. With difficulty they forced him away from the lifeless, though still beautiful form; but the Pastor's gentle words calmed the delirium of his agony at last, and led him to look up from the unsouled clay to the glorified and ever living spirit of her he loved—safe by the throne of God!

"The Baron planted a rose and a lily upon her grave, but Everhard, a tree of life.

"The old peasant and his daughter promised to watch over the flowers; and year by year the rose and the lily blossomed, and the tree of life grew statelier and stronger."

Leaving the other characters of the tale unnamed even, we have only to add that we think the absence of any exemplar of a noble, reasonable, and strong religious faith and life, a very grave defect in the story, and almost, if not quite, enough to defeat the purpose with which it has been written; inasmuch as it leaves the reader almost exclusively in the very society, and under the very influences which it is desired to counteract. The opinions and sentiments of the so-called philosophers are uttered so freely, clearly, and repeatedly, with so much unseemly jesting, frivolity, and profaneness, that they can hardly fail to fix themselves in the mind of many a reader who would not be touched by them if presented in the grave form of a treatise of Spinoza or Hegel. For this reason, and also on account of the scenes of passion, sometimes verging on the limits of decency, we feel bound to add that we cannot advise the indiscriminate introduction of "The First Temptation" into our English households.

MINISTERIAL EXPERIENCES.*

In the reminiscences of his pastoral career Dr. Büchsel has given us a book which, like all works dealing with the affairs of life, and written by men of clear judgment and of earnest minds, is both interesting and instructive; not only to those who may be engaged in the task of teaching and preaching, but even to readers whose

Grecian army, was not without a certain pompous dignity and theatrical effect, in keeping with the stiff, classical style of Racine. The attention of Monsieur de Bois-sec's auditors was profound. For half an hour, perfect silence reigned in the little *salon*, the points and beauties of the dialogue being only marked by mute expressions of approval. At the end of that time, Mademoiselle Victorine began to yawn behind her handkerchief, and look as if she wished the winds in Aulis would change their quarter, and set Iphigénie and the Greek ships free. Rutter, too, began to grow impatient; for, to tell the truth, Monsieur de Bois-sec's reading, if appropriate, was monotonous, and the effect of it was to make you feel that rhymed verse conduced to lowness of spirits and nervous sensations in the calf of the leg. Thus, it was a decided relief to certain of the audience, when Monsieur de Bois-sec at last reached the end of the second act, and laid down the book. While Monsieur refreshed himself with sugared water, and received the congratulations and thanks of his friends, Mademoiselle Victorine and Kate discussed with Rutter and myself, in one corner of the room, the success of the entertainment."

The Mademoiselle Victorine mentioned in this extract is Madame's granddaughter, and it is in working out the character of this clever, beautiful, and heartless girl, that the author has bestowed the greatest pains, producing a highly finished portrait. Nothing can be more subtle than her perception of the right thing to be done or the right word to be spoken to effect her object; nothing more perfect than the effect with which she utilizes her opportunities. While she plays for the heart of the rich young Englishman, she has to pacify a fiery Monsieur Sabreton, with whom she has compromised herself. Though his mother, sister, and friend mistrust and dislike her, she coils herself round young Rutter with a serpent fascination from which there is no escape, and which is complete, without any apparent design or effort upon her part. She knows that his friend Hamilton penetrates her heartlessness; but even when he has discovered proofs of her dealings with Sabreton, in the midnight meeting at which, unseen, he has been present, she foils him by confiding the story to Rutter, giving it her own colour with an air of candour which conceals her falsehood.

"From the hour when Victorine's beauty first struck me, I had felt a presentiment of what would follow. But it was only of late that I had admitted it to my own mind, as a thing to be reasoned and reflected upon. I sickened at the picture my fancy drew. Victorine was false-hearted and wicked. I knew it by other proofs than instinct. I had not watched this beautiful panther all these months without detecting the subtle, cruel nature that lurked under that fair skin and graceful form.

"Mademoiselle de Longueville was no more capable of understanding a love like Rutter's, than a mermaid of returning the affection of a human being. And yet this mermaid, with her spells and charms, so like the true graces of the womanhood she counterfeited, had got fast hold of a man's heart, strong, tender, and true, and had but to hold up her finger, or beckon with her mirror, and he would plunge down into the depths of the treacherous sea whither she would lure him."

It is a drawback on the portion of the plot in which this lady plays her part, that we are never allowed to doubt that she will run down the game she has started. From the moment we learn that she has marked Rutter for her victim, we see only the process by which she entangles him in the toils of her fascination. If there was ever a probability of doubt as to the result, it is at an end as soon as we have read the sentences above quoted. We question, too, whether a man of Rutter's firm disposition and sound intellect would so easily fall a victim to a girl so cruelly heartless. Good sense and clear judgment are essential qualities of manly character; and it is at least not in youth that such men become the dupes of feminine intrigue. But whether we are right or wrong in this opinion, the author is entitled to the highest praise for the force with which he describes the sequel of the elopement. Victorine's flying from her lover when he is stricken with smallpox; the absorbing selfishness and vanity which mark her every movement, from that moment till she re-appears after Rutter's death as the wealthy Madame la Baronne de Schinderhannes, are true to the life; and, contrasted with the faith of the noble heart which has sacrificed everything for her sake, form a picture not very uncommon in the world of reality.

LAMPS OF THE CHURCH.*

THE burning and shining lights in this collection are forty in number. The names of eight of them have long since been enrolled in the annals of fame, and their lives and writings are familiar to all who are conversant with the literature of their age. They are Cowper, Archdeacon Paley, Henry Kirke White, Charles Wolfe, John Mason Good, Hannah More, Mrs. Hemans, and Samuel Taylor Coleridge. Then we have William Wilberforce, with some salient extracts from the biographies written by his sons and Sir James Stephen; Lady Powerscourt, Mary Jane Graham and Helen Plumptre, Admiral Parry, two captains and a major, Professor Turner, Chancellor Raikes, Judge Blosset and John Bowdler, together with twenty clergymen whose memoirs have already been published.

Mr. Clissold does not even profess to give a summary account of the career, character, and compositions of each of these worthies. If he had done so his work would have been interesting, yet it

certain unorthodox opinions. If they were infallible themselves, and did not place pictures before us which are simply contemptible as works of art, we might consent to approve what they praise, and re-condemn their victims. We have, for example, seen good come out of the pre-Raphaelite heresy, and we believe that we are not alone in wishing to see each year what may be the growth or development of that peculiar tendency of the artist mind which has certainly found a very wide sympathy. For our own part, we are amongst the very last to agree with Mr. Brett's ideal of a landscape, but we regard his pictures with great interest as expressing the extreme opinions of a class of artists. Hitherto the Council of the Academy have not been insensible to the public feeling in this respect, and we can see no reason for their disregarding it now. But if no more just and liberal sentiment is to animate the Academy than has been exercised this year, we shall expect to see all the private pique and animosity of the old days at work again. But even before the present Academy existed there was more fairness shown by the old chartered Society of Artists of 1765, who had a very good rule "that any person may appeal from the determination of the hanging committee to a general meeting, to be held three days before the opening of the exhibition." Neither question nor appeal from the decision of the present Academy is permitted. Something of this kind, however, will have to be adopted if such gross injustice continues to be shown to the artists and such conceited indifference is manifested to public opinion.

MUSIC.

Signor Graziani re-appeared at the Royal Italian Opera, on Saturday, as Plumkett in Flotow's weak but inoffensive "Martha," an opera which, like some other mediocre works, owes its acceptance here partly to the interest of the book, and partly to an effective performance of music which scarcely deserves such aids. Signor Mario, as Lionel, would alone give an interest to even a worse work than "Martha." Of the lady who made her first appearance as Enrichetta, it is unnecessary to say more than that she will be replaced in the part by Madlle. Fioretti on the next performance of the opera this evening.

The début of Madlle Artôt, at Her Majesty's Theatre, on Tuesday, was a great and legitimate success. This young lady, who had previously been heard here as a concert singer, appeared as Maria, in "La Figlia del Reggimento;" her performance of which is unquestionably the best, both dramatically and musically, since that of Jenny Lind. Madlle. Artôt possesses a voice of more than two octaves in compass, the upper notes of which are as brilliant as the lower tones are expressive and sympathetic. Her delivery of passages of force and execution was characterized by power, modified by refinement; while in the tender and plaintive portions, her pathos was earnest and touching. "Ciascun lo dice" was given with admirable archness and point, and the expressive air, "Convien partir," was a model of cantabile singing. The acting and bye-play of Madlle. Artôt were also excellent. The arch vivacity of the "Vivandière" was refined by an innate grace of manner that threw a charm over the whole performance. Madlle. Artôt's reception was as enthusiastic as it deserved to be, and there can be littte doubt that she will become as great a favourite here as she has recently been with the principal continental audiences.

The programme of the fifth Philharmonic Concert on Monday last, was as follows:—

Part I.

Sinfonia, No. 11 (Grand)	Haydn.
Recit. and Aria, "With verdure clad," Mdlle. Titiens (The Creation)	Haydn.
Fantasia Overture, "Paradise and the Peri" (composed for the Philharmonic Society's Jubilee Concert)	W. S. Bennett.
Aria, "Che pur aspro," Mdlle. Titiens (Il Seraglio)	Mozart.
Overture, Der Freischutz"	Weber.

Part II.

Sinfonia in B flat	Beethoven.
Valse, "E strano poter," Madlle. Titiens (Faust)	Gounod.
Overture, "Zampa"	Hérold.

The Prince and Princess of Wales were again present on this occasion. The only approach to novelty at this concert was Professor Bennett's Fantasia Overture, which had been heard but once before, on its production last season. The term "Fantasia Overture" is somewhat paradoxical, since an overture has long since been considered to mean a piece of regular construction, with a beginning, a middle, and an end, and a regularly recurring episode. The attempt to illustrate a narrative poem by detached musical phrases of instrumental music, having no constructive relation or coherence one with another, is scarcely calculated for success in concert-room performance. Music, and especially instrumental music, must disclose design, proportion, and development, or it can never possess more than the fragmentary interest of mere impromptu thought. Vocal music may charm, apart from its intrinsic merits, either by the words to which it is allied, or by the brilliancy or pathos of its execution. Such fragments as Professor Bennett's overture consists of might prove effective as dramatic illustrations, but even then they would require accompanying stage action. Haydn's Symphony is one of the least interesting of the "Saloman" set, while Beethoven's will always be worthy of comparison even with its composer's later and more elaborate

works. The

created life as forming one system, we have in geology at present no proof of the transmutation of man from the gorilla. The Moulin-Quignon jaw no more favours such a view than the Engis skull, and whatever may be the mode by which the Creator introduces new forms of life on our planet, or by which he introduced man, there is no geological evidence yet of the nearest allied ape to the human form in any geological deposit from which the relics of these truly primitive men have been derived.

CONTEMPORARY SCIENCE.

At the *soirée* of the Pharmaceutical Society on Tuesday there was an extensive and excellent display of objects and a large attendance of visitors. A beautiful collection of aluminium articles were exhibited by Messrs. Mappin, a large ingot of thallium by Mr. Crookes, Mr. Atkinson had his 18-inch spark induction-coil; Mr. Rammell his model of the pneumatic dispatch tunnel and car; photographs were shown of M. Boucher de Perthes' fossil human jaw lately found at Abbeville. Mr. Symons exhibited his new barometer, and in his very neat thermometer's syphon we observed a small matter of much importance, and deserving of notice at our hands. A little bit of metal, not bigger than the half of a small pin, seems indeed a very trivial affair to those who are not aware of the importance in meteorological investigations of a good index for those instruments. Maximum registering thermometers are generally made with an index, which is pushed before the mercury and left at the point of greatest expansion. Steel has been commonly used for the purpose, but is liable to corrosion, and the various substitutes tried have had some imperfections. Doubtless this has been the means of bringing forward other ingenious methods of registration, two of which are well known and much in use, although they even are not altogether free from objection, either on account of expense or from the want of simplicity. At least for popular use, a cheap maximum thermometer with a perfect index has been a desideratum. Mr. Symons, who has long made this the subject of experiment, thinks he has now succeeded in forming a metallic composition for an index, which he calls "Lithite," that is free from the usual objections. It has certainly so far withstood every test that can be applied, but the verdict of time will be the true certificate of its value.

Messrs. Horne and Thornthwaite showed a very handy and seemingly valuable instrument for students in astronomy—a sort of miniature equatorial, which they call a "star-finder," its use being by means of the declination and right ascension to find out any star, planet, or comet; or by obtaining through it the exact position of any celestial object, to ascertain its name by reference to a table or chart. It consists of a telescope having a sliding adjustment, and an eye-piece with cross-wires; its tube occupies the diameter of a declination-circle graduated both ways to 90°, and read off by a vernier index on the flank of the telescope. Passing through the centre of the declination-circle is an arm which occupies the diameter of the hour-circle, and admits the revolution of the tube. The declination arm, attached at right angles to a carefully-fitted polar axis, is capable of taking any position on the hour-circle. Mr. Larkin, the clever and indefatigable modeller of crystals, had a table on which were displayed a series of glass models, illustrating the six systems of crystallography, uniform with the two, three, and four-inch cubes; wire models, uniform with the six and eight-inch cubes; the six-inch size having the prisms so arranged that upon their axes the other contained forms of crystals may be placed by means of moveable halves. His novelties were a set of wire cubes, arranged by Mr. Henry Perigal, jun., containing the platonic forms, and showing the intimate relation of each to the cube; a set of models, in white wood, illustrating Pereira's Materia Medica; another set, illustrating Dana's Manual of Mineralogy, and a set of geometrical solids.

The anniversary meeting of the British Archæological Society was held on Monday, when it was announced that the congress will be held at Leeds in the early part of October, under the presidency of R. Monckton Milnes, Esq. Ripon Cathedral, Fountains and Kirkstall Abbeys, Aldborough, Wakefield, and Pontefract will be amongst the places of interest to be visited and investigated on that occasion.

At the anniversary meeting of the Ethnological Society on Tuesday, John Lubbock, Esq., was elected president. Professors Busk and Huxley were elected on the council.

Messrs. Robarts, Lubbock, and Co., 15, Lombard-street, E.C.

BROKER.—Lewis H. Haslewood, Esq., 7, Lothbury, E.C.

SOLICITORS.—Messrs. Vallance & Vallance, 20, Essex-street, Strand, W.C.

ARCHITECT.—Francis H. Fowler, Esq., M.I.B.A., Fleet-street, E.C.

AUDITORS.—Messrs. Harding, Pullein, Whinney, & Gibbons, Serle-street, Lincoln's-Inn Fields.

SECRETARY (pro tem.).—H. Nanson, Esq.

Offices: 10, George-yard, Lombard-street, and at the Hotel.

ABRIDGED PROSPECTUS.

The conversion into one grand hotel of the six magnificent mansions (including "Wallace's Hotel") at St. George's-place, Hyde-Park Corner, commanding direct and uninterrupted views over Hyde-park, Rotten-row, and the Serpentine, is the object for which this Company is projected.

The possession of so magnificent a site, with buildings already completed and furnished, and a portion actually appropriated as an Hotel, with an established connection of the highest character, and with a space for the erection of a noble hall and coffee-room, and wanting only communications to be made between these respective buildings, altogether present advantages unequalled in any similar project which has been brought under the notice of the public.

The Alexandra Hotel will offer to the families of the nobility and gentry all the luxuries and comforts of a private residence, with pure air and uninterrupted views; and its immediate proximity to the Palace, the Parks, Piccadilly, and Belgravia, presents local advantages which cannot be too highly valued.

The additions which will be made to the furnishing and embellishment of the Hotel will be commensurate with the importance of the site and the connection which this Hotel will command.

The accommodation of the Hotel will include a splendid hall and coffee-room, private billiard-room, especially for the residents in the Hotel, hot and cold baths, &c. The arrangements will also comprise drawing and reception rooms, with bedrooms adjoining in suites, after the manner of the Continental hotels.

Arrangements will also be made for residences for fixed periods; and every improvement which experience and good taste can suggest will be adopted, so as to ensure the privacy and comfort of home, combined with the advantage of superior hotel accommodation.

As to profits, it must be borne in mind that, as the Company are spared the risk, loss, and delay arising from clearing a site and building an hotel, immediate profits will arise. Having regard to the position of the Alexandra Hotel, the patronage already extended to the one included in the purchase, and the assurances of support received from the highest quarters, the Directors feel justified in looking forward to a very large and remunerative return upon the capital invested.

The liability of the shareholders will be limited to the amount of Shares for which they subscribe.

A deposit of £1 per share will be payable on application, and a further sum of £2 per share upon allotment. The further calls will not exceed £3 per share, at intervals of not less than three months.

If no allotment be made, the deposit will be returned without any deduction whatever.

Applications for shares may be made in the usual form to the Brokers, Solicitors, or Secretary, accompanied by a banker's receipt or a cheque upon a banker for the deposit of £1 per share.

Colborne among the English, could deliver an attack with the most crushing impetuosity and vigour; but they were all men to execute a movement, not to invent it. Probably the only modern soldier who combined both powers was Sir Charles Napier. The present contest in America is no exception to the ordinary rule. In the North there is no single officer who has displayed any genius in the field. M'Clellan and Halleck are certainly cautious and well educated officers. They can discuss a campaign on paper, but beyond this it must be admitted that they have failed. But in the South the case is very different. General Lee, and no doubt Jefferson Davis, have not only displayed the most consummate knowledge of the theory of war, but when they have been called upon to act they have done so with admirable skill and promptitude. Stonewall Jackson, however, has been the chief executive. He it is who has performed the most daring and brilliant exploits in Virginia, and it remains to be seen, now that he has perished, whether the vigour with which the Southern troops are handled will still continue as conspicuous as formerly.

There was, indeed one peculiarity possessed by Stonewall Jackson which it will be difficult to replace. Jackson was not simply a brave and skilful officer—he was inspired by a religious fanaticism. It is said, that the night before a battle was always spent by him upon his knees in fervent prayer. However strange it may appear to some, he really believed that the cause of the South was the cause of religion. A Puritan—a Crusader—call him what you will—it is abundantly clear that he fought under what he believed to be the highest sanction. Some of the Southern leaders are no doubt actuated by purely selfish views; but every man who served under Jackson knew that his motives were absolutely unselfish, and that his sole object in life was the independence of his country. No wonder that amongst the soldiers of the South his name should be great and his influence unrivalled. If ever there was a man who might have relied for success upon the enthusiasm he could inspire, that man was Stonewall Jackson. But yet he did not rely upon such heaven-born qualities. Like Wolfe, with whom he seems to have had much in common, he was thoroughly well-educated in his profession. Indeed, we have had occasion to remark that he was for some time a Professor at a Military College, and delivered lectures to the students on Military Science. This fact deserves attention. Throughout the present American war the officers who have distinguished themselves have all been educated soldiers. With the exception of General Banks no unprofessional soldier has had any success. Lee occupied one of the highest positions in the United Sates army before the Civil War broke out, and all his lieutenants—Stonewall Jackson, Longstreet, Johnstone, and Beauregard—were all graduates of West Point. Education cannot give any man ability; but experience seems to prove that in the military, as in other professions, genius is improved by culture. This is the lesson which many Englishmen are loth to learn.

M. PERSIGNY AND M. THIERS.

THE return of the old Parliamentary celebrities to the political arena has filled M. Persigny and one-half of the Emperor's devoted adherents with vague alarms. They do not think that it will be really possible to combine Imperialism with Liberal institutions. It is, indeed, a formidable problem for all parties whether M. Persigny is not correct in his view. During the desperate episode of the "Cent Jours," Napoleon I. promised France representative government under the Empire, but it is well known that he did so as a last bid for popular support. His biographers assure us that in this matter he was himself no victim to the hallucination with which he sought to dazzle the eyes of Paris, and they cautiously hint that the promise was only meant to be half kept. The present Emperor is what the first Emperor was not—a man of political enthusiasm, and an idealist. Like the first apostle of an invented faith, Napoleon III. perhaps is even more profoundly a believer than the original prophet himself. Meditation and seclusion have taught him to see mysteries and beauties where the founder of the Imperial creed seemed regardless of creating any; and it may be that among the other imaginary virtues which he ascribes to Imperialism, is a capacity for union with the purest liberty. His Minister of the Interior comes of an older, an equally devoted and

selfishness and indifference which too many are ever prone to cast upon them. The doubts that now occur to their minds, and the obstacles that rise up, are due simply to the progressive attempt to put the scheme in operation—to follow up the architects' first rude sketch, with what builders term the "working plans."

The basis of the whole proposal is, that the various parishes and municipalities shall borrow money—probably from Government, and at a low rate of interest—to be used in making parks, cemeteries, water-works, sewerage, main drainage and paving, or in such other undertakings as may be wanted or may be deemed useful; and that the work thus inaugurated shall be performed by the now unemployed men and boys who usually are engaged in factory labour. That is to say, the several localities are to incur a debt bearing interest, and repayable within a fixed term of years, for the sake of finding occupation for those, and distributing wages among those, whom they are now supporting in idleness, in order to prevent the demoralisation attendant upon the want of employment, and the subsistence on alms or poor-rates.

Now, in preparing to carry out this scheme, the first, but the most trifling, difficulty that has come to light is, that in many places where the relief is most needed, there are no local authorities with borrowing powers—scarcely any local authorities at all. This is the case chiefly in the smaller towns and in the more scattered and straggling unions. These have often no municipality; they are not under the Board of Health; there is no specific reason why they should be put under it; and they have a rooted objection to come under its provisions. Yet their drainage is not practically bad; they have a good supply of water; and they want no parks, for the fields and moors around them and within easy reach are parks ready made by nature, and involve no expense. In these cases, the scheme could only be worked out, we understand, by persuading all, or nearly all, the individual rate-payers—many of them small and poor—to involve themselves in debt, and to consent to expenditure for objects of which they do not in the least feel the want, and the indirect moral operation of which they cannot readily be brought at all to comprehend, far less to appreciate at its full value. They are willing to pay whatever rates are necessary to feed the unemployed, partly because they *must* do this, and partly because they can calculate exactly what it will cost; but those who know them well are of opinion that stronger and subtler powers of persuasion than any that have yet been brought to bear upon them, will be needed to induce them to incur unknown and indefinite obligations, of which neither the necessity nor the benefit can be made very clear to them. They know, moreover, and do not hesitate to say, that men who are not at work can be maintained in health and comfort on a much smaller sum, than men whose appetites are stimulated and whose strength is exhausted by regular and severe labour. One hundred pounds in the former case will go further than one hundred and twenty in the latter.

This difficulty may be said to arise from the want of liberal feelings and enlarged views among the mass of rate-payers, as well as from want of organization; but it is not the less serious on that account. The next difficulty that has begun to crop out is traceable partly to a sense of justice, and partly to natural though not laudable jealousy. Some boroughs with competent municipalities and with ample borrowing powers, and with local wants, which the projected undertakings might supply, form part of unions embracing country parishes with different interests, with no corresponding needs, and with different constituent elements, but also with a large unemployed population. Take the case of Ashton, for example. The borough would be willing enough to set on foot water-works, or paving, or possibly a park, and to borrow money to employ *its own* factory hands in carrying out these projects. But the outlying townships, which stretch far into the country, would not benefit by these borough jobs, would not use the park, would have no concern with the paving, would not be supplied by the water-works, and would consequently not be willing to contribute to the cost, or to bear any portion of the debt incurred; nor is it clear how they could be fairly called upon to do so. But, on the other hand, the borough inhabitants naturally say, "As we undertake this plan and this expenditure to save our own rates and to benefit our own poor, we shall confine the work to those belonging to the town alone, and no one from the other parishes in the union shall share the employ-

ment, if those p

best left to the discretion of the responsible Minister. We do not, however, think that it is a measure which can be indefinitely postponed until it may please the Federals to abandon a useless civil war. Under ordinary circumstances, such a course might be convenient; and it has accordingly been adopted on several occasions, of which we have all heard quite enough. But it is not imposed upon us by international law; and it is idle to lay down any fixed rule on a matter which is one merely of policy and prudence. In dealing with it, we cannot leave out of sight the practical disadvantages under which we suffer from possessing no means of protecting British interests when they are threatened or injured by the Confederate Government or its officers. When a country makes its independence and power felt by a navy which sweeps the ocean, other nations cannot, for their own sake, long neglect to take the regular measures for securing its observance of their rights. Delicacy towards the empire from which it has seceded must give way to more imperative considerations. In the face of their own authorities, it is impossible even for the Federal statesmen to contend that the reception of Mr. Mason as Confederate Minister in London, or the despatch of an English Minister to Richmond, would constitute any breach of neutrality on our part. These steps might and no doubt would give indirect encouragement to the revolted States; but we cannot, on that account, be asked to refrain from taking them in a *bonâ fide* regard for our own interests. Many recent events, amongst which we may mention the burning by Captain Semmes of English cargoes on board Federal vessels, prove clearly that our admission of belligerent rights on the part of the South must, ere long, draw after it that diplomatic recognition which is requisite for enabling us to confine their exercise within the bounds prescribed by international law.

THE IRISH CHURCH.

THE House of Commons has been invited to consider the arguments for and against maintaining *in statu quo* the Irish branch of the United Church of England and Ireland. Mr. Dillwyn's motion, indeed, has rather an ugly look of spoliation; while from Mr. Seymour's amendment, if carried, we should expect a re-distribution of the existing revenues, though without appropriation to any but Protestant and Church of England purposes. We have carefully studied the arguments in favour of Mr. Dillwyn's views which were brought forward both by the speakers of last week, and by those who on former occasions have advocated the spoliation of the Church—and we consider that they are all so far wide of the mark that they do not touch the question which is really at issue. That question is not, whether, in this year of 1863, we shall proceed to set up such an institution as the Irish branch of the United Church, but whether, finding that Church in existence, with revenues legally granted and secured to it for certain clearly defined purposes, we shall seize upon those revenues, and appropriate them to purposes of another character. Any arguments which do not touch this latter point we dismiss as worthless, as it alone is before the country.

We are, of course, entirely prepared to admit that it would be impossible to set up such an institution as the Irish branch of the United Church at the present moment; also, that endowments cannot be intended for the clergy only, or for clergymen who waste their time and do nothing in return for them. Reformation is one thing, spoliation is another. If it is a question of spoliation, we are prepared, without hesitation, to answer the question of the spoliation of the present revenues in the negative. We shall detail presently the arguments by which we think the retention of those revenues may be justified. But it will be well, before we touch upon that point, to glance at the results which might certainly be expected to follow, if a rough hand were stretched out for their spoliation. We believe, then, that the spoliation of the Irish branch of the Church would be a clear and unmistakable blow at the other branch of the United Church, viz., that which is established in this country. Secondly, it would establish the vicious precedent that great principles are to be decided by mere numerical majorities. Thirdly, to disturb the undoubted property of the Church would be, as was clearly shown by the late Sir James Graham, to disturb the foundations of property of every kind. It would establish the claim of Parliament

Next, but not less than this, would be its inaccessibility to motives of partiality or interest. As no one would ever make the company his residuary legatee, it could have no private interest in pursuing one course of administration rather than another. Neither would it be open to be affected by the solicitations of parties taking benefit under the deed, who very frequently by personal influence are able to persuade individual trustees to commit a breach of trust, by departing from the precise injunctions of the deed under which they act.

Another important advantage offered by a company would be its capacity to act as a sort of authoritative exponent of the law, without the expense of a decision by a Court. Comprising, as its directors would, many practical lawyers, and being wholly unbiassed in favour of either side, their interpretation of an obscure or difficult deed would often be accepted by all parties as final, and their exposition of an easy deed would be invaluable to such persons as taking an interest under it are yet unable, without professional help, to ascertain the real extent of their rights. In this way it would save a great deal of expense which is now borne not out of the trust estate, but out of the pockets of the individual claimants upon it. And in this further way it would, we fear, diminish the emoluments now annually divisible among the legal profession.

Other advantages peculiar to a company might be enumerated, but these perhaps are enough. It must, however, be steadily kept in view that all these are subordinate to, and flow out of, the great and fundamental benefit which such an establishment is calculated to confer. This will in effect be a Trustee and Executor Bank, a bank holding funds and estates in deposit until the time fixed by the deed of deposit for distributing them, and in the meantime taking the management, and offering its own capital as security for the property; differing, however, from ordinary banks in this respect, that it will exercise no option in investing the funds save such as the depositors authorize, and will draw its profits only in the form of a commission and not in any shape from speculation. This is an institution obviously combining convenience with security, the most important conditions which any system of trusts can offer. And when we add to these that the bank, in the application of any of the funds as to which a discretion attaches, may be required to act only on the order of a guardian, or of an easily accessible officer of the Court of Chancery, we have completed the general theory of a scheme, which seems to present incalculable and unhoped for advantages to a very great number of those who are now driven perforce to claim from private friendship a hard service, and to repose in individual solvency a perilous confidence.

For the benefit, however, of those who like to see an outline of the general *modus operandi* of any new institution before pronouncing in its favour, let us try to sketch what would be the general course of operations of such an establishment. Like banks and insurance companies, it would have its board of directors, elected by the shareholders as the most capable and the most calculated to inspire public confidence whom they can find. It would have its secretary, who would probably be a lawyer, its surveyor, and a sufficient staff of clerks. On a deed or will being transmitted to it, nominating it trustee or executor, the document would be brought before the next meeting of the board, with a brief statement of its general purport and peculiarities drawn up by the Secretary. The Board, if no reason to the contrary or occasion for further inquiries appeared, would accept it. The Secretary would then communicate with the parties in possession of the funds, would have the proper transfers made into the name of the company, would collect outstanding debts, pay expenses, and distribute any sums which might be immediately divisible. If the trust were for investment, and a choice of several investments were allowed by the deed, the matter would be brought before the Board, which would select that security which seemed at the time the most eligible. If any difficult questions as to title or the rights of claimants arose, the parties might, on the matter being intimated to them, either agree to be bound by the decision of the Directors; or if they either could not or would not, resort would be had to the same remedy which at present is available, the stating a case, if the point is not complicated, for the decision of the Court of Chancery; or, if the matter is more complex, the institution of a suit. This would be done only by authority of the Board of Directors, and it would be

let crop up in its place. Croquet is certainly as idle a pursuit as farming; and we do not know that associating with the squire's daughters is a more clerical pursuit than riding to the county town on market-day. Surely the Bishop of Rochester's good sense might tell him that in all things of the kind clergymen are best left to their own discretion, so long as nothing is done to bring discredit on the Church. One thing is certain, that to forbid a clergyman the use of the pulpit is a most serious step, and, unless justified by urgent necessity, the gravest injury. It appears that Mr. Davies is too highly respected in Essex and by his brother clergy to suffer harm; but the Bishop's conduct is not the more excusable. He has run the risk of damaging a brother clergyman's reputation for life because he disapproves of what is, at worst, a mere error of taste and feeling, a venial and trivial fault. These are the unpractical mistakes that bring the Bench into a kind of half contempt in the world without. The publication of the controversy will reflect more on the Bishop's *savoir faire* than on Mr. Davies's character. The minor grievances of which Mr. Davies complains are the want of consideration shown by the Bishop in sending him an inhibition without vouchsafing a word of remonstrance or warning, though he was an old friend of the Bishop's and known to him personally for years; and again, that the Bishop had not chosen to inform him who were his accusers. He has been made to undergo a species of degradation in the teeth of the social protest entered against the Bishop's decision by one half of the county. We think Mr. Davies's vindication of his agricultural pursuits is very apposite.

"I have read as much as most men, but I never yet met with a passage in any writer, sacred or profane, in which agriculture is supposed to be a hindrance to the development of man's higher nature and nobler feelings. The Church, by assigning glebe, of great extent in some instances, recognizes even in her employed members the fact that farming is not unclerical. Mr. Huxtable's appointment last year to the archdeaconry of Dorset was well received by the Church, and Mr. Huxtable is one of the giants of agriculture. Many clergy farm more thousands than I do hundreds of acres. The glebe at Danbury which the late bishop was fond of showing to his clergy, and which I believe your lordship keeps in your own hands, is to the extent of three hundred acres. I have never associated with farmers in any other way than every Christian gentleman ought to associate with them. Your lordship will therefore excuse my protesting against my course having been unclerical. Having put the letters into a pamphlet for my own justification, I hope never to hear the subject mentioned again."

MANAGEMENT OF THE BANK OF ENGLAND.

It is not denied by the most ardent friends of the Bank Charter Act that there are peculiarities in its operation which require amendment. They would be most willing to facilitate the requisite changes without making concessions to popular clamour, or to the advocates of inconvertibility. We have now had the experience of two serious panics since the Act came into force, and they have shown how incapable it is of carrying out in their full integrity the principles which were so strongly asserted as the basis of the new law. But while it is allowed that the Act has not worked as well as it should, it has still not failed to regulate the machinery of the currency in a much better manner than might have been anticipated. The great misfortune seems to be that in maintaining the privilege of the Corporation and of the proprietors—a point invariably looked to in any negotiations between the Governor and the Company of the Bank of England—conflicting interests must arise; and it can hardly be otherwise with the present constitution of the Bank. The Bank is divided into two departments—one the banking and the other the issue department—and they can never work quite satisfactorily together. However conscientiously the directors may desire to conduct the business of their great establishment, there must always be the two objects in view: first, as is supposed, to regulate the currency; and next, to look after profits and to earn an average amount of dividend. In these days of competition, when most of the great metropolitan joint stock banks can distribute to their proprietors profits equal to 20 and 22 per cent., the return of 8, 9, or even 10 per cent. to bank stock proprietors seems insignificant. It must be allowed of course that there is some distinction between the body corporate of Threadneedle-street, and the London and Westminster and the London Joint Stock Banks, as regards the class of transactions into which they enter; but the position of the former, with the large facilities it possesses, ought to ensure it a greater proportion of profit. It is true there is much dignity about the Bank of England; the office of Director is a post of high honour, and the supreme seats of Governor and Deputy-Governor place their happy occupants at the highest elevation of financial rank; but it is unfortunately this very dignity, refusing to stoop down from its lofty eminence, that prevents the Bank from securing a much larger share of busi

crusade against the means of furthering the aims of science. To rush to the rescue of a frog lying senseless and painless in the hands of a physiologist, whilst we shut our eyes to the rush of man and horse and dog after the poor hare or fox, is certainly to strain at a gnat and swallow a camel. We would put it to these worthy humanitarians, whether it would not be better for them to adjourn their onslaught on scientific men until they have rescued poor puss from the helterskelter rush that is made upon him by the country gentlemen for no more noble aim than mere amusement? Looking at the matter from our own point of view, of course, we do not mean to condemn this pastime, which subserves to the health of those who enjoy it; but from the extreme point of view taken up by this Society, the pastime of hunting must be cruel in the extreme. Here then is a fair field for the labours of the Society. Let it strive to put down the pastime of the country gentlemen; then it will be time enough to interfere with the scientific labours of our philosophers.

MISS RYE AND HER EMIGRANTS.

WHATEVER differences of opinion may have existed with regard to the feasibility of Miss Rye's scheme for female emigration, there could be but one opinion about this enterprising lady's intentions, and only one wish with regard to their result. If she could find in Australia lucrative employment for women who were in peril of starvation, and of something far worse at home, she would do a great good. And certainly there seemed a field open for her exertions. Twelve or fifteen years ago, Mrs. Chisholm had organized family groups into which young English women without friends were adopted on the passage out; and when they arrived in Australia they had no difficulty in locating themselves comfortably. Settlers came down to the ports in search of wives. Many of the girls sent out had hardly landed before they were married; and though such ready wooing might in the old country realize the adage about marrying in haste and repenting at leisure, this was not likely to be the case in settlements where women, so to speak, were at a premium. Since then, the discovery of the gold-fields has sent up their value by the immense immigration of males from all parts of the world. And though the lapse of years has done something towards restoring the balance between the sexes, the disparity seemed yet great enough to warrant the hope that young women strong enough and handy enough to do the hard work of domestic life, to fulfil at the same time the duties of mistress and servant, would find in Australia prospects much more favourable to their happiness and prosperity than in England. The case of governesses was not so hopeful. But Miss Rye had assured us before sailing for Otago, that she had every confidence of finding them employment. And immediately upon her arrival at Dunedin, Otago, she wrote home on the 16th of February last, saying, "I shall have no difficulty in disposing of the girls we have here; they will all find good situations and good salaries."

It appears, however, that this bright anticipation has been disappointed, and that difficulties have arisen which Miss Rye could not foresee. The *Melbourne Argus*, writing on the authority of the Otago journals, says that her experiment has been a failure. She has met with a cold reception. Her charges find few offers. Out of eight governesses, only three have found employment. The rest of the hundred emigrants, though household servants, are stowed away in an uncomfortable barrack, ill-housed and ill-fed. The ladies of Dunedin look coldly on the enterprise, and have met Miss Rye with a "chilling indifference." The *Argus* gives a hint of other difficulties which give distinct meaning to Miss Rye's caution in the letter above-mentioned:—"Already I see more clearly the force of my reiterated assertion that it is certain destruction to ship off unsteady girls." The *Otago Daily Times* writes: "It is a bitter return to Miss Rye for selecting Otago as the first test of her experiment, that not only should she herself be received with scant cordiality, but that she should be doomed to appear to keep bad faith with those who have trusted themselves to her protection. The Government, too, have a sad wrong to answer for in enticing out these poor females, and according them such a reception." Miss Rye's letter was dated the 16th of February. Eight days elapsed, and only three governesses out of the whole number of emigrants were provided for. Yet nothing could be more circumspect than her measures. She had found, in the course of a careful investigation as to which colony would be best suited for her purpose, that Otago presented precisely the want she was labouring to supply. In that province the disproportion between the sexes was marked. The Government was anxious to rectify this disparity; and Miss Rye, in selecting her emigrants, chose only young wom

Piccadilly or down Whitehall without being respectfully saluted by those who have only seen his portrait in the photographer's windows. The greater part of the crowd around Mr. Phillip's picture correctly identify the principal figures—the Speaker, Earl Russell, Mr. Disraeli, Mr. Gladstone, and the Premier himself. But the most random and absurd guesses are made in regard to the other characters, and many people would be glad of a key to the whole of the portraits. It will be our task to supply this want.

The painter has used a pictorial licence in the composition of his picture of which no one can complain, and which we only notice, in order that the too literal reader may not imagine he sees the groups before him in the places which they all habitually occupy. The Speaker is in his chair, with the Serjeant-at-arms by his side—a position which Lord C. Russell is seldom or never seen to occupy, his place being an arm-chair near the bar. Three or four Ministers occupy the second bench instead of the Treasury Bench. Sir Hugh Cairns and other ex-Ministers in like manner are painted not on the front Opposition bench but on the second bench. Mr. Walpole and Mr. Henley are brought down from their fourth bench to a seat nearer to the Speaker. Mr. Cobden and Mr. Bright are brought from a more distant seat still into the radius of Mr. Phillip's picture. The Speaker desired to be painted in the chair of the House of Commons surrounded by the more eminent members, and the artist has shown great skill in bringing forty figures attired in prosaic modern costume into one picture, and investing the scene with historical dignity.

The "House of Commons in 1860" is a picture not of the House, but of a section of the House during an early evening debate. The spectator is supposed to be a member of Parliament walking up the floor, who has nearly gained the table. Lord Palmerston is addressing the House, apparently on the subject of our relations with France, since, upon the table, may be seen "Correspondence between her Majesty and the Emperor of the French." The gold mace, admirably painted, the Treasury and Opposition boxes, which are placed on each side of the table in order to give out a resonant sound when struck by rhetorical knuckles, the elegantly bound row of statutes, the details and furniture of the table, are treated with masterly fidelity. Seated at the table are the clerks in wig and gown, and behind them is Mr. Speaker, in his raised green chair—the central, and, next to Lord Palmerston, the most prominent figure in the painting.

The Premier has reason to complain, we think, of his portrait. It is perhaps the least successful likeness in the painting, approaching indeed so near to the comic and to caricature, that the first impulse of his friends is to laugh, and the next to be angry. The Palmerston in the picture is a funny and humorous old gentleman, entirely wanting in dignity, which is certainly not the appearance of the original when he is addressing the House of Commons. An attempt has been made to indicate an arch twinkle of the eye, but the satiric sparkle which so often gleams there, and which heralds the ready retort and happy witticism, will be looked for in vain. The noble lord's nose is small, but regular. In the picture it is a small, pinched, and red organ, entirely deficient in dignity, and giving a mean expression to the features. We do not envy the Prime Minister his feelings when he discovered, at the Royal Academy dinner, the "counterfeit presentment" under which he, the "Cupid" of the War and Foreign Office, was to go down to posterity. A friend endeavoured to ascertain what he thought of his likeness. He fought off the question by saying, with a good-humoured laugh, "Ah! it's very difficult to look one's best in a picture." He has small reason to congratulate himself upon his portraits in the Exhibition. There are two likenesses of him; one painted for the Cinque Ports, and the other for his Tiverton constituents. Neither is very successful; but assuming that they are good in the points in which they resemble each other, their dissimilarity to Mr. Phillip's portrait may be taken as the measure of the failure of that artist.

Nearer to the spectator than the Premier, and quite in the foreground on the left of the table (the Speaker's right), sits the late Sir George Cornewall Lewis. He is leaning forward on the bench, and holds a note-book in his hand, in which he may be supposed to make memoranda of the speech that is being delivered by his chief, with a view to defend him in reply. This, again, is a poetic licence, for no such note-book is ever seen in the House of Commons, where the note-taking is of a much less elaborate kind, being made upon any sheet of paper, and with any pen hastily caught up from the table. Mr. Phillip has been much happier in his likeness of the late lamented Secretary of State for War. The profile is perhaps a little exaggerated, but his prominent features wear the look of philosophic reflectiveness, calm sagacity, and imperturbable good temper that distinguished him in life.

Continuing our circuit of identification, and repeating that the first figure on the left is Sir G. C. Lewis, and the second Lord Palmerston, we come to Earl Russell, then "Lord John," whose arms are folded in his favourite historical attitude. The likeness is good, and the spectator will note a deliberative expression about the mouth which denotes the sagacious and veteran statesman. It may be that after ages will determine that the great Whig leader, under whom the present First Minister so long served, ought to have been the prominent figure in the "House of Commons in 1861." It was not for the painter, however, to estimate the rival claims of the two statesmen upon the gratitude of their countrymen and the admiration of posterity. It is enough to feel that a contemporary picture which represents the two great Liberal politicians

although in some cases the naked fact may be detected which underlies the "imaginative or marvellous language in which it is recorded." Impelled by a great dread of overloading the faith of the present day, he wishes to avoid resting a belief in Christianity on the argument from miracles. He points out that the ancient myths of Greece and Rome were once as universally believed as they are now explained away; "that the supernatural in all modern history has quietly receded or been relegated into the fanciful realm of fable;" that the mass of miracle is being continually purified and rationalised; and his conclusion is twofold, that the Scripture miracles are alone and isolated, and that temporary accidents of religion belonging to old worlds of thought and knowledge "will gradually fall away."

This will seem bold reasoning indeed to many who are doubting, bolder to the majority who do not doubt; but it is well worth our while to place clearly before the world the reasoning of the most venerable and the most learned leader of the Rationalist party in the Church of England.

The wanderings of the Israelites in the desert are described in this history without the tremendous appetite for disbelief which marks Bishop Colenso's work. Their numbers are reduced from a great nation to a formidable tribe. Canon Stanley's hypothesis of their dwelling in a fertile waste land around Sinai, the most fruitful part of the peninsula, among sufficient "wadies" and oases, to support their flocks is preferred to the belief that they lived miraculously in a wilderness: the arguments from the number of the first-born and the limited number of priests for such extensive duties are alluded to, but not pressed to absurd conclusions; and the general impression left on the reader's mind is, that most difficulties and many miracles are to be accounted for by natural reasons. For instance, the manna is stated to be abundant in those parts still; and a note adds that the curious fact has been observed, that unless boiled it would putrify if kept for more than one day. In another place, the making sweet the waters of Marah by Moses is gently explained by this hint, viz., that the branches of certain trees probably make sweet waters impregnated with mineral salts by evolving oxalic acid!

The account of Balaam's ass is only inserted on the authority of Balaam, and the miracle of the sun and moon stayed in Ajalon he considers, with Mr. Newman, to be a quotation from an imaginative poem. Yet, he remarks, it would have been astonishingly sublime to have supposed the deities of the conquered people to be thus arrested in their career, and forced to witness the discomfiture and contribute to the extirpation of their worshippers.

We have now perhaps said enough to show the plan which Dean Milman adopts in describing these miracles: wherever it is possible to suggest natural causes at work, he hints an explanation; where the supernatural element is essential to the narrative, he examines the authority given for it, and as in the cases above-mentioned of Balaam and Joshua, seems to look for possible mistakes in the minds of the writers, or injudicious insertions by later restorers of the Pentateuch. In other cases he states the facts as recorded in the Bible without comment.

With regard to the date of the Pentateuch, he altogether rejects the German theory of its compilation in very late times, and firmly holds that it is very ancient indeed, though probably rearranged at a later date. As to the discrepancies in some of the minor statements of the books of Kings and Chronicles, we will quote his own words:—

"The Book of Kings is properly so called; the Book of Chronicles may be rather called the Books of the High Priests. Throughout there is a sacerdotal bias, ... and this sacerdotalism becomes more manifest as the history darkens toward its close. The reason of this appears to be simple. From its own internal evidence, and from its words, the Chronicles cannot have been written before the Captivity, not before the time of Ezra, to which they descend. But at that time the high-priesthood was aspiring to the supremacy; it was gradually acquiring that kingly power which it afterwards assumed. The compiler, therefore (one, perhaps, of that order), would adopt that tradition, that version, that colouring of events which would give the sanction of antiquity or authority to these sacerdotal claims. This perhaps unconscious and hardly perceptible leaning does not necessarily imply either dishonesty or untruth. At that period the best and wisest Jews might look to the ascendancy of the religious power of the high priesthood as the only saving influence.

"Mr. Francis Newman sees throughout a latent conspiracy for the tyrannous elevation of the priestly order, and in the compiler of the Book of Chronicles, its artful and (it can hardly be ascribing too strong a word to Mr. Newman) mendacious apologist."

This passage will show the position which the Dean has taken, a post half-way between the bold theorisers, whose principles forbid them to treat the Sacred Writings in a different manner from the records of other ancient nations, and the large party which prefers to treat the history of the Jews as forbidden and holy ground. His theory demands our belief that the "keepers of the Oracles of God" were men of their age, and their books the books of their age; and that only as to "moral and religious truth" is the authority of the Scriptures infallible.

"They spoke what was the common belief of the time according to the common notion of things and the prevalent and current views of the world around them, just as they spoke the Aramaic dialect: it was part of the language; had they spoken otherwise it would have been like addressing their hearers in Sanskrit or English. This view has been sometimes expressed by the unpopular word *accommodation—a bad word, as it appears to imply art or design*, while it was merely the natural, it should seem inevitable, course of things."

that day. In more recent times a similar vein has been largely worked. The author of "Doctor Antonio" gave us a perfectly charming Italian man in love with a high-bred young English lady, whose broken leg he cures and whose heart he wins; though her father, a proud and pompous old baronet, and her brother, an obnoxious and noisy "plunger," put the idea of a proposal of marriage out of the question. Here, besides the glorious scenery of the Riviera, the social state and the political throes of Italy before 1848 (and not art or antiquities) form the natural background of the picture. In "Lavinia," again, the hero, a young Roman painter, becomes engaged to the beautiful, accomplished, and spoiled English heroine. They part, and each goes through great trials. The scene changes to England, to Paris, to the Crimea; till they meet again, she a hospital nurse, he a wounded Sardinian soldier, at Scutari. But still the struggle for Italian liberty and nationality runs through the story. The last phase of the Italian novel is the Neapolitan phase. The central character of the piece is a Neapolitan nobleman, and he is an atrocious villain. Either he succeeds in marrying the charming English heiress and heroine, whose woes and persecutions by her husband, the priest, and the mother-in-law, form the staple of the story, as in the tale of "Court Life at Naples," published some two years ago; or else, as in the book before us, his machinations, his shifts, his wooings, and his iniquities cause the main interest; while Naples life, scenery, revolutions, and dungeons fill in the canvas; and the heroine, after consent, and in act of flight, is saved by the good angel of the tale, while her lover comes to a bad and sudden end.

There is certainly no want of incident about "Niccolò Marini." The plot is good on the whole, and not ill worked out. It has improbabilities, which, on looking back after the book is read, seem quite absurd and outrageous. But, just as in "East Lynne" and "The Woman in White," the story is told well enough to make them pass muster at the time. They go down, and are swallowed unconsciously. As long as this is the case, the reader will not, nor should, perhaps, the critic, require more. We live in a "sensation" epoch; and novels, as farces have long since done, are acquiring a vested right to be built on a groundwork of sheer impossibility.

The novel opens (like the Promessi Sposi) with a description of the *intérieur* of Padre Ottavio, the priest of a small town in North Italy. The padre is suddenly summoned to the bedside of a dying stranger in a lone house outside the town. Pepino, before dying, confesses that he has come to the town for the purpose of acting the part of priest in a sham-marriage between an Italian gentleman and a young English girl who has run away with him; which sham-marriage is to take place next morning. The good father, after a night of agonizing deliberation, at length decides that the only hope of palliating the mischief about to take place is to appear as Pepino's substitute and to marry the seducer to the girl in good earnest. Accordingly he disguises himself, keeps Pepino's appointment with the seducer at the inn at six next morning, says he is commissioned by Pepino, who is dangerously ill, to take his place, and acts his part so well, that within half an hour the unsuspecting seducer and the innocent maiden have been formally married in the Church, which "my friend, the Sacristan, promised to leave open," and the certificate has been duly signed. The Benedict *malgré lui*, and his bride, drive off as they came, and are heard of no more.

The scene shifts to "Lady B.'s reception" at Naples. Here Baron Niccolò Marini is introduced, a little out at elbows of course, but noble in birth, perfect in breeding and manners, a favourite with women, the idol of society, and with all the world at his feet. The character is well drawn and well kept up. There are no sickening details of a filthy Neapolitan interior contrasting with his brilliant appearance in society. The man is a gentleman in birth and in habits; only by degrees it dawns on one that he is a schemer, an unscrupulous intriguer, a ruined gambler, a spy, a poisoner, and a double-dyed traitor. The Baron has just come from his first introduction to three charming Englishwomen newly arrived at the Hotel V. Foremost of these is Geraldine Leslie, the beautiful young widow of Arthur Leslie, rector and proprietor of Starfield. She is drawn something in the type of David Copperfield's Dora, a child with little sense or ballast, but most loveable; needing and submitting to guidance, and yet wilful and fond of her own way. Pining at first for her husband, she goes abroad for change with Laura Leslie, her husband's sister, to whose care he has commended her on his deathbed. At Florence they renew acquaintance with a Count Antonelli, who had married in former years Laura's sister Julia. Antonelli is re-married to a Florentine. But there is a daughter of the first marriage, an Italian Giulia, whom the aunts find grown into a lovely *spirituelle* young lady, who sings divinely, adores Art, and is the Corinne of the book. She consents to accompany the two aunts to Naples, glad probably to escape a stepmother. The Count commends them to the care of his friend Baron Marini, who will show them all the world of Naples. Here is a great chance for Marini. Charmed with the society of the trio of ladies, charmed with the wit and face, and above all, the fortune of the widow, he determines to win her, and thenceforth he will purge, he thinks, and live cleanly. Assiduous in his attentions, he is soon in the good graces of Geraldine. But Laura and Giulia both dislike him. The former, late one night, after the Baron has left them, overhears a conversation on the stairs between him and Geraldine's Swiss maid. He seems to be tampering with her, and gives her money. Troubled at this, Laura hesitates to divulge her suspicions till they are better founded. It may be only a flirtation with the maid.

for the great assiduity and amiability with which he visited a very large number of his parishioners at their own houses, while he discharged with equal industry all the other duties of his office. Few men in London, we think, holding the same position as Mr. Laing, have better deserved that their names should be kept alive in the remembrance of their neighbours. A considerable part of what Mr. Spooner relates, concerning the happy state of the church and its successful operations in this parish, may be viewed as a monument to the memory of Mr. Laing, though it is no less certain that upon his retirement from the ministry, which took place two or three years before his death, his plans were continued and worked out by Mr. Spooner with great energy, and with a very sound judgment.

We must proceed, however, to notice rather more in detail the parochial agencies which the author of this volume himself superintended for the comfort and improvement of the people under his care. The church itself, a commodious and not inelegant structure, adorned with a spire, contains 1,500 sittings, of which 600 are free; and there are no pews, but open benches. Mr. Spooner dislikes the system of private boxes in a church; and he tells, with much glee, the story of a little child who, being asked one Sunday where she had been, replied, "I have been *in a cupboard* in surch with Aunt Barby." The National School-house, which stands hard by, served also for the Sunday schools of boys, girls, and infants; there were several other Sunday schools and night schools, with the two ragged schools, for one of which a special building, likewise used as a chapel, was erected in Ferdinand-place. Three arches of the North London Railway were successively enclosed and occupied by the institutions belonging to Mr. Spooner's church; one of them being used for a girls' night-school, and for Bible classes on Sundays; whilst another was converted into a snug reading-room and library, open to everybody for a penny, or to subscribers for eighteenpence a quarter; and the adjoining arch was fitted up for a lecture-room, meeting-room, or concert-room, where lectures upon various subjects of instruction and entertainment, or readings and recitations, or the public performances of an amateur music class, might beguile the winter evenings. Besides these local institutions, Mr. Spooner tells us of the District Visiting Society, the ladies of which, paying 25,000 visits to the houses of the poor in the course of one year, consoled a vast deal of misery; the Provident Fund, or Parish Savings' Bank, which allowed interest at the rate of a shilling in the pound for money not withdrawn till Christmas; the Provident Dispensary for sickness; the Infant Nursery, for the care of children whose mothers are obliged to work away from home; the Ladies' Fund for the relief of poor women in childbirth; the Working Men's Auxiliary to Scripture Readers; and the Children's Sick Fund. Here is a goodly list of the different operations of Christian charity in connection with a single district church! The Children's Sick Fund was a very pretty notion. In the girls' night school a small committee of eight children was entrusted with any small sums of money that might be given for that purpose, to be expended by them, under proper direction, in purchasing any little delicacies of food, which, cooked very nicely by their own little hands, they might carry to the bedsides of the sick. The object of the Working Men's Auxiliary was to bring men to meet together for the study of the Bible and religious conversation, as well as to provide, by their own subscriptions, for the employment of a second Scripture reader. A set of "Daily Prayers for the Week" has been written and printed by some of these men, the initials of whose names, with their trades and callings—as cabman, coal-porter, sawyer, railway platelayer, and policemen—were appended to the publication. But we should find it rather difficult to enumerate all the specific channels through which the spirit of piety and philanthropy takes its outflow from the centre of social worship and brotherhood in a well-conducted parish. The clergyman—or, as Mr. Spooner prefers to style himself, the parson—of this parish has very multifarious occupations in stimulating, guiding, or controlling these proceedings; as well as in his private intercourse with the people, in addition to the regular and formal services, both at stated periods and upon accidental occasions, which he is called upon to discharge. Mr. Spooner gives us some idea of the diversity of applications for his aid or counsel, which used to assail him at those hours when he waited in the vestry to see all comers—one wanting merely his signature to a certificate for some pension or annuity, one begging for his intercession with the police magistrate to get a naughty boy sent to the reformatory, one desiring help to emigrate to British Columbia, others seeking to pour into his ear a tale of domestic sorrow, or of a difficult case of conscience, or of the deepest spiritual struggles. He has, with the assistance of his curates, on one Wednesday morning, between ten and twelve o'clock, thus met and given audience to from seventy to a hundred persons. Nor is this all: in seasons of distress, as we know, the parson has to act as a sort of relieving officer and supernumerary guardian of the poor, in dispensing the bounty of parishioners and others mercifully inclined. Mr. Spooner has, in a severe winter, had nearly a hundred applicants in one morning for relief coming to his vestry, which was open for that purpose, during the worst exigency, every day for one hour; besides giving away much, of course, through the district visitors. The best method was found to be the giving of tickets inscribed with an order upon any one of several local tradesmen for a certain quantity of food or other necessaries of life. Hospital tickets likewise proved the means of relieving many painful cases of sickness aggravated by destitution; and the Convalescent Hospital is especially recommended, as a blessing to the poor. But we have picture, filled up wi Spooner has drawn o a London suburban p bears testimony, is th class of society, to duty. Holstein. From that moment it rapidly increased in wealth and splendour, till its commercial prosperity was dismally interrupted by the blockade of 1802. Not content with ruining its trade, Napoleon occupied it with troops from 1806 to 1809, and, in the following year, annexed it to the empire. In 1813, the Russians obtained possession of it for a short time, but in the same year it was retaken by the French. Davoust sustained a memorable siege there, held out during a twelvemonth, and surrendered only in May, 1814, when the Bourbons had regained the throne of France.

Such was the city which gave birth to Wilhelmina Sieveking, and such were the leading events in its history during the first twenty years of her life. The sufferings of her fatherland were well fitted to nurture her natural benevolence, and to fill her with high resolves for the future relief of human want and woe.

Wilhelmina enjoyed the advantage of springing from a well-known and honourable family, through whom she was linked to a circle of friends which, for the last eighty years, has mirrored in a very distinct and remarkable manner nearly all the deeper intellectual movements that have affected the German people. In this circle once moved Lessing, one of the most distinguished leaders of the literary movement in Germany, the popular poet Claudius, the philosopher Frederic Jacobi, and his correspondent on the subject of Spinoza—Elisha Reimarus. These, with the exception of the first, who had passed off the scene in 1781, used, at the opening of this century, to assemble frequently in an old house, the country seat of Senator Sieveking, rich with classical associations, on the banks of the Elbe, just beyond Altona; and round them gathered persons from all parts of the world, representing all the various political parties, and all the higher interests of that stirring epoch. Among these gifted individuals shone Wilhelmina Sieveking, just growing up into life, "nourishing a youth sublime," not only with "the fairy tales of science, and the long result of time," but still more with the society of kindred spirits. The influence exerted over her by many of her associates was better calculated to charm the intellect than to sanctify the heart; and her education, religious as well as secular, being entrusted to a rationalistic tutor, it is no wonder that her early years were overclouded with unbelief. From this, however, she slowly and steadily emerged. Though perplexed in faith she was pure in deeds. She fought her doubts, and gathered strength by the conflict. She faced the spectres of the mind, and laid them. She waded through a stormy sea, till at length she felt the rock beneath her feet, and, like the doubting disciple, stretched forth her hand, and thrust, as it were, her finger into the pierced side of Him whose divinity she had questioned, and whose atonement at one time she would not accept.

Thenceforth her career was bright, and the purpose of her life was clearly defined. Thenceforth she would dare to do good in her own way, to follow the instincts of philanthropy wherever they might lead, to tread in the steps of Howard and Mrs. Fry, to "recur," as she says, "to the example of Vincent de Paul," and exist only for the elevation of her sex and the solace of suffering humanity. It was a noble purpose, yet not too high and holy for one to whom love was a more powerful incentive even than duty, and who could not be happy but in making others so. Her great desire and ambition were to establish a society of Sisters of Mercy in the Evangelical Church, and after having long nurtured this project in secret, she was surprised and delighted one day at its being actually suggested to her by Professor Hartmann. It was not fated indeed that she should found a sisterhood in the manner and shape that first floated before her mind, yet she was destined to see it come into existence during her lifetime, and her definite presentiment on this point did not deceive her. Meanwhile, ere her public labours begun, she continued the task of educating the young, and published her "Meditations on Certain Portions of the Holy Scriptures" and an "Account of a Christian School in Lower Saxony."

From her works in general, her diaries and correspondence, abundant extracts are made in her "Life." Though some of these might have been curtailed with advantage, they are, on the whole, replete with interest, particularly to all who are engaged in "charitable works." We find in them deep and striking thoughts expressed in flowing language, originality without affectation, and piety without conventional phrases; and when reading her remains we cannot but discover in her an admirable combination of sincerity of character with precise and luminous ideas. All her conceptions, all her views, were characterized by breadth: narrowness was abhorrent to her nature. From her youth up the observation of mankind had, as she writes in a letter to the Queen of Denmark, been her favourite study, and upon this she brought to bear not only a vigorous understanding, but also—what is no less requisite for success in the pursuit—a most loving heart. She believed that there is something divine in every man, even in those who have sunk the lowest—some portion of God's essence which cannot be wholly extinguished, that more than half the sins committed in the world are free from guilty intention, and that "many things now reproached as wickedness and baseness will, in the light of eternity, appear as error and misunderstanding." Though a Lutheran, she would not be tied to the opinions prevalent among her Christian friends. She objected to some English dissenters at Hamburg, that their observance of the Sabbath was "rigid formalism," and that they allowed themselves "a pharisaic love of condemning those who bear the same seed only in another vessel," and in May, 1820, she wrote in her diary, with a degree of liberalism very common in Germany, "I firmly believe that as many Catholics as Protestants may probably belong to the invisible Church which our Lo... the Gospel is n... t bo... ticular opinions ... n thi...

reader will infer that Mrs. Ramsay deserves to be mentioned with respect among the translators of this mighty poet.

From the feminine we turn to the clerical translator. Mr. Thomas's version of the "Inferno" was received with a fair amount of favour. We incline to think that of the "Purgatorio," which is published by subscription, an advance upon its precursor. With less ease and *àplomb* than Mrs. Ramsay's, it may be commended as having more character, in the poem itself, and very much more in the illustrative matter supplied by way of prefaces and notes. Throughout this we recognize the hand of a clerical writer addicted to some freedom in dogma, liberal in politics, and by no means exempt from crotchets, or from a fondness for "giving a bit of his mind," whether apposite or not. The laudable or harmless phases of this character have dictated the "Dedication to Garibaldi," the apt and somewhat racy account of the "Doctrine of Purgatory," and some references to the ecclesiastical and popular notions about Hell. On the other hand, there is little better than mere surplusage in the useless and often quite nugatory parallel drawn between Dante and Wiclif, the quotations from the Bible in and out of season, the hits or tirades against Mariolatry, and the drippings of jocosity prompted by "gentle dulness." It is a serious objection to Mr. Thomas's notes that he shows no suspicion of the need for their being as short as possible.

As we have already intimated, Mr. Thomas, as well as Mrs. Ramsay, follows his original both in metre and in rhyme, and thus comes equally into competition with Mr. Cayley. He is, however, put out of court by that gentleman even more decisively than Mrs. Ramsay is. He cannot plead, as the lady can, that his translation is sensibly easier to read and plainer to understand than Cayley's; to whom he is as clearly inferior in strong scholarship and individual turn of expression. We cannot blame a sincere devotee of Dante for trying his hand at a translation; but neither are we able to admit that the English literature and reading public, already supplied as they are with Cayley, can derive any serious advantage from Wesley Thomas.

In the cases of Mrs. Ramsay and Mr. Thomas, we have been dealing with a sensible view of what the translation ought to be, and with qualified success in the result. In the case of the third translator on our list, Mr. Wilkie, we deal with only a dead failure. His is the feeblest attempt upon Dante which has yet been made. Such a translation might be written "by the mile." Mr. Wilkie discards both rhyme and metre; giving us only rhythmical lines (if such they can be called) of any and every length, just as it suits his convenience or caprice. Thus freed from every temptation to deviate, through the exigencies of versified form, from a strict, direct, and manly rendering of the words which were good enough for Dante, Mr. Wilkie might at least have been expected to stick to sound and serviceable literality. But no; he is throughout trivial and loose, and, whenever he pleases, paraphrastic; while silly inversions abound, to an extent that would be unpardonable amid the utmost difficulties of rhymed metre. He even ventures upon the licence of explaining in jejune terms what Dante has indicated by allusions: as, to take one instance among many, in Canto 3, "the form of him who weakly left the papal chair," instead of "the shade of him, who, thro' cowardice, made the great refusal." To all these perversities Mr. Wilkie adds that of not vouchsafing a single line of explanation or note from first to last, beyond the remark that he has generally followed a particular text, but has "occasionally taken a view of Dante's meaning, for which none of his editors are responsible." In fact, here is a Scotch advocate who has, without why or wherefore, without a single qualification for the office, determined to appear in print as a translator of Dante, and, in that gratuitously assumed character, "rushed reckless on the public."

SALAMMBÔ.*

It is now a good many years since Mr. Carlyle predicted the speedy extinction of novels. The times, he thought, were becoming so momentous, and life so serious a matter, that "this exceeding great army of story-tellers" would soon be reduced to silence, or find no audience but "children and fatuous persons." Theoretically, the inference is not obvious, for it seems natural to suppose that the need for complete relaxation of mind might be more felt as the necessary business of life became more absorbing; and practically the result has been widely different.

The truth is, whether we like it or no, that novel-writing occupies at this moment a larger quantity of intellect than it has ever done before, and that novel-reading forms, in an ever-increasing degree, the chosen amusement of the instructed classes in Europe. This mistake of a wise man may serve to warn us against generalizing on subjects of this kind. Having only just opened our eyes to the truth, that the social, as well as the individual thoughts and acts of men are subject to laws, we need not wonder if the nature and operation of them is still a mystery to us. Some future philosopher will no doubt see development and necessary succession even in the phenomena of literary history, and will explain why at one period the human mind seeks relief in rhymed decasyllabic couplets, and at another refuses to give up its secret except in periodical driblets of romance.

Without, therefore, attempting to explain the fact, we cannot help seeing that the novel is in our day the most widely influential

"A tear lay on thy cheek,
For thou hadst slept while weeping
Like a little pearl in its delicate shell,
Or the dew in a snowdrop sleeping.

"We watch'd my darling sleep
Those golden morning hours,
Like a little weary bird in its nest
On her pillow of leaves and flowers."

"The Puritan's Daughter" is the best of the many pieces in this volume; but there are not wanting, in some others, evidences of superior poetic talent.

"Love and Mammon" * is one of those poems which prove rather the richness of a writer's vocabulary than the clearness of his ideas. Miss Wyvill has great command of words; but we are not always sure that we catch her meaning, and sometimes we doubt whether she herself clearly comprehends what she is writing about. At the very first page we find ourselves at fault. She would have us understand that people know very little about Poetry, who fancy that she is not to be found in the City, but only "in forest depths and mountainous retreats." Now we have never met with any one who entertains this absurd idea, or who doubts that poetry in plenty is to be found in the densest gatherings of bricks and mortar. But when Miss Wyvill proceeds to state the co-extension of poetry with human life, she leads us into a maze which fairly bewilders us. She says:—

"Wheresoe'er we toiling masses move,
The Infinite earings each little life,
Whence stretching into open distances
Of silent space beyond earth's multitude,
Thus circling each, is girdle to the whole."

We say very respectfully that we don't understand this; nor do we quite see our way through the definition of poetry which Miss Wyvill seems to think a simple one:—

"Poetry methinks is simply this:
Infinity, Eternity, and God,
Express'd to an intelligence by signs,
In things material, owning voice and form
Familiar, common, humble, it may be,
But ever holy, even where marr'd by sin,
Because His symbols and His instruments,
For speaking, doing, working out His will."

This promise of what is to come is not very encouraging; and as we proceed we frequently find that we have lost the thread of the idea, or that half a dozen ideas have become hopelessly entangled. This is a sad drawback; but it is somewhat made up for by the fact that the plot is not intricate, and that, by dint of strong swimming against a torrent of words, we ascertain what becomes of the characters in the story. We cannot say, however, that they interest us much. First, there is Ernest Brand, who is in love with Flavia Basil. Flavia is the representative of Mammon, and acts up to her character by pledging Ernest to keep secret till the end of the London season the fact that she has promised to marry him, because she is anxious to prove Lord Wissendine's intentions with regard to her, and, should they be favourable, she will have no difficulty whatever in sending Ernest to the right-about. But, instead of an offer from the noble lord, she is blessed with a fortune of fifty thousand pounds, left her by a relative, and, as Ernest's bank fails, she consents to marry his friend Philip Wynwode. She and her husband, however, are not rich in prudence. They dissipate their money, and when it is gone, the heartless Flavia elopes with Lord Wissendine, and is thus as faithful a personation of Mammon as we could desire. But surely when, after jilting Ernest, she seems surprised, in their last interview, at his leaving her without wishing her joy, the cool impudence of the most consummate flirt is a little overdone.

Honoria Courtenay represents Love. This is the most painfully interesting young lady we have ever met. She is a visitor of Mrs. Basil's, meets Ernest, and falls in love with him. When Mrs. Basil tells her, as a dead secret, that Ernest is going to marry Flavia, and that she has, therefore, no hope in that quarter, the most frantic heroine of a transpontine melodrama could hardly conduct herself with a closer approach to insanity. She creeps away to her own chamber

"With an empty soul,
Which neither hoped, nor thought, nor dream'd, scarce knew;
Then, in the centre of the floor, she stood,
With blank, blind eyes, and hands so tightly clasp'd
That every muscle of her tender arms
Was strain'd by her resisting will. And lo!
That queenly figure, bending all its pride
Beneath the load of unrequited love,
Till woman's weakness yields; and down she sinks
At her bedside, a soft, white muslin heap."

There she lay, "stunned, stupefied," taking "no count of time lost to her own identity."

"But ever and anon a fearful stroke
Of sharp remembrance flash'd across her brain,
And cut her shivering through and through,"

till at last, after one final, "quick, convulsive shudder,"

closest scrutiny, and as we are informed, photographers of experience have often been deceived by them. We hope to have done justice to Mr. Watson's works; they have a peculiar interest, and we are not disposed to be dogmatical against them. Let them by all means be seen; many will pronounce them, as we are told Mr. Ruskin did, "stunning." Perhaps some few may agree with the opinion we have endeavoured to express, and at the same time not withhold a fair meed of praise from Mr. Watson.

MUSIC.

THE performance of Meyerbeer's "Prophète" at the Royal Italian Opera on Monday was characterized by the same splendour, both scenic and musical, that has distinguished its former representations at this establishment. Among the many spectacular operas so magnificently mounted by Mr. Gye, none are more gorgeously placed on the stage than the "Prophète," with the pageantry of its cathedral scene and the ingenious contrivance of the skating evolutions. Signor Tamberlik's Jean of Leyden is well-known as one of his finest impersonations, and his singing on this occasion was worthy of his highest reputation. Madame Nantier Didiée was an expressive and picturesque representative of Fides—a part in which, however, it is difficult to avoid a comparison with Madame Viardot Garcia's matchless interpretation. Mdlle. Dottini was an interesting if not a very energetic Bertha; while the three Anabaptists were rendered much more tunable than of yore by their present representatives. Altogether the "Prophète" at the Royal Italian Opera is one of those exhibitions of combined stage splendour and musical excellence which it is worth a long journey to see and hear.

At Her Majesty's Theatre, the new tenor, Signor Baragli, has gained a sort of *succès d'estime* by his appearance as Edgardo in "Lucia di Lammermoor." Of this artist's powers, however, we hope to have future opportunities of more fully judging. The new ballet produced at this house under the title of "Bianchi e Negri," is a terpsichorean travestie of "Uncle Tom's Cabin,"—an odd subject for pirouettes, pas, and pantomime, but rendered attractive by scenic spectacle and the excellent dancing of Mdlle. Ferraris Mdlle. Morlacchi, and Signor Ammaturo.

Signor Thalberg's first *Matinée* on Monday was a renewal of the success which this great artist achieved on his re-appearance last season. The following programme is interesting, as showing an increased disposition on the part of M. Thalberg to vary the performance of his own pieces by a selection from other composers:—

PART I.

Adelaide	Beethoven.
Romanza (Preciosa)	Weber.
Ballad	Thalberg.
Irish Airs	Thalberg.
Two Songs without Words	Mendelssohn.
Pastorale (MS.)	Thalberg.

PART II.

Marche Funèbre	Chopin.
Study	Thalberg.
Scherzo	Mendelssohn.
Two Studies	Moscheles.
Russian Airs	Thalberg.

The great pianist displayed all those marvellous qualities of mechanism and tone which have for many years rendered him unrivalled as a performer of executive difficulties; and his reception was such as to assure him that a London public does not tire of those favourites who have first-rate claims to its admiration.

The Musical Society of London gave its fourth and last concert of the season at St. James's Hall, on Wednesday, the programme being slightly altered by the indisposition of Mr. Sims Reeves, and the appearance, in his stead, of Signor Delle Sedie. The selection, as amended, was as follows:—

PART I.

Overture (Jessonda)	Spohr.
Recitative—"Crudele! Ah mio bene;" Aria—"Non mi dir" (Don Giovanni), Miss Louisa Van Noorden	Mozart.
Concerto in D minor—Pianoforte, Op. 40, Miss Madeline Schiller	Mendelssohn.
Aria—"Pietá Signor," Signor Delle Sedie	Stradella.
Overture (Hamlet)	Macfarren.

PART II.

Symphony in C minor, No. 5, Op. 67	Beethoven.
Aria—"Eri tu," Signor Delle Sedie	Verdi.
Overture (Guillaume Tell)	Rossini.

Conductor, Mr. Alfred Mellon.

The orchestral performances were, as usual at these concerts, of first-rate excellence. A band, consisting of the finest players in London, mostly solo performers, conducted by so admirable a *chef d'orchestre* as Mr. Alfred Mellon, can scarcely fail to render justice to the instrumental works of the great masters. On the present occasion the only approach to novelty was Mr. Macfarren's overture; a gloomy and erratic prelude in which some masterly instrumentation scarcely compensates for a vagueness which is not justified even by the philosophical nature of the subject which is supposed to have suggested the work. The great composers have shown that it is possible to be abstract and still coherent—but Mr. Macfarren's work, with much occasional cleverness, has the

on the Nile and feed it for a distance of a hundred and fifty miles of its course. Notwithstanding Speke gives the negros of Uganda the character of "the French" of those parts, he was detained, hospitably it is true, as a sort of state prisoner for five months before he was passed on to the next kingdom, Ungoro.

Hitherto he had had no trouble on account of interpreters, one single language being more or less understood by the people of the countries he had passed through; now, however, that difficulty commenced. He found, too, the inhabitants more barbarous, some living in absolute nudity. Here, again, the travellers experienced much annoyance by the procrastination of the King Kaunasi. Tracked for two degrees north of the lake, the river was found to make a great bend to pass through Luta Nzige, and Speke had to travel along the chord of the bend, a distance of seventy miles, striking it again at De Bono's ivory station in latitude 3° 45′, a few marches from Gondokoro. A difference of level of a thousand feet in the bed of the river, before and after the bend, shows a possibility that the old traditions of foaming cataracts on the Nile may yet be realized in this interval.

The great practical object in exploring the Nile is to ascertain the practicability of a water communication for commerce with the interior, and the friendly or adverse disposition of the native tribes towards traders. On this point, of the three kingdoms he passed through during his year of semi-captivity, Speke gives the preference to Karagwè Mtesa, the sovereign being an amiable youth surrounded by wives and delighting in field-sports. The rule of the Court, however, requiring the execution of one man daily for the good of the State, diminishes our respect for it; while something of abhorrence is excited by the description of the monarch of the northernmost of these countries, who is reported as a morose, churlish creature, whose time is divided between fattening his wives and children till they cannot stand, and practising witchcraft.

To their numerous presents, and to the desires of the chiefs to open a traffic with the whites, there is little doubt our travellers owe their safety and their escape from these regions.

As Captains Grant and Speke are now on their way to England, we shall shortly hear from their own lips a fuller account of the countries they have penetrated, of their resources, and the possibility and prospects of a trade with those races, whose condition can only be ameliorated by commerce, and extensive connexion with civilized nations. In this light the deeds of Grant and Speke are glorious accomplishments.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 1st June, 1863.

Architects—At 8 p.m.
Asiatic—At 3 p.m.
Entomological—At 7 p.m.
Geologists' Association—At 7 p.m.

Tuesday, 2nd June.

Civil Engineers—At 9 p.m. The President's Annual Conversazione.
Ethnological—At 8 p.m. "On the Institution and Formation of the Caste System in India, Aryan Polity." By Professor Tagore.

COLLARD & COLLARD SEMI-GRAND PIANOFORTE. To be SOLD, at a very low price, for Cash or for HIRE, with the option of Purchase, a remarkably powerful, sweet, and brilliant-toned REPETITION INSTRUMENT, 6½ octaves, and all the recent improvements. Also **SEMI-COTTAGE**, by the same Makers, at HOLDERNESSE'S, 444, New **Oxford-street.**

ERARD HARP.—To be SOLD, for less than half the original cost, a Magnificent Patent Double-Action Instrument, of Gothic design, maple-wood and gold, with key, cover, fork, and gauge complete, at HOLDERNESSE'S, 444, New Oxford-street.

MONEY, in SUMS from £100 to £5,000, ready to be lent upon Freehold, Copyhold, and Leasehold Property; the loans repayable in one sum or by instalments, during any number of years that may be agreed upon; the law charges are fixed, and Property can at any time be redeemed upon equitable terms. Apply to Mr. TRESIDDER, Secretary of the Perpetual Investment and Building Society, 37, New Bridge-street, Blackfriars, London. The Amount Advanced since May, 1851, exceeds £400,000.

THE GREAT EASTERN RAILWAY COMPANY.

FOUR-AND-A-HALF PER CENT. PREFERENCE STOCK.

The GREAT EASTERN RAILWAY COMPANY is prepared to receive applications for sums of £100, or upwards, of the above Stock, bearing a fixed Preferential Interest of 4½ per cent. per annum.

Interest commences from the date of payment.

Applications to be made, either personally or by letter, to the undersigned.

Bishopsgate Terminus, May, 1863. J. B. OWEN, Secretary.

PERPETUAL FOUR PER CENT. DEBENTURE STOCK.

The Directors of the GREAT EASTERN RAILWAY COMPANY are prepared to grant Allotments of their Four per Cent. Debenture Stock in any sums most convenient to Subscribers.

This Stock is authorized by Act of Parliament for the purpose of paying off the Mortgage Debt. It bears interest in perpetuity at 4 per cent. per annum, which must be paid half-yearly, on the 1st March, and the 1st September, and it takes precedence of all the other Stocks of the Company.—Applications to be made to

Bishopsgate Terminus, 1st May, 1863. J. B. OWEN, Secretary.

ROYAL INSURANCE COMPANY.

HEAD OFFICES:—
20, LOMBARD-STREET, LONDON,
AND
ROYAL INSURANCE BUILDINGS, LIVERPOOL.

Total Annual Revenue exceeds £500,000.

Accumulated Funds in hand, over £1,000,000.

FIRE DEPARTMENT.—The Receipt of Fire Premiums has been as follows:—

1854.....	£128,459	1858.....	£196,148
1856.....	151,733	1860.....	262,978

While for 1862 they exceeded £300,000.

The Fire Revenue has been enhanced, in Four Years, by the enormous sum of more than £100,000, and during the last Six Years it has been doubled.

Moreover, the latest Parliamentary Return of Insurance Tax paid to the Inland Revenue Office (ordered to be printed by the House of Commons, 8th July, 1862) exhibits the ROYAL INSURANCE COMPANY, as respects increase of business, at the Head of all the Insurance Offices.

LIFE DEPARTMENT.—The rapid Progress and Position of this Branch will be best shown by the following Statement of the New Life Business effected for the

Year.	Sum Assured.	New Premiums.
1855	£206,514	£5,909 18 6
1857	329,380	10,270 8 6
1859	434,470	13,086 8 5
1861	521,101	16,627 18 0

While the sum assured by New Policies in the year 1862 amounts to more than Seven Hundred Thousand Pounds Sterling.

Large Bonuses declared 1855 and 1860—£2 per Cent. per Annum.

THE GREATEST BONUS EVER CONTINUOUSLY DECLARED BY ANY COMPANY.

PERCY M. DOVE, Manager and Actuary.
JOHN B. JOHNSTON, Secretary in London.

EXTENSION OF THE

UNIVERSITY LIFE ASSURANCE SOCIETY.

Established 1825. Incorporated by Royal Charter.
24, SUFFOLK-STREET, PALL-MALL EAST, LONDON, S.W.
Capital, £600,000.

PRESIDENT—His Grace Charles Thomas, Lord Archbishop of Canterbury.

DIRECTORS.

James Alderson, Esq., M.D.
Francis Barlow, Esq.
Edward Buller, Esq.
The Ven. Archdeacon Burney, D.D.
Lord Robert G. Cecil, M.P.
Sir Robert Charles Dallas, Bart.
Francis H. Dickinson, Esq.
Sir Francis H. Doyle, Bart.
Robert Hook, Esq.
Arthur Thomas Malkin, Esq.
The Rt. Rev. the Lord Bishop of Oxford.
The Hon. and Very Rev. George Pellew, D.D., Dean of Norwich.
The Right Hon. the Lord Chief Baron of the Exchequer.
Edward Romilly, Esq.
Thomas Watson, Esq., M.D.
The Right Hon. James Stuart Wortley.
John Wray, Esq.
John Copley Wray, Esq.

Nine-tenths of the Profits are appropriated to the Assured.

Assurances can be effected by all persons who are, or have been, on the Books of a University, or of any College, Hall, Foundation School, or other similar institution in the United Kingdom.

Divisions of Profits every Five Years.

Since the establishment of the Society in 1825, the amount of Additions allotted to the assured has exceeded £659,000.

The Fee to the Medical Referee is in each case paid by the Society.

Personal appearance at the Office is not required except in particular cases.

Forms of Proposal may be obtained on application to this Office.

CHARLES M. WILLICH, Secretary and Actuary.

*** Commission allowed to Solicitors and other Agents introducing Assurances.

FURNISH YOUR HOUSE

WITH THE BEST ARTICLES AT

DEANE'S

Ironmongery & Furnishing Warehouses.

A Priced Furnishing List sent Post-free.

DEANE & CO., LONDON-BRIDGE.

Established A.D. 1700.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

WHITE and SOUND TEETH are realized by the use of ROWLANDS' ODONTO, or Pearl Dentifrice. It preserves and imparts a pearl-like whiteness to the teeth, eradicates tartar and spots of incipient decay, strengthens the gums, and gives a pleasing fragrance to the breath. Price 2s. 9d. per box. Sold by chemists and perfumers.—Ask for "Rowlands' Odonto."

IMPORTANT to Noblemen and Gentlemen forming or adding to their Libraries, Amateurs of Rare, Curious, and Fine Books, Curators of Public Libraries, &c.

On JUNE 1 will be published, 8vo. pp. 180, a CATALOGUE RAISONNÉE 50,000 Volumes of Rare, Curious, Useful, and Valuable Books, Ancient and Modern, in various Languages and Classes of Literature, Splendid Books of Prints, Picture Galleries, Illustrated Works, Beautifully Illuminated Manuscripts on Vellum, &c. &c., interspersed with Bibliographical Notices and Extracts, now on Sale at very greatly Reduced Prices affixed.

J. LILLY having determined in the Thirty-seventh year of his continuance in business to commence Selling-off his very extensive and valuable Stock of Books, all those in this Catalogue are marked at very greatly reduced prices; and to prove this to be the case, the present and the former prices are printed in parallel columns.

This very interesting and valuable Catalogue will be forwarded, post-free, on the receipt of Twelve Postage Stamps.

JOSEPH LILLY, 17 & 18, New-street (removed from Bedford-street), Covent Garden, London, W.C.

Just published, Seventh Edition, price 2s. 6d.; post free, thirty-two stamps.

HUNT on the SKIN.—Tenth Thousand.—A GUIDE TO THE TREATMENT AND PREVENTION OF DISEASES OF THE SKIN, illustrated by cases. By THOMAS HUNT, F.R.C.S., Surgeon to the Western Dispensary for Diseases of the Skin, 21A, Charlotte-street, Fitzroy-square.

"Mr. Hunt has transferred these diseases from the incurable class to the curable."—*Lancet*.

London: T. RICHARDS, 37, Great Queen-street.

PUBLISHED EVERY SATURDAY, 32 pages, PRICE TWOPENCE,

PUBLIC OPINION.

A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

CONTENTS OF No. 88, MAY 30, 1863:—

to the line they have taken. The population of Paris are generally in opposition, whatever government is in power, and the severity of M. Persigny's *régime* is most felt in the French capital itself. There have been on the present occasion no violent demonstrations; and, if the truth could be accurately discerned, it would probably be shown that the slap in the face which Paris has bestowed on the administration is meant rather for the Minister than for the Emperor himself. The best way to meet it is to treat it as nothing more. The dismissal of M. Persigny would be the most politic step that could be taken under all the circumstances; yet it is conceivable that Napoleon III. may be reluctant to inflict pain upon a tried and faithful follower, whose fault has been merely that of over-zeal. But the repressive system has been obviously carried too far by the present Cabinet. In dealing his blows right and left at the press and public writers, M. Persigny has forgotten that a careful autocrat will not be perpetually reminding the population of a gay and spirited metropolis that they are no longer free. The only possible excuse by which the Emperor can justify to France the fetters which he imposes upon free discussion is, that public safety must, above all things, be secured. But to convert the press laws into an ingenious instrument for torturing M. Persigny's antagonists wherever they are to be found, is a policy—as Napoleon III. will now have learnt—both irritating and feeble. The best criticism upon the past elections has been uttered by the journal of M. La Guerronière. "They are symptoms of public opinion," says *La France*, "which challenge the most serious attention of the throne—nothing more, nothing less."

The immediate effect of the movement of the last ten days will be, perhaps, to put an end to an excessive dictatorship over the newspapers, which the devotion of the Emperor's servants has turned into a means of unnecessary tyranny. As far as it is possible to judge so variable a nation as the French, they really seem to have had no further object than this in view. Imperialism suits them at present in many ways; and all that many of the voters wanted who carried the Opposition candidates in the Paris arrondissements was to give the Emperor's Ministers a thoroughly wholesome lesson. It is doubtless an advantage to the country to have an able, though small, Parliamentary opposition in the Corps Législatif which will not be afraid of criticising the Emperor's finance, or of showing up the miserable jobs of which half the Prefects in France are guilty every day. So far France profits by the late elections. On the other hand, it may well be a question whether the Emperor's dynasty has not gained something too. The "ancient parties," for the first time for twelve years, are now broken up. Their leaders have abandoned their attitude of opposition to the Emperor's person, and one and all have taken the oath imposed by the law of February, 1858, upon those who propose to offer themselves for election to the Legislative Assembly:—

"Je jure obéissance à la Constitution, et fidelité à l'Empereur."

M. Thiers, M. Montalembert, M. Barrot, M. Berryer, and M. Dufaure, have all taken the unpleasant pill, and they will now be bound as men of honour to keep their word, whether they have been elected or not. It is clear, that while the country gains by having men of this position brought into contact with political affairs, it does so at the expense of their personal and individual *prestige*. M. Thiers was somebody while he remained aloof and maintained a proud attitude of disdain towards all the Imperial institutions—towards the Emperor's *parvenu* Senate, and his Assembly of flatterers, and his stock-jobbing Ministers. This personal dignity M. Thiers loses when he becomes one of the Emperor's faithful Deputies, and sits under the tinkle of M. de Morny's bell. The case of M. Jules Favre and M. Emile Ollivier is different. They are young men, and sacrifice nothing by condescending to win their spurs as a Liberal minority in a House of Imperialists. Men who have had a grand career in other times stand on a separate footing. In entering public life once more under the imposed conditions, M. Berryer and M. Thiers dock themselves of the splendid Parliamentary halo which marked them out as heroes of the old *régime*. Henceforward they cannot stand aside in proud seclusion from the world, and protest to Europe against the *régime* of the day. A personal wrangle with M. de Morny, and the other creatures of the Empire who sit about him, will reduce

Digitized by Google

they would never think of behaving to their equals. There is no doubt some truth in this; but, on the other hand, the smaller states contrive to extract from their subordinate position, no slight compensation. They often take very unfair advantage of the public opinion by which they are protected, and of the reluctance with which a nation of the highest rank exhibits itself as the antagonist of one unworthy of its arms. They are sadly apt to be litigious about small matters. For want of something more important to occupy their attention, they prolong paltry squabbles by infinite diplomatic debate; and are frequently very difficult to deal with on account of the irritable self-assertion which they mistake for dignity. The competition of the leading nations of Europe for influence at the minor Courts no doubt acts beneficially in preserving the independence of the latter; but, at the same time, it often leads them to seek safety in balancing one rival against another, rather than in doing what is right and just. Moreover, they are not above adapting their policy to the support which they may derive from the domestic dissensions of a powerful State; and although often disappointed in gaining anything from this source, it is a never-failing basis for intrigue. In one way or another they manage almost as well as women to make their very weakness a source of strength. We feel nearly as uncomfortable under their protests and complaints as we do under a shower-bath of feminine tears. Perhaps all this would not furnish much matter for objection; but it is, to say the least, inconvenient—it certainly does not tend to encourage any romantic generosity towards one of these States, when we find it palpably attempting to reopen a settled dispute because it unexpectedly finds that it has more and better friends than it knew of.

This, however, appears to be the line which Brazil has just chosen to adopt. About the end of last year we were under the unpleasant necessity of resorting to reprisals against that power, in order to obtain satisfaction for certain long-standing grievances. The merits of these controversies seem to us utterly immaterial to the question which has now arisen; but as the transactions in question have probably faded from the memory of most Englishmen, it may be as well to mention that one cause of complaint on our part was the neglect of the Brazilian Government to punish the persons who had been guilty of wrecking the *Prince of Wales*—which was lost on their coast—and of murdering a portion of her crew; and that another arose out of an alleged insult to some officers of Her Majesty's ship *Forte*. After long and unavailing attempts to obtain redress, our Admiral on the station was ordered to take measures to enforce a settlement. He seized several Brazilian ships, and under the pressure of the force which he displayed, the Government of that country consented to pay such an indemnity as we might choose to exact for the wrong done in respect to the *Prince of Wales*, and to refer the other dispute to the arbitration of the King of the Belgians. Accordingly, on the 24th of February, Earl Russell wrote a note to M. Moreira, the Brazilian Minister at our Court, fixing the compensation on account of the plunder of the *Prince of Wales* at £3,200. That sum was forthwith paid by a cheque upon the Bank of England. On the 3rd of March the Belgian Minister for Foreign Affairs accepted, on behalf of his Sovereign, the office of arbitrator in the matter of the *Forte*; and every one on this side of the Atlantic believed that a very disagreeable dispute was amicably settled. It was true that M. Moreira had formally protested against the violence done to his country; and had reserved the right of claiming, in the name of its Government, satisfaction "for the violation of its territorial sovereignty, in consequence of five vessels belonging to the Brazilians, having been captured and held as prizes in the territorial waters of the empire by way of prizes." He did not, however, specify further than in this general way his ground of complaint; and as this note was followed by another, on March 2nd, in which he asked Lord Russell to acknowledge the receipt of his protest "for the completion of this transaction," but did not return to the subject of the reprisals, we were quite warranted in regarding this as merely a decent covering of the retreat. It never occurred to anybody, that after receiving an indemnity for a wrong done us, we were liable to be called upon for damages on account of the measures we had taken to enforce its payment. No speaker during the debate which took place in the House of Commons on the 7th of March hinted a suspicion that the quarrel was still open; and from beginning to end of the discussion

Digitized by Google

Church-rates, and by an act of last Session relating to the use of locomotive steam-carriages on the public highways. We believe it would prove a most convenient mode of settling more than one of these questions with regard to the licensing and regulation of public-houses, which evidently depend upon a variety of local circumstances, beyond the ken of Parliamentary legislation. This enactment, for example, which has just been rejected by the House of Commons, is one that could not, for many reasons, have been practicable in London; one that in London would have proved intolerably mischievous, if it had been passed. Yet it is nearly identical with the Forbes Mackenzie Act, which seems to have worked most beneficially in Scotland, and which the majority of the House of Commons would hesitate to repeal. Nor can we fail to be impressed with the fact, that in the great town of Liverpool, fully three-fourths of all the householders, having been fairly canvassed, and recording their deliberate votes, have pronounced for the entire and absolute prohibition of the Sunday traffic in intoxicating drinks. It might not be difficult to ascribe these differences of opinion to the diversity of local conditions, and to the character of the population, as well as to their tastes and habits, as regards the consumption of particular kinds of drink, some of which, unlike malt liquors, can be purchased on the Saturday, and will be as good and as fresh on the Sunday. Liverpool abounds with sailors, who are, like the Scotch, more addicted to spirits than to beer. It is possible that the same rule which would apply to Liverpool might apply to Shadwell and Wapping, but not to other districts of this vast and various London, and certainly not to every town or village in England. If, therefore, it had been possible for the House of Commons at all to entertain such a proposition as that of Mr. Somes, we should rather have seen it put in the form of a "permissive" measure, gradually, and as it were experimentally, coming into operation, by a direct vote of each local community for itself.

GENERAL GRANT AT VICKSBURG.

IT is impossible to deny the importance of the military movements which are reported to have taken place during the month of May in the vicinity of Vicksburg. There is no object which has excited more interest in the Northern States than the possession of the Mississippi, and there is none for which the Federals have fought with more skill and resolution. The western armies under Grant and Rosencranz are composed of very different material from those in the east under Burnside and M'Clellan. In the west are to be found the *élite* of the American people. They are the yeomen farmers and the German settlers, who are distinguished for energy and industrious habits. If original settlers, they have had the vigour to leave the seaboard cities where they landed from Europe, and to seek new homes in the new districts at the sources of the Mississippi, or in the fertile prairies of Illinois. These are the men to whom the power of America passed at the last Presidential election, and it is probably their destiny to wield the future power of the Republic. They are impressed with the conviction that they must drive back the Confederates considerably south of the Ohio, and at all hazards obtain the complete control of the Mississippi from Minnesota to New Orleans. Whether they are justified in these designs is not the present question. Such are their designs, and it becomes important, therefore, to observe the mode in which they have attempted to carry these designs into effect, and the success which has attended these efforts.

The possession of the Mississippi by the Federals will, it is supposed, produce two results. The first is, that the Confederacy will be cut in two, and will thus be extremely weakened; the second is, that the area of slavery will be circumscribed by a distinct boundary. If successful, the people of the North-western States will, of course, be able to communicate directly with the Gulf of Mexico; but the results just mentioned are those against which the South have been fighting with such desperate courage. As soon as Farragut obtained possession of New Orleans it was thought that the Mississippi was lost to the Confederates. But the conclusion was premature. Various defensible positions on its banks were fortified, and when the Northern ships attempted to pass these batteries they were driven back. It was only by cutting a canal that General Pope managed to pass New

Digitized by Google

men of about half the House of Commons. The fact is exactly the reverse. The new City member weakened his influence by stating that he was a Ballot man, and apparently preferred to weaken it by an open and honest avowal of an unpopular theory, rather than sail into Parliament under false colours. Nobody could read his address without seeing that, even if in one or two points it was extreme, it was the address of an honest and able man. As we said last week, we believe that the City has done both wisely and well. A young man of known brilliancy and industry ought not to be put aside because he is, on principle, in favour of a measure which is unpopular with the more cultivated classes; but which did not disqualify Sir R. Bethell from becoming a Chancellor, or Mr. Milner Gibson from becoming a Minister of State. Political situations change very rapidly; the present situation in the next few years will change decisively. The questions of to-day are not the questions of to-morrow; and a little experience of political life will make able men either modify or mature mere theoretical opinions. Mr. Goschen is neither a firebrand nor an anti-Churchman; while he is likely to distinguish himself in the House beyond most men of his years. We really cannot understand the covert attack that has been made upon him, and can only impute it to the natural vexation which Conservatives feel at seeing the seat pass, without a contest, from a Liberal to a Liberal.

THE IRISH CHURCH.

WE have already pointed out both the positive, and what may be called the negative, arguments in favour of retaining the Irish branch of the United Church *in statu quo*. To alienate its revenues, would be to make a stab at our own branch of the Church; would introduce the vicious principle of deciding great principles by mere majorities; would disconnect the government of Ireland with any religious opinions, and would disturb the foundations of all property whatsoever. We have seen, moreover, that the Irish Church has *a history*, and that that history has a just claim for a hearing. It now remains to be inquired, how has the Irish Church carried out her principles? And, how far may we hope that she will carry them out in the time to come?

As to the past, it is impossible to deny that the result, however much the arguments we are about to urge may mitigate the blame to be attached to the Irish clergy, has not been commensurate with the means at their disposal. It would be absurd to deny that, up to thirty years ago, the Irish Protestant clergy had, to a considerable degree, succumbed to the difficulties with which they were surrounded. Non-residence and pluralities were too frequent, and had done the mischief which non-residence and pluralities must ever inflict upon a neighbourhood. But it must be remembered, that these evils were not regarded in either country as they are now regarded. They were a tradition and a fact, handed down from one generation to another, and tolerated like a thousand other abuses, because none could remember when it had been otherwise. If we look to the political horizon of the Irish Church, we see reasons for its inactivity, in the fact that it was used by the Tudors and others as a mere political machine, and, for long after the Tudors, was never regarded by men in power as an engine for the improvement and education of the people. Its ascendancy was maintained by a code so distasteful to all the better feelings of our nature, that the only wonder is, that the system was able to maintain itself at all when that code was done away. It is unfair, we think, to form any judgment as to results until a better and freer system had been for some generations introduced. And if the political horizon of the Irish Church was thus dark, what shall we say of the social? What of the bludgeon of the assassin, and of the bullet of the lurking coward? These things cannot and must not be overlooked in considering the past history of the Irish Church. We will defy Mr. Dillwyn, or any other Member of Parliament, calmly to compose his next speech, if he felt there was a chance that a sharp-faced, hungry-looking Irishman might start out upon him from the next thicket, or that any night a brace of slugs may whiz out of the shrubbery, crash through his drawing-room window, and leave his family without a head. And if we turn from the political and social view of the case to the religious, what better chance of developing herself has been afforded to the Irish Church? We must not ignore

Digitized by Google

of the *Quarterly*, remains to be seen. For the present, the internal evidence is enough. There is a scene in *A Legend of Montrose*, in which the disguised Lord of the Castle expatiates on his own manifold virtues to Captain Dalgetty. 'I never heard so much good of him before,' said Dalgetty! 'You must know the Marquis well, or rather you must be the Marquis himself!' We leave the application to the military critic of the *Quarterly*."

And this actually proceeds from the pen of the whining trinity in unity, who are complaining so bitterly of the unfair personalities of the *Times!* Dressing their opponents, as their custom is, with oil of vitriol, the *Saturday* Reviewer and his doubles are not ashamed to disturb the clubs and coteries of London with their clamour simply because they themselves have been served up with a mild *sauce piquante*.

SEA DREAMS IN THE HOUSE OF COMMONS.

It was a hot still night in early June. Whalley and Newdegate had been wearily prosing and raving about Maynooth, and a long list of business still stood on the paper to be got through. The drowsy roar of the dusty city came muffled through the windows, the fag of London life lay heavy on the spirits, the fumes of rich London dinners stupefied the brain, and the exhaustion of stifling London parties weighed soul and body down. Then rose up a potent magician, and spoke of the sea and the fishermen hauling their nets on the shore, of the trawlers out in the offing with sails filled by the gallant breeze, of the salt-smelling sea-weed mixed with shells that fell out of the dripping nets. As the picture grew beneath the wizard's touch, the tired House yielded itself to the blissful illusion, the medicated ventilation seemed to turn into the sharp fresh air that had kissed nought of earth save the Atlantic foam; the coved ceiling became a deep blue vault flecked with thin shreds of fleecy cloud; the hum from without changed to the ripple of the dancing waves against the clinker-built bow, as the boat lifted lazily over the long ocean swell; and the voice was the mermaid's lulling song, singing, as she combed her yellow hair in the sunshine:—

> "O come with me, my love,
> And our fairy home shall be
> Where the water spirits rove,
> In the deep, deep sea."

So, listening to "such dulcet and harmonious sounds," the fatal spell wrought on the soothed senses and drew with resistless might the willing victims of enchantment to the cold chambers of the sea-maid's haunt. Then, sharp and terrible, broke the Clerk's voice, proclaiming the numbers, and fifty miserable M.P.'s woke and saw that the mermaid was Mr. Fenwick, and knew that it was all a dream about the fresh salt sea and the plash of waves, and found that in their sleep they had gone into the Opposition lobby, and that the Government was beaten, and that they were in London, and that a Commission was to issue to inquire into something about sea-fishing, and the number of turbot sent to town during the season.

Well, very pleasant was the dream, and very pleasant is it to read about such themes before we go out into the hot, hazy streets next morning, and very pleasant will it be to be commissioners to go all about the coast and ask all sorts of questions about fish, and how they are caught, and how much they get for them, and what they do with the bad ones, and to settle to go out to-morrow, if it is warm and fine, and see all the process and get paid for a great many days' work of that sort.

Nor shall we throw any doubt on the explanation that such a roving commission may gather for us a great deal of useful and interesting information. But still we cannot help suggesting, that the first duty it will accomplish will certainly be to scatter to the winds the great bulk of the allegations on which it was asked and has found support. Nothing of course is more natural than that Mr. Fenwick, who has taken a great part in our recent salmon legislation, and who was able, on the very evening in question, to cite to the House the triumphant fact, that four smooth, or puffy salmon, each upwards of five inches long, had this season been already caught at the Nore, should desire the application of similar rules to the preservation of cod, whiting, and turbot. And perhaps it is not remarkable that the *Times*, which cannot be expected to keep a naturalist upon the premises, or to knock up at two in the morning somebody who had seen a salmon actually hooked, and knew the difference between "clean" and "foul" fish, should next morning patronize Mr. Fenwick, and tell the public how thoroughly it might confide in his facts. But unhappily the real fact is, that there is not the smallest analogy between the case of salmon and sea-fish, and not the slightest ground for expectation that legislative restrictions, however

were strong enough to induce her to shield them from the allegations of Mr. Macdonald, what on earth could be her reason for casting a disgraceful imputation on the honour of the Baron? He appears to have acted with perfect good faith, and, having wealth of his own, was willing that the lady's should be settled upon herself. Without any apparent justification, Mademoiselle puts an end to their engagement, impugns his honour, and refuses to give him back his letters. And so ends the "Patti Romance." The heroine waves a signal of distress; but when the knight gallops up, with his trusty squire the Vice-Chancellor, to the castle in which she is imprisoned, and offers to set her free, she tells him to begone, that she knows nothing of him, wants none of his services, and is not the love-lorn maiden she at first pretended to be. To say the least, this is shabby.

THE SICK MAN AND HIS HEIRS.

For the last hundred and fifty years the Eastern question has been a source of perplexity to statesmen, and a pretext for the promulgation of many foolish political theories. The dissolution of the Turkish Empire has been regarded as a constant menace and imminent danger to the peace of Europe. Still the danger seems no nearer after this lapse of time, and rarely has there been a fitter and apter illustration of the truth of the proverb that "threatened men live long." The sick man is not dead. Yet it is precisely now, when the prophecy of evil appears to have been falsified, and to have recoiled on the heads of its authors, that certain English politicians have chosen to prognosticate ill to Turkey, and to seek to obtain a complete reversal of English policy towards the Porte—an ingenious mode to insure the fulfilment of their vaticinations. It must be admitted that the occasion is not quite *àpropos*. It is sought to change the policy of this country just as it is on the point of bearing fruit, and when the capital, trade, and civilization of Western Christendom have commenced to improve the condition of the Sultan's dominions, and to grapple with the prejudices of Islam. Last Friday Mr. Gregory and Mr. Cobden denounced reform in the East as a sham; they declared the Sultan was a fanatical bigot, a spendthrift, and too obstinate to follow the counsels of others, a hater of Western ideas, and a gross sensualist. These gentlemen, unintentionally no doubt, made themselves the organs of the calumnies of the Perotes—a community that has acquired pre-eminence for lying among the mendacious populations of the Levant. Whether by accident or design, the Sultan has given a practical refutation to these calumnies by appointing Fuad Pasha Grand Vizier. This nomination is far more significant than it may at first appear, for Fuad represents the party which desires to break away from the ignorant traditions of Mohammedanism. But if we leave aside the *cancans* of embassies, and the falsehoods that circulate in the *cafés* of Pera, to deal with the few facts that transpire to public knowledge, Abdul Aziz appears more liberal in his ideas than any of his predecessors. One act of his alone, now forgotten, speaks volumes in favour of his humanity and of his subjection to the influence of Western ideas. Instead of following the invariable custom of previous Sultans—which had come to be looked on as a law of political necessity for the State's safety, and which, indeed, had been borrowed from the practice of the Greek Emperors—of slaying the relatives of former occupants of the throne, and all whom it was imagined might be competitors for it, Abdul Aziz spared the lives of the children of his brother, and has taken them into his favour. It is true that the late Sultan also spared the life of his brother's child, which shows that a good deed is not lost. We are not inclined to attach more importance than they deserve to these humane departures from the laws of the Ottoman State, but when it is asserted that the Turk is unchanged in ignorance and cruelty, we cannot fail to remember these things, and to compare them with the murder of his own children during a long series of years by Mahmud (the father of the last and present Sultans), simply to keep his throne, by rendering it impossible for those who might wish to depose him to find a successor of the family except in some remote Tartar tribe. Are not the sons better than the father? and are we justified in maintaining that the Turks are unchangeable, or it is waste of time and effort to seek to bring them within the influence of modern civilization, as was stated in Parliament last week? Whether the attempts to induce Mohammedans to adopt our civilization will be completely successful it would be presumptuous to pretend to say, but there can be no doubt as to the desirability of endeavouring to make them wiser and happier; or as to the impolicy and gross inhumanity of seeking to discourage these endeavours. wisely do that the price may be carried too high, and that if a reaction should take place it will probably prove disastrous.

We now come to Greek securities. Owing to the indebtedness of the State, amounting to several millions, these were never dealt in, and hardly even thought of, until the dethronement of Otho. From that time they came into favour with the speculators, who pretended to anticipate great prosperity from the development of the country under a new and beneficent rule; as if the errors of a quarter of a century could be rectified in one or two years. Surely this must have been the hope of men who, concluding engagements in the Five per Cents at 8½ and 9—the quotation immediately after the outbreak of the Revolution—are prepared now to give 33 to 34. Admit that the circumstances of the country are greatly altered, where, after all, is the foundation for this very important improvement? Perhaps the best solution is the old one,—the existence of a speculation *furore*. Ask those who evince such faith in the future of Greece on what grounds they base their expectations, and they tell you that the debt is to be settled on a one per cent. basis; there is also to be a National Bank,—nothing now can be done without a bank,—and a system of railways and irrigation-works will complete the programme of financial prosperity. Without doubt this looks well upon paper. But why do men shut their eyes to the struggle that must be made to accomplish this long course of pecuniary recuperation? *Caveat emptor* was never more applicable than in this case; and though we are quite prepared to go along with those who believe in the regeneration of Greece, still it must not be imagined that, under the happiest auspices, there will be a speedy return to financial regularity. Certainly the Greeks themselves are not so sanguine of general peace and plenty as many of our English operators. That their debt would be settled at the Greek Kalends had passed into a proverb. Recent events show more favourable prospects, but they have yet to be realized.

Of all the movements that have taken place recently at the Stock Exchange, perhaps the most legitimate is the advance in Spanish passives and Spanish certificates. Not that this is to be attributed to any real desire on the part of the Court of Madrid to mete out justice to the foreign debtor, or to the unsullied character of the hands into which a part of the negotiation has fallen. It is simply the consequence of the improved appearance of the country, the satisfactory increase in the revenue, and the necessity of the financial authorities adopting an honest policy, in order to secure the introduction of capital for territorial improvements. In consequence of the disgraceful conduct of Spain to her foreign creditors, the quotations of any new securities have long been excluded from the European Bourses, and being thus prevented from availing herself of the advantages of railways and other public works, she will be compelled before long to adopt measures to restore her credit. The national property set apart for the liquidation of the passive debt has never been properly applied. The balance has largely accumulated, and, if regularly dealt with, the stock should be redeemed at a much more elevated price than at present. But although these circumstances have been well known, it required a speculative epoch to give the debt an efficient impetus. This it has received, and the quotation has now been carried 10 or 12 per cent. in advance. If the thing is not overdone by time bargaining, and if the old stagers are not too precipitate in their action, a favourable issue may be attained. But diplomacy will be necessary, and the next or the succeeding Cortes may have to sit their term before the end is accomplished. The indication furnished by the enhanced price offered at the monthly biddings at Madrid is evidence that the pressure from without is being felt. Advantage will be taken of this, and the seed sown must eventually bear good fruit. The certificate question is another matter of moment. Whether an adjustment will precede the Spanish settlement, or only follow it, is a matter of trifling consequence; it must come, though *ad interim* frequent variations may be expected. When those things shall have been brought to a satisfactory conclusion, Castilian honour will no longer be a byword or reproach, and, with the assistance of local improvements, the glory of old Spain may be revived.

The practical lesson to be deduced from what we have said is, that deferred investments may at particular seasons be obtained at cheap and moderate prices—that by a current of speculation their value may be taken up far above their intrinsic worth, and that when the *furore* subsides a ruinous reaction is probable. On entering into business of this description, it is advisable that individuals should purchase only as much as they can conveniently hold, without risk to themselves or the parties with whom they deal; for in speculating, *i.e.*, buying for the rise or selling for the fall, they may "be cut to pieces" or ruined by a convulsion.

poem. None of its companions are equal to it, but there are passages of great beauty in many of them. "Narcissus" belongs almost entirely to the modern school of Greek poetry, being "most musical, most melancholy." Here are some very beautiful lines from it—

"And all about him snatches of old songs,
Heard in old hours among the Oréades,
Mixed with a meaning never felt before,
Floated—dark legends of mysterious love
Unhappy, and of hope for ever fallen,
Fallen for ever, like his own—and still
Haunted him more than all a simple strain
Sung by Liriopè, the naïad-nymph,
His mother, how a maiden golden-haired,
Trusting to treachery and led by love,
Followed a stranger from her father's halls:
'She like a rose just opening into bloom,
Which one hath paused in passing to admire,
Anon hath gathered, and against his heart
Worn for a little hour, then cast away
For ever, and remembers it no more;
But all the while it lieth where it fell,
Silently drooping on an alien earth,
Alone, unpitied of the passers-by;
Nor any more availeth that the showers
Strive with sweet influences to lend it life,
And golden suns caress it as of old;
Not to have been in native loveliness
First among flowers availeth any more,
So lowly doth it lie, so far hath fallen.'"

Mr. Worsley is especially happy in his use of simile. Some of the images he introduces are worthy of Homer himself, being as simple and natural, and yet as carefully finished, as those with which that mighty artist has enriched the world. He has studied nature carefully, and he draws his most striking illustrations from the little life around him of bird and flower and tree. We may take as an instance the following passage from the poem called "Edith," in which he has described the misery of a girl whose lover has betrayed and then abandoned her, but who finds, in her hour of deepest anguish, the consolation of a mother's love.

"As when a heartless child for self-delight
Hath stolen a little nestling from the nest,
And loves it with a cruel careless love,
And promises to hoard it for his own,
Till in the sunset, growing tired of play,
He casts it from him as a worthless thing,
And leaves it cowering on the naked earth,
Bruised on the breast, and cold, and all alone—
But in the twilight comes the mother-bird
And brings it food, and strives to make it eat,
And with such shelter as the place provides
Fences it from the night that cometh on;
But all in vain—for never shall she hear
That voice among the voices of the bowers,
Never behold the little wings outspread
Drinking new vigour from the vernal suns—
Like to that bird, in such a lonely doom,
Lay Edith, tended by a mother's love."

The poem from which these lines are taken is a good illustration of Mr. Worsley's strong and weak points. It is tender and pathetic, but it is wanting in dramatic power. It abounds in rich imagery, but it is deficient in life. It suffices to give expression to the half unconsciously uttered complaints of the broken-hearted girl, but it utterly fails to render the passionate outcry of her mother's despair. But we prefer to dwell on Mr. Worsley's merits, rather than to spy out his short-comings, and with the following extract we take leave of the original poems contained in this volume:—

"As one who, torn with sickness and slow pain,
Lies whisperless with horror all night long,
And ever in the ghostly flicker of light
Quails with a doubtful death-stare in his eyes;
But when the shivering wind blows chill with dawn,
And the grey stealth of twilight with pale feet
Treads on the listless hills, or half in fear
Feels tremblingly about the dark ravine,
While the lone eagle from her sunless rock,
Veiled in the wet smoke of the rushing streams,
Stirs through the cold a hollow cry far off—
Sad Echo wails—that moment the sick man
Feels the tense nerves relaxing, and the brain
Showered on by sweetness of Elysian dews;
Then marble-mute, with the white-breasted smile
Of simple childhood wreathing his wan lips,
Lies stirless in the murmurings of the morn,
And stirless in the golden afternoon,
Till, when the sun's red splendour sinks at eve,
He, fresh from dream of flowers and resonant rills,
Opens wide eyes rejoicing, saved by sleep—
As life's rich tumult seemeth sweet to him,
Thus in her dying sweet was death to her,
To Edith, when she passed from the cold earth."

The translations are somewhat disappointing, but of this result the excellence of Mr. Worsley's "Odyssey" is probably the cause. He has so thoroughly succeeded in his rendering of Homer, that we are perhaps induced to expect too great a perfection in the versions of other poets which he now offers us. But however this

falling from her shoulders, a bouquet, a gold fan, and glittering bracelets. Madame Jacob's head nearly shook off with horror. The word was with the Pasteur Boulot, who did not conceal his opinion, and whose strictures introduced into the sermon were enough to make a less hardened sinner quake in her shoes. Many of the great leaders of the Protestant world in Paris had been present on that occasion. Some would not speak to her, some did speak very plainly. Elizabeth took it all as a sort of triumph, bent her head, smiled, fanned herself, and when ordered out of the room by her mother, left it with a splendid curtsey to the Rev. M. Boulot, and thanked him for his beautiful and improving discourse."

This refractory Elly is a very piquant and fascinating character. She is one of those warm-hearted, impetuous, wilful young people whose faults we are so apt to condone, or even to prefer to other people's virtues, especially when they are of the other sex, and have, like Elly, "great soft eyes, and pretty yellow hair, and a sweet flitting smile, which came out like sunshine over her face." Tennyson's Sketch of Lilia in the Prologue to the Princess would do for her :—

> A rosebud set with little wilful thorns,
> And fresh as English air could make her.

Sir John Dampier is the name of the *jeune premier*. He is the kind of man that is better liked by women than by his own sex; an amiable, honourable gentleman, rather selfishly good-tempered and weakly sensitive to the wills and opinions of those nearest to him. The authoress makes use of him generally as a foil to the other characters, and perhaps she is right in this. We should observe that Elly has another lover, Anthony, the son of the *pasteur* who marries Mrs. Gilmour. A French Protestant student of theology would appear to possess few of the graces of polite society if the authoress is right in presenting this as a typical portrait of the class :—

"Anthony Tourneur sat admiring her with his eyes wide open, and his great mouth open too. He was a big young man, with immense hands and feet, without any manners to speak of, and with thick hair growing violently upon end."

But under this unpromising exterior we find so much generosity and delicacy of sentiment, with a strength of will and devotion to duty that are wanting to the older man, that the course of the story, though strictly probable and natural, disappoints us, as we are vexed by the apparent perversities of destiny in real life. But the authoress provides him with no makeshift substitute for the happiness he desired. She leaves him alone with duty. There is no greater merit in the book than this indifference to the appearance of completeness. "Poetical justice" only insults our ineradicable sense of the inequalities of life.

When we come to speak of Mrs. Gilmour, we feel strongly what is really the great fault of the book. It may be called a want of concentration. Conscious, probably, of sympathy with many varieties of character and many phases of feeling; endowed with a fine observation which traces these with rapid instinct in the outward clothing of words, acts, and involuntary movements which they assume; and wielding besides a picturesque and supple style, the authoress is rather oppressed by her own powers, and has not learned how to shape with the unswerving hand of an artist the materials which are present to her in embarrassing abundance. Thus the tragical element in Mrs. Gilmour's character should either have been fairly worked out—which would have required a larger canvas—or it should have been merely kept present to the imagination as a disturbing influence, without coming into the foreground at all. But there is a want of consistency in the character as it stands. In the early part of the book a soliloquy of somewhat exaggerated and melodramatic pathos reveals the conflicting state of her passions and conscience; but this is a foundation on which nothing is built, and the authoress seems afraid to continue on the same scale. This is no small fault, as it destroys the keeping of the book, which is otherwise harmoniously composed. The minor characters are generally interesting and not too prominent. Jean Dampier, Elly's constant friend and adviser, is admirable—one of those useful and excellent women who redeem the name of old maid from the discredit which, after all, exists only in the minds and mouths of foolish persons. Madame Jacob, the rigid Protestant *dévote*, seems to us exaggerated, perhaps not without spiteful *animus* on the part of the writer, who may have suffered more than most people from the inner despotism of a sect embittered by centuries of persecution and contempt. Will Dampier, the clergyman, is a rather otiose figure in the story, but he represents very well a valuable type of English character :—

"He was a big, commonplace young man, straight-minded and tender-hearted, with immense energy and great good spirits. He believed in himself; indeed, he tried so heartily and conscientiously to do what was right, that he could not help knowing, more or less, that he was a good fellow. And then he had a happy knack of seeing one side of a question, and having once determined that so and so was the thing to be done, he could do so and so without one doubt or compunction. He belonged to the school of athletic Christianity. I heard some one once say that there are some of that sort who would almost make out cockfighting to be a religious ceremony. William Dampier did not go so far as this, but he heartily believed that nothing was wrong that was done with a Christian and manly spirit. He rode across country, he smoked pipes, he went out shooting, he played billiards and cricket, he rowed up and down the river in his boat, and he was charming with all the grumbling old men and women in his parish, he preached capital sermons—short, brisk, well-considered.

dence there. The Obea men produced sicknesses and various evils by hiding sticks or other objects in the houses or gardens of the persons they meant to injure; and the Myal men opposed them, and professed to dig out the hidden "instruments of darkness" and remove the maladies occasioned by them. A great and very troublesome revival of these extraordinary practices took place in Jamaica in 1842, which is partly explained by the removal of the severe repressive laws which were in force before the date of emancipation, and partly by the introduction of a large number of fresh negroes from Guinea. But many of the members of the missionary churches were victims of the frenzy, and took part in the wild wanderings, dances, and exorcisms. The identification, in the Calabar language and in the conceptions of the negroes, of the *soul* and the *shadow* is connected with singular fancies and rites. The shadow can be lost or stolen before death; can be shut up for safety in a sacred place; and at death may be caught by a Myal man, who will use it for "purposes of necromancy:"—

"It must be caught at the grave, at or soon after interment; therefore in the dusk of the evening, when burials usually took place, or by moonlight, a fitting time for such mysterious proceedings. In the midst of the people encircling the grave, the Myal man saw, what was unseen by others, the shadow or spirit of the departed hovering over its last tenement; and he tried by many violent gestures, leaping and grasping, to seize it, or by strange voices to charm it, as it flitted about and evaded him. When he succeeded, he secured it in a tiny coffin ready for the purpose, to be buried in the same grave, or deposited in the house, and under the bed, of the practitioner for future use."

A young girl who fancied she had lost her shadow is represented as wandering about, "seeking it by the bushy banks of streams, or round the gigantic cotton-tree, or in other haunted spots, by moonlight." A Calabar chief believed that some one had caught his soul and *bottled it up*, and neighbour chiefs had proclamation made that the thief should let it go or die a terrible death.

Of the many other interesting passages in Mr. Waddell's work, we can only name the account of Calabar (Chap. XVIII.), a discussion on polygamy, in which the view of the Bishop of Natal is controverted, and the notes on the Efik language, in the Appendix. The volume is neatly illustrated, and contains two or three small sketch maps.

THE APOSTLE OF THE ALPS.*

THE author of "Moravian Life in the Black Forest" has taken the establishment of the celebrated hospice of Mount St. Bernard for the foundation of a tale intended to illustrate the maxim that "no life is pleasing to God, that is not useful to man." We may object that the apophthegm is not true; if by "useful" is meant a practical utility such as is exercised by the monks of St. Bernard and their dogs. A penniless bedridden old woman is obviously not a very useful member of society. But if she bears her sufferings patiently, taking them as a dispensation intended for her spiritual correction, her example is calculated to edify those around her, and she is thus "useful" in a high sense of the word. Many excellent people, who are neither penniless nor bedridden, have not the power to serve their fellow-creatures except by setting them a good example; yet it would be hard to say that their life is not "pleasing to God." Infant children are an instance. No one not related to them cares to have very much to do with them. We are pleased to look at their pretty ways, to fondle their rosy hands and feet, to pat their chubby little cheeks, and hear them crow and make their first attempts at the Queen's English. But we would rather not have to wash or dress them, or nurse them, or, unless they are bone of our bone and blood of our blood, to get up half a dozen times in the night and walk about hush-a-by-babbying them, when they are teething. Yet the innocence of children is our brightest human example, and the divine love for them one of the most touching features of our Christian records. We have no wish, in urging this objection to the purpose of the tale before us, to throw any slight on the founder of Mount St. Bernard. He and his followers have deserved and won the admiration and love of their fellow-creatures, and even Mr. Whalley himself, with all his abhorrence of the Scarlet Lady, would not object to be dug out of a snow drift by one of them, even at the peril of having to take shelter in the hospice and share pot-luck with the black-robed fraternity. We object only to the narrowness of our author's idea of usefulness, which, unless we wrong him, contemplates only such services as are actually, visibly, and substantially beneficial.

This apart, the tale is pretty and nicely told. The young Bernard de Menthon is a student at the University of Paris. His wish is to be a priest; but his parents have destined him to marry the Lady Marguerite de Miolans, and presently he is summoned home to complete this contract. The wedding day is fixed. But on its eve he wanders away from the château of his parents, and on approaching a small chapel dedicated to the Virgin he hears some one praying aloud inside. It is Marguerite, and she is praying that by some divine interposition her marriage may be prevented. For she is in love with the young Chevalier Aleranne; and though her parents have driven him from the house, anxious that Marguerite should marry Bernard to whom she has been betrothed from her childhood, the girl is unable to drive him from her heart. Bernard, however, finding that he and

in the annual exhibition of the Academy. With this hint we may for the present be content, reserving some other questions for future consideration.

THE ARUNDEL SOCIETY.

This society has now been in active existence for fifteen years. During the latter part of this period it has, we are sincerely glad to observe, been at the same time increasing its powers and attracting new members. When first established its primary object was the illustration of Italian fresco-painting of the fourteenth, fifteenth, and sixteenth centuries, by providing copies in the form of engravings, coloured lithographs, and photographs. The works in oil-painting were put aside, as of minor importance and as being those with which the public were thought to be sufficiently familiar. Sculpture, both of the antique and mediæval styles, was also to be illustrated by casts. The operations of the society became more developed when, as it fortunately happened, the process of multiplying copies in colour became very greatly improved at the same time that the war in Italy was threatening to repeat the devastation which befell many of the most precious monuments of art in former times. This society very wisely, and in complete accord with the objects which led to its origin, then proposed a distinct fund for copying. To this donations may, as we understand, be contributed without membership, and thus any one feeling an interest in the preservation of accurate copies of pictures inevitably doomed to decay may assist in rendering a very important and valuable service to the study of art. A visit to the society's rooms in Old Bond-street will show how far this plan has been carried out, and in what direction the council of the society have been working, better than the space at our command will enable us to show. The original drawings made from the frescoes form a most interesting collection, and afford an opportunity of comparing the chromo-lithographs and observing the close accuracy which has been obtained. The drawings are chiefly the work of Signor Marianecci, and in all the important points of drawing, colour, and complete appreciation of the style and manner of the various masters, they must be pronounced as nearly perfect as possible. The only thing which occurs to us is that there has been in some instances a little too much latitude permitted to the copyist, where he has restored in his own work the parts destroyed and lost in the original, as we remarked when speaking of the Arundel Society's publications on a former occasion (vid. *London Review*, No. 128). These missing portions ought not to be supplied for the sake of pleasing the eye of the amateur; the copy should be that which the society engages to produce for their subscribers—a scrupulously exact copy. Restoration is a most treacherous thing in all cases, and perhaps it would not be extravagant to say that no work of art has ever been quite satisfactorily restored or even reproduced in perfect imitation. Where the mind and feeling and sentiment of the artist have left the mark upon his work, as in mediæval sculpture for example, true imitation is extremely rare to meet with. The society's beautiful collection of casts from ivories, and the mechanical reductions from the Parthenon sculptures, are necessarily free from error of the kind we refer to. The question which the connoisseur demands is, whether the chromo-lithographs are to be relied upon as the most exact imitations possible by the means at command. Apart from the question of permitting any restorations of parts lost by decay, it is of great importance that we should have perfect confidence in the conscientious copying of the work. There must be no putting in of a last touch or a hair upon the eyelid if it is not in the original. We remember that in the two chromo-lithographs of the large fresco of Filippo Lippi, in the Brancacci chapel, one of the single figure of Paul, and the other of the complete subject, recently published by the society, there was considerably more touching in of detail in the dresses observable in the smaller copy, while to the head of Paul eyelashes were added which were not to be seen in the larger copy. The difference is not so much worth notice as the admission of the principle of adding to and supplying even in so slight a matter as an eyelash. If exactness, to the point of *fac-simile*, is an object, then we must be particular to a hair. The last issue of the society is an extra publication of a chromo-lithograph taken from the fresco by Benozzo Gozzoli, representing "St. Augustine preaching," a large work in the Duomo of the old town of San Gemignano, in Italy. It is a most finished and perfect copy, and a good example of the style of the fifteenth century painters, who had begun to shake off some of the stiffness of manner of their predecessors. The general tone of colour has been well seized, as well as the expression of the heads. Better examples of Benozzo Gozzoli might perhaps have been selected, for this, with the exception of the quaint little dog, which was always a favourite in his pictures, hardly gives an idea of his delight in natural objects, his fancy for animal life, for flowers, fruit, and picturesque landscape of the composed and artificial style. Gozzoli, though a pupil of Angelico, never caught his master's beautiful refinement of expression; though there is good expression in his heads, he is wanting in elevation of sentiment. He was an original, but had none of the genius of Masaccio and the two Lippi, who were certainly studied by Raffaele himself. The architectural and arabesque border of this fresco is one of its most interesting features, and this has been particularly well given in the chromolith. As a specimen of the new process the illustration is also admirable; it is clear and harmonious in colour, and in the nicer tints especially delicate. This part of the society's work is executed in Germany by the lithographers, Messrs. Storch & Kramer, and under the direction of Professor L. Gruner, the proofs being sent over during

all the prismatic rays but the red. Familiarly we adopt this knowledge in the red signal-lights of our lighthouses, which are thus selected because the red rays alone will penetrate a fog. Why then have we sometimes the moon in total darkness? The ring of atmosphere round our planet is at such times like a transparent projecting wall, and if that atmosphere be clear the sun-light passes freely through. But if it be densely filled with clouds and vapours it becomes inpenetrable to light, and the beams which if refracted would glow on the moon, are annihilated by our terrestrial vapours, and the moon passes unilluminated into the darkness of the earth's shadow. But while the great mass of the eclipsed moon is coppery in colour, the edge of the shadow, or the penumbra, has a greenish or bluish hue. Why is this? Green is the complementary colour of red, and hence some fancy it is an optical illusion. We would, however, suggest whether it may not be due to light reflected from our spherical shell of air. These reflections make us desirous of changing our position, and taking a mental view of celestial phenomena from the moon. Standing on Pluto, or any less elevated position there, what shall we see? In the sombre ruddy illumination the first thing striking will be that our shadows are less intense.

The moon having no atmosphere, the shadows of daylight there are black and sudden, no twilight occurs, it is the brightness of noon or the depth of night in an instant. The day-shadows fall on the ground with the rigidity of ruled lines. But as the earth's shadow passes over the face of the moon, oft something like twilight goes on before. But looking up to the sun, what do we see? Not a hard, sharp, black edge, as the airless moon presents in solar eclipses to us, biting out the light-giving face of the sun; but a softened reddish edge preceded by greyish spots and dots. As we look on, and the great earth shuts out the sun from view, it is a huge dark world that hangs before us,—sixteen times larger than the mere black disc that for a moment only shuts out entirely the sun from some restricted region of our earth—and round that great dark world is a glowing, ruddy, luminous border, caused by the bent-down rays of light from our air, while our enveloping atmosphere surrounds the whole with a circle of beautiful azure light, like a crowning ring of glory. Few spectacles can be more exquisite than a total solar eclipse on the moon.

But to come back to our earth. There in the starry sky glows the coppery moon. Over her ruddy face gleam now and then quick flashes of pale silvery light. It would be curious to know if the moon possesses "phosphorescence"—or more strictly, any luminosity of her own. But those grey flashes were no phosphorescent gleams. What were they? Flashes of sunlight reflected by the higher clouds in our air. Floating high in our atmosphere the fleecy clouds illuminated by the setting or the rising sun reflect his bright rays from their under-surfaces upon the moon, and just as catching a beam of sunshine issuing from a shutter-chink in a closed apartment upon a looking-glass, the slightest motion causes long streaks of light upon the wall, so the slow sailing of the clouds in our air transforms the reflected beam of light into a silvery flash across the moon.

It would be interesting also to know what actinic power she may possess. A piece of paper exposed to sunshine will, even though it be kept in a closed vessel for months, photograph its own image in the dark. Did any photographers try the actinic power of the moon on Monday last, and make her paint the likeness of her clouded face?

Lastly, a word about investigations. There is something more than ordinary to be made out in eclipses of the sun. There are the red-flames, the nature of his light, the nature of space itself to be unriddled by his rapid teaching, his momentary unlocking of deep secrets. What can we find out by examination of eclipses of the moon? One thing at any rate, very interesting just now—the so-called atmospheric lines of the solar spectrum. Thus, if the additional lines on the solar spectrum seen at the period of the setting sun when the light has to traverse the greatest distance of the atmosphere are due to the air, those lines should be more apparent and more distinct when the sunlight traverses a still greater amount of air.

Now the light which came to us from the moon in the late eclipse would have passed through the entire horizontal thickness of the earth's atmosphere in its passage to the moon and again through its whole vertical height in coming back to the spectator, or about some $2\frac{3}{4}$ times the length of atmosphere it would have to traverse at sunset. A good opportunity was therefore afforded for the spectrum-examination of air-lines. Mr. Huggins, to whom science has been lately so much indebted for his excellent examinations of the spectra of stars, had intended to have investigated this subject, but was prevented by the lowness of the moon's elevation; his telescope being fixed in an observatory of somewhat restricted dimensions there was not room enough to depress it sufficiently when the spectroscope was attached to it. We regret to have been thus accidentally deprived of the investigations of so able an observer.

As a rolling snow-ball gathers weight in progressing, so we hope the few points we have mooted, by bringing more generally men's thoughts towards lunar eclipses, will be followed by other suggestions for practical investigations. We lose much by regarding anything as valueless because not uncommon, and the better we understand the mysteries of familiar things the more we shall enjoy their wonders, and the better we shall be fitted for the contemplation of higher and rarer phenomena.

PHOTOGRAPHERS ALOFT.

PHOTOGRAPHERS in every street—on every house-top, and photographs in every room, we were nearly adding—it needed but photographers in the skies to complete the ubiquity of those now ubiquitous operators, and the full series of likenesses of things on the earth, below the earth, and above it. Soon, from the clouds, photographers will be taking maps of British territories and foreign kingdoms, and stereoscopic views of scenes in the celestial regions will be offered for sale in our picture-shop windows. Some people predicted it could not be done; but Mr. Negretti has done it.

It does not much matter what motive induced Mr. Negretti to go up with Mr. Coxwell on Thursday last, with a dark tent, in the famous "Mammoth," but Mr. Negretti says he was deeply interested in ascertaining the possibility of taking photographic pictures in a balloon; and whether business, science, or pleasure tempted him to use the camera and hypo-sulphite bath at 4,000 feet above the earth, we, at least, are very much interested in his proceedings and their results. The special hiring of the balloon, when Mr. Coxwell had offered free passages on the occasions of his public ascents, solely for the completely and effectively carrying out his experiment, must make us accord, however, to Mr. Negretti all the honour due to a true scientific investigator; and it is but justice to himself and his firm to acknowledge how readily and ably, on all occasions when new scientific instruments have been required for scientific inquiries, the resources of their manufactory and their own practical skill and experience have been placed at the service of competent observers in furtherance of the attainment of scientific knowledge.

Ascending at noon from Sydenham, the balloon rose swiftly, but its rotation was so rapid that it would have been useless to have attempted any use of the camera. Indeed, this incessant rotatory motion, although not always so quick as in the present case, is the most troublesome and principal difficulty the aërial photographer will have to contend with. Terrestrial photographers astonish the multitude with views of horses galloping, steamers smoking along over the sea, guns firing, and other so-called instantaneous views; but as the conjurer uses a little sleight of hand to mask the manipulation of his tricks, so instantaneous photographers use a little dodgery to effect the seemingly perfect accuracy of their views of moving objects. They do not photograph a steamer as she passes by, but rather take her as she comes towards them. So the horse, if they do not take a front view as he rushes on, they take him as diagonally as they conveniently can. The flash of a gun lasts a perceptible time, the smoke for several seconds; and if the flash be not quite accurately got the picture can be easily touched up. But no one has taken a photograph from an exploding gun, or even from a moving steamer or a coach. It is a very different thing to take a photograph of a moving object from a solid base of operations and to take one of an immoveable scene from a whirling and rotative base. It is no wonder, then, Mr. Negretti's assistant, when views were attempted in the elevated regions of the air, where the motion of the balloon had become steadier, reported of the pictures "moved," that is, that the edges of the objects were a little shifted, and the picture not quite sharp and true. Still we can fancy Mr. Negretti's delight, because the primary question to be solved was, whether the actinic powers of the sunbeams were as effective as in the lower regions; and, indeed, whether sunlight up there had any actinic power at all. The fact that many pictures were taken, although all reported "moved," distinctly proves that sun-pictures may be taken at from 3,000 to 4,000 feet at least, and higher no doubt when the trial is made.

As the rotatory and onward movements of the balloon cannot be stopped, to get rid of the objectionable defect the camera apparatus must be made to open and close not only with the utmost rapidity, but also without vibration, sudden jerk, or shake. The plates, in short, cannot be exposed too rapidly, too shortly, nor too quietly. These are points the mechanicians will soon overcome, and hundreds of adventurous photographers will soon no doubt follow their active pioneer, and bring down scenes innumerable from cloud-land, if not portraits of those mythical cherubs of which Dibdin sings, as sitting in invisible regions, to take care of the lives of our tars.

Mr. Negretti landed near Maidstone, and a view of the pointed poles in the hop-gardens below him in his descent would no doubt have been a suggestive and popular picture had it been taken.

PHOTOGENIC GAS COMPANY.

(LIMITED).

(Incorporated under the Companies' Act, 1862, whereby each Shareholder's liability is specially limited to the amount of his subscription.)

Capital, £200,000, in 10,000 Shares of £20 each.

(FIRST ISSUE, 5,000 SHARES.)

Payable—£1 on application; £2 on allotment; £2 in three months from the date of allotment; and the remainder in sums not exceeding £2. 10s. each, at intervals of not less than three months, as the extension of the Company's business may require. It is estimated that £10 per share is the largest amount that will be required during the first twelve or eighteen months, and it is not intended that more than £15 per share should at any time be called for.

DIRECTORS.

SAMUEL APPLEBY, Esq., No. 6, Harpur-street, Bloomsbury.
WILLIAM CLARKE, Esq., No. 193, Adelaide-road, Hampstead.
GEORGE FAGG, Esq., Director of the London and South-Western Bank.
JOHN GEARY, Esq., Director of the Metropolitan and Provincial Bank.
REGINALD READ, Esq., Director of the Crystal Palace Company.
CHARLES STRUDWICK, Esq., No. 76, Cannon-street West, and 25, St. James's-square.

(With power to add to their number.)

SOLICITOR.

JAMES CROSBY, Esq., No. 3, Church-court, Old Jewry.

BANKERS.

METROPOLITAN AND PROVINCIAL BANK, No. 75, Cornhill.

BROKER.

HENRY FRISBY, Esq. (late Foster Brothers & Frisby), No. 27, Tokenhouse-yard.

MANAGER.

Mr. JOSEPH THOMAS.

Offices: No. 95, BISHOPSGATE-STREET WITHIN (adjoining Gresham House).

This Company is formed for the purpose of introducing to the United Kingdom of Great Britain and Ireland the Photogenic Light, equally obtainable from ordinary gas or atmospheric air, by Mongruel's Patent Cold Generator.

The Photogenic Light has been publicly exhibited in London for some months past to thousands of persons, including chemists, engineers, gasfitters, and large consumers, and possesses the following advantages:—

1. That when atmospheric air is used it can be made in any house, costs less than ordinary gas, gives a whiter and more intense light, without smell or smoke, and is more healthy.

2. That it is not necessary to make any alterations in existing gas-fittings, except in some cases with the burners; and that where no service at present exists, it will cost less to lay down the pipes, &c., &c.

3. That, in consequence of the absence of ammoniacal and sulphurous acid vapours, it does not injure the paint, gilding, or furniture of apartments, and that it is inexplosive.

4. That when used to enrich and purify ordinary gas, an increased illuminating power of from 150 to 400 per cent. is obtained, while the consumption of the gas itself is diminished by at least one-fourth.

5. That when used as last stated, in order to obtain a light equal to that of ordinary gas, the consumption of such gas is diminished by upwards of 60 per cent., while the heat and other injurious effects arising from the use of gas are diminished in proportion.

Beyond the amount to be paid to M. Mongruel for his patent and patent rights, no charge will be made for the formation of the Company beyond the actual preliminary expenses incurred therein.

Prospectuses and forms of application may be obtained of the bankers, broker, and solicitor of the Company, and at the Company's Offices, where any further desired information will be given.

The Company's Light may be seen at the offices of the Company, No. 95, Bishopsgate-street Within (adjoining Gresham House), every half-hour, from 12 to 3 p.m., daily.

GREAT EASTERN RAILWAY.—SEA SIDE ARRANGEMENTS.

LONDON TO YARMOUTH, LOWESTOFT, and HUNSTANTON.

	First class.	Second class.	Third class.
*Monthly Family Tickets.....	32s. ...	25s.	
Weekly ,, ...	25s. ...	20s. ...	15s.

LONDON TO ALDBOROUGH.

*Monthly Family Tickets.....	26s. ...	21s.	
Weekly ,, ...	25s. ...	20s. ...	15s.

LONDON TO HARWICH.

*Monthly Family Tickets.....	20s. ...	16s.	
Weekly ,, ...	17s. 6d. ...	12s. 6d. ...	8s. 6d.

Available by any train of corresponding class for Yarmouth, Lowestoft, Aldborough, and Harwich, viâ Colchester and Woodbridge only, and to Hunstanton viâ Cambridge.

*The Monthly Family Tickets are issued to family parties of not less than three persons. The time may be extended on the payment of a small per centage at the sea side station.

Extra Tickets may also during the month be obtained at the sea-side stations, to enable one member of each family party to travel to London and back at half the Monthly Family Ticket Fares.

A NEW FAST TRAIN, 1st, 2nd, and 3rd class, leaves London for Yarmouth, Lowestoft, Aldborough, and Harwich at 10.0 a.m.; and a corresponding up train leaves Yarmouth at 9.50 a.m., and Lowestoft at 10.0 a.m., performing the journey each way in about three and a half hours.

EXPRESS TRAINS also run through: Down, ex London, at 4.25 p.m., and up, ex Yarmouth, at 6.35 a.m.

For full particulars see handbills and published time books of the company.

By order, B. OWEN, Secretary.

MONEY, in SUMS from £100 to £5,000, ready to be lent upon Freehold, Copyhold, and Leasehold Property; the loans repayable in one sum or by instalments, during any number of years that may be agreed upon; the law charges are fixed, and Property can at any time be redeemed upon equitable terms. Apply to Mr. TRESIDDER, Secretary of the Perpetual Investment and Building Society, 37, New Bridge-street, Blackfriars, London. The Amount Advanced since May, 1851, exceeds £400,000.

COLLARD & COLLARD SEMI-GRAND PIANOFORTE. To be SOLD, at a very low price, for Cash or for HIRE, with the option of Purchase, a remarkably powerful, sweet, and brilliant-toned REPETITION INSTRUMENT, 6¾ octaves, and all the recent improvements. Also SEMI-COTTAGE, by the same Makers, at HOLDERNESSE'S, 444, New Oxford-street.

ERARD HARP.—To be SOLD, for less than half the original cost, a Magnificent Patent Double-Action Instrument, of Gothic design, maple-wood and gold, with key, cover, fork, and gauge complete, at HOLDERNESSE'S, 444, New Oxford-street.

ORNAMENTS for the DRAWING-ROOM, LIBRARY, &c. An EXTENSIVE ASSORTMENT of ALABASTER, MARBLE, BRONZE, and DERBYSHIRE SPAR ORNAMENTS. Manufactured and Imported by J. TENNANT, 149, Strand, London, W.C.

Now ready at all the Libraries,

A NEW NOVEL BY THE REV. J. PYCROFT,

Author of "Twenty Years in the Church."

DRAGON'S TEETH.

Two Vols., Post 8vo., cloth boards, price 21s.

L. BOOTH, 307, Regent-street, W.

Now ready, Illustrated with Six Chromo-Lithographic Drawings.

FOUR MONTHS IN A DAHABEEH;

OR,

A NARRATIVE OF A WINTER CRUISE ON THE NILE.

By M. L. M. CAREY.

One Vol., Demy 8vo., cloth boards, price 15s.

L. BOOTH, 307, Regent-street, W.

Just ready, Second Edition, Fcap. 8vo., cloth boards, price 3s. 6d.

JESSE'S LECTURES ON NATURAL HISTORY,

DELIVERED AT BRIGHTON.

L. BOOTH, 307, Regent-street, W.

JUST READY.

I.

PARSON AND PEOPLE; or, Incidents in the Every-day Life of a Clergyman. By the Rev. E. SPOONER, M.A., Vicar of Heston, Middlesex. In crown 8vo., frontispiece, 3s. 6d., cloth.

II.

CHURCH PRAYERS adapted to Family Use. Consisting of

I. A Week's Prayers, selected from the Liturgy.

II. A Second Week's, from the Prayers published by Royal Authority, by the Compilers of the Book of Common Prayer.

In post 8vo., large type, 2s. 6d., cloth.

III.

A Third Edition of THE SPIRIT IN THE WORD; or, Facts gathered from a Thirty Years' Ministry. By the Rev. W. W. CHAMPNEYS, M.A., Canon of St. Paul's and Vicar of St. Pancras. In small 8vo., 3s. 6d., cloth.

SEELEY, JACKSON, & HALLIDAY, 54, Fleet-street, London.

Now ready, the Fifth edition of

THE REV. E. B. ELLIOTT'S HORÆ APOCALYPTICÆ. Revised, corrected, and enlarged, with 38 Illustrations. Price £2. 16s. in cloth. In this edition the author has left his maturest thoughts and corrections; the proofs being now, he trusts, made complete. The late Sir James Stephen, in his "Essays on Ecclesiastical Biography," thus speaks of this work:—"The 'Horæ Apocalypticæ,' by the Rev. E. B. Elliott; a work of profound learning, singular ingenuity, and almost bewitching interest." And as regards the strength of the evidence and argument, he expressed himself to the effect following:—"That, in his judgment, if the proof of design arising out of the coincidences there traced between the prophecy and history were deemed insufficient, all idea of proof from circumstantial evidence must be laid aside."

SEELEY, JACKSON, & HALLIDAY, 54, Fleet-street, London.

JOHN FOSTER.

Now ready, in Crown 8vo., price 6s. cloth,

AN ESSAY

ON THE

IMPROVEMENT OF TIME.

AND OTHER LITERARY REMAINS.

By JOHN FOSTER,

Author of "Essays on Decision of Character," &c.

London: JACKSON, WALFORD, & HODDER, 27, Paternoster-row.

Now ready, price 2s.; post-free, 2s. 2d.

MOSES THE MAN OF GOD.

AN ESSAY IN BLANK VERSE.

F. ALGAR, 11, Clement's-lane, Lombard-street, E.C.

A SHORT ADDRESS TO THE WIVES, MOTHERS, AND DAUGHTERS OF ENGLAND. By the FATHER of a FAMILY.

London: CLAY, SON, & TAYLOR, Bread-street-hill.

May be had Gratis and Post-free on application.

CAWTHORN & HUTT'S list of Surplus Copies of the most recent popular Works is now ready, which they offer to the public at very reduced prices. The following is a selection from the List:—Smiles's Engineers, 2 vols. 30s. Orley Farm, 2 vols. 8s. Trollope's America, 2 vols. 10s. 6d. Aurora Floyd, 3 vols. 9s. Russell's Diary in America, 3 vols. 8s. Christopher North, 2 vols. 8s. No Name, 3 vols. 6s. Mrs. Hallyburton's Troubles, 3 vols. 6s. Italy under Victor Emmanuel, 2 vols. 10s. Ravenshoe, 3 vols. 6s. DEATH OF SIR CULLING EARDLEY FROM RE-VACCINATION.—Read the "HYGEIST" for JUNE, which contains most important matter on this question. Why are not meetings held throughout the country to take the evidence of those who have suffered from Vaccination? Wherever we go it is the same story—"Ah! my poor child was well until it was vaccinated!" We appeal to the whole nation on this fact. All properly authenticated information will be inserted in the "HYGEIST."

PUBLIC OI

A Weekly EPITOME of FACT and OPIN

PUBLIC OPINION every SATURDAY, 2d.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

PUBLIC OPINION is invaluable to Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

TO ADVERTISERS.—The extensive circulation attained by PUBLIC OPINION amongst all classes of society, renders it a valuable Advertising Medium. Appealing to no restricted class, but to the great body of persons interested in the discussion of the topics of the day; aiming to interest alike the Politician, the Clergyman, the Student, and the man of Business, it is peculiarly adapted for Advertisements of a Literary, Artistic, or Scientific nature, the announcements of Assurance Companies, &c., while its lighter pages, attractive to the various members of families, render it a valuable medium for general commercial firms.

SCALE OF CHARGES FOR ADVERTISEMENTS.	£. s. d.
Four Lines and under	0 2 6
Each Additional Line	0 0 6

A CONCISE RECORD of EVENTS connected with LITERATURE, the FINE ARTS, MUSIC, the DRAMA, the CHURCH, the ARMY and NAVY, and the LAW, kept in PUBLIC OPINION, so as to give all Facts of Interest connected with each, and to show their General Progress.

THE COLENSO CONTROVERSY.—PUBLIC OPINION (Nos. 60 to 65) contains a Digest of the Reviews of Bishop Colenso's First Work on the PENTATEUCH, showing all sides of this important question. Nos. 72 and 73 contain a comprehensive Analysis of Bishop Colenso's Second Volume, shewing the scope and design of the work. The set complete may be obtained of any Newsagent, price 1s. 4d.; or, by post, 2s.

KINGLAKE'S HISTORY OF THE WAR IN THE CRIMEA.—PUBLIC OPINION, Jan. 31, 1863, contains a comprehensive digest of the Reviews of this important national work. Price 2d.; stamped, 3d.

THE ROYAL WEDDING NUMBER of PUBLIC OPINION.—PUBLIC OPINION of Saturday, March 10, 1863, contains full particulars of the Reception of H.R.H. the Princess Alexandra, the Procession in honour of her Arrival, full details of the Marriage Ceremony, and the various Public Rejoicings, forming the most complete and concise record of this great national event.

THE WAR IN AMERICA.—All the Great Battles and other Events connected with the Civil War, given in the words of the English and American Press in PUBLIC OPINION, Vols. I. and II.

IRON-CLAD SHIPS.—The History of Iron-clad Ships and the Debate upon them, to be found in PUBLIC OPINION, Vols. I. and II.

ARMSTRONG, WHITWORTH, and LANCASTER GUNS. The question of the relative merits of the above Guns discussed in PUBLIC OPINION, Vols. I. and II.

THE BRITISH COLUMBIA EMIGRATION QUESTION. Is British Columbia a Fit Place to Emigrate to? See PUBLIC OPINION, Vols. I. and II.

THE EDUCATION QUESTION, the REVISED CODE, &c. All arguments for and against the New Code to be found in PUBLIC OPINION, Vols. I. and II.

THE ROUPELL FORGERIES, and other CAUSES CELEBRES. For the fullest Accounts see PUBLIC OPINION, Vol. II.

COMPETITIVE EXAMINATIONS.—The Merits of the System Reviewed in PUBLIC OPINION, Vols. I and II.

THE COTTON QUESTION fully discussed in PUBLIC OPINION, Vols. I. and II.

FEMALE EMIGRATION.—For the *pros* and *cons* of this question, see PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF BLOCKADE EXAMINED in PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF INTERVENTION ventilated in PUBLIC OPINION, Vols. I. and II.

THE GREAT EXHIBITION OF 1862.—The Opening, Progress, Incidents, and Close of. See PUBLIC OPINION, Vols. I. and II.

THE THAMES EMBANKMENT.—The Rise and Progress of this Project. See PUBLIC OPINION, Vols. I. and II.

ALL NEW STANDARD WORKS found described, together with the conflicting Criticisms of the Press put in juxtaposition, in PUBLIC OPINION.

all the advantages which would attend freedom from subscription; but there are strong reasons for believing that the reality would be disappointing. We have never seen such a state of things in this country, and therefore we are apt to desire it. The state of America, as regards religion, is not very encouraging, and nowhere, perhaps, is there more fanaticism and religious tyranny. As Mr. Milnes well said, in the House of Commons:—"Destroy the Articles as laws, and you will go far to establish an *unwritten* law of the Church of England, a law of public opinion. I believe the law of public opinion in religious matters to be far more intolerant and far narrower than the law of the Church of England." He instanced the controversy on the inspiration of Scripture, where it was made evident that the ecclesiastical courts of this country pronounced more liberal judgments than those of what is called the "religious world."

Subscription, then, to some extent, we cannot avoid considering as indispensable to the safety and usefulness of the Church of England. But there is another view which may be taken of it, which leads to the same conclusion. It has been argued that the case of a clergyman is analogous to that of a Professor in a college or university. It is said that no one would think of binding a Professor of Astronomy or Geology, by subscriptions to a certain creed on these subjects; and that, therefore, a clergyman should not be so bound. But the analogy is incomplete, the argument unsound. There is a difference of vital importance in the two cases, which destroys the parallelism. Astronomy, geology, and other such kindred sciences, are essentially matters of speculation, and subjects of scientific inquiry; but religion relates to life and conduct, and the welfare and happiness of men. An Astronomer Royal has not the cure of souls committed to him, and their moral and spiritual welfare. The case of a clergyman is more like that of the captain of a vessel—the *Anglo-Saxon*, for instance—who has the lives and properties of his fellow creatures in his charge, and therefore would not be allowed to steer his ship by theories and fancies of his own. No shipowner would send his vessel to sea without instructions—*written instructions*—and a distinct agreement made with the captain. It may not be always safe to apply analogies of this kind to religion, but surely this is a much safer one than that of a college Professor. Much dependence, then, cannot be placed on the argument for extending to the government of a Church, as to the matter of subscription, the rules and practices of colleges or universities.

Yet, while we thus advocate subscription as a principle, we are prepared to admit that there are points on which subscription may be relaxed, in the strict sense of that word. But the way to effect such extension of liberty can scarcely be that proposed by Mr. Buxton. The Bishop of Cashel, in the debate in the Lords, seems to have clearly seen where the true difficulty lay. He considered that Lord Ebury was attempting reform "at the wrong end;" and that what was first required was, that the Articles and Liturgy should be revised by a fair body representing the Church in a true Convocation. It certainly seems the more reasonable course to postpone the removal of subscription to a removal of the difficulties objected to in both the Articles and the Liturgy. One would think the revision of these should first be attempted. That being done, we should be in a better position to judge how many persons would still remain offended by the doctrine and discipline of the Church, and how far and in what form subscription might be relaxed. This appears to be the natural course; but here the old objection of impossibility meets us. We are told that revision cannot in the present state of the Church be attempted. This, however, is a question to which we shall address ourselves on a future occasion.

In the mean time, there seems, to us, to be no valid objection to doing away with the declaration of assent and consent; the Bishop of London has pronounced in favour of this reform; and there seems to have been a very great unanimity in both Houses of Parliament regarding it. The declaration is, at least, unnecessary, though it is doubtful if it will bring the amount of relief to tender consciences which is expected. It may bring some relief. There is a difference of degree between giving "unfeigned assent and consent to everything in the Prayer-book" and merely declaring a belief that it "contains nothing contrary to Scripture." There is certainly more latitude allowed in the latter expression, and, as the Bishop of London showed, a man might become a bishop without making this declaration.

enable them to reply to the questions which are asked night after night in the House of Commons. Mr. Cowper could not even say, in answer to Lord Elcho, whether Mr. Hunt, who had made a minute survey of the buildings, and who is the surveyor to the Office of Works, had put on record his opinion as to their present condition, which was surely the first point to be ascertained. This apparent uncertainty or paucity of information, with the successive delays in stating what are the views of government, has given room for much hostility to the whole scheme. For our part, we forbear to condemn it entirely, until we get some more precise information as to what is intended to be done.

It appears to us, that in considering this question, it is an error to make everything depend upon the architectural merits or demerits of the design, apart from its fitness for the special purpose which it has served, and for the purposes which it may serve hereafter. In extenuation of the faults of the design—ugly as it is—Captain Fowke may urge, what his critics forget, that he was bound to observe the most rigid economy, both in cost of material and of labour, and in space. He could not, therefore, break up the parts of his building, or advance or set back its various parts, to obtain that play of light and shade which is the means of producing a fine architectural effect. Had he done so, he would have sacrificed a large portion of the interior space, which was absolutely required for the purpose that the structure was to serve; and he would have materially augmented the quantity of bricks and mortar consumed, and increased the cost of labour. The difficulty of dealing with a façade under these circumstances, where there is no depth to be obtained, or breaks in the plan, was the same which Sir Charles Barry had to encounter in the river-front of the Palace at Westminster, but which he surmounted, in some degree, by breaking the sky-line, to avoid monotony. For this purpose he had recourse to an additional storey over the centre compartment, towers with high roofs, pinnacles, turrets, and the lofty clock and Victoria towers. To none of these expedients could Captain Fowke resort in designing the South Kensington building, because their adoption would have entailed increased expenditure; and if they were found necessary in a façade of 870 feet in length, the distance from the Victoria tower to the clock tower, it will be easily understood how much more urgently they would be required in a front 1,150 feet in length, such as that which faces the Cromwell-road. In these remarks there is, of course, no comparison, in an architectural sense, between the Palace at Westminster and the building at South Kensington, which is merely the work of an engineer, designed with a view to the strictest economy, and simply to afford shelter to the objects it contained. Conceding that Captain Fowke's design is as ugly as it is said to be, we may ask his hostile critics to prove that a more artistic edifice could have been erected at the same cost, to afford the same accommodation, and under the same pressure of time. For an example, let us take the Paris Palais de l'Industrie, in which the International Exhibition of 1855 was held. Except that the external walls are of stone, it is very little if at all superior in design to the South Kensington building, which labours under the disadvantage of being constructed of common bricks—a consideration with those who make materials and not design a ground for preference. The French Government paid the Company for that structure, independently of the annexes in the Cour de la Reine, and of the picture galleries—which were temporary constructions apart, and irrespective of the site which belonged to the municipality—the sum of £416,000 which was less by twenty per cent. than the capital of the Company spent upon its construction. At South Kensington it is proposed to buy the present building, which covers 16½ acres of ground, for £80,000, and to spend £154,000 for repairs, to make the building thoroughly and permanently substantial; £40,000 to convert the glass domes into solid domes; £30,000 for warming and ventilating apparatus; £15,000 for fireproof floors to the picture galleries; and £45,000 for completing architecturally the exterior parts of the building; altogether £284,000, according to the detailed statement of the surveyor, Mr. Hunt, thus securing to the nation for £364,000 an Exhibition building better suited to the purpose and much larger than that of our neighbours, for a much smaller sum. The cost of site is in both instances left out of the account. The Royal Commissioners of the 1851 Exhibition, who are the proprietors of the site, for they purchased it out of the famous surplus, require to be paid £120,000. They estimate t

publicly to his notice, that a sentry had been placed by his orders close to their sick bed, with directions not to lose sight of the man, night or day. Is it possible that a commanding officer who could act thus towards a dying woman who had recently been bereaved of both her children, can be pronounced to be fit for any command under a civilized and Christian Government?

It now remains for us to say a few words as to the part which Sir Hugh Rose has played in this business. His Excellency, in his General Order, cast the gravest reflections on Colonel Shute, the officer who had preceded Colonel Crawley in command of the 6th Dragoons. According to Sir Hugh he had left that regiment in a disgraceful condition, both as to officers, horses, and discipline; and Colonel Crawley had met with most vexatious opposition from its officers whilst judiciously endeavouring to restore it to efficiency. Unluckily, however, official documents are on record at the Horse Guards which show that on many previous occasions Sir Hugh Rose had complimented Colonel Crawley's predecessor on the admirable condition of the regiment under his command; and but a few weeks before Colonel Crawley joined it, Sir Hugh Rose had written officially to Colonel Shute, deploring that such an excellent officer should be about to leave India, and offering, if he would remain, to move the Horse Guards at home to create for him the post of Inspector-General of Cavalry in India! But shortly after Sir Hugh Rose had borne this strong testimony of his appreciation of Colonel Shute's merits, a coolness arose between these two officers. That coolness was based on what is called in India "a social question." The details of it are well known at the Horse Guards. They have been freely discussed in the public papers in India, and yet they are of such a nature that nothing but the gravity of the present case would induce us even to allude to them in our columns. It would seem that the present Commander-in-Chief in India is a veteran of a warm temperament, *le fanfaron des vices qu'il n'a plus*. He is fond of surrendering in public his lion's skin and club to the Omphale of the minute whom it delights him to honour. Colonel Shute is a married man and a high-minded gentleman. The Omphale in this case was a lady who for very sufficient reasons was *mal vue* by the respectable section of Indian society. The rest of the story need not be told. Every sneer at the alleged demoralization of the 6th Dragoons under Colonel Shute, which Sir Hugh Rose's General Order contains, was, in his Excellency's eyes, a blow struck on behalf of the favourite who had been considered unfit company for virtuous ladies. All this is well known to the Commander-in-Chief at home—all this has given his Royal Highness cause for much anxiety and perplexity—all this has led to the result that in his Memorandum of the 18th of December his Royal Highness has declared that he does not believe one word which Sir Hugh Rose has so loudly proclaimed of the inefficiency of Colonel Shute, and of the efficiency of Colonel Crawley.

COLONEL WAUGH.

SOME wiseacre has said that England is the worst country in the world for a man to fail in. We deny it. Our beloved country, on the contrary, is the very paradise of bankrupts. As the maternal heart is moved with an extra gush of tenderness for that member of the flock which is afflicted with a weak chest, or with rickets, or lateral curvature, so our great mother, Britannia, nestles her bankrupt offspring in the softest and warmest place in her bosom. If any one doubts it, he shall see with what a plain fact we will put him down. Stand up, Colonel William Petrie Waugh; get into the witness-box, and show your honest face to an incredulous world. Here is a man who has not only been a bankrupt himself, but the cause of bankruptcy in others. He has dipped his hands deep in the pockets of Indian officers, their widows, and their orphans. He has made his name a household word in hundreds of families who recall it with a terror as great as if it reminded them of a surgical operation. He has been to many of them the cause of cursing and swearing, of tears and heartburning, of sleepless nights and short commons, of unpaid bills and over-due rent, of curtailed gentility and penniless old age. And all this he did with his eyes open, with a perfect knowledge of the mischief he was doing, and an utter indifference as to who suffered, so long as his wants were supplied. In a few months he swept the paid up capital of a great

Digitized by Google

Poles, and to the conscience of humanity, as a compensation due for the loss of the previous rights of Poland, the entire restitution of which had been considered impracticable. Those original rights, which the violation of the rights of 1815 has necessarily revived, are and can be only the *national* independence of Poland, as it existed for twelve centuries before the partition, and also the extent of territory within whose limits that independence was exercised "before 1772," according to the expression used in the Treaties of Vienna. By these treaties the same limits of territory were assigned to the new-established right, as those of the territory over which the previous and original right had been in force.

Once agreed on this point, the Powers of Europe, as parties to that Treaty, have it in their power to re-establish the Poles in their original rights, and to give them, by a speedy recognition, the most effectual support. They have but to proclaim and notify to the Emperor of Russia that they severally withdraw the sanction which they gave, in 1815, to his assuming the title of King of Poland, and to his dominion over the Polish provinces remaining annexed to the Russian empire. Each of the Powers individually may address this notification to Russia. No preliminary negotiations are necessary between those Powers, and no attempt of that kind is desirable, since the eternal distrust prevailing between them makes the adoption of any measures concerted beforehand very difficult. The example given by one of them is the safest and speediest way of obtaining the concurrence of the others. Were England, in the first place, to adopt this course, France would be sure immediately to follow her example. If England hesitates, and if France takes the lead, public opinion in England, already strongly excited, will certainly not be content with watching lest the British Government should do or say aught against it. The same public opinion may be with confidence expected to confirm the solemn declaration of France, and not to allow the Government to remain any longer the accomplice of the barbarous dominion of Russia in Poland when another Power shall have proclaimed its forfeiture. But even though England should withhold or adjourn her decision, France alone openly taking this course, Austria would find herself free to adopt the policy best suited to her own interest. Austria—it cannot be too often repeated, so little is her real disposition and character understood—Austria is, more than any other Power, interested in the restoration of an independent Poland. On that condition she is even ready to give up Gallicia. Half of this province, before joining Poland, and up to the thirteenth century, was called *Red Russia*. It preserved that name even as a province of Poland. It consequently remains, in the eyes of the St. Petersburg Government, one of "all the Russias." It is true that Catherine II., in order to obtain from the King of Poland, in 1764, the recognition of that essentially usurped title of "Empress of all the Russias," pledged herself solemnly, and pledged her successors likewise, never to put forward this title as a claim to the Russian or Ruthenian provinces, which, for the space of five centuries, had formed the eastern and southern portions of Poland. But things are greatly changed. The former Grand Duchy of Moscow, after taking the name of *Great Russia*, by degrees annexed to itself *Little Russia* (Kieff), *White Russia* (Witebsk), *Black Russia* (Ukraine), and one-half of *Red Russia* (Podolia and Volhynia); and Russia now pretends that in so doing she had only re-united these provinces to the common family of "the Russias," and restored them to their ancient communion with the Russian Church. Such precedents, followed by the incessant intrigues of the Government of St. Petersburg, have never allowed Austria the shadow of a hope of retaining possession of Gallicia. Its restitution, along with the reconstitution of an independent Poland, would therefore be a clear profit to her. This is not all. It is by Poland alone that Austria can be saved from Panslavism; for the Government of the Czar, after having absorbed everything which it calls Russian, sets up pretensions to convert into one empire all the nations whose origin is Slavonic. Gallicia, once incorporated to the Russian Empire, becomes the key to the Slavonic possessions of Austria, from Prague to Semlin, Trieste, and Ragusa. On the other hand, were Gallicia again made a portion of restored Poland, by the hands of Austria, as the instrument of such a restoration, this would give back to Austria the bulwark which she has been in need of, since the suppression of Poland. It would besides secure to Austria a lasting and fruitful alliance with reconstituted and independent Poland. This alliance will indeed be profitable to all; to Europe as well as to Austria, to Turkey as well as to Europe. It will be profitable to Europe, by re-establishing the independence of Austria itself, which is reduced, since Poland has lost its own, to a secondary and passive position. Exposed as Austria is, to unceasing

Digitized by Google

the gentleman in question will manage accidentally to allude to them. He ought not to be too hard on Lord Cardigan. We know that in the navy the fashion is for the captain to stand by his burning vessel to the last. Men of high rank in the navy, on such occasions walk out last. If in the army a different etiquette prevails, and a general walks out of the enemy's battery before his men, it is probably merely a difference—an unimportant difference—of fashion. As the Chief Justice eloquently hinted, none of us can tell what we should be inclined ourselves to do if we found ourselves in an enemy's battery. A man who, like Lord Cardigan, had ridden boldly in, can, at worst, only have been guilty of want of consideration in riding quickly out, even if he were not driven out at the point of the sword, which, upon the evidence, we have no doubt he was. The chesnut horse with the white heels, we feel sure, at all events, was glad to be out of it, if Lord Cardigan himself was indifferent. Probably the noble charger's feeling was, that if he ever got clear of the guns and the Cossack lances, he would give his noble rider leave to write upon his tomb the equine epitaph—"*Occupet extremum scabies.*"

THE TWA KIRKS.

In the last week of the merry month of May Edinburgh is annually invaded by a host of clergymen, who come from every nook and corner of the land,—from the Orkneys to the Cheviots, and from the rugged Western Islands, upon which the great waves of the Atlantic break, to the eastern sands, on which the German Ocean plays more mildly. At this season the streets swarm with black coats and white neck-ties. In spite of the old association of publicans and sinners, the inns, and even the taverns, are pervaded with divinity. There are few citizens of credit and renown who have not to make ready the "prophet's chamber" for a reverend guest. The raiment of these visitors, although monotonous in hue, is diverse and characteristic in its cut, and enables us to guess with considerable certainty whether the wearer is from the town or the country, the hills or the plains. When we meet a tall gaunt figure, in a swallow-tailed coat of antique design, the deep creases on which tell of its long repose in the wardrobe, with a wisp of crumpled linen round his scraggy neck, and a high-cheeked, weather-bronzed face, surmounted by one of those rough beavers which preceded the invention of the Paris hat, and when we hear the nasal drone of his accent, we instinctively picture to ourselves his humble manse, among wild desolate hills in some secluded region of the North, where heather is more luxuriant than corn, and sheep are more numerous than mankind. The pet clergyman of a town congregation—the bland recipient of countless book-markers and embroidered slippers from adoring spinsters—is equally distinguishable by his well-fitting frock-coat, faultless tie, natty boots, and lavender gloves. Intermediate, between these two extremes, we recognize the spiritual shepherd of a thriving agricultural parish, burly and jovial, encased in glistening broadcloth, and perhaps as much at home over his toddy at a farmer's ordinary (remote from the diocese of Rochester) as in the pulpit or the vestry. Nor are there wanting a few who affect the long Noah's Ark coat, the high waistcoat reaching to the chin, and the narrow rim of collar, which are typical of a certain class of the English clergy, and which are supposed by the severer Presbyterians to indicate a dangerous bias towards the "pestilent Prelacy" of the Southron.

The cause of this clerical invasion is the meeting of the General Assemblies of the two great divisions of Presbyterianism—the Kirk of Scotland and the Free Kirk. When these two ceased to be one at the disruption, the seceders continued to hold that *they* formed the National Church, and to this day they still cling to this theory. Hence the Free Assembly is modelled exactly on that of the Established. It meets at the same time, and is constituted in the same way. Each comprises about four hundred members, of whom two-thirds are clerical and the rest are laymen. Every five parishes send up a minister, and for every two ministers there is one lay delegate. In some of the smaller and more distant parishes, where none of the elders can spare the time or the money for a visit to the capital, some person there resident—generally an advocate or law agent, who finds it a capital stepping-stone to practice—receives a commission to act as a delegate. On both sides an effort is made to obtain the attendance of notabilities. A live lord who can talk is, of course, a great catch; but an M.P. is better than nothing. In bagging this sort of game, the keen scent and untiring energy of the Frees secure them most success. The Kirk, however, may console itself for any deficiency in this respect by the reflection that its Assembly basks in the presence of Royalty itself—at least of a representative of Royalty. In the Established Assembly, on a throne above the Moderator (or President), sits a

that rockets attempted to go up, and splendid pyrotechnic conceits bravely spluttered and fought against the rain and wind,—all these must be accepted as indisputable facts. It is even credibly reported that the Prince of Orange duly went up to Surley as sitter in the leading boat—an honour purchased by the gift from the sitter to the boat's crew of from one to six dozen of champagne; and that a crowd of carriages, many of them full of ladies, went through the whole of the ceremony. Happy they whom no misguided zeal or enthusiasm of an Eton son or brother so misled, who quietly took the train to return to town, without having been wet to the skin, and then got dry again, and without laying in an unfailing stock of cold, rheumatism and lumbago! But to the Eton boy on the 4th of June rain or shine makes little difference. He may possibly use an umbrella; but a great coat—he scorns the very idea of one. He will see the last Catharine-wheel extinguished by the rain, and then retire to supper:—

"A ducking on the river's brim
A wetted jacket is to him,
And it is nothing more."

But, oh, Jupiter Pluvius! oh, Admiral Fitzroy! could you not have given us timely warning, or, better still, could you not have sent upon some other evening the rain which the country so much desired?

THREE TALES OF THE PEERAGE.

The vicissitudes of noble and illustrious families have ever been favourite topics of heralds and poets. Nor have the sympathies of mankind in general been denied to these conspicuous examples of that mutability of fortune which awaits all in turn. No doubt Mr. Thackeray could easily detect a snobbish element in the keen zest with which we devour every column in the *Times* that might be, if it is not, headed "A Romance in High Life." But without at all denying that here, as almost everywhere else, the traces of human weakness and childishness may be detected, it is but fair to admit that the public curiosity and interest are not without a more substantial justification. So long as we retain those distinctions of classes which we reckon amongst the safeguards of our liberties, although foreigners find it difficult to reconcile them with any liberty at all, it is inevitable, and, upon the whole, it is advantageous that a sharper scrutiny than ordinary should fix upon any unusual deeds or occurrences which disturb the serene and untroubled current of high life. It is well that those who enjoy conspicuous rank and influence should feel that the public eye is upon them. Mankind in general, moreover, are not gifted with that microscopic vision, or that power of perceiving the realities of things, which would enable them to see, in the ups and downs of a small tradesman's life, tragedies as real and striking as those which convulse a royal or illustrious house. Not only is the world a stage, but any fact or aspect of life which would get itself recognised, must—unless it involve monstrous guilt or superhuman virtue—assume something of a stagey character. Unless it puts on a crown or a coronet, dresses itself out in robes, and has a fanfare of trumpets blown before it, men are apt to pass it by as commonplace or trivial. We have an inveterate habit of weighing things by results, and the least which we think worth attending to are the transfer of a great estate, or the inheritance of a name which is historic at least in the pages of Burke or Debrett.

From whatever motives we may be led to take interest in scandals connected with the peerage, there is just now an abundant supply of these exciting topics. In each of the three kingdoms, the courts are either occupied on, or are about to be occupied with, a *cause célèbre* of this description. In many respects the Irish contribution is the most striking, and we will therefore give it precedence. The Egmont case not only involves the destination of great estates, but, if the plaintiff's assertions are substantiated, it reveals a course of the most astute and systematic villany on the part of a man who filled during a long life positions of the highest trust and confidence, and went down to his grave honoured and respected by all who knew him. The issue here is neither more nor less than this—Was the late Sir E. Tierney—a solicitor of large practice in Dublin, agent to several of the largest landed proprietors in Ireland, Crown solicitor for the north-west circuit, and registrar of the Court of Appeal in that country—guilty of violating the trust reposed in him, and of obtaining by false and fraudulent pretences the Irish estates of the Egmont family? It seems that in the early part of the present century the affairs of that noble house were in a most deplorable state of confusion; and it was found requisite in 1824 to vest their extensive landed property both in Ireland and England in the hands of trustees, who were empowered to sell the estates and to pay their creditors out of the

lazy torpor which forgets that each bears a separate share of our national responsibility, increasing liberty, however good, will be nothing for us to be proud of; any more than a child who has set a great stone rolling down hill may claim credit for his own precocious strength in making it reach the bottom over so great a distance. His claim to admiration would evidently rather be in stopping it at the right moment, before it did damage at its journey's end. But how about the possible truth of that suggestion, that English society generally does not in fact care so much about religious questions as it did forty years ago? We all know how true it is that use begets neglect, even in the greatest blessings of every-day life. Can it be that this is the case with religion, and that the very fact that this has gained so firm a hold on our nation—on even the customs and fashions of our people—is the reason why Protestant England is at this moment so ready to acquiesce in any new concession to a foreign faith, and less stringent observance of our own? There is too much reason, we believe, to fear that there are some grounds for such a notion.

As for this particular measure, there is much to be said on both sides of the question. Viewed in one light, the Bill in question simply does away with a clear anomaly—a relic of religious exclusiveness in a State which has avowedly adopted principles of thorough toleration. It merely gives to the 5,000 Roman Catholic occupants of our prisons and penal settlements the privilege of ministration from their own priests, who must be supposed to be capable of the greatest influence over them. And while we are very far from sympathizing with any who look at these simply as poor pitiable objects of compassion whom the State is bound to comfort and pamper with all its possible appliances, we can still quite understand that if this is really the only way by which religious instruction can ever get near them, we are bound to adopt it. On the other hand, and viewed in a different light, this new measure provides an additional opening for Popish arts and seditious sentiments creeping into the midst of our social system, and gradually extending an authority which ever since the Reformation it has been our pride to undermine and deny. Which of these two contending arguments is entitled by its balance to our vote, we do not mean here to decide. All we do say is, that as every step in free legislation must have some effect on what is to succeed it, and makes future resistance harder, it behoves our nation to consider well, in every case of this sort, the principles on which it is based, and the motives with which it receives assent.

If we look at the religious "signs of the times" around us, we fear we cannot find much reason for self-congratulation. As far as can be gathered from the complaints of the bishops of our Church, the young men of our upper and middle classes are gradually beginning to find every profession and employment more attractive than that of holy orders. What a contrast this to the testimony of our two great Universities half a century back! Law-schools were then in both of them comparatively unknown; in one even by name, in the other as far as actual attendance at them went. Now, both Oxford and Cambridge have schools of law whose range of subjects is spreading every year, and triposes whose lists get larger and larger. Young men, who are first led to the subject by the inducement of easy honours and attractive prizes, are by this means induced to turn in crowds towards the various Inns of Courts in London, and to adopt as a profession what has been the pleasant road to an honourable degree. It is a patent fact to all acquainted with present University matters, that more than one-half of each year's batch of undergraduates sent forth into the great world are destined for some branch of the legal profession. Add to this, that in one of our Universities, at least, a medical "hostel" is in full swing; and it appears pretty obvious that clerical life is not in possession of all the attractiveness it once used to have.

What is to be said, again, of those who are to be numbered among the rising generation of parsons? We have no hesitation in asserting, as a truth well known to every one with any present close acquaintance with either Oxford or Cambridge, that a vast number of the best intellects among the young men of each are at this moment deterred from undertaking a clergyman's calling by the unsettled state of their religious convictions. We appeal for proof of this to scores of them who are now wasting their time in the idleness of resident fellowships, or in the still more unsatisfactory delay of masterships at Eton, and Rugby, and Harrow. And those who do undertake the vocation to which they may have looked forward from boyhood, are many of them—God forbid that we should say all or even most of them!—men who, by reason of not having sufficient brains for either of the other liberal professions, enter the Church as the most probable means of a gentlemanlike livelihood, and settle down—again we say many of them—into a luxurious and unthinking Tractarianism.

with the decisions of commanding officers. His lordship could not deny that many Volunteer commandants were opposed heart and soul to this Disbanding Clause, but he magnanimously attributed their opposition to "a desire to get rid of the responsibility which fell upon them." "The Government," he added, "was not willing that, while accepting the honour, they should evade the duty which attached to it." Lord Hartington did not attempt to say from what motive Lieut.-Colonel Luard, Deputy Inspector of Volunteers, declared before the Volunteer Commission that "this power of dismissal is a greater power than that accorded to any officer of the Army," and, moreover, that "it is a power which ought not to be in the hands of Volunteer officers." Nor is he alone in his opposition to the Clause. Lieutenant-Colonel Warde, commanding the London Rifle Brigade, condemns it as "unnecessarily great," and "liable to abuse;" and expresses his preference for a Court of Inquiry, which would strengthen the hands of the commanding officer, and put him in possession of the true facts of every case for dismissal brought before him, before he is called upon to act. The sting of this Disbanding Clause is, that the commanding officer being allowed to judge and condemn a Volunteer, his sentence, though it may be a very gross libel, becomes by this Clause a privileged communication. But all argument was thrown away upon the House; and upon a division on the Disbanding Clause, the amendment of Sir R. Clifton was lost by a large majority.

We fear that the effect of this Clause will be prejudicial to the progress of the Volunteer movement. The men who have come forward to take upon themselves, without remuneration, the defence of their country, should it be invaded, deserve, and, as far as words go, have received, the highest favour. The Legislature, we think, would have done well had it fortified their position by privileges greater than those afforded to our soldiers in the regular army. To be dismissed from the ranks of the Volunteers must be a disgrace proportioned to the honour of wearing the Volunteer's uniform. But when Parliament places the citizen soldier on a lower footing in respect of this most important privilege than the common soldier, and puts it in the power of an officer animated by dislike, or moved by caprice, or prone to rash judgment and hasty action, to dismiss a Volunteer who may be his social equal, and even superior, who shall wonder if the effect of such a law be to lessen the ardour for enlistment?

THE PRINCE AND PRINCESS AT THE CITY BALL.

It is a great disappointment to find ourselves victims of our own good intentions. The loyalty of the City Corporation has already involved them in one battle royal with the Home Office, and the Ball last Monday, given by the Corporation to the Prince and his bride, has been the cause of something like a misunderstanding between the City and the Court. It appears that certain ill-advised advisers of her Majesty, remembering perhaps their own misadventure in the matter of the convict lately presented to the Prince, and fearing for the fair Princess among the savages of the unknown East, caused a requisition to be sent to the Ball Committee for a list of the expected guests. Here was a dilemma for the civic hosts. They could not but suppose that probably the list was intended to undergo the scrutinising of those great officials, whose duty in the State is to prevent the approach of plebeian vulgarity to the royal presence. If so, how would it do for the Corporation to receive back their list, revised and corrected according to Court pattern, with some luckless names scratched out? Could the invitations already issued be re-called, or could the objectionable guests receive a hint not to come? Impossible; this would be abdicating the right of the Corporation to choose its own guests. Or should the City take the responsibility of disregarding objections or revisions, and allow the Prince and Princess to meet those who might have been expressly marked as unfit for their presence? The second alternative would be worse than the first. The Committee, therefore, did exactly what they under the circumstances ought to have done, and what is said to have been the course adopted, under like circumstances, by the managers of a forthcoming Military Ball to the Royal Bride and Bridegroom. They refused to send any list at all.

It is unfortunate that the Ball Committee should have been thus placed in opposition to the officials of the Court; because although the Ball (like the ceremonial of March 7th) was got up chiefly in honour of the young pair, it was intended nearly as much as a mark of respect to the Queen herself. Had it not been for her Majesty's bereavement she herself would doubtless have been present upon both these occasions, and her presence would have afforded a legitimate and wholly sufficient protection to the Princess against intrusion. the completeness wl may soon again fi becomes more urge and embarrassment stand, however, un resumption of her p of these things at C care of his own digr his own part, not p Court etiquette, at him honour.

We do not know exactly who are represented here by the unbelieving Sadducees, unless it be those who make it their habit not to hear, or, when heard, to dismiss from their minds voices from Wessex concerning Lancashire, and Mr. Ruskin on political economy and politics. The Pharisees are more intelligible, and we shall leave them to their fate. As, however, want of credulity is not usually supposed to be the leading characteristic of that body, we presume that "less believing" must here again be interpreted to mean believing less in Mr. Kingsley. But it is a rather remarkable thing that Mr. Kingsley in these lines seems to be afraid that the world is going to object to his doing that very thing for which we shall all allow he is most eminently fitted. If the country muse would only keep to playing at leapfrog with children and "realities" —whatever that may mean—nobody would say a word; and Sadducees and Pharisees would alike acknowledge that Mr. Kingsley was faultless. It is when he comes to deal with "dull conventionalities," by which we suppose he means things in general, and the laws of labour, and politics, and metaphysics, that we object to leapfrog, and what Mr. Kingsley is pleased to call the country muse. Leapfrog is an admirable amusement in its place. What stings Mr. Kingsley in reality is not that anybody minds his playing leapfrog with water-babies, but his playing leapfrog (as he calls it) with more important questions. It is natural that an author of so healthy a temperament should dislike finding that sensible people do not care to have matters which are matters of pure reasoning and common sense, settled on all occasions summarily by Mr. Kingsley and his friends in a spirit of jovial uproar. But he has no right to betake himself with an air of sulkiness to a fairy tale, as if we did not admire him when he comes to fairy tales, or as if this world's Sadducees ill-used him by refusing to allow him to talk nonsense on subjects where nonsense is both ludicrous and pernicious. Mr. Kingsley is not an ill-used man. His vigorous morality, his able writing, and his imaginative power, give him a great influence over a number of people who may not be very clever, but whom it is a decided credit to be able to influence for good. He has no business to expect to be allowed to lay down the law on social government or philosophy, simply because he is a pleasant writer of poetry and a most admirable novelist, and a well informed companion. In purely intellectual matters the *ipse dixit* of the most accomplished Muscular Christian is worth just its intrinsic value and no more.

We allude to this tone of oracular irony towards the world which Mr. Kingsley assumes, not only because it is a habit that seems to be very catching among his imitators, but because it is so intensely ludicrous in the eyes of bystanders. It is absolutely comical to listen to the way in which some of the followers of the Muscular Christian leaders begin to speak of the learning and philosophy of the world. Just as Mr. Maurice's favourite way of disconcerting an opponent is to tell him "that there is much good in him, and that unconsciously he is saying what has a great deal of truth in it if he only knew it;" it is the fashion among his admirers to regard intellectual people as curiously perverted beings, who, however, under the ripening influences of religion, might be turned into something useful. "After all"—Mr. Kingsley would probably say—"After all there is more in Aristotle than Aristotle really knew himself." This is the tone he actually adopts in the Water-Babies, to decide the difference between Locke and Plato,—

"Ah, you dear little Ellie, fresh out of Heaven! When will people understand that one of the deepest and wisest speeches which can come out of a human mouth is that 'It is so beautiful that it must be true?' Not till they give up believing that Mr. John Locke (good man and honest though he was) was the wisest man that ever lived on earth; and recollect that a wiser man than he lived long before him; and that his name was Plato, son of Ariston."

It is difficult to imagine a more absurd sight than that of an excellent Cambridge clergyman, in an off-hand way and by a kind of side blow, settling for ever all the metaphysical questions of the world in favour of what he imagines to be Platonism, and making excuses for Locke's weakness of head on the ground that he was a good and honest man. Does Mr. Kingsley seriously think that a book for children is improved by this nonsense? If he does, he is no doubt quite wise in wishing Sadducees and Pharisees alike to stand aside and not to look at him while he is engaged in the Christian and charitable task of apologizing for Locke's intellectual errors. Mr. Kingsley reminds us of an aged and aristocratic lady who, on a recent occasion, was brought into contact with one of the leading thinkers of the day. "My dear," said she on her return, "I have been talking to ——, and I see now that it is his head and not his heart that is at fault." Mr. Kingsley, with equal charity, having shown his own clearness of conception by informing us sententiously that Beauty and Truth are co-extensive, and that Plato thought so, pats Locke on the back and tells us that Locke's errors are errors not of heart but of head. *Ridete domi quicquid est cachinnorum.*

We do not propose to enter into a learned argument with so profound a metaphysician as to whether "Beauty is Truth, Truth Beauty," as the poet says; nor if we did, would it lead to any more "deep or wise" conclusion than that people who choose to employ a particular term in a sense which is not its every day use, have a right to do so, and to make the most they can of the valuable privilege. We prefer—subject to the above protest—to take Mr. Kingsley on his own terms, to lay aside the Sadducee, to put on for the nonce whatever dress he pleases, and to express our thorough admiration of the less "profound" portion of the "Water-Babies." As a somewhat fanciful describer of nature, Mr. Kingsley is quite unequalled; and the '

takes a fancy to a page. Having done so, her first step is to demand the name of the lady whom the boy loves *par amours*. A denial that he loves any one, a statement that he loves a girl of ten years old, are treated with equal contempt; and the page is instructed how, by loving some mature and sensible woman, he may learn to avoid all manner of evil. Pride, anger, envy, sloth, gluttony, will flee from him; and as to incontinence—well, in the mean time, that had best be avoided also. But as the youth advances in wisdom and in years, he gathers from the same fair teacher that the worship of the *vaga Venus* was indeed to be eschewed; but that the worship of one idol, and especially of the Lady of the Fair Cousins, was in all respects worthy of the perfect knight. Le Petit Saintré is certainly lectured most unmercifully; but he finds compensation in court promotion and liberal supplies of money. When lectures, money, years, and prowess have advanced him sufficiently in the path of chivalry, he goes forth to seek adventures which may render him worthy of his lady's favour. In romance, he who seeks adventures always finds them, and finds them to his enemy's cost and his own great renown. Accordingly, Saintré returns covered with glory, and finds his mistress not slow to reward him. But "pleasures are like poppies spread"—a stalwart abbot supplants the accomplished knight; and the book ends with recording how Saintré repaid the insults heaped upon him by the licentious priest and his faithless lady-love.

It is quite plain that this sort of thing cannot in itself be very interesting or very amusing. It is, perhaps, occasionally comical; but it never commands interest at all. The *amor studii* has led Mr. Vance far astray when he compares De la Salles to Scott, and equals "Saintré" with "Waverley." He is much nearer the truth when he likens it to the "Grammont Memoirs." There is nothing in it worthy the name of a plot; there is nothing approaching to delineation of character. The chief value of the romance, and of "The Book of the Knight of the Tower," which accompanies it, consists in the picture they present to us of the manners and customs of the days of chivalry. Mr. Vance, however, does not admit the truth of this picture. In fact, the representation is not a flattering one, and Mr. Vance, concerned for the honour of his favourite middle ages, labours to impugn its accuracy. We are constrained to say that he labours with more zeal than success. It is idle to deny that, as a general rule, the light literature of a period reflects the morals of that period; for the sole aim of such literature is popularity, and popularity can never be hoped for unless the modes of thinking of those among whom it is sought be observed. And this general rule applies with peculiar force to the romancers and troubadours of the middle ages. These men were not, strictly speaking, writers of fiction; fiction was then in its infancy. As we have already said, fiction, even when most elaborated, must reflect the manners of the time; but it must especially do so when it is but beginning; when the art of fiction is not yet understood; and when writers have not advanced further than to throw into songs and stories what they see going on around them. Such was the judgment of no mean authority—Sir Walter Scott. In a note to the essay on chivalry, he says:—

> "We may here observe, once for all, that we have no hesitation in quoting the romances of chivalry as good evidence of the laws and customs of knighthood. The authors, like the painters of the period, invented nothing, but, copying the manners of the age in which they lived, transferred them, without doubt or scruple, to the period and personages of whom they treated. But the romance of Jehan de Saintré is still more authentic evidence, as it is supposed to contain no small measure of fact, though disguised and distorted."

Mr. Vance, zealous for the purity of knighthood, not only denies that the literature of the Middle Ages truly represents their morality, but denies further that the said literature is really objectionable. Coarseness, indeed, he admits; but he maintains that it was only the coarseness of out-spoken simplicity. Now it is certainly true that, in a question of mere expression, morality is not concerned at all. Whether a spade shall be boldly called a spade, or shall be referred to by some more refined circumlocution, is a thing of no moment whatever. It is a matter of fashion, and nothing more. But in the romances of the Middle Ages there is much beyond this. There is not only coarseness of language, but also grossness of description, and licentiousness of idea. Their comic tales are uniformly indelicate. Not to go beyond our own literature, what does Mr. Vance say to the "Canterbury Tales?" Must it not have been rather an odd state of society in which the miller's tale was thought a fit story for the ears of the prioress and her votaries? And even their most exalted romances, while they preserved decorum, did not greatly regard virtue. In Amadis de Gaul female chastity is held a thing of no account; and the denunciation of Ascham against the romances of the Round Table, that "little was to be learned from them but examples of homicide and adultery," is hardly too severe. Nay, in the very book before us, not the largest charity could recognize any trace of sentiment in the lady's intrigue with a big brawny abbot, or, in fact, see anything else in it but extreme indecency, and not a little profanity. Occasionally, indeed, even Mr. Vance has found the "simplicity" of Saintré too much for him. At the head of more than one chapter the reader finds a warning that what follows must not be read aloud, and some chapters are, on the score of impropriety, omitted altogether. We must say that we object to this latter expedient heartily. No amount of Bowdlerizing can ever make this book suitable for a drawing-room table, or improving reading for young ladies. And this being so, the process had better have been left alone altogether. A reader, even though not exceedingly partial to the

Leicestershire, he observed a large number of black rats—the old English rat—emigrating, according to their habit. He stood quietly watching the march of the colony, who passed close by him, and in the midst of the crowd he saw an old blind rat holding one end of a piece of stick in his mouth, the other end of which was held by another rat, who was in this way leading his blind companion."

A hundred and fifty pages of stories such as these, interspersed with descriptions and lively dialogue, and prettily illustrated with numerous woodcuts, must be allowed to be a capital book for young folks, especially for boys. It is in fact a sort of boy's Isaac Walton, without the special application to angling. Like the famous production of that patriarch of the rod and line, Mr. Cheltnam's book has a fresh, open-air taste of the country about it, and is written in the same familiar and companionable spirit. It is just the sort of handy little volume for boys to take out with them on a stroll through the fields and lanes, or to pore over, indoors, during the long winter evenings. A knowledge of the beauties and wonders of animal life will do more than anything to prevent boys from the gratuitous infliction of death and pain; and Mr. Cheltman, though not a sentimentalist, is earnest in placing before his readers the foolishness, as well as criminality, of unnecessary persecutionof our meaner fellow-creatures.

POEMS BY MISS BESSIE PARKES.*

Miss Parkes is a true feminine poet. We do not mean the phrase at all disrespectfully, but simply that her verses show throughout the woman's nature that conceived them. They clearly reflect a mind exquisitely sensitive to impressions, prone to view everything through an emotional medium, widely sympathetic, and deeply though unaffectedly devout. With her, as with most poetesses (Mrs. Browning, of course, being an illustrious exception), poetry seems to be more a sentiment than an art; a relief to overcharged feelings, rather than a passion and a duty in which the whole life is absorbed. The result, in many of the poems before us, is a want of definite purpose, of tangible existence apart from the personal and private mood out of which they have arisen; the creation of much which, though elegant in form and harmonious in sound, is so vague and undefined in meaning as to leave no positive mark upon the mind. No doubt, an excess of "subjectivity," as the Germanising critics call it, is one of the faults of modern poetry, whether of men or women; but it is particularly noticeable in the productions of female poets, because the comparative solitude and isolation of women, their want of the corrective of active business pursuits, and the frequency with which their sensitive natures suffer from unsatisfied affections and disappointed ideals, induces in them a tendency to brood over their individual experiences to a degree which colours the whole universe. Hence it follows that the poetry of ladies is generally sad, with a tone of quiet resignation such as you might expect from nuns when thinking of the world they have renounced, but not forgotten. In a rhymed dedication, Miss Parkes says that each of her friends will know his or her portion of the volume she now puts forth; but that, if "one constant image still appears," the "dear critic" for whom she "wrote the greater part" is to take the book into special keeping. This may account for some of the poems seeming to the outer public to want force and purpose; but so much remains which all can enjoy and love for its own grace and beauty, that we should not have mentioned the defect had we not been desirous of seeing the fair authoress cultivating a greater habit of concentration. Although sometimes content with mere prettinesses of expression, as, for instance,—

> "And lilies ringing various bells
> To prayer and praise in shady nooks,

which really means nothing at all—she can sing truly, tenderly, and sweetly; can touch some of the depths of emotion; and can paint natural scenery—especially of southern lands—with a bright, warm pencil. Her two poems about Algiers are especially excellent; but, had we space, we should prefer to quote some of her lyrics of thought and feeling, such as "The Dead Love," "What distance parteth thee and me?" (both of which strike us as exquisitely sweet, sad, and beautiful), the "Voluntaries," some of the gorgeous pictures in "The World of Art," or the stanzas entitled "Firelight," which are so truly and charmingly feminine in their yearning affection, their nervous fancies, their waywardness and tremulous flutter of spirits between despondency and hope, that we can almost fancy we hear the voice of the poetess throbbing through the rhythm. This piece and one or two others we recollect in an earlier volume of Miss Parkes's, published some six years ago; but they will bear repetition.

* Ballads and Songs. By Bessie Rayner Parkes. London: Bell & Daldy.

FINE ARTS.

THE BRITISH INSTITUTION.

If the directors of the British Institution established for the promotion of the fine arts would but see it, they have a very important part to fill in collecting together every year a *selection*, not a mere exhibition, of good examples of the works of the old masters. Occasionally, at long intervals, we have had brought together pictures which illustrated the different styles of art and methods of painting with something like an intelligible plan; but

generally the colle

of the concert was Monsieur Sainton's performance (for the first time) of a violin concerto by Auber, a work of the composer's early amateur days. With much that is graceful and piquant, there is a redundancy of merely mechanical passages, and a want of development and treatment of subject that will hinder this work from taking rank with standard concertos. Yet the flowing elegance of the slow movement, and the humorous vivacity of the finale, will make the concerto welcome on many hearings. It is scarcely necessary to say that it was played to perfection on this occasion. It was well done to bring forward this very interesting work; which, like M. Auber's pianoforte trio, would probably have remained unheard here but for Monsieur Sainton.

Herr Goffrie, the well-known violinist, gave the first of a series of three soirées musicales on Wednesday, when he was assisted by some excellent vocal and instrumental performers, who gave effect to an agreeable and varied programme. Among the principal features of the selection were Schumann's pianoforte quartett, in which Herr Gollmick admirably sustained the principal part, and Beethoven's pianoforte trio in B flat, op. 11, in which Miss Alice Mangold was the pianist. Of this young lady's performance we have before had occasion to speak favourably, and a further hearing confirms our impression that her playing is an admirable combination of finished mechanism and high refinement of style, with ample power and volume of tone. In two solo pieces, by Henselt and Bach (the latter loudly re-demanded), Miss Mangold proved her acquaintance with very opposite styles both of composition and mechanical execution.

SCIENCE.

MR. RUSKIN ON THE ALPS OF SAVOY.

It is not Mr. Ruskin as a word-painter, or Mr. Ruskin as an artist, that we speak of in this article, but Mr. Ruskin in an equally proper, though less familiar capacity,—Mr. Ruskin the geologist. On Friday last the Royal Institution contained one of those overflowing audiences such as Faraday used to draw,—the lecturer was that brilliant word-painter, whose works some delight to abuse, thousands to admire, but all delight to read; and whom, it would seem, many wanted to see and hear.

Mr. Ruskin's geology was not only entertaining but instructive and suggestive. The phases in which he viewed the Alps were just what we should have expected—eloquent and artistic pictures of their substance, formation, sculpture; what they were made of; how they were made; how their beautiful scenery was sculptured out by time, weather, wind and rains, contortions, dislocations, cracks, and fissures. Whenever the geologist stoops—or rather, it is seldom rises—to description of structural phenomena, it is nearly always in districts which present them on the smallest and least complex scale. "We have never yet seen," Mr. Ruskin observed in his opening remarks, "a complete section of the Valley of the Rhone. I wonder at the indifference of travellers in such matters, and that it never occurs to them to ask how the scenery to which they owe so much enjoyment was first cast into its colossal shape; how the hills were withdrawn from the opening through which the Lake of Geneva expands between Clarens and Meillerie; or how that strange chasm, bent like forked lightning, was cleft through the rocks of Uri, to be filled with the waters of the four cantons."

Mountain scenery is not the result of mere natural irregularities, mountains no mere heaps of rock. They are truly, in Mr. Ruskin's own words, "true sculptured edifices." The hills of Savoy were selected because, though amongst the boldest, they were amongst the simplest, in displaying the main questions relating to structure. Then mentally the lecturer set forth to build a mountain, taking stone for brick and slime for mortar. The Savoy mountains are made of a great many things, chiefly from limestone; secondly, dark brown neocomian sandstones; and, lastly, a hard grey rock, the Hippurite limestone of ages, equivalents of our Portland stone and lower chalk formations. All these rocks agree in this, they were formed at the bottom of the sea. Mr. Ruskin would not dwell on the difficulties of raising them. "Sir Charles Lyell," he said, will allow us to do that to any extent, if we only "take our time;" but he dwelt forcibly on the difficulty of *drying* them. Raised quickly or slowly—and the elevation of these mountains was, he believed, incalculably slow—the rocks must dry and settle. How long it takes to dry a wall, how long then to dry a mountain two miles deep. Consider, too, the consequences; by whatever means accomplished, drying is not merely a hardening, but a contraction of the whole body, and either the rock must become powdery like chalk, or it must crack and fall to pieces. In hard rocks these pores and cracks are filled with crystalline matter, matter moved and rearranged by that marvellous process, the finest particles taken out of the very flesh of the rock substance and carried in slow currents to be arranged with such strength and coherence that the very fissures which would have been sources of weakness become bonds of strength. The crack is not formed first, filled afterwards. It is filled as it is formed, or the rock would fall apart before it could be filled at all. The external aspect and hardness of a stone are no evidence of its real state. Though hard, it may be getting harder; though soft, more tenacious; it may be contracting or expanding, in every case it is *changing*. Not one of the atoms of it is at rest. The particle of lime a thousand fathoms deep in rock that rings to the hammer's blow is no more at rest than the hardest

uninjured, and those of the rhododendrons are so effectually protected in their small compact ball of earth that they may be left exposed for days and weeks; thus the flowering can be retarded without injury for any exact period of time. Thus it is Mr. Waterer succeeds in flowering all his charming shrubs together, and presenting to our admiring eyes a scene that can only be compared to a cloud of the tenderest colours congealed into bouquet-crystals of radiant flowers.

But all those exquisite variations of colour, so delicately commingling the red, white, and blue, are the hybrid products of the florist's skill—the interbreeding of the tender Indian with the hardy New World sorts—semi-hardy varieties that thrive well in our temperate clime. And, what is not a little strange, the flowering time is intermediate too.

Lessons there were in that restricted, though charming show, for Darwinites and special-creationists, lessons for children and upgrown men; but, in these few lines, we cannot extract one-half the wisdom which the ever-green leaves and painted petals there conveyed. Still one question may be asked. Why, with our lovely native roses before them, do not our florists treat us with like dense, double flowers on some of these imported "rose-trees," for such their Greek name means? They cannot do it. Our true and native rose has many stamens, and by culture the gardener can convert each one of them into a coloured flower-leaf or petal. Our common daisy is a bunch of flowers. The beautiful heath-related rhododendron flower has but ten stamens, and consequently the florist with his utmost skill can only get but a fifteen-petalled flower. So much for nature and so much for art.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Alford's (Dean) The New Testament for English Readers. Vol. I. Part I. 8vo., cloth, 12s.

EXTENSION OF THE

UNIVERSITY LIFE ASSURANCE SOCIETY.

Established 1825. Incorporated by Royal Charter.

24, SUFFOLK-STREET, PALL-MALL EAST, LONDON, S.W.

Capital, £600,000.

PRESIDENT—His Grace Charles Thomas, Lord Archbishop of Canterbury.

DIRECTORS.

James Alderson, Esq., M.D.
Francis Barlow, Esq.
Edward Buller, Esq.
The Ven. Archdeacon Burney, D.D.
Lord Robert G. Cecil, M.P.
Sir Robert Charles Dallas, Bart.
Francis H. Dickinson, Esq.
Sir Francis H. Doyle, Bart.
Robert Hook, Esq.
Arthur Thomas Malkin, Esq.
The Rt. Rev. the Lord Bishop of Oxford.
The Hon. and Very Rev. George Pellew, D.D., Dean of Norwich.
The Right Hon. the Lord Chief Baron of the Exchequer.
Edward Romilly, Esq.
Thomas Watson, Esq., M.D.
The Right Hon. James Stuart Wortley.
John Wray, Esq.
John Copley Wray, Esq.

Nine-tenths of the Profits are appropriated to the Assured.

Assurances can be effected by all persons who are, or have been, on the Books of a University, or of any College, Hall, Foundation School, or other similar institution in the United Kingdom.

Divisions of Profits every Five Years.

Since the establishment of the Society in 1825, the amount of Additions allotted to the assured has exceeded £659,000.

The Fee to the Medical Referee is in each case paid by the Society.

Personal appearance at the Office is not required except in particular cases.

Forms of Proposal may be obtained on application to this Office.

CHARLES M. WILLICH, Secretary and Actuary.

*** Commission allowed to Solicitors and other Agents introducing Assurances.

The Only Office whose Bonds and Policies of Guarantee are accepted by the Treasury, Customs, Inland Revenue, General Post-Office, War, Admiralty, Home, Colonial, India, and other Government Departments.

THE EUROPEAN ASSURANCE SOCIETY.

DIRECTORS IN LONDON :—

HENRY WICKHAM WICKHAM, Esq., M.P., Chairman.
JOHN CHEETHAM, Esq., Stalybridge.
JOHN FIELD, Esq., Warnford-court, City.
CHARLES FORSTER, Esq., M.P. for Walsall.
RICHARD FRANCIS GEORGE, Esq., Bath.
HENRY H. HARRISON, Esq., Hamilton-place, St. John's Wood.
THOMAS C. HAYWARD, Esq., Minories and Highbury.
JOHN HEDGINS, Esq., Cavendish Club.
JAMES EDWARD McCONNELL, Esq., Wolverton.
C. W. REYNOLDS, Esq., Eaton Place, Belgravia.
RICHARD SPOONER, Esq., late Her Majesty's Commissioner of Customs, Bombay.
H. WICKHAM WICKHAM, Esq., M.P. for Bradford.
THOMAS WINKWORTH, Esq., Gresham Club and Canonbury.
J. P. BROWN-WESTHEAD, Esq., M.P. for York.

Security is provided in approved cases for Officers of Banking and Commercial Establishments, Public Companies, Municipal Corporations, and for other places of trust.

Life Assurance may be combined with Guarantee on advantageous terms.

Prospectuses, Forms of Proposal, and every information may be obtained from the Chief Offices, 2, Waterloo-place, Pall Mall, London; and 39, George-street, Edinburgh.

THE LIVERPOOL AND LONDON FIRE AND LIFE INSURANCE COMPANY.

INVESTED FUNDS £1,350,000.

LONDON BOARD.

Sir JOHN MUSGROVE, Bart., Chairman.

FREDERICK HARRISON, Esq. | WM. SCHOLEFIELD, Esq, M.P.

DEPUTY CHAIRMEN.

John Addis, Esq.
C. S. Butler, Esq., M.P.
Hugh C. E. Childers, Esq., M.P.
Sir William P. de Bathe, Bart.
Henry V. East, Esq.

John Laurie, Esq.
William Macnaughtan, Esq.
Ross D. Mangles, Esq.
James Morley, Esq.
Sir Charles Nicholson, Bart.
William Nicol, Esq., M.P.
Swinton Boult, Esq.
Secretary to the Company.

In 1857 the Duty on Fire Insurances in Great Britain paid to Government by this Company was £32,882, and in 1861 it was £61,833, being an increase in five years of £29,951.

In 1860 the Fire Premiums were £313,725; in 1861 they were £360,130, being an increase in one year of £46,405. The losses paid amount to £2,500,000 and all claims are settled with liberality and promptitude.

JOHN ATKINS, Resident Secretary.

GEOLOGY and MINERALOGY.—ELEMENTARY COLLECTIONS, to facilitate the study of this interesting Science, can be had, from Two Guineas to One Hundred, also Single Specimens, of J. TENNANT, 149, Strand, London, W.C. Mr. Tennant gives Practical Instruction in Mineralogy and Geology.

GREAT EASTERN RAILWAY.—SEA SIDE ARRANGEMENTS.

LONDON TO YARMOUTH, LOWESTOFT, and HUNSTANTON.

	First class.	Second class.	Third class.
*Monthly Family Tickets.....	32s. ...	25s.	
Weekly ,, ...	25s. ...	20s. ...	15s.

LONDON TO ALDBOROUGH.

*Monthly Family Tickets.....	26s. ...	21s.	
Weekly ,, ...	25s. ...	20s. ...	15s.

LONDON TO HARWICH.

*Monthly Family Tickets.....	20s. ...	16s.	
Weekly ,, ...	17s. 6d. ...	12s. 6d. ...	8s. 6d.

Available by any train of corresponding class for Yarmouth, Lowestoft, Aldborough, and Harwich, viâ Colchester and Woodbridge only, and to Hunstanton viâ Cambridge.

*The Monthly Family Tickets are issued to family parties of not less than three persons. The time may be extended on the payment of a small per centage at the sea side station.

Extra Tickets may also during the month be obtained at the sea-side stations, to enable one member of each family party to travel to London and back at half the Monthly Family Ticket Fares.

A NEW FAST TRAIN, 1st, 2nd, and 3rd class, leaves London for Yarmouth, Lowestoft, Aldborough, and Harwich at 10.0 a.m.; and a corresponding up train leaves Yarmouth at 9.50 a.m., and Lowestoft at 10.0 a.m., performing the journey each way in about three and a half hours.

EXPRESS TRAINS also run through: Down, ex London, at 4.25 p.m., and up, ex Yarmouth, at 6.35 a.m.

For full particulars see handbills and published time books of the company.

By order, B. OWEN, Secretary.

T. COOKE & SONS,

OPTICIANS,

AND

MANUFACTURERS OF ASTRONOMICAL

AND

MATHEMATICAL INSTRUMENTS,

etc.,

31, SOUTHAMPTON-STREET, STRAND, LONDON,

MANUFACTORY,

BUCKINGHAM WORKS, YORK,

Beg to solicit attention to the

EDUCATIONAL TELESCOPES

They are now constructing, which, in consequence of the simplicity of construction, they are enabled to offer to all interested either in Astronomy or Education, at the following prices :—

	£.	s.	d.
Telescope of 2¼ in. aperture, 40 in. focal length	10	0	0
Telescope of 3 in. aperture, 43 in. focal length	12	0	0
Ditto, with finder	13	0	0
Telescope of 3½ in. aperture, 50 in. focal length	18	0	0
Ditto, with finder	20	0	0
Telescope of 4 in. aperture, 60 in. focal length	26	0	0
Ditto, with finder	28	0	0

These instruments have excellent object-glasses, and are mounted in brass tubes on tall tripod stands, with horizontal and vertical motions, and steadying-rods to insure complete stability. Two eye-pieces are supplied to each, and means of the most delicate adjustment to focus afforded by a draw-tube and rack and pinion motion.

The prices mentioned include packing and a neat box, in which they may be securely sent to all parts of the world.

32, SOUTHAMPTON STREET, STRAND, W.C.
May 12th, 1863.

THE PERFECT SUBSTITUTE FOR SILVER.

The REAL NICKEL SILVER, introduced more than Thirty Years ago by WILLIAM S. BURTON, when Plated by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful set, guaranteed of first quality for finish and durability, as follows :—

	Fiddle or Old Silver Pattern.	Bead Pattern.	Thread or Brunswick Pattern.	King's or Lily &c.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.

Any article to be had singly at the same prices. An oak chest to contain the above, and a relative number of knives, &c., £2. 15s. Tea and Coffee Sets, Dish Covers, and Corner Dishes, Cruet and Liqueur Frames, &c., at proportionate prices. All kinds of re-plating done by the patent process.

WILLIAM S. BURTON, GENERAL FURNISHING IRONMONGER, by Appointment, to His Royal Highness the PRINCE of WALES, sends a CATALOGUE, gratis and post-paid. It contains upwards of 500 Illustrations of his illimited Stock of Sterling Silver and Electro-Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bedroom Cabinet Furniture, &c., with Lists of Prices and Plans of the Twenty large Showrooms, at 39, Oxford-street, W. ; 1, 1a, 2, 3, and 4, Newman-street ; 4, 5, and 6, Perry's-place ; and 1, Newman-yard, London.

CARSON'S

ORIGINAL ANTI-CORROSION PAINT.

PATRONIZED BY

The British Government.
The Russian Government.
The lamented Prince Consort.
Most of the Nobility and Gentry.
Railway and Canal Companies.
Collieries, Iron Masters, &c.

It is extensively used at Home and Abroad for all kinds of

OUT-DOOR WORK,

and is proved, after a test of 70 years, to surpass any other Paint. It is applicable to Wooden Houses, Farm and other Out-buildings, Conservatories, Park Fencing, Agricultural Implements, Gates, &c. ; also Iron Roofing, Bridges, Hurdling, and every description of Iron-work. For

PUBLIC EDIFICES, MANSIONS, VILLAS,

and every kind of Brick, Stone, Compo, &c., it is unrivalled, presenting the appearance of fine cut stone.

The ANTI-CORROSION is lower in price, and lasts twice as long as the best White Lead ; at the same time it is economical in application, as

ANY PERSON CAN LAY IT ON.

The ANTI-CORROSION is a powder, and will keep any length of time.

COLOURS.

	Per Cwt.		Per Cwt.

Now ready, Illustrated by Six Chromo-Lithographic Drawings.

FOUR MONTHS IN A DAHABEEH.

By M. L. M. CAREY.

One Vol., Demy 8vo., cloth boards, price 15s.

L. BOOTH, 307, Regent-street, W.

Now ready at all the Libraries,

A NEW NOVEL BY THE REV. J. PYCROFT,

Author of "Twenty Years in the Church."

DRAGON'S TEETH.

Two Vols., Post 8vo., cloth boards, price 21s.

L. BOOTH, 307, Regent-street, W.

Just ready, Second Edition, Fcap. 8vo., cloth boards, price 3s. 6d.

JESSE'S LECTURES ON NATURAL HISTORY,

DELIVERED AT BRIGHTON.

L. BOOTH, 307, Regent-street, W.

Just published, in fcap. 8vo., price 2s. 6d., cloth,

THE NULLITY OF METAPHYSICS AS A SCIENCE AMONG THE SCIENCES, set forth in Six brief Dialogues.

London: LONGMAN, GREEN, & CO., Paternoster-row.

CONGREGATIONAL EDITION of the CHORALE-BOOK.

May now be had, in 1 vol., Fcap. 8vo., price 1s. 6d. cloth,

HYMNS AND MELODIES OF THE CHORALE-BOOK for Family and Congregational Use: being the Hymns of the "Chorale-Book for England," as translated by Miss C. WINKWORTH, with the Melodies, as arranged for the "Chorale-Book" by W. STERNDALE BENNETT, Prof. of Music in the Univ. of Cambridge; and by OTTO GOLDSCHMIDT.

London: LONGMAN, GREEN, & CO., Paternoster-row.

THE BISHOP OF NATAL ON THE PENTATEUCH.

On Thursday next will be published, in 8vo., price 8s. cloth,

THE PENTATEUCH AND BOOK OF JOSHUA CRITICALLY EXAMINED. By the Right Rev. JOHN WILLIAM COLENSO, D.D., Bishop of Natal. Part III. THE BOOK OF DEUTERONOMY.

London: LONGMAN, GREEN, & CO., Paternoster Row.

ANSWERS TO ESSAYS AND REVIEWS.

Now Ready, in 1 vol., 8vo., price 8s. 6d. cloth,

SEVEN ANSWERS TO THE SEVEN ESSAYS AND REVIEWS.

By JOHN NASH GRIFFIN, M.A.,

Trinity College, Dublin, formerly Senior Moderator and University Gold Medallist in Mathematics and Physics, and Moderator and Medallist in Ethics and Logic.

With Introduction by the Right Hon. J. NAPIER,

Late Lord Chancellor of Ireland.

London: LONGMAN, GREEN, & Co., Paternoster-row.

DEDICATED, BY PERMISSION, TO HER ROYAL HIGHNESS THE PRINCESS OF WALES.

Now ready, in One handsome 4to Volume, appropriately bound in cloth, price 15s.

THE LORD'S PRAYER.

ILLUSTRATED IN A SERIES OF ETCHINGS

By LORENZ FRÖLICH.

"M. Frölich's Lord's Prayer (with an etched dedication plate and prefatory plate and 10 etched designs illustrative of the text) is dedicated to the Princess Alexandra, as in duty bound, the artist being a loyal Dane, and is about to be published in this country. It is a work worthy to be laid at the feet of so fair and gracious a lady. * * * Nothing is more ingenious in these designs than the way in which the earthly and the heavenly are combined and contrasted."—*Times*.

British public to ascertain the exact market value of what they are asked to buy. We feel certain that if this were done, the real value to Messrs. Kelk & Lucas of the buildings would prove to be nearer £30,000 than £80,000, *less the cost of pulling them down and removing them*, showing a difference in this one item of the tremendous bargain submitted to us so confidently by the Treasury of no less than £50,000 against the public and in favour of the disinterested contractors! But against our conviction there is, we admit, to be placed the high authority of Sir Morton Peto. Before we give way to that eminent gentleman, who understands all these matters but too well, we will take leave to ask, what has he to do with the business at all? Why does he take Messrs. Kelk & Lucas under his protection? Are those *industriels* not perfectly competent to look after their own interests? Is Sir Morton perchance their partner? Is he associated with them in other great speculations? If we recollect right, there have long been close and intimate business relations between Mr. Lucas and Sir Morton Peto, and, if we are not mistaken, sufficient business relations still exist between them to render Sir Morton's uncalled-for intervention in this affair indecent, and his opinion as to the amount of money which the public ought to pay to his friends, unsafe. Indeed, the whole of these transactions are entirely in the hands of a gang of art and science jobbers—who are impudently operating under the shadow of poor Prince Albert's memory. The members of the Society of Arts, the Commissioners of 1851, the Commissioners of 1862, the Councils of the Horticultural Society, and of half a dozen other "institutions in union with them," are all playing into each other's hands—buying of each other, selling to each other, praising each other, rewarding each other; and preying on the public with such preposterous effrontery, that we know not whom to trust. Whatever they wish to have done for their own aggrandisement or for their own emolument, they call upon the public to do, immediately and cheerfully, out of loyalty to the Queen, and out of respect to the last wishes of Prince Albert, as recorded and interpreted by themselves. There are, indeed, amongst them many high-minded men whose views and opinions are entitled to all deference and respect; but those men shrug their shoulders and remain silent and torpid in very shame at the greedy audacity of the Art and Court parasites with whom they have the misfortune to be associated. The whole movement is concocted by about a dozen well-known individuals, whom everybody distrusts and everybody despises, who have nevertheless constituted themselves managers, commissioners, and dispensers of all honours attached to science and art in England, and who exercise through the periodicals with which they are connected a sort of reign of terror over all artists and authors who do not bow down and worship them, and who hesitate to admit that English art and science is deeply indebted to them.

Such are the parties with whom we have to deal in the present instance, and against whom we earnestly desire to rouse and warn the public. Whether the vote o Thursday next be carried or rejected, one great good wil at least have been effected by the resistance which will hav been offered to it. The machinations of the Brompto Boilermen will have been thoroughly exposed. It is significant fact, that that portion of the press which ha been most vehement in denouncing them, has been tha which is known to be under the immediate influence of tl Government. The most telling quotations read by M Gregory in his speech on the 15th, were selected from t *Observer;* the best and most vehement articles that ha been written against the South Kensington conspiracy ha appeared in the *Globe*. Our ministerial contemporar have the best means of obtaining good information as the details of official jobs in contemplation, and it is usua their province to defend them. The South Kensington must surely be a very bad job indeed when the *Observer* a the *Globe* denounce it in such language as they have b using during the past week, in defiance of the Chancello the Exchequer and of the Right Hon. Robert Lowe.

THE FALL OF PUEBLA.

FONTAINEBLEAU might well be illuminated at news of the taking of Puebla, for the fate of Mexican expedition was weighing on the spirits of

Paymaster Smales, that they ought not to be allowed to deal with the case of Colonel Crawley. If that officer is found guilty, his guilt must to some extent involve the guilt of Sir Hugh Rose himself, who not only extravagantly praised him, but grossly calumniated the unfortunate Sergeant, who afterward succumbed to the effects of his illegal imprisonment.

In the third place, it seems that the most material witnesses who ought to appear on the trial are now in this country, and some of them, having retired from the army, cannot be compelled to return to India. Even if there were any means of obtaining the evidence of such persons by a commission, it is obvious that their testimony would not be so valuable as if they were examined in open court. There is no hardship in Colonel Crawley, or even in the whole regiment under his command, being ordered home; nor is it possible to conceive that he will have less chance of obtaining a fair trial in this country than in India. On the other hand, it is to be observed that Sergeant-Major Wakefield, who was confined with Duval and Lilley, is now a civilian, and in this country; and that General Farrell, who commanded the district under Sir William Mansfield, and sanctioned the illegal imprisonment, is in the same predicament. Moreover, the surgeon who ordered the spirits to be administered to Lilley's dying wife; Lieutenant Fitzsimon, who insists that it was Colonel Crawley who directed the sentry never to lose sight of Lilley and his dying wife, night or day; and many other officers in the 6th Dragoons, though still in the service, are all now in this country. Both convenience and necessity, therefore, point to the same conclusion.

Lastly, it is important that the approaching trial should be conducted with the utmost care, and with strict regard to the principles of law. We have already proved that as this Court will, in point of fact, be a court of appeal, it ought not to be under the direction of the judge against whom the appeal has been allowed. But further, the members of the Court ought to be assisted by the best legal advice which can be procured, in order, if possible, to avoid any further miscarriage. In short, for the satisfaction of the public, for the satisfaction of the friends of Sergeant-Major Lilley, and above all for the sake of Colonel Crawley himself, it is obvious that the approaching trial should take place in this country.

THE CROWN PRINCE OF PRUSSIA.

THERE is, very naturally, a disposition in this country to believe that the husband of our Princess Royal has resolved to take his stand at the head of the Constitutional party in Prussia. It would, of course, be gratifying to our national self-esteem that the beneficial influence of his English connections should be proved by so illustrious an example. We are not inclined to rate highly the effect of matrimonial Court alliances on the political conduct either of reigning or expectant sovereigns. But Prince Frederick William, during his education at the University of Bonn, associated much with our countrymen, from whose conversation, as well as from his frequent visits here, in his maturer years, it is likely that he may have imbibed a genuine predilection for English public life. He can scarcely fail, at least, to be sensible of the dangerous and disgraceful plight of his father's royal house at this moment. His acquaintance not only with the current opinions of English society, but with the most instructive passages of English history, must have informed him that a kingdom whose monarch repeats the fatal errors of our Charles I. is decidedly going to the bad. Besides the experience of the Stuart dynasty, he may have seen among the broken relics of foreign kingship, from time to time cast upon our shores, abundant instances of the ruin that probably awaits a faithless and obstinate Prince who would usurp more prerogative than is consistent with the fundamental laws of the State. The Bourbons and the Orleans family have successively taken refuge in this hospitable land of legality and freedom. It would be a pity that the Hohenzollerns, to whom, by our Protestantism and our German affinities, we are more nearly related, should ever be reduced to become our dependent guests. These reflections might well occur to the Crown Prince of Prussia, since the late behaviour of King William is denounced by every organ of English opinion as the way to a deserved disaster. For one thus instructed, who, so far as his character is as yet developed, seems not to have inherited

as yet small evidence that he means to lend his counte nance to the Liberal and Constitutional party. Th Prussians themselves, who had watched his conduct sinc the beginning of the Parliamentary struggle, do not seer to attach very great significance to this almost accidenta utterance of a personal exculpation, implying no promise t stand by the chartered liberties of the country. It does nc appear that this speech was anything like a deliberat announcement of his policy. The fact is, that while visitin the towns of the eastern provinces on a tour of offici military inspection, the Crown Prince found himself, wit his amiable English wife, exposed to a very disagreeab proof of unpopularity, on account of the arbitrary measur of the Government, from which he is not known to hav ever before openly dissented. The municipalities agreed t turn the cold shoulder towards him. Arriving Dantzic, he was received only by the servants of tl Government; and since the Town Council refuse to wait upon him, he frankly condescended to go and ca upon them. Herr von Winter, the Mayor, who is an ol friend of the Prince, publicly told him, when he met tl Council, that they were sorry they could not give him more joyful welcome, in the present situation of the countr as their regard for the Constitution was equal to their respe for the Royal Family. In reply to this pointed reproof, tl Crown Prince, flushed with excitement, and no doul heartily ashamed of his position as the King's representativ said that he lamented this misunderstanding between tl Government and the people—that he was surprised at it- and that, as he was absent when the ordinances on the Pre were adopted, he had nothing to do with the matter.

There can, of course, be no doubt of his perfect candou and truthfulness in this declaration. It could not be su posed for a moment that he would have assented either t the decree for suppressing all Opposition journals, or to tl order prohibiting all municipal bodies from taking notice political affairs. He must have known better than that; ar it was notorious that he had left Berlin the day before the fir of these measures bore date. But those ordinances follov ing instantly upon the abrupt dismissal of a Parliamer which had been bullied and insulted by the King and t Count Bismarck-Schönhausen, after being deprived of i constitutional right to vote the budget, were but the crow ing outrage of a series of lawless and tyrannical acts, again which it does not appear that the Prince had ever proteste Being well acquainted, at least, with all that had take place for the last twelvemonth and more, if he affected to fe surprised but the other day at the quarrel between tl Government and the people, it must be that he had n until then discerned the perilous character of the cour which his royal father pursued. We are not, therefor warranted in taking his speech at Dantzic for more than sort of impromptu personal apology, which was extorted t a sudden perception of the difficulties of his position. an isolated fact, it has no great importance; and we sha wait to see whether he is prepared to follow it up with ar overt acts marking his secession from the unprincipled ar infatuated government. It would be deemed indecorous him to publish a direct remonstrance against the admini tration of his father; but he might, without being reproache as an undutiful son, throw up whatever official posts he no occupies, and claim the freedom of a subject, enjoying tl high rank and influence of which he cannot be deprive The rumour, indeed, of his being about to go into a voluntar exile, for the testimony that he has borne in favour of tl Constitution, is reduced to the fact of his going to spend tl Midsummer month at his marine residence in Rügen. Tl heir-apparent, with his appanages and matrimonial endov ments, and with the circle of expectant courtiers who loc to greet him on the throne, is at any rate secure of a splendi position, independent of the favour of his sire—unless, by tl paternal misrule, that throne should be overturned.

These considerations may, perhaps, somewhat modify ou appreciation of Prince Frederick William's conduct in tl late affair. We should have preferred to take a higher est mate of his merits, and to recognize in him the noble examp of a patriot prince. We should likewise have been glad t find, in all the different ranks of society in Prussia, a mor vigorous exhibition of those personal qualities of unflinchin courage and self-sacrifice, which are associated in the Englis mind with a struggle for the assertion of civil freedom. Tl parallel between our Long Parliament and the Berlin Chambe of Deputies would be more complete, if a German Pyr

Digitized by Google

678,661, which is the population of the Established Church in Ireland according to the last census, the quotient will be 295. Each Irish clergyman, then, has cure of 295 souls of his own Church on an average—say, in round numbers, 300 souls. But how are these distributed? Over what amount of area has each clergyman to travel in order to visit them? These questions can be answered by dividing the total area of Ireland by the number of clergy. And as there are 32,000 square miles in the whole island, the result is, that each clergyman has charge of an average district of 14 square miles, over which on an average 300 members of his Church are scattered. What now is the average amount of his remuneration? It has been shown by Archdeacon Stopford, in his work on the income of the Irish Church, that the whole nett revenue for parochial purposes is about £357,459, and that, after paying each of about 656 curates £75 annually, there would remain for each incumbent only an average annual nett income of £200. The position, then, of a clergyman of the Irish Church may be represented thus:—He has 300members of his own Church to take charge of; these members are scattered over 14 square miles; and his remuneration, if an incumbent, is in round numbers £200, if a curate, £75.

Now let us ask what is the corresponding position of a clergyman in England? It is not easy to ascertain exactly what the proportions of the several denominations are in this country, as no religious returns were made in the last census. But as the Roman Catholics are supposed to be 2,000,000, and it is probable that the various Dissenting bodies make up an aggregate 6,000,000, we shall not be much astray in putting down 12,000,000 as the Church population of England and Wales. If we divide this number by the number of clergy, which is about 18,000, the result will be that each English or Welsh clergyman has cure of about 670 souls. The average extent of his district, calculated as in the case of Ireland, is $3\frac{1}{4}$ square miles; and the average income of an incumbent £280; and of a curate £10

The result, then, of a comparison of the positions of the clergy in the two countries, in our opinion, leaves little to choose between them. The Irish clergyman has one cure of 300 souls, of his own communion, but they are scattered over 14 square miles; while the English clergyman, who has indeed the larger number to look after, has them condensed into a smaller space. Now, let the question be put to any clergyman, whether he would prefer the larger number in the smaller space, or the smaller number in the larger space; in nine-tenths of cases, would he not choose the former alternative?

There is, then, really no very great disparity between the two countries. The Irish Church may be the Church of only 678,000 people, but that there should be one clergyman to every 300 of these is nothing unreasonable, especially when we consider the magnitude of the district. It is a fact constantly lost sight of in this controversy, that there are only 2,300 clergy of the Established Church in Ireland, while there are 18,000 in England. The area of Ireland is more than half of that of England, but the English clergy are eight times more numerous than the Irish. It is right that they should be so, as the Church population is so much more numerous. But it is this very circumstance which proves that the Irish Church, in its revenues, the numbers of her clergy, and her work, is by no means out of proportion to the requirements of the country. We speak of her, of course, not as a new experiment now for the first time to be tried, but as one of the oldest institutions of the country, time-honoured, established by the State, whose fate should not be decided by the mere consideration of numbers, but by truth, good moral teaching, loyalty, and patriotism being thrown into the scale, together with the actual numbers in her communion.

But it may be objected to the above reasoning that though each Irish clergyman may have an average of three hundred souls in cure, yet, in fact, there are many districts where they are far below this number, amounting sometimes to not more than ten, twenty, or fifty. Let the facts stated in the objection be admitted; but what do they prove? Clearly, only the necessity of a commission to inquire into the best way of removing such an unequal division of labour. It is a case for reform, not for destruction of the Church. And let such reforms be effected. The best interests of the Church require them; and every true friend should welcome any beneficial change which would promote the best interests of religion. But let us go further, and see

Digitized by Google

and old abodes of learning,—relieved by the brightest of flowers and the greenest of foliage and verdure,—become surpassingl picturesque with an invasion of the fair barbarians of Mayfair, wit the prettiest dresses and the prettiest faces in the world. Oxfor is always young; Oxford is always old. All through the summe months the college-green, which has seen so many historical gener ations and has been connected with so much of the dusty learnin and the piety of the past, wears a merry modern air of luxury,— wholly out of keeping, yet not without a gracefulness of its own as the voices of well-dressed and happy English young men rin over it, on their way to amusement, and gaiety, and pleasure But Oxford puts on for the three days of Commemoration a dres and an air which throw into the shade all the youthful holiday making of the summer months. The genius of the place crown himself that week with flowers. The streets, so silent and s monastic, wake up one June morning and find themselves echoin again with the laughter of a gay multitude, half attired in academi costumes and half in the fashions of Belgravia. The breakfasts the ceremonials, the flower-shows, the boat-races, the dinners, an the balls succeed one another with a rapidity that leaves th delicate visitors scarcely time to breathe the special atmosphere o the place; no time, certainly, to moralize upon the association connected with it. Are these the shady groves of Academus? I it here that were born the wisdom and the erudition of past ages Is it hence that have issued the erudite speculations that have s often adorned, or enlightened, or perplexed the Church? A rus of merry feet—a din of well-bred voices—a hubbub of dons, an undergraduates, and ladies; and the crowd is gone again, withou answering the question, or knowing much more of Oxford tha they knew before they came, and without even waiting to mak the acquaintance of the genius of the place as he wakes up agai on the following morning—the first morning of the long vacation— deserted and discrowned.

The proceedings on the occasion of the visit of the Princess t the University appear to have been of the usual character, only, i possible, still more bright and gay than ever. In the theatr degrees were conferred upon the principal visitors; and as a acrimonious Professor has taken upon himself the amiable duty o black-balling those whose religious opinions he may chance to dis approve, the illustrious and new-made doctors in civil law will hav the satisfaction of feeling that they have passed triumphantl not only through an academical grade, but also through a thec logical scrutiny. Their names were saluted from the gallery wit the same storms of approval or inquiry as usual, though the unde graduates above took care to show that their sympathies at leas were not on the side of the self-elected inquisitor of the da The prize poems, the essays, and the orations were each no dou as gallant and as erudite as it is the custom to make them, an contained the average amount of allusions to heathen mythology, t the ladies' dresses, and to the next world; while one of the juveni laureates crowned the merriment of the day by forgetting, in h excitement, most of the poem it was his duty to recite, except verse which contained a rapturous compliment to the beauty of th eyes of her Royal Highness. A talented feminine novelist, at th close of a long list of boyish virtues, seems inclined to belie that—next, of course, to the high privilege of being a you nobleman of religious habits and in weak health—the ide of earthly happiness must be to get the English prize poe at an Oxford Commemoration. It is conceivable that the hono and glory of reciting one's own poetry in white kid glov to the Princess of Wales and the Royal family might turn t head even of a stronger young gentleman than the hero of t *Daisy Chain;* and we would not give a farthing for the poet wh when it was a question between loyalty and self-possession, did n give it in favour of loyalty. After all, the failure was more of tribute to the Prince and Princess than an admirable recitatio would have been. To have forgotten everything would have be only a proof that the particular Muse was of a shy dispositio and could not stand white gloves and a fashionable audience. B to have been able to forget everything else, and yet to rememb the Princess's eyes, was a feat of poetic and chivalrous feeling th does the man the highest honour. It is of a piece with Sir W Raleigh's celebrated offering of his cloak. The Oxford muse stri herself of all her own verses, and lays them unsung at the fect Royal Beauty. A procession of boats, at which, as usual, o of the more enthusiastic crews, while saluting with the oars, were upset into the stream, and unceremoniously intr duced thereby to all the mysteries of Isis; and a nov incident, consisting of a row in an eight-oar down the river tak by their Royal Highnesses, were the only other events of the vi that are worth recording. It is, perhaps, a pity they did n

Digitized by Google

have affirmed their belief in the veracity of the Countess Dowager's account of her wooing and wedding, and have accepted her statement that from the first she was no mere mistress, but what her husband deemed her, the best, the truest, and the most devoted of wives. It scarcely fell within the strict line of judicial duty to characterize as it deserved the conduct of her third son, Captain Cochrane, of the *Warrior*. But the voice of public opinion will certainly not spare him. It would have been bad enough if he had merely sought to prove that his parents lived together without the sanction of any legal tie until after the birth of their two eldest children. But he did far more than this. His case was only maintainable upon the supposition that both his father and mother had at a subsequent period deliberately forged the document which professed to record their union at Annan in 1812; that the late Earl had over and over again lied in the most direct and circumstantial manner in his accounts of that transaction; and that the Countess Dowager had committed at the bar of the House of Lords perjury, not only wilful, but of the most sustained, elaborate, and ingeniously inventive kind. Even this was not all. For this exemplary son was not ashamed to lay before the House the evidence of a fellow named Jackson—a former secretary of the late Earl—who swore that immediately after the birth of her first-born, and during the imprisonment of her husband, the Countess had frequently averred to him that she was not married; had talked of becoming the mistress of Mr. Basil Cochrane,—an old man whom she had never seen; and had offered herself in vain to Jackson himself. Had this evidence been true, no one can doubt that it was the duty of a son to abstain from using it against a woman who, whatever might have been her faults, was still his mother. But not only was it obviously unworthy of credit, but it does not seem to have been relied upon even by Captain Cochrane himself. After laying it before the Committee of Privileges, he retired from the case; and by so doing virtually admitted the worthlessness of his witness. Censure would be thrown away upon conduct such as this; we will only add, that its baseness was heightened by the hypocritical affectation of "delicacy," under which the Captain forbade the cross-examination of his mother, and thus deprived her of any opportunity of contradicting or explaining in her first statement the evidence to be given by the fellow Jackson.

We pass willingly from this topic to the facts of the case itself. The claim of the present Earl did not, indeed, rest exclusively upon the evidence of his mother; but if it had done so, we have no hesitation in saying that it could not possibly have depended upon testimony more evidently worthy of complete credit. It is quite true that discrepancies may be detected here and there in her statements as to small facts which happened half a century ago. But no one accustomed to weigh evidence can hesitate for a moment to believe the high-spirited and impulsive woman who tells so graphically, in her old age, the story of her early love; and through whose narrative truth speaks in many an unpremeditated touch and many an outburst of quick feeling, which are utterly irreconcilable with the notion of cool and designed perjury. She tells us that her parents died when she was young, and that from the earliest period she could remember down to 1812, when she was sixteen years of age, she had resided with her aunt, Mrs. Jackson, in Bryanston-street. In that year she first met her future husband, then Lord Cochrane, who was introduced to her family by her cousin, Captain Nathaniel Day Cochrane. The gallant sailor's courtship was short, and no doubt vehement; but it was impossible for him to contract an open marriage for fear of offending his uncle, Mr. Basil Cochrane, from whom he had considerable expectations. In order to avoid a premature disclosure of their union, he prevailed upon Miss Barnes, with the full assent of her aunt, to contract a secret Scotch marriage. "That," says the former, now Countess Dowager of Dundonald, "was given to me as the object, and I had no right, and I had no reason, to doubt the word of the most honourable man I had ever known. *I loved him.*" She did not, however, agree to this arrangement until her gallant lover had been brought by illness to death's door, and had to be lifted to his bed-room window, "looking like a corpse," to see her walking in front of his uncle's house, where he was then living. Then it was, she says, that "my heart was softened to see that great man, the hero of a hundred fights. I could not see that man in such a state as he was in." Accordingly, on the 6th August, she and Lord Cochrane, accompanied by a maid and a man-servant, set out for Scotland, and arrived at Annan on the evening of the 8th. Almost immediately they arrived at the Queensberry Arms his lordship called for pen and paper, and wrote out an acknowledgment that Catherine Corbett Barnes was his wife. Underneath this she added, by his direction, an acceptance and declaration of Sir Thomas, commonly called Lord Cochrane, as her husband; and this document was witnessed by their servants. It is needless to say that this amounted to a valid marriage by the law of Scotland. "After the paper was signed, and the servants were gone away, he began to dance the sailor's hornpipe, a very unusual thing for him, and said, Now you are mine, Mouse, for ever." But his conjugal transports were of short duration. It was necessary that he should be in London on the 10th, in order to be present at his uncle's wedding; and therefore, almost as soon as his own contract of marriage was signed, he left his young wife to struggle in vain with a cross, Scotch landlady, for the comfort of a bath; and posted back to London. She followed him two days afterwards. On the 18th of the same month they started together for the Isle of Wight, and from that time to the day of his death, with the exception of his period of imprisonment, she never left his side, sharing, with heroic constancy and courage, his toils and his dangers. In 1818 his lordship accepted the command of the Chilian navy; but before he and his wife started for South America a second ceremony of marriage, according to the rites of the Church of England, was performed between them, at the instance of the lady's cousin. And again, on their return from Brazil some years later, a third marriage was celebrated in Scotland, in order to please a gentleman who had purchased a great part of the old family property of the Dundonalds, and had promised to bequeath some portion of it at least to Lord Cochrane. It is not surprising that Lady Dundonald should have been, as she says, "bothered all to pieces with the marrying;" nor can we wonder that this double repetition of the ceremony threw some doubt upon the union at Annan. Lawyers and suspicious men of the world did not take quite the same view of it as the impulsive sailor, who seems to have regarded a new marriage simply as a fresh testimony of his affection. "Marry her!" he said, when the second ceremony was proposed to him, "I would marry her in a hundred churches; I would marry her all over the world," adding, however, that she was already his lawful wife.

Nevertheless, the evidence by which the Countess's account of that marriage is confirmed, seems perfectly irresistible. In the first place, the written contract is in existence, and the handwriting of both parties was clearly proved. An additional ground for relying upon its authenticity was afforded by the discovery, made during the proceedings before the House of Lords, that it bore the water-mark of 1811, the year before that in which it purported to be drawn up. Three thoroughly reliable witnesses swore that the late Earl had shown it to them as the authentic record of his first marriage. One of them was the trustee of a lady who had become the wife of his second son; and it was exhibited to him for the purpose of proving that son's legitimacy. It is therefore impossible to doubt its genuineness without casting the grossest stigma upon the Earl. To another of these witnesses, Mr. Earp (of whom we shall have something more to say presently), his lordship gave an account of the circumstances of the Annan marriage, tallying in every material respect—as to time, place, and the reasons for its clandestine celebration—with the evidence of the Countess Dowager. The conduct of both parties, and the manner in which they had been treated by their friends, were matters of no slight importance; and, so far as they suggest any inference, it is decidedly in favour of the validity of the marriage. It is true that, during the period previous to the second marriage, Lady Cochrane did not enter society. So long as her marriage was concealed she could not expect from the world the treatment of a wife; or, as she puts it, "How could a private thing be a public thing?" But it is clear, from unimpeachable testimony, that on their return from Chili she was at once received into society in a way which shows that people must at that time have been satisfied that her past course of life had been that of an honest woman.

Against this evidence there was really very little on the other side, if we leave out of question the testimony of Jackson. It was said that the eldest son was baptized as the child of Lord Cochrane and of "Catharine Corbett Barnes;" but in reply to that, it was observed, that it is the invariable usage to insert in Scotch baptismal certificates the mother's maiden and not her married name; and it was shown that the child was taken to the font by a Scotch nurse, whilst Lady Cochrane was suffering from severe illness. Various minute discrepancies were pointed out between statements made at different times by Lady Dundonald; but these were obviously entitled to no weight, referring, as they did, to matters of the merest detail, with respect to which it was quite impossible that she should have a certain memory after the lapse of half a century. One important contradiction between Lady Dundonald's evidence and the work known as the Earl of Dundonald's "Autobiography," it was indeed necessary to clear

Digitized by Google

up. The lady accounted for her husband's sudden return from Annan, by stating that his uncle Basil's marriage was fixed for the 12th of August, and that it was absolutely requisite he should attend this ceremony, in order that no suspicion might be aroused with respect to his own wedding. In the book it is said that the secret marriage at Annan was not long concealed; and that it was in consequence of discovering it that Mr. Basil Cochrane took unto himself a wife. The explanation of this variance involved an interesting literary revelation.

This so-called Autobiography was not, it appears, written by the late Earl himself, but was compiled by Mr. Earp, partly from his lordship's conversations and partly from his papers. "I should state," says this witness, "that my general practice in writing that book was to write it from his documents, not from his words, because I frequently found his memory fail of late years." And again, "His memory had begun to fail very seriously; so much so that I took down many things from his lips, but I made it a practice never to insert anything unless I had documents to verify it, and by that means I found many of his statements not erroneous from principle, but erroneous from recollection." Mr. Earp, however, admits that he knew nothing about Mr. Basil Cochrane's wedding except from the Earl's verbal statement; and, therefore, although we are told that his lordship went over the chapter of his "Autobiography" which relates to his marriage, and cut it down, from a narrative of much greater length, to the four pages which it now occupies, no one will attach any importance to the circumstance that in this decaying state of his memory he should have given, or allowed to pass uncorrected, an erroneous account of the relation—either of time or of cause and effect—in which his wedding and that of his uncle stood towards each other. Certainly this cannot for a moment be allowed to impugn the statement which he had made many years before, when his memory was unimpaired.

We have no hesitation, therefore, in expressing our satisfaction with the conclusion at which the House of Lords have arrived. The fair fame of a most noble lady has thus been most amply vindicated; nor can we help dwelling for a moment upon the reputation and the character which it was sought to sully. The late Earl's Autobiography may not be quite what we believed it; but there can be no doubt that it faithfully represents his feelings and opinions. His wife is invariably spoken of in terms of the most devoted affection. A later volume would have related how this heroic woman shared with him all the hardships and dangers of his life—his journeys, his voyages, and even his battles; how on one occasion she even fired a cannon with her own hand, when his seamen shrank from the odds against them; and how (as Lord Brougham told the peers he had heard from her lord's lips) she had stood on deck by his side during that most desperate action which he fought on the coast of South America with the frigate *Esmeralda*. Nor was this all; for in the preface to the work in question we are told that it was to her energy and perseverance—to the determination with which she pressed for an interview with William IV., and to the courage with which she made use of the opportunity—that her husband owed his restoration to the rank and honours of which he had been unjustly deprived in 1814.

DIGEST OF ENGLISH LAW.

More than two hundred and fifty years ago two of the greatest ornaments of English law stood at deadly feud with each other. They were, in truth, the representatives of principles which in every age come into conflict. Sir Edward Coke was the champion of the Past: he collected its wisdom, revered its sagacity, and maintained its absolute perfection. Francis Bacon's was the spirit of the Future. The far-seeing eye which directed Science in the new path which has led her to such wonders, saw also the errors and dangers which beset the law as it was delivered to us by our forefathers, and the true course by which it might be made a trustworthy and easy guide. The conflict between the two giants of mind was hot and long. At last the younger and greater succumbed, borne down less by his adversary's prowess than by the fatal operation of those inherent weaknesses by which we are reminded that his genius was human. Science grew up a goodly tree over his tomb, but Law Reform lay buried with him in his grave. It could not be prosecuted in the quiet study of the thinker; and the din of civil arms and political change kept men from having time to debate it for many a year to come. When the eighteenth century brought internal peace, it brought also that singular love of form and affectation which cramped every department of intellect.

Then came the French Revolution, when men in power moved as those over whom in some narrow Alpine pass the avalanche impends, and who fear to speak above their breath, lest the shock of their voices in the air should bring it down. So, not till our own day has the spirit of Bacon again walked the earth. But, after two centuries and a half, the hour of its triumph is at last come. Fines and recoveries, the outworks of the common law, have been swept away. Special pleading has toppled down, amid a cloud of dust. Law and equity are gradually approaching fusion. Last of all, uprises a new Chancellor, and, in the very seat from which Lord Verulam fell, cites as his motto the words and principles of his great predecessor. He tells startled learned lords and lay figures—we mean peers—that what was bad in Bacon's time is tenfold worse now; that, with all we have lately done, there is still an infinite deal needed to redeem our legal science from disgrace; that he is in favour of codification, but that it is only applicable to a system which is tolerably near perfection in principle; and that English law is still too barbarous to admit of such a crowning ornament. Truly, the whirligig of time, slow as its revolutions have been, has brought in its revenges at last.

So, now that we abjure the ancient judicial doctrine expressed by Lord Coke, that "the Law is the perfection of Reason," and admit frankly that it is very full of all manner of blunderings, stupidities, timid fictions, intended to obviate the grossest part of its injustice and its general lack of everything like sound logic or consistent principle, where are we to look for a remedy? Lord Westbury answers, first of all in discovering what is the law. It is to be found, he tells us, at this moment in 1,200 volumes of reports, in forty quartos of statutes, and in the breast of twelve common law and six equity judges, besides several law peers, all of whom, as "nursing mothers," yield to the fond pressure of the young beings in their several courts enough of legal milk to fill sixty-two series of reports with fresh supplies every year. Naturally a good deal of this bountiful provision speedily turns; but, as tastes vary, it is impossible for any lawyer to predict what may be deemed by a court to be utterly bad and unfit for use, or what may be pronounced, though a little stale, yet still very tolerable, and quite good enough for the purpose. So it follows, as a consequence, that not merely does the general public not know the law, but lawyers themselves dare not say they know it. None of them can say whether a contrary case may not be raked up, or produced from the manuscript notes in which it has lain embalmed; and none of them can say whether an existing precedent, standing in the printed books, shall be treated by our present judges as expressing bad law, but now become sacred through use, or as mistaken law, which, with all possible reverence for its authors, they deliberately set aside. The uncertainty of the law is, therefore, as its highest officer tells us, not a false popular prejudice, but an existing fact, most truly appreciated by those who best know what the law is. And he justly argues, that the only means by which we can set about a reformation, is step by step to reduce the law into manageable bulk, by removing from it those inconsistencies, superfluities, obsoletisms, and downright errors which now form the luxuriant waste of leafage by which its true nature and meaning are concealed from scientific as well as from public apprehension.

Lord Westbury's plan, then, is in brief to consolidate and digest, without at present codifying or altering, our Statute Law and our Reports. The former part of his scheme has been many times sanctioned by Parliament; it has already been in part carried into effect in the new statutes for consolidating the Criminal Law, and it is being at this moment prosecuted by two gentlemen appointed by Government. The funds voted for the purpose have however been hitherto so miserably small that the progress has been slow; but the Chancellor tells us that the work is now so far advanced that with a little more liberality it might be completed within a year. The next step is to attack the 1,200 volumes of Reports. This is the real novelty in the proposition, yet it is a novelty only to this generation, and students of Bacon will find its essential features in his "Proposal for the Amending of the Laws of England." The Chancellor of Queen Victoria rested this part of his scheme so greatly upon the authority of his retired predecessor under James I.; and the ideas with which the House of Lords was agitated on the evening of Friday week were so closely akin to those which came from the seclusion of the fallen Verulam, that we shall venture to lay them before our readers in the words of the earlier statesman, omitting merely some of the amplification and explanation in which he clothed them:—

"The work is to be done in this manner. It consisteth of two parts, the digest or recompiling of the common laws, and that of the statutes. In the first of these, there is to be made a perfect course of the law *in serie temporis*, or year books as we call them, from Edward I.

Digitized by Google

to this day; in the compiling of this course of law as year books the points following are to be observed.

"First, all cases which are at this day clearly no law, but constantly ruled to the contrary, are to be left out; they do but fill the volumes, and season the wits of students in a contrary sense of law. And so likewise all cases wherein that is solemnly and long debated, whereof there is now no question at all, are to be entered as judgments only and resolutions, but without the arguments, which are now become but frivolous.

"Secondly, *Homonymiæ* (as Justinian calleth them), that is, cases merely of iteration and repetition, are to be purged away, and the cases of identity which are the best reported and argued to be retained instead of the rest.

"Thirdly, as to the *Antinomiæ*, cases judged to the contrary, it were too great a trust to refer to the judgment of the composers of this work to decide the law either way, except there be a current stream of judgments of later times, and then I reckon the contrary cases among cases obsolete of which I have spoken before; nevertheless this diligence would be used, that such cases of contradiction be specially noted and collected, to the end those doubts that have been so long militant may either by assembling all the judges in the Exchequer Chamber or by Parliament be put into certainty.

"Fourthly, all idle queries which are but seminaries of doubts and uncertainties, are to be left out and omitted, and no queries set down but of great doubts, well debated and left undecided for difficulty.

"Lastly, cases reported with too great prolixity would be drawn into more compendious report, not in the nature of an abridgment, but tautologies and impertinences to be cut off.

"For the reforming and recompiling of the Statute Law, it consisteth of four parts.

"The first, to discharge the books of those statutes whereas the case, by alteration of time, is vanished, as *Lombards*, *Jews*, Gaul's *halfpence*.

"The like of statutes long since expired and clearly repealed.

"The next, is to repeal all statutes which are sleeping and not of use, but yet snaring and in force.

"The third, that the grievousness of the penalty may, in many statutes, be mitigated, though the ordinances stand.

"The last is, the reducing of concurrent statutes heaped one upon another to one clear and uniform law."

Such was the outline of the proposal of the master-mind in philosophy and law, of the Elizabethan age. If Lord Westbury can carry it into execution, he will confer on the Victorian era a celebrity as great, if somewhat different in character, as that which distinguishes the times of our first female Sovereign, and he will win for himself a title to a niche not very far removed from that which holds the statue of his great predecessor on the woolsack.

LONDON CABMEN.

Most people will allow that, immediately after getting into a cab, the first thought is about the "proper fare." If you know you are going to drive exactly two miles, and mean to give one shilling, you are prepared for the cabman's steady gaze at the coin, and you plan your escape from his remarks. But you may enjoy otherwise a drive in comfort, when you have positively determined to add a sixpence to the regular charge, and can therefore get out at the end with benevolent dignity. It is the doubtful distance that gives you real trouble in cab-driving, and a humiliating disclosure of your ignorance puts you in the cabman's power, by asking, at the end of a tortuous journey, "What's your fare?"

There must be a fine opportunity for the study of human nature in a cabman's daily intercourse with the various people who employ him, and perhaps a philosophic driver might be inclined to ponder much on the character of his "fares." Yet very few people ever find a word to say to the cabman, except about where he is to drive and what he is to charge, while we use the 5,700 cabs that daily and nightly ply in the streets of London. Perhaps it is little wonder that the off-duty habits and the inner life of the cabman class are scarcely known, and that a few persons only exert themselves to better the cabman's lot.

Much interesting information on this subject is to be found in an "Essay by John Cockram, Cabman," which obtained the first prize of a series offered lately by the "Cab and Omnibusmen's Sunday Rest Association." In this he tells us that of cabmen "the greater portion are those who have been in service, and that, too, the first in the land, from the strapper to the head coachman, from the under footman to the valet; another portion have to make this their last resource, from loss of character or health; and, lastly, there are those whom we may designate as 'countrymen,' more especially from the agricultural districts of Norfolk, Suffolk, and Cambridge." Besides these, there are men who have been "gentlemen, tradesmen, professors and mechanics, ex-soldiers, sailors, and policemen." Their attainments in education are extremely various; yet among them, we learn, "are those who speak the Queen's English, and who can distinctly pronounce the names Panopticon, Pantechnicon, or Panklibanon." It must be confessed that very little indeed is done to educate these poor fellows, and that hindrances are put in their way. "Let a cabman go to a bookstall—those eyes peeping from behind that shelf of books meet his, and he has a perfect stare; the bookseller immediately takes his stand at his elbow, and he is conscious of being an unwelcome guest, and unless he becomes a purchaser—if you may judge from the bookseller's expression—he is glad when you are gone." So, too, it is when a man seeks for lodgings. If he is known to be a "cabdriver," the landlady tosses her head, with a No! of proud disdain. All this is hard to bear. The "contractor," who is an owner of cabs, compels his drivers to sign an agreement to pay a certain sum per diem, varying from twelve shillings to a pound, and he can then exercise the tyrannical power of putting the defaulter in prison for any deficiency. "I have heard cabmen avow that they have bullied people out of treble their fare, justifying themselves by saying, 'My master won't trust me a shilling—there is a chance of them (the fare) not summoning.'" The "non-contractor" has a more lenient system, and behaves better to his men and horses, while others let out the cab to the driver for "what you can pay." The "morning man" goes out between the hours of 6 and 9 a.m. and returns between 5 and 8 p.m. The "night man" leaves between 6 and 8 p.m. and returns at the same hour next morning. It is calculated that, including all classes connected with the business,—drivers, stablemen, builders, trimmers, painters, wheelwrights, smiths, and farriers, with those dependent upon them,—about 60,000 persons are directly engaged or interested in the cab trade of London.

Before we speak further of the men, let us see whence come their horses.

Many of these are excellent horses, which have been sold hastily because they have jibbed, or stumbled, or kicked when "killed with kindness, pampered and caressed by their master, well clothed up, and fed to the full." A cabby hears that this sort of favourite is to be sold, and "does not care if he is scratched or has cut his knee,—sixpenny worth of tincture, and a little gunpowder and lard, will soon put that to rights;" so he gets him for £20—perhaps a sixth of the original price. The temper of such a horse is soon reduced by hard work and bad feeding. In the wettest night he stands in a cold wind, and on the hottest day he is chafed with the coarse harness; "while the gent inside the Hansom is sitting as far back as possible to avoid the scorching rays, the poor horse is often in untold misery." Then, again, there is the slippery mud, the hard pavement, the slush of a thaw, and the glassy road after a sudden freeze, when each stumble entails unnatural twists and struggles to keep up, and countless quick stoppages, wrenching the poor horse's muscles. "We might feel somewhat for him if we had to run on a hard road in cricketing shoes or to carry a heavy load in pattens." Every sort of trade or manual labour has, of course, its hardships, and we need not indulge in any maudlin sentiment when we recite the woes of a cabman and his horse. But as this particular calling is practised directly under everybody's notice and for everybody's comfort and convenience, it is the duty of all to give some attention to the evils of cabmen's condition, especially if those evils are very much caused by the habits of the public, and may be remedied by them. The fatal diseases and large number of deaths among cabmen may be caused partly by their being men originally of a weak or broken-down constitution, or partly by their vicious habits; but these evils are undoubtedly increased by the very nature of their occupation. "Our long-day-man goes on thinking it is not so cold as people make out, but, as the day advances, especially after he has changed horses, he finds that, notwithstanding his wraps, he is cold. He buffets himself till he is sore, and in this state he looks anxiously out for the next rank, where he can get down and have a run, though risking a summons for standing with more than the allotted number of cabs. He is at last, however, 'fair,' and then jumps off his box and indulges in a walk as far as the limited space to which he is confined by the care of his horse will admit. The weight of his clothes, however, soon tires him, and, as the cabs get off, he takes their place until he is first. He must now look out. He remounts, and often sits there until he seems a fixture. That blue face and those chattering teeth are an evidence that he is cold through, and if he has not gone to the public-house before, he is now ready to do anything to obtain warmth." He needs not go far; the gin-palace is at hand, and he whisks off a glass of spirits. Still, when he goes out and mounts his box, down pours the rain. He is giddy with cold, wet, and drink, and gets, perhaps, only a shilling fare; and again he is sent wandering through the bleak night; and again he tries to nerve himself with another "three penn'orth." He gets late to bed, having risen very early, and his wet coat is not dry by morning. Can we wonder that a man exposed to all this is rheumatic? "I know that very many are soaked to the skin

Digitized by Google

various parishes, till their heads are muddled; and with no hope of any payment for their trouble except the universal chorus of complaint from neighbours, whose rating it is their duty to raise in every single instance above what it has stood at hitherto. The Act says, "take the rent as it ought to be, and then allow for repairs." But where is the test of what the rent ought to be? A new valuation of the whole union by a competent surveyor would perhaps be the best thing. In some unions this means is adopted. But the great expense of surveying deters most committees from adopting it.

Nor is a surveyor the very best to be implicitly relied upon. Without local knowledge he would be liable to make mistakes, or to be imposed upon. One farm is seen at a favourable season and in fine weather; another at a worse season and in the wet. One farmer makes friends with him, treats him, walks with him round the farm, and shows him how much better his neighbour's land over the fence is than his own; another neglects or offends him. Where there is local knowledge, the danger of partiality and prejudice is all the greater; but what land really will fetch in a particular parish is probably better known by a farmer in that parish than by any surveyor or valuer.

So the committees often have to make their way as best they can without professional help, eking out information given them by the overseers with their own local knowledge. They have four general guides to help them. 1. The existing parish rate-book. This is some guide to the relative values of the properties in the parish. But it is generally so old, so faulty, and so far below the mark as to be of little use. 2. The county rate assessment. This, where the assessment is modern, may be a good guide to the total value of the properties in the parish. But here its usefulness ends, for it does not specify at all the values of individual properties. There remain; 3. The rent actually now paid, where it can be ascertained; 4. The return to the Income-tax under Schedule A; and these two latter are the only guides which will be found of much practical service. Rents, however, unless paid on a holding from year to year, are no good criterion. And even when the letting is from year to year, they are often fallacious as a guide to real lettable value. It only requires two rogues—one for landlord and the other for tenant, who may combine and understate the rent—to render the test worthless. Then, in the case of leases, the rent paid is often no criterion at all; and where land is occupied by the owner there is no rent paid. Here Schedule A of the Income-tax comes in, and is of some service as a check. But the return to the Income-tax is often incorrect. Sometimes the Income-tax paid upon several properties belonging to the same owner is lumped together. Some properties, as those held under charities, have no annual value returned under Schedule A, because the charities are exempt from Income-tax.

No doubt, rent paid from year to year, with the check of a reference to the return to the Income-tax, will prove the best general guide. But in some cases, even in rents from year to year paid in the same parish, there are glaring irregularities. Farmer A. holds under a small tradesman in the next town, who exacts the last farthing of rent the land will bear, and spends nothing on repairs; so that the tenant is paying in effect even more rent than he actually seems to pay, because he finds himself obliged to do certain absolutely necessary repairs which his landlord ought to do for him. Farmer B. holds a farm of equally good land under the Duke of X., as his father and grandfather did before him. He pays, perhaps, the same rent as was paid thirty or forty years ago, the land having since then almost doubled in value; and his landlord supplies him with first-rate buildings, and keeps everything in excellent repair. Where these glaring inequalities exist, an assessment committee will almost surely be compelled to depart from the usual rule of taking rent as the test of value. Farmer B. will be raised; he will be assessed to the relief of the poor on £500 say, while he is actually paying to his landlord only £400. Then will come the Income-tax collector, and referring to the assessment in the new rate-book, will insist on his deducting from his rent 500 sevenpences, and not 400 only. Thus the Income-tax may be expected to rise very considerably. But taking this to be a rare instance, and however much assessment committees may stick to the principle of never assessing a tenant above the actual rent paid, there still remains the vast quantity of land occupied by its owners. Upon these occupiers of their own land the neighbouring farmers are scarcely likely to have any pity. Their assessment to the new poor rate, and consequently to Schedule A of the Property-tax, must necessarily go up to something like the real present lettable value of their land, instead of remaining, as now it often does, nearly or quite at the low level of the old poor-rate assessment. From this class of holders, at any rate, Mr. Gladstone will derive an appreciable addition to the Income-tax. It is difficult to forecast how great this addition may be. But it seems not improbable that, on the whole, and in the course of a year or two, when the new assessments are completed and working, an addition not far short of £1,000,000 per annum may be realized by the Exchequer from these sources.

But the effect of the new assessment will not stop here. If the committee do their duty as they ought to do, many assessments on old properties will stand at a higher figure than the present rent paid. The Duke of X., in the case supposed above, will suddenly find that he is paying a landlord's Income-tax upon £500 a year for Mr. D.'s farm, while he is only receiving a rent of £400. This state of things will not last long. Farmer B.'s rent will be raised. And, indeed, putting out of sight this particular question of Income-tax, it can hardly be that a new valuation of this kind, accompanied by a general discussion of the value of properties, should fail to open the eyes of many landlords, and show them clearly that their land is let at an inadequate rent. So that the Parochial Assessment Act of 1862, besides effecting in the main (however imperfectly) its avowed object of equalizing the assessment to the poor-rate both as between individual and individual and between parish and parish, is likely to prove also a powerful engine for two purposes which the Legislature which passed it probably never contemplated: namely, first, an increase of the produce of the Income-tax; and second, a general raising of rents throughout the kingdom.

These results are by no means to be deprecated. It is quite right that the State should receive Income-tax upon the full annual value of all property, whether that full annual value is got out of it by the owners and occupiers or not. It is also quite right and desirable that the landlord should exact to the full a fair rent for his property. Low rents mean stagnation, indolence, carelessness, unthriftiness, and the absence of all improvement; and the State does well, as far as it can, to encourage every owner of land to insist on receiving a fair compensation from his tenants for its use. But these results have not hitherto been brought into notice in the public press, though many letters have appeared and much discussion has arisen upon the details of the working of the new Act. It is the desire to call attention to these important though indirect and future effects, which has caused us to devote this space to an apparently uninviting subject.

CATCHING A WIFE.

One of the liveliest occurrences of the week has been the action for libel brought by Captain Ramsay, of Morne Park, near Newry, against Captain Stewart, of the 42nd Highlanders, and tried before the Court of Queen's Bench on Tuesday and Wednesday. The plaintiff complained that the defendant had posted him "a poltroon and a coward;" and the defendant pleaded justification. But this issue, important as it was to the parties, derived its public interest from the romance of which the libel was only a collateral incident. In the annals of domestic scandal we have read nothing more curious. When a man marries, he involves himself in much more than a wife. He confronts the traditions, the prejudices, the likings and dislikings, the cabals, the mistrusts, the jealousies, hatreds, and rivalries of his bride's family. First and foremost there is her mother. Will she prove friendly or hostile? Will she counsel her daughter to be loving and obedient, or "put her up" to insubordination, and place at her disposal all the experience, the arts and subtleties by which she has succeeded in prostrating the authority of her own spouse? Or perhaps the young wife has a favourite aunt, or a beloved sister, or a dear female friend to whom she has been accustomed to look up. It may be that she has a whole army of friends who have taken a dislike to her husband, and who, thinking how much better it would have been if she had married some one else, are resolved to do their utmost to destroy the union which they cannot undo. To what precise agency Captain Stewart owed the defection of his wife it is difficult to say. But that some of her friends have been active in turning her against him no one who has read the report of the trial can doubt.

It appears that in 1857 Captain Stewart married Miss Frazer, the sister of a brother officer, who had served with him in the same regiment. Her friends were opposed to their union upon pecuniary grounds, but the lady loved him well enough to marry him privately. Mrs. Stewart was a relation, by marriage, of Archbishop Whately, and to his Grace's family the husband attributes the fact that the first half year of their marriage was not happy. There seems, indeed, to have been some attempt on the part of Miss Blanche Whately to correspond secretly with Mrs. Stewart. She was desirous, as that lady was going with her husband to St.

THE MEDLEY OF PORTRAIT CARDS.

MANY are the uses of photography; so many, indeed, that we think some of them at least may be dispensed with. Passing along any of our fashionable West End streets, one is surprised to find how intimate our manipulators in the new art seem to be with royalty. There is scarcely an attitude in which the Prince or Princess of Wales can stand or sit, that these gentlemen have not caught and "registered" for their own pecuniary profit. In the popular sense at least, "A divinity doth hedge a king," which the Court portrait-painters take care not to violate. A royal personage, of old, was either represented clad in steel, "with truncheon based on hip," or clothed in the imperial purple, with crown and sceptre, or other insignia of his rank. Let us look into the first booksellers' windows at the *cartes de visite*, and see the modern manner of treating royalty. There is the "true Prince" in what the police ignobly term a "billycock hat" and greatcoat, smoking a cigar to its very flabby last inch. Really, this is a free and easy style, which proves on what intimate terms the photographer must have been with his Royal Highness in order to have taken him in such an unguarded moment. Then we have his Royal Highness in a shooting-jacket, his Royal Highness at a writing-desk, a back view of his Royal Highness, a side view of his Royal Highness, and a view of the same illustrious person seated on the ground. Really, the heir-apparent must have been turned about and "posed," his arms arranged and his legs composed so as to form graceful lines, in a manner which proves that royalty is nothing better than a lay-figure in the hand of the photographer. We perceive that our royal sailor has fallen into the same manipulating hands. He has no sooner recovered from his fever than he is put through his paces to suit the purpose of the photographer. He smiles grimly at us with the bob of his cocked hat to the left of his nose,—he smiles pleasantly with the bob to the right of his nose,—he grasps his sword fiercely,—he leans upon it elegantly,—he comes before us playing with his hat,—he stands at ease crowned with the same brightly brushed chimney-pot. In short, the poor young prince, in his present weak state, must have been tired out by the wretched posture-master, who saw in every fresh attitude of the royal limbs the making of a good round sum. As for the poor Princess of Wales, when, we ask, will she be at rest? Why not publicly announce that the illustrious lady will appear in a series of *cartes de visite*, wearing the different articles of her *trousseau*? But we have still more tender ground to touch—the unwarrantable liberties taken with the affianced pair. Did the Prince clasp the fair Dane's hand of his own accord, or was this position only a delicate arrangement of the Belgian photographer? for we are glad to say no Englishman has yet dared so to offend against good taste. Or that jewelled white hand resting on the shoulder of her *fiancé*? Surely princesses, of the most gushing nature, do not do such things in public; and yet no photographer, one would think, would venture upon such an arrant impertinence of his own accord. But whether it be joy or grief affecting the Royal family, in some way the lens of the camera appears to spy into it in the most offensive manner. We protest, on the public behalf, against the unwarrantable manner in which those sacred feelings are turned to commercial account. Of course, if the inner life of Royalty is thus invaded, it is not to be supposed that humbler individuals will receive any consideration. Matters for the Divorce Court, we find, are made piquant by the publication of *cartes de visite* of the interested parties. In a window in Piccadilly, Mr. Boucicault simpers blandly upon Mr. Jordan, attired as a Mexican bandit, and Mrs. Jordan, adjusted in a triangular fashion, is seen smiling with maternal affection upon her sleeping infant. Pretty horsebreakers smile at us from every window, and ladies of the "easiest virtue," who find their "cards" obtain admittance to the best houses. It is but justice to the photographic art, however, to say that it plays into the hands of justice as liberally as it smiles upon vice, a fact of which the magnificent collection of *cartes de visite* of gentlemen that are "wanted," to be seen on the walls of the head police station at Scotland-yard, affords a sufficient testimony.

But the impartiality with which photography deals with all classes of the population, is perhaps its most remarkable feature. The true portrait gallery of the people is to be found in our shop windows. If misery makes us acquainted with strange bedfellows, photography throws us cheek by jowl in the same unceremonious manner. Mrs. Windham and Mrs. Fry, for instance, form a charming pair; and Bishop Colenso is seen serenely smiling in the midst of the bench of bishops. It is certainly a grand oversight that the Zuloo Caffre was forgotten in this happy family. Look again at Tom Sayers and Miss Nightingale occupying a corner of the window to themselves, the very archetypes of physical force and moral suasion. What odd people to crop up in this great picture gallery! What class of people, for instance, put Harry Boleno, the famous clown, in their albums, and why should tradesmen insist upon classifying Mr. Fitzball among celebrated authors? We must say that, as a class, authors are the worst represented of any in this pasteboard Valhalla. A foreigner would think our literature represented by half a dozen persons, whilst music and the Church deluge us with their second and third-rate representatives.

The value of the *carte de visite* as an advertising medium is, we perceive, not overlooked, especially by the great sensation preachers. For instance, there is Mr. Bellew, who appears to have exhausted every posture, in order to oblige an approving public. We remember his first likeness, in which he burst upon the town as an ethereal young priest in full canonicals, expressed in the most delicate floating drapery—evidently a copy from a drawing from some female hand. His later hebdomadal portraits represent the "curled darling" a little more substantially. Apparently tired of giving the public a full view of his sacerdotal legs, a last effort has been concentrated upon his vignetted head. And Mr. Spurgeon—why should we be admitted into the bosom of his family so familiarly? We have no doubt that the tenderest relations exist between him and his spouse, but what necessity is there for exhibiting the pair, in every shop-window, on a rustic seat in the midst of a wood? With respect to his many varied *cartes de visite* whilst in the act of preaching, we may perhaps be permitted to remark that if we saw a little more of "the wood," and a little less of him, it would be a great advantage, as an open rostrum does not set off his person well. The clergy are a little too fond of seeing themselves in the shop-windows. There is scarcely a pastor in the metropolis whose *carte de visite* is not to be seen in the booksellers' windows. We can understand a flock desiring a remembrance of their pastor, and a private circulation of such portraits may be excusable; but the world can feel no particular interest in preachers the world has never heard of. It may be a convenient fiction to excuse the publication of mediocre charity sermons, on the plea that they were put in circulation "at the request of some friends," but vanity can scarcely be excused so easily. On the other hand, the use of the *carte de visite*, in making us familiar with the features of those who have made themselves famous, is indubitable.

It seems as if we could not realize the nature of a man's sayings or doings unless read by the light of his countenance. When the mind is left to paint its own picture, how we idealize portraits! we cannot help it; we must match the appearance of the individual to the nature of his performances; and how often we find that our ideal and the reality are utterly opposed to each other, and what a confusion the discovery makes in the mind! But in these days the photographer does not leave us time to draw our ideal. If a general wins a battle on the other side of the Atlantic, a fortnight afterwards we find his portrait in our windows almost as soon as the news arrives. If a traveller discovers some unknown river or country, before the details of his journey are forwarded we are taking stock of his face in Regent-street. It may puzzle some people to know how the savages in the desert which he is still traversing, should know anything of photography; but the difficulty is explained when we remember that there is always some one—"a sister or brother," or one "dearer than all other"—who has cherished a miniature at home. By some unaccountable means the fact is sniffed by some pushing photographer, and before a week is over, the secret portrait, yet warm from some loving bosom, is scattered by photography broadcast over every European capital.

There are some photographic artists who lay themselves out for this line of business entirely; they take portraits of celebrities for the value of the negative. It must be clear that the copyrights of some individuals are more valuable than the copyright of any book. Those favoured members of the art who have managed to register her Majesty and other members of the Royal Family, for instance, make more by these transactions than they possibly could do by simply serving the public in their capacity of portrait takers. These Royal *cartes de visite*, be it remembered, are printed by the hundred thousand, sometimes by hundreds of thousands. Now, as the only expense incurred in their production is the labour of printing from the negative and the value of the prepared paper, the profit may be estimated.

But who shall estimate the value of the photographic art in a domestic and affectionate point of view? What rude means were only lately at our disposal for estimating the development of childhood! The mark behind the door kept a register of children's altitude, and there our power ended of putting on record all the

Digitized by Google

no doubt arose at a time when the old relations between a writer and his patron still existed in undiminished vigour, and when any "Lines by a person of quality" were sure of a respectful reception. But whatever may have been the time of its birth, it is pretty evident that in the minds of those who first acknowledge the rule authorship must have been held to be an innocent if not a useful occupation. Any one who appeared for a season as an author without undertaking the profession, conferred a benefit on society, or at least paid it respect; and this without being urged forwards by the hope of advantage. The amateur had at starting the advantage of popular admiration that he should become an author at all, and the admiration was only increased if it was discovered on examination that he was creditably filling the character. The sounder sentiment of the present day, which has long ago discarded this reason of the rule, ought to have thrown aside the canon itself. Indeed, it would be more in accordance with our modern notions if we reversed it and declared that the works of amateurs ought to be more severely scrutinized than those of professional authors. Since the publication of a book is now *primâ facie* an offence against society, and every author is required to justify his conduct and remove the suspicion of guilt which attaches to him, the amateur cannot put forward the plea in mitigation of sentence which can be urged by him who writes to live. No doubt all makers of books must be judged by the same principles; whether a book is good or bad must be determined without reference to the character in which the author makes his bow; but the measure of the punishment of the guilty may vary with the temptations of the offenders. When an indifferent book is published out of pure wantonness the offence cannot be palliated by extenuating circumstances.

Some such considerations as these are forced upon us in reviewing Mr. Senior's "Biographical Sketches." Mr. Senior is a man who has done the State some service, and on many accounts is deserving of honour. As a political economist, he has the merit of having written one of the few books in the English language treating the subject in a thoroughly scientific manner. As a practical reformer, the New Poor Law is a monument of his industry, his patience, and his acumen. The position of Master in Chancery was a fitting sequel to an honourable career as a conveyancer. But Mr. Senior has relieved these useful and laborious pursuits by writing an occasional article for the *Edinburgh Review*. During twenty years he has produced about half as many essays, which he has now collected in a single volume. Such a reprint is warranted by the practice of Mr. Senior's contemporaries, but the practice is a bad one. It follows, from the nature of periodical literature, that very few of the contributions to it merit preservation in a permanent form. Essays, which in the strictest sense of the word are occasional, should perish with the occasion that gives them birth. A reviewer, moreover, must be little, if at all above the standard of his readers, or a judicious editor will remove him from his staff; perhaps his highest function is to popularize the conclusions of some crabbed and solitary thinker. Most of the collections of essays which have appeared in such numbers within the last fifteen years, give us little more than second-hand facts and second-hand arguments, hesitating and deprecatory apologies for positions which have long ago been universally acknowledged as incontestable, or hasty and imperfect criticism of novelties not immediately apprehended. There is a rule of husbandry of which we are reminded in looking over such volumes; in almost every farming lease is found a covenant that there shall not be removed from the farm any of the straw produced upon it. Some such rule should be observed by quarterly reviewers. Their ephemeral productions should be allowed to rot peacefully into the common mind of the nation; if there be any grains possessing value, they will not be lost, but the far larger part, having discharged every useful function, will happily pass into oblivion. Mr. Senior is, as we have said, a man of note and ability, and we may freely apply these considerations to the volume before us. Is there in it anything more than commonplace passing criticism on a few men and books? We are compelled to answer, little or nothing. The volume contains articles on lawyers, political economists, and monkeys, and the last section—unfortunately a very short one—appears to be the only part which deserved to be reproduced. The essays on the elder Berryer and Tronson du Coudray throw very little light on the French Revolution; nor would a reader wholly unacquainted with the life of Lord King learn much of his character as a statesman and economist from the article devoted to him. A certain interest is attached to the narratives extracted from Feuerbach, the interest involved in unravelling great and obscure crimes; but those who are fond of such reading may not unnaturally prefer the narratives without the commentary, especially as they have been well translated by Lady Duff Gordon.

Mr. Senior uses Feuerbach's narratives as illustrations of the German criminal procedure, and he institutes a comparison between it and our own. The comparison is still instructive, although our process has been freed from some of its greatest flaws since Mr. Senior first wrote. Thus we have removed the stigma of incompetency which formerly was fastened on many classes of persons who might have been witnesses, and we now allow them to give evidence, and leave to the jury the task of estimating its value; but we still reject, as wholly inadmissible in criminal cases, the evidence of a wife or of a husband for or against the other, and in all cases the evidence of a person avowing a disbelief in a Divine Providence. In our worst days, however, we never went to the length of the German law in rejecting witnesses as incompetent, or in reducing suspicious witnesses to certain definite fractional parts of an unimpeachable witness. Mr. Senior writes:—

"Witnesses are divided into incompetent, suspicious (verdächtig), and sufficient (vollgutig). Children under the age of eight years, those who have accepted any reward or promise for their evidence, those who have immediate and certain interest in the success or failure of the prosecution, those who have been accused of calumny, of giving false information, or of perjury, and have been convicted or not fully acquitted, and those who, in any material part of their evidence, have been guilty of falsehood or of inconsistency, are all *incompetent* witnesses. Their evidence is to be rejected *in toto*. Persons under the age of eighteen, the injured party, informers (unless officially bound to inform), accomplices, persons connected with the party for whom they depose by blood, by marriage, by friendship, by office, or by dependence; persons opposed to the party against whom they depose by strife or by hatred; those who may obtain by the result of the inquiry any remote or contingent benefit; persons of suspicious character; persons unknown to the court, and those whose manner gives the appearance of insincerity or of partiality, are all *suspicious* witnesses. The testimony of two sufficient witnesses, stating not mere inferences, but facts which they have perceived with their own senses, amount to proof. That of one sufficient witness amounts to half proof. Two suspicious witnesses whose testimony agrees (*sic*) are equal to one sufficient witness."

From the table, four suspicious witnesses = two sufficient witnesses = proof, several remarkable arithmetical equations follow. We have, for example—

2 sufficient witnesses — 2 suspicious witnesses = ½ proof;
3 sufficient witnesses — 2 suspicious witnesses = proof;
7 suspicious witnesses — 2 sufficient witnesses = ¾ proof;

and an indefinite number of similar equations can be formed. From the embarrassment and failure of justice which might be caused by these rules, the German lawyers escape by employing such a strict and prolonged examination of the prisoner that he ultimately gives way to his inquisitors, and is convicted on his own confession; but the rules themselves, like those of our own law, are curious instances of the desire of mankind to escape from the independent determination of questions of difficulty by submitting to some arbitrary rule. Men are so affrighted at having to exercise judgment and discretion, that they seek help in the most pedantic regulations, and the attempts to fix the limits of conformity and private belief, of liberty and obedience, spring from the same idiosyncracy of humanity as the numerical measures of evidence. The case of Riembauer affords an example of the way German lawyers examine the accused in order to avoid the consequences of their own rules. The evidence against Riembauer, a priest accused of murder, would infallibly have produced a conviction from an English jury, but unluckily it amounted to only "half proof." A strenuous contest ensued between the inquiring judge and the accused. "For four years the contest continued. Riembauer endured ninety-nine formal examinations, besides confrontations with separate witnesses said to be innumerable. The depositions filled forty-two folio volumes." At the end of one examination, which took place on the anniversary of the murder, and lasted from 4 p.m. till midnight, Riembauer was suddenly confronted with the skull of his victim, but he endured even this test; and, in fact, the inquiry was closed and the results of the protracted investigation before the superior court, when Riembauer's body and mind both began to give way, and he confessed his crime. Cruelties of this kind, differing rather in form than in essence from the direct application of physical torture, make an Englishman unwilling to entertain the idea of allowing the accused person to give evidence on his own behalf, entailing, as that would, the necessary consequence of cross-examination. In discarding this, the former practice of our criminal courts, we probably err as much in one direction as the German judges do in another. If the object of a criminal trial be the detection and punishment of crime on the one hand, or the proof of innocence on the other, nothing can well be devised more likely to secure such a result than the sifted evidence of the person accused; the guilty would be unable to reconcile the contradictions of a fabricated story, the innocent would be able to supply a state of facts which would remove the presumption of circumstantial evidence. Our practice is wholly in favour of the guilty. The committing magistrate warns the accused person that he need not say anything, and if, after this caution, he makes a statement, his counsel at the trial is allowed to refer to it freely although it has not been attested on oath nor subjected to an examination; if his statement be false, it carries a weight beyond its desert; whilst, if it be true, it is denied its proper influence. It can scarcely be doubted, in spite of the nugatory result of the trial of Jessie McLachlan, that the conduct of it was much facilitated by the Scotch practice of examining the accused.

The rejection of the accused person as a witness is an innovation which has found its way into our law almost simultaneously with another—that of allowing persons accused of felony to employ advocates to conduct their defence. Both innovations seem to spring from the same conception of a criminal trial as a duel between the Crown and the prisoner, but they have met with very different acceptance from persons who have paid attention to our criminal procedure. There is a large consensus in favour of admitting prisoners as witnesses, but few would be disposed to doubt the propriety of the introduction of advocates. An able writer who considered the subject in the *Cornhill Magazine* some time ago, and who based his defence of the practice on the truth that the

Digitized by Google

belligerent tendencies of the nation with fuel. As the year waned, and hostilities between Russia and Turkey actually began, the unfitness of the Aberdeen Cabinet for the work of the day became more and more painfully apparent; and *Punch*, interpreting the all but unanimous feeling of the country, was exceedingly severe on the Premier. The cartoon for December 10th represents the Scotch earl performing in a circus as "the Courier of St. Petersburg." He is riding six horses *à la* Ducrow; but his trembling knees and irresolute face show a degree of perplexity which in no respect recalls the great master of the Astley's ring; and the horses are all in a jumble. Turkey and Russia are biting one another with savage viciousness; Austria is jibbing, with a hard and dogged mouth; Prussia is doing nothing in particular; and England and France are standing side by side, waiting to be off as soon as their incompetent rider shall have got his team into something like order. In a box above, Mr. *Punch*, addressing the Queen, says, "Really, your Majesty, this is very slow." On December 17th the Premier is shown quietly seated on a barrel of gunpowder, smoking the Pipe of Peace. In the caricature of the following week, Aberdeen appears as a policeman skulking behind a dead wall, while a party of Turks and Russians are fighting round the corner. Flushed and excited, Mr. *Punch* runs up to the guardian of the peace, invoking his interference; but he, sullenly settling his back to the wall, replies, "I shan't interfere till they call 'murder'!" At the same time, Palmerston was rapidly rising in public estimation as the real war minister, though it took more than another year to make him so; and *Punch* hails him in stanzas of rapturous panegyric, headed "Our Bottle-holder," as the pride and hope of England, the terror of tyrannical kings, and the universal champion of oppressed nationalities. Throughout the whole of the year, however, the tone of the sometime Radical satirist had been getting exceedingly Conservative and high-bred. The sketches of society are chiefly laid in the fashionable circles, and Mr. Leech's Belgravian "swells" disport themselves throughout the entire volume.

Of course, the coming war was the chief topic of 1853; but there were some other subjects of note, which are vividly brought back to our memory as we turn the pages. It was the year of "the Beard Movement," which may be said to have now become an Institution; of hat-turning and table-rapping, then in its infancy; of the strike of London cabmen, on the passing of Mr. Fitzroy's Act fixing the fare at sixpence a mile—a strike which resulted in London being without any hackney carriages for three days; and of the Parliamentary inquiry into bribery and corruption, in which Mr. Coppock and certain constituencies achieved an immortality of disgrace. The best political hit in the volume for 1853 is the proposal that electors should be put up to auction, for rival candidates to bid for. A cartoon shows us a drunken "free and independent," with his hat marked "Lot 231," and surrounded by would-be members of Parliament, who are being addressed by Mr. Coppock from his rostrum. On the opposite page is a specimen of the style of oratory of the political George Robins; and admirable is the way in which he brings in Magna Charta, the Bill of Rights, Hampden, Algernon Sidney, and Lord William Russell, to enhance the value of the elector.

The commencement of 1854 was signalized by the accusation made against Prince Albert of unduly interfering in affairs of State, more especially foreign affairs and the administration of the army. *Punch* took the popular side, as usual; but the excitement soon passed, and the war with Russia was the all-absorbing topic. By the spring the rupture was complete; the Guards and the Line were sent off to the East; politics came to a dead stand-still, and Lord John Russell abandoned his Reform Bill, literally with tears. But the war for some time hung fire, to the high indignation of the country, which accused Lord Aberdeen of treacherously endeavouring to baffle the Turks and support the Russians. The Duke of Cambridge, who had command of a division under Lord Raglan, lingered so long at Paris that Mr. *Punch*, in the character of Hector, rebuked him, in the words of Pope's "Homer:"—

> "Him, thus inactive, with an ardent look
> The Prince beheld, and, high resenting, spoke."

The Duke is languidly smoking his cigar on a sofa, and the looking-glass is stuck round with invitations to dinner at the Tuileries, *fêtes* at the Elysée, balls, &c. *Punch*, in antique casque and mantle, breaks in upon his Royal Highness's repose, and rouses him to a sense of duty. The army, however, remained inactive at Varna all through the summer; cholera thinned its ranks, and a gloomy and depressing cloud seemed to settle on the nation. Lord Aberdeen and Lord John Russell are depicted in one of the caricatures before us as a couple of old washerwomen. "When's the fighting goin' to begin, George-ena?" asks Lord John; to which no answer is given. In August, matters brightened a little with the visit of Prince Albert to the Emperor Napoleon at Boulogne, and we find *Punch* getting civil to the French ruler. September brought the battle of the Alma, and then, with the autumn and winter, came the operations against Sebastopol and the unspeakable miseries of that unhappy time. One almost wonders how a comic publication could have gone on at all under such circumstances; and indeed, as we turn over the latter pages of the volume for 1854, we find ourselves so saddened as to feel it a relief when we arrive at the end. It is like the reopening of old wounds, to read these grotesque records of suffering and death, of fatal incompetence and stupidity in high places, of noble heroism wasted, of Balaklava charges resulting in nothing, of Inkermann surprises that should never have occurred. Not that *Punch* treats of these matters in a tone of heartlessness. On the contrary, there are many sad and touching things in his numbers for the second half of 1854; and it is simple justice to say that the little satirist has generally been remarkable for the truly human warmth of his affections, and for the solemnity and tender reverence with which he has approached the trials and agonies of our nature. But the jester must jest; the satirist must satirise; the amusing fellow must amuse, even when every post brings tidings that, in the memorable words of Lord John Russell, are "horrible and heartrending." *Punch* certainly did so as little as he could help in that dreary December of 1854; but we must confess that the comic pictures and verbal jokes which his vocation compelled him to put forth become intolerable, when we recollect that our countrymen were at that very time perishing by thousands with cold and hunger in the wet Crimean trenches. And, now that the excitement of the contest is over, there is something not very edifying in the spirit of self-laudation and of facile underrating of the enemy, which was then considered the only way of being patriotic. Nor is it agreeable to find Mr. Bright, whatever his faults and mistakes, pictorially tarred and feathered for opposing the Russian war. *Punch* himself seems to have felt all this, and yet to have been unable to help falling into the mistakes which he deplores in others. In a notice of a stupid, clap-trap piece at the Haymarket, called "The Sentinel of the Alma,"—a notice written in the form of a letter from one of the characters,—we read:—

> "As the night grew on, the enemy thickened his fire, and I had to discharge jokes at the cannon-balls that rolled about me; jokes that I thought they ought to have hired the ape of the Zoological Gardens to crack, and not a live, human man. Jokes on bombshells at the same time that heart-strings are cracking in many a breast; that hot, scalding tears, big as bullets, are rolling down poor widows' cheeks! . . . . But, honoured Sir, I haven't come to the worst. You have heard and read how the rascally Russians have prowled about the battle-field killing and stabbing the wounded,—the very devil's wickedness. But, honoured Sir, isn't it the cowardliest work in the world to deny to the enemy even the common feeling that bulldogs and mastiffs have? Do we make ourselves the stronger by showing the Russians to be a set of cowardly braggarts and runaway poltroons? And yet, Sir, I had to do this in the Haymarket on that awful night of the 18th."

Strange to say, "jokes on bombshells" (such as the woodcuts called "A Little Dinner at the Crimean Club," and "Evening Party at Sebastopol"), and frequent sketches "showing the Russians to be a set of cowardly braggarts and runaway poltroons," are to be found in close proximity to this very protest! Such is the self-ignorance inseparable from a state of national excitement.

We have now gone through the volumes of *Punch* from 1849 to 1854. They give us a very high idea of the wit, humour, fancy, quickness of observation, readiness of application, and knowledge of men and affairs, which have built up the reputation of this unique periodical, and made it a veritable power in the State—nay, a power which foreign potentates have often winced under and dreaded. We must confess that the earlier volumes seem to us superior to what we see from week to week now. Mr. *Punch* has lost the best of his literary co-labourers. The passionate ardour, nimble wit, and almost poetical fancy of Douglas Jerrold,—the fine sense and satire of Thackeray, cutting with acid sharpness into every subject that he handled,—and the pleasant verbal drollery of Gilbert Abbott à Beckett,—have not as yet been succeeded by anything equal to those triumphs of an earlier day. People will read *Punch* several generations hence, as we now read the *Spectator* and *Tatler* of Steele and Addison; or, if they do not, it will only be because the bulk of the work will render it difficult of access, and hopeless to reprint. But at least it will always be appealed to and quoted from, as the liveliest and completest picture in existence of English manners and opinions in the middle of the nineteenth century.

BELL ON FEUDALISM.*

THE compiler of this manual has brought together, in a convedient compass, the most striking features in the history of feunalism. He has shown what that system was in the abstract and in the concrete, has laid bare its essential principles, exhibited it in operation both in individuals and nations, pointed out the peculiarities of its various institutions, and adduced many of the most salient pages of history to illustrate its nature and tendencies. In addition to all this, he has culled from a goodly number of eminent writers some of the most pithy and memorable things that have been said concerning it, and given those who have but commenced its study an idea of the pleasure that awaits them when they shall be able to puruse it to greater lengths under the guidance of such philosophical historians as Sismondi, Montesquieu, Stuart, Robertson, Hallam, and Guizot.

The topic Mr. Bell has chosen is worthy of all his pains. It ranges over many centuries of the Christian era, traces the progress of society from barbarism to civilization, supplies the link, or series of links, connecting ancient with modern times, unites and mingles in these links every variety of pure metal and alloy, and has, at

vate romantic imaginations: we can pass the drawbridge of the baron's frowning stronghold, and be ushered by pages into the palatial hall or the sunlit area, where bright-eyed dames and damsels are seated on a dais, or raised part at one end, while gallant knights, half-armed, are standing beside, and listening to the graceful and voluptuous poetry of Provence which troubadours in the musicians' gallery are singing in alternate strophes; or laughing merrily at the feats of jugglers and wandering minstrels who mingle music and buffoonery on the sward in the centre of the court. Retainers and domestics share freely in the mirth of their lords; and some pilgrim perchance from the Holy Land comes in to vary the scene, and, laying down his staff and hat with scallop-shell, narrates to wondering auditors the prodigious exploits of valiant crusaders, and the all but miraculous discomfiture of Paynim hosts. From the castle we turn to the tournament. We join the gaily dressed throng pressing eagerly towards the place of rendezvous along the dusty roads, amid fair matrons on ambling palfreys, and knights with large bands of mounted followers on richly caparisoned and prancing steeds. The lists are prepared; squires and yeomen, in rich liveries, are busy in attendance; heralds and pursuivants are running to and fro; the laws of tourney are read and the tilting begins. Antagonist knights pace the arena, and every eye in the crowd is fixed on their proud bearing and the badges emblazoned on their shields. The marshals give the word of onset; the trumpets sound; lances are shivered in the shock of conflict; the weaker are unhorsed; and ladies' hands shower bouquets and scarves on the victors. The banquet follows; the combatants sit side by side, and drown their rivalry in flagons of malvoisie.

But we are not deceived by the momentary enchantment. The picture has another side; and when we remember that those feudal lords were, for the most part, ferocious despots, that the labourers, or villans, were bought and sold as portion of the live stock of an estate, that the highest aim of female education was embroidery and playing on the virginals, that witchcraft and manifold superstitions held dominion over the popular mind, that learning was confined to monasteries and a few of their inmates, we are brought, however reluctantly, to the conclusion that, although the feudal polity was in one point of view a scheme of civil freedom, though the feudal law-books breathed throughout a spirit of mutual obligation, though the reciprocal services of lord and vassal gave scope to every magnanimous and disinterested energy, and engendered in the people loyal sentiments, yet, on the whole, the ages of romance were ages of unbridled passion, and the "good old times" were good only in relation to worse that had gone before.

GUDRUN.*

Readers would have more than enough to do if they undertook to read half the books which reviewers taste and praise for them. Reviewers themselves can hardly keep pace at times with books all the year round crowding and hurrying from the press. Still harder is it occasionally to make praise discriminating and emphatic. For there are so many cases in which commendation cannot without injustice be withheld, and the terms in which it is expressed become so trite that when we would fain signify very hearty praise we are at a loss how to do so. A difficulty of the same kind is sometimes felt in the intercourse of daily life from the vulgarization of all terms and phrases expressive of affection; and still more seriously in the special life and business of the religious teacher, who finds the words he wants for the utterance of his best convictions and desires familiar, technical, and dead.

Praise, hearty, emphatic, and unmistakeable is what we wish to give to this story of "Gudrun." The book is, both in substance and in form, most dainty and delightful. The green and gold cover; the stiff cream-white paper, the sharp clear type, the quaint title-page, head-pieces, and tail-pieces, and, last not least, the exquisitely graceful frontispiece,—a photograph from a sketch by Mr. J. Noel Paton,—form the attractive dress and adornment of one of the most charming of tales. The tale, as Miss Letherbrow gives it to us, is a prose version of the mediæval German poem, known as the "*Gudrunlied*,' which was founded upon Danish traditions of much earlier date, and is only inferior in importance and interest to the great Niebelungenlied. One copy only is known to be extant, and since its discovery, in 1820, in the castle of Ambras in the Tyrol, critics have been contending about its value, and some have rejected very large portions of it as spurious. For those readers who may care to know something of the historical and critical value of the Gudrunlied Miss Letherbrow has written an introductory essay, which we hope few will "skip." It is full of eloquence and fine feeling:—

The chronicle of Gudrun opens as follows:—

"In old times there lived in the land of the Hegelings, which lay on the shores of Friesland, a mighty king, Hetel by name, who had wedded the daughter of Wild Hagen, King of Ireland. To this noble couple was born a daughter whom they called Gudrun, and so fair was she, and of such gracious bearing, that the old felt young again when they looked upon her, the sad-hearted learned to smile, and the roughest grew gentle in her presence. While she was but a child in years the fame of her beauty spread to many lands, and kings and nobles of high degree sent to entreat her hand in marriage. But King Hetel was haughty, and his wife Queen Hilda still prouder of heart; and wooer after wooer was sent away from the Castle of Matalan, often with words of discourtesy and scorn; and these rejected ones vowed vengeance against King Hetel. Some even threatened him in his own hall; but Hetel recked little of their threats, deeming himself beyond power of harm in his strong burg at Matalan, and in truth there was no richer nor mightier king than he."

Hetel had also a son, Ortwin, and had given him in charge to one of his five vassals, Wat, Earl of Sturmland, a grand old warrior who is "worth a kingdom." Hetel and his queen received as guest, Siegfried, King of Moorland, and made great cheer for him and his knights twelve days; but when he asked Gudrun as his wife he got a firm refusal. "So he called his men together and rode away from Matalan, swearing bitter dole to the stiff-necked king of the Hegelings." Next came a band of sixty knights, well-mounted and richly apparelled, with letters from Hartmut, son of Ludwig, King of Normandy, asking for the hand of the fair Gudrun. But Ludwig had been vassal to Wild Hagen, and had broken faith with him: so Hilda would not hear of Hartmut as a spouse for her daughter. And the Normans rode home with the bad tidings. Hartmut did not despair, but bid his earls "call together their fighting men and make ready to fall upon the Hegelings." This was the source of the sorrows of Gudrun. Hartmut, however, visited Matalan, and then, failing in his secret suit, prepared for war. At the time of his visit came a fresh wooer, King Herwig of Zealand, "a brave sword, comely withal and of ancient race." He, too, was rejected, and vowed revenge, and in three months led his Zealanders to war with Hetel. There was a single combat between Hetel and Herwig which Gudrun looked on at with fear and pity, and at last by loving intervention ended. Herwig was allowed to declare to her the purpose of his coming, and thus he spoke:—

"'I sought you for my wife. They told me I was too poor for you. I wot well I am poor and plain beside you, sun of my life; but oft have the rich found joy and content under a poor man's roof.'

"As he spoke, he stood before her fearless and open-browed, fair as a picture worked out carefully by a master-hand, on a snow-white parchment; and the king's daughter answered him:

"'Who could despise you that saw you fight as you did even now, and for a woman's sake? If they said I scorned you, it was false. No maid could bear you greater good-will than I; and if my friends were willing, I would gladly abide with you for ever, and hold myself honoured to be your wife.'

"'If you deign to love me, fair maid,' answered the knight, "I swear to be kind and true to you always, and to do your pleasure in all things.'

"'Gladly will I give you my hand, dear knight,' said the maiden; 'and you shall ever find me a true and loving wife.'

"Then she bade them fetch the king and queen; and when they were come she told them she wished herself no better man for a husband than Herwig, and prayed them not to cross her will; to which they answered that they desired, before all things, her happiness; therefore they would willingly receive Herwig as their son. So the strife was ended with two gold rings, and Herwig could kiss his betrothed on the mouth; and I know not how many kisses he took to seal the bond. Would to God that all fighting came to such a happy end!"

The wedding was put off a year to prepare dresses for the feast and the crowning. "Woe was the day! For their women's whims and finery many a brave knight paid with his life upon the Wulpensand!"

Meanwhile Siegfried made war on Zealand, and Herwig hurried to meet him. Hard pressed he sent for help to Matalan, and help was speedily given. A bloody battle was fought, which lasted twelve days, and then Siegfried and his men fled in the night and entrenched themselves in a fortress by the sea. For months the Hegelings watched outside the burg, and had no hope of success except in starving out the foe. To while away the weary time swift Horand sang the story of Hetel's wooing. The song was interrupted by evil tidings—how Ludwig of Normandy and Hartmut had sacked the town of Matalan, burnt the ships, and plundered the castle, carrying off Gudrun into captivity. Herwig wept, and the knights with him; but Wat of Sturmland growled, "Away with tears! They may do for women, but ill beseem valiant men." By his advice they make peace with Siegfried, who joined them in the pursuit of the Normans. Horand beguiles the sorrowful hearts of the knights as they gather round him on deck in the still cloudless night, by finishing the lay of Hetel's wooing. At last they reached the Wulpensand, "a lonely island where the screaming seagulls built their nests and the wild winds blustered both summer and winter." The Normans had put in there with the captive Gudrun and her maids. The battle began in the waves, the Hegelings leaping from their ships and the Normans rushing "breast-high into the waves to meet them." The sun set and darkness fell on them and the battle was not decided. So they lay down to sleep. Hetel, unable to sleep, wandered about the camp at midnight, and saw Ludwig standing by a watchfire. He challenged his foe, and when the squires had made a great fire of pinewood on the shore—

"The two kings, who had armed themselves, stepped up close to one another, and each measured his foe with angry eyes, clutching his sword with deadly purpose. In girth and stature they were as well matched as if they had been twins; from childhood they had hardened their sinews in hunting and battle; their fists were iron, their thews were steel; each had looked death in the face a hundred times. For a while they plied each other with swift sword-strokes that flashed like lightning in the glare of the fire, but they were both so skilful in the use of the shield that neither could find a

* Gudrun. A Story of the North Sea. From the Mediæval German. Edmonston & Douglas.

elections were a preparation for the others, and gave token of that revival of the Liberal movement which is now taking place in France. At the beginning of the month the French Academy had two elections to make. There were two candidates who grounded their claims solely on their literary merits; these were MM. Littré and J. Janin; while their two opponents, MM. Dufaure and Carné, asserted their political claims. Looking at matters purely from an academical point of view, there was no ground for any hesitation. M. Littré is the author of "L'Histoire de la Langue Française," and of the "Dictionnaire de la Langue Française," which we have already had occasion to commend. Independently of his other works, these two should have particularly recommended their author to the French Academy, the accredited guardian of the traditions of the French language. M. Dufaure, who was one of the most noted Parliamentary orators under the late *régime*, is now one of the leading counsel at the bar in Paris; but he has not written any books. As for the other pair of candidates, M. de Carné could point to some political essays, and to several works on Syrian history, of little real talent, but he chiefly recommended himself to the majority of the Academy by his faithful attachment to Liberal political principles. M. Jules Janin, on the other hand, is a writer, not certainly one of the purest and most academic school; but his life has been wholly devoted to letters; he may rest his claims upon his recent book, "La Fin d'un Monde et le Neveu de Rameau," and upon his clever translation of Horace. The choice here was more difficult. But in each case the election was entirely political, and literature was but very little considered. Bishop Dupanloup decided between M. Littré and M. Dufaure. He determined the choice by a somewhat ultra-academic proceeding. Some days before the election, Monseigneur Dupanloup put forth, under the title of "Avertissement aux Jeunes Gens et aux Pères de Famille," a vehement manifesto against M. Littré. Not that the episcopal Academician attacked the literary pretensions of M. Littré; he took good care not to do that. But he denounced the religious, moral, and political doctrines of the candidate. It is to be observed that M. Littré is one of the most zealous partisans of the *philosophie positive*, and that he also belongs to the most advanced democratic school. The Bishop of Orleans pointed this out. The free-thinkers and the democrats, in the journals of their party, protested against the Bishop's conduct, and some of them asked whether a confessional ticket from the Bishop of Orleans was necessary to gain admittance to the Academy. In consequence of this scandal, however, M. Littré's candidateship gave way, and M. Dufaure, the Orleanist, was elected. The Academy having thus yielded once to political influence, the second election had the same fate as the first; and M. Carné, the faithful partizan of those Parliamentary opinions which predominate in the Academy, was preferred to M. Jules Janin, who is only a writer.

We cannot be surprised that little attention has been paid to literature in a month so devoted to electioneering business. The list of works of which we have to give an account is, in fact, neither long nor important. We may first mention, in the department of Greek literature, an excellent work by M. Havet, Professor in the College de France, being a translation of the finest orations of Isocrates, to which M. Havet has prefixed an introduction, written with a masterly hand. Isocrates belongs to the last epoch of the existence of free Greece, a stirring time, full of the struggles of the Greek cities, which ruined each other for the profit of Philip of Macedon. It was in Athens that this accomplished orator lived,—in Athens, the only one of those republics which we know well, because it has left us a literature which we still read, and because it was pre-eminently the city of orators, where thought and speech were always associated with action. If, then, we are interested in Athens, we ought to be interested in Isocrates. M. Havet, in the work before us, not only makes us acquainted with his personality and with the sphere in which he moved, but he points out how the delicacy, the elegance, the dignity of Isocrates' discourses are the reflection of his moral virtues, gifts which place him, though lacking a mighty genius, far above mediocrity. Such does Isocrates appear to us in M. Havet's beautiful introduction, and in the translations themselves. His book is a work of sound erudition and of refined taste.

We pass from the decay of Athens to that of Rome, in noticing the two volumes which M. Serrigny has devoted to the "Administration of the Roman Empire in the Fourth and Fifth Centuries." M. Serrigny is not, properly speaking, an historian, but a learned and sagacious student of jurisprudence. His book does not present a picture of the administration of the Roman empire at that period, but a series of interesting studies regarding each branch of the Roman administration—the civil service, the army, the navy, the financial department, and the condition of the people. This book is composed in sections and paragraphs, like a code of laws. In a literary point of view, this division is wearisome, but it is very convenient in a scientific point of view. The works of M. Serrigny will take a high place among the host of books on the decline and fall of the Roman empire, at the head of which are the splendid works of Gibbon in English, and of MM. Guizot and Amédée Thierry in French.

Of new works illustrative of modern history, we may mention two—on subjects of a very different nature, but which contribute to make known the social condition of the eighteenth century. One is entitled "Emmanuel de Swedenborg, sa Vie, ses Ecrits, et sa Doctrine," by M. Matter; the other is called "Le Maréchal de Richelieu et Madame de St. Vincent," by M. Mary Lafon. Swedenborg, the visionary, the founder of a new church, and Richelieu, the type of the *grand seigneur* of the Regency, are subjects which certainly have not much in common. These two biographies are suggestive of very different tendencies of taste and sentiment. It is the mania of spiritualism, pretending to communicate with the other world, which brings us back to Swedenborg; and it is the literary fashion of the *demi-monde*, the portraiture of manners between elegance and depravity, which recalls us to the hero of the Regency. There are few characters in literary history more singular than that of the Swedish mystic. The life and writings of Swedenborg present only a collection of strange contradictory phenomena. A theosophist, who has his own peculiar ideas and language, but who never seeks to make proselytes; a writer of extreme fecundity, but one who, employing an ingenious method and extensive scientific knowledge, disdains every species of human authority; a philosopher who despises visionaries and enthusiasts, who is the adversary of error, credulity, and superstition, yet who relates a vaster succession of extraordinary visions than any other man,—one who utters his oracles as a prophet, who announces dogmas, and who describes transcendental scenery; and all this in a most sceptical and incredulous age—the age of the imperturbable Kant at Konigsburg, and the sarcastic Voltaire at Ferney; this is a character that well deserves study, especially after all the recent experiments upon somnambulism, magnetism, and the hankering of a certain class after spirit-mediums, which have so nearly put us into communication with the kingdom of darkness. M. Matter, in order to make us understand Swedenborg, begins by collecting with care all the facts which theosophy, mysticism, and the history of apocalyptic studies can afford. He reviews the chief precursors or rivals of Swedenborg in Germany, in England, and in France. The recital of the life and the analysis of the works of Swedenborg occupies the greater part of the book. We see how the learned explorer of mineralogy became suddenly the exponent of ultra-spiritualism. The heavens are open to him; his spirit conquers space, and time is not. He knows what is done in the moon; and a person dead three thousand years before gives him the information that "the spiritual inhabitants of Jupiter are more honest than those of the other planets; the inhabitants of Venus are stupid giants, who do not trouble themselves about heaven or the life to come!" Socrates and the first Apostles reveal to him their secrets. Lastly, the most important of his writings—such as "The New Jerusalem" and "The Heavenly Doctrine," or the "White Horse" (spoken of in the nineteenth chapter of the Apocalypse)—are direct revelations from on high; they contain the spiritual sense of the divine word, which has hitherto only been interpreted in its human, worldly sense. The actual propagation of the spiritual sense commences an era of regeneration and restoration,—Emmanuel Swedenborg is a Paraclete! This is the supernaturalism which M. Matter sets before us. . . . . But he draws no conclusion, and affirms nothing. We will here follow his example. Let us descend from the heights of these lunatic visions into the *chronique scandaleuse* of the French Court of the 18th century. It is thither, in fact, that M. Mary Lafon's book conducts us. It treats of a lawsuit brought against le Maréchal Duc de Richelieu, at the close of his life, by one of the *grandes dames* de St. Vincent, the great-granddaughter of Madame de Sévigné, but sadly degenerate, who, after having been repudiated by her husband, passed, with more or less liberty, through the convents of Millau, of Tarbes, of Poitiers, and of Paris, ending in the Bastille and under the bolts of the Chatelet. This woman, who was something worse than frivolous, by means of trickery took advantage of her connection with the Duc de Richelieu, to forge bills upon him to the value of 500,000 francs. The lady and her accomplices were arrested; trials and lawsuits followed, which lasted four years, and kept all France and Europe on the *qui vive*. What! a marchioness, the wife of a president of the Sovereign Court of Aix, to have turned forger, and with a major of the Dauphin's regiment, and with stock-jobbing lawyers, Abbés, and Jews, to have leagued against Louis François Armand du Plessis, Duc de Richelieu, peer and Marshal of France, first gentleman of the Chamber to his Majesty, Governor of Guienne and Gascony, and a member of the French Academy! Was not this sufficient to account for the sensation? M. Mary Lafon informs us, however, that it was not only the amount of the booty, and the quality of the persons, which excited so much interest, but there was a struggle going on between Parliaments and Royalty. The Duc de Richelieu had helped the Chancellor Maupeou in breaking up the Parliaments; and thence the vengeance of the Parliament of Paris. The Duc de Richelieu with difficulty escaped, although he had the right all on his side. Such is the subject of M. Mary Lefon's book. It contains the infamous history of the connection between Maréchal Richelieu and Madame de St. Vincent, which is, we must say, by no means edifying. M. Mary Lafon tells us, at the end of his preface, that the real facts of this affair transcend the fictitious accounts; he assures us that he has not added a single circumstance to those set forth in the documents which have come under his inspection. We are quite willing to believe M. Lafon, but we may observe that there are some hideous pages of history which are best left unread. We will wind up by noticing two pleasanter works; one is by M. Lannau-Roland, entitled "Michel Angelo et Vittoria Colonna," and the other is "Madelon," by M. About; it is his last new novel. Michel Angelo is less popularly known for his poems, and his devoted attachment to Vittoria Colonna, than for his masterpieces of sculpture or of painting. Vittoria Colonna, one of the celebrated Italian ladies of the time, was to Michel Angelo what Beatrice and Laura were to Dante and Petrarch. The book of M. Lannau Roland, we observe, consists of a new biography of

Digitized by Google

Pentateuch; but his desire is to know what *is* true in it and in the Bible generally. In his reference to the clergy, he acted strictly in self-defence. He believed that many of them, and not a few of his episcopal brethren, did not accept the story of the Noachian Deluge as literally and historically true; yet they justified themselves in retaining their offices in the Church. If his conduct was "dishonest" in retaining his, so was theirs.

He then turns to the letter addressed to him by the Bishops, requiring him to resign his see, on the grounds (1) that he no longer believed "unfeignedly all the canonical Scriptures; (2) that he could not use the Ordination Service, which requires such belief; (3) that he felt himself precluded from using the Baptismal Service and other offices of the Prayer-book, unless they omit such passages as assume the truth of the Mosaic history. On the first and second of these points the Bishop defends himself by pleading the late judgment of Dr. Lushington in support of his view that the words "believe unfeignedly all the canonical Scriptures" must be taken to mean no more than a simple expression of a *bonâ fide* belief that "the Holy Scriptures contain everything necessary to salvation," and that "to that extent they have the direct sanction of the Almighty." Upon the third point, he says that if clergymen who disbelieve the historical truth of the Noachian Deluge may freely explain to their people their opinion respecting the Biblical account of it (as it seems from the same judgment they may), they may still be content to read the allusions to it in the Liturgy. Others, of more scrupulous conscience, he would advise to *omit* such expressions, and take the consequences of such omission; quoting for such advice the authority of the Archbishop of Canterbury, who, in his place in the House of Lords on the 1st instant, stated that "he had been consulted frequently" by clergymen who had conscientious scruples against using certain words of the Burial Service in particular cases, "in which, however," Dr. Colenso observes, "by the *law* and by their ordination *vows* they were required to use them;" and that "he (the Archbishop) had said this, *that nothing would induce him to pronounce these words*" in such cases—"*he would stand the risk of all the penalties of the law rather than do so.*"

He proceeds:—

"This, then, is what I meant when I contradicted, publicly, the assumption of my episcopal brethren, that with my present views I cannot use the language of the Baptismal and Ordination Services. I *can* use that language, provided that I claim it as my right, as a minister of the National Church, and lay it upon myself as a duty, to explain freely and fully to my people in what sense I use it. And what are others doing in this respect? How does my conduct differ essentially, in respect of honest adherence to the principles of the Church of England, from them? The Bishop of Oxford was the *first* to issue a letter of inhibition, after my reply to the address of the Archbishops and Bishops. Not, then, in his personal capacity, but as a representative of those who have followed him in adopting this extraordinary mode of public Church censure,—upon the mere judgment of each individual Bishop, without any hearing or trial of the accused,—I would ask the Bishop of Oxford, before my fellow-countrymen, Does *he*, a Fellow of the Royal and other scientific societies, believe unfeignedly in the literal historical truth of the account of the Creation, the Noachian Deluge, or the numbers of Exodus? If the Bishop will say that he *does* 'unfeignedly believe' in all these matters, as related in the Pentateuch, of course I have nothing more to say as regards this part of my argument. But if he does not, then how, I repeat, does his present conduct differ essentially from mine? *He* has some way of explaining these matters, which satisfies his own mind, as I have. And the only difference is this, that I think it to be my duty, and shall make it my practice, to tell my people plainly, on such points, what I believe, and what I know to be true; and the Bishop of Oxford has not yet, as far as I am aware, thought it necessary to say what he really thinks upon any one of these subjects."

Dr. Colenso expresses his astonishment that the Archbishop of Canterbury should have spoken of his book as "derogatory to the person, the attributes, and the work, of our Divine Redeemer," and as "charging Him, who knew what was in man, with ignorance and imposture;" and that the Archbishop of York should reproach him with "having imputed to the Lord of Glory ignorance of holy things;" and "having described our Lord as a blind guide, quoting for the very Word of Life the baseless fables of men." He says that in speaking of our "Lord's ignorance as the Son of Man," he was perfectly justified by the practice of the most eminent theologians, ancient and modern. He then quotes a letter addressed to him by the "Rev. W. Houghton, Preston Rectory, Wellington, Salop," in which the writer says (1) that the doctrine of our Lord's ignorance as man is expressly taught by our Lord himself; (2) that it has the sanction of very many Biblical writers, both ancient and modern; and (3) that it is implied in the language of the formularies of our Church. In support of the first position, the writer quotes Mark xiii. 32, where our Lord says, speaking of the destruction of Jerusalem, or of the end of the world, "Of that day and hour knoweth no man; no, not the angels which are in heaven, *neither the Son*, but the Father." That this implies ignorance in the second person of the Blessed Trinity *as man*, the writer quotes, amongst the Patristic writers, Leontius, St. Ambrose—who, however, only admits that the doctrine was held by many, "not quite so timid as I am," but says, "I had rather fear deep things than be wise about them,"—Gregory Naz., Theodoret, Athanasius, Cyril, Chrysostom, and Augustine, who, with the theologians of his day, interpret the passage to mean, not that our Lord was ignorant of the day, but was unwilling to communicate it. Amongst modern theologians, the writer quotes Hammond, Lightfoot, Bishop Horne, Waterland, Dean Alford, and Professor Harold Browne. In support of the third point, he quotes the 15th of the Thirty-nine Articles, which teaches "that Christ in the truth of our nature was made like unto us *in all things*, sin *only* except." The statement from Luke ii. 52, "that Jesus *grew in wisdom*," &c., is also insisted upon in support of the doctrine of His ignorance as man.

The preface closes with some comments on the Report of the Committee of Convocation appointed to examine Parts I. and II. of Dr. Colenso's work. The Bishop objects that the Committee has not reported that his criticisms are *unfounded* or his conclusions *false*. "They do not impeach the scientific *truth*, but only the *orthodoxy* of my reasonings; they leave to 'individuals' the business of replying to my books; and they say 'the work of a synod of the Church is of a different kind.'"

The Committee selects four propositions on which they condemn the Bishop's work—

(i.) He has said that "the Bible is not itself God's word." The Bishop replies that he has said that "assuredly God's word will be heard in the Bible by all who will humbly and devoutly listen for it;" and he quotes Dean Milman, who, in his "History of the Jews," p. xi., writes, "The moral and religious truth, and *this alone*, I apprehend, is the 'word of God' contained in the sacred writings."

(ii.) He has said that "Not Moses, but Samuel, and other persons of a later age, composed the Pentateuch." To this he again replies by quoting Dean Milman's work, p. xxvii., where the Dean declares himself to be of the opinion of those who believe "that the Pentateuch, even in its present form, is of very high antiquity, as high as the time of Moses, but that *it has undergone many interpolations, some additions, and much modification*, extending to the language, in successive ages."

(iii.) He has said, that "the story of the Pentateuch, with respect to some at least of the chief portions of the narrative, cannot be regarded as historically true." He replies by quoting Dean Milman (*ibid.*, p. xxxii.), who writes:—"Maintain the numbers [of the Pentateuch] as they stand, I see no way, without one vast, continuous miracle, out of the difficulties, contradictions, improbabilities, impossibilities."

(iv.) The Committee condemn the Bishop's proposition imputing ignorance to our Lord in his human nature as one which "questions our Blessed Lord's Divine knowledge as witnessed in Scripture by the Holy Ghost." Dr. Colenso replies, that with regard to this proposition, he is supported "by the consentient opinion of very many of the greatest divines, both ancient and modern."

We have thought it right to refer thus at length to the preface, that our readers might be in complete possession of Dr. Colenso's view of his present position up to the issuing of the third part of his work. We now proceed to the book itself.

Chapter I.

In this chapter Dr. Colenso proceeds to consider the age and authorship of the book of Deuteronomy.

He observes that there can be no doubt that the book "is throughout the work of one and the same hand, with the exception of the last chapter, and perhaps one or two other short sections (such as xxxii. 48–52)."

But its style and contents exhibit a marked difference from those of the other books, which are occupied almost entirely "with long details of legend and history, with circumstantial directions for the construction of the Tabernacle and its vessels, or with multiplied repetitions of the minutiæ of the ceremonial law." The book of Deuteronomy, on the contrary, is, almost from beginning to end, "one magnificent poem, or collection of poems, ... enforcing, in tones of earnest and impassioned eloquence—now with the most persuasive and touching tenderness, now with the most impressive and terrible denunciations—the paramount duties of morality and religion."

This difference suggests strongly the conviction that it and the other books "cannot have had the same author or authors."

"But it may, perhaps, be asked, 'Was not Moses himself capable of producing such a book as this?'" May he not, "with his feet already standing on the verge of the eternal world, and his spirit's eyesight straining into the darkness that lay before him" have "gathered up the manifold and wonderful experiences of his life, in this last burst of grand, heart-stirring oratory?" [Such an argument would be plausible] "if we had not already seen sufficiently that the story of the Exodus, generally, cannot be regarded as historically true—if it were not also plain that the other books of the Pentateuch cannot possibly have been written by Moses, but must have been composed in a much later age than his—if, lastly, there were not in the book of Deuteronomy itself abundant indications, as we have said—not only in the general tone and spirit of the book, which have been already referred to, but also, as will now be shown, in its *language* and *subject-matter*—which prove beyond all doubt, that we have here a very different author, and one of a very different age, from those concerned in writing the main portions of the other books of the Pentateuch."

Dr. Colenso proceeds to give a variety of instances in which expressions used in the other books are not used in Deuteronomy, and *vice versâ*. For example, in the four previous books the priests are *always* styled the "sons of Aaron," and *never* the "sons of Levi." In Deuteronomy they are *always* called the "sons of Levi," or "Levites," and *never* the "sons of Aaron;" although "in D. xxvii. 9, 'the priests the Levites,' and in D. xxxi. 9, 'the priests the sons of Levi,' are not the priests, who should be in future days, but the priests then actually living or supposed to be

1. "It could hardly have been the *whole* Pentateuch that Hilkiah now found." For "Shaphan 'read it'—perhaps read only part of it,—or, as the Chronicles say, 'read *in* it,' 2 Ch. xxxiv. 18—before he returned to the king on the business about which he had been sent to the Temple." He then read it to the king; and on the same or the next day the king himself read in the ears of the people "*all* the words of the Book of the Covenant, which was found in the house of Jehovah." It cannot be supposed, Dr. Colenso argues, that he read to them the whole Pentateuch.

2. The book found by Hilkiah is repeatedly called the "Book of the Covenant," 2 K. xxiii. 2, 3, 21, a term inapplicable to the whole of the Pentateuch, but which very well applies to the chief portion of Deuteronomy, in which it is written, D. xxix. 1,—"These are the words of the covenant, which Jehovah commanded Moses to make with the children of Israel in the land of Moab, beside the covenant which he made with them in Horeb."

3. The Book of the Law which was found by Hilkiah "contained directions about the Passover, 2 K. xxiii. 21, such as we find in D. xvi. 1—8; and severe denunciations of the Divine displeasure against all who transgressed the commands contained in it, 2 K. xxii. 13; such as we find in D. xi. 16, 17; xxix. 18—28; xxx. 15—20; and, especially, in D. xxviii. 15—68. And it led directly to the putting down with a strong hand of every kind of idolatrous practice, of all groves, high places, altars, &c., as we read in 2 K. xxiii. 24:—'Moreover the familiar spirits, and the wizards, and the images, and the idols, and all the abominations that were spied in the land of Judah and in Jerusalem, did Josiah put away, that he might perform the words of the law, which were written in the book that Hilkiah the priest found in the house of Jehovah.' And this, too, was in accordance with the commands of the Book of Deuteronomy xii. 2, 3; xiii.; xvi. 21, 22; xvii. 2-7; xviii. 10-12."

"In short," says Dr. Colenso, "the whole description of the nature and effect of the words contained in this 'Book of the Law' shows that it must have been the book of Deuteronomy."

He suggests that it was the desire of Hilkiah and others about the young king, to take advantage of his religious spirit, and bring about a reformation of religion, and that for this purpose they privily agreed to compose a book in which the very spirit of the older law should be summed up in a powerful address adapted to the circumstances of the times, such as Moses *would* have delivered if now present with the people, and to put it into the mouth of the departed Lawgiver. Therefore, in Deuteronomy it is *Moses* always, and not Jehovah, who is introduced as speaking, except in xi. 14, 15, xxix. 5, 6. Such a proceeding, Dr. Colenso observes, though it would be contrary to our ideas of truth, would not be so to a man who believed himself to be in *immediate* communication with the Source of all Truth. "The *inner* voice, which he believed to be the voice of the Divine Teacher, would silence all doubts and questionings;" and if the writer were Jeremiah, or any other contemporary seer, meditating upon the condition of his country, and the means of weaning his people from idolatry, he might *become possessed* with the idea of writing such an address; the thought would take the form of a Divine command, and all questions of *deception* would vanish.

FINE ARTS.

THE ROYAL ACADEMY EXHIBITION.

[Concluding Notice.]

Landscape painting has been brought to greater perfection by English artists than by any others in the world, yet we can see very little to boast of as super-excellent in this branch of art in the present exhibition. The painters of old and high reputation appear either to have lost their cunning altogether, and show us works that in time to come will be spoken of as their "latest manner," or they do not care to put the bow upon the stretch. Of those whose genius, like all sources of the beautiful, is on the wane, far be it from us to say anything in the way of fault-finding; it is to the painters who show the signs of indolent mannerism when they should be displaying the fruits of the ripest study that we have a word to offer. Mr. F. R. Lee, R.A., in forsaking his first love in landscape—the leafy lanes and rocky streams of Devonshire—for such subjects as the arid rock of Gibraltar and the Roman aqueduct at Nismes, seems to us to mistake his *métier* in an especially unfortunate way. His colour was never of the happiest tint, and when the picture necessarily requires great breadth of one dull earthy colour, as in the Gibraltar rock and the brick and stone of the ancient aqueduct,—(322) the "Pont du Gard," a picture very similar to his large work of last year—unless the art of painting the atmosphere as well as the mere objects is possessed, the result is a hard and prosaic view. We have only to imagine how Turner would have dealt with these subjects to see that Mr. Lee's facility of hand and clever power of imitation lead him too much away from an idealistic treatment of landscape. "Where the Trout lie," (195), is a subject more within his grasp, and in proportion more pleasing; while (15) "Across the Ferry and over the Meadows" is feeble, and mannered, in his worst tone of colour; and (298), "A Deserted Island," a very common-place production, only confirms, by its utter lack of imaginative treatment, what we have said as to this painter's limited view of landscape art. In a circle of certain pretty pastoral conventionalities, Mr. Lee is seen to the best advantage. Mr. Creswick, R.A., cannot claim the merit of originality in any of his pictures this year. He contents himself with a repetition of such well worn themes as (86), "Crossing the Stream," and (647), "Pleasant Paths," in none of which, however, are to be traced those delicate gradations of pearly grays in the sky and over the moss-grown stone of the river bed, which once gave such a charm to his pictures. The principle upon which Mr. Creswick seems now to be painting is very much the reverse of this; in place of those delicate tints we perceive a general use of black in different shades, and with this, the handling of the foliage and the branches is laboured and yet unfinished. Mr. Creswick's trees always had a peculiar way of supporting the foliage, as if the branches pierced the leaves, as so much hay upon a fork; this arbitrary kind of tree flourishes more than ever in his pictures, and indeed one is struck with this want of fresh study throughout all the works exhibited by him this year. (205), "The River Tees, at Wycliffe," is the most natural and best in colour. Landscape demands a most constant and devoted worshipper of nature; an historical painter might perhaps work "out of his own head," but not even Turner himself, the most imaginative of all landscape painters and yet the most true, worked without direct study of nature to the last. It is not that we want absolute imitation on the canvas; this would be a weakness—it would show that the artist was not a creator, but a copyist; but if the landscape artist is so conceited that he dispenses with the counsel nature offers, as though he knew all that she could tell him, then he inevitably paints like these pictures of Mr. Creswick. There is one remarkable landscape in the exhibition which should be a lesson to all who are inclined to forsake study; it is the "View of Catalan Bay, on the east side of Gibraltar," by Mr. E. W. Cooke, A.R.A. Here is a painter, who must be not less experienced in the craft than those we have just spoken of, making the most extraordinarily minute study of a vast slope of sand and finely laminated strata of rock overgrown with "palmito" and cactus, in which we might almost count the grains if that were a test of art. All the geological and botanical points are perfect and render the picture really valuable as a scientific record. Then the picturesque elements are touched with equal care; the Genoese fishermen's houses upon the beach, their nets spread out to dry, painted to a mesh; and dancing on the fresh waves are their gay-looking boats. Nothing is wanting in detail, the only thing we miss is the sunny air of the spot, and this is certainly not thrown over the picture, so photographically rendered by the skilful hand and eye. The clouds and the sky generally appear cold and sunless, and thus, with all its realism, the picture does not satisfy. It is true, we may peer into the sand and the cracks in the rock, and even be cheated into picking up a wet pebble from the beach, but here the deception ends; there is none of that dreamy enchantment to be got out of the picture, which there must be in gazing upon the real scene. This is what all realistic painting of this kind comes to; it calls up an exclamation of wonder at the patience and cleverness of the painter, but, beyond that, it does not touch the feelings as a work of art ought to do. We are even inclined to prefer Mr. Cooke's less miraculous performances, (230) "Dutch Trawlers Waiting for the Flood Tide," and (585) "The Church of the Salute at Sunset." Mr. M'Callum is another artist devoted to detail of one special character, which might be described as the structural anatomy of trees. Unfortunately, landscape, with our artists, after having reached the perfection of conventional rurality, has been striving too much in rivalry with the photograph, and losing the higher sentiment which men like Wilson, Turner, and Danby felt. We should be sorry to see too much scope given to the poetic landscape, but it is a regrettable feature in our exhibitions that they so very rarely show any impressive work of landscape art in which the poetic sentiment of the real scene has been caught. The large pictures by Mr. Linnell and his sons are inspired by something of the kind, but they indulge sadly in the violent displays of the mere colourist; they never attain either the impressive majesty of a land storm or the lovely fading away of evening. (463), "Amang the Heather," by W. Linnell, shows the taste for rich colour at the cost of tenderness. (22), "The Rainbow," J. T. Linnell, is similarly ambitious.

Mr. Redgrave's (R.A.) pretty botanical tendencies in landscape we have before referred to. Mr. Sidney Cooper, A.R.A., exhibits only one picture this year (255), "Cooling the Hoof," cows standing in a stream under the shade of a willow, but the landscape in this has none of the sunny air that we have so often admired in his pictures. As a landscape in which the glaring atmosphere of the desert has been well represented, and the peculiar character of the Eastern life well seized, we should point out young Mr. Herbert's "Well in the Desert" (336),—and with the more satisfaction as it is almost a first work. Mr. B. W. Leader is a young landscape painter who shows good feeling for the sentiment of landscape and good study in (440) "A Welch Churchyard,"—a lonely resting-place among the hills, with three solemn old guardians in the sombre yew trees. Mr. J. Hamer's picture (460) of the Arctic Regions, with the Franklin exploring vessel, the *Fox*, by moonlight, deserves a sincere word of praise, for the ability with which the strange land of frozen mountains and seas has been brought before the eye. No. 533, "Coming out of the Mist," by Mr. R. Ansdell, A.R.A., though not the work of a professed landscape painter, is an admirable picture, full of the genuine feeling for mountain scenery. Mr. F. W. Hulme's "The Waning Year" (571), though by no means very characteristic of autumn, is one of the best landscapes in the Exhibition; the foliage gracefully laid upon the branches and not of that very bright green the painters are so apt to shock the artistic eye with in their more enthusiastic

Digitized by Google

monplace, assumes a factitious importance from the weight of instrumentation, a military band being employed on the stage and cornets plentifully used *à la* Meyerbeer. The effect of this movement is decidedly *ad captandum*. The Mephistopheles serenade aims at an originality and quaintness of character that it does not attain. The Duel trio, which ends with the slaying of Valentine, is one of the most dramatic movements in the opera, but is much too suggestive of reminiscences of Meyerbeer's "Huguenots." M. Gounod, however, has not the same power to deal with large combinations, and to work conflicting passions up to a culminating climax of grandeur such as Meyerbeer has developed in his three great operas. The fifth act is the shortest and weakest portion of the whole work, presenting nothing that calls for special mention.

The "Faust" of M. Gounod merits recognition as the work of a thoroughly educated and conscientious musician, who respects himself and his art, and throws his most earnest endeavours into his work. If popularity be a test of greatness, then M. Gounod must be admitted to have achieved that distinction, since the opera has been received with enthusiasm in Goethe's own land, even hypercritical Berlin having accorded it a warm welcome. And notwithstanding its æsthetical shortcomings, there is so much merit of a high order in "Faust" as to render it grateful after the inflated and noisy style of some modern operas. As already intimated, M. Gounod's touch is delicate rather than forcible. In some respects he is a kind of musical Stothard; flowing, graceful, refined, but scarcely ever grand or elevated. In the construction of his movements he has a tendency to vagueness and indefiniteness, rather than to that proportionate development which is characteristic of the great masters. His instrumentation is generally excellent—sonorous and well-balanced, and always showing the hand of the practised master. Of the execution of the work it would be impossible to speak too highly. Mdlle. Titiens appeared to have changed her individuality. Instead of the demonstrative passionate impulse in which her powers have generally been displayed, there was the gentle blonde Margaret, dressed after the German ideal, acting and singing with a subdued refinement that stood in remarkable contrast to the tragic impetuosity in which it has been generally assumed Mdlle. Titiens could alone excel. Signor Giuglini, as Faust, acted with more force than usual, and sang with great passion and refinement. Mdlle. Trebelli was an interesting Siebel; and Mr. Santley, as Valentine, acted powerfully in the death scene, and sang, as he always does, like a finished artist. Signor Gassier's Mephistopheles was careful and well-intentioned, but scarcely subtle enough to redeem it from commonplace melodrama. The general performance by solo singers, band, and chorus, on the first night, offered an instance of perfect preparation in the highest degree creditable to all concerned; not forgetting the excellent conductor, Signor Arditi, to whose strenuous exertions and careful superintendence this result must have been largely owing. Such a first performance of so difficult a work is rarely heard; and we may congratulate both the management and the London public on the thoroughly efficient production of an opera which, whatever its shortcomings, must take a higher rank in art than anything that has been produced since Meyerbeer's "Dinorah."

At the Royal Italian Opera, M. Obin, the celebrated Parisian basso, has made a successful *debût* as Bertram in Meyerbeer's "Robert." This gentleman, who is a refined and finished singer, and a picturesque and powerful actor, must prove a valuable accession to the company.

At the seventh Philharmonic Concert on Monday, the symphonies were Beethoven's first and Mendelssohn's in A minor; the overtures, Weber's "Oberon," and Cherubini's "Anacreon." The chief feature in the concert, however, was an excellent performance of Mendelssohn's violin concerto by M. Buziau, a young artist of whom we should assuredly hear more.

Signor Thalberg gave his fourth and last Matinée on Monday, playing with all his early vigour and refinement.

The New Philharmonic Concerts closed for the season on Wednesday. The symphony was Mendelssohn's in A major (the Italian); the overtures, "Leonora" and "Masaniello." Herr Japha played Spohr's dramatic concerto (violin), and Madame Arabella Goddard a pianoforte concerto by Dr. Wylde.

SCIENCE.

APOLAR AND UNIPOLAR NERVE-CELLS.

To the world at large the minute and toilsome investigations which the practical anatomist carries on are unknown. Fierce discussions may rage, and yet the world will run on in its great course without any knowledge of such mental fights at all. Perhaps not ten people in all may know which is right and which is wrong between the contending parties, or be able to take part in the battle.

Still these may be, and generally are, the conditions under which the pioneers of human knowlege grasp progress. It is only when a decisive victory has been won that the subject in its full importance or grandeur is laid before the world.

Mysterious is life, mysterious is vital action. We can see a crystal built up under the microscope; round the central minute nucleus layer after layer is added, coat after coat can be seen put on. The increase is on the outside and visible, but in the living cell the changes are within, the outer coating is the oldest, the nucleus full of ever new and living energy. Moreover, exposure destroys vitality, and the dead cell has no longer in it the mysterious secret of life.

In the cells of living structures we have the greatest chance of getting knowledge. To build surely we must begin at the beginning. "What you can see, you can surely describe," may be the general remark, but those who have tried to see and tried to describe know well these tasks are not so easy. We must prepare before we can see, we must be sure we have rightly prepared and rightly seen—more, that we have rightly reflected and reasoned, before we can describe. And to prepare animal tissues for examination is very difficult indeed. We must inject a dye or a pigment into the veins and capillaries, we must stain the nerve fibres of a different colour from the muscles. Nay, more, we must artificially tint the formative and the formed materials of the very cells themselves, before we can distinguish the relationship of their parts to one another. And, having done this, any crushing or distortion of the specimen will again deceive us. We have to combat chemical action as well as mechanical.

Amongst anatomists there is a generally received opinion as to the existence of various kinds of nerve-cells in the nervous tissues, nerve-cells without fibres, with one fibre, with two fibres, and with many fibres proceeding from them; or, as they are termed, apolar, unipolar, bipolar, and multipolar nerve-cells.

Now the nerve-cells are the living sources of the nerves. The cables of fibres, which we call nerves in the animal body, are the cables of telegraph-wires from one nerve-cell to another. They are the formed material; the living cell is where the material is mysteriously formed. Inorganic pabulum filters through the cell-wall and acquires living powers within; it is at length deposited as lifeless matter again within the cell-wall, and whatever removal of effete matter takes place is from the outside of the cell.

Dr. Beale, than whom no one has worked in this field of research more exactly, more laboriously, or, as we believe, more successfully and truthfully, holds the opinion that by the destruction of chemical combinations of particles of the material within the nerve-cell the communicative force is generated, and this force is transmitted along the cell nerve-fibres as they traverse through the body. This idea necessitates the existence at least of a perfect circuit in the nerve-fibre; it must proceed from and return to the nerve-cell, consequently, in ordinary language, every nerve-cell must have at least two fibres proceeding from it; and therefore he contends apolar and unipolar nerve-cells cannot exist.

In a recent paper before the Royal Society, Dr. Beale has ably dealt with this subject, and showed, on the occasion of its reading to the Fellows, by means of his portable microscopes, numerous preparations from those parts of a frog in which unipolar and apolar cells have been stated to exist—with a proof of the fictitious character of those statements.

No one who has seen a magnified portion of the "grey matter" of the brain, with its innumerable living nerve-cells sending off their fibres in all directions, ramifying, interlacing, intensifying, but will ever remember the first impression of wonder and astonishment it produced.

We seem at once to be grasping the prime-motor of the wonderful living machine, the handle of the vital telegraph, the lever of vital action and intelligence. But we see also that the human frame is a wonderful machine, and mentally we instantly ask—what is the operator? Call it soul, spirit, life, what you will, it is no part of the machine.

One of those nerve-cells of the frog, which have hitherto been suppositiously called unipolar, is given in the annexed sketch, in which, at *a*, there will be seen the two fibres connected with the cell diverging in opposite directions, as shown by the arrows; at *b*, the fibre from the central part of the cell; at *c*, the fibre from the circumference; at *d*, the lower part of the cell splitting so as to form the spiral fibre, of which the thick fibre, *c*, is the continuation; *e*, fundus of the cell with large nucleus and nucleolus. The nuclei in the fibres are indicated by dots.

All Dr. Beale's exquisite notion of the intercommunication of the nerve-cells must be scattered if fibreless or one-fibred nerve-cells exist, or various and differing actions must be attributed to the various forms of the nerves. The great object, then, was to show that apolar and unipolar nerve-cells do not occur; and by carefully preparing those very portions of animal tissue regarded as their special habitats, Dr. Beale has apparently conclusively proved that the supposed unipolar and apolar cells are not such, but really have two distinct and separate fibres.

We cannot conceive that a nerve-cell without fibres can have any communication with or influence a distant nerve-cell; neither is it likely that a nerve-cell with one fibre can act on the same principle as one from which two or more fibres proceed. Indeed, if no fibre or but one fibre proceeds from certain cells, complete nervous circuits, in such cases at least, are impossible; and such admission would induce a strong *à priori* inference against the existence of such circuits as a fundamental condition in the complete nervous apparatus. On the other hand, if the proof that the supposed unipolar and apolar cells offered by Dr. Beale are really

Digitized by Google

As to the first question, it was almost unanimously resolved that the coinage should be based on the French system with the franc as unit, and consisting of the same proportions of silver, viz., nine-tenths pure.

Another proposition to adopt the Prussian dollar, *i.e.*, making the specie dollar equal to 1½ Prussian dollars, which would require a reduction in the standard of Sweden of about one two-eighths per cent., and in Norway and Denmark one per cent., found only few supporters.

For common weights and measures the French metric system was unanimously adopted without any opposition at all. On the second question resolutions were passed recommending the introduction of an equal postage for the three countries, amounting to four, eight, and twelve skillings, or one, two, and threepence stirling; making the first the international postage in each country, the eight skilling the postage between Denmark and Norway, Norway and Sweden, or Denmark and Sweden, and the twelve skilling the postage in the winter time between Norway and Sweden, when the post has to be carried through Sweden.

For the Custom tariff it was resolved:—

1. To base the duties only with respect to revenue, and not to protection of individuals.
2. To make articles the necessaries of life and all war-materials duty-free.
3. To assist the respective countries in suppressing the smuggling of spirits, which is carried on to some extent between Sweden and Denmark, owing to the drawback allowed on the exportation from Denmark.

It was also resolved that an Industrial Exhibition be held in 1866 at Gottenburg. The meeting further unanimously decided that the resolutions passed respecting coins, weights, and measures be forthwith communicated to Wm. Ewart, Esq., M.P., who, on the 12th ult., obtained leave to introduce the bill now before Parliament for the introduction of the metric system into England.

A similar Congress will be held in 1865, in Copenhagen.

MEETINGS OF LEARNED SOCIETIES NEXT WEEK.

MONDAY.

GEOGRAPHICAL—At 9 P.M. Extra Meeting to receive Captains Speke and Grant on their return from Africa.

TUESDAY.

MEDICAL AND CHIRURGICAL—At 8½ P.M. 1. "On Sterility in Man." By Mr. Curling. 2. Strangulation of the Stomach in an Umbilical Rupture. By Mr. Moore; and other Papers.

ZOOLOGICAL—At 9 P.M. 1. "On the Placenta of Hyrax." By Professor Huxley. 2. "On the Placenta of the Tewrec." By Professor Rolleston.

WEDNESDAY.

BOTANIC—2 to 7 P.M. General Exhibition.

ROYAL LITERATURE—At 4½ P.M.

SOCIETY OF ARTS—At 4 P.M. Anniversary.

THURSDAY.

CHEMICAL—At 8 P.M. 1. "On a Case of Electrolitic Action. By Mr. Abel. 2. "On the Iodide of Iodammonium." By Dr. Guthrie.

SATURDAY.

BOTANIC—At 3½ P.M.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Bædeker's (K.) Handbook to Switzerland, Savoy, &c. Fcap., cl., 5s. 6d.
——— Handbook for Travellers on the Rhine. Fcap., cloth, 4s.
Baline's (E. B. W.) Reply to Mr. Burt's "Wakefield Figures in relation to Convict Discipline." Crown 8vo., sewed, 6d.
Bede's (Cuthbert) a Tour in Tartanland. Crown 8vo., cloth, 10s. 6d.
Blaikie's (Rev. W. G.) Better Days for Working People. Crown 8vo., boards, 1s. 6d.
Blind Amos and his Velvet Principles. By Rev. Paxton Hood. Crown 8vo., cloth, 1s. 6d.
Book (The) of Daniel. Translated from the original Hebrew by John Bellamy. 4to., cloth, 2s. 6d.
Brace's (C. L.) The Races of the Old World. Crown 8vo., cloth, 12s.

BISHOP COLENSO ON DEUTERONOMY.

THE DIGEST OF PART III. OF

BISHOP COLENSO'S WORK ON THE PENTATEUCH

WILL BE CONCLUDED IN THE

LONDON REVIEW

OF SATURDAY, JUNE 27th.

The Digest will be followed by a Series of Articles reviewing the whole of DR. COLENSO'S WORK, and the Answers by which its Arguments have been met.

OFFICE: 11, SOUTHAMPTON STREET, STRAND, LONDON, W.C.

Digitized by Google

EXTENSION OF THE

UNIVERSITY LIFE ASSURANCE SOCIETY.

Established 1825. Incorporated by Royal Charter.

24, SUFFOLK-STREET, PALL-MALL EAST, LONDON, S.W.

Capital, £600,000.

PRESIDENT—His Grace Charles Thomas, Lord Archbishop of Canterbury.

Robert Hook, Esq.
Arthur Thomas Malkin, Esq.
The Rt. Rev. the Lord Bishop of Oxford.
The Hon. and Very Rev. George Pellew, D.D., Dean of Norwich.
The Right Hon. the Lord Chief Baron of the Exchequer.
Edward Romilly, Esq.
Thomas Watson, Esq., M.D.
The Right Hon. James Stuart Wortley.
John Wray, Esq.
John Copley Wray, Esq.

Nine-tenths of the Profits are appropriated to the Assured.

Assurances can be effected by all persons who are, or have been, on the Books of a University, or of any College, Hall, Foundation School, or other similar institution in the United Kingdom.

Divisions of Profits every Five Years.

Since the establishment of the Society in 1825, the amount of Additions allotted to the assured has exceeded £659,000.

The Fee to the Medical Referee is in each case paid by the Society.

Personal appearance at the Office is not required except in particular cases.

Forms of Proposal may be obtained on application to this Office.

CHARLES M. WILLICH, Secretary and Actuary.

*** Commission allowed to Solicitors and other Agents introducing Assurances.

The Only Office whose Bonds and Policies of Guarantee are accepted by the Treasury, Customs, Inland Revenue, General Post-Office, War, Admiralty, Home, Colonial, India, and other Government Departments.

THE EUROPEAN ASSURANCE SOCIETY.

DIRECTORS IN LONDON:—

HENRY WICKHAM WICKHAM, Esq., M.P., Chairman.
JOHN CHEETHAM, Esq., Stalybridge.
JOHN FIELD, Esq., Warnford-court, City.
CHARLES FORSTER, Esq., M.P. for Walsall.
RICHARD FRANCIS GEORGE, Esq., Bath.
HENRY H. HARRISON, Esq., Hamilton-place, St. John's Wood.
THOMAS C. HAYWARD, Esq., Minories and Highbury.
JOHN HEDGINS, Esq., Cavendish Club.

HEDGES & BUTLER,

London, 155, Regent-street, W.; Brighton, 30, King's-road,

(Originally established A.D. 1667.)

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

DR. DE JONGH'S

(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., F.R.C.P.L.,

Physician to the British Embassy at Paris, &c.

"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Dr. LETHEBY,

Medical Officer of Health to the City of London, &c., &c.

"It is, I believe, universally acknowledged that Dr. de Jongh's Light-Brown Cod Liver Oil has great therapeutic power; and from my investigations, I have no doubt of its being a pure and unadulterated article."

EDWIN CANTON, Esq., F.R.C.S.,

President of the Medical Society of London, &c., &c.

"For several years past I have been in the habit of prescribing Dr. de Jongh's Light-Brown Cod Liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

Dr. LAWRANCE,

Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

HARPER TWELVETREES' GLYCERINE SOAP POWDER makes its own Soap, and saves one half of time, two-thirds of Soap, and three-fourths of labour! A Penny Packet will make a Pound of Glycerine Washing Soap, possessing extraordinary Lathering and detergent qualities.—Patentee: HARPER TWELVETREES, Bromley-by-Bow, London. Sold by Grocers, Druggists, and Oilmen, everywhere.

MEMOIRS OF VICTOR HUGO,
RELATED BY
THE COMPANION OF HIS LIFETIME.
The only authorized English Edition.
This book contains unpublished Works of Victor Hugo—Poems, Letters, Recollections of Travels, and a Drama—and must become the indispensable companion to Victor Hugo's Works; for it is not only a Personal Biography written by Madame V. Hugo on notes of her husband's, but it is also the history of this century—the literary history of an important school.

LONDON: Printed by CHARLES WYMAN, at the Printing-Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, JUNE 20, 1863.

ripe for a party discussion in the House. The reason of this seems to us to be clear. Mediation cannot be *forced* upon America without a violent departure from international comity and custom. It is, moreover, of the highest importance to England not to kindle into a flame the sparks of latent hostility between ourselves and the North which have shown themselves of late. Before we interfere to mediate, let us make sure that our mediation will not be received as a mark of disguised enmity towards the Union. The analogy between Poland and the South is a ridiculous one, and cannot be sustained. The treaties of Vienna oblige us in honour—even if the relative position of the two combatants did not powerfully plead with us—to interest ourselves for the Poles; every possible consideration, however, prompts us to remain diplomatic neutrals with respect to the North and South. Before stepping out of the charmed circle of neutrality within which alone we are safe, the Americans themselves should be consulted, lest we should really offend or alienate those whom we wish to serve. Lastly, when the offer of mediation comes, let it come from united Europe, if Europe can be made to join, as the latest Austrian telegrams imply is possible. Joint diplomatic action with the great countries of the Continent ought in this as in all other matters to be the policy and pride of England. It is the only safe and honourable line for a nation, that wishes to rely not on its arms but on its moral influence. The policy of isolation—we earnestly repeat it—is a policy that leads only to misunderstanding, to war in Europe, to the territorial aggrandisement of European Powers less peaceful than ourselves, and to continental distrust and dislike of England. In great political questions, France will act whether we wish it or no. The true method of upholding the dignity of England and the quiet of the world is within certain diplomatic limits to act honourably with her, and thus to moderate the excessive tendencies of French Imperialism. We do not complain, therefore, of Mr. Roebuck for wishing to see a harmony effected between England and France on the American question. Let it be so, but let the proper persons take the matter up. We complain of him because he has forced himself into a position to which he has no claim, and which he is the worst man in Europe to fill. If there is a living politician who cannot speak on a question without offending and outraging somebody else, it is Mr. Roebuck. In the name of common sense, we ask, is he the right man to agitate on so delicate a subject? We do not wish to see dragged into the arena of party debate, a problem which it is for the English Executive and for English diplomacy to solve, by watching for golden opportunities, and by acting after grave and careful deliberation.

THE REPAIRS OF "DILKE'S DELIGHT."

MR. HUNT, the Surveyor to the Board of Works, is evidently a wag. Wishing, apparently, to emulate the well-known Irishman who, having bought a rusty and decayed pocket-knife for next to nothing, boasted that his purchase, when provided with a new handle and a new blade, would prove an excellent instrument, Mr. Hunt has put forth a Report, in which he recapitulates the merits of the extraordinary bargain which Messrs. Kelk & Lucas are so generously forcing upon the public, and details the few slight and inexpensive repairs which will be required before the South Kensington Dilkoosha can be made a fit playground for the Society of Arts and "the institutions in union with them." Mr. Hunt's Report bears no date; a significant omission, which leads us to infer that it has been in the hands of the Treasury for some time, and that it has only now been extorted from their Lordships' hands by pressure from without. Anyhow, it is a masterpiece of delicate irony in its way.

It commences by affirming that "the brick building in Cromwell-road, used during the Exhibition of 1862 as a gallery for pictures, is a substantial structure." So far, so good. But then it goes on to say, that the roof of this "substantial structure," built but a year ago, "requires extensive repair, and that its skylights must be replaced throughout by others of a stronger character glazed with stronger glass." This "substantial structure" is further stated by Mr. Hunt to require "new floors resting on new constructions of brick arches, and iron girders to support them." When these slight defects have been remedied—when the knife has been new handled and new bladed—Mr. Hunt is of opinion that these unrivalled galleries will be nearly as good as new, and we entirely credit his assertion. Against the cost to be thus incurred, over and above the purchase-money of the ground, are the Exhibition sheds as they stand. John Bull will be credited with the value of an enormous heap of broken glass, rotten felt, and decayed sashes and skylights—less the cost of pulling them down—the most appropriate use of which would be to form an enormous bonfire on the auspicious occasion of Sir Wentworth Dilke's next birthday.

These picture galleries are, however, according to the sanguine Mr. Hunt, the best part of the bad bargain which we are thus having thrust upon us by the hangers-on of the Court. He confesses that the rest of the building is chiefly "temporary in its construction." He hopes that when "modified and readjusted" some few of the iron columns, girders, and trusses may be of use; but he condemns the timbers and skylights as entirely of a temporary character, and states that a new and more substantial timber roof and a new covering of metal will be required to keep out the weather. All the gutters throughout this maze of 16½ acres will require, moreover, to be lined with lead, and the whole of the skylight frames, ridges, and hips must also be covered with the same expensive protection.

The joists and floor-boards of the galleries Mr. Hunt pronounces to be worthless, and asks for entirely new floors and joists throughout. He significantly advises that the present foundation of the building itself should be strengthened by a layer of concrete twelve inches thick. On this a new floor constructed of new materials is to be laid down. "The joists are to be of the best timber, the sleepers are to be of oak, supported on *proper thick walls* built on the concrete platform above described, &c." It would almost seem from this last incautious expression, that Mr. Hunt is of opinion that the existing walls of the Dilkoosha are not "proper thick walls." When all this has been done Mr. Hunt pronounces that the floors of the new Dilkoosha will be as good as new; and we again say that there can be little doubt of the fact. Now for the drainage of the Dilkoosha. Mr. Hunt informs his employers that "when the buildings were erected, a complete system of drainage was constructed." This is very satisfactory; for upon this point doubts have been expressed, based on the lake of stagnant water which used to be visible under the open flooring of the Exhibition during the wet season of 1862. When such great men as Kelk & Lucas "construct a system of drainage," a man must be incredulous indeed who supposes that it is not "complete." But stay—what says the very next paragraph of Mr. Hunt's sarcastic report? This complete system of drainage, constructed in 1862, in 1863 "requires to be repaired, and in parts to be relaid!" In 1862 it would not even carry off the rainwater that fell, as we all saw; and in 1863 it requires to be repaired and relaid; and yet its constructors were the celebrated firm of Kelk & Lucas, late Morton Peto & Co., and the surveyor who eulogises it as "complete" is no less an individual than the impartial and able Mr. Hunt of the Board of Works!

Finally, there are the domes. Mr. Hunt pronounces that the present domes are to come down, and that new domes are to be constructed; but he does not attempt to solve the difficult problem of getting the former down, nor does he offer any estimate of the cost of doing so. In the construction of the new domes we again have the parable of the Irishman's knife with a vengeance. The present foundations will not do. "New piers of brickwork are to be built upon solid foundations of concrete, and new brick arches springing from these piers are to be constructed. The lower portion of the domes will then be filled in with brickwork covered externally with lead, and the upper portion will be glazed with new thick glass." It must be observed that Mr. Hunt remorselessly condemns all the timber and all the glass which was used in the Exhibition of 1862, which the public are nevertheless urged by the Treasury to buy. We have suggested an appropriate use to which the old timber may be put, when dry enough; but we confess that we are at a loss to devise any advantageous mode of disposing of sixteen or seventeen acres of cracked and worthless glass.

Of the ornamentation of this vast pile Mr. Hunt speaks oracularly, suggesting that "such an amount of decoration should be introduced as may be consistent with the purposes to which the building is to be applied." Whether he himself, or Captain Fowke, or a committee of taste, presided over by Sir Wentworth Dilke, are to settle what is to be

Digitized by Google

permitted the resolution to pass. It gives but a poor idea of the House of Commons to think that it can be coaxed into meeting a difficulty by having it presented in instalments. It may be that the discussion of a problem which no one can solve will suffer little by postponement. Still, it is both undignified and dangerous to repeat this session the action of the last, when the Rate-in-Aid Bill was hurriedly passed in the last week of the session.

THE *ALEXANDRA*.

AT length the circumstances connected with the case of the *Alexandra* have been explained by the Attorney-General; and the jury, under the direction of the Lord Chief Baron, have pronounced that no violation of the Foreign Enlistment Act has occurred. After hearing the evidence which was produced on behalf of the Crown, it is impossible to doubt that the law officers were not only justified in taking proceedings, but that the Government would have exposed themselves to just animadversion if they had refused to seize the vessel in question. The past history of the *Alabama* had made it abundantly clear that she had been built in the port of Liverpool, that many of her crew had been hired in that port, and that although she left that port unarmed, the guns and ammunition intended for her were sent to Terceira, and there placed on board. The depredations which this vessel has inflicted upon Federal commerce are sufficiently notorious. It is not surprising that the merchants of Boston and New York should feel irritated at such proceedings, or that the Government of Washington should have addressed vigorous remonstrances to Earl Russell. It happened, moreover, that the British Government did not attempt to justify the conduct of the Confederates in thus using our ports. On the contrary, in compliance with the opinion of the law officers, they admitted that those who were concerned in fitting out the *Alabama* had violated the Act of Parliament, but they insisted that in allowing her to escape they had been guilty of no culpable neglect. Earl Russell, in his correspondence with Mr. Adams, and the Solicitor-General in the House of Commons, admitted that she would have been seized if only they had known the whole facts in time. That they were sincere in their desire to maintain the strictest neutrality there is no reason to doubt; but if any such doubts existed, they must be dispelled by their conduct in the case of the *Alexandra*. Whether or not, the opinion delivered by Chief Baron Pollock as to the construction to be put upon the Foreign Enlistment Act is still matter of doubt. The whole question must be re-argued before the judges. But whatever that decision may be, the American Government and the American people must acknowledge that all has been done that can be done to enforce the laws of neutrality.

The case of the *Alexandra*, as brought before the law-officers of the Crown, was very simple. It appears that in Liverpool the Confederate Government have a number of agents, some of whom are officers in the Confederate service, others of whom are Liverpool merchants, who supply money on the requisition of such agents. The *Alexandra* was a vessel fitted for warlike purposes; a gun-boat, in fact, to all appearance, which, according to the statement of the builder, was being built for the Confederate Government. Besides these two facts, the Crown had some evidence that Captain Bullock, an officer in the Confederate navy, exercised some supervision on this gun-boat, or at all events was in very close relationship with the builders of that vessel. But it should be observed, that there was no evidence to show that men had been hired for the purpose of serving on board, nor did the Crown succeed in proving that any guns had been made specifically for this ship. It must also be admitted, that although the *Alexandra* was built in an open dock, and is now lying at Liverpool still, the witnesses to prove her character and destination were neither numerous nor very creditable. Indeed, Mr. Clarence Randolph Yonge, who had formerly been the confidential secretary of Captain Bullock, admitted himself to be one of the most shameless scoundrels who ever appeared in a court of justice. He had abandoned his wife and child in Savannah; he had wormed himself into the confidence of Captain Bullock; he had sailed in the *Alabama* to Kingston, where, after receiving pay to the last moment, he deserted; there he married a widow, sold all her property, returned to Liverpool, abandoned his second wife, and finally betrayed all his secrets to the American Minister in London. Such has been the career of Mr. Clarence Randolph Yonge, and if the case had rested materially upon his evidence, the Crown would hardly have been justified in ordering the seizure. But, in truth, his evidence was comparatively immaterial, for it simply confirmed the evidence produced by other persons.

But as the matter turned out, the testimony produced may be considered as irrelevant. For, even if the Crown had conclusively proved their case, there was, according to the Chief Baron, no ground for seizing the *Alexandra*. It was admitted that, at the time of the seizure, no guns or ammunition were on board; and the judge declared that unless the arming took place within some part of the Queen's dominions, there could be no violation of the Act of Parliament. The history of the English Foreign Enlistment Act is interesting. It was passed in the year 1819 in order to prevent those who sympathized with the revolted Spanish colonies from organizing expeditions for their assistance. The United States had suffered under the same inconvenience at the beginning of the century. The French had endeavoured to use the neutral ports of America for the purpose of fitting out men-of-war to cruise against the English. At that time Washington was president, and, upon the remonstrances of the English minister, that great man not only stopped any such attempts, but induced Congress to pass a law arming the Government with additional powers. That law is in terms the same as the English Foreign Enlistment Act of 1819; indeed, Mr. Canning, when he introduced it, admitted that he had copied the American statute, and defended its provisions by recalling the conduct of Washington and Jefferson.

According to that act it is illegal to *equip*, *furnish*, *fit out*, or *arm* any vessel within the British dominions, with intent to commit hostilities against any nation at peace with this country. It is admitted that, until the case of the *Alexandra*, no proceedings have been taken under this statute. There is no decision in the records of our courts upon the subject. But in America it is quite otherwise. There is a series of judgments delivered in the Supreme Court of Washington by lawyers of acknowledged ability. It might seem, therefore, that these decisions ought to guide English judges in forming their judgment. More especially should this be the case when the Act of Parliament is an Act passed to give a municipal sanction to the doctrines of international law. But if the doctrine laid down by the Lord Chief Baron be ultimately upheld, these views must be admitted to be erroneous. Whether he is right or wrong, most certain it is that his interpretation differs from that of the American judges. Chief Baron Pollock maintains that the terms *furnish*, *equip*, *fit out*, and *arm*, are identical. In order, therefore, to constitute a breach of the Act, it must be proved that the vessel was *actually armed* within the dominions of the Queen. Most clearly this was not so in the case of the *Alexandra*. Neither guns nor ammunition were on board, and therefore those who were concerned in building her or fitting her out were guilty of no offence under the statute. But the Chief Baron went even further. Alluding to the case of the *Alabama*, he volunteered the opinion, that even in her case no offence had been committed, because, he said, the guns were placed on board at Terceira, within the dominions of Portugal. Hitherto, it has been considered that the Foreign Enlistment Act would be infringed if a man-of-war were fitted out for sea, and started from a British port, with the intent to receive her armament on board elsewhere, and with the further intent to prey upon the commerce of a friendly nation. And upon this view of the law the law-officers of the Crown have acted. According to the Chief Baron, they are mistaken. It remains to be seen whether the other judges are prepared to support Sir F. Pollock. But if his opinion be supported, it must be admitted to involve somewhat serious consequences.

REFORM OF THE ADMIRALTY.

THE continued existence of the Board of Admiralty illustrates the truth of the proverb that "threatened men live long." Since the failures and mismanagement of the Crimean war drew public attention to the constitution and working of the military departments, it has been subjected to a pitiless fire of criticism; has been the butt of numerous motions and resolutions; and has undergone the examination of both committees and commissions. But it still survives to confront a fresh suggestion of inquiry

Digitized by Google

sary to arrive first at some definite conclusion on this cardinal point; but attention may then be usefully directed to the subordinate parts of the system, which are cumbrous, imperfectly connected, and ill adapted to rapid action. No doubt it is the duty of the Government itself to undertake the requisite reforms. But experience has convinced us that it is hopeless to expect anything in that quarter. We see no resource but in a searching investigation before a really independent Committee of the House of Commons; and this we trust will take place early next session. Let us, however, give the assailants of the Admiralty one word of advice. If they are to succeed they must concentrate their efforts far more closely than they have hitherto done on some one or two leading points; and they must make an effort to agree among themselves as to the particular reforms they desire. The Board still exists principally because its opponents have hitherto wasted their strength in desultory skirmishing and purely negative criticism.

THE STATE OF IRELAND.

IF proof be ever demanded of the sympathy which English people feel for distress and suffering in Ireland, it will be sufficient to point to the ready response they made in 1846-7 to the appeal for help for her famishing millions. And a no less valid proof of the interest they take in her real welfare, is afforded in the wise measures of legislation which immediately followed the famine, and so largely contributed to the prosperity which up to 1859 she enjoyed. These feelings of sympathy and interest have certainly not diminished during the last few remaining years in which the communication between the two countries has been brought almost to perfection, and each has become more known to the other. Unfortunately, this prosperity has received a check. Ireland, though not stricken with actual famine, is brought almost to its verge; and there is very serious distress among her agricultural population. The subject has been brought twice during this session under the notice of the House of Commons; on Friday the 13th ult. by Colonel Dunne, and on last Tuesday evening by Mr. Maguire. The debates on both occasions are said to have been conducted with much moderation; but certainly they were not free from exaggerations, and some very strange theories to account for the distress. One considered the Established Church to be the cause of all Ireland's woes; an argument about as good as that of Tenterden Steeple being the cause of the Goodwin Sands. Another thought that the delay in granting the Galway subsidy, and the refusal to build a harbour of refuge on the west coast of Ireland would account for a portion at least of the misery. Absenteeism was the root of the evil in the opinion of others. Mr. Longfield would account for it by over-taxation, a theory which was torn into shreds, in the face of facts, by the Chancellor of the Exchequer; while Mr. Maguire and a number of others consider that the entire fault lies with Parliament for not having legislated better on the relations between landlord and tenant. This latter seems to be the favourite theory, though it is nothing more than the old cry again repeated that the landlords are the great impediment to Ireland's prosperity. It is in vain to tell these gentlemen, as Lord Palmerston did, that legislation on the matter had been pushed as far in 1860 as it possibly could without infringing on the rights of property, that anything more would amount to "Communism," and reduce landlords to be mere annuitants on properties which would, in fact, be transferred from them to the tenants. The notion has got into the minds of Irishmen of a certain stamp that Ireland can only be helped out of her miseries by "tenant right," or some other such method of holding land against the will of its rightful owners; and it seems really useless to attempt to reason with them.

But that there is really distress in Ireland we have abundant testimony to prove, and it cannot be questioned; and the more immediate causes of it are obvious, namely, the three successive bad seasons of 1860-62, to which may be added the American war. In the spring of 1860 came the hay-famine, when fodder ran up to fabulous prices; and the small farmers were drained of their little ready money in endeavouring to keep their farm stock alive. Notwithstanding this sacrifice, their cattle very generally perished, especially those of the poorest class of farmers. The late spring was followed by a cold summer; and the winter found them much reduced in the resources of money and stock. The season of 1861 was unusually wet, so much so that the turf-fuel was scarcely dried; and, though the oat crop was a fair average, the potato was nearly a failure, being small and wet, and scarcely fit for food. The year 1862 did not much mend matters. The summer was both cold and rainy; the crops with difficulty came to maturity; and there was a great deficiency in the average yield. To these disheartening circumstances was added the action of the American war on the trade of the country. Owing to the Lancashire distress, the English market demand for Irish bacon and butter fell off. The diminished demand caused a fall of price in these articles; and this, combined with the already reduced yield, caused a double falling-off in the money value of the farm produce of the year. It is no wonder, then, that great difficulty should have been experienced in the payment of rents, and that much real destitution should prevail.

But, though these are the immediate causes of the present depressed state of Ireland, one cannot but feel that there must be something totally astray in her whole agricultural system, or in the character and habits of her people, which unfits her for meeting a cycle of unfavourable seasons, and passing through them unscathed. In these more remote causes the true explanation of Irish distress is to be found; and to remove them ought to be the aim of the true philanthropist and legislator. The Roman Catholic religion has been alleged to be one of these causes; but we cannot see how its sufficiency as a cause can be proved. It may be true that, in the past political circumstances of Ireland, this agency has operated unfavourably on the character of the people, producing disaffection, depriving them of freedom of thought and self-reliance, and embittering the relations between landlord and tenant. But we do not find that religion always producing these results, and necessarily impeding agricultural prosperity. Belgium is eminently prosperous in agriculture. In Lower Canada that religion does not create agricultural distress. In Italy, regenerated under Victor Emmanuel, it is not likely to do so; and we cannot therefore see why it should *in itself* have any such effect in Ireland.

Much has been said of absenteeism as a potent, if not the chief, cause of Ireland's miseries. But its effects have also been greatly exaggerated. The notion has originated in the idea that Irish money is spent by the landlord out of the country, as if it made much difference whether he eats his Irish beef and bacon at home, or after it has been sent over and sold in England; or bought his cloth for his coat in the neighbouring Irish country town, or a few hundred miles nearer, in England, to the manufacturer. But it is not easy to see how residence on a property in land is to be generally expected as a duty, if land is to be bought and sold in public market like everything else, as we are now taught by political economists. Why should a capitalist in England, who has invested ten or twenty thousand pounds in an Irish estate, managed it successfully, treated his tenants justly, and given them every reasonable indulgence, be obliged to reside among them? What has residence or non-residence to do in such a case with the success of the farmer in his farming? There are no better managed estates in Ireland than those in the county of Derry belonging to the London companies, and no happier tenantry; and yet no landlord resides among them. Whatever, then, may be the advantages of having a resident landlord—and they may be many—we cannot but think that they have been greatly exaggerated. The happiness and prosperity of a people depends much more on themselves than on any such extraneous aid.

But this brings us to the true cause of the inability of Ireland to meet a sudden agricultural reverse of fortune—namely, the subdivision of the greater portion of the country into small farms of not more than five, ten, or fifteen acres. It was alluded to in last Tuesday's debate both by Lord Palmerston and Sir Robert Peel, who showed that the holders of these farms, being from the very nature of the case men of no capital, are incapable of effecting any real improvements. The extent to which this state of things existed in Ireland before the famine, will be understood from the fact that, out of 691,000 holdings, there were 310,000 between one and five acres, and 252,000 between five and fifteen—making altogether 562,000 farms under fifteen acres. There were only 81,000 between fifteen and thirty, and but 48,000 approaching in any degree to what would be called a farm in England. Was it to be wondered at that, when a famine came, it should have decimated the population, and led to a wholesale exodus? The first effect

Digitized by Google

nothing to do except to wait patiently in the ante-chamber on the other side of the Cabinet door, till the door opens to receive him again. The Emperor does what he can to soften the disappointment of the resigning official, by either making him an ambassador extraordinary, or else giving him a place in the Senate with a corresponding golden dotation. At present every Frenchman knows that one of two things must happen to M. Persigny, who has been sacrificed by Louis Napoleon after the recent electioneering tempest, very much as a sailor in ancient times, who escaped from a shipwreck, used to hang up his dripping garments as an offering to the god of the sea. He must either be sent on a special embassy somewhere, or else he must be turned, with a golden collar round his neck, into the Senate. Count Walewski will be consoled on his similar dismissal by becoming guardian of the little Prince Imperial, which must be a cruel mockery to a fiery gentleman whose head is running on nothing else except Poland and the Poles. A recent number of the *Journal des Débats* contained a curious telegram from England, to the effect that Mr. Gladstone was about to retire from the Board of Works and to be appointed to the bishopric of Exeter. It was probably the composition of some French wag, who knew French credulity, and who also knew Mr. Gladstone's foibles ; but if there is a country in the world where the intelligence might wear an air of truth, it is in France, where no official ever gives up anything without being upon the spot presented with something else. The system of continual pay to such eminent individuals is an expensive one, but it no doubt works well. To be an Imperialist is to belong to a staff where promotion is certain and lucrative, and where there is no half-pay.

The dismissal of M. Persigny was not a necessary step to the preservation of quiet in France, for France has never been on the brink of a disturbance ; but it will be a popular and a politic measure. It will be popular, because M. Persigny has taken boldly on himself the odium of a stringent policy towards the press and towards electoral bodies. It is politic, because by taking it, the Emperor seems to encourage the notion that his Ministers, and not himself, are to blame for the unpopular and restrictive measures of the Government. The dynasty strengthens itself by detaching itself at such moments as these from particular Ministers, who are less popular and less liberal than the idea of Napoleonism. The theory of Imperialism is that it belongs to no party and to no set of men ; that it is a national creed, not a set of party doctrines. If so, the business of the Emperor is to watch the current of popular opinion, and to set his sails to the breeze. The more he introduces the notion of ministerial responsibility, the more he establishes the throne. This is a political conception which all history fortifies, and Napoleon III. shows that he is not blind to its truth. Paris will be satisfied with the concessions. The recent elections will seem to have had their legitimate force and weight upon the policy of the Government, and the popularity of the Emperor will increase instead of suffering. The simultaneous change in the organization of the Ministry, which virtually abrogates the institution of Ministers without portfolios, is a movement in the same direction. The practical result may not be great ; for the real inconvenience has chiefly been felt upon financial questions, in which for some time the curious spectacle was seen of one politician defending in a lukewarm way the budget of his rival, which he disapproved. But all these little changes please the French nation. They do not want to be governed by orators or Orleanists, but they wish for reasonable good government. Most of all are they pleased by these occasional acknowledgments made by the Emperor that the will of the nation ought to be supreme. The elected chief of the State on State occasions wisely lowers his fasces in the presence of the French people.

The resignation of M. Walewski is probably to be explained upon different grounds. The event seems to have a bearing upon the question of Poland ; and taken in conjunction with the evident reluctance of England to move beyond the limit of diplomacy, has been taken to imply that the Emperor is resolved not to commit himself to another war for an idea. Such is the interpretation that seems most natural, considering the known tendencies of M. Walewski. On the other hand, the French intelligence teems with rumours of warlike preparations. The event alone can show what is the real purpose of the master of a hundred legions. English opinion may pronounce, and seems likely to pronounce, against any English offensive movement against Russia, however strong the provocation given to civilization and humanity by the terrible scenes enacting in Poland. We must, however, in such a case fairly be prepared to see France recompensing herself, after the threatened war is over, for her sacrifices for Poland. We cannot eat our cake and have it too, and must not expect to be disappointed, if a repetition of a campaign for an idea is followed by the repetition of a demand for territorial annexations on the French frontier. It is for us to choose between two evils : for we cannot hope to escape both ; and it is as well that the English public should know it.

DEATH AMONG THE DRESSMAKERS.

It is only another girl that has fallen a victim to the white slavery of the needlewoman's trade. "Young persons," as this class of our fellow-creatures are called, may die as fast as they please. Their places are, in this Malthusian age, very quickly and certainly supplied. Our social economy provides for the speedy extinction of a superfluous part of the female human stock. The balance of their labour market is continually redressed, not so much—in the fashionable millinery trade—by employing half-time, and for half-wages, a larger number of workers, as by using them up fast and taking on a set of new ones. Some of them are killed outright by excessive toil and the suffocating air of their rooms. Others, concluding with poor Hood's shirtmaker, in favour of the theory of the barbarous Turk, that women have neither souls nor bodies to save, at length prefer idleness and sin to a desperate sort of labour, and peril their lives, while casting away their virtue, in the nightly parade of venal girlhood in our shameless streets.

There are houses where, for the profit indeed of their employers, both these occupations are combined. There *was* a well-known dressmaker in extensive business a few years ago at the West-End who kept open a —— well, a picture-gallery, a museum of art and *virtù*, adjoining the work-rooms of her young people. It is said that gentlemen would sometimes call there, unaccompanied by shopping wives, to inspect, by a special invitation from the mistress, her collection of beautiful objects. The mistress died, full of years and wealth ; her gallery of choice paintings, alabaster statuettes, and curious old china, was dispersed by the hammer of an auctioneer ; the pretty *bijoux*, which had served as an excuse for the occasional visits of licentious men, were purchased to adorn the drawing-rooms of proud and pure ladies, whose costly robes, perhaps, that same establishment had prepared. It may be easy, in certain situations, by several ways at once, to accumulate a fortune of £20,000 or £50,000. Girls are so plentiful of late seasons, and for the purpose of marriage are so little in demand, that it is cheap for the proprietor of a West-End gynæceum to hire the honest or the ugly for work, and the others for the show department. But we will leave that part of the subject. Colonel Waugh's bankruptcy case has just reminded us of a famous bill for millinery and the like, which was sent in to his wife by the late Mrs. Clarke, of Regent Street, and which astonished the Court, the assignees, the attorneys, and the creditors, in the first exposure of his private affairs just six years ago. We cannot now remember all the items which made up that unpaid account of more than £2,000. The charges may have been fair enough, with an allowance for the improbability of getting the money, though of the value of his personal security Mrs. Clarke was perhaps a keener judge, than his accomplices in the London and Eastern Banking Company were inclined to be. It is perfectly natural, and we do not say it is unjust, that a certain class of tradespeople should indemnify themselves, by extortionate prices, for their enormous risk of bad debts. The ladies who are fond of finery, beyond the limits of their stipulated pin-money, should lay the blame upon themselves, if they find that the West-End milliner or dress-maker is obliged to fabricate an unconscionable bill. Their remedy is to be more careful, not only in the rate of their own expenditure, but in employing those houses which are known to prefer the honourable sort of customers, instead of resorting to the favourite *modiste*, who is recommended by the patronage of fast women, and of the women belonging to fast men. We have some reason also to think that, by a little quiet inquiry and supervision in this quarter, it would be fairly in the power of respectable matrons to remedy, in some degree, the two-fold evils of systematic cruelty and of systematic corruption, which annually destroy a terrible average number of the oppressed and betrayed youth of their sex. Ladies, of course, will mind their own business ; and they have a right to give their orders where they please. Yet we observe that they are disposed, at the present day, to betake themselves to many forms of direct philanthropic effort, in aid of which our advocacy is constantly desired. We may therefore be permitted to tell the fair presidents, patronesses, visitors, and committee-women of sundry institutions for moral, social, and sanitary reform, that while their public counsels and ministrations, if prudently directed, are possibly the means of doing a little good—for much good is sure to be wasted in the doings of any benevolent association whatever

Digitized by Google

Why should any human beings, who, like Mr. Toole and the ladies playing Manrico and Leonora at the Adelphi, are very capable of higher things, be called upon for this senseless exhibition? Is there a conspiracy to degrade and utterly destroy the noble histrionic art? Clever men and women, as these are, might really be spared the humiliation of enacting such parts, and of speaking such language, as are set down for them in a piece which is vaunted in the current playbills to-day for "Byron's best." His pen is as fatal as the wand of Harlequin-Circe, or Harlequin-Comus, in the most shocking transformation scene, where we see a company of people suddenly changed into the nature of a set of silly, skipping, jabbering, gesticulating animals, without the slightest purpose or consistency in their behaviour, and with only a certain parrot-like facility of catching the sound of words, or at least of syllables, overheard from the articulate speech of mankind. This is the effect produced at length by the recent compositions of Mr. H. J. Byron, under the auspices of Mr. Benjamin Webster, on the Adelphi stage. What can they mean by it? Do they wish to supply an experimental proof of the Darwinian theory? or to warn us of the possible fulfilment of that dreadful prevision, suggested by Mr. Kingsley and Mr. Carlyle, which contemplates a future state of existence, when the abuse of human faculties and the indulgence of simious propensities will be punished by our restoration to the original state of apehood?

It is the fault of a highly critical contemporary, if we are provoked into a controversy on the merits of this peculiar Byronic literature of the present age. Our neighbour, the *Saturday Review*, with its fine catholicity of spirit, was at great pains the other day to laud Mr. H. J. Byron for his singular ingenuity in catering for this generation of play-goers; and we have been desirous to examine the grounds of that favourable judgment. With our habitual deference to the opinions of a journal hitherto assuming to be the organ of a sect of literary Purists or Pharisees, we felt that a contributor, who told us he knew how to construe the most intricate Æschylean chorus, might claim to decide, as it were *ex cathedrâ*, upon the classical productions which adorn the Adelphi stage. Yet his parade of Greek scholarship would have been more germane to the subject, if he had compared the plays of Aristophanes with those of Mr. Planché, the genuine offspring of a fine airy fancy, moulded with artistic skill, expressed with many happy turns of phrase; witty, graceful, and in admirable taste, which used to delight us at the Lyceum ten or fifteen years ago. Madame Vestris is no more, and Mr. Planché has yielded his place to authors who mangle both sound and sense, who outrage every feeling for whatever is noble and beautiful in the humanities of art. But we think it might have been appropriate, in an article purporting to review the history of burlesque and extravaganza on the London stage, if the writer had just mentioned those charming compositions of Mr. Planché's, with which nothing of Mr. Byron's can for one moment be compared. The rapid deterioration of the popular taste is terribly conspicuous in the descent from such pieces as we can remember, to the gross and vulgar buffoonery, without a ray of intelligence, which now solicits the cachinnations of gallery and pit. Let us, however, take note of those achievements of "verbal pleasantry," for which Mr. H. J. Byron, as "the leading professor of the modern burlesque language," is so industriously praised by no less an authority than the *Saturday Review*. This standard of criticism will determine the value of its future judgments.

What, then, is the "verbal pleasantry" for which this burlesque of Byron is gravely commended? It consists, we are informed, in "such an arrangement of words that groups of syllables, perhaps as many as four in number, are echoed by groups of similar dimensions." But this is mere *parrotry*, and it is the whole of Mr. Byron's craft. His kind and partial critic, in the journal which we have named, requests us to admire a few specimens of this contrivance, the few words in each quotation being carefully underlined to assist the reader in seeing the joke. In a passage, for instance, extracted from "Beautiful Haidee," Mr. Byron's travestie of Lord Byron, the commentator dwells with serious approval upon such lines as the following, in which it is remarked, after the subsiding of a storm at sea, that—

"What was *commotion* is now all *calm ocean*."

Another line, in which the heroine's complaint, that she is kept too close at home, and never allowed to go to a Ball, or Fancy Fair, or Fête of *Horticulture*, is met with this reproof:—

"You are a *naughty gal ter* talk that way."

Again, when she says, "My limbs to chains you *doom 'em*," the stern guardian of her domestic imprisonment replies, "Yes, we *do, mum*." Again, as she is deprived even of the solace of the last new novel, this poor young lady "in her room *mewed is*, with no books from *Mudie's*;" for in all these particulars, we are told, "the *law*" (or *lor*) "*made* by her *pa* must be obeyed by her *parlour-maid*." Who now can rise from the perusal of these wretched jingles, and of the critical essay in which, as bugs in amber, they are so curiously enshrined, without mingled feelings of astonishment and disgust?

"The things, we know, are neither rich nor rare;
But wonder how the devil they got there."

How indeed came Mr. Byron's burlesque of "The Ill-treated Il Trovatore" to be honoured with an elaborate puff in the *Saturday Review*? There are more things in heaven and earth, and elsewhere, but especially in the sphere of theatrical criticism, than are dreamt of by an innocent play-going public, in its philosophy of idle submission to the self-styled arbiters of taste.

We are not of those austere Puritans who utterly condemn the pun, as a base, dishonest, and nefarious thing. We do not lay it down, with the great English lexicographer, that a man who will perpetrate a pun is criminal enough to pick his neighbour's pocket. We will not cite this rule to pronounce Mr. Byron guilty of the most heinous felonies within the cognisance of penal law. That playful trick of similarly sounding words has, in every age, been resorted to by some of the best authors, classical, sacred, and profane. A very modest and discreet punster of our acquaintance was threatened one day with a fine of five shillings for each repetition of his darling sin. He sued for mercy, "Let me not be so pun-i-shed for every pun I shed." Mr. Byron, who is the author of some thirty punning pieces, never made a pun so neat as this, though it is nothing better than a mere sportive exchange of syllables, however perfect in its kind. But the art of punning is only justifiable as an auxiliary to real humour or wit; as when Dr. Johnson himself told the Dons of a venal Scotch University that they would "grow rich by degrees," or when somebody promised a traveller that he should not starve in the desert, "because of the sand which is there." In these lawful applications of the pun, we find a shrewd or queerly incongruous idea, like the spicy almond in a sugar-comfit, enveloped in the pleasant jingle of resembling vocables; but in those of Mr. Byron's clumsy manufacture, we find no kernel of wit or humour, no after-taste of a whimsical or satirical thought. He is the most awkward punster, as he is also the rudest versifier, that ever pretended to conjure with the sounds of words. He cannot even make musical nonsense; he has no more ear than a donkey for the finer differences of English pronunciation, or for the rhythm and the rhyme of English verse.

We feel bound, however, seriously to protest against the offensive and debasing character of the late attempts in this kind. We can admire the true burlesque, in which, as in "Tom Thumb," "Chrononhotonthologos," and "Bombastes Furioso," our mirth is excited by the incongruity of mock-heroic declamation with incidents of a trivial nature. But it is a paltry expedient, for lack of original invention, to pollute the stories, the scenes, dialogues, and songs, invested with touching or elevating associations by a former artist, and to court a foolish grin by distorting and defiling that which is beautiful in itself. The other day it was one of Handel's operas, as we saw; now it is one of Verdi's; and though scientific musicians do not rate the popular Italian *maestro* in the highest rank, none of the audience who heard Mario last Friday night in Covent Garden could desire to let Mr. H. J. Byron work his wicked will upon the "Trovatore" without an indignant rebuke.

The action, too, as well as the music, is indecently and inhumanly abused. We really cannot see the fun of Mr. Byron's hideous parody upon the scene in prison, where Manrico soothes the anguish of his mother, as she lies in a delirious fever. It may be true, that representations of sickness and madness are unfit for the tragic stage; they are doubly unfit for burlesque. Yet this is not the worst. That scene in which Leonora, outside the walls of the prison, hears the monks chanting their *Miserere* for the soul of her lover, already condemned to be put to death; and, in the midst of their solemn dirge, the voice of Manrico from a window of his cell, as he bids the world and his bride farewell,—even that scene, in which a legitimate dramatic effect is set off by some of the most pathetic music that was ever composed, has been marked out for the foulest profanation. We almost shudder to relate how this villany is managed, by mixing up the air of *Ah che la morte* with that of *I am the Perfect Cure*. The other day, when a murderess was hanged at the Old Bailey, we had the Perfect Cure at the foot of the gallows. The shameless purveyors of comic sensation to the low mind of vulgar half-price Cockneydom will not stop at this. What do they care for Shakespeare and the musical glasses, or for what Shakespeare says about the man who is not moved by con-

Digitized by Google

Most properly. But General Peel has put the case too mildly. Our readers will bear in mind that the regiment was embodied in March, 1855, and disembodied in June, 1856. The accounts of the regimental agents from the 24th of November, 1855, to the 5th of May, 1858, have been examined by a professional accountant, who at the time of the Court of Inquiry reported as follows :—

"It appears that on the 18th of February, 1856, when the outstanding claims were not less than £436, and the balance in the agent's hands was £305, Colonel Dickson drew out £150, only £100 of which he paid away, retaining £50 to the end of March, when it had been further increased to £61. On the 14th of April it was reduced to £17, but next day he drew out £75 from the agents, on account of which no payment was made by him. In May £35 was paid by him, but £60 was drawn out by him on the 14th, by which the balance in his hands was increased to £106. On the 20th of June it was reduced to £62, and on the 12th of July £100 was received by him from Lord Wilton for the band fund, which was not paid by him to the agents, by which the balance in his hands was increased to £162, which was retained by him, no payments being made on account thereof until the 7th of November, and on the 14th was increased to £167, and no payment was made on account thereof until May, 1857, by which time it was further increased to £247. On the 7th of February, having that balance in his hands, Colonel Dickson, desiring to pay the wine merchant £49, borrowed that amount from the paymaster, and retained a portion until the 1st of June, 1857, between which date and the 24th of July the balance was reduced to £26, which does not appear to have been yet repaid."

Where, with such a case against Colonel Dickson, was the need for a conspiracy to remove him from his command? Can a stronger case be imagined against an officer at the head of a regiment than this which we receive from himself—that he permitted a misapplication of the funds of his regiment, postponing debts incurred to tradesmen, to the more pleasurable, doubtless, but the very prodigal expense of entertainments which there was really no money to meet? Will nothing but the theory of a conspiracy account for Earl Wilton's irritation when he found himself sued for the debts of a regiment with which he had only a nominal connection? Will that theory alone explain Viscount Combermere's opinion that the lieutenant-colonel who had suffered so disgraceful a state of things to arise ought to resign, or General Peel's belief that he was unfit to command? This is a question upon which every man is competent to give an opinion, and upon which there must be a universal consent. Colonel Dickson's honour is not questioned. But surely he, who could tell his officers that he had the right to dismiss them without court-martial if he pleased, ought not to find fault with the Secretary of War who treated him with such considerate leniency. Possibly enough, the Court of Inquiry conducted its proceedings without regard to the rules of judicial investigation common to military tribunals; and we may admit that nothing could well be more ridiculous than their proceedings. But Colonel Dickson has relieved us from the duty of entering at all upon this question. He has written down his own condemnation, and the impertinent charge of conspiracy falls to the ground.

THE CRUIKSHANK GALLERY.

Measured by quantity alone, the collection at Exeter Hall of the etchings and woodcuts of George Cruikshank, to which we called attention in a previous number, is a remarkable sight; the more so when we consider that, after all, it is merely a selection. The fecundity is amazing; and fecundity, be it observed, is one of the signs of genius. For the last sixty years, almost, Cruikshank has been an ever-working servant of the public. There are even sketches in this collection which bear the date 1799—the century of Hogarth; but they are only the jottings of a precocious boy, with a world of undeveloped art in him, and are simply exhibited to the public as curiosities. From the early years of the present century, however, down to the year in which we are now living—from the days of the Regency to those of Queen Victoria—from the epoch of George Augustus, Prince of Wales, to that of Albert Edward, Prince of Wales—this indefatigable pencil has been throwing off caricatures, squibs, illustrations to songs and illustrations to books, pictured morals like those of Hogarth, quaint fancies such as Hogarth could not have approached, delineations of contemporary manners, and creations for all time. Like some of the old Italian and Flemish painters, Cruikshank's works make a gallery in themselves. We walk from one wall to another, bewildered by the mere amount; and, if asked to summarise in a few words the prevailing style, find it difficult to give an answer. An attentive examination, however, will, we think, result in an impression that Cruikshank's various styles throughout his life have generally been more or less affected by that in which he began. He commenced his career as a caricaturist; and something of the caricaturist's love of exaggeration is visible in most of his productions, from the sketches made by the boy Cruikshank down to the oil painting of "The Worship of Bacchus," whereon the colours are yet scarcely dry.

When George Cruikshank was a youth, the great caricaturist of the day was Gillray. He was the "H. B." of that period. An uneducated man, and coming at a time when humour was scarcely understood apart from coarseness, he worked with a rough power and broad farcicality which would now be considered unpleasant. But for a long while he set the fashion to succeeding caricaturists, and it was thought that the wildest excesses of oddity were permissible to the designer of burlesques. Cruikshank was born in the midst of this condition of comic art, and was in some degree influenced by the prevailing mode. To his credit be it said, he did not transgress the limits of decorum, but he ran riot in the somewhat rank efflorescence of his fancy. Notwithstanding the conspicuous ability of his early political sketches—their creative humour, vigour, and life—they do not strike very agreeably on our modern eyes. Something, of course, is to be conceded to the loss of immediate interest in the subject; for a caricature derives much of its vitality from the electrical condition of the public mind out of which it issues. But this is not all. We have outgrown a certain infantine fondness which we had in the last generation for exhibitions of ugliness. It was the result of imperfect art-education—of a childlike condition of mind as regards that particular thing. Children, though they will much more quickly make friends with handsome than with ill-looking people, have no idea of fun apart from hideousness. Half their pleasure in the pantomimic clown is derived from the astounding distortions and discolourations of his face. The same may be observed of nations which have not yet been educated to the love of beauty; and, as we had not been so educated in the opening years of George Cruikshank's life, his pencil received a corresponding tendency to the uncouth. His caricatures, political and social—at any rate, those which he produced in his young manhood—abound in physical deformities, and are sometimes rather depressing than exhilarating. The habit, however, greatly diminished in after-times, and the humour of the *Comic Almanacks*, of the *Omnibus*, and of the thousand and one plates which the graver of Cruikshank has furnished as illustrations to books, is often genial and enjoyable. In riper years he gave up caricaturing, and wisely so, for his genius lay far more emphatically in another direction. The elder Doyle, whose political sketches with the signature of "H. B." were the great attraction of the print-shop windows when some of us were young, became the chief caricaturist of the intermediate days between Cruikshank and *Punch*, and was the first to show that pictorial pasquinades may be executed with a prevailing spirit of elegance. *Punch* itself has followed in the same wake, and won an immortal name by refining satire, and allying it with generosity and grace. But it would be unfair to George Cruikshank to quarrel with him for not having done the same thing fifty years ago. All the elements and characteristics of society were against such a reform. It was a coarse age, brutalized by years of war, by exclusion from the civilizing influences of intercommunication with foreign countries, and by the drinking habits of all ranks of the people; an age distinguished by a low, vulgar, and bloated class of physiognomy, by the disfigurations of gout, apoplexy, and palsy, and by the meanest style of costume that ever existed. We have improved incalculably in all these respects since the reign of George IV.; and Mr. Leech can now give us pictures of English life, of which, on the whole, we need not be ashamed before the world.

But the tendency to exaggeration which runs through most of Cruikshank's productions is frequently not a fault, but a positive virtue. It forms the finest element in his drollery. If in the humour of actual every-day life he has his superiors, in the humour of fancy he cannot be approached. The exuberance of invention—the antic sportiveness—the fertility of suggestion—the endless variety of grotesque detail, so that illustrations of the main idea start out of every "coigne of vantage," out of arch and corbel, out of roof and casement, out of chair-back and table-leg, out of the pattern in the carpet, out of the tracery on the walls, out of the flame of the taper, out of the glowing embers in the fire—until, as in some of his designs for fairy tales, and in the wonderful plate called "Ghosts," the whole conception seems instinct with goblin phantasy,—all this is truly inimitable. No one does such things with half the grace and wild vivacity of Cruikshank; nor can any one so artfully suggest, in the midst of all the grimness, an over-mastering spirit of fun. The possession of this unrivalled power—which would be German if there were not a hearty English health in it all—makes Cruikshank the best illustrator we have

terminus hotels, we will accompany the reader through its long galleries and splendid reception rooms, and give him a general view of the underground offices in which the main business of the hotel is carried on. There is a very popular print which represents a longitudinal section of a first-rate man-of-war, and which at one glance shows the spectator the whole economy and anatomy of a great war-ship of the old school. If we could make a transverse section of the Grosvenor, it would be equally interesting, and, moreover, it would represent a thing of the advanced present, instead of, as in the case of the 120-gun ship, only a picture of the past. No sight in the metropolis strikes the provincial Englishman with more astonishment than the first sight of this huge building. From the dip of Piccadilly he sees it looming in the distance, far over the head of the royal palace; as he gets nearer it seems to grow into the air; and as he *debouches* full upon it from some side street, it towers up like a mountain before him—a mountain chiselled from basement to garret with clustered fruit and flowers, all wrought in enduring stone. A fastidious taste may perhaps think the building somewhat overdressed, but there can be no dispute about the enormous amount of labour spent in its enrichment, or respecting the imposing appearance of the pile, with its "stories without end" which the giddy head refuses to count. The richness of its exterior far surpasses the Louvre Hotel, from which it totally differs as regards construction. From the open nature of its site it is lit almost wholly from without, whilst the model Parisian hotel, jammed in between tall houses, was constrained to adopt the interior court system, which, together with some advantages, on the whole contrasts unfavourably with the design of our great metropolitan hotel. The disadvantages are patent the first moment we enter the doors of the Grosvenor. Although we enter a noble hall, from which marble flights of stairs ascend with almost regal dignity and amplitude, yet we must confess that we miss the exquisite grace which greets the stranger as he drives into the crystal courtyard of the Louvre. We miss the tropical verdure and the trophies of flowers which adorn the grand court, the oriental palms on the balustraded stairs, through which fair faces gleam and bright eyes glisten from the open windows of the gilded saloon as the bell announces the arrival of strangers. By night, again, we miss the bright *café*, the brilliantly illuminated offices, and the fringe of guests smoking and claretting, and clattering *petits verres*, whilst ladies sip ices and demurely quiz; we miss, also, the *salle-à-manger* which rivals the finest rooms of the Louvre palace in gilding, in rich mouldings, and in its painted ceilings. But this, in all the true substantialities of an hotel, in the comfort of its arrangements, in the light of its apartments, and in its cooking, and last, but not least, in its moderate charges, may challenge comparison with its Parisian rival. When we speak of rivalling, however, we only refer to management and arrangements, as no London hotel yet constructed can bear comparison either with the Hôtel Grand or Louvre in magnitude. For instance, the Grosvenor makes up only 180 beds, whilst the Louvre can accommodate 500 guests, and its sister hotel an equal number, we believe. Whilst, however, Paris can only sustain two of these gigantic caravanserais, London will, in a short time, possess at least a dozen of the more moderate-sized railway hotels, of which we take the Grosvenor as a type.

But let us enter, as we have tarried long enough on the threshold. If you wish, good traveller, to spend but moderately, and you are therefore told that you must mount to the third flight, your mind and your legs also will be relieved at being invited to enter the ascending-room. At the Louvre you sigh as you see your heavy luggage taken up by the "lift," and wonder why humanity should be treated worse than trunks and portmanteaus. But "they manage these things better" at the Grosvenor, at least as far as the traveller is concerned, for he steps into a room, throws himself on a lounging sofa, and, lo! he is in a trice on the third floor. Meanwhile the porter is constrained to carry his own load and that of the traveller up the long and wearisome flights of stairs,—an error this, but one which the traveller will at least contrast favourably with the arrangement of his Parisian hosts. When we consider the waste of human muscles that a few gallons of water scientifically applied can save, we wonder that these convenient ascending-rooms were not in public use long ago. One hundred and twenty gallons of water is sufficient to work the hydraulic apparatus by which the room, with its complement of seven inmates, can be lifted, say 120 feet, which, at fivepence a thousand gallons, makes the cost a little more than a halfpenny.

But here we are on the third-floor, and as the room stops level with the landing, the head chambermaid, who has been spoken with through the gutta-percha tube from the bar below—or "bureau de reception," as our Parisian friends have it—meets us and conducts us to the apartment assigned to us. As in the Parisian hotels, there is a service to which is attached a head chambermaid and two subordinates, neatly dressed in black stuff with white aprons. The "service" here is not the gossiping, lounging room of the Louvre, in which the male attendant receives the keys and dispenses bad cigars to the little company on his particular *étage*. We know the obvious limits of service which nature draws between men and women. Men do not make the beds, and women do not act as porters. The room of the head chambermaid is used simply as a station, to receive orders and to receive the keys of the guests. One is astonished abroad to find the keys of every guest hanging in the hall of the hotel, on a black board, opposite the number of his bedroom; and one is more astonished to find that the clumsy, ill-wrought keys are all alike, and that it is the easiest thing possible either to take your neighbour's key when he is out—and you may be certain he is out by the fact of his key being on the peg—or else to use your own key to enter any apartment whose lock it will fit. When the Grosvenor was opened the foreign system was adopted, in so far as hanging the keys openly in the "service," and the result was that different rooms were entered and robbed, by the facilities thus given, to the extent of £500. If this had gone on, it would have ruined the hotel. Mr. Hobbs was therefore called in, the doors were altered so as to open from the inside only by the handle, and from the outside by the patent key; consequently, if a guest should leave his key on the mantelpiece, and slam the door behind him, the master-key of the manager would be his only means of obtaining ingress. If he took his key he would leave it at the service, not open, as abroad, but in a frame specially fitted up to receive them, and fastened with a patent lock, the key of which is retained in the possession of the head chambermaid. By this arrangement surreptitious entry into any guest's room is impossible, and since its adoption, robberies have altogether ceased.

It is unnecessary to describe the bedrooms, all of which are lofty. We may go so far as to say, they differ as widely from the old bedroom of the British hotel, as these did from the sleeping-room of a well-ordered private house of the best class. In addition to the usual conveniences, 120 of the sleeping-rooms have private *closets*. Those only who have experienced the indescribable odour of those apartments in the immediate vicinity of the said *closets*, in the very best hotels in Paris, will be able to appreciate the merit of this arrangement. There are private suites of rooms on the different floors for families; and as no great hotel should be without its facilities for wedding breakfasts, the Grosvenor boasts a resplendent range of chambers fitted for the especial service of Hymen. The ground floor is devoted wholly to the public rooms; the dining-room is perhaps one of the most cheerful apartments in London. Unlike the dark *salle à manger* of the Louvre, which is lit by a borrowed light from the interior, its windows look out upon the stream of life for ever flowing to and from the Victoria station. No attempt has been made to introduce the *table d'hôte* dinner, as it has been proved over and over again that it is not suited to the tastes of Englishmen. Your Briton has no objection to make one of the three or four hundred guests who quiz each other in foreign hotels, or even at English watering-places; but we decline to depart from our habits of reserve in our own great cities. If any person could have successfully established a *table d'hôte* dinner in London, Mr. Verey was the man; but he made the attempt, and failed, some years ago, and it has never been tried a second time, at least for the delectation of first-class Englishmen. Since the breaking up of the pew system, if we may so term the high boxes which of old partitioned guests from each other, isolated tables, to hold four persons, seem to be the fashion, and these at the dinner-hour are generally well filled, attracted by the very good cooking and the admirable manner in which the table and dinner is served. It is certainly an innovation in hotel charges to be able to obtain a really good dinner of soup, fish, and joints, with vegetables, for four shillings, and a dinner from the joint, with vegetables, for three shillings. The lift, which communicates with every sitting-room as high as the third story from the kitchen, distributes each meal all over the house "hot." The smoking-room is a magnificent apartment, thoroughly ventilated. The ladies are taken care of as well as the men. They have a private room devoted exclusively to themselves, and opening into the library, well stored with books and periodicals, which is appropriated to the guests resident in the house. It will be seen that this new style of hotel, of which the Grosvenor is the exemplar, is arranged more like the apartments in a private mansion than the ordinary inns we have been accustomed to, where the coffee-room, at best, contains a Post-office Directory, or perhaps a local guide book—the newspaper always being engaged by the gentleman "upstairs."

But the chief points of interest in the hotel are to be sought in the basement. Here, in the spacious offices underground, the real agencies by which the great household above is provided for, lie hidden from the general eye. It is a small town we traverse, rather than mere domestic offices. For instance, under the road, and opening into the spacious area, we notice the bakehouse—all those delicate rolls which furnish the dinner-table are made on the premises; and as we pass, the white-capped baker is seen busy with his peel, getting ready the bread fresh and fresh for the day's meal. In the next arch we see the fish-store—it is a veritable fishmonger's shop, bright with scarlet lobster, glistening with silver salmon, and tinted with the delicate hues of the red mullet, all ranged on the ice-cold slabs. In the next compartment is the ice-house, with its refrigerators, the grand conservatory of perishable delicacies in the dog-days. Some little distance off, water in its liquid condition, is to be found. Boilers under the roadway circulate hot water over the entire house; within the distance of twenty yards we pass from the Tropics to the Pole, and witness the arrangements for dispensing either refreshing cold or life-restoring warmth to the population above.

In the basement of the establishment are to be found the usual offices, but so magnified in their dimensions as to be scarce recognizable. For instance, here is the den of "Boots;" but this renowned individual, like our Lord High Admiral, has been put in "commission," and his duties are now performed by a committee of six. Then the washing-room is passed—a large apartment presided over by an active little lady, who passes her entire life amid large mounds of soiled linen, which are ever rising and falling around her like the foam-crested waves of a chopping sea. Curious to see the daily items which composed the mass, we furtively glanced at the washing-list—a document almost as big as a parish

Digitized by Google

of the one—viz., one for hunting, fishing, and sale of furs; another for the partition and disposal of the lands; and a third for prosecution of mineral researches. If on the principle of *ex uno disce omnes*, they would be dividend-paying indeed. At least let us hope that they possess a better chance of success than the Australian Agricultural and the Peel River Company, which, with regard to prices, in the heyday of their supposed prosperity, went up like a rocket, but subsequently descended like the stick, and are now but second and third-class securities. Most people do not believe in these revivals. These old-fashioned companies, born in periods similar to the South Sea, the Levant, the Turkey, and other associations of that ilk, have lost caste; and except during a time of speculation, as at present, this kind of metamorphosis would not be tolerated. What next will be the character of enterprize adopted by the International Company to show its activity in working? Will it be Dock amalgamation, Bank amalgamation, or other far-sought arrangement? *Nous verrons.* The General Credit and Financial Society and the London Financial Association are comparatively quiet and unobstrusive in their transactions. They have made no demonstrative displays—they have not reached forward to take large responsibilities—but they have nevertheless moved onwards, and in some directions with profit. Here again it must be confessed that the risk will be proportional, and that unless the soundest discretion is exercised, a single loss may outweigh the general accumulations of the entire half-year. Agencies, it is believed, will be given of these two companies—agencies which will leave a commission without a participation in the adventure, and thus narrow the limit of hazard. If business of this class in sufficient magnitude can be compassed, it may turn out not so greatly remunerative, but it will be much less liable to fluctuation than that which the International has so zealously pursued.

These companies, their engagements and their prospects, have, as we have said before, brought the late speculation to a stand. Their inauguration and present development have exhausted the creative powers of promoters, and present such demands for capital that new schemes, except through their intervention, will fade almost as soon as they are presented. The *auri sacra fames* of the public has lost much of its strength, since it is apparent that premiums may be suddenly converted into a discount, and that calls are gradually but surely testing the *bona fides* of many of the mushroom projects. We do not hear so much now as a few months ago of the large sums made by the individuals who were early in the field with the new Banks, the new Insurances, and the new Hotel Companies. The claims of promoters are not so liberally recognized, preliminary expenses are ruthlessly curtailed, and company-mongering solicitors and qualified directors are much more discreet in either entering into or allowing themselves to be announced as connected with these undertakings. If these respective financial societies shall have effected no other good, they will have assisted materially in crushing and placing beyond the power of committing harm a variety of small doubtful schemes which would have preyed on the purses and persons of that section of the public least capable of protecting themselves, and who, though they can ill afford it, invariably become the dupes of designing knaves. The fate of the professional speculators themselves few will regret. They have had the time to make their harvest, and if they have neglected the opportunity they have but themselves to blame. Their fraudulently obtained proceeds, whether through promotion money, share rigging, or allotment hunting, if secured in one channel, will speedily be exhausted in another, the temptation among this class of dealing in the multifarious securities afloat being too great to be resisted. The final reckoning will come with them; we already see it approaching; the days of bright hats, bright ties, bulbous pins, and cable chains will soon pass away; and in the course of the autumn, when the "spirit of seediness" shall have made himself at home in these circles, we shall meet many of our old acquaintances in apparel more suited to their recognized worth and proper position in society.

REVIEWS OF BOOKS.

BISHOP WARBURTON.*

THE once great reputation of Bishop Warburton has dwindled down to little more than the preservation of his name; nor can it be said that he did or wrote anything for which he deserves to be better remembered. At the same time, as he filled a considerable place amongst the literary men of the last century, his life and works serve in some degree to illustrate the manners of his time and the state of learning in England. In this portly volume Mr. Watson has carefully collected all the facts that can throw light on the career and character of the pugnacious prelate; and he tells us quite as much as any one need care to know about the heavy treatises and bitter pamphlets of which he was the author, and the innumerable controversies in which he was constantly involved. We suspect, indeed, that the general reader's interest in the subject will hardly suffice for the digestion of so substantial a biographical meal, especially as we are bound to add that the cooking hardly makes amends for the poverty of the materials. Mr. Watson is far from an animated writer, and has an unfortunate tendency to indulge a vein of commonplace reflection. He has rather flung together a mass of crude materials, than worked them up into an effective and interesting whole. Still, his work is a storehouse of information, and we propose to use it for the purpose of sketching briefly the Bishop's life.

William Warburton was born at Newark, December 24th, 1698. After receiving his education at the grammar schools of Oakham and Newark, he was articled to an attorney; but although he was admitted a member of this branch of the legal profession, he soon turned his attention to the Church, and received deacon's orders in December, 1723. As might have been expected, his stock of learning was at this time very scanty, as is proved by the wretched style of the Latin dedication to Sir R. Sutton of a volume of miscellaneous translations. However, the faults of his style did not offend the influential personage whose patronage he obviously desired to secure. It was by Sir R. Sutton's exertions that he obtained his first living when he assumed priest's orders in 1727; and to the same source he was indebted for some other country preferments, including the incumbency of Brant-Broughton, near Newark, where he resided during eighteen of the most active years of his life. Previous to his settling down in this parish, he spent some time in London, where he became acquainted with Theobald, to whose edition of Shakespeare he contributed a number of annotations. The circumstance is principally interesting, because it has been made the basis of a charge that he was at this time a conspirator with Theobald's party to annoy and humble Pope, whose intimate friend—it might be said whose flatterer—he subsequently became. To its full extent the accusation is probably untrue; but there can be little doubt that he must have given at least a tacit assent to the depreciatory language in which Theobald was wont to describe the author of the "Dunciad." In 1727 he published his "Inquiry into the Causes of Prodigies and Miracles as related by Historians," a singularly poor performance, and only worth mentioning for the audacity with which the conclusion was plagiarized from one of the most striking passages in the "Areopagitica." His first really important work was "The Alliance between Church and State." His theory of the relations between these bodies was rather that of a politician than a divine. According to him Church and State, although originally distinct, had voluntarily formed an alliance on just and reasonable terms for the sake of mutual advantage. The equivalent which the Church received for acknowledging the civil power to be her superior, was protection in her acts and support to her authority. On the other hand, the State obtained a right to call on the Church to exert her influence in the promotion of virtue and good order, and as a support to the civil jurisdiction. In selecting the religious society with which it will ally itself, the State will be guided by its size and influence, "for the larger a religious society is the better able will it be to be serviceable in an alliance, as having the greatest number under its influence." The connection once formed will not be indissoluble, "for it will naturally subsist only so long as the religious society thus placed in alliance with the State maintains its superiority in numbers over other religious societies." At the same time, while it continues, Warburton was of opinion that it was perfectly justifiable to provide by a test law for the exclusion of members of dissenting bodies from offices of honour and power, in which they might exert influence to the hurt of the allied society. It was a necessary result from these principles that the civil courts should be superior to the ecclesiastical; that no ecclesiastic should be permitted to exercise his functions without the magistrate's approbation and licence; and that the Church, as a body, should enter into business even in the convocations, which they may hold without the express sanction of the civil power. It is hardly surprising that a theory so thoroughly Erastian in all its parts, should have received but little favour from any party in the Church, either in his own or subsequent times.

The work, however, by which Warburton is best known is "The Divine Legation of Moses." It was the object of this paradoxical production, to furnish an answer to those who argue that the absence of the doctrine of a future state of rewards and punishments from the religious system of Moses, is a decisive proof that he was an impostor. Admitting the fact to be as stated, Warburton contends that it leads irresistibly to the very opposite conclusion, and shows that the Jewish polity must have been under the immediate protection of heaven, or been upheld by means of a special and extraordinary providence:—

"His demonstration of this position he promised to leave very little short of mathematical certainty, requiring only the following postulatum to be granted him, which he considered that all would allow to be reasonable:

"'That a skilful lawgiver, establishing a religion and civil policy, acts with certain views and for certain ends, and not capriciously, or without purpose or design.'

"This being granted, his proof was to be erected on three very clear and simple propositions:

1. "'That to inculcate the doctrine of a future state of rewards and punishments is necessary to the well-being of civil society:

2. "'That all mankind, especially the most wise and learned nations of antiquity, have concurred in believing and teaching that this doctrine was of such use to civil society:

3. "'That the doctrine of a future state of rewards and punishments is not to be found in, nor did make part of, the Mosaic dispensation.'

"'Propositions so clear and evident,' he says, 'that, one would think, we might directly proceed to our conclusion:

"'That therefore the law of Moses is of Divine original.'

* The Life of William Warburton, D.D., Lord Bishop of Gloucester from 1760 to 1779, with Remarks on his Works, by the Rev. J. S. Watson, M.A., &c., &c. London: Longmans & Co.

Digitized by Google

headings of its five parts, and that the book itself is what we have just called it, a simple, lucid, and lively sketch of the facts of geological science. In a short introductory chapter the author treats of nature as a book, or rather a library of many volumes, rich in information, written in various languages or dialects, and open to the study and the wonder of man. One of these volumes is the "Great Stone Book," whose leaves are the rock-beds that form all that is accessible to us of the solid substance of the earth; and in it we are to read, by careful observation of its multifarious contents, by equally careful observation of the processes regularly going on in the world around us, and by such interpretation of the former as cannot fail to be suggested by the latter, the authentic history of the earth. A course of reading, this, which few of us in this hardworking world can even attempt; but the fruit of which, gathered laboriously by those who do go through it, and pleasantly presented to us, we shall do well to receive and taste, not without gratitude. We fear, however, that in spite of wise and enthusiastic teachers, and notwithstanding the multiplication of popular manuals, a very large majority will do no more than seek the idlest amusement in random opening of this "Great Stone Book;" "staring with astonishment at the strange skeletons in the British Museum, or the still more strange stony monsters perpetually threatening the following night's repose of the visitor to the gardens of the Crystal Palace at Sydenham."

In the first part, entitled "The Languages of the Great Stone Book," our author explains the action of rivers, sunshine, wind, rain, and frost on the surface of the earth. He points out the difference between the river-bed and the sea-beach, describing the process of the formation of each of them; and he thus sums up the vast effects of the action of rain and rivers:—

"Over the whole world the hills and mountains are being gradually moved away bodily, and lowered by degrees, because of the rain which falls on them and runs off to form the rivers; and the stones and mud carried away help to fill up the sea. This is the inevitable effect of rain, and it is not a small effect, for the whole of Holland is entirely formed by the mud thus brought down by the river Rhine; the greater part of Lower Egypt, the most ancient agricultural country in the world, was deposited in the same way by the Nile; an enormous country in India is the result of deposits left behind by the Ganges; and, in America, the city of New Orleans is built on mud which the Mississippi has brought down from the interior of the continent it drains. Every day throughout the year does this great river throw into the Gulf of Mexico sufficient mud to make a conical hill half a mile round at the bottom and sixty feet high."

In the second part, entitled "The Stones of the Great Stone Book," we have chapters on clay and its varieties, chalk, limestones and marble, sand and sandstone, granite, granitic rocks and lava. The chapter on the clays can hardly fail to excite interest in any reader, however unprepared he may come to its perusal; and many will probably learn for the first time, and with no little astonishment, that the beautiful metal aluminium, which has recently attracted so much attention, and is likely to become of great importance in manufactures and the arts, is the fundamental element of the vulgar material of which we make bricks and build our houses. The importance of clay as one of the most abundant combinations entering into the solid structure of the earth can scarcely be exaggerated. Its relations to agriculture and its uses in various manufactures are more or less known to most people; while few probably are aware that "slate of all kinds is nothing more than clay that has undergone an enormous squeezing," and can by an easy process be reduced again to clay; that felspar, which, with closely allied minerals, is "the basis of all the granites and also of all the basalts and lavas all over the world," is itself a clay with the addition of soda or potash; that pumice and lava are only modified clays; and that "even some precious stones," the garnet, emerald, beryl, and carbuncle, belong to the same class of bodies.

In the chapter on limestones we find an account of the caverns with their bone-contents and chipped flints, which have become familiar to us in connection with the great question, now under discussion, of the antiquity of man; and also a brief explanation of the formation of coal. The curious footprints and markings which have been discovered on some of the sandstone deposits in Europe and North America, are thus described in the following chapter:—

"Triangular footprints, as of birds, are mixed with marks of the step of some small but heavy animal, perhaps an ancient turtle; and here and there are huge clumsy indentations, more like the effect of a large hand than a foot pressing on the sand. These hand-like marks are in sets of two, not four,—the corresponding two being not only much smaller, but generally obliterated. It would seem that the animal must have resembled in its proportions those living kinds which, like the kangaroo among quadrupeds and the frog among reptiles, have two large hind-feet and two very small fore-feet. But no animal now lives, of either class, capable of producing such a foot-mark; and until some bones of the animal could be found, it was hopeless to speculate on its nature. At last, in rocks not far off and of the same kind, bones and teeth were found, which proved that a reptile had lived whose proportions correspond with those of the frog, but whose dimensions exceed those of the largest kangaroo."

The third part, entitled "The Placement and Displacement of the Stones in the Great Stone Book," after pointing out how we may find a connecting link between the present and the past by study of the beds in a brick-field or gravel-pit, treats of quarries and mining, volcanoes and earthquakes, and the disturbance of rocks. In reference to the latter subject, the author protests against the seemingly natural tendency of the mind to account for the great changes which have evidently taken place in the position of the rocks and the configuration of the earth's surface, by imagining certain violent movements and tremendous catastrophes of which experience has furnished us no example. He warns the student against assuming interferences, rather than gradual and successive adaptations, in the great system of nature, as one of the greatest and most harmful errors.

Part the fourth, "The Pictures in the Great Stone Book," will perhaps be found the most attractive of all. One chapter is devoted to a statement of what the pictures are, and what they mean; another to an account of ancient forests and modern fuel; and a third to a sketch of the inhabitants of the pre-Adamite world. The pictures are, of course, the fossils-petrifactions, as they used to be called—or remains of animal and vegetable life embedded in the rocks, and transformed into stone. That this transformation was possible without destroying the details of the once living structure; that the most minute peculiarities of shell, bone, or wood "can be examined under the microscope in the fossil state, quite as well as if recently obtained from a living specimen," is one of the strangest facts known to us. This marvellous change, says Mr. Ansted,—

"is effected in a manner not very easy to understand, since the original substance must be removed, and the new one supplied particle by particle; and this must have taken place not unfrequently while lying on the ground, or scarcely buried more than a few feet in the earth. There can be no doubt, however, as to the fact; inasmuch as both wood and coral, and occasionally shells and bone, are found in the transition state, consisting partly of the original and partly of the replacing mineral."

A short inspection of a coal mine prepares us to understand the picture—a *restoration*—of an ancient forest, with its gigantic ferns, its curious *Sigillaria*,—lofty trunks "fluted like the columns of a temple," and terminating in magnificent crests of fronds, with scars at regular intervals on the trunks, indicating the places of the growth and falling away of leaves or fronds; and the roots and rootlets spreading out in a complicated mass, like spokes of a wheel, from the base of the trunk; its *Lepidodendron*, or tree-like club-moss, and its *Calamite*, or gigantic reed. At the close of his chapter on the pre-Adamite world, the author wisely reminds us how limited, after all, our means of knowledge of the immeasurable past are; how very small a proportion of the immense number of animated forms which occupied in succession the land and the waters of our planet have become known to us, or are likely to become known.

"We grope about in the dark, picking up here a little, and there a little; but we can never hope to remove and bring to light all that is left, and there must remain to the last, in the great burying-place of nature, a far larger series than the most searching investigation of man will ever bring to light. Could we even attain to a complete knowledge of organic remains, we should have made but one step, and that an imperfect and incomplete step, towards an acquaintance with the life that has passed away, for there must still remain large gaps to be supplied of such animals as pass out of existence, and leave no durable skeleton or hard part capable of conservation."

The fifth part, entitled "The Treasures of the Great Stone Book," includes chapters on the precious stones and gems, the metals, and the circulation of water. And then follows a very short chapter headed, "The Shutting-up of the Great Stone Book;" merely a sort of expanded "finis." The list (pp. 263, 264) of the silly Polish superstitions respecting certain precious stones, the months, and certain moral qualities, and that setting forth the symbolic connection between twelve gems and the twelve apostles, are not worth printing in any book, and are most of all *impertinent* in a book of science. The illustrations to this volume are, most of them, mere fancy compositions, and do not add much to its value or attractiveness.

The science of geology is scarcely past its infancy, but its growth is rapid and vigorous, and it is certain to attract the attention of a continually increasing number of men. All discoveries which invest it with a more special human interest, such as those of the flint weapons, the Scandinavian and other "kitchen-middins," and, above all, the now famous human jaw of the Abbeville deposit, will enlarge the number of its students. It is possible that even yet some wonderful doubters may lurk in corners here and there, who dare avow their disbelief in fossils as real remains of living forms, and there is nothing for it but to leave them alone in their singular glory. A more numerous class are those who shrink from geology on account of the "uneasy relations" still existing between its established facts and certain points of religious belief. But every day is doing something towards lessening this discord and difficulty, and consummating the victory of science, which is the victory of facts. To all those who are desirous of getting a general view of the field of geological science and of the diversified objects of interest it includes, and who can spare but a small portion of time for the purpose, we can recommend as a suitable help this volume of Professor Ansted's.

A MEDIÆVAL TOWN.*

At a general view, the history of one town appears very like that of another, and presents few attractions to an ordinary reader.

* The Town and Borough of Leominster; with Illustrations of its Ancient and Modern History. By the Rev. Geo. Fyler Townsend, M.A. London: Arthur Hall & Co.

Digitized by Google

ing to him as manorial lord, and they remained in the crown until the reign of James I., who granted the whole manor, with all its ancient rights, possessions, and privileges, to his favourite, the Duke of Buckingham, and it was restored, after the stormy season of the Commonwealth, to his son, the worthless spendthrift of the reign of Charles II., who, after having alienated various portions of it, left it to be sold off to pay the mortgage upon it. It was bought by Major Wildman in 1675, who sold it again, in 1692, to Lord Conyngsby, a nobleman intimately connected with this part of Herefordshire. Lord Conyngsby possessed no little ambition, and a violent and overbearing temper, and he believed that the original royal grant to the Duke of Buckingham, which was vested in himself by his purchase, gave him a right to exercise a supreme and almost royal power in the town of Leominster. In his attempts to enforce his imaginary claims, he obstinately persevered during a long series of years, involving himself in a labyrinth of vexatious and expensive law-suits, none of which were successful. With him ended all attempts to disturb the municipal freedom or rights of the borough of Leominster.

Mr. Townsend's "History of Leominster" is a good book, much superior to the generality of our local histories. He has gone to work upon what remains of the local records diligently and zealously and honestly, and he has thus been enabled to tell us much that is entertaining and instructive relating to the habits and doings of the townspeople in past ages. It is a valuable contribution to this class of literature.

A QUARTETT OF STORY-TELLERS.

The plan adopted by Mr. Charles Dickens in the Christmas numbers of *Household Words* and *All the Year Round* seems to have been present to Mrs. Owen when she "arranged," if not when she wrote, the series of stories and sketches which form the work to which she has given the title of "Snowed Up."* These sketches and stories are all of the ordinary magazine type, and each of them is complete in itself, and bears no reference to any other in the volumes. Yet the authoress, by means of a slight narrative, has strung the various chapters together, thereby not only giving to her work an air of more completeness than a mere collection of tales could have, but also giving it a better title to assume the shape of the three-volume novel. The pictures have evidently been painted before the frame-work was conceived, and all Mrs. Owen's ingenuity cannot conceal the fact; but they are pictures which, for the most part, might make their way in the world without any frame-work at all. The structure of the work is, by this time, somewhat hackneyed. A number of travellers, the majority of whom are strangers to each other, being "snowed up" during an Alpine tour, endeavour to relieve the tedium of their detention by each telling a story or sketching an incident. The stories are worth telling and the sketches worth drawing, but when one has overcome some natural astonishment that so many excellent story-tellers should be thus accidentally brought together, one cannot struggle against the conviction that they tell their tales as mortals in quiet converse never did tell tales since the world began. Who, for instance, ever heard a respectable and sensible lady deliberately begin a story with words like these?—

"The Rosary of Time, on which he tells our years as they go evenly by, and counts the joys and sorrows of each sliding from his touch upon the silken string of life, soon to be knitted into the endless round, eternity, so far differs from its type as that there is no beginning again when the number is once told."

This would sound absurd enough falling from any woman's lips, yet the story which it commences is one of the best in the book and contains in itself sufficient matter for a good three-volume novel. The fact is, that one of the greatest difficulties which novelists experience is to make their characters hold even short conversations in the language of rational creatures, and the art of writing a fire-side story in the words in which it might be spoken is very rare. And yet Mrs. Owen's connecting narrative is lively, and even clever, and her tales and sketches make as readable matter, taken alone, as anything of the kind we have met with for a very long time. Wherefore, our fault-finding is no fault-finding at all, especially since we hasten to declare that our authoress has made some of the "snowed-up" party read their stories instead of telling them, and that few lovers of light literature will, after reading the first story, lay the volumes down until they have come to the end of the last.

We think it was the late Mr. Wakley who asserted his ability to write poetry by the yard. We have no doubt that Miss Sarah Stredder, the authoress of "The Fate of a Year,"† could write prose by the mile. But as Mr. Wakley's verses were not first-class, so Miss Stredder's novel is remarkable for the ease with which she gives quantity, rather than for the grace with which she gives quality. We have never been of the faith of those who maintain that anyone can drive a gig or write a leading article; but, after reading "The Fate of a Year," we are inclined to believe that anybody who can write at all can produce a novel and find a publisher. Our authoress is never at a loss for matter; and though she seems comparatively careless about plot or incident, she is one of the most fertile reporters of conversation we ever met with. She could fill a long chapter with small talk about the weather, and expand the common salutation, "How do you do?" into half-a-dozen pages at least. We are all acquainted with the peculiar dexterity with which M. Alexander Dumas, and others of his school, sometimes get over their paper. "Eh bien: c'est fini!" "Fini!" "Est-ce possible?" "Oui, oui;" and so on. So many lines to a page, and about two words, on an average, to each line. Miss Stredder, however, is dexterous, not in getting over the paper merely, but in actually crowding it with matter. One thing in M. Dumas's favour was, that if there was very little writing there was not much reading; but in "The Fate of a Year" there is a burdensome amount of both; and so much of the matter is altogether unconnected with the plot, as such, that it is difficult to keep the thread of the story in one's mind at all. Yet there is evidence in the volumes that Miss Stredder can write well. The reading of Simon Liscard's will, for instance, evinces considerable dramatic power. The fact is, that our authoress, having to tell a tale for which one volume would have amply sufficed, has utterly marred it by expanding it into three; the fault of fully one-half the three-volume novels that issue from the press.

The author of "Joseph Anstey"* has crowded into one volume an amount of matter that would have sufficed to fill the ordinary three. He calls his work "a story of chequered life, from youth upwards," and takes for his motto the words of Lord Brougham, "The success of mediocrity, both in public and in private life, affords a valuable lesson to the world—a lesson the more extensively useful because the example is calculated to operate upon a far more enlarged scale than the feats of rare endowments." The minuteness of detail in the book would induce the belief that a considerable portion of it relates Mr. Henry's own experience of life, and, remembering the dogma of the late Mr. John Murray, that every man had "one good book in him," it might have been expected that a work like this would have been at all events readable. But Mr. Henry has yet to learn the art of telling a story or writing biography, and "Joseph Anstey" is an utter failure, whether regarded as fiction, or as personal history. The success of mediocrity is, no doubt, capable of being made a profitable, if not always an inviting theme, but, to be either, it must be remarkable for its magnitude, or for the means by which it was obtained, or for both. Now the first half dozen men whom the reader might encounter in Fleet-street would probably have more remarkable self-histories to relate, if put to the test, than that which Mr. Henry relates of his hero whose success, after all, is nearly as mediocre as his abilities. A narrative of the life-struggle of humble talent against adverse circumstances, overcome at last, can hardly fail to be interesting otherwise than from the incompetence of the narrator. Even a life like that of Joseph Anstey must have had a good deal of earnest in it, but the earnest here is left almost entirely out of sight, in order that Mr. Henry may crowd his canvass with incident, to distinguish which the word "trivial" would be too mild, and the word "imbecile" hardly too severe. We quite agree with Lord Brougham's proposition; but until we can have better "lessons" of the "success of mediocrity" than the volume before us presents, we shall prefer to confine our reading in that line to the history of Mr. Richard Whittington.

"Tried and True"† is a simple and well-told story of a course of true love that runs with the customary degree of roughness till it reaches the usual haven of marriage, and "they were happy ever after." A woman's self-sacrificing devotion to her father, who has fallen from affluence to poverty, and the constancy towards her of a lover, who encounters the anger of a rich uncle and the loss of fortune in consequence, the baffled craft of the uncle in question, and the sufferings of poor dressmakers, who work for cold-hearted ladies of fashion, form the groundwork of the story. There is but little of originality, either in plot or character, though the hero and heroine, Harry Clare and Grace Arnold, are very well drawn; but the story flows smoothly along; there is not a page of dreary moralizing in the book, and hardly a line in the way of conversation but what is necessary to help the narrative forward. Hence, in a great measure, the success of "Tried and True." The author, having a story to tell, has been wise enough to satisfy himself with simply telling it.

BISHOP COLENSO ON DEUTERONOMY.

(Concluded from the London Review, *June 20.)*

We continue our digest of Part III. of Dr. Colenso's work on the Pentateuch.

Chapter IV.

Having, as he believes, established, (1) that the book of Deuteronomy must have been written chiefly by one writer; (2) that this writer must have been a different person from the writer or writers by whom the rest of the Pentateuch, speaking generally, was written; (3) that the Deuteronomist, whoever he may have been must have lived in a later age than either the Elohist or Jehovist, since he takes for granted facts recorded in their narrative; (4) that there are some indications of this book having been written in a *very late* age of the Hebrew history; (5) that there are historical circumstances which suggest that it may have been com-

* Joseph Anstey; or, the Patron and the Protégé. By D. S. Henry. London: John Wilson.

† Tried and True. By Alton Clyde. London: T. C. Newby.

xvi. 16, could scarcely have arisen in an age when Solomon, though he 'loved Jehovah, walking in the statutes of David, his father,' yet 'sacrificed and burnt incense in the high places,' 1 K. iii. 3, and specially at the 'great high place' of Gibeon, v. 4 (whereas the Ark, the symbol of God's Presence, was at that time in the Tabernacle on Mount Zion), nor in an age when the people of the Ten Tribes would have had to travel all the way to Jerusalem for that purpose. We do not read that the prophets of Israel, such as Elijah or Elisha, ever went to Jerusalem to keep the Passover, or obeyed the solemn command to go up thrice in every year to the 'place which Jehovah had chosen.' And the most pious kings, such as Asa, Jehoshaphat, Joash, Amaziah, Uzziah, and Jotham, Hezekiah's grandfather, still sacrificed, without hesitation, on the high places, and brought their offerings to other altars than that erected in the Temple, which they would not have done, we must believe, if this law existed, and was known to be of Divine, or even Mosaic origin."

The Bishop then proceeds at some length to give his reasons for believing that the law in Deuteronomy, confining all sacrifices to Jerusalem, could not have been written before the age of Hezekiah.

(ii.) He observes that, throughout the Book of Deuteronomy, the Levites are coupled continually with the poor and destitute, "the widow, the stranger, and the fatherless." Not a word is said of their having "any divine right to *demand*, or, at least, to *expect*, the payment of *tithes* from the people, according to the provision supposed to have been made by Jehovah himself, N. xviii. 21, only a few months before through Moses, who is now (in Deuteronomy) represented to be speaking,—'Behold, I have given the children of Levi all the tenth in Israel, for an inheritance.'" But they are spoken of, again and again, as depending, like other necessitous people, mainly upon the charity of others, while "not a trace of this poverty is found in the other Books of the Pentateuch."

(iii.) "The most complete contradiction obviously exists between the two sets of laws, supposed to be uttered, the first directly by Jehovah himself, the second by Moses, within a few months of each other."

In support of this position, Dr. Colenso compares D. xii. 15, 16, with L. xvii. 3, 4; D. xii. 17—19, with N. xviii. 21, 24, 26; N. xviii. 15—18; D. xii. 27, with L. i. 5, 11, iii. 2, 8, 13, vii. 2, i. 15, iv. 6, 7, 17, 18, 25, 30, 34.

Chapter VIII.

In this chapter many other discrepancies are pointed out between the law as it is laid down in Deuteronomy and in the earlier books of the Pentateuch, in support of the position that Deuteronomy only represents "the state of ecclesiastical matters which existed in *later* days when that book was written."

It would be useless to pursue the mode we have hitherto adopted in this digest, of taking chapter by chapter, and laying before our readers even the principal reasons which Dr. Colenso puts forward in support of his theory with regard to Deuteronomy. We have given enough of them to put our readers in possession of the general character of the book; and we shall now proceed to the summary of "results" which the bishop believes he has arrived at by his examination of the whole book of Deuteronomy.

He maintains that the "phenomena" he has pointed out—"the contradictions, variations, and numerous indications of a more advanced state of civil and religious development"—would be sufficient to satisfy us that the book must have been written in a different age from that in which the other four books, generally, of the Pentateuch were written, and in a much later day.

From the "signs of time" which he has observed in the course of his examination, he arrives at the following conclusions:—(1) Deuteronomy was written after the Elohistic and Jehovistic portions of the other four books, since reference is made throughout to matters of fact related in them, and expressly to the laws about leprosy. (2) Hence it was written after the times of Samuel and David; and this is further confirmed by the fact that the laws relating to the kingdom seem not to have been known to Samuel, 1 S. viii. 6—18, nor to the later writer of Samuel's doings. (3) The mention of the kingdom in xvii. 14—20, with the distinct reference to the dangers likely to arise to the State from the King multiplying to himself "wives" and "silver and gold," and "horses," implies that it was written after the age of Solomon; and this is confirmed by the very frequent references to the "place which Jehovah would choose," that is, Jerusalem and the Temple. (4) The recognition of the independence of Edom carries down its composition to the time of their complete liberation from the control of the Kings of Judah in the reign of Ahaz. (5) It was written after the time of Hezekiah's Reformation, when the high places were removed, which the former Kings of Judah, even the best of them, had freely permitted. (6) It was written after the captivity of the Ten Tribes, in the sixth year of Hezekiah's reign; since the sorrows of that event are evidently referred to as matters which were well known, but which now were things of the past. (7) It was written after the great spread in Judah, in Manasseh's time, of the worship of the "sun and moon and the host of heaven." (8) It was written *before* the time of Josiah's Reformation, since the words ascribed to Huldah expressly refer to it; and, indeed, there can be little doubt that this book, whether alone or with the other books, was that found in the Temple by Hilkiah, and was the direct cause of that Reformation. (9) Hence it can scarcely be doubted that the book of Deuteronomy was written, either in *the latter part of Manasseh's reign*, or in *the early part of Josiah's*.

Dr. Colenso cites Ewald, Riehm, Bleek, Kuenen, and others, who are of opinion that the most probable supposition is that it was written in the latter part of Manasseh's reign. De Wette, Von Bohlen, Knobel, &c., place its composition in the reign of Josiah; and with them he agrees.

"If it was really written in Manasseh's time, we are then met by the following difficulties. In that case, the author may have placed it in the Temple in Manasseh's lifetime, without the knowledge of any one, which, of course, is conceivable. But then he must have gone his way, *leaving so valuable a fruit of so much labour* to the chances of the future,—or we may say to the overruling of Providence,—without communicating to any one the fact of its existence; and he must have *died*, without betraying his secret,—without showing any personal interest in the success of his great enterprise, or caring to see any result of it in his own days,—nay, without even making any provision against the possibility of the book itself being neglected, destroyed, or lost, while it lay unknown and unheeded in the Temple, during the latter portion of Manasseh's idolatrous reign. For we take no account of the chronicler's story of Manasseh's repentance, 2 Ch. xxxiii. 18, 19, of which the Book of Kings says nothing.

"Or, if the writer himself survived the reign of Manasseh, and the short reign of Amon, and so was living in the early years of Josiah,—or if any one was then living, to whom the writer, before his death, *had* communicated his secret,—it seems very difficult to account for the long and total silence with respect to the existence of this book which was maintained during *seventeen* years of Josiah's reign, when the king's docile piety and youth would have encouraged the production of such a book, if it really existed, and there was such imperative necessity for that Reformation to be begun as soon as possible, with a view to which the book itself was written.

"Thus it seems to us, on the above grounds only, *most* reasonable to suppose that the book was *in process of composition* during these first seventeen years of Josiah's reign. The youth of the prince—his piety—his willingness to follow the teaching of the Prophets around him—gave every encouragement for such an attempt being made to bring about the great change that was needed. Possibly some years of Josiah's reign had passed before the work was begun, though we can scarcely doubt that it must have taken some time for its completion. Still two or three years, at most, might suffice for this; and during that interval, however short or long, we may conceive insertions to have been made from time to time, as fresh ideas occurred to the writer, and thus we may account in some measure for the numerous repetitions of the same sentiment by which the book is characterized."

Dr. Colenso next addresses himself to the question, Who was the writer? Independently of his "free handling" of the earlier records, he must have been a remarkable person who conceived the idea of adding another book to the existing Tetrateuch. "A writer of such originality, power, and eloquence—of such earnest piety, such ardent patriotism, such tender human affections,—must have surely filled a very prominent position in the age in which he lived." Jeremiah lived in this age. He began to prophesy "in the thirteenth year of King Josiah," four or five years before this book was found in the Temple. There are not a few very striking indications of a close resemblance between the language of Jeremiah and that of the Deuteronomist. Could he have been the writer? Dr. Colenso reserves the further consideration of this question for another part of his work.

We come now to his "Concluding Remarks."

It must be admitted, says Dr. Colenso, as the results of the preceding investigations (Parts I., II., and III.), that the traditional belief, that the whole Pentateuch, with a few important exceptions, was written by Moses himself, can no longer be maintained; and that, whatever portions of the other books may have been written by him, yet certainly the Book of Deuteronomy was *not* written by him, but is the product of a much later time, and bears the distinct impress of that time and its circumstances. "Yet this book it is, and this alone, of which the authorship is actually claimed for Moses. . . . . Not only are we told, D. xxxi. 22, that Moses 'wrote' the song which we find recorded in D. xxxii., but the writing of the whole book, or, at least, of the principal portion of it, is plainly ascribed to him in D. xxxi. 9—11." Again, "this book also it is, in point of fact, which forms, so to speak, the most living portion, the very sum and substance of the whole Pentateuch. When we speak of the 'Law of Moses' we mean chiefly the Book of Deuteronomy. And we cannot but remember that it is this book also which is quoted again and again, with special emphasis, in the New Testament." But are the words quoted from Deuteronomy—["He answered and said, It is written, Thou shalt not live by bread alone, but by every word that proceedeth out of the mouth of God" (Matt. iv. 4); "Jesus said unto him, It is written again, Thou shalt not tempt the Lord thy God" (ver. 7); "Then saith Jesus unto him, Get thee hence, Satan; for it is written, Thou shalt worship the Lord thy God, and Him only shalt thou serve" (ver. 10): passages quoted from D. viii. 3, vi. 16, vi. 13, x. 20]—less true because they were written by some later prophet and not by Moses? "Are they true *only* because they are 'written' in this 'Book of the Law?' Are they not rather true because they are true in themselves, by whomsoever written or spoken—eternally and unchangeably true,—and, as such, come home at once, with living power and authority, to the hearts and consciences of living men?"

Digitized by Google

temptation and trial,—more sorrowful and ashamed when we have fallen,—more quick to rise, and go on again, in the path of duty, with tears and thanksgivings,—more eager to tell out the love of God to others, whether to those who as yet are groping, 'if haply they may feel after Him and find Him,' who 'is not far from any one of them,' 'in whom they live and move and have their being,' or to those who *have* known Him, but know no longer now the joy of His children, 'sitting in darkness and in the shadow of death, fast bound in misery and iron.'

"But, in all this, it is not our knowledge, however clear, or our faith, however firm and orthodox, or our charity, however bright or pure, that holds us up daily, and binds us to the bosom of God. 'Our Father' will delight in all the sacred confidences of His children,—their clingings of faith and hope,—their longings of pure desire for a closer sense of His presence,—their holy aspirations and penitential confessions. But it is not our prayer that will hold us up. It is His love alone which does this.

"'The eterna' God is our refuge,
And underneath are the everlasting arms.'—D. xxxiii. 27."

FINE ARTS.

THE ILLUSTRATIONS OF LORENZ FROLICH.*

THESE illustrations have a peculiar interest just now when the artists of Scandinavia are only beginning to take a position amongst the painters of the world. M. Frölich is a Dane, and although his study has been carried on in the schools of Paris, yet this has not at all obliterated his nationality of feeling—his style is happily not in the least overlaid by any of the grandiose affectation of the French taste, or by any of their less pardonable tendencies in art. The highly imaginative tone of the art of the Far North, even in days so early as when the Norseman's hunting horn was carved with the fabulous sea-serpents and the dragons, seems to be still a fertile source of excellence in the works of modern Scandinavia. We see it strong in these subjects of M. Frölich's; in the Cupid and Psyche, where the treatment, though necessarily in accordance with the antique model, is constantly fresh and original in some grace of attitude, or some expression of the face delightfully refined and poetic, and anything but what we call classical. The severe forms of the Greek are impossible to the glowing and more humanized, not to say Christianized, mind of a Northern temperament. Then we see the fancy of the artist again in the beautiful borderings which enclose the subject in an arabesque of endless variety, ever-charming and suggestive of the tender grace of plants and flowers. This treatment of the exqusite legends of the Greeks—their romance of the soul — is indeed singularly unlike the statuesque feeling which has usually been considered proper to the subject; but we can see no reason why the painter should not bestow all his art upon a theme so thoroughly kindred to poetic feeling in art. M. Frölich works chiefly in outline with a little shading, so as to give some suggestions of form and colour. We are not aware that he has represented any of his compositions in colour, but there are all the indications of a taste for colour as powerful and as refined as is to be observed in the pictures of his fellow artists of Denmark, Sweden, and Norway. But it is not so much the technical perfection that is to be admired in these illustrations; for this is frequently, and indeed generally, so far as the drawing of the figure is concerned, very imperfect; it is the feeling for beautiful sentiment. To mention one only of the Psyche set, that in which Zephyr sent by Eros, having found the timorous yet trustful girl, and rescued her from the fancied demon, bears her away to the Valley of Bliss; nothing can be more sweetly expressed than this, though we may find faults enough in the study of the figure if that were the point in which the artist challenged the critical eye. These illustrations of Cupid and Psyche are the most important of Frölich's etchings; they are upon a larger scale than the others, and very beautifully printed in sepia colour. The text of Apuleius, which accompanies it, is so good for French typography that it might be English.

In a style similar to this, but on a small scale, M. Frölich has illustrated the exquisite story of "Hero and Leander," the original drawings of which we happen to have seen, and can speak of the same charmingly poetic treatment so pleasing in them. This work is, we believe, soon to be published in London.

The illustrations of the Lord's Prayer form a handsome volume, which is very appropriately dedicated to the Princess of Wales. In these the artist has introduced more shadow into his work, and proportionately more pictorial effect; and this is given by the plan of ruled lines more or less close or broad according to the depth required. The delicate touching of the etching work, however, is a little obscured by this; but, on the whole, we are disposed to approve this addition of colour as part of the intention of an original designer of a new school. The most favourable example of this method is perhaps the illustration of the passage, "Give us this day our Daily Bread," and this is at the same time equally characteristic of the Scandinavian taste. The subject is a family of peasant reapers, about to partake of their mid-day meal—women and children gathered into a kneeling group among the ripe corn, while the father cuts the first slice from a big loaf of dark bread. Beyond is seen the river leading to the sea and a distant landscape; above in the sky is Christ surrounded with angels, the passage illustrated appearing as in each illustration in the centre light of a glory. The opening address of the prayer is illustrated by an elaborate composition showing Christ pointing to Heaven, as it were, in answer to the inquiry of His disciples and followers, "Lord, teach us to pray." Below the elevated ground on which this group stands are seen the various people of the earth throwing down their idols and preparing to join in the prayer of universal charity and goodness.

As we said of the other illustrations, it is the feeling which is the excellence more than the technicalities. But in these there is an additional charm—what might be called the beauty of holiness in the countenance of the Christ and many of the angels. In some there is a little too much attempt at subject painting, as where sneering and mocking personages are introduced in the illustration to "Forgive us our Debts," and in that of the "Lead us not into Temptation," where man, climbing over the rocks of life, against which the waves are dashing, is beset with somewhat comic-looking figures, one holding a purse, another a bunch of grapes, another the swift horse of vice, ready to bear him from all trouble of the present. All these, with the alluring nymphs floating on air amongst them, conspire to give the picture a commonplace air, which is not at all the case with the rest of the illustrations. There is, however, much allowance to be made for the great difficulties to be encountered in treating subjects of this grand and very abstract nature, especially upon so small a scale. Much as there is to admire in this, and much to praise, we doubt whether M. Frölich's talent is not, like that of all the painters of Scandinavia, essentially naturalistic, with a nice perception of the picturesque, and sweet poetic feeling, more particularly in the direction of domestic sentiments. This shows strongly in the pretty illustrations of child life, "La Journée de Mdlle. Lili;" and here his sensitive pencil, quite instinct with expression, finds abundant scope and freedom. This is a class of subject which requires such peculiar gifts as we imagine M Frölich possesses in an eminent degree, and we shall hope to see some of the many delightful stories about children and for children illustrated in this spirit of innocence and freshness so congenial to the subject and the artist.

THE FINE ARTS QUARTERLY REVIEW.

THE first number of this new periodical, devoted entirely to the fine arts, and published by Messrs. Chapman & Hall, made its appearance last week after a rather lengthy period of incubation. It is a handsome volume of larger size than any of the fraternity of quarterlies, and exhibits a certain refinement of typography in its old type and tinted paper. This paper is advantageous for illustrations, but as to the type it smacks a little strongly of the South Kensington affectation. It will, we think, be pretty generally admitted that a periodical of this stamp was wanted, for the one journal alluded to by the editor, Mr. Woodward, as "avowedly restricted to the arts," is, in fact, restricted to anything but art, and dedicated chiefly to the enlightened designers of the pots and pans of our modern Etruria. Whether the subject of art is not adequately treated, according to the wants of the public in that department of culture, in various other journals, and whether the more elaborate and special consideration of the fine arts proposed will meet with the indispensable support which it well deserves, are points upon which there will probably be a difference of opinion. Mr. Woodward states that on entering upon his duties as librarian of the art collections in the Royal Library at Windsor, he felt grievously perplexed how to obtain clues to the information he wanted about them, and that suggested this undertaking as a means of addressing himself to the students of the history of art generally. His feeling, he says, was shared by "genuine art-students in England," and accordingly we have a list of the contributors and referees, and a most imposing one it is.

There are thirteen articles in this number, and six other sections which refer to correspondence, new purchases at the National Gallery, British Museum, and National Portrait Gallery, a summary of art news, and a list of works recently published. Of the articles, the most interesting for its original remarks, comprehensive view, and generally sound comment, is the opening paper, by Mr. Tom Taylor, on English painting in 1862. The gist of this article seems to be shown in the remark that "English art at this moment presents to us a picture in which, from one point of view, the prominent features are internal anarchy—something like a break-down in our first essays at national employment of our painters, and an unexampled and triumphant intrusion into the domain of art of the trading and speculative principle. These features are combined with more extensive and better paid employment for the painter by private patrons than has ever been known in any period of history or in any country." The writer compares the larger national employment of artists abroad with that given to them among us, refers to the several noble public halls in the kingdom that are waiting to be adorned with paintings, praises Sir Walter Trevelyan's commission to Mr. Scott for national pictures, and Mr. Watt's grand essay *al fresco* in Lincoln's Inn Hall, and winds up his argument in favour of employing the "great power for vigorous historical work on a large scale lying dormant" among many artists whom he names, while he has some faith that the artists are ready to forfeit the dealer's tempting offers for the honour of associating their names with some remarkable public work. Mr.

as a standard publicly exhibited of length, capacity, or weight."* Primary standards most accurately prepared are provided by the State and placed in the hands of the exchequer. Local standards, carefully compared and adjusted with the primitive standards, are in the hands of municipal authorities and others. The conformity of our commercial weights and measures with the local standards is enforced by law, but there is no provision made by the State for the verification of these local standards by comparing them occasionally with the primitive ones. There is no appeal against the inaccuracy of the local standards, even though it be clearly shown that they are not to be relied on; nor any means of ascertaining whether wear, accident, or fraud may have caused any variation since their first comparison.

Let us turn from this disorderly system and its monstrous inaccuracies, and consider the extreme simplicity, unity, and precision of the metric system now proposed to be allowed in this country.

The metre† was originally considered to be the ten-millionth part of the distance from the pole of the earth to the equator, measured along the surface of the sea. It was, however, declared in 1799 to be the length of the platinum standard preserved in the archives at Paris. Its equivalent value in English measure is easily recollected, being nearly equal to three feet, three inches, and three-eighths of an inch. Its coincidence with the length of a seconds pendulum in London is very remarkable, this latter being three feet, three inches, and one-eighth nearly.

In the metric system, the metre is the fundamental unit of measurement whence the units of superficies, of capacity, and of weight are derived. The whole system consists of four principal elements, with their decimal multiples and decimal parts, viz., the *metre* for length, the *are* for surface, the *litre* for capacity, and the *gram* for weight.

These are all subdivided into tenths, hundredths, and thousandth parts, which are denominated by the syllables (derived from the Latin) deci, centi, and milli; the multiples are similarly by tens, hundreds, thousands, and tens of thousands, &c., distinguished by the prefixes (derived from the Greek) of deca, hecto, kilo, and myria. Thus, the whole of the metric system may be shown in the following scale:—

Measures of				Proportions.
Length.	Surface.	Capacity.	Weight.	
Millimetre.			Milligram.	Thousandth part.
Centimetre.	Centiare.	Centilitre.	Centigram.	Hundredth part.
Decimetre.	(Not used).	Decilitre.	Decigram.	Tenth part.
METRE.	ARE.	LITRE.	GRAM.	One.
Decametre	Decare.	Decalitre.	Decagram.	Ten times.
Hectometre.	Hectare.	Hectolitre.	Hectogram.	A hundred times.
Kilometre.		Kilolitre.	Kilogram.	A thousand „
Myriametre.			Myriagram.	Ten thousand times
			Quintal.	Hund. thousd. „
			Ton.	One million „

In addition to the above subdivisions and multiples, the metric system has always been permitted on the Continent to make use of the secondary units, 2, 5, ·2 or ·5, 20 or 50, &c. Thus, we say half a kilogram, a fifth of a litre, &c.

The manner in which the are, litre, and gram depend upon the metre is very simple. An are is a hundred square metres, a litre is the volume of a cubic decimetre, and a gram is the weight of a cubic centimetre of water.

All the multiples and subdivisions being decimal, there is a total absence of fractions. The reduction from one denomination to the other being performed by simply multiplying by 10 or its multiples, or dividing by them, it is not necessary to alter the figures, but simply to read them differently, by placing the decimal point so many places to the right or left of its place in any given number, according to the terms of the required denomination. Thus, to represent 52749· metres in decimetres we write 527490·; to reduce it to centimetres we put down 5274900·; and so likewise for the higher denominations we can write it down as 5274·9 decametres, or 527·49 hectometres, or 52·749 kilometres, or 5·2749 myriametres. The number 37645264 millimetres can be written down as the sum of 3 myriametres, 7 kilometres, 6 hectometres, 4 decametres, 5 metres, 2 decimetres, 6 centimetres, and 4 millimetres. To convert the latter into the former we have only to write down all the figures one after another. The metre is equivalent to 39·37079 English inches, or $1\frac{1}{10}$th yard nearly; therefore we have, by moving the decimal point, the value of any of the lengths of the metric scale. Approximately, the millimetre is about $\frac{4}{10}$ths of an inch. The centimetre is a little more than a barleycorn, or shoemaker's size; the decimetre is nearly a hand, or 4 inches; the double decimetre very close upon a surveyor's link; the metre about a yard and a tenth; the double metre nearly a fathom and a twelfth; half a decametre, or 5 metres, is very closely equal to our rod, pole, or perch; the double decametre, or 20 metre chain, is nearly the same as ours, being 65 feet and $\frac{4}{5}$ths instead of 66; the double hectometre nearly agrees with our furlong, it being less only by the six thousandth part; the kilometre is about 5 furlongs.

For the ordinary purposes of trade and construction the metre is generally used without its multiples; thus, for 156·65, we say, 156 metres, 65 centimetres, instead of 1 hectometre, 5 decametres, 6 metres, 6 decimetres, and 5 centimetres.

In square measure, the quantities being the result of two dimensions, the divisions and multiples are made primarily by hundreds; they can also be divided by tenths to suit convenience. The *are*, the unit of superficies, is 100 square metres, each metre being equal to 100 square decimetres, and so on. If we have a piece of land 37,256 square metres in area, we can write the contents as 3 hectares, 72 ares, and 56 metres, by cutting up the number, towards the left, into periods of two figures. For lower denominations the points must be moved in pairs to the left; thus, 0·836097 square metres is the same as 0 square metres, 83 square decimetres, 60 square centimetres, and 97 square millimetres. A decare, or ten ares, is nearly equal to an English rood, and a double decare is equal to half an English acre. A hectare is about two acres and a half, so that half a hectare is nearly an acre and a rood.

For measures of capacity, the *litre* is the volume of a cubic decimetre, and all its multiples and subdivisions are reckoned by tens, hundreds, &c., as in the case of the metre. The litre is equal to 1·760773 imperial pints, or about $1\frac{3}{4}$. The hectolitre is nearly our sack of three bushels. Half a kilolitre, or 500 litres, corresponds nearly with our butt or pipe of 108 gallons, and the kilolitre is nearly our tun, liquid measure. It is precisely the same as the cubic metre, the content of which is the metric ton for ships. In the reductions of solid measure, such as cubic metres, decimetres, &c., the subdivisions are shown by pointing off periods of three places of decimals; thus, 2·5475432 cubic metres can be written as 2 cubic metres, 547 cubic decimetres, 543 cubic centimetres, and 200 cubic millimetres.

Measures of weights are divided into tens, &c., and the reduction is carried on precisely in the same manner as that of the metre and its multiples. The *gram*, the weight of a cubic centimetre of water at its maximum density, is the unit. A cubic decimetre contains 1,000 cubic centimetres, therefore that quantity of water weighs a kilogram. The cubic metre, being equal to 1,000 cubic decimetres, contains 1,000 kilograms of water, and constitutes the ton or millier. The gram is equivalent to 15·43234874 English grains. A hectogram is about $3\frac{1}{2}$ ounces. A kilogram nearly equals 2 lb. $3\frac{1}{4}$ oz. avoirdupois. The quintal corresponds very nearly with our sack of two hundred weight, and the millier is nearly equal to our ton. In practice the kilogram is generally made the unit. Thus we say 156 kilograms instead of 1 quintal, 5 myriagrams, and 6 kilograms; but for scientific purposes and postage the gram is necessary.

Such is the metric system in all its simplicity. It is not necessary to use all the multiples and subdivisions which we have given in order to explain the whole construction. For the ordinary purposes of life the kilometre, metre, centimetre, millimetre, are, hectare, hectolitre, litre, decilitre, ton, kilogram, and gram, are all that is practically necessary. For instance, instead of 3 decimetres, we say 30 centimetres, &c. The following equivalents of our present system are useful in comparing scales of either weight or measure:—An inch is about 25 millimetres; a foot, $30\frac{1}{2}$ centimetres, or 305 millimetres; a yard, 0·914 metres; a quart, 1·136 litres; a pound, 0·454 kilograms; an acre, 0·405 hectare.

The metre has every quality which can be desired in a unit. The decimal character of the system, and the absence of fractions, render it superior both in facility of calculation and application to practice to any other yet known. Children, in countries where it has been adopted, are able to go through arithmetical and mercantile calculations which most of our grown-up men cannot. From an inquiry instituted among schools by Mr. James Yates, F.R.S., and Dr. Levi, F.S.S., we are able to state that, according to our system, the time commonly necessary for a boy of average ability to master all the system of weights and measures now in use, with all the branches of arithmetic thereon depending, is two years, ten months, and nine weeks; whereas the probable time with a decimal system would be nine months two weeks. We can form some idea of the precious time annually lost to youth in our country.

Every country into which the metric system has been introduced now practically appreciates the merits of the system. Even in our own country its advantages have been acknowledged among scientific men by its adoption in all our laboratories and many of our workshops. To engineers, whose field of action is world-wide, its practical readiness and accuracy is such that they have generally preferred it to their own system. We have asked those who have carried on extensive operations and contracts abroad with English workmen, and the invariable answer has been, that the men, when once they have become acquainted with the metric measures, prefer them to any other. They also state, that workmen fresh-arrived from England were always able to understand and work with the metre in a few days after they had seen it for the first time. In the mechanical arts, where delicate adjustments are requisite, and in which small differences in size should be expressed in terms denoting their value, the decimal system is the only one that can be used with accuracy.

The recent treaty for extending our commerce to other nations will never become perfect as a trading medium, till our system of weights and measures is assimilated to theirs. We cannot ask all nations to assimilate theirs to our system, for we have not a word to say in its favour. They have nearly all adopted the metric system, in order that when they buy and sell in other countries which have that system, they may know what they are about; therefore, as long as we persevere in retaining our old weights and measures, we shall be shut out from a wide field of Continental commerce. The change must come sooner or later, and as that change will prove a beneficial one, the sooner we start about it the better.

* Letter from the Astronomer Royal to the Comptroller of the Exchequer, 1st February, 1859.

† We have Anglicised the words mètre, gramme, &c., used on the Continent.

MORE AIR.

THERE is great force in the air—silent and unseen—and well it is there should be. With the strong pressure of its downward weight it forces itself everywhere. Through seams and crevices it finds its way; through the finest cracks it enters. We close our windows to keep it out; we shut our doors against it. We want air—good, pure, fresh air—in our dwellings; we want good, fresh air to breathe, and, for the sake of little inconveniences, we bar its access to us, and leave it to squeeze its useful but disregarded particles as best it can into our presence.

No one scarcely ever thinks of how much air he wants for life, how much is necessary to support the combustion of his existence, or what is to become of the products of that combustion, how they are to be taken away, or what harm they will do if not removed. Peclet has proved that a man consumes 212 cubic feet of air per hour, and our common reason tells us this air should be pure, free, and wholesome. Yet we let it in as though we were better without it, needed it not as a first essential of actual life and a not less essential of health; under doors, between the dusty beams, and up the narrow seams of our flooring, through the fuzzy interstices of carpets, in cutting drafts through the chinks in our windows. Coming impure from our streets, we make it worse by forcing it to lick up dust and decomposition emanations, and every additional pollution that can possibly be put in its passage. It is not, however, so much the quality of air as the quantity that is now exciting our attention. A young dress-maker has perished for want of more air. Her death may be assigned to a secondary cause, but that was the first. Apoplexy may be the result, but want of more air was the primary source of it.

Families are crowded into rooms; for families are not large or small according to the size of the house they live in, but the size of the house depends on the parents' pecuniary means, and often in the smaller habitations the door is set open to relieve the sensation of oppressiveness. We feel in the daytime the effects of polluting the air, and the stagnation produced thereby in the circulation of our blood. As the products of life-action are voided from the lungs, the air is replaced by the carbonic acid of the breath. And not simply is the air supplanted by a poisonous compound, but the very body itself is prevented from getting rid of its deleterious products. The carbonic acid generated in life-action remains in the blood, the action of the lungs is prolonged, the action of the heart slackened, the delay in its beatings retains the blood in the veins and capillaries, which swell and distend under the pressure; fainting comes on, or something gives way, and apoplexy—death—is the result.

In the daytime we feel this danger slowly approaching, and as the oppressiveness of the sensations increases, we get more and more distressed, until the door is opened and more air let in. Soon then passes away the dull headache, soon the breathing becomes freer, the blood circulates as usual, and all oppressiveness is gone. Not so at night—tired with many hours of toilsome labour, weary in spirit, wasted in body, poor humanity, over-taxed, lies over-lifeless in its sleep. The poison in the close atmosphere increases, adds to the deepness of slumber, unconsciousness becomes more unconscious, the eyes have closed never to open, the tired brain has ceased to think, it will never think again.

The first practical consideration in proper ventilation is free ingress and egress for the air. In small houses, especially where ventilation is restricted or unprovided for, open windows are the best relief. In many cases the ills of open windows at night would be less than the ills of closing them. In no case, in our opinion, ought there to be in a closed room a less allowance than 400 cubic feet of air for every person sleeping in it—two hours' breathing quantity. The minimum quantity fixed by the Poor Law Board is 300 cubic feet; but the magistrate of the Bow-street division has given an order which enables the medical officers of that district to insist on the larger quantity we have named. In our hospitals, in the new wards, 1,500 cubic feet are now invariably taken for every allotment; and in the model hospital at Bordeaux, an allowance even of 2,200 cubic feet is made. In the wards of St. Thomas's, now pulled down, which were built about ten years ago, the allowance was 1,600 feet. In King's College Hospital, just built in Portugal-street, 1,500 feet are assigned.

It is the general opinion of physicians that in fever hospitals the quantity should never be less than this (1,500 feet), in order to dilute the poison of the emanations from the patient, and it is found practically that when the disease-poison is diluted to this extent it is innocuous. Cases of typhoid fever may be harmlessly introduced into the general ward under such conditions without danger to the surrounding inmates.

These allotments of particular quantities of air are, of course, made independent of any regard to the circulation of air. In themselves, therefore, they are only supplies for a limited time, and during that interval the whole air of the space ought at least to have been once completely renewed. In many hospitals and buildings, perforated zinc plates, air-bricks, and traps have been introduced with more or less judiciousness and efficacy. Miss Nightingale, indeed, sets her face against all artificial ventilation in hospitals; but experience shows not wisely, for even if we admitted her views to be theoretically correct, in practice they are defeated.

To open a window on one side of a sick ward to let in air, and to open a window on the other to let it out, is a plan that can be alike adopted in the temporary as in the permanent hospital, but the effects are these. The open window lets the cold air *fall down* suddenly on the patients, and at the entreaty of their sick the nurses close the windows. If perforated zinc plates are used in the apartment, near the ceiling, they cannot be stopped up by the patients, and, moreover, when the air is thus separated by meshes or perforations the so divided masses of air do not fall solidly and suddenly down, but drop gently and cloud-like over the patient; and opposing perforated plates have, of course, an effect equal to opposing windows, for ingress and egress of air as far as mere quantity is concerned.

What is necessary for health and prevention of contagion in a workhouse, or hospital, is necessary in ordinary dwellings. The sick man does not breathe more air than the healthy man, and the poisons of contagious diseases are met in our streets as well as in our infirmaries. The emanations of typhus fever may come like the air through a chink in the wall; the poison of typhoid through the crevices of the floor. The over-crowding of a neighbour's rooms may cause us an attack of the first; the imperfect drains of a neighbour's house may prostrate us with the latter. Odours and disease emanations are very subtle—finer, more subtle, than air,—and issue through every crank and cranny from the infested domicile; the passers-by, were it not for the dilution with the free air of the street, might be struck with sickness, as the next-door resident more surely will be, by the poisons which may trickle through into his close and badly ventilated rooms. Typhoid fever is the fever of drains and putrifying organic decomposition; it is rarely got except by actual entrance into the vitiated atmosphere. We need not go into the drains, however, to be its victim; it may steam up from our basements to us, whether we live in a cottage or a palace. Typhus, on the other hand, is the fever of over-crowding. And typhus is more subtle, more dangerous, and essentially contagious. We cannot put typhus cases into an hospital as we would typhoid. It may come to us though we go not to it. Through a crack in the wall the poison may leak through from a neighbour's over-crowded room, even though it be no sick person's death-room. The fœtid emanations of the body produce it, and these may seize on any victim.

If the disease-vapours were visible like clouds and fogs, we should see how horrible, how prevalent, the danger, and the outcry would be intense; but we see not the evil, and the winds and the sunshine do such earnest work, we escape all but a fraction of that evil. That fraction, however, is terrible enough in towns and cities. Artificially we block out, by our multitudes of houses, the fresh breezes of the sea and the balmy air that has traversed the fields of the open land. Artificially by our streets we pen in the air and stop its circulation; and in the circulation of the air is, so to speak, its vitality. The day may come when, in this vast, over-crowded London, companies may supply fresh air to our dwellings as companies now supply us with water.

There is yet a third kind of fever which, in passing, we ought to notice—the relapsing, or famine-fever. This, at the period of the potato calamity, was common enough in Ireland, but it is not known in the fever wards of our hospitals at the present time, and, singularly enough, has scarcely been known in our country at all since the Corn-laws were abolished.

Typhoid fever is characterized by the tenderness of the abdominal regions. It is essentially the fever of drains and polluted organic matter. If we go into the poisoned atmosphere we are seized. If the poison-vapour come to us, we must block it out. If it generate in any district, we can pluck out its origin root and branch. As an illustration within our own experience, bad typhoid fever occurred in Lisson-grove. The Poor-law inspector, who took the patient out to the hospital, was seized with the fever, and died; the owner, who went to the house to carry out the improvements directed, was also seized, and died. It was the region there, not the patients, to which these men's deaths were due.

Typhoid fever, be it remembered, is the sewage fever,—typhus the over-crowding fever. Let us see how this view works out.

Since the recent stringent measures of sanitary reform the ravages of typhoid fever have declined; but in consequence of the recent destruction of the houses of the poor, and the consequent overcrowding of other habitations, typhus—the most dangerous—has largely increased.

We say most dangerous because most contagious. Its characteristic is extreme weakness, requiring large quantities of stimulants. Its prime source is the emanations from the external skin; and if these poisonous products be concentrated in a close, impure atmosphere, instead of being diluted with plenty of air, the poor wretches who lie packed two in a bed, and work thirty in a room of twelve feet cube, generate the poison and impregnate each other with the death-dealing disease. Once a centre of typhus established, there is no security for the neighbouring houses.

But it may be said, the sanitary law enables its officers to enforce its rules against the crowding of dwellings by defining the cubic space each inmate shall have in a house. The law defines the cubic space certainly, but how does it enable its officers to carry out its provisions? There are many difficulties in the way,—the chief and immoveable one in the Act itself. The medical officers and inspectors may not enter after six o'clock at night. We have shown how our natural senses warn us of what is going on wrong in the day time, and how to instinctively apply the remedy. When we are suffering from the oppression of an over-crowded room, we want no physician to order us to open a door or window; if we are panting for breath in a dense crowd we want no philosopher to tell us to get out if we can. It is just at night, then, that we want to know, for sanitary purposes, how a house is filled,—exactly at that very time when the Act prevents our going to see. Some of the worst—and perhaps many of the best—are

THE PATENT AMERICAN KITCHENER, with recent Patented Improvements,

IS THE CHEAPEST AND MOST ECONOMICAL COOKING RANGE EVER OFFERED TO THE PUBLIC.

It saves half the fuel usually consumed, cures smoky chimneys, requires no brickwork setting, is fully equipped with cooking utensils, and MAY BE SEEN IN OPERATION DAILY at

J. H. RIDDELL'S AMERICAN STOVE WAREHOUSE,

155, CHEAPSIDE, LONDON.

Illustrated Prospectuses, with Prices and Testimonials, free.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

DR. DE JONGH'S

(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir JOSEPH OLLIFFE, M.D., F.R.C.P.L.,

Physician to the British Embassy at Paris, &c.

"I have frequently prescribed Dr. de Jongh's Light-Brown Cod Liver Oil, and I have every reason to be satisfied with its beneficial and salutary effects."

Dr. LETHEBY,

Medical Officer of Health to the City of London, &c., &c.

"It is, I believe, universally acknowledged that Dr. de Jongh's Light-Brown Cod Liver Oil has great therapeutic power; and from my investigations, I have no doubt of its being a pure and unadulterated article."

EDWIN CANTON, Esq., F.R.C.S.,

President of the Medical Society of London, &c., &c.

"For several years past I have been in the habit of prescribing Dr. de Jongh's Light-Brown Cod Liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

Dr. LAWRANCE,

Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

ROWLANDS' MACASSAR OIL.—This Elegant and Fragrant Oil is universally in high repute for its unparalleled success in Improving and Beautifying the Human Hair. It is under the Patronage of Her Majesty the Queen, and of Royalty, and the Aristocracy of Europe, while its introduction into the Nursery of Royalty and those of the Upper Classes is a sufficient proof of its merits. Price 3s. 6d., 7s., 10s. 6d. (equal to four small), and 21s. per Bottle. Sold by Chemists and Perfumers.

*** Ask for "ROWLANDS' MACASSAR OIL."

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

Immediately will be published, in 2 vols., Post 8vo., £1. 1s.

MEMOIRS OF VICTOR HUGO.

RELATED BY

THE COMPANION OF HIS LIFETIME.

This work, including the biography of Victor Hugo, by his wife, founded mainly on her gifted husband's own notes, is enriched with many hitherto unpublished productions from his pen. Amongst them are an Original Drama, Miscellaneous Poems, Recollections of Travel, &c. The work may be regarded not only as a history of a certain school of writers in France, but in some respects as a literary history of the 19th century.
